## Correspondence ID:3149

Correspondence: The policy of accommodating private cattle ranching in The Seashore to the detriment of native tule elk and other wildlands biotic values is long overdue for a complete overhaul.

Perhaps some limited animal agriculture could continue at PRNS, but as things currently stand, the equation is tilted entirely too much against habitat and wilderness values and unduly towards the domestic livestock element -- with the erosion, water pollution, and a punitive, destructive management approach for the tule elk which results. If there is to be containment for the elk, let it be far more closely aligned with the borders of the PRNS itself.

It must be abundantly obvious that the vast weight of public opinion is in favor of a PRNS managed for native wildlife first, with legacy ranching a long second, if it is to exist at all. And as PRNS managers know, originally all ranching enterprises were supposed to have been sunsetted at The Seashore by now. Their extended continuance is an insult to the public will regarding OUR collective National Seashore.

There is enough land surrounding Tomales Bay and the Seashore devoted to grazing as it is. Enough already.

**Correspondence ID:3150**

Correspondence: There is something really shady, incomprehensible, and unacceptable going on at the National Seashore, specifically Tomales Point. NPS, the Point Reyes National Seashore belongs to all Americans, not just to the ranchers who profit from its use. The NPS must protect the Seashore and its wildlife.

Native Tule elk, a rare subspecies nearly extinct across California are rapidly and needlessly dying at the Seashore due to highly questionable NPS management. The NPS General Management Plan for Point Reyes keeps elk trapped behind a fence, expands commercial agricultural use, and extends cattle ranch leases for up to 20 years.

Instead of protecting the Wilderness and elk that live there, the NPS has the largest elk herd at the National Seashore fenced into an enclosure at Tomales Point. Not only is there not enough forage for the confined elk, but ongoing drought has caused scant freshwater to dry up, leaving the elk dying of hunger and thirst, as documented by visitor photographs of dead and emaciated elk. That is cruel, heartless, and unacceptable.

The NPS is confining the elk to prevent them from competing for forage and water with the nearly 6,000 cattle that continue to graze at the National Seashore, decades after the government paid fair market value to acquire private ranches and end livestock grazing there. When Point Reyes National Seashore was established in 1962, permitted ranchers were allowed to continue operations for 25 years. In a move that prioritized cattle ranching over the needs of wildlife, some of the ranchers who refused to move after the 25-year time period ending in 1987 were granted new leases by the NPS???

So, some/most? of the ranchers did leave because the 25 years they were allowed to continue operations were up, but those who didn't live up to the agreement were granted new leases because they refused to move? NPS must be the only government agency to fold and reward such incredibly bad behavior. I'm quite sure the IRS would handle a refusal to pay taxes a tad differently. It is outrageous that some 28,000 acres of public land at the National Seashore continue to be grazed by cows despite the original agreement to end this commercial use. Unbelievable! Shame on the NPS for allowing this travesty of justice to continue!

Elk, cut off from needed food and water, are dying at alarming numbers. The elk population behind the fence dropped from 540 to 286 in 2015, then 221 more elk died by 2020, and another 25 percent died more recently.

I am speaking up for the rare Tule Elk who are being sacrificed by NPS for a bunch of fricken domestic cows. NPS, please choose to do the right thing by prioritizing the needs of native wildlife and putting an end to commercial ranching at Point Reyes like NPS was supposed to do decades ago. Fences have no

place in Wilderness. The NPS needs to end the tragic, ongoing deaths of rare Tule elk at Point Tomales in the Phillip Burton Wilderness by taking down the fence so elk can access food and water.

NPS, again please remember, the Point Reyes National Seashore belongs to all Americans, not just to the ranchers who profit from its use. The NPS must protect the Seashore and its wildlife. I hope to very soon be able to thank NPS for having chosen to do the right thing for the Tule elk and the American people the NPS is suppose to be serving.

**Correspondence ID:3151**

Correspondence: WildCare has advocated for humane treatment of the captive herd of Tule Elk on Tomales Point for many years. We appreciate the Park Service's ongoing work to provide additional water for the animals during severe drought conditions, and the efforts the Park Service team has made to keep WildCare and our supporters up to date on the elks' welfare.

However, with the opportunity to update the management plan regarding the elk, WildCare and our supporters strongly advocate that the elk fence be removed once and for all, and that a wildlife corridor be established to allow the elk to leave the peninsula as needed.

152 Tule Elk died in Point Reyes National Seashore's Tule Elk Reserve from 2019 to 2020, according to NPS statistics. WildCare and our supporters say it is not right to keep a group of animals captive and then attempt to maintain a hands-off management approach.

More than 20,000 wildlife advocates have signed WildCare's petition in support of removing the fence. These animal advocates and we agree that removing the fence is the only humane way to manage the Tule Elk on Tomales Point that cannot escape their enclosed peninsula, and are thus at the mercy of water and forage availability within that restricted territory.

The public planning process for the Tomales Point area of Point Reyes National Seashore offers an opportunity to rethink management of the elk herd in light of the Park Service's commitment to preserving wildlife and the environment.

Removing the fence that has confined this elk herd since 1978 and allowing the elk (via a wildlife corridor) to find water and food beyond Tomales Point is the only humane way to deal with these once-endangered wild animals.

Please remove the fence and create a wildlife corridor to allow the Tomales Point elk herd to expand their territory to areas that offer consistent sources of forage and water!

**Correspondence ID:3152**

Correspondence: As a regular visitor to Pt Reyes, I have always found it very distressing to learn about the advantages provided to private interests, ranchers and cattle over native and wild elk who consistently suffer from lack of water and access to resources. Why ranchers working on public property should take precedent over the natural systems the Park Service should be protecting has always mystified me, particularly in a region where the vast majority of park are so supportive of the Tule Elk. Please consider the collective needs of our community and stop showing preference to private interests. We only have one shot at saving the Tule Elk in light of ongoing persistent drought which will only intensify with climate change.

**Correspondence ID:3153**

Correspondence: I have always liked the dairy farms in the park, but I think they could do as well in many other nearby places. However the Tule elk are a surviving remnant of historic herds and have no other place. they need enough forage to survive and are not getting enough behind the fence. Take down the fence and allow them to get food .

The elk are a special treat to see in the park and need to be better cared for. Move the dairy farms out of Point Reyes park.

Please save the elk, Jean Struthers

**Correspondence ID:3154**

Correspondence: It is an outrage that tule elk have died of thirst due to the elk fence. Remove it! Until that occurs, supply as much water as the herd needs. the animals which should be thinned at Point Reyes are the cattle, not the elk.

**Correspondence ID:3155**

Correspondence: I have been to this beautiful place and seen the rare Tule elk. This seashore belongs to me and all Americans, not just to ranchers who profit from its use. I believe that fences have no place in wilderness. The National Park Service must protect the Seashore and end the awful, ongoing deaths of these rare animals at Point Tomales in the Philip Burton wilderness by removing the fence so these elk can get food and water. Please prioritize the needs of this native wildlife by putting an end, at long last, to commercial ranching at Point Reyes. Do the right thing. Thanks for the consideration of my comments.

**Correspondence ID:3156**

Correspondence: The Tomales Point Area Plan for Point Reyes National Seashore must make the preservation and restoration of the park's natural values, its native wildlife, archeological resources, and public use and enjoyment its highest priority.

The Tomales Point Area Plan must set standards and conduct monitoring to ensure that ranching does not damage park ecosystems or negatively impact wildlife habitat, endangered species, archeological sites, water quality, native vegetation, public recreation or the aesthetic natural beauty of the park.

Tule Elk are an ecologically important part of the landscape of Point Reyes National Seashore. Their recovery should be a success story for restoring native ecosystems, consistent with the mission of the National Park Service.

Ongoing private cattle grazing is incompatible with the purposes for which the Point Reyes National Seashore was established. Commercial lease holders should not dictate wildlife removal or exclusion policies. Confinement, fencing, removal, hazing, and killing of wildlife in the national park for the benefit private ranch operators is unacceptable. The existing ranch operations are plundering taxpayers' rightful heritage by operating large, industrialized dairy operations that ruin the beauty and potential of the national seashore: they overgraze the sensitive grasslands turning them into mud and erode the topsoil, place the value of cows over a well-managed Tule elk introduction program, use silage cutting practices that destroy endangered owl habitat during nesting, and cause large scale cattle manure and urine pollution of the surface ground water and ocean.

The people responsible for running the Point Reyes parklands have demonstrated a travesty of stewardship of these precious public lands that should be a crown jewel park for those in the bay area and beyond to experience unspoiled natural seashore. The farm corporations should be held financially and morally responsible for the environmental damage the ranches have inflicted on our public land.

In summary, the only way to stop impairing nature at Point Reyes would be for the National Park Service to stop ranching and manage Point Reyes like national parks are supposed to be managed, with the overarching duty being the protection and restoration of natural resources, not the destruction of them.

**Correspondence ID:3157**

Correspondence: I support Elks!

**Correspondence ID:3158**

Correspondence: As a recent full time home owner on the Inverness Ridge, I am writing to support the PRNS plan to manage the elk so that ranching can continue in the Park. The Park demonstrates how to support sustainable (and historical) agriculture along side other visitor activities. Witness the many selfie taking visitors with cows.

Too many people in the US have no idea where their food comes from. The ranching community provides an educational opportunity to scores of visitors who do not subscribe to the minority vegan and PETA world view that zero animal husbandry in any and all circumstances is the most desirable outcome for the majority. There are many of us who disagree with the emotional and autocratic imposition of this minority world view. Whipped up by self proclaimed "activists" and "environmental" lawyers who don't hesitate to tie up the courts with specious and expensive lawsuits. Enough.

Thank you.

**Correspondence ID:3159**

Correspondence: The Point Reyes National Seashore belongs to all Americans, not just to ranchers who profit from its use. The NPS must protect the Seashore and its wildlife.

Fences have no place in Wilderness. The NPS needs to end the tragic, ongoing deaths of rare Tule elk at Point Tomales in the Phillip Burton Wilderness by taking down the fence so elk can access food and water.

The NPS needs to prioritize the needs of native wildlife by putting an end to commercial ranching at Point Reyes like it was supposed to do decades ago.

Protect the Tule Elk !

**Correspondence ID:3160**

Correspondence: Dear Administrators,  
Please remove the fencing that traps the Tule Elk in the area that is too small to ensure a viable genetic mix.

That is an easy partial solution to the plight of the elk. Many citizens will volunteer to do the work. We do not need more feed and water trucked to this herd if you just allow the fencing to be taken down.

Martha S. Bibb

**Correspondence ID:3161**

Correspondence: Despite public opinion being against extending the ranching leases in Point Reyes National Seashore, the park service extended them. It put the interests of a handful of ranchers above the welfare of the park. Even when the ranchers truck in water and hay for the cattle, their ranching practices contaminate natural water sources, cause erosion, and destroy biodiversity. Every summer I

am horrified by the sight of our top soil blowing away with the wind. What should be a living soil ecosystem has been turned to dust. The constant disturbance of mowing favors invasive annual plants, and the ranches are frighteningly large sources of thistles, mustard, wild radish, and various invasive grasses. How can we expect the native animals and plants to compete in such a compromised ecosystem without a little help from us. We're the ones who caused these problems, and we should do what we can to alleviate them. That might include providing water for the elk and other animals during our increasingly long dry seasons. It should include restoring native habitat so that tule elk and other animals can survive without our constant input. After all, this is a park, not a zoo. Most visitors come to the park to see wild animals, especially the tule elk, not poorly managed livestock.

Please stop pandering to the ranchers. They got their money. They signed the leases and had plenty of notice to leave. Extending their leases again was a mistake.

Please take down the fences. Please take care of the elk. Their health is an indication of the health of the ecosystem, and maintaining the health of the ecosystem should be the main priority of the park service.

**Correspondence ID:3162**

Correspondence: The drought mortality of native elk is unacceptable.

Removing the fence is better management for wildlife than setting up plastic water tanks and troughs, and trucking water up to the elk reserve.

Old and downed fencing is hazardous and needs to be removed. Elk become tangled in these fences and die.

85% of Tomales Point is in the Philip Burton Wilderness, making NPS management of tule elk herds here much more difficult during times of drought. The fence needs to come down.

The Pierce Point Ranch was a working dairy until closed in 1978 and made into an interpretive center, free of livestock (see: <https://www.nps.gov/places/point-reyes-pierce-point-ranch.htm>). Pierce Point Ranch is managed well as a visitor experience that is interpreted as to its dairy history. This should serve as a model for other dairies and beef ranches as their commercial livestock operations are removed from the Seashore and Golden Gate National Recreation Area.

**Correspondence ID:3163**

Correspondence: The Point Reyes National Seashore belongs to all Americans, not just to ranchers who profit from its use. The NPS must protect the Seashore and its wildlife.

Fences have no place in Wilderness. The NPS needs to end the tragic, ongoing deaths of rare Tule elk at Point Tomales in the Phillip Burton Wilderness by taking down the fence so elk can access food and water.

The NPS needs to prioritize the needs of native wildlife by putting an end to commercial ranching at Point Reyes like it was supposed to do decades ago.

**Correspondence ID:3164**

Correspondence: I am disappointed that you have extended cattle leases beyond their scheduled expiration. You have a responsibility to manage the resource in a manner that best benefits its natural values. Also, cattle are a major source of methane, which contributes substantially to the existential threat of global warming.

**Correspondence ID:3165**

Correspondence: As members of both the National Park Foundation and Western Watersheds Project, we submit these comments regarding the Tomales Point Area Plan.

Drought mortality of the native Tule Elk is an issue of grave concern to us and to many other concerned citizens. Because of the 8-foot-tall exclusion fence, these native elk are locked inside the narrow Tomales Point, which has few natural supplies of fresh water, and is surrounded by Tomales Bay and the Pacific Ocean. Large numbers of elk have died off during recent extreme drought. This is simply unacceptable. Furthermore, all indications are that the drought conditions are becoming more severe.

Moreover, as if drought mortality weren't enough, old and downed fencing is hazardous to the elk, that become entangled in the fencing and die tragically and painfully.

The Philip Burton Wilderness constitutes 85% of Tomales Point. We're aware that this makes NPS management of tule elk herds there much more difficult during times of drought. Supplemental water and minerals were supplied to Tomales Elk Reserve elk only after public protests that drew media attention. Removing the fencing is better management for wildlife than setting up plastic water tanks and troughs, and trucking water up to the Reserve.

It is imperative that all the fencing comes down. The free-roaming elk herds did not suffer drought mortality, and apparently have access to better water resources. These trapped elk must be allowed to roam into the larger Seashore area and find water and food.

As you know, the Pierce Point Ranch was a working dairy until closed in 1978 and made into an interpretive center, free of livestock. Pierce Point Ranch is managed well as a visitor experience that showcases its dairy history. This should serve as a model for other dairies and beef ranches as their commercial livestock operations are removed from the Seashore and Golden Gate National Recreation Area.

This beautiful coastal park needs to be managed for native wildlife, coastal prairies, and public access, unhindered by fences. We ask that you give our concerns and recommendation your most serious and thoughtful consideration as you construct the Tomales Point Area Plan.

**Correspondence ID:3166**

Correspondence: Dear Superintendent Kenkel,

As a local resident and frequent user of the trails at Point Reyes National Seashore, I welcome the opportunity to respond to your invitation for comments regarding the updating of management procedures at the Tomales Point area of PRNS, the primary focus being elk herd management.

The area under consideration is predominantly in lands designated by Congress as wilderness, and included within a national park. A fence intended to restrict the range of native inhabitants (tule elk) does not belong in a wilderness park. Fencing inhibits the elk herd's natural ability to forage for food and water and excludes the elk from its native habitat in favor of private commercial dairies and their cattle. The cattle operations take up about a third of the national park, which by definition should be set aside for the use of its natural inhabitants and the public. The "dairy" part of the park should be largely coastal prairie in which wildlife, including the elk, roam freely. Under such a scenario, the park would exemplify

coastal wilderness. As it exists today, that part of the park leased to ranchers is heavily polluted and unhealthy for inhabitants, the immediate environment, and the planet in general.

The ranchers have been poor stewards of the environment at PRNS. The streams are polluted and native vegetation is denuded by trampling and the spreading of cow manure, and they are directly at fault for these conditions. There is open sewage at ranch dwellings and blatant dumping of trash. This is not acceptable in a national park, and for the elk it is a disaster. In recent drought years fenced in animals perished in large numbers, likely due to being inhibited by fencing in their search for water and food. Inside the enclosure they were dependent on service by park personnel that was not always forthcoming. These were, and are still, hard times made worse by being enclosed in an area low in water and forage.

Therefore, without a doubt, a healthy wild ecosystem that supports wildlife and the public alike is incompatible with cattle operations. The fence should come down. Cattle ranching should be phased out. Those should be the primary concerns in the upcoming planning process at PRNS.

As an aside, included in your recent news release is the intention to collaborate with the Federation Indians of Graton Rancheria in this process. That, of course, is commendable. However, I wonder if there could be some collaboration with our local Miwoks, who inhabited the land long before others, and also have tribal views and traditional ecological knowledge of the planning area.

Thank you for the opportunity to comment on this upcoming planning process.

Sincerely,

Mel Wright

**Correspondence ID:3167**

Correspondence: In the name of compassion and decency and humanity, for God's sakes please take down that fence of death for the Tule Elk. Your job is to protect and take care of Wildlife, not to starve these animals on behalf of the dairy ranchers. These poor, voiceless, defenseless animals are suffering and dying for the greed of the dairy industry. Shame! Shame on you all! How can you look at yourself in the mirror every morning while those animals are suffering and dying. Take down that fence!!!

**Correspondence ID:3168**

Correspondence: Please tear down man-erected fences to allow these indigenous animals, like Tule Elk, to roam free and unobstructed , provide year round water, and corral cattle away from the National park lands.

National seashores are Not Places to allow cattle the freedom to ruin the land, devastate the vegetation, and pollute the ground with urine and cow pies.

This land is for us to enjoy.

I do not enjoy the smells of cattle.

Please consider if this was in your backyard.

Thank you

jp

**Correspondence ID:3169**

Correspondence: I'm writing in support of the Point Reyes National Seashore, preservation of the natural environment, resources, habitats and wildlife, especially the Tule Elk. I urge you to read Kenneth Brower's letters of the PRNS and it's founding. His father, David Brower, director of the Sierra Club, was present at the signing of the Law in 1962. Ranching was not included in the Law and was to be phased out over time. Increased commercialism was never intended until Rancher Lunny met with Trump in 2017. Then the 20 year lease was proposed with expanded farming, varied stock, even tourism and lodging. The ranchers had already received healthy compensation for the land. Ranchers have become overconfident, careless, even entitled in their commercial pursuits and have taken advantage of a more than generous arrangement.

Tule Elk were reintroduced as part of the natural environment. Their conditions should not be relegated by the those of cattle. The Park has a responsibility to protect and support Tule Elk not favor cattle and ranch commerce at the expense of the Elk. The Elk are being dismissed and treated abusively. The Elk deserve the expanse of the parkland without fences. They need free access to water and grazing land. Tule Elk are the natural inhabitants of the Seashore not the cattle.

Ranches damage soil, water, air and parkland.

Agricultural runoff, manure, pesticides, nutrients with a variety of toxins contaminate water systems, ponds, streams and ultimately the ocean. This affects the food source, seagrass, plankton and small organisms that feed larger fish and marine mammals.

A 20 year lease with expanded commercial ventures has given ranchers license to abuse and ignore environmental protection. They must be held accountable with frequent, ongoing investigation and review of ranch policies.

Ranchers should never have been allowed to renegotiate the terms of the original agreement. The NPS should gradually decrease, not increase, ranching in the Point Reyes National Seashore.

Thank you.

Jayne Cerny

**Correspondence ID:3170**

Correspondence: The elk fence should be removed, along with all the damaged sections of fencing scattered throughout the park. I have personally seen dead elk wrapped in fence wire on multiple occasions inside the elk reserve. This fence is causing damage to the ecosystem and hurting the wildlife at PRNS. It would also be wise to remove the cattle ranching operations inside our national seashore. They are causing severe degradation to the ecology and the environment as a whole. The people do not want private for profit businesses in our national seashore. Please listen to the people, this is our land!

**Correspondence ID:3171**

Correspondence: Lets get on board with the original intent of the Park and stop allowing ranchers and way too many cows to damage the land, and water.

The Elk are rare - originally from this area and a unique treasure.

Stop taking ranching \$ and pressure from politicians who take ranching \$ and get on board with the job you are supposed to be doing!

**Correspondence ID:3172**

Correspondence: Tomales Point Area Plan April 27, 2022

Attn: Superintendent Kenkel

Point Reyes National Seashore

1 Bear Valley Rd.

Point Reyes Station, CA 94956

Re: Fenced Tule Elk Herd at Point Reyes National Seashore

I am one of the great majority of public voices writing to address what you've described in your notification as the "complex wildlife, resource, and wilderness management issues at Tomales Point within Point Reyes National Seashore."

As stated in your solicitation for comments, "More than 85% of the Reserve is within the Phillip Burton Wilderness...The impetus for this planning process are the impacts to the tule elk population and other resources within the Reserve arising from the historic drought conditions over the past eight years."

These two lines, summarize the failed perspective of the NPS in understanding the definition of "wilderness" and the continued refusal to take responsibility for the wildlife and resources under its jurisdiction. The misplaced blame on "drought conditions" for the extraordinarily high death rates of tule elk unnaturally contained in what is the direct opposite of wilderness has been thoroughly and indisputably exposed to the public and the facts of the PRNS staff's blatant lack of consideration and disregard for the wellbeing of the elk and other wildlife are now widely known.

The National Park Service employees at PRNS have failed to adhere to the mandates in the creation of the park, specifically the NPS Organic Act & the Enabling Legislation which, as you know, states that this land be managed ". . . without impairment of its natural values...consistent with, based upon, and supportive of the maximum protection, restoration, and preservation of the natural environment." In moving forward, any NPS planning efforts must take into consideration the failure in meeting these criteria and the scope of the planning effort must genuinely address the public's interest in protecting wildlife and restoring the land. For this plan to succeed, there must be a re-evaluation of the GMP that prioritizes wildlife and nature in this park over private profits.

Any plan that does not include the ability for animals to safely roam, forage and seek water and shelter in the entirety of the park will be in violation of the laws on which this park was founded. To stay the current course would be a further violation of the law.

The survival of all flora and fauna in this park and especially of this endemic elk species entrusted to your care remains your responsibility. We are at this juncture because thus far, the staff at PRNS has failed to fully take on this responsibility and instead placed allegiances elsewhere.

You have the data, you know the issues: Restore this park and remove the elk fence to change course before more of our precious resources and wildlife are destroyed and the PRNS becomes the epitome of failed management.

Diane E. Gentile

**Correspondence ID:3173**

Correspondence: Please do the right thing. PLEASE REMOVE THE TOMALES POINT FENCE.

The Tule Elk will thank you. Support for biodiversity is critical - especially right now. Please do your part to make sure that this beautiful, sacred species not only survives, but thrives.

We thank you. Our children thank you. Our children's children will thank you.

And our entire fragile and interconnected planet will thank you.

**Correspondence ID:3174**

Correspondence: I am commenting to ask the National Park Service to please remove the Tomales Point Fence at Pt. Reyes National Seashore to allow the tule elk to roam freely at Point Reyes.

thank you.

**Correspondence ID:3175**

Correspondence: Take the fences down, get the cattle out, clean up the waters and give the Elk their room please!

**Correspondence ID:3176**

Correspondence: I fully support the FORELK's stance and commentary re: Tule elk population in PRNP. I'm unable to address any more eloquently than they have done. Personally Experiencing the sight and sound of these magnificent animals at PRNP is a priceless opportunity. It certainly doesn't compare with being stopped on the roadway while herds of domesticated cattle are crossing. Please give this herd a chance!

Sincerely,  
Jane Hartman

**Correspondence ID:3179**

Correspondence: I am writing to you on behalf of myself, as well as my nonprofit organization Plant-Based Advocates

In Los Gatos, CA. Thank you for the opportunity to give feedback on the National Park Service's planning process for the Tomales Point area in Point Reyes National Seashore. I am urging you to remove the Tule Elk Reserve fence so that the elk can have access to adequate food and water in order to thrive.

The removal of the Tule Elk Reserve fence is neither a radical or new idea. In fact, the National Park Service's own 1998 Environmental Assessment concluded that the only way to create a healthy free-roaming population of Tule Elk in the Seashore and associated parks would require the "elimination of exotic cervids and removal of the fence across Tomales Point" (National Park Service, 1998, p. 89).

The decline of the Tule Elk Reserve's herd by nearly half over the last few years is not natural self regulation but a direct result of the lack of access to proper nutritional forage and adequate water sources during the increasingly hot summers caused by Climate Change. Because there are no perennial streams in the Tule Elk Reserve, the herd's population has been cruelly limited to which individuals can survive on limited nutrition and water. This is not a natural carrying capacity.

The tule elk are the "bison" of the west, and once number half a million strong on the west coast. The tule elk are the dominant herbivore in this ecosystem and are necessary to preserve and restore our ecosystem.

It's time for NPS to stop putting commercial cattle industry wants ahead of human, animal and ecosystem needs. Please remove the fence and allow the tule elk to roam free, allowing them to grow stronger and help restore this precious ecosystem.

**Correspondence ID:3180**

Correspondence: To the National Park Service, Marin County officials and local population of the Point Reyes National Seashore, most importantly the population of the Tule Elk:

It seems the emphasis in the management of the natural wildlife and encroaching ranching lifestyle has taken a very disturbing turn away from a humane direction.

I am shocked and deeply disturbed to see how this is actually happening.....

I am in disbelief that in Marin, of all places, such a inhumane act is taking place.

It is so sad and so wrong. fencing in Wildlife and preventing the Elk from ranging and finding water and food???? Really?

I have grown up in this beautiful place and so amazed by the natural wildlife and landscape.

But now, I am disheartened by the actual people in power that are letting this take place.

Stop it. Stop it now..... The Elk are not prisoners..... SET THEM FREE NOW.

Sue Sullivan

**Correspondence ID:3181**

Correspondence: (Some info copied/edited from the Elk Team letter)

The removal of the Tule Elk Reserve fence needs to be done. In fact, the National Park Service's own 1998 Environmental Assessment concluded that the only way to create a healthy free-roaming population of Tule Elk in the Seashore and associated parks would require the "elimination of exotic cervids and removal of the fence across Tomales Point" (National Park Service, 1998, p. 89).

The decline of the Tule Elk Reserve's herd by nearly half over the last few years is not natural but is put there because a fence keeps them from good forage and any reliable water sources.

The Tule Elk Reserve fence causes disturbing genetic selection limitations for the herd in the Tomales Point area. The loss of genetic diversity across generations can lead to harsh consequences, such as weakness, illness, disease, death and even extirpation if the National Park Service does not actively increase connectivity between the herds in the park.

A study published last year on the genetic diversity of a Tule Elk metapopulation reintroduced in a similar time frame to the Tomales Point herd found that there was lack of migration among the groups, and almost every group was below the threshold to improve or maintain genetic diversity over the next 25 years (Batter, Bush & Sacks, 2021).

This suggests that genetically isolated populations, like the Tomales Point herd, will likely decline further due to inbreeding and genetic problems unless they are able to move freely and breed with the other free-roaming populations in Point Reyes National Seashore and the state and a 1987 study conducted in the Tomales Point Reserve backs up this claim. The authors argue that without the ability to increase genetic variation, the Tomales Point herd will suffer from the various problems associated with inbreeding, depression, and genetic drift to the point of extinction (Barrett & Gogan, 1987). They need to be able to freely roam and breed with the other established free-roaming herds.

The National Park Service, among others, often claim that removal of the Tomales Point fence will have significantly harmful impacts on the tenant cattle ranch operations in the Seashore. From what I understand the Tule elk were there before cattle ranching and the cattle are ruining the land and causing dead zones in the shoreline. The current population size of the Tule Elk in Point Reyes will have little impact on cattle grazing in the Seashore. This is backed up by a case study in the Owens Valley in Southern California. A socioeconomic analysis was conducted in 1985 by researchers in the Owens Valley which has had similar competition between various political, agricultural and environmental interests in the last few decades. "The competition between Elk and domestic livestock in the Owens valley is minor even during drought" (Wantrup & Phillips, 1970, p. 26).

The Tomales Point fence is in clear conflict with the National Park Service's directive to protect the natural resources of the Seashore for the countless generations to come. This goal can only be actualized through the removal of the Tomales Point fence, the installation of wildlife corridors to increase connectivity among the Seashore's several Tule Elk herds, and long-term genetic monitoring.

The creation of wildlife corridors was originally proposed in the 1998 Environmental Assessment (Appendix G) as one of the many options to increase connectivity and establish free-roaming herds (National Park Service, 1998).

It is your and all of our responsibility to ensure that the bugling Tule Elk are not another silenced instrument in the wild orchestra of the planet's natural world. We ask you to do the right thing, and make Point Reyes a National Seashore that lives up to the values it espouses.

**Correspondence ID:3182**

Correspondence: Please support our beautiful Point Reyes park--the wild animals that live there, and the natural habitat..

The Tule Elk Reserve fence should be removed!

Thank You for doing the right thing,

Judy Lindow

Dear Superintendent Kenkel,

Thank you for the opportunity to comment regarding the National Park Service's planning process for the Tomales Point area in Point Reyes National Seashore.

I ask you to ensure the following:

- 1) Remove the fence currently restricting Tule Elk movement within the Park.
- 2) Facilitate Tule Elk movement to freely breed with other free-roaming elk populations in Point Reyes National Seashore.

For over twenty years I have lived near the Park, hike in the Park. I was born and raised in California. I see the Tule Elk and I see the cattle. Cattle are fenced into their respective ranch locations where ranch operations owners are their caregivers.

With millions of visitors, the Park is the responsible caregiver for the lands, resources and wildlife that live in the Park.

Currently, Tule Elk are restricted inside the fenced area and do not have adequate access to sufficient wilderness nutrients. A severe water deficiency is particularly acute as we have more hot summers.

There are no perennial streams in the Tule Elk Reserve. The lack of water is a cruel limitation.

If this were a neighborhood issue and dogs and cats were noticed by other neighbors to be roaming through the neighborhood without adequate food and water, someone would call Animal Control who would take care of the situation.

You are our public servants for Park issues. Cattle ranch owners are responsible for their issues.

Cattle ranch operations' freedoms to this area stop where the public Park's freedoms for administering public park space start. Honor long standing agreements that have thus far preserved limited space constraints between the Park and ranch operations.

As with Animal Control, the public does not expect that uncared for dogs and cats continue to roam the neighborhood creating a nuisance, or worse, die.

It would be criminal negligence. The Tule Elk situation borders on criminal negligence.

The creation of wildlife corridors specifically is a feasible and realistic goal which would allow the Tomales Point herd to travel to the Southern portions of Point Reyes and alleviate the population density in the North.

What will visitors see in fifty years if you do not act now? A living landscape and mosaic of wildlife, including the iconic Tule Elk--or a wasted landscape ruined by our own hubris and inaction?

I ask you to do the right thing and make Point Reyes a National Seashore the Park that lives up to the values it espouses and takes full responsibility for the land, resources, and wildlife.

Respectfully,  
Eric Boehm

**Correspondence ID:3184**

Correspondence: We feel that the fence should be taken out. The ranches should be also taken out as was the original plan for the area.

**Correspondence ID:3185**

Correspondence: I have been following how the Tule Elk have been blocked from accessing water in the summer and dying. It is shocking. I can't believe this is allowed. Elks need the freedom to move. Also by dividing herds you risk inbreeding and this reduces their resilience.

Please remove the Tule Elk Reserve fence!!! In fact, the National Park Service's own 1998 Environmental Assessment concluded that the only way to create a healthy free-roaming population of Tule Elk in the Seashore and associated parks would require the "elimination of exotic cervids and removal of the fence across Tomales Point" (National Park Service, 1998, p. 89).

**Correspondence ID:3186**

Correspondence: I am a regular visitor to the park and I am asking for the REMOVAL OF THE TOMALES POINT FENCE!! I have seen the elk stuck behind the fence for years and it's heartbreaking and cruel. Please do the right thing! REMOVE THE FENCE!!

**Correspondence ID:3187**

Correspondence: I'm writing to add my voice to those requesting that your new management plan for the Tomales Point area consider the welfare of the Tule Elk. As you know, currently a fence separates two herds, isolating each and resulting in inbreeding and genetic decline. The fence prevents access to forage and water, already in short supply due to drought conditions and climate change. The spectacle of volunteers bringing water to elk who have been cut off from it is both heroic and sad.

I remember when the Tomales Point area was included in the Point Reyes National Seashore. At the time, it was expected that the dairy farms would be eliminated over a limited period of time. In the interim since then, dairy farms have not disappeared and climate change and the role played in it by

cows and methane have become scientific facts. It is more important than ever that National Park decisions consider climate change in land and wildlife policies.

Please create a Tomales Point management plan that takes down the fence which separates Tule elk from the water and forage they need and replace this barrier with wildlife corridors that enable co-mingling and sustenance.

Thank you.

**Correspondence ID:3188**

Correspondence: Please remove the Tomales Point fence To help address the water and food efficiency for the Thule elk.

Thank you for your consideration

**Correspondence ID:3189**

Correspondence: From what I have seen and come to understand it seems that removing the fence to allow the native tule elk more access to water in their native terrain is the best thing to do . I strongly encourage you to remove the fence!

**Correspondence ID:3190**

Correspondence: May 5, 2022

Dear Superintendent Kenkel,

We are thankful for the opportunity to give feedback on the National Park Service's planning process for the Tomales Point area in Point Reyes National Seashore. It is our position that the removal of the Tule Elk Reserve fence is the only way to accurately address the nutrient and water deficiency and associated Tule Elk population management problems in the Tomales Point area.

The removal of the Tule Elk Reserve fence is neither a radical or new idea. In fact, the National Park Service's own 1998 Environmental Assessment concluded that the only way to create a healthy free-roaming population of Tule Elk in the Seashore and associated parks would require the "elimination of exotic cervids and removal of the fence across Tomales Point" (National Park Service, 1998, p. 89).

The decline of the Tule Elk Reserve's herd by nearly half over the last few years is not natural self regulation but a direct result of the lack of access to proper nutritional forage and adequate water sources during the increasingly hot summers caused by Climate Change. Because there are no perennial streams in the Tule Elk Reserve, the herd's population has been cruelly limited to which individuals can survive on limited nutrition and water. This is not a natural carrying capacity.

The Tomales Point herd is still relatively new and has very little genetic diversity compared to other natural herds. The entire Tule Elk subspecies experienced a severe bottleneck effect in the 20th century, and the Tule Elk Reserve fence causes further genetic selection limitations for the herd in the Tomales Point area. The loss of genetic diversity across generations can lead to harsh consequences, such as weakness, illness, disease, death and even extirpation if the National Park Service does not actively increase connectivity between the herds in the park and establish more free roaming herds within the Seashore's boundaries.

A study published last year on the genetic diversity of a Tule Elk metapopulation reintroduced in a similar time frame to the Tomales Point herd found that there was lack of migration

among the groups, and almost every group was below the threshold to improve or maintain genetic diversity over the next 25 years (Batter, Bush & Sacks, 2021).

Compared to natural Rocky Mountain Elk populations in Idaho, where there has been considerable gene flow between geographically isolated groups, there was little migration among most groups even decades after introduction (Aycrigg & Garton, 2014).

This suggests that genetically isolated populations, like the Tomales Point herd, will likely decline further due to inbreeding and genetic problems unless they are able to move freely and breed with the other free-roaming populations in Point Reyes National Seashore and the state. A 1987 study conducted in the Tomales Point Reserve backs up this claim. The authors argue that without the ability to increase genetic variation, the Tomales Point herd will suffer from the various problems associated with inbreeding, depression, and genetic drift to the point of extinction (Barrett & Gogan, 1987). Genetic variation in the herd could be improved or at least maintained through natural processes if the herd was able to freely roam throughout the Seashore and breed with the other established free-roaming herds.

Although it is the National Park Service's responsibility to prioritize the natural resources (including the Tule Elk) of the Seashore, it is impossible to ignore agricultural and ranching operations within its boundaries. The National Park Service, among others, often claim that removal of the Tomales Point fence will have significantly harmful impacts on the tenant cattle ranch operations in the Seashore. It is our position that the current population size of the Tule Elk in Point Reyes will have little impact on cattle grazing in the Seashore.

This is backed up by a case study in the Owens Valley in Southern California. A socioeconomic analysis was conducted in 1985 by researchers in the Owens Valley which has had similar competition between various political, agricultural and environmental interests in the last few decades. Additionally, the population size of Tule Elk in the Owens Valley at this time fluctuated roughly between 200 and 300 individuals which is similar to the Tomales Point Herd in Point Reyes today. (Wantrup & Phillips, 1970) Obviously, Owens Valley and Point Reyes are not exactly the same but there are many undeniable similarities especially the central factor of competition between domestic livestock and the native Tule Elk.

The analysis concluded that Tule Elk populations in the Owens Valley could be significantly larger if the state was able to establish more free-roaming herds throughout the region. The social benefits of this would ultimately outweigh the social costs associated with the conflict between Tule Elk and livestock. The authors remark, "The competition between Elk and domestic livestock in the Owens valley is minor even during drought" (Wantrup & Phillips, 1970, p. 26). The Tomales Point fence is in clear conflict with the National Park Service's directive to protect the natural resources of the Seashore for the countless generations to come. This goal can only be actualized through the removal of the Tomales Point fence, the installation of wildlife corridors to increase connectivity among the Seashore's several Tule Elk herds, and long-term genetic monitoring.

The creation of wildlife corridors specifically is a feasible and realistic goal which would allow the Tomales Point herd to travel to the Southern portions of Point Reyes and alleviate the population density in the North. This was originally proposed in the 1998 Environmental Assessment (Appendix G) as one of the many options to increase connectivity and establish free-roaming herds (National Park Service, 1998). Today, wildlife corridors are still a viable alternative to increase connectivity between the herds in the Southern part of the Seashore, and allow the Tomales Point herd to stabilize its population size and health.

We are living at a critical moment in time as we are faced with unprecedented loss of biodiversity and wild places on a global scale. The public has set aside Point Reyes as a National Seashore--one of a few rapidly vanishing slices of wilderness in the West to be protected and

Preserved. The decisions made today will have a profound impact on innumerable generations of visitors and wildlife. What will visitors see in fifty years if you do not act now? A living landscape and mosaic of wildlife, including the iconic Tule Elk--or a wasted landscape ruined by our own hubris and inaction?

It is your and all of our responsibility to ensure that the bugling Tule Elk are not another silenced instrument in the wild orchestra of the planet's natural world. We ask you to do the right thing, and make Point Reyes a National Seashore that lives up to the values it espouses.

Thank you for your time and consideration, be well.

Sincerely,

John Daniel Hanavan

**Correspondence ID:3193**

Correspondence: A federal lawsuit in 2016 over the NPS prioritizing commercial ranching to the detriment of the Seashore's natural resources and the public, led to a multi-year planning process. But had little impact on the final GMPA. Thousands of public comments ultimately mattered little. As spokesperson Melanie Gunn said of the public comment process, "This isn't a vote." The scoping document for the Tomales Tule elk, appears another such performative process.

The elk scoping document subordinated the welfare and survival of these native wildlife to perpetuating private ranching. The goal of this process isn't to produce a healthy, sustainable elk population in the only national park where they exist, but to minimize inconvenience to the tenant ranchers.

The elk scoping document presumes the Tomales elk herd will continue to be fenced to protect cattle, and kept separate from the park's other elk herds.

This portends a plan for how animals are to be managed in zoo, not in a national park.

Whether for lack of funds, expertise, or the influence of a politically powerful special interest, the NPS at Point Reyes has proved incapable of managing for the survival of the Tomales Point elk herd. The NPS's failure to manage according to the recommendations of 1998 elk management plan has directed contributed to the loss elk's genetic diversity and ongoing population crashes. The NPS has historically explained the increasing die offs of the Tomales elk herd as "normal." But denying confined wildlife sufficient food and water so as to cause suffering and death is not normal. It's sociopathic. Allocating

scarce public funds and limited staff to the Seashore's commercial dairy and cattle operations is to misapprehend the mission of the National Park Service.

The following should be undertaken by the NPS in its current and future approaches to elk management.

1. Contract with independent outside experts to produce scientifically based, short- and long term management plans for ALL the Seashore's Tule elk (not limited to Tomales Point) with the goal of ensuring the wellbeing of the species and its survival in perpetuity at the Seashore. Include analysis of current and predicted conditions impacting the Tule elk, such as, but not limited to, climate change, drought, fire, fencing, forage, water, genetic diversity, reproduction, disease, mortality, impacts from ranching and the conditions expected by the dissolution of ranching, and other relevant and changing conditions affecting the Seashore and viability of the species.
2. Produce the elk management plan within one year and obtain the necessary resources to implement it.
3. Implement it.

Correspondence: Dear Superintendent Kenkel,

Thank you for the opportunity to give feedback on the National Park Service's planning process for the Tomales Point area in Point Reyes National Seashore.

I am a resident of Orinda and feel very fortunate to live within visiting distance of Point Reyes. This is a beautiful area that my family and I enjoy, not only for the landscape but for the wildlife and Tule Elk that live there. I am disturbed that the care and protection our National Seashore has been declining and even losing its unique Tule Elk herd as a result of fencing practices which are unsound and of no benefit whatsoever to the public to which the seashore belongs.

It is disturbing to know that the elk are under serious threat through lack of drinking water and proper forage. Furthermore, the fencing prevents them from fleeing approaching fire. There is no justification for allowing the herds to suffer. And certainly we know from experience in 2016 as well as current observed deaths, that this is more than a likely possibility.

Please honor your commitment as guardians of our national parks. Help us protect what is left of our heritage. I strongly urge you to remove the Tomales Point fence.

Thank you,

Kay Sibary

**Correspondence ID:3196**

Correspondence: Please keep PRNS for natural wildlife, tule elk, sea mammals, birds, reptiles, native plants, nature & for us human nature lovers to peacefully enjoy.

Cattle ranches, Dairy ranches, animal ag of any type, slaughter facilities, animal exploitation corporations, have absolutely no reason whatsoever to be polluting & harming the Nation's National Seashore Public Park.

Please consider turning PRNS into a natural & accessible national public park Without millions of pounds of cattle manure, miles of ugly barbed-wire-fence and trampled down polluted National Seashore Public Parkland.

Scott Young

## Correspondence ID:3199

Correspondence: Thank you for accepting my public comment on the Tomales Point planning process for Point Reyes National Seashore. I am very concerned. The Seashore's natural resources like the Tule Elk should be unimpaird.

Taxpayer dollars should not be spent on killing or neutering any animals, especially rare Tule Elk, once the herd is deemed "too large". The plan should allow for native wildlife to roam freely and die of natural causes.

Moving forward the Park Service should partner closely with the Coast Miwok and scientists to re-wild the park.

Removing the fence allows native tule elk to roam free, which is good for both elk and for park landscape. Please help make this happen.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity.

**Correspondence ID:3201**

Correspondence: Please remove the elk fence from Point Reyes National Seashore in order for the elk herds to have access to sufficient amount of water, minerals and forage and to live like the nomadic animals they are.

It would be better and less expensive to allow Tule elk access to water sources, such as the spring and lagoon in the region directly below the Tomales Point reserve.

It is requested to stop using taxpayers' money to pay for the visual blight of the Elk Fence out on Tomales Point. Please stop trucking in water and minerals and whatever else to try to sustain a native

herd in a non-native environment. Take down the fence, and use our taxpayers' money to actually turn the Seashore into a National Park that it deserves. Wildlife, natural habitat, clean water/soil/air, and public access should be the primary forces the Park Service supports - not a small group of politically-connected ranchers and their hoofed methane-operations.

The drought conditions are continuing. Due to this urgency the Park must now act to help not only the Tule elk but all other species within its borders. The most impactful thing the Park can do in the short term to assist the elk in their survival is to remove the elk fence. This is not only the most humane thing to do, it is the most cost-effective and reasonable action.

I hope the above concerns are addressed honestly and thoroughly. I, like millions of others, treasure our Seashore, and want it to be treated in a manner that preserves it and enhances it for future generations, something that is not happening now. I will be watching to make sure it is a transparent process, and look forward to improved management of our public commons.

**Correspondence ID:3202**

Correspondence: Regarding the upcoming plan for Tomales Point within Point Reyes National Seashore I request our National Park prioritize the wishes of the Miwok First Nation people. They managed that land for thousands of years and didn't disrupt the ecosystem. Allow them to determine how the land should be managed so that our future generations will be allowed to experience biodiversity, not cows, that exists there today.

There's not enough natural food and water to sustain the Tule Elk trapped behind the fence at the Tule Elk Reserve. The existing fence should be removed and replaced with a wildlife friendly fence that will allow Tule Elk to leave the reserve while still keeping cattle out.

Removing the existing fence will reduce the costs associated with proper stewardship of these captive animals - water troughs, mineral licks and staff time to regularly monitor the health of the herd will be unnecessary if the fence is removed.

The 1998 plan says "Natural processes will be relied on to control populations of native species ..." There is nothing natural about caging animals behind a fence.

I respectfully submit this letter and request the National Park Service to be impartial in the next steps related to our incredible native wildlife in Point Reyes National Seashore.

**Correspondence ID:3203**

Correspondence: Tomales Point is a stunning place and I appreciate the chance to provide input for the planning process.

Removing the elk fence is a frugal option, for a Park Service that apparently operates with limited resources.

The park should put every effort into connecting Tomales Point and its wildlife to the rest of the park. A visitor to the park should not have to pass through cattle/dairy pasture to walk through the Philip Burton Wilderness and nor should the Tule Elk. Every effort should be directed in allowing the elk to roam freely across the entire area of the park.

We should not have a captive herd of Tule elk in the Point Reyes National Seashore. Tule elk should be allowed to roam free.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3204**

Correspondence: I am writing to submit my public comment for the Tomales Point planning process at Point Reyes National Seashore. Tomales Point is a de facto prison or zoo enclosure for several, distinct Tule Elk herds present there. It is a cruel, inhumane, and entirely contrived solution to the real problem: continued beef and cattle ranching across one-third of our Seashore. Please take down the Elk Fence now.

The Park Service should not be spending so much money to maintain fencing at Tomales Point Reserve. There are all the expenses for materials, then all the hidden costs and time for labor, operations, administration, and rancher-pleasing. As a concerned citizen for the elk, please spend the money to remove the fence and free the Elk.

The NPS should revise the PRNS Succession Policy to permanently retire grazing leases as ranchers choose to not renew them. This would create an historic opportunity to restore that 33% of the park that is currently surrounded by fences, full of cow manure and turn it into a program that will benefit not only Tule Elk, but expand the biodiversity throughout the park. The public would enthusiastically volunteer to help the NPS with such a program.

The fence should be removed, for the benefit of the elk herds and their survival.

Thank you for your attention to my comments. Tomales Point should be an open area, not fenced in because ranchers use false arguments against Tule Elk. Cattle by the thousands at Point Reyes Seashore cause exponentially more damage than a few hundred Tule Elk. The Park Service should protect and help wildlife and their habitats, not promote private, for-profit ranching. The fence needs to come down, and the ranchers need to stop interfering with wildlife, polluting streams, and hassling Park visitors. The ranchers need to either give up some of their privileges, or get out of the Park. The American people will be watching how you approach what's right for Tomales Point and our National Park.

Correspondence: I want the fence at Tomales Point, which confines tule elk, to be removed. This is a necessary step for the NPS to take for our native elk.

When will the National Park Service and Point Reyes National Seashore officials stop spending money on a misbegotten Elk fence idea? Remove the fence, and let the Tule Elk roam. It is time to get rid of the cattle ranchers in our national park, as they're the ones forcing their will against the American public's will. Free the Elk and let Americans enjoy a true national park.

There have been claims made over the years by ranching interests that the elk have damaged ranch operations or facilities. NPS should determine the facts here, and document the actual costs of any verifiable damage. Additionally, ranchers have claimed the elk need to be separated from their cattle because the elk will eat too much of the forage they want for their cows. The science clearly shows that elk eat far less than cows, weigh a fraction of cows' weight, and being browsers, do not deplete the grasses and shrubs as much as cows do. Therefore, when scoping the plan update, NPS needs to compare the impacts of elk foraging vs. cattle grazing, and develop its plans consistent with the Organic Act of 1916 mandate of resource preservation and protection.

Removing the elk fence is the most impactful step the Park can take for Tomales Point, and this should be the plan review's top priority. This and total removal of all dairy and cattle operations from all of the park would have the strongest positive impacts, both ecologically and in terms of protection of the public's resources. The removal of both would benefit the return of native, deep-rooted grasses, allow the return of birds and wildlife that cannot survive in the barren fields where cattle have eaten the greenery down to the earth, and let the natural prairie reestablish itself. It could also serve as an outdoor laboratory for studying how to accelerate its healing and nurturing, information that will be increasingly important as we try to save our planet from the damages of global warming.

We need a long-range plan that supports a healthy population of native Tule Elk. It is time for the Park Service to prioritize our elk in PRNS over private cattle operations on our public land. Thank you in advance, for a plan that will include immediate removal of this unnatural and unethical eight foot fence.

**Correspondence ID:3207**

Correspondence: Please read and consider my public comment on the Tomales Point planning process for Point Reyes National Seashore. Tule Elk should be free to roam, gather, find water and food, and live more healthy lives--not be imprisoned for their entire lives behind a god-awful fence. Point Reyes is a national park, therefore please remove the fence now.

The elk fence has hidden costs that have not been analyzed or made public before. Besides the typical costs of fence construction and maintenance, there's the cost of park staff having to make sure the water tanks that serve the captive elk herd are maintained and kept filled, the mineral licks provided are sufficient to the herd's needs, and complaints from ranchers are responded to. Then there are the costs of the impacts on the area outside the fence: the massive amounts of invasive plants that have forced out the native, deep-rooted grasses that are true effective carbon sequesters, the elimination of habitat for indigenous animals of all sizes, the carbon created by the rotting of annual invasive grasses, and more. And because the fence only exists at the request of cattle ranchers, NPS should look at the costs of the damage the cattle do with their methane pollution the atmosphere and their manure polluting the parks' streams, lagoons and bays. These ecological costs haven't been accounted for, and need to be.

The Park Service should put all resources to removing the elk fence, allow the elk to roam free, stop the killing of the elk, and plant native grasses for them to feed.

Removing the elk fence is the most impactful step the Park can take for Tomales Point, and this should be the plan review's top priority. This and total removal of all dairy and cattle operations from all of the park would have the strongest positive impacts, both ecologically and in terms of protection of the public's resources. Thank you for your attention to my public record comments on the Tomales Point planning process for Point Reyes National Seashore. Your responsibility is to the spirit of wilderness preservation and protection, and to the vast majority of Americans who have insisted that this iconic place be freed from private, for-profit, commercial business interests. We will continue to press for just that, like taking down the Tomales Point fence.

**Correspondence ID:3208**

Correspondence: Please remove the eight foot fence at Tomales Point for the sake of our native Tule Elk. We must prioritize our native Tule elk over the domestic cattle raised for profit in PRNS.

No matter what the Park Service spends to supplement water and minerals for the Tule Elk at Tomales Point, it will not matter. The Tule Elk are starving to death at Tomales Point due to continued drought, and megadrought. Please stop spending time and money on the fence and artificial approaches, and let the Elk roam free for natural sources of water and good nutrition.

The Park Service should put all resources to removing the elk fence, allow the elk to roam free, stop the killing of the elk, and plant native grasses for them to feed.

Point Reyes National Seashore should plan for prompt removal of the Elk Reserve fence on Tomales Point. This will achieve Tule Elk freedom of movement to naturally water, forage, and mate, and sustain optimal health and well-being of Tule Elk throughout the Seashore.

Thank you for your attention to my comments. If you do only one thing: Remove the godawful eyesore of a fence out there. Would you want to be trapped without enough water or food? You can't say it's a natural process of attrition if you've got them captive. Remove the fence immediately. Create safe and easy wildlife corridors for the elk to move out. Make the ranchers stop harming wildlife and hassling human visitors. The American people in multiple surveys, letters, op-eds, articles, and more want a National Park at Point Reyes. Not a ranch.

**Correspondence ID:3209**

Correspondence: Thank you for accepting my public comment on the Tomales Point planning process for Point Reyes National Seashore. I am very concerned. The Seashore's natural resources like the Tule Elk should be unimpaired.

No matter what the Park Service spends to supplement water and minerals for the Tule Elk at Tomales Point, it will not matter. The Tule Elk are starving to death at Tomales Point due to continued drought, and megadrought. Please stop spending time and money on the fence and artificial approaches, and let the Elk roam free for natural sources of water and good nutrition.

The NPS should revise the PRNS Succession Policy to permanently retire grazing leases as ranchers choose to not renew them. This would create an historic opportunity to restore that 33% of the park that is currently surrounded by fences, full of cow manure and turn it into a program that will benefit not only Tule Elk, but expand the biodiversity throughout the park. The public would enthusiastically volunteer to help the NPS with such a program.

The 1998 plan says "Natural processes will be relied on to control populations of native species ..." There is nothing natural about caging animals behind a fence. The existing fence at the Tule Elk Reserve should be removed and replaced with a wildlife friendly fence that will allow Tule Elk to leave the reserve while still keeping cattle out.

Thank you for paying attention to my comments. Please include them in the official record. The Park Service, if nothing else, needs to remove the fence at Tomales Point so the Elk can find food, water, and live a more normal, healthy, wild life. The elk are literally dying behind that fence. Between the Park Service, the public, scientists, and Native American ecologists, there is a solution to making things better out at Point Reyes. Please listen to the public, and use their input....not just do what the ranchers want to make their money and ruin the place.

**Correspondence ID:3210**

Correspondence: Please accept for the record these comments as input for the NPS's upcoming environmental review of its Tomales Point management plan update. These are important aspects that must be considered in determining the scope of the planning process and should be included in any

environmental impact statement. My top concern is for the Park Service to remove the fence that keeps the tule elk penned in on grazing land that's insufficient to support a healthy herd.

Removing the elk fence is a frugal option, for a Park Service that apparently operates with limited resources.

The Park Service should put all resources to removing the elk fence, allow the elk to roam free, stop the killing of the elk, and plant native grasses for them to feed.

The NPS already studied this matter, decades ago, and determined the fence should be removed.

We ask, why should the "elk fence" across the width of Tomales Point on Point Reyes National Seashore be immediately removed? Because, at long last, after six decades of the Seashore's existence--it is the right, just, humane, and obvious thing to do for an American, even global, National Park, perched on the formidable and awesome Pacific Coast, still waiting for its true nature to be revealed.

**Correspondence ID:3211**

**Correspondence ID:3213**

Correspondence: Thank you for inviting public input into the planning process for Tomales Point. The best way to advance the National Seashore's mission is to remove the fence at Pierce Point.

The elk fence has hidden costs that have not been analyzed or made public before. Besides the typical costs of fence construction and maintenance, there's the cost of park staff having to make sure the water tanks that serve the captive elk herd are maintained and kept filled, the mineral licks provided are sufficient to the herd's needs, and complaints from ranchers are responded to. Then there are the costs of the impacts on the area outside the fence: the massive amounts of invasive plants that have forced out the native, deep-rooted grasses that are true effective carbon sequesters, the elimination of habitat for indigenous animals of all sizes, the carbon created by the rotting of annual invasive gasses, and more. And because the fence only exists at the request of cattle ranchers, NPS should look at the costs of the damage the cattle do with their methane pollution the atmosphere and their manure polluting the parks' streams, lagoons and bays. These ecological costs haven't been accounted for, and need to be.

Financial resources of the National Park Service (NPS) should be used to end the Tule Elk Reserve on Tomales Point, by removal of the rancher and NPS insisted eight foot fence and replace that with a wildlife-friendly smaller fence but a fence that keeps the cattle out of this preserved environment. Let's establish a Coastal Native Prairie Reserve in place of the wholly bad and inhumane Tule Elk Reserve. The Tule Elk get to roam free for food and water throughout the Seashore, and the current Reserve transforms into a wild habitat global study model during these times of severe climate heating and California megadrought.

Maintaining a captive Tule elk herd at Tomales Point will likely only become increasingly expensive with climate change and recurring, significant droughts. If the fence is removed, water troughs and mineral licks will be unnecessary.

As a long-time user of the seashore, I'm looking forward to seeing what the Park Service comes up with as an improved management plan. It's a good time to make some long-needed changes, particularly the elk fence removal. That alone will make a significant difference in one's experience of the park, and I'm sure it will be met with massive public approval. Thank you for considering my input. I'm excited to see the results.

**Correspondence ID:3214**

Correspondence: Thank you for reading my public comment for the Tomales Point planning process. We love Point Reyes National Seashore, but the Tule Elk Reserve is a really sad place out there. Why is a fence to trap wildlife even a good science idea? Please remove the Tule Elk Fence now.

Recently, the NPS has started an unnatural process of providing emergency water via tanks. This practice is costly, and has limited effectiveness.

The NPS should put resources into creating a rewilded park. It will be necessary to plan on demolition and disposal of the many tons of concrete which now comprise the modern loafing barns at each PRNS dairy (one of which supposedly closed a year ago).

Maintaining a captive Tule elk herd at Tomales Point will likely only become increasingly expensive with climate change and recurring, significant droughts. If the fence is removed, water troughs and mineral licks will be unnecessary.

I hope the above concerns are addressed honestly and thoroughly. I, like millions of others, treasure our Seashore, and want it to be treated in a manner that preserves it and enhances it for future generations, something that is not happening now. I will be watching to make sure it is a transparent process, and look forward to improved management of our public commons.

**Correspondence ID:3215**

**Correspondence ID:3216**

Correspondence: Thank you for accepting my public comment on the Tomales Point planning process for Point Reyes National Seashore. I am very concerned. The Seashore's natural resources like the Tule Elk should be unimpaired.

What are the annual costs for the Tomales Point Reserve fence and the supplemental water and minerals for the Tule Elk trapped there? Why are Elk still trapped and causing this expense, when there are ample lands and waters for Elk to roam at Point Reyes National Seashore? It's not a zoo, it's a national park. Please take down the fence.

The National Park Service should partner with the First Nation people and create a wildlife sanctuary in Point Reyes National Seashore so that our elk are not hazed, nor culled, nor confined without sufficient food and water.

The Tomales Point Elk Reserve fence must promptly be taken down. This should occur in conjunction with a renewed, science-based plan to cease rancher successions of leased lands, allowing Point Reyes National Seashore to revert to natural landscapes, waterscapes, habitats, and ecosystems.

Thank you for the opportunity to provide feedback on the upcoming plan for Elk Reserve in Point Reyes National Seashore. The 3-year timeframe proposed by the NPS appears to be too long of a period, as we have lost approximately 50% of our native Elk held captive behind this 8 foot fence due to lack of appropriate amount of food, water and minerals. In your upcoming plan, please ensure there are numerous alternatives available on the removal of this deadly fence. It is time for that fence to be removed.

**Correspondence ID:3217**

Correspondence: I am writing the National Park Service to respectfully request to remove the eight foot fence at Tomales Point in order for our iconic Tule elk to roam free in our National Park.

The Park Service should not be spending so much money to maintain fencing at Tomales Point Reserve. There are all the expenses for materials, then all the hidden costs and time for labor, operations, administration, and rancher-pleasing. As a concerned citizen for the elk, please spend the money to remove the fence and free the Elk.

Pierce Point Ranch should be the only real "historical" ranch in PRNS. It should be developed as a working model of a ranch from the 19th Century, with no more than a few head of cattle and a few dairy cows, showcasing actual ranching and farming techniques of that era. Docents could explain the conditions, techniques, and context for working the land under the times and circumstances in place at the time. It should also tell the full story of the Native Americans that preceded European settlers and their fate. All other ranches should be removed from the park.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

Thank you for paying attention to my comments. Please include them in the official record. The Park Service, if nothing else, needs to remove the fence at Tomales Point so the Elk can find food, water, and live a more normal, healthy, wild life. **Correspondence ID:3218**

Correspondence: Dear Superintendent Kenkel,

We are thankful for the opportunity to give feedback on the National Park Service's planning process for the Tomales Point area in Point Reyes National Seashore. It is our position that the removal of the Tule Elk Reserve fence is the only way to accurately address the nutrient and water deficiency and associated Tule Elk population management problems in the Tomales Point area.

The removal of the Tule Elk Reserve fence is neither a radical or new idea. In fact, the National Park Service's own 1998 Environmental Assessment concluded that the only way to create a healthy free-roaming population of Tule Elk in the Seashore and associated parks would require the "elimination of exotic cervids and removal of the fence across Tomales Point" (National Park Service, 1998, p. 89).

The decline of the Tule Elk Reserve's herd by nearly half over the last few years is not natural self regulation but a direct result of the lack of access to proper nutritional forage and adequate water sources during the increasingly hot summers caused by Climate Change. Because there are no perennial streams in the Tule Elk Reserve, the herd's population has been cruelly limited to which individuals can survive on limited nutrition and water. This is not a natural carrying capacity.

The Tomales Point herd is still relatively new and has very little genetic diversity compared to other natural herds. The entire Tule Elk subspecies experienced a severe bottleneck effect in the 20th century, and the Tule Elk Reserve fence causes further genetic selection limitations for the herd in the Tomales Point area. The loss of genetic diversity across generations can lead to harsh consequences, such as weakness, illness, disease, death and even extirpation if the National Park Service does not actively increase connectivity between the herds in the park and establish more free roaming herds within the Seashore's boundaries.

A study published last year on the genetic diversity of a Tule Elk metapopulation reintroduced in a similar time frame to the Tomales Point herd found that there was lack of migration among the groups, and almost every group was below the threshold to improve or maintain genetic diversity over the next 25 years (Batter, Bush & Sacks, 2021).

Compared to natural Rocky Mountain Elk populations in Idaho, where there has been considerable gene flow between geographically isolated groups, there was little migration among most groups even decades after introduction (Aycrigg & Garton, 2014).

This suggests that genetically isolated populations, like the Tomales Point herd, will likely decline further due to inbreeding and genetic problems unless they are able to move freely and

breed with the other free-roaming populations in Point Reyes National Seashore and the state. A 1987 study conducted in the Tomales Point Reserve backs up this claim. The authors argue that without the ability to increase genetic variation, the Tomales Point herd will suffer from the various problems associated with inbreeding, depression, and genetic drift to the point of extinction (Barrett & Gogan, 1987). Genetic variation in the herd could be improved or at least maintained through natural processes if the herd was able to freely roam throughout the Seashore and breed with the other established free-roaming herds.

Although it is the National Park Service's responsibility to prioritize the natural resources (including the Tule Elk) of the Seashore, it is impossible to ignore agricultural and ranching operations within its boundaries. The National Park Service, among others, often claim that removal of the Tomales Point fence will have significantly harmful impacts on the tenant cattle ranch operations in the Seashore.

It is our position that the current population size of the Tule Elk in Point Reyes will have little impact on cattle grazing in the Seashore.

This is backed up by a case study in the Owens Valley in Southern California. A socioeconomic analysis was conducted in 1985 by researchers in the Owens Valley which has had similar competition between various political, agricultural and environmental interests in the last few decades. Additionally, the population size of Tule Elk in the Owens Valley at this time fluctuated roughly between 200 and 300 individuals which is similar to the Tomales Point Herd in Point Reyes today. (Wantrup & Phillips, 1970) Obviously, Owens Valley and Point Reyes are not exactly the same but there are many undeniable similarities especially the central factor of competition between domestic livestock and the native Tule Elk.

The analysis concluded that Tule Elk populations in the Owens Valley could be significantly larger if the state was able to establish more free-roaming herds throughout the region. The social benefits of this would ultimately outweigh the social costs associated with the conflict between Tule Elk and livestock. The authors remark, "The competition between Elk and domestic livestock in the Owens valley is minor even during drought" (Wantrup & Phillips, 1970, p. 26). The Tomales Point fence is in clear conflict with the National Park Service's directive to protect the natural resources of the Seashore for the countless generations to come. This goal can only be actualized through the removal of the Tomales Point fence, the installation of wildlife corridors to increase connectivity among the Seashore's several Tule Elk herds, and long-term genetic monitoring.

The creation of wildlife corridors specifically is a feasible and realistic goal which would allow the Tomales Point herd to travel to the Southern portions of Point Reyes and alleviate the population density in the North. This was originally proposed in the 1998 Environmental Assessment (Appendix G) as one of the many options to increase connectivity and establish free-roaming herds (National Park Service, 1998). Today, wildlife corridors are still a viable alternative to increase connectivity between the herds in the Southern part of the Seashore, and allow the Tomales Point herd to stabilize its population size and health.

We are living at a critical moment in time as we are faced with unprecedented loss of biodiversity and wild places on a global scale. The public has set aside Point Reyes as a National Seashore--one of a few rapidly vanishing slices of wilderness in the West to be protected and Preserved. The decisions made today will have a profound impact on innumerable generations of visitors and wildlife. What will visitors see in fifty years if you do not act now? A living

landscape and mosaic of wildlife, including the iconic Tule Elk--or a wasted landscape ruined by our own hubris and inaction?

It is your and all of our responsibility to ensure that the bugling Tule Elk are not another silenced instrument in the wild orchestra of the planet's natural world.

We ask you to do the right thing,  
and make Point Reyes a National Seashore that lives up to the values it espouses

With Gratitude,

Sven Sorge  
(in the name of The ForElk Team)

**Correspondence ID:3220**

Correspondence: I am writing the National Park Service to respectfully request to remove the eight foot fence at Tomales Point in order for our iconic Tule elk to roam free in our National Park.

As a taxpayer I expect the National Park Service to spend money wisely and frugally. I also expect the Park Service to prioritize wildlife over private enterprise. Therefore I ask the Park Service to stop spending money on erecting and maintaining a wildlife fence for the sole purpose of keeping native Tule Elk out of the parcels that are leased by private cattle and dairy ranch operations within a National Park.

The NPS should put resources into creating a rewilded park. It will be necessary to plan on demolition and disposal of the many tons of concrete which now comprise the modern loafing barns at each PRNS dairy (one of which supposedly closed a year ago).

The first sentence of the Tule Elk Management Plan and Environmental Assessment, dated 1998 states "The purpose of this plan and environmental assessment is to guide the management, monitoring, and research of Tule Elk, *Cervus elaphus nannodes*, at Point Reyes National Seashore for the next five to ten years". Well here we are 24 years later and you're finally getting around to updating this horribly outdated plan. Meanwhile hundreds of beautiful Tule Elk have died behind that fence while the NPS did nothing. That fence has to go.

With the public's participation, I expect a greatly improved management plan for Tomales Point and the Tule elk. This is a good way for the Park Service to demonstrate that it can properly manage the public's resources in a way that improves the health and diversity of the park, while improving relations with the general public. Thank you for the opportunity to provide input.

**Correspondence ID:3221**

Correspondence: Please remove the elk fence from Point Reyes National Seashore in order for the elk herds to have access to sufficient amount of water, minerals and forage.

Without a fence at Tomales Point, the National Park Service wouldn't need to waste efforts and money bringing water up to the elk. The animals would have plenty of water available from Abbotts lagoon and other sources down in the valley.

The long run goal is to phase out cattle from the Point Reyes National Seashore, altogether. This would allow a number of costly issues to be dropped as the progression of steps were accomplished, namely the need and upkeep of the elk fences, trucking in feed and water for the elk herds in the increasing occurrence of drought, culling the herds when successfully repopulating the areas and eradication of invasive species of plants brought in by cattle, cattle feed, and industrial machinery.

A National Park was created in Point Reyes to protect one of the most scenic and biologically diverse areas in our country. It is being put at risk for the profits of a few private ranchers. This is not acceptable to the people of Marin, the SF Bay Area, and the nation, nor our native wildlife. It is time to remove the Elk fence.

I am grateful to have the opportunity to provide this preliminary feedback, and I look forward to participating in the next steps of this important planning process.

**Correspondence ID:3222**

Correspondence: Thank you for the opportunity to provide input on the updated Tule Elk Management Plan/General Management Plan for Pt. Reyes National Seashore. To help the National Park Service (NPS) best structure its environmental review process, I offer the comments below. Please consider including these points in scoping your review and the presumed Environmental Impact Statement.

Allowing the continuation of cattle ranching in this area, Tomales Point in the Point Reyes National Seashore, is contradictory to the NPS trying to mitigate the negative impacts of climate change partially caused by this very practice. The NPS needs to do its part and at every step possible be a leader to achieve this end-result.

Pierce Point Ranch should be the only real "historical" ranch in PRNS. It should be developed as a working model of a ranch from the 19th Century, with no more than a few head of cattle and a few dairy cows, showcasing actual ranching and farming techniques of that era. Docents could explain the conditions, techniques, and context for working the land under the times and circumstances in place at the time. It should also tell the full story of the Native Americans that preceded European settlers and their fate. All other ranches should be removed from the park.

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. The park's top priority should be to ensure the Tule elk survive and even thrive. Remove the elk fence.

Thank you for taking the time to read this comment, and for inviting public input. The land in Point Reyes National Seashore belongs to the public, and should be managed for public, not for private benefit.

**Correspondence ID:3223**

Correspondence: The Point Reyes National Seashore belongs to all Americans, not just to ranchers who profit from its use. The NPS must protect the Seashore and its wildlife.

Fences have no place in Wilderness. The NPS needs to end the tragic, ongoing deaths of rare Tule elk at Point Tomales in the Phillip Burton Wilderness by taking down the fence so elk can access food and water.

The NPS needs to prioritize the needs of native wildlife by putting an end to commercial ranching at Point Reyes like it was supposed to do decades ago.

**Correspondence ID:3224**

Correspondence: I appreciate the opportunity to provide input into this scoping process and ask that you remove the elk fence at Tomales Point.

Removal of the fence is a less expensive option than "management" of the herd.

The Park Service wastes taxpayer money on the self-fulfilling problems caused by its continued decades-long poor wildlife management choices out on Tomales Point. The already limited funds available should be used to remove the tule elk fence so elk can find sufficient food and water on their own across the Seashore.

Removing the fence allows native tule elk to roam free, which is good for both elk and for park landscape. Please help make this happen.

It is time to focus on the health of our National Seashore and protect the air, soil, water, native wildlife and native vegetation over the constant impact from private cattle operations. The ranchers espouse crackpot pseudoscience about false carbon sinks (pasture vs. native coastal prairie), regenerative ranching (oxymoron), methane digesters (new profit streams), while the objective and independent science-based literature state how a native landscape with native vegetation and wildlife will help fight climate change more effectively than cattle operations. Please prioritize our native landscape and native wildlife in Point Reyes.

**Correspondence ID:3225**

Correspondence: The removal of the Tule Elk Reserve fence is the only way to accurately address the nutrient and

water deficiency and associated Tule Elk population management problems in the Tomales Point area. The removal of the Tule Elk Reserve fence is neither a radical or new idea. In fact, the National Park Service's own 1998 Environmental Assessment concluded that the only way to create a healthy free-roaming population of Tule Elk in the Seashore and associated parks would require the "elimination of exotic cervids and removal of the fence across Tomales Point" (National Park Service, 1998, p. 89).

Please consider this plan to save elk.

**Correspondence ID:3226**

Correspondence: Thank you for accepting my public comment on the Tomales Point planning process for Point Reyes National Seashore. I am very concerned. The Seashore's natural resources like the Tule Elk should be unimpaired.

No matter what the Park Service spends to supplement water and minerals for the Tule Elk at Tomales Point, it will not matter. The Tule Elk are starving to death at Tomales Point due to continued drought, and megadrought. Please stop spending time and money on the fence and artificial approaches, and let the Elk roam free for natural sources of water and good nutrition.

The NPS should revise the PRNS Succession Policy to permanently retire grazing leases as ranchers choose to not renew them. This would create an historic opportunity to restore that 33% of the park that is currently surrounded by fences, full of cow manure and turn it into a program that will benefit not only Tule Elk, but expand the biodiversity throughout the park. The public would enthusiastically volunteer to help the NPS with such a program.

The 1998 plan says "Natural processes will be relied on to control populations of native species ..." There is nothing natural about caging animals behind a fence. The existing fence at the Tule Elk Reserve should be removed and replaced with a wildlife friendly fence that will allow Tule Elk to leave the reserve while still keeping cattle out.

Thank you for paying attention to my comments. Please include them in the official record. The Park Service, if nothing else, needs to remove the fence at Tomales Point so the Elk can find food, water, and live a more normal, healthy, wild life. The elk are literally dying behind that fence. Between the Park Service, the public, scientists, and Native American ecologists, there is a solution to making things better out at Point Reyes. Please listen to the public, and use their input....not just do what the ranchers want to make their money and ruin the place.

**Correspondence ID:3227**

Correspondence: Regarding the upcoming plan for Tomales Point within Point Reyes National Seashore I request our National Park prioritize the wishes of the Miwok First Nation people. They "managed" that land for more than 10,000 and didn't disrupt the ecosystem. Allow them to determine how the land should be managed so that our future generations will be allowed to experience biodiversity, not cows, that exists there today. Maybe then the area will be allowed to thrive.

Removing the fence will reduce the costs associated with proper stewardship of these captive animals - water troughs, mineral licks and staff time to regularly monitor the health of the herd will be unnecessary if the fence is removed.

We wonder why Point Reyes National Seashore officials, especially Superintendent Kenkel, persist with keeping the expense of a long ugly fence out at Tomales Point and to truck in water and minerals. It's obvious even to a non-scientist. There's not enough natural food and water to sustain the Tule Elk entrapped in a zoo pen out there. Take down the fence, and instead use the money to help the Tule Elk transition and thrive across the Seashore. Remove the ranchers and their cattle. Enough is enough. It's a NATIONAL PARK!

The 1998 plan says "Natural processes will be relied on to control populations of native species ..." There is nothing natural about caging animals behind a fence. The existing fence at the Tule Elk Reserve should be removed and replaced with a wildlife friendly fence that will allow Tule Elk to leave the reserve while still keeping cattle out.

I respectfully submit this letter and request the National Park Service to be impartial in the next steps related to our incredible native wildlife in Point Reyes National Seashore.

**Correspondence ID:3228**

Correspondence: I am writing in concern for the tule elk in the Tomales Point Area. I am aghast about the treatment of these elk in managed lands around California. I am sincerely asking for the removal of the Tomales Point fence. It's not right to control this legacy species through blatant mistreatment. Please do not prioritize cattle grazing over the thrive of our native elk. Let them roam free. Thank you

**Correspondence ID:3229**

Correspondence: "Please accept for the record these comments as input for the NPS's upcoming environmental review of its Tomales Point management plan update. These are important aspects that must be considered in determining the scope of the planning process and should be included in any environmental impact statement. My top concern is for the Park Service to remove the fence that keeps the tule elk penned in on grazing land that's insufficient to support a healthy herd.

Taxpayer dollars should not be spent on killing or neutering any animals, especially rare Tule Elk, once the herd is deemed "too large". The plan should allow for native wildlife to roam freely and die of natural causes.

Rather than maintaining the elk fence, troughs and mineral licks, the NPS could better use these resources to develop educational materials and programs about Tule elk.

Tomales Point and the Point Reyes National Seashore is to be an area where wildlife are given back their home. Taxpayers and visitors venture out that way to hear the roar of the Pacific Ocean and feel the sun

and wind, and see the land as it was made in its beautiful creation. Taxpayers do not go out to Point Reyes to see miles of wire fences 'keeping Nature in check', and the destructive, exploitive industrial practices of corrupt politically influential parties rule the land.

It is time to end the mis-management of our native Tule elk in Point Reyes National Seashore. Please follow the scientific advice provided in 1993, and remove the fence across Tomales Point. It is important for the survival of this herd to be free-roaming with access to food and water.”

**Correspondence ID:3230**

Correspondence: “I am writing and requesting to please take down the elk fence from Tomales Point, as it prevents natural migration of tule elk. It also stops them from getting water and food.

It is unconscionable the National Park Service, who is to protect public lands and natural resources, continues to incur costs for the ugly Elk Fence and supplemental water and nutrients when getting rid of the cattle ranchers and letting Elk roam free in the Park would work free for the rest of time.

I respectfully ask that the Tule Elk Reserve fence be taken down now. National Park Service and Point Reyes National Seashore funds supplied by the American taxpayer should be used to create wild and healthy freedom for the Tule Elk and other wildlife. Public access to vast swaths of the Seashore now blocked by ranching barbed/electric wire and formidable gates, which is not acceptable on public lands. Please investigate, enforce, and punish cattle ranching families that continue to degrade and pollute our Seashore's lands, waters, and air. Superintendent Kenkel and all of you at the NPS: It is time to get your priorities and mandates straight. Please serve the interests of wildlife, habitat, visitors, and posterity.

Point Reyes National Seashore management must scope a plan to remove the Tule Elk Reserve fence across Tomales Point. This must be done in conjunction with a serious, science-based, enforced plan to cease the practice of ranching on our public land, so that timely and effective Seashore wilderness restoration occurs with public participation, focused on natural and native features, habitats, wildlife, and visitor accessibility.

Respectfully, the land in Point Reyes National Seashore belongs to the public, and should be managed for public, not for private benefit. It is imperative to keep the native Tule Elk as the priority, and remove the Elk fence.

**Correspondence ID:3231**

Correspondence: Regarding the upcoming plan for Tomales Point within Point Reyes National Seashore I request our National Park prioritize the wishes of the Miwok First Nation people. They "managed" that land for more than 10,000 and didn't disrupt the ecosystem. I respectfully submit this letter and request the National Park Service to be impartial in the next steps related to our incredible native wildlife in Point Reyes National Seashore.

**Correspondence ID:3232**

Correspondence: I am writing to you specifically to address your plans for Tomales Point in the Point Reyes National Seashore. As they currently stand, they need to be incorporated into the General Plan for the Seashore - not as a separate part of it. It does not make strategic or economic sense to treat them as a part-as-to-of-themselves. The steps to restore the flora and fauna for all areas must be incorporated into the dynamics of the plan at the outset.

No matter what the Park Service spends to supplement water and minerals for the Tule Elk at Tomales Point, it will not matter. The Tule Elk are starving to death at Tomales Point due to continued drought, and megadrought. Please stop spending time and money on the fence and artificial approaches, and let the Elk roam free for natural sources of water and good nutrition.

The long run goal is to phase out cattle from the Point Reyes National Seashore, altogether. This would allow a number of costly issues to be dropped as the progression of steps were accomplished, namely the need and upkeep of the elk fences, trucking in feed and water for the elk herds in the increasing occurrence of drought, culling the herds when successfully repopulating the areas and eradication of invasive species of plants brought in by cattle, cattle feed, and industrial machinery.

Confining Tule elk for the benefit of private ranching interests is a breach of the public trust.

We ask, why should the "elk fence" across the width of Tomales Point on Point Reyes National Seashore be immediately removed? Because, at long last, after six decades of the Seashore's existence--it is the right, just, humane, and obvious thing to do for an American, even global, National Park, perched on the formidable and awesome Pacific Coast, still waiting for its true nature to be revealed.

**Correspondence ID:3233**

Correspondence: "I want to thank you for taking my public comment on the Tomales Point scoping process at Point Reyes National Seashore. I cannot believe there is a Prison Fence restricting Tule Elk in our national park. What is that about? To please the cattle ranchers, and prevent the Tule Elk from being free to roam, associate, and live a good life? No more animal prisons in our national park. Point Reyes is not a zoo either. It is time to take down the elk fence.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

The NPS should put resources into creating a rewilded park. It will be necessary to plan on demolition and disposal of the many tons of concrete which now comprise the modern loafing barns at each PRNS dairy (one of which supposedly closed a year ago).

Taking down the fence is the best option, according to ecologists.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!"

**Correspondence ID:3234**

Correspondence: Thank you for the opportunity to comment on Tomales Point. Why is this area being treated separate from Point Reyes National Seashore? As it is within the boundaries of the seashore it should be interwoven within the fabric of the rest of the seashore and the ecosystem allowed to become whole instead of piecemeal. A visitor should be able to walk/hike the entirety of the park. And the native grasses and wildlife (including elk) should be able to roam freely within all areas of the park. Please remove the elk fences and let the park be an actual park.

Removing the fence will reduce the costs associated with proper stewardship of these captive animals - water troughs, mineral licks and staff time to regularly monitor the health of the herd will be unnecessary if the fence is removed.

Rather than maintaining the elk fence, troughs and mineral licks, the NPS could better use these resources to develop educational materials and programs about Tule elk.

The original motivation for the fence was to protect financial interests, not for optimal ecological restoration. It must be removed.

Thank you for allowing me to comment and for putting effort and resources to considering how to protect our precious and dwindling natural resources of our National Park.

**Correspondence ID:3235**

Correspondence: "Many thanks for allowing the public, rightful owners of the land, to comment on the upcoming plan for Tomales Point within Point Reyes National Seashore. This area, along with any area within the national park should be allowed to be re-wild. All fences and evidence of fences should be removed.

What are the annual costs for the Tomales Point Reserve fence and the supplemental water and minerals for the Tule Elk trapped there? Why are Elk still trapped and causing this expense, when there are ample lands and waters for Elk to roam at Point Reyes National Seashore? It's not a zoo, it's a national park. Please take down the fence.

The park should put every effort into connecting Tomales Point and its wildlife to the rest of the park. A visitor to the park should not have to pass through cattle/dairy pasture to walk through the Philip Burton Wilderness and nor should the Tule Elk. Every effort should be directed in allowing the elk to roam freely across the entire area of the park.

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

I want to thank Superintendent Craig Kenkel for the opportunity to provide comments on the upcoming plan for our iconic Tule elk. It is of utmost importance for the plan to include numerous alternatives which requires the removal of the unethical fence across Tomales Point. It is time for our native elk to have the ability to freely roam throughout the National Seashore, versus being confined without sufficient sustenance to survive.”

**Correspondence ID:3236**

Correspondence: “Tomales Point is the highlight of many visitors' experience in Point Reyes National Seashore. Thank you for inviting public comment in this planning process. By removing the 8-foot elk fence, you can begin the process of restoration of the entire peninsula's ecosystem.

It is not clear why the Park Service continues to spend taxpayer money for an unethical eight foot fence at the Tule Elk Reserve when the public has requested for years to remove the fence and let the Elk roam for free to get their water and food.

Instead of paying for fence maintenance and supplemental water and minerals out at Tomales Point when Elk are actually starving to death--why doesn't the Park Service and Mr. Kenkel come up with a plan to remove tenant ranchers and let wildlife live naturally all across Point Reyes National Seashore?

The public loves the elk, and are horrified when they learn that due to being penned in, significant numbers have perished due to thirst or lack of sustenance. As seen with the other, free-roaming herds in Pt. Reyes, it seems such needless harm will be eliminated if the herd is allowed to roam at will. If there is conflict between cattle and elk, the Park Service should have ranchers remove their cows, since this is a national park, not a feedlot.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity.

**Correspondence ID:3237**

Correspondence: “Tomales Point is a stunning place and I appreciate the chance to provide input for the planning process.

The Park Service will never be able to fully provide enough water, minerals, or forage for the captive Tule Elk at Tomales Point. Put the money into taking down the fence and letting Elk live and thrive throughout the Seashore.

Why is the NPS having separate GMPs for the leased ranch lands and for the Tule Elk Reserve? Is this not all one national park? Are you going to have a separate GMP for the southern part of the Phil Burton

Wilderness area? PRNS needs to be managed as one comprehensive and coordinated part, not sliced up in pieces. As a member of the public I don't see separate areas.

I cannot find a reasonable sound argument for continued ranching or dairy in a National Park. There are numerous dairy and cattle ranches in West Marin and Sonoma counties, as well as all across California and the entire United States. Some owned by the same families as those that ranch in the park today. Tule elk are only native to California and only found in Point Reyes National Seashore. We are lucky the elk are located in a National Park where they should be protected. Why private dairy and beef cows are prioritized over those elk in a National Park is beyond anyone's logical reasoning. It is political and that does not make it right. The National Park should be above politics. We need our National Parks, which we pay for and support, to work for us, the people.

I want to thank you for your serious consideration of my comments, and placing them into the public record for scoping analysis of Tomales Point. The most important thing is for the Park Service to get rid of that horrible fence out there. It's 2022! Please come up with a good plan for the Elk, wildlife, birds, native plants, and everything else that should thrive in a National Park. We are counting on you to help Point Reyes be all it can naturally be!

**Correspondence ID:3238**

Correspondence: As a mother and grandmother, I believe it is our duty to protect and preserve wildlife as precious natural resources held in trust for all future generations. I also feel a deep responsibility as a Steward for all of Earth's Divine Creation. That responsibility will always be more important than politics or profit.

The elk fence at Tomales Point must be removed. This is an important and the right step for the upcoming management plan.

Maintenance of an 8-foot fence and providing water and nutrition for captive Tule elk is not a reasonable use of funds, when the Tule elk could find adequate food and water if they were allowed to freely roam.

The park should spend time and money on removing the fences, planting native grasses, cleaning up the water pollutants, and generally restoring Tomales Point back to its natural habitat.

It is the responsibility of the Park Service to protect wildlife, and the most obvious solution is to remove the elk fence, allow the elk to roam, water, and feed, and for the Park Service to ameliorate climate change impacts, including removal of nonnative plants, improve fire resiliency, and allow wildlife and natural processes to restore areas of the Seashore. A good first step is to end the lease agreements with the cattle ranchers.

As a long-time user of the seashore, I'm looking forward to seeing what the Park Service comes up with as an improved management plan. It's a good time to make some long-needed changes, particularly the elk fence removal. That alone will make a significant difference in one's experience of the park, and I'm sure it will be met with massive public approval. Thank you for considering my input. I'm excited to see the results.

**Correspondence ID:3239**

Correspondence: "I am writing and requesting to please take down the elk fence from Tomales Point, as it prevents natural migration of tule elk. It also stops them from getting water and food.

It is unconscionable the National Park Service, who is to protect public lands and natural resources, continues to incur costs for the ugly Elk Fence and supplemental water and nutrients when getting rid of the cattle ranchers and letting Elk roam free in the Park would work free for the rest of time.

I respectfully ask that the Tule Elk Reserve fence be taken down now. National Park Service and Point Reyes National Seashore funds supplied by the American taxpayer should be used to create wild and healthy freedom for the Tule Elk and other wildlife. Public access to vast swaths of the Seashore now blocked by ranching barbed/electric wire and formidable gates, which is not acceptable on public lands. Please investigate, enforce, and punish cattle ranching families that continue to degrade and pollute our Seashore's lands, waters, and air. Superintendent Kenkel and all of you at the NPS: It is time to get your priorities and mandates straight. Please serve the interests of wildlife, habitat, visitors, and posterity.

Point Reyes National Seashore management must scope a plan to remove the Tule Elk Reserve fence across Tomales Point. This must be done in conjunction with a serious, science-based, enforced plan to cease the practice of ranching on our public land, so that timely and effective Seashore wilderness restoration occurs with public participation, focused on natural and native features, habitats, wildlife, and visitor accessibility.

Respectfully, the land in Point Reyes National Seashore belongs to the public, and should be managed for public, not for private benefit. It is imperative to keep the native Tule Elk as the priority, and remove the Elk fence."

**Correspondence ID:3240**

Correspondence: Thanks for reading this.

I am a taxpayer who wants you to remove the fence confining the tule elk. It is important our elk survive and are well cared for in a natural habitat, vs confined behind a fence which keeps the elk away from much needed water and forage.

The recent controversies regarding the treatment of the captive elk herd extract a cost on park management by forcing it to respond to the public's concerns and the demands the ranchers have become used to making. For example, NPS is now providing water sources and mineral licks for the elk to prevent recurring starvation and dying from thirst. In the past, NPS has built and repaired fences on behalf of the ranches. How much would the Park Service save if the elk were allowed to roam free? How much would it save if the ranchers were held to their lease terms and paid for improvements themselves? NPS should not be spending tax monies on private, for-profit ventures in our public park.

Instead of US taxpayers footing the bill for a godawful fence to keep elk without enough water and food out at Tomales Point, the Park Service needs to take down the fence, remove the thousands of cattle impacting the land, air, and waters, and let nature be whole at Point Reyes National Seashore.

The Elk Fence on Tomales Point must be removed. Tule Elk need to mingle, associate, and mate to prolong genetic diversity and sustain present and long-term herd health, vitality, and viability.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the welfare ranchers/polluters!

**Correspondence ID:3241**

Correspondence: "Thank you for the opportunity to comment on Tomales Point. Why is this area being treated separate from Point Reyes National Seashore? As it is within the boundaries of the seashore it should be interwoven within the fabric of the rest of the seashore and the ecosystem allowed to become whole instead of piecemeal. A visitor should be able to walk/hike the entirety of the park. And the native grasses and wildlife (including elk) should be able to roam freely within all areas of the park. Please remove the elk fences and let the park be an actual park.

How much does it cost the National Park Service or Point Reyes National Seashore in Tomales Point Reserve for fence maintenance and supplemental water and minerals? How much does it cost us the taxpayers not only in materials, but in all the hidden costs of labor, operations, communications, negotiation, administration, and don't forget, pleasing the ranchers who shouldn't even be there due to their constant impairment to the Seashore.

The Park Service should put all resources to removing the elk fence, allow the elk to roam free, stop the killing of the elk, and plant native grasses for them to feed.

The difference in landscape between the Tule Elk Reserve and the ranches on the other side of the fence is stark. The Tule elk Reserve looks like a beautiful coastal prairie with lots of wildflowers and coyote brush. The land to the south looks barren and denuded and there is evidence of cow manure spraying - not what visitors come to Point Reyes to see. Please remove the fence in the Elk reserve, as this is the right step to take for our National Park.

An independent, scientific panel provided a recommendation to the NPS, to remove the eight foot fence across Tomales Point, which currently confines the native Tule elk in an environment which does not allow the herds to be large, healthy and free-ranging. Please include numerous alternatives in the upcoming elk management plan that would remove the Tomales Point fence in order for our native wildlife to be free-roaming.

**Correspondence ID:3242**

Correspondence: "Removal of the elk fence at Tomales Point should be included in your plans for PRNS. It is the necessary and ethical step to take for a native species in a National Seashore.

The costs for Tomales Point elk fence maintenance and to put out water and minerals is not solving the problem of Tule Elk health. There is not enough water and minerals for the different non-mingling Tomales Point herds. It is a band-aid for a constant wound therefore please come up with a real solution for wild Elk, as they should not be confined in a zoo-like environment that does not have a sufficient amount of water and forage for this herd.

If cattle ranchers are concerned about the spread of disease between the elk and bovine populations, then the cattle should be kept far enough away from the elk as necessary to allow passage through wildlife corridors. This allocation would allow two short run goals- one being that the elk could traverse

the area to graze for necessary vegetation for nutritional well-being, as well as access to water; and secondly, cordoning off the unnatural effects of the different effects of cattle grazing on the area's vegetation which would allow the native flora a better environment to establish itself.

As an endemic species, Tule elk benefit the land, and allowing them to freely roam in Point Reyes National Seashore will enhance the park overall.

It is requested the personnel at the National Park Service re-review the 1993 report of the Scientific Advisory Panel on control of Tule Elk in PRNS, and include it's recommendation in the upcoming plan. The independent advisory panel recommended to remove the fence across Tomales Point, and develop a plan to achieve a large, healthy, free-ranging elk population. Thank you Mr Kenkel for your attention to this recommendation.”

**Correspondence ID:3243**

It is a band-aid for a constant would therefore please come up with a real solution for wild Elk, as they should not be confined in a zoo-like environment that does not have a sufficient amount of water and forage for this herd.

If cattle ranchers are concerned about the spread of disease between the elk and bovine populations, then the cattle should be kept far enough away from the elk as necessary to allow passage through wildlife corridors. This allocation would allow two short run goals- one being that the elk could traverse the area to graze for necessary vegetation for nutritional well-being, as well as access to water; and secondly, cordoning off the unnatural effects of the different effects of cattle grazing on the area's vegetation which would allow the native flora a better environment to establish itself.

As an endemic species, Tule elk benefit the land, and allowing them to freely roam in Point Reyes National Seashore will enhance the park overall.

It is requested the personnel at the National Park Service re-review the 1993 report of the Scientific Advisory Panel on control of Tule Elk in PRNS, and include it's recommendation in the upcoming plan. The independent advisory panel recommended to remove the fence across Tomales Point, and develop a plan to achieve a large, healthy, free-ranging elk population. Thank you Mr Kenkel for your attention to this recommendation.”

**Correspondence ID:3244**

Correspondence: “Please remove the eight foot fence at Tomales Point for the sake of our native Tule Elk. We must prioritize our native Tule elk over the domestic cattle raised for profit in PRNS.

Without a fence at Tomales Point, the National Park Service wouldn't need to waste efforts and money bringing water up to the elk. The animals would have plenty of water available from Abbotts lagoon and other sources down in the valley.

Removal of the elk fence would give the Park a good opportunity to create a prairie preserve, located just on the outside of the existing elk preserve, by pushing back any cattle away from the current fence line. In fact, if the ranches are to remain, installing a wildlife-friendly fence south of the elk fence to let elk and other native animals move freely while keeping cattle at bay would let the park establish a specific prairie preserve where the flora and fauna have been degraded. This could be a site for studying the restoration of the native environment after decades of degradation by cattle.

For climate change and biodiversity reasons, the Tomales Point scoping plan must include complete removal of the Tule Elk Reserve fence combined with an entirely new and enforced ranch succession plan. It must commit to ceasing continued ranchlands succession of leased parcels to ranchers, and restoration of native coastal prairie and wildlife habitat. It must emphasize the roles of indigenous Coast Miwok's ecological and scientific cultural knowledge and practices, and the importance of wildlife and natural forces in the restoration process.

Thank you for the opportunity to provide feedback on the upcoming plan for Elk Reserve in Point Reyes National Seashore. The 3-year timeframe proposed by the NPS appears to be too long of a period, as we have lost approximately 50% of our native Elk held captive behind this 8 foot fence due to lack of appropriate amount of food, water and minerals. In your upcoming plan, please ensure there are numerous alternatives available on the removal of this deadly fence. It is time for that fence to be removed.

**Correspondence ID:3245**

Correspondence: Kindly take down the elk fence from Tomales Point. It restricts the tule elk and prevents them from getting water and forage.

Dismantling the elk fence will save the NPS money, as it is a less expensive and less invasive option.

Instead of paying for fence maintenance and supplemental water and minerals out at Tomales Point when Elk are actually starving to death--why doesn't the Park Service and Mr. Kenkel come up with a plan to remove tenant ranchers and let wildlife live naturally all across Point Reyes National Seashore?

Taking down the fence is the best option, according to ecologists.

Thank you for your consideration in this important manner.

**Correspondence ID:3246**

Correspondence: "Please accept for the record these comments as input for the NPS's upcoming environmental review of its Tomales Point management plan update. These are important aspects that must be considered in determining the scope of the planning process and should be included in any environmental impact statement. My top concern is for the Park Service to remove the fence that keeps the tule elk penned in on grazing land that's insufficient to support a healthy herd.

It would be better and less expensive to allow Tule elk access to water sources, such as the spring and lagoon in the region directly below the Tomales Point reserve.

Too many park resources are used to cater to the private ranchers. Ranch operations pollute the streams and waterways of the seashore with manure runoff, release methane into the atmosphere from cattle belches and farts, damaging our climate, and have caused the massive spread of invasive plants.

NPS should be putting these resources into restoring the deep-rooted native grasses, wildflowers, mosses and other native plants that cannot survive destructive grazing practices caused by too many cattle on the land.

The Tomales Point Elk Reserve fence must promptly be taken down. This should occur in conjunction with a renewed, science-based plan to cease rancher successions of leased lands, allowing Point Reyes National Seashore to revert to natural landscapes, waterscapes, habitats, and ecosystems.

Thank you for submitting my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore. Please remove the fence across Tomales Point so the Elk can be free to roam, feed, drink, associate, mate, and thrive naturally. It can be done! Please consider and use my comments to help Point Reyes be a beautiful place for wildlife and humans.

**Correspondence ID:3247**

Correspondence: I am writing the National Park Service to respectfully request to remove the eight foot fence at Tomales Point in order for our iconic Tule elk to roam free in our National Park.

Whatever the costs to maintain the Tule Elk Fence and to provide water towers and mineral supplements--the Tule Elk are dying off because of lack of proper, nutritious, healthy food and forage. The Elk are starving to death and dying of an inadequate supply of water at Tomales Point. The Park Service will never be able to be effective to supplement the Tule Elk food and water supply that is needed. Please do the right thing and take down the elk fence.

Financial resources of the National Park Service (NPS) should be used to end the Tule Elk Reserve on Tomales Point, by removal of the rancher and NPS insisted eight foot fence and replace that with a wildlife-friendly smaller fence but a fence that keeps the cattle out of this preserved environment. Let's establish a Coastal Native Prairie Reserve in place of the wholly bad and inhumane Tule Elk Reserve. The Tule Elk get to roam free for food and water throughout the Seashore, and the current Reserve transforms into a wild habitat global study model during these times of severe climate heating and California megadrought.

As an endemic species, Tule elk benefit the land, and allowing them to freely roam in Point Reyes National Seashore will enhance the park overall.

The original studies done by the NPS on how to manage the Tule elk showed they should be allowed to roam free. I will be tracking this process to see what the Park Service's plans are in this regard. I and the vast majority of the public want better treatment of the elk, and better treatment of the Seashore itself. We do not want to see for-profit ranches degrading our beautiful park. This is the Park Service's opportunity to do this job right. You have my support in achieving this.

**Correspondence ID:3248**

Correspondence: Please remove the elk fence from Point Reyes National Seashore in order for the elk herds to have access to sufficient amount of water, minerals and forage.

It's both cheaper and more ecological to let the elk be free, without a fence, than it is to try to manage them unnaturally, with trucked water tanks and salt licks.

Instead of US taxpayers footing the bill for a godawful fence to keep elk without enough water and food out at Tomales Point, the Park Service needs to take down the fence, remove the thousands of cattle impacting the land, air, and waters, and let nature be whole at Point Reyes National Seashore.

We should not have a captive herd of Tule elk in the Point Reyes National Seashore. Tule elk should be allowed to roam free.

Thank you for your attention to my comments. If you do only one thing: Remove the godawful eyesore of a fence out there. Would you want to be trapped without enough water or food? You can't say it's a natural process of attrition if you've got them captive. Remove the fence immediately. Create safe and easy wildlife corridors for the elk to move out. Make the ranchers stop harming wildlife and hassling human visitors. The American people in multiple surveys, letters, op-eds, articles, and more want a National Park at Point Reyes. Not a ranch.

**Correspondence ID:3249**

Correspondence: I want to thank you for taking my public comment on the Tomales Point scoping process at Point Reyes National Seashore. I cannot believe there is a Prison Fence restricting Tule Elk in our national park. What is that about? To please the cattle ranchers, and prevent the Tule Elk from being free to roam, associate, and live a good life? No more animal prisons in our national park. Point Reyes is not a zoo either. It is time to take down the elk fence.

How much does it cost the National Park Service or Point Reyes National Seashore in Tomales Point Reserve for fence maintenance and supplemental water and minerals? How much does it cost us the taxpayers not only in materials, but in all the hidden costs of labor, operations, communications, negotiation, administration, and don't forget, pleasing the ranchers who shouldn't even be there due to their constant impairment to the Seashore.

Resources budgeted for Point Reyes National Seashore should be used for preventing wildlife destruction, rather than additional money toward how to maintain an unethical 8 foot fence in the Elk Preserve.

For climate change and biodiversity reasons, the Tomales Point scoping plan must include complete removal of the Tule Elk Reserve fence combined with an entirely new and enforced ranch succession plan. It must commit to ceasing continued ranchlands succession of leased parcels to ranchers, and restoration of native coastal prairie and wildlife habitat. It must emphasize the roles of indigenous Coast Miwok's ecological and scientific cultural knowledge and practices, and the importance of wildlife and natural forces in the restoration process.

Respectfully, the land in Point Reyes National Seashore belongs to the public, and should be managed for public, not for private benefit. It is imperative to keep the native Tule Elk as the priority, and remove the Elk fence.

**Correspondence ID:3250**

Correspondence: "The elk fence at Tomales Point must be removed. This is an important and the right step for the upcoming management plan.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying -

just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

Instead of paying for fence maintenance and supplemental water and minerals out at Tomales Point when Elk are actually starving to death--why doesn't the Park Service and Mr. Kenkel come up with a plan to remove tenant ranchers and let wildlife live naturally all across Point Reyes National Seashore?

We should not have a captive herd of Tule elk in the Point Reyes National Seashore. Tule elk should be allowed to roam free.

It is time to focus on the health of our National Seashore and protect the air, soil, water, native wildlife and native vegetation over the constant impact from private cattle operations. The ranchers espouse crackpot pseudoscience about false carbon sinks (pasture vs. native coastal prairie), regenerative ranching (oxymoron), methane digesters (new profit streams), while the objective and independent science-based literature state how a native landscape with native vegetation and wildlife will help fight climate change more effectively than cattle operations. Please prioritize our native landscape and native wildlife in Point Reyes.

This is critical as all natural existence is at this crisis point in our environment. You know this. Please, please let these elk live unfenced. It is immoral and makes no sense."

**Correspondence ID:3251**

Correspondence: Regarding the upcoming plan for Tomales Point within Point Reyes National Seashore I request our National Park prioritize the wishes of the Miwok First Nation people. They "managed" that land for more than 10,000 and didn't disrupt the ecosystem. Allow them to determine how the land should be managed so that our future generations will be allowed to experience biodiversity, not cows, that exists there today. Maybe then the area will be allowed to thrive.

Removing the fence will reduce the costs associated with proper stewardship of these captive animals - water troughs, mineral licks and staff time to regularly monitor the health of the herd will be unnecessary if the fence is removed.

We wonder why Point Reyes National Seashore officials, especially Superintendent Kenkel, persist with keeping the expense of a long ugly fence out at Tomales Point and to truck in water and minerals. It's obvious even to a non-scientist. There's not enough natural food and water to sustain the Tule Elk entrapped in a zoo pen out there. Take down the fence, and instead use the money to help the Tule Elk transition and thrive across the Seashore. Remove the ranchers and their cattle. Enough is enough. It's a NATIONAL PARK!

The 1998 plan says "Natural processes will be relied on to control populations of native species ..." There is nothing natural about caging animals behind a fence. The existing fence at the Tule Elk Reserve should be removed and replaced with a wildlife friendly fence that will allow Tule Elk to leave the reserve while still keeping cattle out.

I respectfully submit this letter and request the National Park Service to be impartial in the next steps related to our incredible native wildlife in Point Reyes National Seashore.

**Correspondence ID:3252**

Correspondence: Thank you for the opportunity to provide input on the updated Tule Elk Management Plan/General Management Plan for Pt. Reyes National Seashore. To help the National Park Service (NPS) best structure its environmental review process, I offer the comments below. Please consider including these points in scoping your review and the presumed Environmental Impact Statement.

The costs for Tomales Point elk fence maintenance and to put out water and minerals is not solving the problem of Tule Elk health. There is not enough water and minerals for the different non-mingling Tomales Point herds. It is a band-aid for a constant would therefore please come up with a real solution for wild Elk, as they should not be confined in a zoo-like environment that does not have a sufficient amount of water and forage for this herd.

There have been claims made over the years by ranching interests that the elk have damaged ranch operations or facilities. NPS should determine the facts here, and document the actual costs of any verifiable damage. Additionally, ranchers have claimed the elk need to be separated from their cattle because the elk will eat too much of the forage they want for their cows. The science clearly shows that elk eat far less than cows, weigh a fraction of cows' weight, and being browsers, do not deplete the grasses and shrubs as much as cows do. Therefore, when scoping the plan update, NPS needs to compare the impacts of elk foraging vs. cattle grazing, and develop its plans consistent with the Organic Act of 1916 mandate of resource preservation and protection.

Point Reyes National Seashore management must scope a plan to remove the Tule Elk Reserve fence across Tomales Point. This must be done in conjunction with a serious, science-based, enforced plan to cease the practice of ranching on our public land, so that timely and effective Seashore wilderness restoration occurs with public participation, focused on natural and native features, habitats, wildlife, and visitor accessibility.

Thank you for allowing me to comment and for putting effort and resources to considering how to protect our precious and dwindling natural resources of our National Park.

**Correspondence ID:3253**

Correspondence: "Removal of the elk fence at Tomales Point should be included in your plans for PRNS. It is the necessary and ethical step to take for a native species in a National Seashore.

The costs for Tomales Point elk fence maintenance and to put out water and minerals is not solving the problem of Tule Elk health. There is not enough water and minerals for the different non-mingling Tomales Point herds. It is a band-aid for a constant would therefore please come up with a real solution for wild Elk, as they should not be confined in a zoo-like environment that does not have a sufficient amount of water and forage for this herd.

If cattle ranchers are concerned about the spread of disease between the elk and bovine populations, then the cattle should be kept far enough away from the elk as necessary to allow passage through wildlife corridors. **Correspondence ID:3257**

Correspondence: To assist the NPS with its planned NEPA review of the Tomales Point area and Tule elk herd management in Pt. Reyes National Seashore, I suggest the following issues be included in your review process, and any eventual Environmental Impact Statement that comes out of it. These points are intended to insure that the park resources, including the Tule elk and native plants and animals, get the maximum protection for the public's current and future benefit.

Tomales Point is not a zoo. The taxpayers do not want to incur the cost of feeding and providing water to wild animals. Nor do they want to visit a zoo. A simple solution, and one that is the most cost

effective, is to stop "managing" the park. Take down the fence, remove the cattle, and let nature run its course.

The Park Service should put all resources to removing the elk fence, allow the elk to roam free, stop the killing of the elk, and plant native grasses for them to feed.

Tule Elk are not only rare beautiful animals they are also caretakers of the land. The elk help native grasses flourish, which helps carbon sequestering, thus reducing the threat of climate change. In this day and age the National Park service must lead our nation in restoring our parks to help reduce our nation's carbon footprint.

I want to thank you for your serious consideration of my comments, and placing them into the public record for scoping analysis of Tomales Point. The most important thing is for the Park Service to get rid of that horrible fence out there. It's 2022! Please come up with a good plan for the Elk, wildlife, birds, native plants, and everything else that should thrive in a National Park. We are counting on you to help Point Reyes be all it can naturally be!

**Correspondence ID:3258**

Correspondence: Proposed plans for PRNS must include the removal of the elk fence at Tomales Point.

The current plan of what is called a 'co-habitation' - which is a farce - is wasteful in a number of ways. Instead of letting the elk populations roam the land to access the water and flora they have evolved to need for subsistence, it often needs to be trucked in to keep populations at levels 'mandated by a plan'. Not only do these resources need to be expended to keep the herds alive - then later, National Park Service personnel go and cull the population when it exceeds their some-how-agreed upon 'rancher-acceptable' number.

Instead of US taxpayers footing the bill for a godawful fence to keep elk without enough water and food out at Tomales Point, the Park Service needs to take down the fence, remove the thousands of cattle impacting the land, air, and waters, and let nature be whole at Point Reyes National Seashore.

Confining Tule elk for the benefit of private ranching interests is a breach of the public trust.

I look forward to the next steps in the planning process. Thank you for the opportunity to participate in this initial phase.

**Correspondence ID:3259**

Correspondence: "I am writing the National Park Service, to state that the Elk fence needs to be removed in order for the elk herds to roam freely in the park. This is the best next step for the survival of this endemic species.

Maintenance of an 8-foot fence and providing water and nutrition for captive Tule elk is not a reasonable use of funds, when the Tule elk could find adequate food and water if they were allowed to freely roam.

Viewing the Tomales Point project from an objective approach, the most cost effective long-run plan is to take down the elk fences without the interference of cattle concerns and let the herds roam in a natural manner. The health of the elk herds could be clearly addressed, as well as the flora can be given

its space for natural progression and seed dispersion. This would focus on only one plan to implement, for taxpayers and NPS staff, and not take the resources with two competing approaches.

Removal of the Tule Elk Reserve fence across Tomales Point in Point Reyes National Seashore must happen now. This must be done urgently in light of the drought and fire conditions caused by climate change. It must include a completely revised and science-based plan, enhanced by Native American ecological knowledge and practices, to cease the ranch succession policies of the past in favor of transformation to natural habitats, with well-planned wildlife corridors to aid natural and assisted rewilding restoration processes.

We need a long-range plan that supports a healthy population of native Tule Elk. It is time for the Park Service to prioritize our elk in PRNS over private cattle operations on our public land. Thank you in advance, for a plan that will include immediate removal of this unnatural and unethical eight foot fence.

**Correspondence ID:3260**

Correspondence: Please read and consider my public comment on the Tomales Point planning process for Point Reyes National Seashore. Tule Elk should be free to roam, gather, find water and food, and live more healthy lives--not be imprisoned for their entire lives behind a god-awful fence. Point Reyes is a national park, therefore please remove the fence now.

The elk fence has hidden costs that have not been analyzed or made public before. Besides the typical costs of fence construction and maintenance, there's the cost of park staff having to make sure the water tanks that serve the captive elk herd are maintained and kept filled, the mineral licks provided are sufficient to the herd's needs, and complaints from ranchers are responded to. Then there are the costs of the impacts on the area outside the fence: the massive amounts of invasive plants that have forced out the native, deep-rooted grasses that are true effective carbon sequesters, the elimination of habitat for indigenous animals of all sizes, the carbon created by the rotting of annual invasive grasses, and more. And because the fence only exists at the request of cattle ranchers, NPS should look at the costs of the damage the cattle do with their methane pollution the atmosphere and their manure polluting the parks' streams, lagoons and bays. These ecological costs haven't been accounted for, and need to be.

The Park Service should put all resources to removing the elk fence, allow the elk to roam free, stop the killing of the elk, and plant native grasses for them to feed.

Removing the elk fence is the most impactful step the Park can take for Tomales Point, and this should be the plan review's top priority. This and total removal of all dairy and cattle operations from all of the park would have the strongest positive impacts, both ecologically and in terms of protection of the public's resources. The removal of both would benefit the return of native, deep-rooted grasses, allow the return of birds and wildlife that cannot survive in the barren fields where cattle have eaten the greenery down to the earth, and let the natural prairie reestablish itself. It could also serve as an outdoor laboratory for studying how to accelerate its healing and nurturing, information that will be increasingly important as we try to save our planet from the damages of global warming.

Thank you for your attention to my public record comments on the Tomales Point planning process for Point Reyes National Seashore. Your responsibility is to the spirit of wilderness preservation and protection, and to the vast majority of Americans who have insisted that this iconic place be freed from

private, for-profit, commercial business interests. We will continue to press for just that, like taking down the Tomales Point fence.

**Correspondence ID:3261**

Correspondence: "Many thanks for allowing the public, rightful owners of the land, to comment on the upcoming plan for Tomales Point within Point Reyes National Seashore. This area, along with any area within the national park should be allowed to be re-wild. All fences and evidence of fences should be removed.

Removing the elk fence is a frugal option, for a Park Service that apparently operates with limited resources.

I am extremely disappointed that the National Park Service (NPS) continues to spend our taxpayer money for an unethical fence which traps Elk on Tomales Point at Point Reyes National Seashore. Taxpayers are insisting that the fence come down immediately, that ranchers move out, and wildlife be allowed to live naturally across all of our Park.

The Elk Fence on Tomales Point must be removed. Tule Elk need to mingle, associate, and mate to prolong genetic diversity and sustain present and long-term herd health, vitality, and viability.

I want to thank Superintendent Craig Kenkel for the opportunity to provide comments on the upcoming plan for our iconic Tule elk. It is of utmost importance for the plan to include numerous alternatives which requires the removal of the unethical fence across Tomales Point. It is time for our native elk to have the ability to freely roam throughout the National Seashore, versus being confined without sufficient sustenance to survive."

**Correspondence ID:3262**

Correspondence: "Now that the National Park Service is looking at its management of the Tomales Point area of the Pt. Reyes National Seashore, there are a number of items NPS should take into consideration as it updates its plans. Please include consideration of these when scoping your environmental review process. The most critical of these is the permanent removal of the fence that keeps the Tomales Point Tule elk herd imprisoned on land that isn't sufficient to support a captive herd.

How much does it cost the National Park Service or Point Reyes National Seashore in Tomales Point Reserve for fence maintenance and supplemental water and minerals? How much does it cost us the taxpayers not only in materials, but in all the hidden costs of labor, operations, communications, negotiation, administration, and don't forget, pleasing the ranchers who shouldn't even be there due to their constant impairment to the Seashore.

Too many park resources are used to cater to the private ranchers. Ranch operations pollute the streams and waterways of the seashore with manure runoff, release methane into the atmosphere from cattle belches and farts, damaging our climate, and have caused the massive spread of invasive plants. NPS should be putting these resources into restoring the deep-rooted native grasses, wildflowers, mosses and other native plants that cannot survive destructive grazing practices caused by too many cattle on the land.

Removing the Tomales Point elk fence will improve genetic diversity within the elk population.

I hope the above concerns are addressed honestly and thoroughly. I, like millions of others, treasure our Seashore, and want it to be treated in a manner that preserves it and enhances it for future generations, something that is not happening now. I will be watching to make sure it is a transparent process, and look forward to improved management of our public commons.

**Correspondence ID:3263**

Correspondence: "Please accept for the record these comments as input for the NPS's upcoming environmental review of its Tomales Point management plan update. These are important aspects that must be considered in determining the scope of the planning process and should be included in any environmental impact statement. My top concern is for the Park Service to remove the fence that keeps the tule elk penned in on grazing land that's insufficient to support a healthy herd.

Reliable reports state the NPS has shouldered many of the operational costs over the years that should have been borne by the ranchers. Since most agencies have limited budgets, I'd like the Park Service to analyze how much it could save by making the ranches pay for any and all fencing, but especially the elk fence at Tomales Point. It should also look at how much it would save if the ranches were removed entirely from the park. Included in these analyses should be the value of increased public access to areas ranchers try to keep the public away from, the increased enjoyment of the park by the public, and the savings from not having to respond to rancher demands.

The NPS should put resources into creating a rewilded park. It will be necessary to plan on demolition and disposal of the many tons of concrete which now comprise the modern loafing barns at each PRNS dairy (one of which supposedly closed a year ago).

Removal of the Tule Elk Reserve fence across Tomales Point in Point Reyes National Seashore must happen now. This must be done urgently in light of the drought and fire conditions caused by climate change. It must include a completely revised and science-based plan, enhanced by Native American ecological knowledge and practices, to cease the ranch succession policies of the past in favor of transformation to natural habitats, with well-planned wildlife corridors to aid natural and assisted rewilding restoration processes.

It is time to end the mis-management of our native Tule elk in Point Reyes National Seashore. Please follow the scientific advice provided in 1993, and remove the fence across Tomales Point. It is important for the survival of this herd to be free-roaming with access to food and water."

**Correspondence ID:3264**

Correspondence: Regarding the upcoming plan for Tomales Point within Point Reyes National Seashore I request our National Park prioritize the wishes of the Miwok First Nation people. They "managed" that land for more than 10,000 and didn't disrupt the ecosystem. Allow them to determine how the land should be managed so that our future generations will be allowed to experience biodiversity, not cows, that exists there today. Maybe then the area will be allowed to thrive.

Removing the fence will reduce the costs associated with proper stewardship of these captive animals - water troughs, mineral licks and staff time to regularly monitor the health of the herd will be unnecessary if the fence is removed.

We wonder why Point Reyes National Seashore officials, especially Superintendent Kenkel, persist with keeping the expense of a long ugly fence out at Tomales Point and to truck in water and minerals. It's

obvious even to a non-scientist. There's not enough natural food and water to sustain the Tule Elk entrapped in a zoo pen out there. Take down the fence, and instead use the money to help the Tule Elk transition and thrive across the Seashore. Remove the ranchers and their cattle. Enough is enough. It's a NATIONAL PARK!

The 1998 plan says "Natural processes will be relied on to control populations of native species ..." There is nothing natural about caging animals behind a fence. The existing fence at the Tule Elk Reserve should be removed and replaced with a wildlife friendly fence that will allow Tule Elk to leave the reserve while still keeping cattle out.

I respectfully submit this letter and request the National Park Service to be impartial in the next steps related to our incredible native wildlife in Point Reyes National Seashore.

**Correspondence ID:3265**

Correspondence: Please accept for the record these comments as input for the NPS's upcoming environmental review of its Tomales Point management plan update. These are important aspects that must be considered in determining the scope of the planning process and should be included in any environmental impact statement. My top concern is for the Park Service to remove the fence that keeps the tule elk penned in on grazing land that's insufficient to support a healthy herd.

It would be better and less expensive to allow Tule elk access to water sources, such as the spring and lagoon in the region directly below the Tomales Point reserve.

Too many park resources are used to cater to the private ranchers. Ranch operations pollute the streams and waterways of the seashore with manure runoff, release methane into the atmosphere from cattle belches and farts, damaging our climate, and have caused the massive spread of invasive plants. NPS should be putting these resources into restoring the deep-rooted native grasses, wildflowers, mosses and other native plants that cannot survive destructive grazing practices caused by too many cattle on the land.

The Tomales Point Elk Reserve fence must promptly be taken down. This should occur in conjunction with a renewed, science-based plan to cease rancher successions of leased lands, allowing Point Reyes National Seashore to revert to natural landscapes, waterscapes, habitats, and ecosystems.

Thank you for submitting my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore. Please remove the fence across Tomales Point so the Elk can be free to roam, feed, drink, associate, mate, and thrive naturally. It can be done! Please consider and use my comments to help Point Reyes be a beautiful place for wildlife and humans.

**Correspondence ID:3266**

Correspondence: Thank you for the opportunity to provide input on the updated Tule Elk Management Plan/General Management Plan for Pt. Reyes National Seashore. To help the National Park Service (NPS) best structure its environmental review process, I offer the comments below. Please consider including these points in scoping your review and the presumed Environmental Impact Statement.

The costs for Tomales Point elk fence maintenance and to put out water and minerals is not solving the problem of Tule Elk health. There is not enough water and minerals for the different non-mingling Tomales Point herds. It is a band-aid for a constant would therefore please come up with a real solution

for wild Elk, as they should not be confined in a zoo-like environment that does not have a sufficient amount of water and forage for this herd.

There have been claims made over the years by ranching interests that the elk have damaged ranch operations or facilities. NPS should determine the facts here, and document the actual costs of any verifiable damage. Additionally, ranchers have claimed the elk need to be separated from their cattle because the elk will eat too much of the forage they want for their cows. The science clearly shows that elk eat far less than cows, weigh a fraction of cows' weight, and being browsers, do not deplete the grasses and shrubs as much as cows do. Therefore, when scoping the plan update, NPS needs to compare the impacts of elk foraging vs. cattle grazing, and develop its plans consistent with the Organic Act of 1916 mandate of resource preservation and protection.

Point Reyes National Seashore management must scope a plan to remove the Tule Elk Reserve fence across Tomales Point. This must be done in conjunction with a serious, science-based, enforced plan to cease the practice of ranching on our public land, so that timely and effective Seashore wilderness restoration occurs with public participation, focused on natural and native features, habitats, wildlife, and visitor accessibility.

Thank you for allowing me to comment and for putting effort and resources to considering how to protect our precious and dwindling natural resources of our National Park.

**Correspondence ID:3267**

These are important aspects that must be considered in determining the scope of the planning process and should be included in any environmental impact statement. My top concern is for the Park Service to remove the fence that keeps the tule elk penned in on grazing land that's insufficient to support a healthy herd.

Taxpayer dollars should not be spent on killing or neutering any animals, especially rare Tule Elk, once the herd is deemed "too large". The plan should allow for native wildlife to roam freely and die of natural causes.

Rather than maintaining the elk fence, troughs and mineral licks, the NPS could better use these resources to develop educational materials and programs about Tule elk.

Tomales Point and the Point Reyes National Seashore is to be an area where wildlife are given back their home. Taxpayers and visitors venture out that way to hear the roar of the Pacific Ocean and feel the sun and wind, and see the land as it was made in its beautiful creation. Taxpayers do not go out to Point Reyes to see miles of wire fences 'keeping Nature in check', and the destructive, exploitive industrial practices of corrupt politically influential parties rule the land.

It is time to end the mis-management of our native Tule elk in Point Reyes National Seashore. Please follow the scientific advice provided in 1993, and remove the fence across Tomales Point. It is important for the survival of this herd to be free-roaming with access to food and water."

**Correspondence ID:3268**

Correspondence: "I want to thank you for taking my public comment on the Tomales Point scoping process at Point Reyes National Seashore. I cannot believe there is a Prison Fence restricting Tule Elk in

our national park. What is that about? To please the cattle ranchers, and prevent the Tule Elk from being free to roam, associate, and live a good life? No more animal prisons in our national park. Point Reyes is not a zoo either. It is time to take down the elk fence.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

The NPS should put resources into creating a rewilded park. It will be necessary to plan on demolition and disposal of the many tons of concrete which now comprise the modern loafing barns at each PRNS dairy (one of which supposedly closed a year ago).

Taking down the fence is the best option, according to ecologists.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3269**

Correspondence: Please accept for the record these comments as input for the NPS's upcoming environmental review of its Tomales Point management plan update. These are important aspects that must be considered in determining the scope of the planning process and should be included in any environmental impact statement. My top concern is for the Park Service to remove the fence that keeps the tule elk penned in on grazing land that's insufficient to support a healthy herd.

As a private citizen I find the fact that my tax dollar is being used to fence and kill wild animals in a National Park abhorrent. Take down the fence and let the Tule Elk roam to find water and forage.

It is requested to stop using taxpayers' money to pay for the visual blight of the Elk Fence out on Tomales Point. Please stop trucking in water and minerals and whatever else to try to sustain a native herd in a non-native environment. Take down the fence, and use our taxpayers' money to actually turn the Seashore into a National Park that it deserves. Wildlife, natural habitat, clean water/soil/air, and public access should be the primary forces the Park Service supports - not a small group of politically-connected ranchers and their hoofed methane-operations.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

With the public's participation, I expect a greatly improved management plan for Tomales Point and the Tule elk. This is a good way for the Park Service to demonstrate that it can properly manage the public's resources in a way that improves the health and diversity of the park, while improving relations with the general public. Thank you for the opportunity to provide input.

**Correspondence ID:3270**

Correspondence: "Regarding the upcoming plan for Tomales Point within Point Reyes National Seashore I request our National Park prioritize the wishes of the Miwok First Nation people. They "managed" that land for more than 10,000 and didn't disrupt the ecosystem. Allow them to determine how the land

should be managed so that our future generations will be allowed to experience biodiversity, not cows, that exists there today. Maybe then the area will be allowed to thrive.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying - just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

Viewing the Tomales Point project from an objective approach, the most cost effective long-run plan is to take down the elk fences without the interference of cattle concerns and let the herds roam in a natural manner. The health of the elk herds could be clearly addressed, as well as the flora can be given its space for natural progression and seed dispersion. This would focus on only one plan to implement, for taxpayers and NPS staff, and not take the resources with two competing approaches.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3271**

Correspondence: "You want my input to the Tomales Point planning process for Point Reyes National Seashore? Why is there even a Tule Elk enclosure out there? Does everything have to please and serve the ranchers (who shouldn't even be there anymore)? The Tule Elk cannot even get enough water or food, and are dying off in really high numbers! Please get rid of the Tule Elk Fence and let the Elk roam free. If you need a fence, put up a wildlife-friendly one, and turn the place into a Native Coastal Plant Reserve.

What are the annual costs for the Tomales Point Reserve fence and the supplemental water and minerals for the Tule Elk trapped there? Why are Elk still trapped and causing this expense, when there are ample lands and waters for Elk to roam at Point Reyes National Seashore? It's not a zoo, it's a national park. Please take down the fence.

Instead of paying for fence maintenance and supplemental water and minerals out at Tomales Point when Elk are actually starving to death--why doesn't the Park Service and Mr. Kenkel come up with a plan to remove tenant ranchers and let wildlife live naturally all across Point Reyes National Seashore?

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

The original studies done by the NPS on how to manage the Tule elk showed they should be allowed to roam free. I will be tracking this process to see what the Park Service's plans are in this regard. I and the

vast majority of the public want better treatment of the elk, and better treatment of the Seashore itself. We do not want to see for-profit ranches degrading our beautiful park. This is the Park Service's opportunity to do this job right. You have my support in achieving this.

**Correspondence ID:3272**

Correspondence: Proposed plans for PRNS must include the removal of the elk fence at Tomales Point.

It is unconscionable the National Park Service, who is to protect public lands and natural resources, continues to incur costs for the ugly Elk Fence and supplemental water and nutrients when getting rid of the cattle ranchers and letting Elk roam free in the Park would work free for the rest of time.

Too many park resources are used to cater to the private ranchers. Ranch operations pollute the streams and waterways of the seashore with manure runoff, release methane into the atmosphere from cattle belches and farts, damaging our climate, and have caused the massive spread of invasive plants. NPS should be putting these resources into restoring the deep-rooted native grasses, wildflowers, mosses and other native plants that cannot survive destructive grazing practices caused by too many cattle on the land.

The original motivation for the fence was to protect financial interests, not for optimal ecological restoration. It must be removed.

Sadly, Point Reyes National Seashore is a landscape dominated by private, for-profit industrial cattle ranching businesses. These private business owners claim stewardship of the lands, waters, and air, and do everything in their power to evade, circumvent, ignore, abuse, and thumb their collective noses at the most basic and sound environmental principles, ethics, practices, and responsibilities. This selfish and unjust behavior should not occur in a National Park. Please take down the Elk fence, and prioritize our native wildlife over private and destructive cattle operations.

**Correspondence ID:3273**

Correspondence: "Please remove the elk fence from Point Reyes National Seashore in order for the elk herds to have access to sufficient amount of water, minerals and forage.

No matter what the Park Service spends to supplement water and minerals for the Tule Elk at Tomales Point, it will not matter. The Tule Elk are starving to death at Tomales Point due to continued drought, and megadrought. Please stop spending time and money on the fence and artificial approaches, and let the Elk roam free for natural sources of water and good nutrition.

In developing alternatives to be evaluated, the NPS should include Tule Elk not being confined behind the fence. Alternatives should include adding currently leased land to the Tule Elk Reserve as the leaseholders retire them due to climate change or shifting economic pressures, as we are already seeing.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

I respectfully submit this letter and request the National Park Service to be impartial in the next steps related to our incredible native wildlife in Point Reyes National Seashore."

I and the vast majority of the public want better treatment of the elk, and better treatment of the Seashore itself. We do not want to see for-profit ranches degrading our beautiful park. This is the Park Service's opportunity to do this job right. You have my support in achieving this.

**Correspondence ID:3280**

Correspondence: I am writing to submit my public comment for the Tomales Point planning process at Point Reyes National Seashore. Tomales Point is a de facto prison or zoo enclosure for several, distinct Tule Elk herds present there. It is a cruel, inhumane, and entirely contrived solution to the real problem: continued beef and cattle ranching across one-third of our Seashore. Please take down the Elk Fence now.

The American public, by a wide margin, does not support spending money to keep Tule Elk in captivity at Tomales Point in Point Reyes National Seashore. There is no viable, long-term monetary solution for supplemental water, minerals, or food for the Tomales Point herds. The only reasonable cost is to remove that harmful fence and let the Elk roam free as is natural and the right step to take.

There have been claims made over the years by ranching interests that the elk have damaged ranch operations or facilities. NPS should determine the facts here, and document the actual costs of any verifiable damage. Additionally, ranchers have claimed the elk need to be separated from their cattle because the elk will eat too much of the forage they want for their cows. The science clearly shows that

elk eat far less than cows, weigh a fraction of cows' weight, and being browsers, do not deplete the grasses and shrubs as much as cows do. Therefore, when scoping the plan update, NPS needs to compare the impacts of elk foraging vs. cattle grazing, and develop its plans consistent with the Organic Act of 1916 mandate of resource preservation and protection.

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. The park's top priority should be to ensure the Tule elk survive and even thrive. Remove the elk fence.

Thank you for your attention to my comments. If you do only one thing: Remove the godawful eyesore of a fence out there. Would you want to be trapped without enough water or food? You can't say it's a natural process of attrition if you've got them captive. Remove the fence immediately. Create safe and easy wildlife corridors for the elk to move out. Make the ranchers stop harming wildlife and hassling human visitors. The American people in multiple surveys, letters, op-eds, articles, and more want a National Park at Point Reyes. Not a ranch.

**Correspondence ID:3281**

Correspondence: "Thank you for inviting public input into the planning process for Tomales Point. The best way to advance the National Seashore's mission is to remove the fence at Pierce Point.

Removal of the fence is a less expensive option than "management" of the herd.

Resources should be spent on taking down the elk fence and re-wilding the park.

Taking down the fence is the best option, according to ecologists.

Point Reyes National Seashore, after 60 years from its founding, should be a national pride of astounding biodiversity, global climate research, and honor of the public trust in perpetuity. Please emphasize and prioritize the importance of protecting our native Tule elk in the upcoming plan, which would include the removal of the fence across Tomales Point."

**Correspondence ID:3282**

Correspondence: "I am a taxpayer who wants you to remove the fence confining the tule elk. It is important our elk survive and are well cared for in a natural habitat, vs confined behind a fence which keeps the elk away from much needed water and forage.

Tomales Point is not a zoo. The taxpayers do not want to incur the cost of feeding and providing water to wild animals. Nor do they want to visit a zoo. A simple solution, and one that is the most cost effective, is to stop "managing" the park. Take down the fence, remove the cattle, and let nature run its course.

Moving forward the Park Service should partner closely with the Coast Miwok and scientists to re-wild the park.

Point Reyes National Seashore should plan for prompt removal of the Elk Reserve fence on Tomales Point. This will achieve Tule Elk freedom of movement to naturally water, forage, and mate, and sustain optimal health and well-being of Tule Elk throughout the Seashore.

Thank you for your attention to my public record comments on the Tomales Point planning process for Point Reyes National Seashore. Your responsibility is to the spirit of wilderness preservation and protection, and to the vast majority of Americans who have insisted that this iconic place be freed from private, for-profit, commercial business interests. We will continue to press for just that, like taking down the Tomales Point fence." "I am a taxpayer who wants you to remove the fence confining the tule elk. **Correspondence ID:3285**

Correspondence: "Thank you for allowing the public to comment on the process of creating the upcoming plan for Tomales Point within Point Reyes National Seashore. I for one, as I think many others

do, frequent national parks to see wildlife in their natural habitat. I don't go to the park to see cows and fences. If I wanted to go to a zoo I would choose to do just that. Take down the fence and allow all of the wildlife to roam freely within the entire park as that is why the park was created.

As a taxpayer I expect the National Park Service to spend money wisely and frugally. I also expect the Park Service to prioritize wildlife over private enterprise. Therefore I ask the Park Service to stop spending money on erecting and maintaining a wildlife fence for the sole purpose of keeping native Tule Elk out of the parcels that are leased by private cattle and dairy ranch operations within a National Park.

The Park Service should be looking at such alternate uses of Tomales Point as creating a wildlife corridor that could run throughout the park, and the removal of the elk pen. The re-establishment of a more balanced ecosystem where the elk thrive could lead to the return of natural predators such as mountain lions, and with our climate in serious trouble, restoration of native grasses, shrubs and trees should be a high priority for the Park Service.

Confining Tule elk for the benefit of private ranching interests is a breach of the public trust.

I am grateful to have the opportunity to provide this preliminary feedback, and I look forward to participating in the next steps of this important planning process.

**Correspondence ID:3286**

Correspondence: "Tomales Point is a stunning place and I appreciate the chance to provide input for the planning process.

The Park Service will never be able to fully provide enough water, minerals, or forage for the captive Tule Elk at Tomales Point. Put the money into taking down the fence and letting Elk live and thrive throughout the Seashore.

In developing alternatives to be evaluated, the NPS should include Tule Elk not being confined behind the fence. Alternatives should include adding currently leased land to the Tule Elk Reserve as the leaseholders retire them due to climate change or shifting economic pressures, as we are already seeing.

Tule Elk are not only rare beautiful animals they are also caretakers of the land. The elk help native grasses flourish, which helps carbon sequestering, thus reducing the threat of climate change. In this day and age the National Park service must lead our nation in restoring our parks to help reduce our nation's carbon footprint.

As a long-time user of the seashore, I'm looking forward to seeing what the Park Service comes up with as an improved management plan. It's a good time to make some long-needed changes, particularly the elk fence removal. That alone will make a significant difference in one's experience of the park, and I'm sure it will be met with massive public approval. Thank you for considering my input. I'm excited to see the results."

**Correspondence ID:3287**

Correspondence: I am writing the National Park Service, to state that the Elk fence needs to be removed in order for the elk herds to roam freely in the park. This is the best next step for the survival of this endemic species.

Why are my taxes paying for a fence to imprison wild elk at Tomales Point in Point Reyes National Seashore? Why is my money used to pay to ship in water and minerals to supplement insufficient amounts out there? If there is no big fence to surround wild elk, they would just get water and food for free anywhere else they go in the park! Free water and food everywhere already for the Elk! Remove that fence and allow the elk to live a life.

Financial resources of the National Park Service (NPS) should be used to end the Tule Elk Reserve on Tomales Point, by removal of the rancher and NPS insisted eight foot fence and replace that with a wildlife-friendly smaller fence but a fence that keeps the cattle out of this preserved environment. Let's establish a Coastal Native Prairie Reserve in place of the wholly bad and inhumane Tule Elk Reserve. The Tule Elk get to roam free for food and water throughout the Seashore, and the current Reserve transforms into a wild habitat global study model during these times of severe climate heating and California megadrought.

The 1998 plan says "Natural processes will be relied on to control populations of native species ..." There is nothing natural about caging animals behind a fence. The existing fence at the Tule Elk Reserve should be removed and replaced with a wildlife friendly fence that will allow Tule Elk to leave the reserve while still keeping cattle out.

It is time to end the mis-management of our native Tule elk in Point Reyes National Seashore. Please follow the scientific advice provided in 1993, and remove the fence across Tomales Point. It is important for the survival of this herd to be free-roaming with access to food and water.

**Correspondence ID:3288**

Correspondence: "Tomales Point is the highlight of many visitors' experience in Point Reyes National Seashore. Thank you for inviting public comment in this planning process. By removing the 8-foot elk fence, you can begin the process of restoration of the entire peninsula's ecosystem.

As a taxpayer I expect the National Park Service to spend money wisely and frugally. I also expect the Park Service to prioritize wildlife over private enterprise. Therefore I ask the Park Service to stop spending money on erecting and maintaining a wildlife fence for the sole purpose of keeping native Tule Elk out of the parcels that are leased by private cattle and dairy ranch operations within a National Park.

We wonder why Point Reyes National Seashore officials, especially Superintendent Kenkel, persist with keeping the expense of a long ugly fence out at Tomales Point and to truck in water and minerals. It's obvious even to a non-scientist. There's not enough natural food and water to sustain the Tule Elk entrapped in a zoo pen out there. Take down the fence, and instead use the money to help the Tule Elk transition and thrive across the Seashore. Remove the ranchers and their cattle. Enough is enough. It's a NATIONAL PARK!

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. The park's top priority should be to ensure the Tule elk survive and even thrive. Remove the elk fence.

Thank you for your attention to my comments. If you do only one thing: Remove the godawful eyesore of a fence out there. Would you want to be trapped without enough water or food? You can't say it's a

natural process of attrition if you've got them captive. Remove the fence immediately. Create safe and easy wildlife corridors for the elk to move out. Make the ranchers stop harming wildlife and hassling human visitors. The American people in multiple surveys, letters, op-eds, articles, and more want a National Park at Point Reyes. Not a ranch.

**Correspondence ID:3289**

Correspondence: I am writing to submit my public comment for the Tomales Point planning process at Point Reyes National Seashore. Tomales Point is a de facto prison or zoo enclosure for several, distinct Tule Elk herds present there. It is a cruel, inhumane, and entirely contrived solution to the real problem: continued beef and cattle ranching across one-third of our Seashore. Please take down the Elk Fence now.

The American public, by a wide margin, does not support spending money to keep Tule Elk in captivity at Tomales Point in Point Reyes National Seashore. There is no viable, long-term monetary solution for supplemental water, minerals, or food for the Tomales Point herds. The only reasonable cost is to remove that harmful fence and let the Elk roam free as is natural and the right step to take.

There have been claims made over the years by ranching interests that the elk have damaged ranch operations or facilities. NPS should determine the facts here, and document the actual costs of any verifiable damage. Additionally, ranchers have claimed the elk need to be separated from their cattle because the elk will eat too much of the forage they want for their cows. The science clearly shows that elk eat far less than cows, weigh a fraction of cows' weight, and being browsers, do not deplete the grasses and shrubs as much as cows do. Therefore, when scoping the plan update, NPS needs to compare the impacts of elk foraging vs. cattle grazing, and develop its plans consistent with the Organic Act of 1916 mandate of resource preservation and protection.

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. The park's top priority should be to ensure the Tule elk survive and even thrive. Remove the elk fence.

**Correspondence ID:3290**

Correspondence: "I am writing and requesting to please take down the elk fence from Tomales Point, as it prevents natural migration of tule elk. It also stops them from getting water and food.

If NPS removes the elk fence, population control of the herd will be greatly simplified. As seen with the free-roaming herds, numbers are much more stable as the elk are able to find water and forage as needed on their own. If fence removal resulted in a large expansion of the herd (very unlikely), I would like to see the elk allowed to expand throughout the park and onto the mainland, since they are indigenous to this area. In addition, individual elk could be relocated to start new herds in other parks and wilderness areas. If the cows are removed from PRNS, eventually the elk will be cleared of John's

Disease, allowing for such safe transfers. As indigenous animals, their spread would enhance the diversity and resiliency of the environment.

The park should spend time and money on removing the fences, planting native grasses, cleaning up the water pollutants, and generally restoring Tomales Point back to its natural habitat.

The public loves the elk, and are horrified when they learn that due to being penned in, significant numbers have perished due to thirst or lack of sustenance. As seen with the other, free-roaming herds in Pt. Reyes, it seems such needless harm will be eliminated if the herd is allowed to roam at will. If there is conflict between cattle and elk, the Park Service should have ranchers remove their cows, since this is a national park, not a feedlot.

Thank you for the opportunity to provide feedback on the upcoming plan for Elk Reserve in Point Reyes National Seashore. The 3-year timeframe proposed by the NPS appears to be too long of a period, as we have lost approximately 50% of our native Elk held captive behind this 8 foot fence due to lack of appropriate amount of food, water and minerals. In your upcoming plan, please ensure there are numerous alternatives available on the removal of this deadly fence. It is time for that fence to be removed.”

**Correspondence ID:3291**

Correspondence: I am writing to submit my public comment for the Tomales Point planning process at Point Reyes National Seashore. Tomales Point is a de facto prison or zoo enclosure for several, distinct Tule Elk herds present there. It is a cruel, inhumane, and entirely contrived solution to the real problem: continued beef and cattle ranching across one-third of our Seashore. Please take down the Elk Fence now.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

Invasive species, particularly ice plant, thistle and hemlock, are rampant in Point Reyes National Seashore outside of the elk reserve. Funds currently spent on the Tomales Point elk fence would be better spent on removing these plants in other parts of the park.

Superintendent Kenkel and other PRNS officials should demonstrate leadership on a national scale and remove the Tule Elk Reserve's fence across Tomales Point so that a new, sustainable wildlife health model is created to right the wrong of past ill-conceived Park Service policy. It is their duty to protect all National Park natural resources for posterity.

Thank you for the opportunity to provide feedback on the upcoming plan for Elk Reserve in Point Reyes National Seashore. **Correspondence ID:3295**

Correspondence: “To assist the NPS with its planned NEPA review of the Tomales Point area and Tule elk herd management in Pt. Reyes National Seashore, I suggest the following issues be included in your review process, and any eventual Environmental Impact Statement that comes out of it. These points are intended to insure that the park resources, including the Tule elk and native plants and animals, get the maximum protection for the public's current and future benefit.

Since the Park Service recently concluded its multi-year process to update its General Management Plan Amendment (GMPA), one wonders why this part of park operations wasn't included in that process. Nonetheless, now is the time for a comprehensive analysis of NPS current management of Tomales Point, as well as past practices, and all associated costs. While NPS should adhere to its mandate as specified in the Organic Act of 1916 with an eye to providing the highest levels of protection for the natural resources within the park, it should examine the costs in staff time and materials, as well as ongoing maintenance costs, of the elk fence. It should compare that to the savings and benefits of removing the fence, including the environmental benefits of allowing the cattle-grazed areas a chance to repair themselves.

The NPS should put resources into creating a rewilded park. It will be necessary to plan on demolition and disposal of the many tons of concrete which now comprise the modern loafing barns at each PRNS dairy (one of which supposedly closed a year ago).

First and foremost, NPS should remove the fence that separates the Tomales Point herd from private, for-profit ranching livestock and prevents the elk herd from finding forage and water in its own. This would allow a more natural existence, without interference from humans.

I want to thank Superintendent Craig Kenkel for the opportunity to provide comments on the upcoming plan for our iconic Tule elk. It is of utmost importance for the plan to include numerous alternatives which requires the removal of the unethical fence across Tomales Point. It is time for our native elk to have the ability to freely roam throughout the National Seashore, versus being confined without sufficient sustenance to survive."

**Correspondence ID:3296**

Correspondence: I am writing to request the involvement of independent scientists, independent elk biologists and the public in the development of the elk general management. We deserve a seat at the table, and it is imperative the upcoming management plan be objective, and that it prioritizes the survival of our native Tule elk over private cattle ranching in PRNS.

As a private citizen I find the fact that my tax dollar is being used to fence and kill wild animals in a National Park abhorrent. Take down the fence and let the Tule Elk roam to find water and forage.

It is requested to stop using taxpayers' money to pay for the visual blight of the Elk Fence out on Tomales Point. Please stop trucking in water and minerals and whatever else to try to sustain a native herd in a non-native environment. Take down the fence, and use our taxpayers' money to actually turn the Seashore into a National Park that it deserves. Wildlife, natural habitat, clean water/soil/air, and public access should be the primary forces the Park Service supports - not a small group of politically-connected ranchers and their hoofed methane-operations.

The original motivation for the fence was to protect financial interests, not for optimal ecological restoration. It must be removed.

If the Park Service is serious about managing Tomales Point, the Tule elk herds, and the rest of the park most effectively, it will follow the science in determining its plan. That means, first and foremost, removing the elk fence, and protecting and restoring the natural habitat that has been destroyed by

cattle and dairy ranching. This is a great opportunity to show enlightened leadership, and I look forward to continuing my engagement in the process.

**Correspondence ID:3297**

Correspondence: "Please read and consider my public comment on the Tomales Point planning process for Point Reyes National Seashore. Tule Elk should be free to roam, gather, find water and food, and live more healthy lives--not be imprisoned for their entire lives behind a god-awful fence. Point Reyes is a national park, therefore please remove the fence now.

The Park Service should not be spending so much money to maintain fencing at Tomales Point Reserve. There are all the expenses for materials, then all the hidden costs and time for labor, operations, administration, and rancher-pleasing. As a concerned citizen for the elk, please spend the money to remove the fence and free the Elk.

Why is the NPS having separate GMPs for the leased ranch lands and for the Tule Elk Reserve? Is this not all one national park? Are you going to have a separate GMP for the southern part of the Phil Burton Wilderness area? PRNS needs to be managed as one comprehensive and coordinated part, not sliced up in pieces. As a member of the public I don't see separate areas.

Confining Tule elk for the benefit of private ranching interests is a breach of the public trust.

As a long-time user of the seashore, I'm looking forward to seeing what the Park Service comes up with as an improved management plan. It's a good time to make some long-needed changes, particularly the elk fence removal. That alone will make a significant difference in one's experience of the park, and I'm sure it will be met with massive public approval.

We ALL need to work together in order to Protect and SAVE the Wildlife of Pointe Reyes National Seashore! SAVE The TULE ELK!!!

Thank you for considering my input. I'm excited to see the results."

**Correspondence ID:3298**

Correspondence: "You want my input to the Tomales Point planning process for Point Reyes National Seashore? Why is there even a Tule Elk enclosure out there? Does everything have to please and serve the ranchers (who shouldn't even be there anymore)? The Tule Elk cannot even get enough water or food, and are dying off in really high numbers! Please get rid of the Tule Elk Fence and let the Elk roam free. If you need a fence, put up a wildlife-friendly one, and turn the place into a Native Coastal Plant Reserve.

The Park Service continues to spend money on a fence to keep Tule Elk trapped out on Tomales Point at Point Reyes even though there's not enough food and water out there for the Elk, and now I have to pay for fence maintenance and to ship water and supplements out there. Stop the bad spending! Take down that fence and let the Tule Elk go get their food and water for free.

Invasive species, particularly ice plant, thistle and hemlock, are rampant in Point Reyes National Seashore outside of the elk reserve. Funds currently spent on the Tomales Point elk fence would be better spent on removing these plants in other parts of the park.

The first sentence of the Tule Elk Management Plan and Environmental Assessment, dated 1998 states "The purpose of this plan and environmental assessment is to guide the management, monitoring, and research of Tule Elk, *Cervus elaphus nannodes*, at Point Reyes National Seashore for the next five to ten years". Well here we are 24 years later and you're finally getting around to updating this horribly outdated plan. Meanwhile hundreds of beautiful Tule Elk have died behind that fence while the NPS did nothing. That fence has to go.

It is time to end the mis-management of our native Tule elk in Point Reyes National Seashore. Please follow the scientific advice provided in 1993, and remove the fence across Tomales Point. It is important for the survival of this herd to be free-roaming with access to food and water."

**Correspondence ID:3299**

Correspondence: In response to your letter dated March 31, 2022 asking for ideas on the Tomales Point Tule Elk Reserve planning process, I offer the following regarding the elk fence and how best to manage.

The elk fence has hidden costs that have not been analyzed or made public before. Besides the typical costs of fence construction and maintenance, there's the cost of park staff having to make sure the water tanks that serve the captive elk herd are maintained and kept filled, the mineral licks provided are sufficient to the herd's needs, and complaints from ranchers are responded to. Then there are the costs of the impacts on the area outside the fence: the massive amounts of invasive plants that have forced out the native, deep-rooted grasses that are true effective carbon sequesters, the elimination of habitat for indigenous animals of all sizes, the carbon created by the rotting of annual invasive gasses, and more. And because the fence only exists at the request of cattle ranchers, NPS should look at the costs of the damage the cattle do with their methane pollution the atmosphere and their manure polluting the parks' streams, lagoons and bays. These ecological costs haven't been accounted for, and need to be.

The Coast Miwok people should decide how to bring the land back to the way their people left it, before impacted by European settlers in the mid-1800's. The Coast Miwok lived in unison with the Tule elk, the native wildlife and the native vegetation. Let's help recreate our National Park to how it was prior to the impact caused by commercial cattle operations.

The Park Service should consider not only the economic costs of maintaining the elk fence and the management of the elk herd, it should examine the reputational and ethical costs of doing so as well. More and more, the public is very unhappy about the needless deaths of the Tule elk, for no other reason than to protect private ranchers' profits. How many visitors are discouraged from coming to visit due to this wasteful and disagreeable practice? How many dollars are not spent in the park and surrounding areas because of it? How much distrust does the Park Service generate when people see it catering to the select few, at the cost of the iconic Tule elk and damage to the park's environs? Too much, that's for sure.

We need a long-range plan the supports a healthy population of native Tule Elk. It is time for the Park Service to prioritize our elk in PRNS over private cattle operations on our public land. Thank you in advance, for a plan that will include immediate removal of this unnatural and unethical eight foot fence.

**Correspondence ID:3300**

Correspondence: "I am writing the National Park Service to respectfully request to remove the eight foot fence at Tomales Point in order for our iconic Tule elk to roam free in our National Park.

As a taxpayer I expect the National Park Service to spend money wisely and frugally. I also expect the Park Service to prioritize wildlife over private enterprise. Therefore I ask the Park Service to stop spending money on erecting and maintaining a wildlife fence for the sole purpose of keeping native Tule Elk out of the parcels that are leased by private cattle and dairy ranch operations within a National Park.

Park Service money should not be used to trap Elk behind a long tall fence on Tomales Point. Point Reyes Park Service financial resources should be used to get rid of ranchers who pump raw sewage into park lands and waters, build and hide dumps, and prevent public access to the park. Please prioritize native Tule elk over destructive cattle operations on our public land.

The Tomales Point Elk Reserve fence must promptly be taken down. This should occur in conjunction with a renewed, science-based plan to cease rancher successions of leased lands, allowing Point Reyes National Seashore to revert to natural landscapes, waterscapes, habitats, and ecosystems.

The successful reintroduction of the elk herds in the Point Reyes National Seashore should be viewed as the goal of the general plan for not only the Tomales Point area but the entire National Seashore and the most cost-effective way to do that is to work for the elimination of cattle from that area. If this approach is not taken then there will be continued non-native plants being brought in which will necessitate more plans and strategies to eliminate, more engineering projects to contain manure run-off, control of native 'predator' species to protect the cattle which is contradictory to reestablishing the Seashore, just to name a few."

**Correspondence ID:3301**

Correspondence: "I am writing to you specifically to address your plans for Tomales Point in the Point Reyes National Seashore. As they currently stand, they need to be incorporated into the General Plan for the Seashore - not as a separate part of it. It does not make strategic or economic sense to treat them as a part-as-to-of-themselves. The steps to restore the flora and fauna for all areas must be incorporated into the dynamics of the plan at the outset.

It's both cheaper and more ecological to let the elk be free, without a fence, than it is to try to manage them unnaturally, with trucked water tanks and salt licks.

The park should spend time and money on removing the fences, planting native grasses, cleaning up the water pollutants, and generally restoring Tomales Point back to its natural habitat.

A National Park was created in Point Reyes to protect one of the most scenic and biologically diverse areas in our country. It is being put at risk for the profits of a few private ranchers. This is not acceptable to the people of Marin, the SF Bay Area, and the nation, nor our native wildlife. It is time to remove the Elk fence.

Point Reyes National Seashore, after 60 years from its founding, should be a national pride of astounding biodiversity, global climate research, and honor of the public trust in perpetuity. Please emphasize and prioritize the importance of protecting our native Tule elk in the upcoming plan, which would include the removal of the fence across Tomales Point."

**Correspondence ID:3302**

Correspondence: Thank you for the opportunity to provide input on the updated Tule Elk Management Plan/General Management Plan for Pt. Reyes National Seashore. To help the National Park Service (NPS) best structure its environmental review process, I offer the comments below. Please consider including these points in scoping your review and the presumed Environmental Impact Statement.

Removing the elk fence is a frugal option, for a Park Service that apparently operates with limited resources.

The park should spend time and money on removing the fences, planting native grasses, cleaning up the water pollutants, and generally restoring Tomales Point back to its natural habitat.

Because the well-publicized die-offs of the Tomales Point Tule elk over the past few years have captured the public's attention, it's important that NPS give full consideration to the benefits of removing the elk fence that pens the herd in. Since the fence is only for the benefit of the private ranches in the park, NPS should look at what the impacts on ranching would be with removal of the fence, and weigh that against benefits to the natural environment and the public at large. Since the vast majority of park visitors come for the elk, and not the cows, maintaining a healthy herd should be seen as more important than protecting the private interests of the ranchers.

We need a long-range plan that supports a healthy population of native Tule Elk. It is time for the Park Service to prioritize our elk in PRNS over private cattle operations on our public land. Thank you in advance, for a plan that will include immediate removal of this unnatural and unethical eight foot fence.

**Correspondence ID:3303**

Correspondence: "Thank you for the opportunity to comment on Tomales Point. Why is this area being treated separate from Point Reyes National Seashore? As it is within the boundaries of the seashore it should be interwoven within the fabric of the rest of the seashore and the ecosystem allowed to become whole instead of piecemeal. A visitor should be able to walk/hike the entirety of the park. And the native grasses and wildlife (including elk) should be able to roam freely within all areas of the park. Please remove the elk fences and let the park be an actual park.

The Park Service should not be spending so much money to maintain fencing at Tomales Point Reserve. There are all the expenses for materials, then all the hidden costs and time for labor, operations, administration, and rancher-pleasing. As a concerned citizen for the elk, please spend the money to remove the fence and free the Elk.

I respectfully ask that the Tule Elk Reserve fence be taken down now. National Park Service and Point Reyes National Seashore funds supplied by the American taxpayer should be used to create wild and healthy freedom for the Tule Elk and other wildlife. Public access to vast swaths of the Seashore now blocked by ranching barbed/electric wire and formidable gates, which is not acceptable on public lands. Please investigate, enforce, and punish cattle ranching families that continue to degrade and pollute our Seashore's lands, waters, and air. Superintendent Kenkel and all of you at the NPS: It is time to get your priorities and mandates straight. Please serve the interests of wildlife, habitat, visitors, and posterity.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

Point Reyes National Seashore, after 60 years from its founding, should be a national pride of astounding biodiversity, global climate research, and honor of the public trust in perpetuity. Please emphasize and prioritize the importance of protecting our native Tule elk in the upcoming plan, which would include the removal of the fence across Tomales Point.”

**Correspondence ID:3304**

Correspondence: To assist the NPS with its planned NEPA review of the Tomales Point area and Tule elk herd management in Pt. Reyes National Seashore, I suggest the following issues be included in your review process, and any eventual Environmental Impact Statement that comes out of it. These points are intended to insure that the park resources, including the Tule elk and native plants and animals, get the maximum protection for the public's current and future benefit.

The Park Service continues to spend money on a fence to keep Tule Elk trapped out on Tomales Point at Point Reyes even though there's not enough food and water out there for the Elk, and now I have to pay for fence maintenance and to ship water and supplements out there. Stop the bad spending! Take down that fence and let the Tule Elk go get their food and water for free.

The Park Service wastes taxpayer money on the self-fulfilling problems caused by its continued decades-long poor wildlife management choices out on Tomales Point. The already limited funds available should be used to remove the tule elk fence so elk can find sufficient food and water on their own across the Seashore.

Removing the Tomales Point elk fence will improve genetic diversity within the elk population.

Thank you for your consideration in this important manner.

**Correspondence ID:3305**

Correspondence: “I am writing the National Park Service, to state that the Elk fence needs to be removed in order for the elk herds to roam freely in the park. This is the best next step for the survival of this endemic species.

Maintenance of an 8-foot fence and providing water and nutrition for captive Tule elk is not a reasonable use of funds, when the Tule elk could find adequate food and water if they were allowed to freely roam.

Viewing the Tomales Point project from an objective approach, the most cost effective long-run plan is to take down the elk fences without the interference of cattle concerns and let the herds roam in a natural manner. The health of the elk herds could be clearly addressed, as well as the flora can be given its space for natural progression and seed dispersion. This would focus on only one plan to implement, for taxpayers and NPS staff, and not take the resources with two competing approaches.

Removal of the Tule Elk Reserve fence across Tomales Point in Point Reyes National Seashore must happen now. This must be done urgently in light of the drought and fire conditions caused by climate change. It must include a completely revised and science-based plan, enhanced by Native American ecological knowledge and practices, to cease the ranch succession policies of the past in favor of transformation to natural habitats, with well-planned wildlife corridors to aid natural and assisted rewilding restoration processes.

We need a long-range plan that supports a healthy population of native Tule Elk. It is time for the Park Service to prioritize our elk in PRNS over private cattle operations on our public land. Thank you in advance, for a plan that will include immediate removal of this unnatural and unethical eight foot fence.”

**Correspondence ID:3306**

Correspondence: “Thank you for the opportunity to comment on Tomales Point. Why is this area being treated separate from Point Reyes National Seashore? As it is within the boundaries of the seashore it should be interwoven within the fabric of the rest of the seashore and the ecosystem allowed to become whole instead of piecemeal. A visitor should be able to walk/hike the entirety of the park. And the native grasses and wildlife (including elk) should be able to roam freely within all areas of the park. Please remove the elk fences and let the park be an actual park.

The Park Service should not be spending so much money to maintain fencing at Tomales Point Reserve. There are all the expenses for materials, then all the hidden costs and time for labor, operations, administration, and rancher-pleasing. As a concerned citizen for the elk, please spend the money to remove the fence and free the Elk.

I respectfully ask that the Tule Elk Reserve fence be taken down now. National Park Service and Point Reyes National Seashore funds supplied by the American taxpayer should be used to create wild and healthy freedom for the Tule Elk and other wildlife. Public access to vast swaths of the Seashore now blocked by ranching barbed/electric wire and formidable gates, which is not acceptable on public lands. Please investigate, enforce, and punish cattle ranching families that continue to degrade and pollute our Seashore's lands, waters, and air. Superintendent Kenkel and all of you at the NPS: It is time to get your priorities and mandates straight. Please serve the interests of wildlife, habitat, visitors, and posterity.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

Point Reyes National Seashore, after 60 years from its founding, should be a national pride of astounding biodiversity, global climate research, and honor of the public trust in perpetuity. Please emphasize and prioritize the importance of protecting our native Tule elk in the upcoming plan, which would include the removal of the fence across Tomales Point.”

**Correspondence ID:3307**

Correspondence: To assist the NPS with its planned NEPA review of the Tomales Point area and Tule elk herd management in Pt. Reyes National Seashore, I suggest the following issues be included in your review process, and any eventual Environmental Impact Statement that comes out of it. These points are intended to insure that the park resources, including the Tule elk and native plants and animals, get the maximum protection for the public's current and future benefit.

Why are my taxes paying for a fence to imprison wild elk at Tomales Point in Point Reyes National Seashore? Why is my money used to pay to ship in water and minerals to supplement insufficient amounts out there? If there is no big fence to surround wild elk, they would just get water and food for free anywhere else they go in the park! Free water and food everywhere already for the Elk! Remove that fence and allow the elk to live a life.

Park funds should be used to monitor and enforce water quality and other environmental standards in Point Reyes National Seashore versus spending money on a bad fence idea to starve wildlife in a National Park.

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

It is requested the personnel at the National Park Service re-review the 1993 report of the Scientific Advisory Panel on control of Tule Elk in PRNS, and include its recommendation in the upcoming plan. The independent advisory panel recommended to remove the fence across Tomales Point, and develop a plan to achieve a large, healthy, free-ranging elk population. Thank you Mr Kenkel for your attention to this recommendation.

**Correspondence ID:3308**

Correspondence: "I want to thank you for taking my public comment on the Tomales Point scoping process at Point Reyes National Seashore. I cannot believe there is a Prison Fence restricting Tule Elk in our national park. What is that about? To please the cattle ranchers, and prevent the Tule Elk from being free to roam, associate, and live a good life? No more animal prisons in our national park. Point Reyes is not a zoo either. It is time to take down the elk fence.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

The NPS should put resources into creating a rewilded park. It will be necessary to plan on demolition and disposal of the many tons of concrete which now comprise the modern loafing barns at each PRNS dairy (one of which supposedly closed a year ago).

Taking down the fence is the best option, according to ecologists.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!"

**Correspondence ID:3309**

Correspondence: Thank you for the opportunity to provide input on the updated Tule Elk Management Plan/General Management Plan for Pt. Reyes National Seashore. To help the National Park Service (NPS) best structure its environmental review process, I offer the comments below. Please consider including these points in scoping your review and the presumed Environmental Impact Statement.

The American public, by a wide margin, does not support spending money to keep Tule Elk in captivity at Tomales Point in Point Reyes National Seashore. There is no viable, long-term monetary solution for supplemental water, minerals, or food for the Tomales Point herds. The only reasonable cost is to remove that harmful fence and let the Elk roam free as is natural and the right step to take.

The Park Service should put all resources to removing the elk fence, allow the elk to roam free, stop the killing of the elk, and plant native grasses for them to feed.

The Elk Fence on Tomales Point must be removed. Tule Elk need to mingle, associate, and mate to prolong genetic diversity and sustain present and long-term herd health, vitality, and viability.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity.

**Correspondence ID:3310**

**Correspondence ID:3313**

Correspondence: "I am writing and requesting to please take down the elk fence from Tomales Point, as it prevents natural migration of tule elk. It also stops them from getting water and food.

It is unconscionable the National Park Service, who is to protect public lands and natural resources, continues to incur costs for the ugly Elk Fence and supplemental water and nutrients when getting rid of the cattle ranchers and letting Elk roam free in the Park would work free for the rest of time.

I respectfully ask that the Tule Elk Reserve fence be taken down now. National Park Service and Point Reyes National Seashore funds supplied by the American taxpayer should be used to create wild and healthy freedom for the Tule Elk and other wildlife. Public access to vast swaths of the Seashore now blocked by ranching barbed/electric wire and formidable gates, which is not acceptable on public lands. Please investigate, enforce, and punish cattle ranching families that continue to degrade and pollute our Seashore's lands, waters, and air. Superintendent Kenkel and all of you at the NPS: It is time to get your priorities and mandates straight. Please serve the interests of wildlife, habitat, visitors, and posterity.

Point Reyes National Seashore management must scope a plan to remove the Tule Elk Reserve fence across Tomales Point. This must be done in conjunction with a serious, science-based, enforced plan to cease the practice of ranching on our public land, so that timely and effective Seashore wilderness restoration occurs with public participation, focused on natural and native features, habitats, wildlife, and visitor accessibility.

Respectfully, the land in Point Reyes National Seashore belongs to the public, and should be managed for public, not for private benefit. It is imperative to keep the native Tule Elk as the priority, and remove the Elk fence.”

**Correspondence ID:3314**

Correspondence: To assist the NPS with its planned NEPA review of the Tomales Point area and Tule elk herd management in Pt. Reyes National Seashore, I suggest the following issues be included in your review process, and any eventual Environmental Impact Statement that comes out of it. These points are intended to insure that the park resources, including the Tule elk and native plants and animals, get the maximum protection for the public's current and future benefit.

Why are my taxes paying for a fence to imprison wild elk at Tomales Point in Point Reyes National Seashore? Why is my money used to pay to ship in water and minerals to supplement insufficient amounts out there? If there is no big fence to surround wild elk, they would just get water and food for free anywhere else they go in the park! Free water and food everywhere already for the Elk! Remove that fence and allow the elk to live a life.

Park funds should be used to monitor and enforce water quality and other environmental standards in Point Reyes National Seashore versus spending money on a bad fence idea to starve wildlife in a National Park.

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

It is requested the personnel at the National Park Service re-review the 1993 report of the Scientific Advisory Panel on control of Tule Elk in PRNS, and include it recommendation in the upcoming plan. The independent advisory panel recommended to remove the fence across Tomales Point, and develop a plan to achieve a large, healthy, free-ranging elk population. Thank you Mr Kenkel for your attention to this recommendation.

**Correspondence ID:3315**

Correspondence: "Regarding the upcoming plan for Tomales Point within Point Reyes National Seashore I request our National Park prioritize the wishes of the Miwok First Nation people. They "managed" that land for more than 10,000 and didn't disrupt the ecosystem. Allow them to determine how the land should be managed so that our future generations will be allowed to experience biodiversity, not cows, that exists there today. Maybe then the area will be allowed to thrive.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying - just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

Viewing the Tomales Point project from an objective approach, the most cost effective long-run plan is to take down the elk fences without the interference of cattle concerns and let the herds roam in a natural manner. The health of the elk herds could be clearly addressed, as well as the flora can be given its space for natural progression and seed dispersion. This would focus on only one plan to implement, for taxpayers and NPS staff, and not take the resources with two competing approaches.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!"

**Correspondence ID:3316**

Correspondence: "I am writing to request the involvement of independent scientists, independent elk biologists and the public in the development of the elk general management. We deserve a seat at the table, and it is imperative the upcoming management plan be objective, and that it prioritizes the survival of our native Tule elk over private cattle ranching in PRNS.

How much does it cost the National Park Service or Point Reyes National Seashore in Tomales Point Reserve for fence maintenance and supplemental water and minerals? How much does it cost us the taxpayers not only in materials, but in all the hidden costs of labor, operations, communications, negotiation, administration, and don't forget, pleasing the ranchers who shouldn't even be there due to their constant impairment to the Seashore.

Resources currently spent on maintaining the fence could be better spent on expanding interpretive displays of indigenous land stewardship practices and restoration of Coastal Miwok sites in Point Reyes National Seashore.

The 1998 plan says "Natural processes will be relied on to control populations of native species ..." There is nothing natural about caging animals behind a fence. The existing fence at the Tule Elk Reserve should be removed and replaced with a wildlife friendly fence that will allow Tule Elk to leave the reserve while still keeping cattle out.

Thank you for listening to the public and considering the wishes of the many instead of the profits of a few.”

**Correspondence ID:3317**

Correspondence: Thank you for reading my public comment for the Tomales Point planning process. We love Point Reyes National Seashore, but the Tule Elk Reserve is a really sad place out there. Why is a fence to trap wildlife even a good science idea? Please remove the Tule Elk Fence now.

What are the costs to maintain the Tule Elk Reserve fence, and to provide water and mineral supplements for the Tule Elk? What is the rationale for these expenditures, when removal of the fenceline across Tomales Point would allow Tule Elk to roam for free for water and forage.

Viewing the Tomales Point project from an objective approach, the most cost effective long-run plan is to take down the elk fences without the interference of cattle concerns and let the herds roam in a natural manner. The health of the elk herds could be clearly addressed, as well as the flora can be given its space for natural progression and seed dispersion. This would focus on only one plan to implement, for taxpayers and NPS staff, and not take the resources with two competing approaches.

Removing the elk fence is the most impactful step the Park can take for Tomales Point, and this should be the plan review's top priority. This and total removal of all dairy and cattle operations from all of the park would have the strongest positive impacts, both ecologically and in terms of protection of the public's resources. The removal of both would benefit the return of native, deep-rooted grasses, allow the return of birds and wildlife that cannot survive in the barren fields where cattle have eaten the greenery down to the earth, and let the natural prairie reestablish itself. It could also serve as an outdoor laboratory for studying how to accelerate its healing and nurturing, information that will be increasingly important as we try to save our planet from the damages of global warming.

Thank you for submitting my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore. Please remove the fence across Tomales Point so the Elk can be free to roam, feed, drink, associate, mate, and thrive naturally. It can be done! Please consider and use my comments to help Point Reyes be a beautiful place for wildlife and humans.

**Correspondence ID:3318**

Correspondence: “Thank you for allowing the public to comment on the process of creating the upcoming plan for Tomales Point within Point Reyes National Seashore. I for one, as I think many others do, frequent national parks to see wildlife in their natural habitat. I don't go to the park to see cows and fences. If I wanted to go to a zoo I would choose to do just that. Take down the fence and allow all of the wildlife to roam freely within the entire park as that is why the park was created.

The current plan of what is called a 'co-habitation' - which is a farce - is wasteful in a number of ways. Instead of letting the elk populations roam the land to access the water and flora they have evolved to need for subsistence, it often needs to be trucked in to keep populations at levels 'mandated by a plan'. Not only do these resources need to be expended to keep the herds alive - then later, National Park Service personnel go and cull the population when it exceeds their some-how-agreed upon 'rancher-acceptable' number.

It is requested to stop using taxpayers' money to pay for the visual blight of the Elk Fence out on Tomales Point. Please stop trucking in water and minerals and whatever else to try to sustain a native

herd in a non-native environment. Take down the fence, and use our taxpayers' money to actually turn the Seashore into a National Park that it deserves. Wildlife, natural habitat, clean water/soil/air, and public access should be the primary forces the Park Service supports - not a small group of politically-connected ranchers and their hoofed methane-operations.

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. The park's top priority should be to ensure the Tule elk survive and even thrive. Remove the elk fence.

We ask, why should the "elk fence" across the width of Tomales Point on Point Reyes National Seashore be immediately removed? Because, at long last, after six decades of the Seashore's existence--it is the right, just, humane, and obvious thing to do for an American, even global, National Park, perched on the formidable and awesome Pacific Coast, still waiting for its true nature to be revealed."

**Correspondence ID:3319**

Correspondence: Thank you for reading my public comment for the Tomales Point planning process. We love Point Reyes National Seashore, but the Tule Elk Reserve is a really sad place out there. Why is a fence to trap wildlife even a good science idea? Please remove the Tule Elk Fence now.

**Correspondence ID:3320**

Correspondence: "To assist the NPS with its planned NEPA review of the Tomales Point area and Tule elk herd management in Pt. Reyes National Seashore, I suggest the following issues be included in your review process, and any eventual Environmental Impact Statement that comes out of it. These points

are intended to insure that the park resources, including the Tule elk and native plants and animals, get the maximum protection for the public's current and future benefit.

The elk fence has hidden costs that have not been analyzed or made public before. Besides the typical costs of fence construction and maintenance, there's the cost of park staff having to make sure the water tanks that serve the captive elk herd are maintained and kept filled, the mineral licks provided are sufficient to the herd's needs, and complaints from ranchers are responded to. Then there are the costs of the impacts on the area outside the fence: the massive amounts of invasive plants that have forced out the native, deep-rooted grasses that are true effective carbon sequesters, the elimination of habitat for indigenous animals of all sizes, the carbon created by the rotting of annual invasive gasses, and more. And because the fence only exists at the request of cattle ranchers, NPS should look at the costs of the damage the cattle do with their methane pollution the atmosphere and their manure polluting the parks' streams, lagoons and bays. These ecological costs haven't been accounted for, and need to be.

The long run goal is to phase out cattle from the Point Reyes National Seashore, altogether. This would allow a number of costly issues to be dropped as the progression of steps were accomplished, namely the need and upkeep of the elk fences, trucking in feed and water for the elk herds in the increasing occurrence of drought, culling the herds when successfully repopulating the areas and eradication of invasive species of plants brought in by cattle, cattle feed, and industrial machinery.

I cannot find a reasonable sound argument for continued ranching or dairy in a National Park. There are numerous dairy and cattle ranches in West Marin and Sonoma counties, as well as all across California and the entire United States. Some owned by the same families as those that ranch in the park today. Tule elk are only native to California and only found in Point Reyes National Seashore. We are lucky the elk are located in a National Park where they should be protected. Why private dairy and beef cows are prioritized over those elk in a National Park is beyond anyone's logical reasoning. It is political and that does not make it right. The National Park should be above politics. We need our National Parks, which we pay for and support, to work for us, the people.

Thank you for reading and placing my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore (PRNS). It is time, finally, for PRNS officials, notably Craig Kenkel, to stop stonewalling and ignoring the American public from across the country, and use proven science to prioritize wilderness, wildlife and habitat over commercial ranching. Start with a plan to remove the fence at Tomales Point and prioritize the endemic Tule Elk.”

We are lucky the elk are located in a National Park where they should be protected. Why private dairy and beef cows are prioritized over those elk in a National Park is beyond anyone's logical reasoning. It is political and that

does not make it right. The National Park should be above politics. We need our National Parks, which we pay for and support, to work for us, the people.

Thank you for reading and placing my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore (PRNS). It is time, finally, for PRNS officials, notably Craig Kenkel, to stop stonewalling and ignoring the American public from across the country, and use proven science to prioritize wilderness, wildlife and habitat over commercial ranching. Start with a plan to remove the fence at Tomales Point and prioritize the endemic Tule Elk."

**Correspondence ID:3323**

Correspondence: "The elk fence at Tomales Point must be removed. This is an important and the right step for the upcoming management plan.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying - just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

Instead of paying for fence maintenance and supplemental water and minerals out at Tomales Point when Elk are actually starving to death--why doesn't the Park Service and Mr. Kenkel come up with a plan to remove tenant ranchers and let wildlife live naturally all across Point Reyes National Seashore?

We should not have a captive herd of Tule elk in the Point Reyes National Seashore. Tule elk should be allowed to roam free.

It is time to focus on the health of our National Seashore and protect the air, soil, water, native wildlife and native vegetation over the constant impact from private cattle operations. The ranchers espouse crackpot pseudoscience about false carbon sinks (pasture vs. native coastal prairie), regenerative ranching (oxymoron), methane digesters (new profit streams), while the objective and independent science-based literature state how a native landscape with native vegetation and wildlife will help fight climate change more effectively than cattle operations. Please prioritize our native landscape and native wildlife in Point Reyes.

This is critical as all natural existence is at this crisis point in our environment. You know this. Please, please let these elk live unfenced. It is immoral and makes no sense."

**Correspondence ID:3324**

Correspondence: To assist the NPS with its planned NEPA review of the Tomales Point area and Tule elk herd management in Pt. Reyes National Seashore, I suggest the following issues be included in your review process, and any eventual Environmental Impact Statement that comes out of it. These points are intended to insure that the park resources, including the Tule elk and native plants and animals, get the maximum protection for the public's current and future benefit.

Why are my taxes paying for a fence to imprison wild elk at Tomales Point in Point Reyes National Seashore? Why is my money used to pay to ship in water and minerals to supplement insufficient amounts out there? If there is no big fence to surround wild elk, they would just get water and food for free anywhere else they go in the park! Free water and food everywhere already for the Elk! Remove that fence and allow the elk to live a life.

Park funds should be used to monitor and enforce water quality and other environmental standards in Point Reyes National Seashore versus spending money on a bad fence idea to starve wildlife in a National Park.

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

It is requested the personnel at the National Park Service re-review the 1993 report of the Scientific Advisory Panel on control of Tule Elk in PRNS, and include its recommendation in the upcoming plan. The independent advisory panel recommended to remove the fence across Tomales Point, and develop a plan to achieve a large, healthy, free-ranging elk population. Thank you Mr Kenkel for your attention to this recommendation.

**Correspondence ID:3325**

Correspondence: "To assist the NPS with its planned NEPA review of the Tomales Point area and Tule elk herd management in Pt. Reyes National Seashore, I suggest the following issues be included in your review process, and any eventual Environmental Impact Statement that comes out of it. These points are intended to insure that the park resources, including the Tule elk and native plants and animals, get the maximum protection for the public's current and future benefit.

The elk fence has hidden costs that have not been analyzed or made public before. Besides the typical costs of fence construction and maintenance, there's the cost of park staff having to make sure the water tanks that serve the captive elk herd are maintained and kept filled, the mineral licks provided are sufficient to the herd's needs, and complaints from ranchers are responded to. Then there are the costs of the impacts on the area outside the fence: the massive amounts of invasive plants that have forced out the native, deep-rooted grasses that are true effective carbon sequesters, the elimination of habitat for indigenous animals of all sizes, the carbon created by the rotting of annual invasive grasses, and more. And because the fence only exists at the request of cattle ranchers, NPS should look at the costs of the damage the cattle do with their methane pollution the atmosphere and their manure polluting the parks' streams, lagoons and bays. These ecological costs haven't been accounted for, and need to be.

The long run goal is to phase out cattle from the Point Reyes National Seashore, altogether. This would allow a number of costly issues to be dropped as the progression of steps were accomplished, namely the need and upkeep of the elk fences, trucking in feed and water for the elk herds in the increasing occurrence of drought, culling the herds when successfully repopulating the areas and eradication of invasive species of plants brought in by cattle, cattle feed, and industrial machinery.

I cannot find a reasonable sound argument for continued ranching or dairy in a National Park. There are numerous dairy and cattle ranches in West Marin and Sonoma counties, as well as all across California and the entire United States. Some owned by the same families as those that ranch in the park today. Tule elk are only native to California and only found in Point Reyes National Seashore. We are lucky the elk are located in a National Park where they should be protected. Why private dairy and beef cows are prioritized over those elk in a National Park is beyond anyone's logical reasoning. It is political and that

does not make it right. The National Park should be above politics. We need our National Parks, which we pay for and support, to work for us, the people.

The independent advisory panel recommended to remove the fence across Tomales Point, and develop a plan to achieve a large, healthy, free-ranging elk population. Thank you Mr Kenkel for your attention to this recommendation.

**Correspondence ID:3329**

Correspondence: "Thank you for allowing the public to comment on the process of creating the upcoming plan for Tomales Point within Point Reyes National Seashore. I for one, as I think many others do, frequent national parks to see wildlife in their natural habitat. I don't go to the park to see cows and fences. If I wanted to go to a zoo I would choose to do just that. Take down the fence and allow all of the wildlife to roam freely within the entire park as that is why the park was created.

It is not clear why the Park Service continues to spend taxpayer money for an unethical eight foot fence at the Tule Elk Reserve when the public has requested for years to remove the fence and let the Elk roam for free to get their water and food.

In developing alternatives to be evaluated, the NPS should include Tule Elk not being confined behind the fence. Alternatives should include adding currently leased land to the Tule Elk Reserve as the leaseholders retire them due to climate change or shifting economic pressures, as we are already seeing.

Superintendent Kenkel and other PRNS officials should demonstrate leadership on a national scale and remove the Tule Elk Reserve's fence across Tomales Point so that a new, sustainable wildlife health model is created to right the wrong of past ill-conceived Park Service policy. It is their duty to protect all National Park natural resources for posterity.

Thanks so much for your serious attention to my comments. I think the main thing for the Tomales Point scoping plan should be removal of that horrible fence out there. The elk need to roam so they can find water and food. Native plant restoration would be a great starting point to let the American people know you're listening to them (finally!). Please include the general public, and not the ranchers, in your planning and communications."

**Correspondence ID:3330**

The independent advisory panel recommended to remove the fence across Tomales Point, and develop a plan to achieve a large, healthy, free-ranging elk population. Thank you Mr Kenkel for your attention to this recommendation.

**Correspondence ID:3331**

Correspondence: You want my input to the Tomales Point planning process for Point Reyes National Seashore? Why is there even a Tule Elk enclosure out there? Does everything have to please and serve the ranchers (who shouldn't even be there anymore)? The Tule Elk cannot even get enough water or food, and are dying off in really high numbers! Please get rid of the Tule Elk Fence and let the Elk roam free. If you need a fence, put up a wildlife-friendly one, and turn the place into a Native Coastal Plant Reserve.

What are the annual costs for the Tomales Point Reserve fence and the supplemental water and minerals for the Tule Elk trapped there? Why are Elk still trapped and causing this expense, when there are ample lands and waters for Elk to roam at Point Reyes National Seashore? It's not a zoo, it's a national park. Please take down the fence.

Instead of paying for fence maintenance and supplemental water and minerals out at Tomales Point when Elk are actually starving to death--why doesn't the Park Service and Mr. Kenkel come up with a plan to remove tenant ranchers and let wildlife live naturally all across Point Reyes National Seashore?

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

The original studies done by the NPS on how to manage the Tule elk showed they should be allowed to roam free. I will be tracking this process to see what the Park Service's plans are in this regard. I and the vast majority of the public want better treatment of the elk, and better treatment of the Seashore itself. We do not want to see for-profit ranches degrading our beautiful park. This is the Park Service's opportunity to do this job right. You have my support in achieving this.

**Correspondence ID:3332**

Correspondence: "Removal of the elk fence at Tomales Point should be included in your plans for PRNS. It is the necessary and ethical step to take for a native species in a National Seashore.

The costs for Tomales Point elk fence maintenance and to put out water and minerals is not solving the problem of Tule Elk health. There is not enough water and minerals for the different non-mingling Tomales Point herds. It is a band-aid for a constant would therefore please come up with a real solution for wild Elk, as they should not be confined in a zoo-like environment that does not have a sufficient amount of water and forage for this herd.

If cattle ranchers are concerned about the spread of disease between the elk and bovine populations, then the cattle should be kept far enough away from the elk as necessary to allow passage through wildlife corridors. This allocation would allow two short run goals- one being that the elk could traverse the area to graze for necessary vegetation for nutritional well-being, as well as access to water; and secondly, cordoning off the unnatural effects of the different effects of cattle grazing on the area's vegetation which would allow the native flora a better environment to establish itself.

As an endemic species, Tule elk benefit the land, and allowing them to freely roam in Point Reyes National Seashore will enhance the park overall.

It is requested the personnel at the National Park Service re-review the 1993 report of the Scientific Advisory Panel on control of Tule Elk in PRNS, and include its recommendation in the upcoming plan. The independent advisory panel recommended to remove the fence across Tomales Point, and develop a plan to achieve a large, healthy, free-ranging elk population. Thank you Mr Kenkel for your attention to this recommendation.”

**Correspondence ID:3337**

Correspondence: "The elk fence at Tomales Point must be removed. This is an important and the right step for the upcoming management plan.

Recently, the NPS has started an unnatural process of providing emergency water via tanks. This practice is costly, and has limited effectiveness.

The NPS should revise the PRNS Succession Policy to permanently retire grazing leases as ranchers choose to not renew them. This would create an historic opportunity to restore that 33% of the park

that is currently surrounded by fences, full of cow manure and turn it into a program that will benefit not only Tule Elk, but expand the biodiversity throughout the park. The public would enthusiastically volunteer to help the NPS with such a program.

Maintaining a captive Tule elk herd at Tomales Point will likely only become increasingly expensive with climate change and recurring, significant droughts. If the fence is removed, water troughs and mineral licks will be unnecessary.

Thank you for submitting my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore. Please remove the fence across Tomales Point so the Elk can be free to roam, feed, drink, associate, mate, and thrive naturally. It can be done! Please consider and use my comments to help Point Reyes be a beautiful place for wildlife and humans."

**Correspondence ID:3341**

Correspondence: "I am commenting on the process of creating a plan for Tomales Point within Point Reyes National Park. I would hope the National Park Service would not address this area as somehow separate from the park itself but instead view the park in its entirety. As it stands today Tomales Point is more of a zoo within what is suppose to be a park but is in fact seen as private ranch land. And at this particular zoo the wild animals are fenced and the park service personnel let the animals die due to drought and lack of forage. Stop the insanity and take down the elk fence.

When will the National Park Service and Point Reyes National Seashore officials stop spending money on a misbegotten Elk fence idea? Remove the fence, and let the Tule Elk roam. It is time to get rid of the cattle ranchers in our national park, as they're the ones forcing their will against the American public's will. Free the Elk and let Americans enjoy a true national park.

I am extremely disappointed that the National Park Service (NPS) continues to spend our taxpayer money for an unethical fence which traps Elk on Tomales Point at Point Reyes National Seashore.

Taxpayers are insisting that the fence come down immediately, that ranchers move out, and wildlife be allowed to live naturally across all of our Park.

For climate change and biodiversity reasons, the Tomales Point scoping plan must include complete removal of the Tule Elk Reserve fence combined with an entirely new and enforced ranch succession plan. It must commit to ceasing continued ranchlands succession of leased parcels to ranchers, and restoration of native coastal prairie and wildlife habitat. It must emphasize the roles of indigenous Coast Miwok's ecological and scientific cultural knowledge and practices, and the importance of wildlife and natural forces in the restoration process.

Thanks so much for your serious attention to my comments. I think the main thing for the Tomales Point scoping plan should be removal of that horrible fence out there. The elk need to roam so they can find water and food. Native plant restoration would be a great starting point to let the American people know you're listening to them (finally!). Please include the general public, and not the ranchers, in your planning and communications.”

**Correspondence ID:3342**

Correspondence: I appreciate the opportunity to provide input into this scoping process and ask that you remove the elk fence at Tomales Point.

Removal of the fence is a less expensive option than "management" of the herd.

The Park Service wastes taxpayer money on the self-fulfilling problems caused by its continued decades-long poor wildlife management choices out on Tomales Point. The already limited funds available should be used to remove the tule elk fence so elk can find sufficient food and water on their own across the Seashore.

Removing the fence allows native tule elk to roam free, which is good for both elk and for park landscape. Please help make this happen.

It is time to focus on the health of our National Seashore and protect the air, soil, water, native wildlife and native vegetation over the constant impact from private cattle operations. The ranchers espouse crackpot pseudoscience about false carbon sinks (pasture vs. native coastal prairie), regenerative ranching (oxymoron), methane digesters (new profit streams), while the objective and independent science-based literature state how a native landscape with native vegetation and wildlife will help fight climate change more effectively than cattle operations. Please prioritize our native landscape and native wildlife in Point Reyes.

**Correspondence ID:3343**

Correspondence: We want to thank you for taking my public comment on the Tomales Point scoping process at Point Reyes National Seashore. I cannot believe there is a Prison Fence restricting Tule Elk in our national park. What is that about? To please the cattle ranchers, and prevent the Tule Elk from being free to roam, associate, and live a good life? No more animal prisons in our national park. Point Reyes is not a zoo either. It is time to take down the elk fence.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

The NPS should put resources into creating a rewilded park. It will be necessary to plan on demolition and disposal of the many tons of concrete which now comprise the modern loafing barns at each PRNS dairy (one of which supposedly closed a year ago).

Taking down the fence is the best option, according to ecologists.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3344**

Correspondence: You want my input to the Tomales Point planning process for Point Reyes National Seashore? Why is there even a Tule Elk enclosure out there? Does everything have to please and serve the ranchers (who shouldn't even be there anymore)? The Tule Elk cannot even get enough water or food, and are dying off in really high numbers! Please get rid of the Tule Elk Fence and let the Elk roam free. If you need a fence, put up a wildlife-friendly one, and turn the place into a Native Coastal Plant Reserve.

Taxpayer dollars should not be spent on killing or neutering any animals, especially rare Tule Elk, once the herd is deemed "too large". The plan should allow for native wildlife to roam freely and die of natural causes.

All National Park Service resources should be directed to restoring the land to benefit the biodiversity within the park. This is what the public wants and needs, and what we need to do to help fight a biodiversity and climate crisis.

I cannot find a reasonable sound argument for continued ranching or dairy in a National Park. There are numerous dairy and cattle ranches in West Marin and Sonoma counties, as well as all across California and the entire United States. Some owned by the same families as those that ranch in the park today. Tule elk are only native to California and only found in Point Reyes National Seashore. We are lucky the elk are located in a National Park where they should be protected. Why private dairy and beef cows are prioritized over those elk in a National Park is beyond anyone's logical reasoning. It is political and that does not make it right. The National Park should be above politics. We need our National Parks, which we pay for and support, to work for us, the people.

If the Park Service is serious about managing Tomales Point, the Tule elk herds, and the rest of the park most effectively, it will follow the science in determining its plan. That means, first and foremost, removing the elk fence, and protecting and restoring the natural habitat that has been destroyed by cattle and dairy ranching. This is a great opportunity to show enlightened leadership, and I look forward to continuing my engagement in the process.

**Correspondence ID:3345**

Correspondence: "Why is Tomales Point being treated as if it is separate from Point Reyes National Seashore? It should be interwoven in the rest of the seashore and its ecosystem. A visitor should be able to hike the entire park. And the native grasses and wildlife (including elk) should be able to roam freely within all areas of the park. Please remove the elk fences .

Without a fence at Tomales Point, the National Park Service personnel need not waste time and money bringing water to the elk. The animals would have plenty of water available from Abbott 's lagoon and other sources down valley.

Ranching interests have claimed that elk damage their facilities. NPS should determine the facts here, and document the cost of any verifiable damage. Also, ranchers have claimed the elk need to be separated from cattle because the elk would eat too much of the forage the cows need. However, elk eat far less than cows, weigh a fraction of what cows weigh, and being browsers, do not deplete the grasses and shrubs as much as cows do. When scoping the plan update, NPS should compare the impact of elk foraging to cattle grazing, so they can develop a plan consistent with the Organic Act of 1916 mandate to preserve and protect resources.

The elk fence should be removed from the Tomales Point area and all of the Point Reyes National Seashore: that was the intention of establishing this National Park area to begin with.

Thank you for your consideration.”

**Correspondence ID:3346**

Correspondence: We want to thank you for taking my public comment on the Tomales Point scoping process at Point Reyes National Seashore. I cannot believe there is a Prison Fence restricting Tule Elk in our national park. What is that about? To please the cattle ranchers, and prevent the Tule Elk from being free to roam, associate, and live a good life? No more animal prisons in our national park. Point Reyes is not a zoo either. It is time to take down the elk fence.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

The NPS should put resources into creating a rewilded park. It will be necessary to plan on demolition and disposal of the many tons of concrete which now comprise the modern loafing barns at each PRNS dairy (one of which supposedly closed a year ago).

Taking down the fence is the best option, according to ecologists.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3347**

Correspondence: The confined Tule Elk are dying at astronomical rates each year, and the Park Service just keeps them penned up in a cage to suffer and die at Tomales Point. Please stop this. The Tule Elk Reserve fence needs to come down now. If you want a reserve/preserve, remove the 8-foot fence, put in a small wildlife-friendly fence, and turn the land into a Native Coastal Prairie Reserve.

The Park Service will never be able to fully provide enough water, minerals, or forage for the captive Tule Elk at Tomales Point. Put the money into taking down the fence and letting Elk live and thrive throughout the Seashore.

The park should put every effort into connecting Tomales Point and its wildlife to the rest of the park. A visitor to the park should not have to pass through cattle/dairy pasture to walk through the Philip Burton Wilderness and nor should the Tule Elk. Every effort should be directed in allowing the elk to roam freely across the entire area of the park.

It is the responsibility of the Park Service to protect wildlife, and the most obvious solution is to remove the elk fence, allow the elk to roam, water, and feed, and for the Park Service to ameliorate climate change impacts, including removal of nonnative plants, improve fire resiliency, and allow wildlife and natural processes to restore areas of the Seashore. A good first step is to end the lease agreements with the cattle ranchers.

We need a long-range plan that supports a healthy population of native Tule Elk. It is time for the Park Service to prioritize our elk in PRNS over private cattle operations on our public land. Thank you in advance, for a plan that will include immediate removal of this unnatural and unethical eight foot fence.

**Correspondence ID:3348**

Correspondence: "I am writing and requesting to please take down the elk fence from Tomales Point, as it prevents natural migration of tule elk. It also stops them from getting water and food.

The elk fence has hidden costs that have not been analyzed or made public before. Besides the typical costs of fence construction and maintenance, there's the cost of park staff having to make sure the water tanks that serve the captive elk herd are maintained and kept filled, the mineral licks provided are sufficient to the herd's needs, and complaints from ranchers are responded to. Then there are the costs of the impacts on the area outside the fence: the massive amounts of invasive plants that have forced out the native, deep-rooted grasses that are true effective carbon sequesters, the elimination of habitat for indigenous animals of all sizes, the carbon created by the rotting of annual invasive grasses, and more. And because the fence only exists at the request of cattle ranchers, NPS should look at the costs of the damage the cattle do with their methane pollution the atmosphere and their manure polluting the parks' streams, lagoons and bays. These ecological costs haven't been accounted for, and need to be.

The National Park Service should partner with the First Nation people and create a wildlife sanctuary in Point Reyes National Seashore so that our elk are not hazed, nor culled, nor confined without sufficient food and water.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

I respectfully submit this letter and request the National Park Service to be impartial in the next steps related to our incredible native wildlife in Point Reyes National Seashore."

**Correspondence ID:3349**

Correspondence: "The elk fence at Tomales Point must be removed. This is an important and the right step for the upcoming management plan.

Point Reyes National Seashore has finite resources and maintaining an 8-foot fence at Tomales Point is not a good use of taxpayer funds.

The long run goal is to phase out cattle from the Point Reyes National Seashore, altogether. This would allow a number of costly issues to be dropped as the progression of steps were accomplished, namely the need and upkeep of the elk fences, trucking in feed and water for the elk herds in the increasing occurrence of drought, culling the herds when successfully repopulating the areas and eradication of invasive species of plants brought in by cattle, cattle feed, and industrial machinery.

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. The park's top priority should be to ensure the Tule elk survive and even thrive. Remove the elk fence.

It is requested the personnel at the National Park Service re-review the 1993 report of the Scientific Advisory Panel on control of Tule Elk in PRNS, and include its recommendation in the upcoming plan. The independent advisory panel recommended to remove the fence across Tomales Point, and develop a plan to achieve a large, healthy, free-ranging elk population. Thank you Mr Kenkel for your attention to this recommendation."

**Correspondence ID:3350**

Correspondence: Kindly take down the elk fence from Tomales Point. It restricts the tule elk and prevents them from getting water and forage.

The Park Service will never be able to fully provide enough water, minerals, or forage for the captive Tule Elk at Tomales Point. Put the money into taking down the fence and letting Elk live and thrive throughout the Seashore.

It is requested to stop using taxpayers' money to pay for the visual blight of the Elk Fence out on Tomales Point. Please stop trucking in water and minerals and whatever else to try to sustain a native herd in a non-native environment. Take down the fence, and use our taxpayers' money to actually turn the Seashore into a National Park that it deserves. Wildlife, natural habitat, clean water/soil/air, and public access should be the primary forces the Park Service supports - not a small group of politically-connected ranchers and their hoofed methane-operations.

Whether in California or elsewhere globally, climate change impacts nearly every aspect of our current and future environmental conditions. The Tule Elk fence across Tomales Point must be taken down in recognition of this. As conditions are now and for the foreseeable future with seasonal warming, megadrought, desertification, water scarcity, the native Tule Elk will have a better chance of surviving the challenges of this climate crisis, instead of being confined without sufficient water, forage and minerals.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity.

**Correspondence ID:3351**

Correspondence: We want to thank you for taking my public comment on the Tomales Point scoping process at Point Reyes National Seashore. I cannot believe there is a Prison Fence restricting Tule Elk in our national park. What is that about? **Correspondence ID:3352**

Correspondence: In response to your letter dated March 31, 2022 asking for ideas on the Tomales Point Tule Elk Reserve planning process, I offer the following regarding the elk fence and how best to manage.

Removing the fence will reduce the costs associated with proper stewardship of these captive animals - water troughs, mineral licks and staff time to regularly monitor the health of the herd will be unnecessary if the fence is removed.

Pierce Point Ranch should be the only real "historical" ranch in PRNS. It should be developed as a working model of a ranch from the 19th Century, with no more than a few head of cattle and a few dairy cows, showcasing actual ranching and farming techniques of that era. Docents could explain the conditions, techniques, and context for working the land under the times and circumstances in place at the time. It should also tell the full story of the Native Americans that preceded European settlers and their fate. All other ranches should be removed from the park.

Ecological reports recommend the fence be removed. There is no good reason to keep the fence.

Sadly, Point Reyes National Seashore is a landscape dominated by private, for-profit industrial cattle ranching businesses. These private business owners claim stewardship of the lands, waters, and air, and do everything in their power to evade, circumvent, ignore, abuse, and thumb their collective noses at the most basic and sound environmental principles, ethics, practices, and responsibilities. This selfish and unjust behavior should not occur in a National Park. Please take down the Elk fence, and prioritize our native wildlife over private and destructive cattle operations.

**Correspondence ID:3353**

#### **Correspondence ID:3354**

Correspondence: "I am writing to you specifically to address your plans for Tomales Point in the Point Reyes National Seashore. As they currently stand, they need to be incorporated into the General Plan for the Seashore - not as a separate part of it. It does not make strategic or economic sense to treat them as a part-as-to-of-themselves. The steps to restore the flora and fauna for all areas must be incorporated into the dynamics of the plan at the outset.

When it comes to Tomales Point our National Park has failed us, the taxpayer, and rightful owners of the land. We should not be paying for the cost of installing and maintaining a fence so wild animals can't roam and forage for food and water in areas preserved for private cattle and dairy ranchers within a National Park.

In developing alternatives to be evaluated, the NPS should include Tule Elk not being confined behind the fence. Alternatives should include adding currently leased land to the Tule Elk Reserve as the leaseholders retire them due to climate change or shifting economic pressures, as we are already seeing.

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. The park's top priority should be to ensure the Tule elk survive and even thrive. Remove the elk fence.

Thank you for your attention to my public record comments on the Tomales Point planning process for Point Reyes National Seashore. Your responsibility is to the spirit of wilderness preservation and protection, and to the vast majority of Americans who have insisted that this iconic place be freed from private, for-profit, commercial business interests. We will continue to press for just that, like taking down the Tomales Point fence."

**Correspondence ID:3355**

**Correspondence ID:3358**

Correspondence: Thank you for reading my public comment for the Tomales Point planning process. We love Point Reyes National Seashore, but the Tule Elk Reserve is a really sad place out there. Why is a fence to trap wildlife even a good science idea? Please remove the Tule Elk Fence now.

What are the costs to maintain the Tule Elk Reserve fence, and to provide water and mineral supplements for the Tule Elk? What is the rationale for these expenditures, when removal of the fenceline across Tomales Point would allow Tule Elk to roam for free for water and forage.

Viewing the Tomales Point project from an objective approach, the most cost effective long-run plan is to take down the elk fences without the interference of cattle concerns and let the herds roam in a natural manner. The health of the elk herds could be clearly addressed, as well as the flora can be given its space for natural progression and seed dispersion. This would focus on only one plan to implement, for taxpayers and NPS staff, and not take the resources with two competing approaches.

Removing the elk fence is the most impactful step the Park can take for Tomales Point, and this should be the plan review's top priority. This and total removal of all dairy and cattle operations from all of the park would have the strongest positive impacts, both ecologically and in terms of protection of the public's resources. The removal of both would benefit the return of native, deep-rooted grasses, allow the return of birds and wildlife that cannot survive in the barren fields where cattle have eaten the greenery down to the earth, and let the natural prairie reestablish itself. It could also serve as an outdoor laboratory for studying how to accelerate its healing and nurturing, information that will be increasingly important as we try to save our planet from the damages of global warming.

Thank you for submitting my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore. Please remove the fence across Tomales Point so the Elk can be free to

roam, feed, drink, associate, mate, and thrive naturally. It can be done! Please consider and use my comments to help Point Reyes be a beautiful place for wildlife and humans.

**Correspondence ID:3359**

**Correspondence ID:3361**

Correspondence: Please accept for the record these comments as input for the NPS's upcoming environmental review of its Tomales Point management plan update. These are important aspects that must be considered in determining the scope of the planning process and should be included in any environmental impact statement. My top concern is for the Park Service to remove the fence that keeps the tule elk penned in on grazing land that's insufficient to support a healthy herd.

Taking away the fence is cheaper and more sensible than setting up enormous plastic water tanks and trucking water up to the elk reserve.

The Park Service should be looking at such alternate uses of Tomales Point as creating a wildlife corridor that could run throughout the park, and the removal of the elk pen. The re-establishment of a more balanced ecosystem where the elk thrive could lead to the return of natural predators such as mountain lions, and with our climate in serious trouble, restoration of native grasses, shrubs and trees should be a high priority for the Park Service.

Ecological reports recommend the fence be removed. There is no good reason to keep the fence.

Our native Tule elk in PRNS deserve a better quality of life, rather than being confined in an environment without sufficient forage, minerals and water. Please ensure the upcoming plan for our iconic elk has several options that involve the removal of the elk. The public has requested the NPS to protect the Tule elk, and now is the time to take action.

**Correspondence ID:3362**

**Correspondence ID:3363**

Correspondence: The following are comments addressing the upcoming plan for Tomales Point within Point Reyes National Seashore. The National Park Service should not be creating a separate plan for this area of the park, or any other area of the park as it should be included in the Park's General Management Plan and the park should be managed as one whole unit. The complex ecosystem within the park should be treated as one entity, and the health of that entire system is the responsibility of the park service. To do otherwise can only be seen as irresponsible and cruel.

No matter what the Park Service spends to supplement water and minerals for the Tule Elk at Tomales Point, it will not matter. The Tule Elk are starving to death at Tomales Point due to continued drought, and megadrought. Please stop spending time and money on the fence and artificial approaches, and let the Elk roam free for natural sources of water and good nutrition.

Instead of US taxpayers footing the bill for a godawful fence to keep elk without enough water and food out at Tomales Point, the Park Service needs to take down the fence, remove the thousands of cattle impacting the land, air, and waters, and let nature be whole at Point Reyes National Seashore.

The NPS already studied this matter, decades ago, and determined the fence should be removed.

The successful reintroduction of the elk herds in the Point Reyes National Seashore should be viewed as the goal of the general plan for not only the Tomales Point area but the entire National Seashore and the most cost-effective way to do that is to work for the elimination of cattle from that area. If this approach is not taken then there will be continued non-native plants being brought in which will necessitate more plans and strategies to eliminate, more engineering projects to contain manure run-off, control of native 'predator' species to protect the cattle which is contradictory to reestablishing the Seashore, just to name a few.

**Correspondence ID:3364**

Correspondence: We want to thank you for taking my public comment on the Tomales Point scoping process at Point Reyes National Seashore. I cannot believe there is a Prison Fence restricting Tule Elk in our national park. What is that about? To please the cattle ranchers, and prevent the Tule Elk from being free to roam, associate, and live a good life? No more animal prisons in our national park. Point Reyes is not a zoo either. It is time to take down the elk fence.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

The NPS should put resources into creating a rewilded park. It will be necessary to plan on demolition and disposal of the many tons of concrete which now comprise the modern loafing barns at each PRNS dairy (one of which supposedly closed a year ago).

Taking down the fence is the best option, according to ecologists.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the

National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3365**

Correspondence: "Many thanks for allowing the public, rightful owners of the land, to comment on the upcoming plan for Tomales Point within Point Reyes National Seashore. This area, along with any area within the national park should be allowed to be re-wild. All fences and evidence of fences should be removed.

Dismantling the elk fence will save the NPS money, as it is a less expensive and less invasive option.

In developing alternatives to be evaluated, the NPS should include Tule Elk not being confined behind the fence. Alternatives should include adding currently leased land to the Tule Elk Reserve as the leaseholders retire them due to climate change or shifting economic pressures, as we are already seeing.

Ecological reports recommend the fence be removed. There is no good reason to keep the fence.

Thanks so much for your serious attention to my comments. I think the main thing for the Tomales Point scoping plan should be removal of that horrible fence out there. The elk need to roam so they can find water and food. Native plant restoration would be a great starting point to let the American people know you're listening to them (finally!). Please include the general public, and not the ranchers, in your planning and communications."

**Correspondence ID:3366**

Correspondence: I am writing to submit my public comment for the Tomales Point planning process at Point Reyes National Seashore. Tomales Point is a de facto prison or zoo enclosure for several, distinct Tule Elk herds present there. It is a cruel, inhumane, and entirely contrived solution to the real problem: continued beef and cattle ranching across one-third of our Seashore. Please take down the Elk Fence now.

It would be better and less expensive to allow Tule elk access to water sources, such as the spring and lagoon in the region directly below the Tomales Point reserve.

All money, time and energy should be spent on re-wilding the entire National Seashore and not subsidizing destructive cattle operations on these public lands.

Ecological reports recommend the fence be removed. There is no good reason to keep the fence.

Respectfully, the land in Point Reyes National Seashore belongs to the public, and should be managed for public, not for private benefit. It is imperative to keep the native Tule Elk as the priority, and remove the Elk fence.

**Correspondence ID:3367**

Correspondence: "Please accept for the record these comments as input for the NPS's upcoming environmental review of its Tomales Point management plan update. These are important aspects that must be considered in determining the scope of the planning process and should be included in any

environmental impact statement. My top concern is for the Park Service to remove the fence that keeps the tule elk penned in on grazing land that's insufficient to support a healthy herd.

Taxpayer dollars should not be spent on killing or neutering any animals, especially rare Tule Elk, once the herd is deemed "too large". The plan should allow for native wildlife to roam freely and die of natural causes.

Rather than maintaining the elk fence, troughs and mineral licks, the NPS could better use these resources to develop educational materials and programs about Tule elk.

Tomales Point and the Point Reyes National Seashore is to be an area where wildlife are given back their home. Taxpayers and visitors venture out that way to hear the roar of the Pacific Ocean and feel the sun and wind, and see the land as it was made in its beautiful creation. Taxpayers do not go out to Point Reyes to see miles of wire fences 'keeping Nature in check', and the destructive, exploitive industrial practices of corrupt politically influential parties rule the land.

It is time to end the mis-management of our native Tule elk in Point Reyes National Seashore. Please follow the scientific advice provided in 1993, and remove the fence across Tomales Point. It is important for the survival of this herd to be free-roaming with access to food and water."

**Correspondence ID:3368**

**Correspondence ID:3369**

Correspondence: Thank you for reading my public comment for the Tomales Point planning process. We love Point Reyes National Seashore, but the Tule Elk Reserve is a really sad place out there. Why is a fence to trap wildlife even a good science idea? Please remove the Tule Elk Fence now.

Allowing the continuation of cattle ranching in this area, Tomales Point in the Point Reyes National Seashore, is contradictory to the NPS trying to mitigate the negative impacts of climate change partially caused by this very practice. The NPS needs to do its part and at every step possible be a leader to achieve this end-result.

Removal of the elk fence would give the Park a good opportunity to create a prairie preserve, located just on the outside of the existing elk preserve, by pushing back any cattle away from the current fence line. In fact, if the ranches are to remain, installing a wildlife-friendly fence south of the elk fence to let elk and other native animals move freely while keeping cattle at bay would let the park establish a specific prairie preserve where the flora and fauna have been degraded. This could be a site for studying the restoration of the native environment after decades of degradation by cattle.

It is the responsibility of the Park Service to protect wildlife, and the most obvious solution is to remove the elk fence, allow the elk to roam, water, and feed, and for the Park Service to ameliorate climate change impacts, including removal of nonnative plants, improve fire resiliency, and allow wildlife and natural processes to restore areas of the Seashore. A good first step is to end the lease agreements with the cattle ranchers.

I respectfully submit this letter and request the National Park Service to be impartial in the next steps related to our incredible native wildlife in Point Reyes National Seashore.

**Correspondence ID:3370**

Correspondence: "Kindly take down the elk fence from Tomales Point. It restricts the tule elk and prevents them from getting water and forage.

It is unconscionable the National Park Service, who is to protect public lands and natural resources, continues to incur costs for the ugly Elk Fence and supplemental water and nutrients when getting rid of the cattle ranchers and letting Elk roam free in the Park would work free for the rest of time.

All money, time and energy should be spent on re-wilding the entire National Seashore and not subsidizing destructive cattle operations on these public lands.

The difference in landscape between the Tule Elk Reserve and the ranches on the other side of the fence is stark. The Tule elk Reserve looks like a beautiful coastal prairie with lots of wildflowers and coyote brush. The land to the south looks barren and denuded and there is evidence of cow manure spraying - not what visitors come to Point Reyes to see. Please remove the fence in the Elk reserve, as this is the right step to take for our National Park.

The original studies done by the NPS on how to manage the Tule elk showed they should be allowed to roam free. I will be tracking this process to see what the Park Service's plans are in this regard. I and the vast majority of the public want better treatment of the elk, and better treatment of the Seashore itself. We do not want to see for-profit ranches degrading our beautiful park. This is the Park Service's opportunity to do this job right. You have my support in achieving this."

**Correspondence ID:3371**

Correspondence: The elk fence at Tomales Point must be removed. This is an important and the right step for the upcoming management plan.

Point Reyes National Seashore has finite resources and maintaining an 8-foot fence at Tomales Point is not a good use of taxpayer funds.

All money, time and energy should be spent on re-wilding the entire National Seashore and not subsidizing destructive cattle operations on these public lands.

It is the responsibility of the Park Service to protect wildlife, and the most obvious solution is to remove the elk fence, allow the elk to roam, water, and feed, and for the Park Service to ameliorate climate change impacts, including removal of nonnative plants, improve fire resiliency, and allow wildlife and natural processes to restore areas of the Seashore. **Correspondence ID:3373**

Correspondence: "Please read and consider my public comment on the Tomales Point planning process for Point Reyes National Seashore. Tule Elk should be free to roam, gather, find water and food, and live more healthy lives--not be imprisoned for their entire lives behind a god-awful fence. Point Reyes is a national park, therefore please remove the fence now.

Taking away the fence is cheaper and more sensible than setting up enormous plastic water tanks and trucking water up to the elk reserve.

The NPS should revise the PRNS Succession Policy to permanently retire grazing leases as ranchers choose to not renew them. This would create an historic opportunity to restore that 33% of the park that is currently surrounded by fences, full of cow manure and turn it into a program that will benefit not only Tule Elk, but expand the biodiversity throughout the park. The public would enthusiastically volunteer to help the NPS with such a program.

Point Reyes has stunning biodiversity, and the restoration of native plants and wildlife will ensure that these important ecosystems last for generations.

Thank you for submitting my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore. Please remove the fence across Tomales Point so the Elk can be free to roam, feed, drink, associate, mate, and thrive naturally. It can be done! Please consider and use my comments to help Point Reyes be a beautiful place for wildlife and humans.

**Correspondence ID:3374**

Correspondence: Kindly take down the elk fence from Tomales Point. It restricts the tule elk and prevents them from getting water and forage.

Spending the public's money for a Tule Elk Fence and supplemental water and minerals is wasteful, and not a long-term, feasible solution. The Tule Elk are starving to death from lack of access to proper food. And the impact of global warming causes climate effects like long term drought out there. It's bad money after bad money. Free the Tule Elk from Tomales Point. Let the Elk have water and food for free around the Park.

Resources currently spent on maintaining the fence could be better spent on expanding interpretive displays of indigenous land stewardship practices and restoration of Coastal Miwok sites in Point Reyes National Seashore.

We should not have a captive herd of Tule elk in the Point Reyes National Seashore. Tule elk should be allowed to roam free.

Thank you for submitting my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore. **Correspondence ID:3377**

Correspondence: “The elk fence at Tomales Point must be removed. This is an important and the right step for the upcoming management plan.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying - just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

Instead of paying for fence maintenance and supplemental water and minerals out at Tomales Point when Elk are actually starving to death--why doesn't the Park Service and Mr. Kenkel come up with a plan to remove tenant ranchers and let wildlife live naturally all across Point Reyes National Seashore?

We should not have a captive herd of Tule elk in the Point Reyes National Seashore. Tule elk should be allowed to roam free.

It is time to focus on the health of our National Seashore and protect the air, soil, water, native wildlife and native vegetation over the constant impact from private cattle operations. The ranchers espouse crackpot pseudoscience about false carbon sinks (pasture vs. native coastal prairie), regenerative ranching (oxymoron), methane digesters (new profit streams), while the objective and independent science-based literature state how a native landscape with native vegetation and wildlife will help fight climate change more effectively than cattle operations. Please prioritize our native landscape and native wildlife in Point Reyes.”

**Correspondence ID:3378**

**Correspondence ID:3380**

Correspondence: To assist the NPS with its planned NEPA review of the Tomales Point area and Tule elk herd management in Pt. Reyes National Seashore, I suggest the following issues be included in your review process, and any eventual Environmental Impact Statement that comes out of it. These points are intended to insure that the park resources, including the Tule elk and native plants and animals, get the maximum protection for the public's current and future benefit.

Why are my taxes paying for a fence to imprison wild elk at Tomales Point in Point Reyes National Seashore? Why is my money used to pay to ship in water and minerals to supplement insufficient amounts out there? If there is no big fence to surround wild elk, they would just get water and food for free anywhere else they go in the park! Free water and food everywhere already for the Elk! Remove that fence and allow the elk to live a life.

Park funds should be used to monitor and enforce water quality and other environmental standards in Point Reyes National Seashore versus spending money on a bad fence idea to starve wildlife in a National Park.

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

It is requested the personnel at the National Park Service re-review the 1993 report of the Scientific Advisory Panel on control of Tule Elk in PRNS, and include it recommendation in the upcoming plan. The independent advisory panel recommended to remove the fence across Tomales Point, and develop a plan to achieve a large, healthy, free-ranging elk population. Thank you Mr Kenkel for your attention to this recommendation.

**Correspondence ID:3381**

Correspondence: “You want my input to the Tomales Point planning process for Point Reyes National Seashore? Why is there even a Tule Elk enclosure out there? Does everything have to please and serve the ranchers (who shouldn't even be there anymore)? The Tule Elk cannot even get enough water or food, and are dying off in really high numbers! Please get rid of the Tule Elk Fence and let the Elk roam free. If you need a fence, put up a wildlife-friendly one, and turn the place into a Native Coastal Plant Reserve.

Reliable reports state the NPS has shouldered many of the operational costs over the years that should have been borne by the ranchers. Since most agencies have limited budgets, I'd like the Park Service to analyze how much it could save by making the ranches pay for any and all fencing, but especially the elk

fence at Tomales Point. It should also look at how much it would save if the ranches were removed entirely from the park. Included in these analyses should be the value of increased public access to areas ranchers try to keep the public away from, the increased enjoyment of the park by the public, and the savings from not having to respond to rancher demands.

The park should spend time and money on removing the fences, planting native grasses, cleaning up the water pollutants, and generally restoring Tomales Point back to its natural habitat.

The Park Service should consider not only the economic costs of maintaining the elk fence and the management of the elk herd, it should examine the reputational and ethical costs of doing so as well. More and more, the public is very unhappy about the needless deaths of the Tule elk, for no other reason than to protect private ranchers' profits. How many visitors are discouraged from coming to visit due to this wasteful and disagreeable practice? How many dollars are not spent in the park and surrounding areas because of it? How much distrust does the Park Service generate when people see it catering to the select few, at the cost of the iconic Tule elk and damage to the park's environs? Too much, that's for sure.

**Correspondence ID:3383**

Correspondence: I am writing to request the involvement of independent scientists, independent elk biologists and the public in the development of the elk general management. We deserve a seat at the table, and it is imperative the upcoming management plan be objective, and that it prioritizes the survival of our native Tule elk over private cattle ranching in PRNS.

It is not clear why the Park Service continues to spend taxpayer money for an unethical eight foot fence at the Tule Elk Reserve when the public has requested for years to remove the fence and let the Elk roam for free to get their water and food.

Instead of US taxpayers footing the bill for a godawful fence to keep elk without enough water and food out at Tomales Point, the Park Service needs to take down the fence, remove the thousands of cattle impacting the land, air, and waters, and let nature be whole at Point Reyes National Seashore.

The original motivation for the fence was to protect financial interests, not for optimal ecological restoration. It must be removed.

As a long-time user of the seashore, I'm looking forward to seeing what the Park Service comes up with as an improved management plan. It's a good time to make some long-needed changes, particularly the elk fence removal. That alone will make a significant difference in one's experience of the park, and I'm sure it will be met with massive public approval. Thank you for considering my input. I'm excited to see the results.

**Correspondence ID:3384**

Correspondence: "Thank you for the opportunity to comment on Tomales Point. Why is this area being treated separate from Point Reyes National Seashore? As it is within the boundaries of the seashore it should be interwoven within the fabric of the rest of the seashore and the ecosystem allowed to become whole instead of piecemeal. A visitor should be able to walk/hike the entirety of the park. And the native grasses and wildlife (including elk) should be able to roam freely within all areas of the park. Please remove the elk fences and let the park be an actual park.

Maintenance of an 8-foot fence and providing water and nutrition for captive Tule elk is not a reasonable use of funds, when the Tule elk could find adequate food and water if they were allowed to freely roam.

Resources budgeted for Point Reyes National Seashore should be used for preventing wildlife destruction, rather than additional money toward how to maintain an unethical 8 foot fence in the Elk Preserve.

The Park Service should consider not only the economic costs of maintaining the elk fence and the management of the elk herd, it should examine the reputational and ethical costs of doing so as well. More and more, the public is very unhappy about the needless deaths of the Tule elk, for no other reason than to protect private ranchers' profits. How many visitors are discouraged from coming to visit due to this wasteful and disagreeable practice? How many dollars are not spent in the park and surrounding areas because of it? How much distrust does the Park Service generate when people see it catering to the select few, at the cost of the iconic Tule elk and damage to the park's environs? Too much, that's for sure.

Thank you for the opportunity to provide feedback on the upcoming plan for Elk Reserve in Point Reyes National Seashore. The 3-year timeframe proposed by the NPS appears to be too long of a period, as we have lost approximately 50% of our native Elk held captive behind this 8 foot fence due to lack of appropriate amount of food, water and minerals. In your upcoming plan, please ensure there are numerous alternatives available on the removal of this deadly fence. It is time for that fence to be removed.”

**Correspondence ID:3385**

Correspondence: “I am writing to submit my public comment for the Tomales Point planning process at Point Reyes National Seashore. Tomales Point is a de facto prison or zoo enclosure for several, distinct Tule Elk herds present there. It is a cruel, inhumane, and entirely contrived solution to the real problem: continued beef and cattle ranching across one-third of our Seashore. Please take down the Elk Fence now.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

Invasive species, particularly ice plant, thistle and hemlock, are rampant in Point Reyes National Seashore outside of the elk reserve. Funds currently spent on the Tomales Point elk fence would be better spent on removing these plants in other parts of the park.

Superintendent Kenkel and other PRNS officials should demonstrate leadership on a national scale and remove the Tule Elk Reserve's fence across Tomales Point so that a new, sustainable wildlife health model is created to right the wrong of past ill-conceived Park Service policy. It is their duty to protect all National Park natural resources for posterity.

Thank you for the opportunity to provide feedback on the upcoming plan for Elk Reserve in Point Reyes National Seashore. The 3-year timeframe proposed by the NPS appears to be too long of a period, as we have lost approximately 50% of our native Elk held captive behind this 8 foot fence due to lack of appropriate amount of food, water and minerals. In your upcoming plan, please ensure there are numerous alternatives available on the removal of this deadly fence. It is time for that fence to be removed.”

**Correspondence ID:3386**

Correspondence: The following are comments addressing the upcoming plan for Tomales Point within Point Reyes National Seashore. The National Park Service should not be creating a separate plan for this area of the park, or any other area of the park as it should be included in the Park's General Management Plan and the park should be managed as one whole unit. The complex ecosystem within the park should be treated as one entity, and the health of that entire system is the responsibility of the park service. To do otherwise can only be seen as irresponsible and cruel.

No matter what the Park Service spends to supplement water and minerals for the Tule Elk at Tomales Point, it will not matter. The Tule Elk are starving to death at Tomales Point due to continued drought, and megadrought. Please stop spending time and money on the fence and artificial approaches, and let the Elk roam free for natural sources of water and good nutrition.

Instead of US taxpayers footing the bill for a godawful fence to keep elk without enough water and food out at Tomales Point, the Park Service needs to take down the fence, remove the thousands of cattle impacting the land, air, and waters, and let nature be whole at Point Reyes National Seashore.

The NPS already studied this matter, decades ago, and determined the fence should be removed.

The successful reintroduction of the elk herds in the Point Reyes National Seashore should be viewed as the goal of the general plan for not only the Tomales Point area but the entire National Seashore and the most cost-effective way to do that is to work for the elimination of cattle from that area. If this approach is not taken then there will be continued non-native plants being brought in which will necessitate more plans and strategies to eliminate, more engineering projects to contain manure runoff, control of native 'predator' species to protect the cattle which is contradictory to reestablishing the Seashore, just to name a few.

**Correspondence ID:3387**

Correspondence: "Thank you for the opportunity to comment on Tomales Point. Why is this area being treated separate from Point Reyes National Seashore? As it is within the boundaries of the seashore it should be interwoven within the fabric of the rest of the seashore and the ecosystem allowed to become whole instead of piecemeal. A visitor should be able to walk/hike the entirety of the park. And the native grasses and wildlife (including elk) should be able to roam freely within all areas of the park. Please remove the elk fences and let the park be an actual park.

Maintenance of an 8-foot fence and providing water and nutrition for captive Tule elk is not a reasonable use of funds, when the Tule elk could find adequate food and water if they were allowed to freely roam.

Resources budgeted for Point Reyes National Seashore should be used for preventing wildlife destruction, rather than additional money toward how to maintain an unethical 8 foot fence in the Elk Preserve.

The Park Service should consider not only the economic costs of maintaining the elk fence and the management of the elk herd, it should examine the reputational and ethical costs of doing so as well. More and more, the public is very unhappy about the needless deaths of the Tule elk, for no other reason than to protect private ranchers' profits. How many visitors are discouraged from coming to visit due to this wasteful and disagreeable practice? How many dollars are not spent in the park and surrounding areas because of it? How much distrust does the Park Service generate when people see it catering to the select few, at the cost of the iconic Tule elk and damage to the park's environs? Too much, that's for sure.

Thank you for the opportunity to provide feedback on the upcoming plan for Elk Reserve in Point Reyes National Seashore. The 3-year timeframe proposed by the NPS appears to be too long of a period, as we have lost approximately 50% of our native Elk held captive behind this 8 foot fence due to lack of appropriate amount of food, water and minerals. In your upcoming plan, please ensure there are numerous alternatives available on the removal of this deadly fence. It is time for that fence to be removed."

**Correspondence ID:3389**

Correspondence: "I respectfully submit this public comment for your consideration regarding the GMP planning process for Tomales Point at Point Reyes National Seashore (PRNS). All the natural resources, from native plants to the Tule Elk, should be unimpaired in and beyond Tomales Point. The American public wants open and accessible public lands and waters in their National Parks. No wildlife should be caged or captive in a National Park. We must remove the Tule Elk Fence now, and let the Tule Elk and other wildlife roam free to prosper as is natural, healthy, and just. Please scope removal of the Tule Elk Fence in your planning for Tomales Point.

The Park Service should not be spending so much money to maintain fencing at Tomales Point Reserve. There are all the expenses for materials, then all the hidden costs and time for labor, operations, administration, and rancher-pleasing. As a concerned citizen for the elk, please spend the money to remove the fence and free the Elk.

The NPS should revise the PRNS Succession Policy to permanently retire grazing leases as ranchers choose to not renew them. This would create an historic opportunity to restore that 33% of the park that is currently surrounded by fences, full of cow manure and turn it into a program that will benefit

not only Tule Elk, but expand the biodiversity throughout the park. The public would enthusiastically volunteer to help the NPS with such a program.

It is the responsibility of the Park Service to protect wildlife, and the most obvious solution is to remove the elk fence, allow the elk to roam, water, and feed, and for the Park Service to ameliorate climate change impacts, including removal of nonnative plants, improve fire resiliency, and allow wildlife and natural processes to restore areas of the Seashore. A good first step is to end the lease agreements with the cattle ranchers.

Point Reyes National Seashore, after 60 years from its founding, should be a national pride of astounding biodiversity, global climate research, and honor of the public trust in perpetuity. Please emphasize and prioritize the importance of protecting our native Tule elk in the upcoming plan, which would include the removal of the fence across Tomales Point.”

**Correspondence ID:3390**

Correspondence: I am writing and requesting to please take down the elk fence from Tomales Point, as it prevents natural migration of tule elk. It also stops them from getting water and food.

Without a fence at Tomales Point, the National Park Service wouldn't need to waste efforts and money bringing water up to the elk. The animals would have plenty of water available from Abbotts lagoon and other sources down in the valley.

Why is the Park Service wasting taxpayer money on an inappropriate fence out at Tomales Point? The NPS should take down the fence, let the Tule Elk roam, and create a Coastal Native Habitat Reserve instead of keeping the Elk Pen out there. It's ridiculous that wildlife are treated like zoo animals in a National Park.

I am taking the approach that the elk fence be removed from the Tomales Point area and all of the Point Reyes National Seashore because that was and is the intention of the setting-up of this National Park area to begin with. It was not envisioned as a prison area, that is the farthest thing that could be imagined, with cows over here and the elk behind a fence other there. "Oh give me a home where the bison and elk roam.." - not 'why are they behind that fence?'

Thank you for paying attention to my comments. Please include them in the official record. The Park Service, if nothing else, needs to remove the fence at Tomales Point so the Elk can find food, water, and live a more normal, healthy, wild life. The elk are literally dying behind that fence. Between the Park Service, the public, scientists, and Native American ecologists, there is a solution to making things better out at Point Reyes. Please listen to the public, and use their input....not just do what the ranchers want to make their money and ruin the place.

**Correspondence ID:3391**

Please scope removal of the Tule Elk Fence in your planning for Tomales Point.

No matter what the Park Service spends to supplement water and minerals for the Tule Elk at Tomales Point, it will not matter. The Tule Elk are starving to death at Tomales Point due to continued drought, and megadrought. Please stop spending time and money on the fence and artificial approaches, and let the Elk roam free for natural sources of water and good nutrition.

The park should put every effort into connecting Tomales Point and its wildlife to the rest of the park. A visitor to the park should not have to pass through cattle/dairy pasture to walk through the Philip Burton Wilderness and nor should the Tule Elk. Every effort should be directed in allowing the elk to roam freely across the entire area of the park.

We should not have a captive herd of Tule elk in the Point Reyes National Seashore. Tule elk should be allowed to roam free.

If the Park Service is serious about managing Tomales Point, the Tule elk herds, and the rest of the park most effectively, it will follow the science in determining its plan. That means, first and foremost,

removing the elk fence, and protecting and restoring the natural habitat that has been destroyed by cattle and dairy ranching. This is a great opportunity to show enlightened leadership, and I look forward to continuing my engagement in the process.”

**Correspondence ID:3396**

Correspondence: "Thank you for the opportunity to provide input on the updated Tule Elk Management Plan/General Management Plan for Pt. Reyes National Seashore. To help the National Park Service (NPS) best structure its environmental review process, I offer the comments below. Please consider including these points in scoping your review and the presumed Environmental Impact Statement.

Whatever the costs to maintain the Tule Elk Fence and to provide water towers and mineral supplements--the Tule Elk are dying off because of lack of proper, nutritious, healthy food and forage.

The Elk are starving to death and dying of an inadequate supply of water at Tomales Point. The Park Service will never be able to be effective to supplement the Tule Elk food and water supply that is needed. Please do the right thing and take down the elk fence.

The National Park Service should partner with the First Nation people and create a wildlife sanctuary in Point Reyes National Seashore so that our elk are not hazed, nor culled, nor confined without sufficient food and water.

Ecological reports recommend the fence be removed. There is no good reason to keep the fence.

I urge you to use this opportunity to carry out the intentions of the creation of the park, which was to protect the biodiversity within the seashore. To do that, the sacrifices should be made by the few ranch and dairy families that have profited profusely over the years. Our National Park is owned by the people not by the few ranchers.”

**Correspondence ID:3399**

Correspondence: "I want the fence at Tomales Point, which confines tule elk, to be removed. This is a necessary step for the NPS to take for our native elk.

The costs for Tomales Point elk fence maintenance and to put out water and minerals is not solving the problem of Tule Elk health. There is not enough water and minerals for the different non-mingling Tomales Point herds. It is a band-aid for a constant would therefore please come up with a real solution for wild Elk, as they should not be confined in a zoo-like environment that does not have a sufficient amount of water and forage for this herd.

It is requested to stop using taxpayers' money to pay for the visual blight of the Elk Fence out on Tomales Point. Please stop trucking in water and minerals and whatever else to try to sustain a native herd in a non-native environment. Take down the fence, and use our taxpayers' money to actually turn the Seashore into a National Park that it deserves. Wildlife, natural habitat, clean water/soil/air, and public access should be the primary forces the Park Service supports - not a small group of politically-connected ranchers and their hoofed methane-operations.

Tomales Point and the Point Reyes National Seashore is to be an area where wildlife are given back their home. Taxpayers and visitors venture out that way to hear the roar of the Pacific Ocean and feel the sun and wind, and see the land as it was made in its beautiful creation. Taxpayers do not go out to Point Reyes to see miles of wire fences 'keeping Nature in check', and the destructive, exploitive industrial practices of corrupt politically influential parties rule the land.

Thank you for paying attention to my comments. Please include them in the official record. The Park Service, if nothing else, needs to remove the fence at Tomales Point so the Elk can find food, water, and live a more normal, healthy, wild life. **Correspondence ID:3401**

Correspondence: "Please accept for the record these comments as input for the NPS's upcoming environmental review of its Tomales Point management plan update. These are important aspects that must be considered in determining the scope of the planning process and should be included in any environmental impact statement. My top concern is for the Park Service to remove the fence that keeps the tule elk penned in on grazing land that's insufficient to support a healthy herd.

How much does it cost the National Park Service or Point Reyes National Seashore in Tomales Point Reserve for fence maintenance and supplemental water and minerals? How much does it cost us the taxpayers not only in materials, but in all the hidden costs of labor, operations, communications, negotiation, administration, and don't forget, pleasing the ranchers who shouldn't even be there due to their constant impairment to the Seashore.

Instead of US taxpayers footing the bill for a godawful fence to keep elk without enough water and food out at Tomales Point, the Park Service needs to take down the fence, remove the thousands of cattle impacting the land, air, and waters, and let nature be whole at Point Reyes National Seashore.

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. The park's top priority should be to ensure the Tule elk survive and even thrive. Remove the elk fence.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity."

**Correspondence ID:3402**

Correspondence: Thank you for reading my public comment for the Tomales Point planning process. We love Point Reyes National Seashore, but the Tule Elk Reserve is a really sad place out there. Why is a fence to trap wildlife even a good science idea? Please remove the Tule Elk Fence now.

What are the costs to maintain the Tule Elk Reserve fence, and to provide water and mineral supplements for the Tule Elk? What is the rationale for these expenditures, when removal of the fenceline across Tomales Point would allow Tule Elk to roam for free for water and forage.

Viewing the Tomales Point project from an objective approach, the most cost effective long-run plan is to take down the elk fences without the interference of cattle concerns and let the herds roam in a natural manner. The health of the elk herds could be clearly addressed, as well as the flora can be given its space for natural progression and seed dispersion. This would focus on only one plan to implement, for taxpayers and NPS staff, and not take the resources with two competing approaches.

Removing the elk fence is the most impactful step the Park can take for Tomales Point, and this should be the plan review's top priority. This and total removal of all dairy and cattle operations from all of the park would have the strongest positive impacts, both ecologically and in terms of protection of the public's resources. The removal of both would benefit the return of native, deep-rooted grasses, allow the return of birds and wildlife that cannot survive in the barren fields where cattle have eaten the greenery down to the earth, and let the natural prairie reestablish itself. It could also serve as an outdoor laboratory for studying how to accelerate its healing and nurturing, information that will be increasingly important as we try to save our planet from the damages of global warming.

Thank you for submitting my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore. Please remove the fence across Tomales Point so the Elk can be free to roam, feed, drink, associate, mate, and thrive naturally. It can be done! Please consider and use my comments to help Point Reyes be a beautiful place for wildlife and humans.

**Correspondence ID:3403**

Correspondence: ""Tomales Point"" is a, stunningly, precious place and, our family appreciates the chance to provide input for your, planning, process! Biodiversity MUST be prioritized over, private, cattle operations in ""Point Reyes National Seashore""!

It is beyond the time to end the mis-management of our, native, Tule elk in “Point Reyes National Seashore”! Please follow the, scientific, advice, provided in 1993, and, remove the fence across “Tomales Point”! It is important for the survival of this herd to be free-roaming with access to food and water!

The National Park Service is accepting public comments for the, management, plan of “Tomales Point” in “Point Reyes National Seashore”, where wildlife do NOT have enough access to food, or, water! Even though “Point Reyes National Seashore” is the, only, “National Park”, on the West Coast, and, is one of the, most, bio-diverse regions in the country, your, land, management revolves around protecting, private, ranching profits, and, NOT the well-being of the ecosystem! The, native, Tule elk are confined to, limited, space behind a fence, and, the NPS MUST hear from us, and, the rest of the, environmental, community to change this!

Private ranching operations graze, freely, across the Park's, public, lands, which belong to all of us, while the Tule elk cannot! Our family members are telling the NPS to free Tule elk, and, to protect “Point Reyes” for, native, wildlife!

We keep reading that the Park Service does NOT care about the Elk out on “Tomales Point” at “Point Reyes National Seashore”! What is going on? Why does the Park Service spend, taxpayer, money for a fence, and, water, and, mineral, supplements when it is cheaper to just let the Elk go live free, and, wild? Take down the fence, and, STOP wasting our money for cruelty on, innocent, native, wildlife!

It is requested to STOP using, taxpayers', money to pay for the, visual, blight of the “Elk Fence” out on Tomales Point”! Please STOP trucking in, water, and minerals, and, whatever else, to try to sustain a, native, herd in a, non-native, environment! Take down the fence, and, use our, taxpayers', money to, actually, turn the “Seashore” into a “National Park” that it deserves! Wildlife, natural habitat, clean water/soil/air, and, public, access MUST be the, primary, forces the Park Service supports - NOT a, small, group of, politically-connected, ranchers, and, their, hoofed, methane-operations!

For climate change and biodiversity reasons, the “Tomales Point” scoping plan MUST include, complete, removal of the “Tule Elk Reserve” fence combined with an, entirely, new, and, enforced, ranch succession plan! It MUST commit to ceasing, continued, ranch lands succession of, leased, parcels to ranchers, and, restoration of, native, coastal prairie, and, wildlife, habitat! It MUST emphasize the roles of Indigenous Coast Miwok's, ecological, and, scientific, cultural knowledge, and, practices, and, the importance of wildlife, and, natural, forces in the, restoration, process!”

Correspondence: “Please accept for the record these comments as input for the NPS's upcoming environmental review of its Tomales Point management plan update. These are important aspects that must be considered in determining the scope of the planning process and should be included in any environmental impact statement. My top concern is for the Park Service to remove the fence that keeps the tule elk penned in on grazing land that's insufficient to support a healthy herd.

How much does it cost the National Park Service or Point Reyes National Seashore in Tomales Point Reserve for fence maintenance and supplemental water and minerals? How much does it cost us the taxpayers not only in materials, but in all the hidden costs of labor, operations, communications,

negotiation, administration, and don't forget, pleasing the ranchers who shouldn't even be there due to their constant impairment to the Seashore.

Instead of US taxpayers footing the bill for a godawful fence to keep elk without enough water and food out at Tomales Point, the Park Service needs to take down the fence, remove the thousands of cattle impacting the land, air, and waters, and let nature be whole at Point Reyes National Seashore.

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. The park's top priority should be to ensure the Tule elk survive and even thrive. Remove the elk fence.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity."

**Correspondence ID:3406**

Correspondence: Any proposed plans for PRNS should include the removal of the elk fence at Tomales Point.

The Park Service will never be able to fully provide enough water, minerals, or forage for the captive Tule Elk at Tomales Point. Put the money into taking down the fence and letting Elk live and thrive throughout the Seashore.

Resources should be spent on taking down the elk fence and re-wilding the park.

First and foremost, NPS should remove the fence that separates the Tomales Point herd from private, for-profit ranching livestock and prevents the elk herd from finding forage and water in its own. This would allow a more natural existence, without interference from humans.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3407**

Correspondence: "Thank you for accepting my public comment on the Tomales Point planning process for Point Reyes National Seashore. I am very concerned. The Seashore's natural resources like the Tule Elk should be unimpaired.

When will the National Park Service and Point Reyes National Seashore officials stop spending money on a misbegotten Elk fence idea? Remove the fence, and let the Tule Elk roam. It is time to get rid of the cattle ranchers in our national park, as they're the ones forcing their will against the American public's will. Free the Elk and let Americans enjoy a true national park.

Pierce Point Ranch should be the only real "historical" ranch in PRNS. It should be developed as a working model of a ranch from the 19th Century, with no more than a few head of cattle and a few dairy cows, showcasing actual ranching and farming techniques of that era. Docents could explain the conditions, techniques, and context for working the land under the times and circumstances in place at the time. It should also tell the full story of the Native Americans that preceded European settlers and their fate. All other ranches should be removed from the park.

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

Thank you for your time and consideration in this matter."

Correspondence: "I appreciate the opportunity to provide input into this scoping process and ask that you remove the elk fence at Tomales Point.

The current plan of what is called a 'co-habitation' - which is a farce - is wasteful in a number of ways. Instead of letting the elk populations roam the land to access the water and flora they have evolved to need for subsistence, it often needs to be trucked in to keep populations at levels 'mandated by a plan'. Not only do these resources need to be expended to keep the herds alive - then later, National Park Service personnel go and cull the population when it exceeds their some-how-agreed upon 'rancher-acceptable' number.

The National Park Service should partner with the First Nation people and create a wildlife sanctuary in Point Reyes National Seashore so that our elk are not hazed, nor culled, nor confined without sufficient food and water.

The fence should be removed, for the benefit of the elk herds and their survival.

It is time to end the mis-management of our native Tule elk in Point Reyes National Seashore. Please follow the scientific advice provided in 1993, and remove the fence across Tomales Point. It is important for the survival of this herd to be free-roaming with access to food and water.”

**Correspondence ID:3417**

Correspondence: "Please read and consider my public comment on the Tomales Point planning process for Point Reyes National Seashore. Tule Elk should be free to roam, gather, find water and food, and live more healthy lives--not be imprisoned for their entire lives behind a god-awful fence. Point Reyes is a national park, therefore please remove the fence now.

Taking away the fence is cheaper and more sensible than setting up enormous plastic water tanks and trucking water up to the elk reserve.

The Park Service wastes taxpayer money on the self-fulfilling problems caused by its continued decades-long poor wildlife management choices out on Tomales Point. The already limited funds available should be used to remove the tule elk fence so elk can find sufficient food and water on their own across the Seashore.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

The management of Tomales Point is an important part of the overall park. Inviting public comment, and then incorporating those preferences into the plan, will be key if public trust is to be restored in NPS."

**Correspondence ID:3418**

Correspondence: Thank you for accepting my public comment on the Tomales Point planning process for Point Reyes National Seashore. I am very concerned. The Seashore's natural resources like the Tule Elk should be unimpaired.

How much does it cost the National Park Service or Point Reyes National Seashore in Tomales Point Reserve for fence maintenance and supplemental water and minerals? How much does it cost us the taxpayers not only in materials, but in all the hidden costs of labor, operations, communications, negotiation, administration, and don't forget, pleasing the ranchers who shouldn't even be there due to their constant impairment to the Seashore.

If cattle ranchers are concerned about the spread of disease between the elk and bovine populations, then the cattle should be kept far enough away from the elk as necessary to allow passage through wildlife corridors. This allocation would allow two short run goals- one being that the elk could traverse the area to graze for necessary vegetation for nutritional well-being, as well as access to water; and secondly, cordoning off the unnatural effects of the different effects of cattle grazing on the area's vegetation which would allow the native flora a better environment to establish itself.

Taking down the fence is the best option, according to ecologists.

I look forward to the next steps in the planning process. Thank you for the opportunity to participate in this initial phase.

**Correspondence ID:3419**

Correspondence: "Please remove the elk fence from Point Reyes National Seashore in order for the elk herds to have access to sufficient amount of water, minerals and forage.

The Park Service should not be spending so much money to maintain fencing at Tomales Point Reserve. There are all the expenses for materials, then all the hidden costs and time for labor, operations, administration, and rancher-pleasing. As a concerned citizen for the elk, please spend the money to remove the fence and free the Elk.

There have been claims made over the years by ranching interests that the elk have damaged ranch operations or facilities. NPS should determine the facts here, and document the actual costs of any verifiable damage. Additionally, ranchers have claimed the elk need to be separated from their cattle because the elk will eat too much of the forage they want for their cows. The science clearly shows that elk eat far less than cows, weigh a fraction of cows' weight, and being browsers, do not deplete the grasses and shrubs as much as cows do. Therefore, when scoping the plan update, NPS needs to compare the impacts of elk foraging vs. cattle grazing, and develop its plans consistent with the Organic Act of 1916 mandate of resource preservation and protection.

I cannot find a reasonable sound argument for continued ranching or dairy in a National Park. There are numerous dairy and cattle ranches in West Marin and Sonoma counties, as well as all across California and the entire United States. Some owned by the same families as those that ranch in the park today. Tule elk are only native to California and only found in Point Reyes National Seashore. We are lucky the elk are located in a National Park where they should be protected. Why private dairy and beef cows are prioritized over those elk in a National Park is beyond anyone's logical reasoning. It is political and that does not make it right. The National Park should be above politics. We need our National Parks, which we pay for and support, to work for us, the people.

Thank you for reading and placing my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore (PRNS). It is time, finally, for PRNS officials, notably Craig Kenkel, to stop stonewalling and ignoring the American public from across the country, and use proven science to prioritize wilderness, wildlife and habitat over commercial ranching. Start with a plan to remove the fence at Tomales Point and prioritize the endemic Tule Elk."

**Correspondence ID:3420**

**Correspondence ID:3423**

Correspondence: I am writing to submit my public comment for the Tomales Point planning process at Point Reyes National Seashore. Tomales Point is a de facto prison or zoo enclosure for several, distinct Tule Elk herds present there. It is a cruel, inhumane, and entirely contrived solution to the real problem: continued beef and cattle ranching across one-third of our Seashore. Please take down the Elk Fence now.

Allowing the continuation of cattle ranching in this area, Tomales Point in the Point Reyes National Seashore, is contradictory to the NPS trying to mitigate the negative impacts of climate change partially caused by this very practice. The NPS needs to do its part and at every step possible be a leader to achieve this end-result.

The Coast Miwok people should decide how to bring the land back to the way their people left it, before impacted by European settlers in the mid-1800's. The Coast Miwok lived in unison with the Tule elk, the native wildlife and the native vegetation. Let's help recreate our National Park to how it was prior to the impact caused by commercial cattle operations.

The Park Service should consider not only the economic costs of maintaining the elk fence and the management of the elk herd, it should examine the reputational and ethical costs of doing so as well. More and more, the public is very unhappy about the needless deaths of the Tule elk, for no other reason than to protect private ranchers' profits. How many visitors are discouraged from coming to visit due to this wasteful and disagreeable practice? How many dollars are not spent in the park and surrounding areas because of it? How much distrust does the Park Service generate when people see it catering to the select few, at the cost of the iconic Tule elk and damage to the park's environs? Too much, that's for sure.

Our native Tule elk in PRNS deserve a better quality of life, rather than being confined in an environment without sufficient forage, minerals and water. Please ensure the upcoming plan for our iconic elk has several options that involve the removal of the elk. The public has requested the NPS to protect the Tule elk, and now is the time to take action.

**Correspondence ID:3424**

Correspondence: "Please accept for the record these comments as input for the NPS's upcoming environmental review of its Tomales Point management plan update. These are important aspects that must be considered in determining the scope of the planning process and should be included in any environmental impact statement. My top concern is for the Park Service to remove the fence that keeps the tule elk penned in on grazing land that's insufficient to support a healthy herd.

How much does it cost the National Park Service or Point Reyes National Seashore in Tomales Point Reserve for fence maintenance and supplemental water and minerals? How much does it cost us the taxpayers not only in materials, but in all the hidden costs of labor, operations, communications, negotiation, administration, and don't forget, pleasing the ranchers who shouldn't even be there due to their constant impairment to the Seashore.

Instead of US taxpayers footing the bill for a godawful fence to keep elk without enough water and food out at Tomales Point, the Park Service needs to take down the fence, remove the thousands of cattle impacting the land, air, and waters, and let nature be whole at Point Reyes National Seashore.

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. The park's top priority should be to ensure the Tule elk survive and even thrive. Remove the elk fence.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity."

**Correspondence ID:3425**

Correspondence: "I respectfully submit this public comment for your consideration regarding the GMP planning process for Tomales Point at Point Reyes National Seashore (PRNS). All the natural resources, from native plants to the Tule Elk, should be unimpaired in and beyond Tomales Point. The American public wants open and accessible public lands and waters in their National Parks. No wildlife should be caged or captive in a National Park. We must remove the Tule Elk Fence now, and let the Tule Elk and

other wildlife roam free to prosper as is natural, healthy, and just. Please scope removal of the Tule Elk Fence in your planning for Tomales Point.

Without a fence at Tomales Point, the National Park Service wouldn't need to waste efforts and money bringing water up to the elk. The animals would have plenty of water available from Abbotts lagoon and other sources down in the valley.

Resources should be spent on taking down the elk fence and re-wilding the park.

Taking down the fence is the best option, according to ecologists.

I urge you to use this opportunity to carry out the intentions of the creation of the park, which was to protect the biodiversity within the seashore. To do that, the sacrifices should be made by the few ranch and dairy families that have profited profusely over the years. Our National Park is owned by the people not by the few ranchers.”

**Correspondence ID:3426**

Correspondence: “Please accept for the record these comments as input for the NPS's upcoming environmental review of its Tomales Point management plan update. These are important aspects that must be considered in determining the scope of the planning process and should be included in any environmental impact statement. My top concern is for the Park Service to remove the fence that keeps the tule elk penned in on grazing land that's insufficient to support a healthy herd.

How much does it cost the National Park Service or Point Reyes National Seashore in Tomales Point Reserve for fence maintenance and supplemental water and minerals? How much does it cost us the taxpayers not only in materials, but in all the hidden costs of labor, operations, communications, negotiation, administration, and don't forget, pleasing the ranchers who shouldn't even be there due to their constant impairment to the Seashore.

Instead of US taxpayers footing the bill for a godawful fence to keep elk without enough water and food out at Tomales Point, the Park Service needs to take down the fence, remove the thousands of cattle impacting the land, air, and waters, and let nature be whole at Point Reyes National Seashore.

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. The park's top priority should be to ensure the Tule elk survive and even thrive. Remove the elk fence.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity.”

**Correspondence ID:3427**

Correspondence: I am writing to submit my public comment for the Tomales Point planning process at Point Reyes National Seashore. Tomales Point is a de facto prison or zoo enclosure for several, distinct Tule Elk herds present there. It is a cruel, inhumane, and entirely contrived solution to the real problem:

continued beef and cattle ranching across one-third of our Seashore. Please take down the Elk Fence now.

Allowing the continuation of cattle ranching in this area, Tomales Point in the Point Reyes National Seashore, is contradictory to the NPS trying to mitigate the negative impacts of climate change partially caused by this very practice. The NPS needs to do its part and at every step possible be a leader to achieve this end-result.

The Coast Miwok people should decide how to bring the land back to the way their people left it, before impacted by European settlers in the mid-1800's. The Coast Miwok lived in unison with the Tule elk, the native wildlife and the native vegetation. Let's help recreate our National Park to how it was prior to the impact caused by commercial cattle operations.

The Park Service should consider not only the economic costs of maintaining the elk fence and the management of the elk herd, it should examine the reputational and ethical costs of doing so as well. More and more, the public is very unhappy about the needless deaths of the Tule elk, for no other reason than to protect private ranchers' profits. How many visitors are discouraged from coming to visit due to this wasteful and disagreeable practice? How many dollars are not spent in the park and surrounding areas because of it? How much distrust does the Park Service generate when people see it catering to the select few, at the cost of the iconic Tule elk and damage to the park's environs? Too much, that's for sure.

Our native Tule elk in PRNS deserve a better quality of life, rather than being confined in an environment without sufficient forage, minerals and water. Please ensure the upcoming plan for our iconic elk has several options that involve the removal of the elk. The public has requested the NPS to protect the Tule elk, and now is the time to take action.

**Correspondence ID:3430**

Correspondence: "Here's my public comment for the planning process about Tomales Point at Point Reyes National Seashore: Take down that monstrous 8-foot fence and Let the Elk roam free.

When it comes to Tomales Point our National Park has failed us, the taxpayer, and rightful owners of the land. We should not be paying for the cost of installing and maintaining a fence so wild animals can't roam and forage for food and water in areas preserved for private cattle and dairy ranchers within a National Park.

The NPS should revise the PRNS Succession Policy to permanently retire grazing leases as ranchers choose to not renew them. This would create an historic opportunity to restore that 33% of the park that is currently surrounded by fences, full of cow manure and turn it into a program that will benefit not only Tule Elk, but expand the biodiversity throughout the park. The public would enthusiastically volunteer to help the NPS with such a program.

It is the responsibility of the Park Service to protect wildlife, and the most obvious solution is to remove the elk fence, allow the elk to roam, water, and feed, and for the Park Service to ameliorate climate change impacts, including removal of nonnative plants, improve fire resiliency, and allow wildlife and natural processes to restore areas of the Seashore. A good first step is to end the lease agreements with the cattle ranchers.

Thank you for allowing me to comment and for putting effort and resources to considering how to protect our precious and dwindling natural resources of our National Park.”

**Correspondence ID:3431**

Correspondence: Please remove the elk fence from Point Reyes National Seashore in order for the elk herds to have access to sufficient amount of water, minerals and forage.

Removal of the fence is a less expensive option than "management" of the herd.

All National Park Service resources should be directed to restoring the land to benefit the biodiversity within the park. This is what the public wants and needs, and what we need to do to help fight a biodiversity and climate crisis.

The drought conditions are continuing. Due to this urgency the Park must now act to help not only the Tule elk but all other species within its borders. The most impactful thing the Park can do in the short term to assist the elk in their survival is to remove the elk fence. This is not only the most humane thing to do, it is the most cost-effective and reasonable action.

Our native Tule elk in PRNS deserve a better quality of life, rather than being confined in an environment without sufficient forage, minerals and water. Please ensure the upcoming plan for our iconic elk has several options that involve the removal of the elk. **Correspondence ID:3432**

Correspondence: “I am a taxpayer who wants you to remove the fence confining the tule elk. It is important our elk survive and are well cared for in a natural habitat, vs confined behind a fence which keeps the elk away from much needed water and forage.

Tomales Point is not a zoo. The taxpayers do not want to incur the cost of feeding and providing water to wild animals. Nor do they want to visit a zoo. A simple solution, and one that is the most cost effective, is to stop "managing" the park. Take down the fence, remove the cattle, and let nature run its course.

Moving forward the Park Service should partner closely with the Coast Miwok and scientists to re-wild the park.

Point Reyes National Seashore should plan for prompt removal of the Elk Reserve fence on Tomales Point. This will achieve Tule Elk freedom of movement to naturally water, forage, and mate, and sustain optimal health and well-being of Tule Elk throughout the Seashore.

Thank you for your attention to my public record comments on the Tomales Point planning process for Point Reyes National Seashore. Your responsibility is to the spirit of wilderness preservation and protection, and to the vast majority of Americans who have insisted that this iconic place be freed from private, for-profit, commercial business interests. We will continue to press for just that, like taking down the Tomales Point fence.”

**Correspondence ID:3433**

Correspondence: “Please accept for the record these comments as input for the NPS's upcoming environmental review of its Tomales Point management plan update. These are important aspects that must be considered in determining the scope of the planning process and should be included in any environmental impact statement. My top concern is for the Park Service to remove the fence that keeps the tule elk penned in on grazing land that's insufficient to support a healthy herd.

Dismantling the elk fence will save the NPS money, as it is a less expensive and less invasive option.

The Park Service should be looking at such alternate uses of Tomales Point as creating a wildlife corridor that could run throughout the park, and the removal of the elk pen. The re-establishment of a more balanced ecosystem where the elk thrive could lead to the return of natural predators such as mountain lions, and with our climate in serious trouble, restoration of native grasses, shrubs and trees should be a high priority for the Park Service.

The original motivation for the fence was to protect financial interests, not for optimal ecological restoration. It must be removed.

Thank you for submitting my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore. Please remove the fence across Tomales Point so the Elk can be free to roam, feed, drink, associate, mate, and thrive naturally. It can be done! Please consider and use my comments to help Point Reyes be a beautiful place for wildlife and humans.”

**Correspondence ID:3438**

Correspondence: "The elk fence at Tomales Point must be removed. This is an important and the right step for the upcoming management plan.

What are the costs to maintain the Tule Elk Reserve fence, and to provide water and mineral supplements for the Tule Elk? What is the rationale for these expenditures, when removal of the fence line across Tomales Point would allow Tule Elk to roam for free for water and forage.

The NPS should revise the PRNS Succession Policy to permanently retire grazing leases as ranchers choose to not renew them. This would create an historic opportunity to restore the 33% of the park that is currently surrounded by fences, full of cow manure and turn it into a program that will benefit not only Tule Elk but expand the biodiversity throughout the park. The public would enthusiastically volunteer to help the NPS with such a program.

The Tomales Point Elk Reserve fence must promptly be taken down. This should occur in conjunction with a renewed, science-based plan to cease rancher successions of leased lands, allowing Point Reyes National Seashore to revert to natural landscapes, waterscapes, habitats, and ecosystems.

Thank you for allowing me to comment and for putting effort and resources into considering how to protect our precious and dwindling natural resources of our National Park."

Correspondence: “Thank you for the opportunity to provide input on the updated Tule Elk Management Plan/General Management Plan for Pt. Reyes National Seashore. To help the National Park Service (NPS) best structure its environmental review process, I offer the comments below. Please consider including these points in scoping your review and the presumed Environmental Impact Statement.

Allowing the continuation of cattle ranching in this area, Tomales Point in the Point Reyes National Seashore, is contradictory to the NPS trying to mitigate the negative impacts of climate change partially caused by this very practice. The NPS needs to do its part and at every step possible be a leader to achieve this end-result.

Moving forward the Park Service should partner closely with the Coast Miwok and scientists to re-wild the park.

The first sentence of the Tule Elk Management Plan and Environmental Assessment, dated 1998 states "The purpose of this plan and environmental assessment is to guide the management, monitoring, and research of Tule Elk, *Cervus elaphus nannodes*, at Point Reyes National Seashore for the next five to ten years". Well here we are 24 years later and you're finally getting around to updating this horribly outdated plan. Meanwhile hundreds of beautiful Tule Elk have died behind that fence while the NPS did nothing. That fence has to go.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Correspondence: Thank you for the opportunity to comment on Tomales Point. Why is this area being treated separate from Point Reyes National Seashore? As it is within the boundaries of the seashore it should be interwoven within the fabric of the rest of the seashore and the ecosystem allowed to become whole instead of piecemeal. A visitor should be able to walk/hike the entirety of the park. And the native grasses and wildlife (including elk) should be able to roam freely within all areas of the park. Please remove the elk fences and let the park be an actual park.

Recently, the NPS has started an unnatural process of providing emergency water via tanks. This practice is costly, and has limited effectiveness.

In developing alternatives to be evaluated, the NPS should include Tule Elk not being confined behind the fence. Alternatives should include adding currently leased land to the Tule Elk Reserve as the leaseholders retire them due to climate change or shifting economic pressures, as we are already seeing.

Tule Elk are not only rare beautiful animals they are also caretakers of the land. The elk help native grasses flourish, which helps carbon sequestering, thus reducing the threat of climate change. In this day and age the National Park service must lead our nation in restoring our parks to help reduce our nation's carbon footprint.

I urge you to use this opportunity to carry out the intentions of the creation of the park, which was to protect the biodiversity within the seashore. To do that, the sacrifices should be made by the few ranch and dairy families that have profited profusely over the years. Our National Park is owned by the people not by the few ranchers.

**Correspondence ID:3451**

Correspondence: "I am a taxpayer who wants you to remove the fence confining the tule elk. It is important our elk survive and are well cared for in a natural habitat, vs confined behind a fence which keeps the elk away from much needed water and forage.

Tomales Point is not a zoo. The taxpayers do not want to incur the cost of feeding and providing water to wild animals. Nor do they want to visit a zoo. A simple solution, and one that is the most cost effective, is to stop "managing" the park. Take down the fence, remove the cattle, and let nature run its course.

Moving forward the Park Service should partner closely with the Coast Miwok and scientists to re-wild the park.

Point Reyes National Seashore should plan for prompt removal of the Elk Reserve fence on Tomales Point. This will achieve Tule Elk freedom of movement to naturally water, forage, and mate, and sustain optimal health and well-being of Tule Elk throughout the Seashore.

Thank you for your attention to my public record comments on the Tomales Point planning process for Point Reyes National Seashore. Your responsibility is to the spirit of wilderness preservation and protection, and to the vast majority of Americans who have insisted that this iconic place be freed from private, for-profit, commercial business interests. We will continue to press for just that, like taking down the Tomales Point fence.”

**Correspondence ID:3452**

Correspondence: “Please remove the elk fence from Point Reyes National Seashore in order for the elk herds to have access to sufficient amount of water, minerals and forage.

As a taxpayer I expect the National Park Service to spend money wisely and frugally. I also expect the Park Service to prioritize wildlife over private enterprise. Therefore I ask the Park Service to stop spending money on erecting and maintaining a wildlife fence for the sole purpose of keeping native Tule Elk out of the parcels that are leased by private cattle and dairy ranch operations within a National Park.

Financial resources should not be spent on an Elk enclosure at Tomales Point, nor on trucking in water and minerals all the way out there, when the Elk are dying of thirst, malnutrition, and starvation. Financial resources should be spent to free the Elk so they can live a natural and healthy life across the entire Park.

Taking down the fence is the best option, according to ecologists.

As a long-time user of the seashore, I'm looking forward to seeing what the Park Service comes up with as an improved management plan. It's a good time to make some long-needed changes, particularly the elk fence removal. That alone will make a significant difference in one's experience of the park, and I'm sure it will be met with massive public approval. Thank you for considering my input. I'm excited to see the results.”

**Correspondence ID:3457**

Correspondence: Kindly take down the elk fence from Tomales Point. It restricts the tule elk and prevents them from getting water and forage.

Removal of the fence is a less expensive option than "management" of the herd.

Tomales Point and its elk herd should have a wildlife management approach to management. Free access for the elk to roam, restoration of the native grasses and the elimination of invasive plants, removal of private cattle and dairy operations, and unhindered access for the public to wander the land while respecting the natural flora and fauna would increase and enhance PRNS's popularity, as well as its natural biome.

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. The park's top priority should be to ensure the Tule elk survive and even thrive. Remove the elk fence.

It is time to end the mis-management of our native Tule elk in Point Reyes National Seashore. Please follow the scientific advice provided in 1993, and remove the fence across Tomales Point. It is important for the survival of this herd to be free-roaming with access to food and water.

**Correspondence ID:3458**

**Correspondence ID:3460**

Correspondence: Any proposed plans for PRNS should include the removal of the elk fence at Tomales Point.

No matter what the Park Service spends to supplement water and minerals for the Tule Elk at Tomales Point, it will not matter. The Tule Elk are starving to death at Tomales Point due to continued drought, and megadrought. Please stop spending time and money on the fence and artificial approaches, and let the Elk roam free for natural sources of water and good nutrition.

The National Park Service should partner with the First Nation people and create a wildlife sanctuary in Point Reyes National Seashore so that our elk are not hazed, nor culled, nor confined without sufficient food and water.

Tomales Point and the Point Reyes National Seashore is to be an area where wildlife are given back their home. Taxpayers and visitors venture out that way to hear the roar of the Pacific Ocean and feel the sun and wind, and see the land as it was made in its beautiful creation. Taxpayers do not go out to Point Reyes to see miles of wire fences 'keeping Nature in check', and the destructive, exploitive industrial practices of corrupt politically influential parties rule the land.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3461**

**Correspondence ID:3475**

Correspondence: Tomales Point is the highlight of many visitors' experience in Point Reyes National Seashore. Thank you for inviting public comment in this planning process. By removing the 8-foot elk fence, you can begin the process of restoration of the entire peninsula's ecosystem.

Taxpayer dollars should not be spent on killing or neutering any animals, especially rare Tule Elk, once the herd is deemed "too large". The plan should allow for native wildlife to roam freely and die of natural causes.

Moving forward the Park Service should partner closely with the Coast Miwok and scientists to re-wild the park.

Removing the elk fence is the most impactful step the Park can take for Tomales Point, and this should be the plan review's top priority. This and total removal of all dairy and cattle operations from all of the park would have the strongest positive impacts, both ecologically and in terms of protection of the public's resources. The removal of both would benefit the return of native, deep-rooted grasses, allow the return of birds and wildlife that cannot survive in the barren fields where cattle have eaten the greenery down to the earth, and let the natural prairie reestablish itself. It could also serve as an outdoor laboratory for studying how to accelerate its healing and nurturing, information that will be increasingly important as we try to save our planet from the damages of global warming.

The National Park Service was created to conserve the scenery and leave our public lands unimpaired for the enjoyment of future generations. Based on the NPS' mission, the NPS must remove the unnatural eight foot fence, for the sake of our native wildlife and for the enjoyment of future generations.

**Correspondence ID:3476**

Correspondence: Kindly take down the elk fence from Tomales Point. It restricts the tule elk and prevents them from getting water and forage.

Removal of the fence is a less expensive option than "management" of the herd.

Tomales Point and its elk herd should have a wildlife management approach to management. Free access for the elk to roam, restoration of the native grasses and the elimination of invasive plants, removal of private cattle and dairy operations, and unhindered access for the public to wander the land while respecting the natural flora and fauna would increase and enhance PRNS's popularity, as well as its natural biome.

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. The park's top priority should be to ensure the Tule elk survive and even thrive. Remove the elk fence.

It is time to end the mis-management of our native Tule elk in Point Reyes National Seashore. Please follow the scientific advice provided in 1993, and remove the fence across Tomales Point. It is important for the survival of this herd to be free-roaming with access to food and water.

Correspondence: Tomales Point is the highlight of many visitors' experience in Point Reyes National Seashore. Thank you for inviting public comment in this planning process. By removing the 8-foot elk fence, you can begin the process of restoration of the entire peninsula's ecosystem.

Taxpayer dollars should not be spent on killing or neutering any animals, especially rare Tule Elk, once the herd is deemed "too large". The plan should allow for native wildlife to roam freely and die of natural causes.

Moving forward the Park Service should partner closely with the Coast Miwok and scientists to re-wild the park.

Removing the elk fence is the most impactful step the Park can take for Tomales Point, and this should be the plan review's top priority. **Correspondence ID:3480**

Correspondence: Any proposed plans for PRNS should include the removal of the elk fence at Tomales Point.

No matter what the Park Service spends to supplement water and minerals for the Tule Elk at Tomales Point, it will not matter. The Tule Elk are starving to death at Tomales Point due to continued drought, and megadrought. Please stop spending time and money on the fence and artificial approaches, and let the Elk roam free for natural sources of water and good nutrition.

The National Park Service should partner with the First Nation people and create a wildlife sanctuary in Point Reyes National Seashore so that our elk are not hazed, nor culled, nor confined without sufficient food and water.

Tomales Point and the Point Reyes National Seashore is to be an area where wildlife are given back their home. Taxpayers and visitors venture out that way to hear the roar of the Pacific Ocean and feel the sun and wind, and see the land as it was made in its beautiful creation. Taxpayers do not go out to Point Reyes to see miles of wire fences 'keeping Nature in check', and the destructive, exploitive industrial practices of corrupt politically influential parties rule the land.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3498**

Correspondence: Proposed plans for PRNS must include the removal of the elk fence at Tomales Point.

Reliable reports state the NPS has shouldered many of the operational costs over the years that should have been borne by the ranchers. Since most agencies have limited budgets, I'd like the Park Service to analyze how much it could save by making the ranches pay for any and all fencing, but especially the elk fence at Tomales Point. It should also look at how much it would save if the ranches were removed entirely from the park. Included in these analyses should be the value of increased public access to areas ranchers try to keep the public away from, the increased enjoyment of the park by the public, and the savings from not having to respond to rancher demands.

Pierce Point Ranch should be the only real "historical" ranch in PRNS. It should be developed as a working model of a ranch from the 19th Century, with no more than a few head of cattle and a few dairy cows, showcasing actual ranching and farming techniques of that era. Docents could explain the conditions, techniques, and context for working the land under the times and circumstances in place at the time. It should also tell the full story of the Native Americans that preceded European settlers and their fate. All other ranches should be removed from the park.

Confining Tule elk for the benefit of private ranching interests is a breach of the public trust.

Thank you for submitting my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore. Please remove the fence across Tomales Point so the Elk can be free to roam, feed, drink, associate, mate, and thrive naturally. It can be done! Please consider and use my comments to help Point Reyes be a beautiful place for wildlife and humans.

Correspondence: Proposed plans for PRNS must include the removal of the elk fence at Tomales Point.

Reliable reports state the NPS has shouldered many of the operational costs over the years that should have been borne by the ranchers. Since most agencies have limited budgets, I'd like the Park Service to analyze how much it could save by making the ranches pay for any and all fencing, but especially the elk fence at Tomales Point. It should also look at how much it would save if the ranches were removed entirely from the park. Included in these analyses should be the value of increased public access to areas ranchers try to keep the public away from, the increased enjoyment of the park by the public, and the savings from not having to respond to rancher demands.

Pierce Point Ranch should be the only real "historical" ranch in PRNS. It should be developed as a working model of a ranch from the 19th Century, with no more than a few head of cattle and a few dairy cows, showcasing actual ranching and farming techniques of that era. Docents could explain the conditions, techniques, and context for working the land under the times and circumstances in place at

the time. It should also tell the full story of the Native Americans that preceded European settlers and their fate. All other ranches should be removed from the park.

Confining Tule elk for the benefit of private ranching interests is a breach of the public trust.

Thank you for submitting my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore. Please remove the fence across Tomales Point so the Elk can be free to roam, feed, drink, associate, mate, and thrive naturally. It can be done! Please consider and use my comments to help Point Reyes be a beautiful place for wildlife and humans.

Correspondence: Fenced Elk: We strongly support the elk remain in the fenced acreage within predetermined numbers in order to have a healthy herd. There aren't enough mountain lions to reduce the herd. The park will need to continue to maintain and monitor the fencing for any damage caused by rot or strong winds or by the anti-ranching activists who want the elk to be free-range.

We support all the other 4 listed issues the park intends to address as part of the up dating planning effort.

The historic Pierce Ranch is very informative and educational to visitors from all over the world and for locals. Excellent interpretative signs and well-maintained buildings in a harsh climate. We suggest a 2nd picnic table or bench within the ranch area since we have observed people bringing a picnic lunch while others want to sit and enjoy the beauty and silence around them. The ranch and all of Pt. Reyes NS is a very special place for all the diverse visitors and for us locals.

Thank you.

Susan and John Van Der Wal

Correspondence: "Please accept for the record these comments as input for the NPS's upcoming environmental review of its Tomales Point management plan update. These are important aspects that must be considered in determining the scope of the planning process and should be included in any environmental impact statement. My top concern is for the Park Service to remove the fence that keeps the tule elk penned in on grazing land that's insufficient to support a healthy herd.

Dismantling the elk fence will save the NPS money, as it is a less expensive and less invasive option.

The Park Service should be looking at such alternate uses of Tomales Point as creating a wildlife corridor that could run throughout the park, and the removal of the elk pen. The re-establishment of a more balanced ecosystem where the elk thrive could lead to the return of natural predators such as mountain lions, and with our climate in serious trouble, restoration of native grasses, shrubs and trees should be a high priority for the Park Service.

The original motivation for the fence was to protect financial interests, not for optimal ecological restoration. It must be removed.

Correspondence: "Thank you for the opportunity to provide input on the updated Tule Elk Management Plan/General Management Plan for Pt. Reyes National Seashore. To help the National Park Service (NPS) best structure its environmental review process, I offer the comments below. Please consider including these points in scoping your review and the presumed Environmental Impact Statement.

Allowing the continuation of cattle ranching in this area, Tomales Point in the Point Reyes National Seashore, is contradictory to the NPS trying to mitigate the negative impacts of climate change partially caused by this very practice. The NPS needs to do its part and at every step possible be a leader to achieve this end-result.

Moving forward the Park Service should partner closely with the Coast Miwok and scientists to re-wild the park.

The first sentence of the Tule Elk Management Plan and Environmental Assessment, dated 1998 states "The purpose of this plan and environmental assessment is to guide the management, monitoring, and research of Tule Elk, *Cervus elaphus nannodes*, at Point Reyes National Seashore for the next five to ten years". Well here we are 24 years later and you're finally getting around to updating this horribly outdated plan. Meanwhile hundreds of beautiful Tule Elk have died behind that fence while the NPS did nothing. That fence has to go.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into

a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity.”

Please consider and use my comments to help Point Reyes be a beautiful place for wildlife and humans.

**Correspondence ID:3515**

Correspondence: Thank you for the opportunity to comment on Tomales Point. Why is this area being treated separate from Point Reyes National Seashore? As it is within the boundaries of the seashore it should be interwoven within the fabric of the rest of the seashore and the ecosystem allowed to become whole instead of piecemeal. A visitor should be able to walk/hike the entirety of the park. And the native grasses and wildlife (including elk) should be able to roam freely within all areas of the park. Please remove the elk fences and let the park be an actual park.

Spending the public's money for a Tule Elk Fence and supplemental water and minerals is wasteful, and not a long-term, feasible solution. The Tule Elk are starving to death from lack of access to proper food. And the impact of global warming causes climate effects like long term drought out there. It's bad money after bad money. Free the Tule Elk from Tomales Point. Let the Elk have water and food for free around the Park.

We wonder why Point Reyes National Seashore officials, especially Superintendent Kenkel, persist with keeping the expense of a long ugly fence out at Tomales Point and to truck in water and minerals. It's

obvious even to a non-scientist. There's not enough natural food and water to sustain the Tule Elk entrapped in a zoo pen out there. Take down the fence, and instead use the money to help the Tule Elk transition and thrive across the Seashore. Remove the ranchers and their cattle. Enough is enough. It's a NATIONAL PARK!

The 1998 plan says "Natural processes will be relied on to control populations of native species ..." There is nothing natural about caging animals behind a fence. The existing fence at the Tule Elk Reserve should be removed and replaced with a wildlife friendly fence that will allow Tule Elk to leave the reserve while still keeping cattle out.

The successful reintroduction of the elk herds in the Point Reyes National Seashore should be viewed as the goal of the general plan for not only the Tomales Point area but the entire National Seashore and the most cost-effective way to do that is to work for the elimination of cattle from that area. If this approach is not taken then there will be continued non-native plants being brought in which will necessitate more plans and strategies to eliminate, more engineering projects to contain manure run-off, control of native 'predator' species to protect the cattle which is contradictory to reestablishing the Seashore, just to name a few.

**Correspondence ID:3519**

Correspondence: "I am writing to request the involvement of independent scientists, independent elk biologists and the public in the development of the elk general management. We deserve a seat at the table, and it is imperative the upcoming management plan be objective, and that it prioritizes the survival of our native Tule elk over private cattle ranching in PRNS.

It would be better and less expensive to allow Tule elk access to water sources, such as the spring and lagoon in the region directly below the Tomales Point reserve.

The National Park Service is spending taxpayer money for a foolish Elk fence on Tomales Point. The leased ranching operations cause way more environmental harm and damage with thousands of cattle everywhere in the Park. The Park Service should spend money to educate the public about the damage cattle and ranchers cause on what should be a true National Park.

Superintendent Kenkel and other PRNS officials should demonstrate leadership on a national scale and remove the Tule Elk Reserve's fence across Tomales Point so that a new, sustainable wildlife health model is created to right the wrong of past ill-conceived Park Service policy. It is their duty to protect all National Park natural resources for posterity.

Thank you for your attention to my public record comments on the Tomales Point planning process for Point Reyes National Seashore. Your responsibility is to the spirit of wilderness preservation and protection, and to the vast majority of Americans who have insisted that this iconic place be freed from private, for-profit, commercial business interests. We will continue to press for just that, like taking down the Tomales Point fence."

**Correspondence ID:3520**

Included in these analyses should be the value of increased public access to areas ranchers try to keep the public away from, the increased enjoyment of the park by the public, and the savings from not having to respond to rancher demands.

Pierce Point Ranch should be the only real "historical" ranch in PRNS. It should be developed as a working model of a ranch from the 19th Century, with no more than a few head of cattle and a few dairy cows, showcasing actual ranching and farming techniques of that era. Docents could explain the conditions, techniques, and context for working the land under the times and circumstances in place at the time. It should also tell the full story of the Native Americans that preceded European settlers and their fate. All other ranches should be removed from the park.

Confining Tule elk for the benefit of private ranching interests is a breach of the public trust.

Thank you for submitting my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore. Please remove the fence across Tomales Point so the Elk can be free to roam, feed, drink, associate, mate, and thrive naturally. It can be done! Please consider and use my comments to help Point Reyes be a beautiful place for wildlife and humans.

**Correspondence ID:3521**

Correspondence: Thank you for the opportunity to comment on Tomales Point. Why is this area being treated separate from Point Reyes National Seashore? As it is within the boundaries of the seashore it should be interwoven within the fabric of the rest of the seashore and the ecosystem allowed to become whole instead of piecemeal. A visitor should be able to walk/hike the entirety of the park. And the native grasses and wildlife (including elk) should be able to roam freely within all areas of the park. Please remove the elk fences and let the park be an actual park.

Spending the public's money for a Tule Elk Fence and supplemental water and minerals is wasteful, and not a long-term, feasible solution. The Tule Elk are starving to death from lack of access to proper food. And the impact of global warming causes climate effects like long term drought out there. It's bad money after bad money. Free the Tule Elk from Tomales Point. Let the Elk have water and food for free around the Park.

We wonder why Point Reyes National Seashore officials, especially Superintendent Kenkel, persist with keeping the expense of a long ugly fence out at Tomales Point and to truck in water and minerals. It's obvious even to a non-scientist. There's not enough natural food and water to sustain the Tule Elk entrapped in a zoo pen out there. Take down the fence, and instead use the money to help the Tule Elk transition and thrive across the Seashore. Remove the ranchers and their cattle. Enough is enough. It's a NATIONAL PARK!

The 1998 plan says "Natural processes will be relied on to control populations of native species ..." There is nothing natural about caging animals behind a fence. The existing fence at the Tule Elk Reserve should be removed and replaced with a wildlife friendly fence that will allow Tule Elk to leave the reserve while still keeping cattle out.

The successful reintroduction of the elk herds in the Point Reyes National Seashore should be viewed as the goal of the general plan for not only the Tomales Point area but the entire National Seashore and the most cost-effective way to do that is to work for the elimination of cattle from that area. If this approach is not taken then there will be continued non-native plants being brought in which will necessitate more plans and strategies to eliminate, more engineering projects to contain manure runoff, control of native 'predator' species to protect the cattle which is contradictory to reestablishing the Seashore, just to name a few.

Correspondence: "Thank you for the opportunity to provide input on the updated Tule Elk Management Plan/General Management Plan for Pt. Reyes National Seashore. To help the National Park Service (NPS) best structure its environmental review process, I offer the comments below. Please consider including these points in scoping your review and the presumed Environmental Impact Statement.

Allowing the continuation of cattle ranching in this area, Tomales Point in the Point Reyes National Seashore, is contradictory to the NPS trying to mitigate the negative impacts of climate change partially caused by this very practice. The NPS needs to do its part and at every step possible be a leader to achieve this end-result.

Moving forward the Park Service should partner closely with the Coast Miwok and scientists to re-wild the park.

The first sentence of the Tule Elk Management Plan and Environmental Assessment, dated 1998 states "The purpose of this plan and environmental assessment is to guide the management, monitoring, and research of Tule Elk, *Cervus elaphus nannodes*, at Point Reyes National Seashore for the next five to ten years". Well here we are 24 years later and you're finally getting around to updating this horribly

outdated plan. Meanwhile hundreds of beautiful Tule Elk have died behind that fence while the NPS did nothing. That fence has to go.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity."

Please remove the elk fences and let the park be an actual park.

The Park Service continues to spend money on a fence to keep Tule Elk trapped out on Tomales Point at Point Reyes even though there's not enough food and water out there for the Elk, and now I have to pay for fence maintenance and to ship water and supplements out there. Stop the bad spending! Take down that fence and let the Tule Elk go get their food and water for free.

The Coast Miwok people should decide how to bring the land back to the way their people left it, before impacted by European settlers in the mid-1800's. The Coast Miwok lived in unison with the Tule elk, the native wildlife and the native vegetation. Let's help recreate our National Park to how it was prior to the impact caused by commercial cattle operations.

Meanwhile hundreds of beautiful Tule Elk have died behind that fence while the NPS did nothing. That fence has to go.

This is nothing natural nor appropriate of an eight foot fence on public lands purposely confining native wildlife for the sake of leased cattle ranching operations. It is time for our public land in PRNS to be returned to wilderness in its entirety, and remove all impacts of ranching from 1/3 of our National Park. This includes the removal of the Tomales Point fence. Thank you for your attention to its removal, and the focused protection of our native Tule elk.

**Correspondence ID:3526**

Correspondence: "Regarding the upcoming plan for Tomales Point within Point Reyes National Seashore I request our National Park prioritize the wishes of the Miwok First Nation people. They "managed" that land for more than 10,000 and didn't disrupt the ecosystem. Allow them to determine how the land should be managed so that our future generations will be allowed to experience biodiversity, not cows, that exists there today. Maybe then the area will be allowed to thrive.

Taking away the fence is cheaper and more sensible than setting up enormous plastic water tanks and trucking water up to the elk reserve.

If cattle ranchers are concerned about the spread of disease between the elk and bovine populations, then the cattle should be kept far enough away from the elk as necessary to allow passage through wildlife corridors. This allocation would allow two short run goals- one being that the elk could traverse the area to graze for necessary vegetation for nutritional well-being, as well as access to water; and secondly, cordoning off the unnatural effects of the different effects of cattle grazing on the area's vegetation which would allow the native flora a better environment to establish itself.

The Tomales Point management plan for Point Reyes National Seashore must include removal of the Tule Elk Reserve fence, freedom of movement and association by the existing Tule Elk herds throughout the Seashore, and transition from a Tule Elk Reserve to a protected Coastal Native Habitat Reserve. Please include in this plan, the creation of safe wildlife corridors to facilitate Tule Elk migration elsewhere into the Seashore and all manner of other endeavors true to National Park Service founding mandates for natural resources protection and the enjoyment of natural features by future generations. In addition, it must include immediate cessation of the ranching succession policy in favor of immediate removal of commercial cattle operations and its ranch residential infrastructure.

Point Reyes National Seashore, after 60 years from its founding, should be a national pride of astounding biodiversity, global climate research, and honor of the public trust in perpetuity. Please emphasize and prioritize the importance of protecting our native Tule elk in the upcoming plan, which would include the removal of the fence across Tomales Point.”

**Correspondence ID:3531**

Correspondence: "I am writing and requesting to please take down the elk fence from Tomales Point, as it prevents natural migration of tule elk. It also stops them from getting water and food.

Recently, the NPS has started an unnatural process of providing emergency water via tanks. This practice is costly, and has limited effectiveness.

Resources currently spent on maintaining the fence could be better spent on expanding interpretive displays of indigenous land stewardship practices and restoration of Coastal Miwok sites in Point Reyes National Seashore.

Because the well-publicized die-offs of the Tomales Point Tule elk over the past few years have captured the public's attention, it's important that NPS give full consideration to the benefits of removing the elk fence that pens the herd in. Since the fence is only for the benefit of the private ranches in the park, NPS should look at what the impacts on ranching would be with removal of the fence, and weigh that against benefits to the natural environment and the public at large. Since the vast majority of park visitors come for the elk, and not the cows, maintaining a healthy herd should be seen as more important than protecting the private interests of the ranchers.

It is time to focus on the health of our National Seashore and protect the air, soil, water, native wildlife and native vegetation over the constant impact from private cattle operations. The ranchers espouse crackpot pseudoscience about false carbon sinks (pasture vs. native coastal prairie), regenerative ranching (oxymoron), methane digesters (new profit streams), while the objective and independent science-based literature state how a native landscape with native vegetation and wildlife will help fight climate change more effectively than cattle operations. Please prioritize our native landscape and native wildlife in Point Reyes."

**Correspondence ID:3534**

Correspondence: "I am commenting on the process of creating a plan for Tomales Point within Point Reyes National Park. I would hope the National Park Service would not address this area as somehow separate from the park itself but instead view the park in its entirety. As it stands today Tomales Point is more of a zoo within what is suppose to be a park but is in fact seen as private ranch land. And at this particular zoo the wild animals are fenced and the park service personnel let the animals die due to drought and lack of forage. Stop the insanity and take down the elk fence.

The Park Service continues to spend money on a fence to keep Tule Elk trapped out on Tomales Point at Point Reyes even though there's not enough food and water out there for the Elk, and now I have to pay for fence maintenance and to ship water and supplements out there. Stop the bad spending! Take down that fence and let the Tule Elk go get their food and water for free.

Park funds should be used to monitor and enforce water quality and other environmental standards in Point Reyes National Seashore versus spending money on a bad fence idea to starve wildlife in a National Park.

It is the responsibility of the Park Service to protect wildlife, and the most obvious solution is to remove the elk fence, allow the elk to roam, water, and feed, and for the Park Service to ameliorate climate change impacts, including removal of nonnative plants, improve fire resiliency, and allow wildlife and natural processes to restore areas of the Seashore. A good first step is to end the lease agreements with the cattle ranchers.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity."

The Tule Elk are starving to death from lack of access to proper food. And the impact of global warming causes climate effects like long term drought out there. It's bad money after bad money. Free the Tule Elk from Tomales Point. Let the Elk have water and food for free around the Park.

We wonder why Point Reyes National Seashore officials, especially Superintendent Kenkel, persist with keeping the expense of a long ugly fence out at Tomales Point and to truck in water and minerals. It's obvious even to a non-scientist. There's not enough natural food and water to sustain the Tule Elk entrapped in a zoo pen out there. Take down the fence, and instead use the money to help the Tule Elk transition and thrive across the Seashore. Remove the ranchers and their cattle. Enough is enough. It's a NATIONAL PARK!

The 1998 plan says "Natural processes will be relied on to control populations of native species ..." There is nothing natural about caging animals behind a fence. The existing fence at the Tule Elk Reserve should be removed and replaced with a wildlife friendly fence that will allow Tule Elk to leave the reserve while still keeping cattle out.

The successful reintroduction of the elk herds in the Point Reyes National Seashore should be viewed as the goal of the general plan for not only the Tomales Point area but the entire National Seashore and the most cost-effective way to do that is to work for the elimination of cattle from that area. If this approach is not taken then there will be continued non-native plants being brought in which will necessitate more plans and strategies to eliminate, more engineering projects to contain manure run-off, control of native 'predator' species to protect the cattle which is contradictory to reestablishing the Seashore, just to name a few.

**Correspondence ID:3538**

Correspondence: I am writing to request the involvement of independent scientists, independent elk biologists and the public in the development of the elk general management. We deserve a seat at the table, and it is imperative the upcoming management plan be objective, and that it prioritizes the survival of our native Tule elk over private cattle ranching in PRNS.

It would be better and less expensive to allow Tule elk access to water sources, such as the spring and lagoon in the region directly below the Tomales Point reserve.

I respectfully ask that the Tule Elk Reserve fence be taken down now. National Park Service and Point Reyes National Seashore funds supplied by the American taxpayer should be used to create wild and healthy freedom for the Tule Elk and other wildlife. Public access to vast swaths of the Seashore now blocked by ranching barbed/electric wire and formidable gates, which is not acceptable on public lands.

Please investigate, enforce, and punish cattle ranching families that continue to degrade and pollute our Seashore's lands, waters, and air. Superintendent Kenkel and all of you at the NPS: It is time to get your priorities and mandates straight. Please serve the interests of wildlife, habitat, visitors, and posterity.

Ecological reports recommend the fence be removed. There is no good reason to keep the fence.

I am grateful to have the opportunity to provide this preliminary feedback, and I look forward to participating in the next steps of this important planning process.

**Correspondence ID:3539**

Correspondence: "Please remove the eight foot fence at Tomales Point for the sake of our native Tule Elk. We must prioritize our native Tule elk over the domestic cattle raised for profit in PRNS.

Reliable reports state the NPS has shouldered many of the operational costs over the years that should have been borne by the ranchers. Since most agencies have limited budgets, I'd like the Park Service to analyze how much it could save by making the ranches pay for any and all fencing, but especially the elk fence at Tomales Point. It should also look at how much it would save if the ranches were removed entirely from the park. Included in these analyses should be the value of increased public access to areas ranchers try to keep the public away from, the increased enjoyment of the park by the public, and the savings from not having to respond to rancher demands.

The long run goal is to phase out cattle from the Point Reyes National Seashore, altogether. This would allow a number of costly issues to be dropped as the progression of steps were accomplished, namely the need and upkeep of the elk fences, trucking in feed and water for the elk herds in the increasing occurrence of drought, culling the herds when successfully repopulating the areas and eradication of invasive species of plants brought in by cattle, cattle feed, and industrial machinery.

The difference in landscape between the Tule Elk Reserve and the ranches on the other side of the fence is stark. The Tule elk Reserve looks like a beautiful coastal prairie with lots of wildflowers and coyote brush. The land to the south looks barren and denuded and there is evidence of cow manure spraying - not what visitors come to Point Reyes to see. Please remove the fence in the Elk reserve, as this is the right step to take for our National Park.

Sadly, Point Reyes National Seashore is a landscape dominated by private, for-profit industrial cattle ranching businesses. These private business owners claim stewardship of the lands, waters, and air, and do everything in their power to evade, circumvent, ignore, abuse, and thumb their collective noses at the most basic and sound environmental principles, ethics, practices, and responsibilities. This selfish and unjust behavior should not occur in a National Park. Please take down the Elk fence, and prioritize our native wildlife over private and destructive cattle operations."

Correspondence: "Thank you for allowing the public to comment on the process of creating the upcoming plan for Tomales Point within Point Reyes National Seashore. I for one, as I think many others do, frequent national parks to see wildlife in their natural habitat. I don't go to the park to see cows and fences. If I wanted to go to a zoo I would choose to do just that. Take down the fence and allow all of the wildlife to roam freely within the entire park as that is why the park was created.

Dismantling the elk fence will save the NPS money, as it is a less expensive and less invasive option.

The National Park Service is spending taxpayer money for a foolish Elk fence on Tomales Point. The leased ranching operations cause way more environmental harm and damage with thousands of cattle

everywhere in the Park. The Park Service should spend money to educate the public about the damage cattle and ranchers cause on what should be a true National Park.

Tule Elk are not only rare beautiful animals they are also caretakers of the land. The elk help native grasses flourish, which helps carbon sequestering, thus reducing the threat of climate change. In this day and age the National Park service must lead our nation in restoring our parks to help reduce our nation's carbon footprint.

Thank you for the opportunity to provide feedback on the upcoming plan for Elk Reserve in Point Reyes National Seashore. The 3-year timeframe proposed by the NPS appears to be too long of a period, as we have lost approximately 50% of our native Elk held captive behind this 8 foot fence due to lack of appropriate amount of food, water and minerals. In your upcoming plan, please ensure there are numerous alternatives available on the removal of this deadly fence. It is time for that fence to be removed."

### **Correspondence ID:3543**

Correspondence: Thank you for the opportunity to comment on Tomales Point. Why is this area being treated separate from Point Reyes National Seashore? As it is within the boundaries of the seashore it should be interwoven within the fabric of the rest of the seashore and the ecosystem allowed to become whole instead of piecemeal. A visitor should be able to walk/hike the entirety of the park. And the native grasses and wildlife (including elk) should be able to roam freely within all areas of the park. Please remove the elk fences and let the park be an actual park.

Spending the public's money for a Tule Elk Fence and supplemental water and minerals is wasteful, and not a long-term, feasible solution. The Tule Elk are starving to death from lack of access to proper food. And the impact of global warming causes climate effects like long term drought out there. It's bad money after bad money. Free the Tule Elk from Tomales Point. Let the Elk have water and food for free around the Park.

**Correspondence ID:3546**

Correspondence: "You want my input to the Tomales Point planning process for Point Reyes National Seashore? Why is there even a Tule Elk enclosure out there? Does everything have to please and serve the ranchers (who shouldn't even be there anymore)? The Tule Elk cannot even get enough water or food, and are dying off in really high numbers! Please get rid of the Tule Elk Fence and let the Elk roam free. If you need a fence, put up a wildlife-friendly one, and turn the place into a Native Coastal Plant Reserve.

It is unconscionable the National Park Service, who is to protect public lands and natural resources, continues to incur costs for the ugly Elk Fence and supplemental water and nutrients when getting rid of the cattle ranchers and letting Elk roam free in the Park would work free for the rest of time.

All National Park Service resources should be directed to restoring the land to benefit the biodiversity within the park. This is what the public wants and needs, and what we need to do to help fight a biodiversity and climate crisis.

The drought conditions are continuing. Due to this urgency the Park must now act to help not only the Tule elk but all other species within its borders. The most impactful thing the Park can do in the short term to assist the elk in their survival is to remove the elk fence. This is not only the most humane thing to do, it is the most cost-effective and reasonable action.

The management of Tomales Point is an important part of the overall park. Inviting public comment, and then incorporating those preferences into the plan, will be key if public trust is to be restored in NPS."

**Correspondence ID:3548**

Correspondence: Many thanks for allowing the public, rightful owners of the land, to comment on the upcoming plan for Tomales Point within Point Reyes National Seashore. This area, along with any area within the national park should be allowed to be re-wild. All fences and evidence of fences should be removed.

How much does it cost the National Park Service or Point Reyes National Seashore in Tomales Point Reserve for fence maintenance and supplemental water and minerals? How much does it cost us the taxpayers not only in materials, but in all the hidden costs of labor, operations, communications, negotiation, administration, and don't forget, pleasing the ranchers who shouldn't even be there due to their constant impairment to the Seashore.

The park should put every effort into connecting Tomales Point and its wildlife to the rest of the park. A visitor to the park should not have to pass through cattle/dairy pasture to walk through the Philip Burton Wilderness and nor should the Tule Elk. Every effort should be directed in allowing the elk to roam freely across the entire area of the park.

Point Reyes National Seashore management must scope a plan to remove the Tule Elk Reserve fence across Tomales Point. This must be done in conjunction with a serious, science-based, enforced plan to cease the practice of ranching on our public land, so that timely and effective Seashore wilderness restoration occurs with public participation, focused on natural and native features, habitats, wildlife, and visitor accessibility.

Point Reyes National Seashore, after 60 years from its founding, should be a national pride of astounding biodiversity, global climate research, and honor of the public trust in perpetuity. Please emphasize and prioritize the importance of protecting our native Tule elk in the upcoming plan, which would include the removal of the fence across Tomales Point.

**Correspondence ID:3549**

**Correspondence ID:3551**

Correspondence: "I am writing to you specifically to address your plans for Tomales Point in the Point Reyes National Seashore. As they currently stand, they need to be incorporated into the General Plan for the Seashore - not as a separate part of it. It does not make strategic or economic sense to treat them as a part-as-to-of-themselves. The steps to restore the flora and fauna for all areas must be incorporated into the dynamics of the plan at the outset.

Maintenance of an 8-foot fence and providing water and nutrition for captive Tule elk is not a reasonable use of funds, when the Tule elk could find adequate food and water if they were allowed to freely roam.

Financial resources of the National Park Service (NPS) should be used to end the Tule Elk Reserve on Tomales Point, by removal of the rancher and NPS insisted eight foot fence and replace that with a wildlife-friendly smaller fence but a fence that keeps the cattle out of this preserved environment. Let's establish a Coastal Native Prairie Reserve in place of the wholly bad and inhumane Tule Elk Reserve. The Tule Elk get to roam free for food and water throughout the Seashore, and the current Reserve transforms into a wild habitat global study model during these times of severe climate heating and California megadrought.

Because the well-publicized die-offs of the Tomales Point Tule elk over the past few years have captured the public's attention, it's important that NPS give full consideration to the benefits of removing the elk fence that pens the herd in. Since the fence is only for the benefit of the private ranches in the park, NPS should look at what the impacts on ranching would be with removal of the fence, and weigh that against benefits to the natural environment and the public at large. Since the vast majority of park visitors come for the elk, and not the cows, maintaining a healthy herd should be seen as more important than protecting the private interests of the ranchers.

Our native Tule elk in PRNS deserve a better quality of life, rather than being confined in an environment without sufficient forage, minerals and water. Please ensure the upcoming plan for our iconic elk has several options that involve the removal of the elk. The public has requested the NPS to protect the Tule elk, and now is the time to take action."

The steps to restore the flora and fauna for all areas must be incorporated into the dynamics of the plan at the outset.

It would be better and less expensive to allow Tule elk access to water sources, such as the spring and lagoon in the region directly below the Tomales Point reserve.

The National Park Service is spending taxpayer money for a foolish Elk fence on Tomales Point. The leased ranching operations cause way more environmental harm and damage with thousands of cattle everywhere in the Park. The Park Service should spend money to educate the public about the damage cattle and ranchers cause on what should be a true National Park.

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

The National Park Service was created to conserve the scenery and leave our public lands unimpaired for the enjoyment of future generations. Based on the NPS' mission, the NPS must remove the unnatural eight foot fence, for the sake of our native wildlife and for the enjoyment of future generations."

**Correspondence ID:3556**

Correspondence: "I am writing to you specifically to address your plans for Tomales Point in the Point Reyes National Seashore. As they currently stand, they need to be incorporated into the General Plan for the Seashore - not as a separate part of it. It does not make strategic or economic sense to treat them as a part-as-to-of-themselves. The steps to restore the flora and fauna for all areas must be incorporated into the dynamics of the plan at the outset.

It would be better and less expensive to allow Tule elk access to water sources, such as the spring and lagoon in the region directly below the Tomales Point reserve.

**Correspondence ID:3557**

Correspondence: Many thanks for allowing the public, rightful owners of the land, to comment on the upcoming plan for Tomales Point within Point Reyes National Seashore. This area, along with any area within the national park should be allowed to be re-wild. All fences and evidence of fences should be removed.

How much does it cost the National Park Service or Point Reyes National Seashore in Tomales Point Reserve for fence maintenance and supplemental water and minerals? How much does it cost us the taxpayers not only in materials, but in all the hidden costs of labor, operations, communications, negotiation, administration, and don't forget, pleasing the ranchers who shouldn't even be there due to their constant impairment to the Seashore.

The park should put every effort into connecting Tomales Point and its wildlife to the rest of the park. A visitor to the park should not have to pass through cattle/dairy pasture to walk through the Philip Burton Wilderness and nor should the Tule Elk. Every effort should be directed in allowing the elk to roam freely across the entire area of the park.

Point Reyes National Seashore management must scope a plan to remove the Tule Elk Reserve fence across Tomales Point. This must be done in conjunction with a serious, science-based, enforced plan to cease the practice of ranching on our public land, so that timely and effective Seashore wilderness restoration occurs with public participation, focused on natural and native features, habitats, wildlife, and visitor accessibility.

Point Reyes National Seashore, after 60 years from its founding, should be a national pride of astounding biodiversity, global climate research, and honor of the public trust in perpetuity. Please emphasize and prioritize the importance of protecting our native Tule elk in the upcoming plan, which would include the removal of the fence across Tomales Point.

**Correspondence ID:3558**

Correspondence: "The elk fence at Tomales Point must be removed. This is an important and the right step for the upcoming management plan.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying - just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

Instead of paying for fence maintenance and supplemental water and minerals out at Tomales Point when Elk are actually starving to death--why doesn't the Park Service and Mr. Kenkel come up with a plan to remove tenant ranchers and let wildlife live naturally all across Point Reyes National Seashore?

We should not have a captive herd of Tule elk in the Point Reyes National Seashore. Tule elk should be allowed to roam free.

It is time to focus on the health of our National Seashore and protect the air, soil, water, native wildlife and native vegetation over the constant impact from private cattle operations. The ranchers espouse crackpot pseudoscience about false carbon sinks (pasture vs. native coastal prairie), regenerative

ranching (oxymoron), methane digesters (new profit streams), while the objective and independent science-based literature state how a native landscape with native vegetation and wildlife will help fight climate change more effectively than cattle operations. Please prioritize our native landscape and native wildlife in Point Reyes.”

**Correspondence ID:3559**

Correspondence: Thank you for the opportunity to comment on Tomales Point. Why is this area being treated separate from Point Reyes National Seashore? As it is within the boundaries of the seashore it should be interwoven within the fabric of the rest of the seashore and the ecosystem allowed to become whole instead of piecemeal. A visitor should be able to walk/hike the entirety of the park. And the native grasses and wildlife (including elk) should be able to roam freely within all areas of the park. Please remove the elk fences and let the park be an actual park.

Spending the public's money for a Tule Elk Fence and supplemental water and minerals is wasteful, and not a long-term, feasible solution. The Tule Elk are starving to death from lack of access to proper food. And the impact of global warming causes climate effects like long term drought out there. It's bad money after bad money. Free the Tule Elk from Tomales Point. Let the Elk have water and food for free around the Park.

We wonder why Point Reyes National Seashore officials, especially Superintendent Kenkel, persist with keeping the expense of a long ugly fence out at Tomales Point and to truck in water and minerals. It's obvious even to a non-scientist. There's not enough natural food and water to sustain the Tule Elk entrapped in a zoo pen out there. Take down the fence, and instead use the money to help the Tule Elk transition and thrive across the Seashore. Remove the ranchers and their cattle. Enough is enough. It's a NATIONAL PARK!

The 1998 plan says "Natural processes will be relied on to control populations of native species ..." There is nothing natural about caging animals behind a fence. The existing fence at the Tule Elk Reserve should be removed and replaced with a wildlife friendly fence that will allow Tule Elk to leave the reserve while still keeping cattle out.

The successful reintroduction of the elk herds in the Point Reyes National Seashore should be viewed as the goal of the general plan for not only the Tomales Point area but the entire National Seashore and the most cost-effective way to do that is to work for the elimination of cattle from that area. If this approach is not taken then there will be continued non-native plants being brought in which will necessitate more plans and strategies to eliminate, more engineering projects to contain manure runoff, control of native 'predator' species to protect the cattle which is contradictory to reestablishing the Seashore, just to name a few.

Correspondence: "Please accept for the record these comments as input for the NPS's upcoming environmental review of its Tomales Point management plan update. These are important aspects that must be considered in determining the scope of the planning process and should be included in any environmental impact statement. My top concern is for the Park Service to remove the fence that keeps the tule elk penned in on grazing land that's insufficient to support a healthy herd.

Taxpayer dollars should not be spent on killing or neutering any animals, especially rare Tule Elk, once the herd is deemed "too large". The plan should allow for native wildlife to roam freely and die of natural causes.

Rather than maintaining the elk fence, troughs and mineral licks, the NPS could better use these resources to develop educational materials and programs about Tule elk.

Tomales Point and the Point Reyes National Seashore is to be an area where wildlife are given back their home. Taxpayers and visitors venture out that way to hear the roar of the Pacific Ocean and feel the sun and wind, and see the land as it was made in its beautiful creation. Taxpayers do not go out to Point Reyes to see miles of wire fences 'keeping Nature in check', and the destructive, exploitive industrial practices of corrupt politically influential parties rule the land.

It is time to end the mis-management of our native Tule elk in Point Reyes National Seashore. Please follow the scientific advice provided in 1993, and remove the fence across Tomales Point. It is important for the survival of this herd to be free-roaming with access to food and water."

**Correspondence ID:3562**

**Correspondence ID:3568**

Correspondence: "I am commenting on the process of creating a plan for Tomales Point within Point Reyes National Park. I would hope the National Park Service would not address this area as somehow separate from the park itself but instead view the park in its entirety. As it stands today Tomales Point is more of a zoo within what is suppose to be a park but is in fact seen as private ranch land. And at this particular zoo the wild animals are fenced and the park service personnel let the animals die due to drought and lack of forage. Stop the insanity and take down the elk fence.

The Park Service continues to spend money on a fence to keep Tule Elk trapped out on Tomales Point at Point Reyes even though there's not enough food and water out there for the Elk, and now I have to pay for fence maintenance and to ship water and supplements out there. Stop the bad spending! Take down that fence and let the Tule Elk go get their food and water for free.

Park funds should be used to monitor and enforce water quality and other environmental standards in Point Reyes National Seashore versus spending money on a bad fence idea to starve wildlife in a National Park.

It is the responsibility of the Park Service to protect wildlife, and the most obvious solution is to remove the elk fence, allow the elk to roam, water, and feed, and for the Park Service to ameliorate climate change impacts, including removal of nonnative plants, improve fire resiliency, and allow wildlife and

natural processes to restore areas of the Seashore. A good first step is to end the lease agreements with the cattle ranchers.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity.”

**Correspondence ID:3571**

Correspondence: "Please remove the elk fence from Point Reyes National Seashore in order for the elk herds to have access to sufficient amount of water, minerals and forage.

The Park Service should not be spending so much money to maintain fencing at Tomales Point Reserve. There are all the expenses for materials, then all the hidden costs and time for labor, operations, administration, and rancher-pleasing. As a concerned citizen for the elk, please spend the money to remove the fence and free the Elk.

There have been claims made over the years by ranching interests that the elk have damaged ranch operations or facilities. NPS should determine the facts here, and document the actual costs of any verifiable damage. Additionally, ranchers have claimed the elk need to be separated from their cattle because the elk will eat too much of the forage they want for their cows. The science clearly shows that elk eat far less than cows, weigh a fraction of cows' weight, and being browsers, do not deplete the grasses and shrubs as much as cows do. Therefore, when scoping the plan update, NPS needs to compare the impacts of elk foraging vs. cattle grazing, and develop its plans consistent with the Organic Act of 1916 mandate of resource preservation and protection.

I cannot find a reasonable sound argument for continued ranching or dairy in a National Park. There are numerous dairy and cattle ranches in West Marin and Sonoma counties, as well as all across California and the entire United States. Some owned by the same families as those that ranch in the park today. Tule elk are only native to California and only found in Point Reyes National Seashore. We are lucky the elk are located in a National Park where they should be protected. Why private dairy and beef cows are prioritized over those elk in a National Park is beyond anyone's logical reasoning. It is political and that does not make it right. The National Park should be above politics. We need our National Parks, which we pay for and support, to work for us, the people.

Thank you for reading and placing my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore (PRNS). It is time, finally, for PRNS officials, notably Craig Kenkel, to stop stonewalling and ignoring the American public from across the country, and use proven

science to prioritize wilderness, wildlife and habitat over commercial ranching. Start with a plan to remove the fence at Tomales Point and prioritize the endemic Tule Elk.”

**Correspondence ID:3572**

Correspondence: Removal of the elk fence at Tomales Point should be included in your plans for PRNS. It is the necessary and ethical step to take for a native species in a National Seashore.

Correspondence: “Please accept for the record these comments as input for the NPS's upcoming environmental review of its Tomales Point management plan update. These are important aspects that must be considered in determining the scope of the planning process and should be included in any environmental impact statement. My top concern is for the Park Service to remove the fence that keeps the tule elk penned in on grazing land that's insufficient to support a healthy herd.

Dismantling the elk fence will save the NPS money, as it is a less expensive and less invasive option.

The Park Service should be looking at such alternate uses of Tomales Point as creating a wildlife corridor that could run throughout the park, and the removal of the elk pen. The re-establishment of a more balanced ecosystem where the elk thrive could lead to the return of natural predators such as mountain lions, and with our climate in serious trouble, restoration of native grasses, shrubs and trees should be a high priority for the Park Service.

The original motivation for the fence was to protect financial interests, not for optimal ecological restoration. It must be removed.

Thank you for submitting my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore. Please remove the fence across Tomales Point so the Elk can be free to roam, feed, drink, associate, mate, and thrive naturally. It can be done! Please consider and use my comments to help Point Reyes be a beautiful place for wildlife and humans.”

**Correspondence ID:3574**

Correspondence: I am a taxpayer and I want you to remove the fence confining the tule elk.

It is important our elk survive and are well cared for in a natural habitat. They should never be unnaturally confined behind a fence. Especially when this blocks the elk from much needed water and forage.

Tomales Point is not a zoo. The taxpayers do not want to incur the cost of feeding and providing water to wild animals. Nor do they want to visit a zoo. A simple solution, and one that is the most cost effective, is to stop over- "managing" the park. Take down the fence and remove the cattle, and let nature run its course.

Moving forward the Park Service should partner closely with the Coast Miwok and scientists to re-wild the park.

Point Reyes National Seashore should plan the prompt removal of the Elk Reserve fence on Tomales Point. This will give the Tule Elk freedom of movement to naturally water, forage, and mating. This will improve the general health and well-being of Tule Elk throughout the Seashore.

Thank you for the opportunity to share my public comments on the Tomales Point planning process for Point Reyes National Seashore with you. Your duty is to let spirit of wilderness preservation and protection guide your choices. You owe this to the huge majority of Americans who insist that this iconic place be free from private, for-profit, commercial business interests!

We will continue to press for just that, like taking down the Tomales Point fence.

**Correspondence ID:3575**

Correspondence: Removal of the elk fence at Tomales Point should be included in your plans for PRNS. It is the necessary and ethical step to take for a native species in a National Seashore.

No matter what the Park Service spends to supplement water and minerals for the Tule Elk at Tomales Point, it will not matter. The Tule Elk are starving to death at Tomales Point due to continued drought, and megadrought. Please stop spending time and money on the fence and artificial approaches, and let the Elk roam free for natural sources of water and good nutrition.

Rather than maintaining the elk fence, troughs and mineral licks, the NPS could better use these resources to develop educational materials and programs about Tule elk.

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

It is time to end the mis-management of our native Tule elk in Point Reyes National Seashore. Please follow the scientific advice provided in 1993, and remove the fence across Tomales Point. It is important for the survival of this herd to be free-roaming with access to food and water.

**Correspondence ID:3576**

Correspondence: I am a taxpayer and I want you to remove the fence confining the tule elk.

It is important our elk survive and are well cared for in a natural habitat. They should never be unnaturally confined behind a fence. Especially when this blocks the elk from much needed water and forage.

Tomales Point is not a zoo. The taxpayers do not want to incur the cost of feeding and providing water to wild animals. Nor do they want to visit a zoo. A simple solution, and one that is the most cost effective, is to stop over- "managing" the park. Take down the fence and remove the cattle, and let nature run its course.

Correspondence: "I am writing to you specifically to address your plans for Tomales Point in the Point Reyes National Seashore. As they currently stand, they need to be incorporated into the General Plan

for the Seashore - not as a separate part of it. It does not make strategic or economic sense to treat them as a part-as-to-of-themselves. The steps to restore the flora and fauna for all areas must be incorporated into the dynamics of the plan at the outset.

Without a fence at Tomales Point, the National Park Service wouldn't need to waste efforts and money bringing water up to the elk. The animals would have plenty of water available from Abbotts lagoon and other sources down in the valley.

The Coast Miwok people should decide how to bring the land back to the way their people left it, before impacted by European settlers in the mid-1800's. The Coast Miwok lived in unison with the Tule elk, the native wildlife and the native vegetation. Let's help recreate our National Park to how it was prior to the impact caused by commercial cattle operations.

We should not have a captive herd of Tule elk in the Point Reyes National Seashore. Tule elk should be allowed to roam free.

I respectfully submit this letter and request the National Park Service to be impartial in the next steps related to our incredible native wildlife in Point Reyes National Seashore."

Correspondence: Proposed plans for PRNS must include the removal of the elk fence at Tomales Point.

Reliable reports state the NPS has shouldered many of the operational costs over the years that should have been borne by the ranchers. Since most agencies have limited budgets, I'd like the Park Service to analyze how much it could save by making the ranches pay for any and all fencing, but especially the elk fence at Tomales Point. It should also look at how much it would save if the ranches were removed entirely from the park. Included in these analyses should be the value of increased public access to areas ranchers try to keep the public away from, the increased enjoyment of the park by the public, and the savings from not having to respond to rancher demands.

Pierce Point Ranch should be the only real "historical" ranch in PRNS. It should be developed as a working model of a ranch from the 19th Century, with no more than a few head of cattle and a few dairy cows, showcasing actual ranching and farming techniques of that era. Docents could explain the conditions, techniques, and context for working the land under the times and circumstances in place at the time. It should also tell the full story of the Native Americans that preceded European settlers and their fate. All other ranches should be removed from the park.

Confining Tule elk for the benefit of private ranching interests is a breach of the public trust.

Thank you for submitting my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore. Please remove the fence across Tomales Point so the Elk can be free to roam, feed, drink, associate, mate, and thrive naturally. It can be done! Please consider and use my comments to help Point Reyes be a beautiful place for wildlife and humans.

**Correspondence ID:3583**

Correspondence: "I respectfully submit this public comment for your consideration regarding the GMP planning process for Tomales Point at Point Reyes National Seashore (PRNS). All the natural resources, from native plants to the Tule Elk, should be unimpaired in and beyond Tomales Point. The American public wants open and accessible public lands and waters in their National Parks. No wildlife should be caged or captive in a National Park. We must remove the Tule Elk Fence now, and let the Tule Elk and other wildlife roam free to prosper as is natural, healthy, and just. Please scope removal of the Tule Elk Fence in your planning for Tomales Point.

The costs for Tomales Point elk fence maintenance and to put out water and minerals is not solving the problem of Tule Elk health. There is not enough water and minerals for the different non-mingling Tomales Point herds. It is a band-aid for a constant wound therefore please come up with a real solution for wild Elk, as they should not be confined in a zoo-like environment that does not have a sufficient amount of water and forage for this herd.

I respectfully ask that the Tule Elk Reserve fence be taken down now. National Park Service and Point Reyes National Seashore funds supplied by the American taxpayer should be used to create wild and healthy freedom for the Tule Elk and other wildlife. Public access to vast swaths of the Seashore now blocked by ranching barbed/electric wire and formidable gates, which is not acceptable on public lands. Please investigate, enforce, and punish cattle ranching families that continue to degrade and pollute our Seashore's lands, waters, and air. Superintendent Kenkel and all of you at the NPS: It is time to get your priorities and mandates straight. Please serve the interests of wildlife, habitat, visitors, and posterity.

The Elk Fence on Tomales Point must be removed. Tule Elk need to mingle, associate, and mate to prolong genetic diversity and sustain present and long-term herd health, vitality, and viability.

The successful reintroduction of the elk herds in the Point Reyes National Seashore should be viewed as the goal of the general plan for not only the Tomales Point area but the entire National Seashore and the most cost-effective way to do that is to work for the elimination of cattle from that area. If this approach is not taken then there will be continued non-native plants being brought in which will necessitate more plans and strategies to eliminate, more engineering projects to contain manure run-off, control of native 'predator' species to protect the cattle which is contradictory to reestablishing the Seashore, just to name a few."

**Correspondence ID:3589**

Correspondence: I am writing to share my comments on the National Park Services intended update of the management plan for the Tule elk in the Tule elk reserve in Point Reyes National Seashore.

To start, I question why there would be a separate management plan for just one of the 3 elk herds in the National Park. The elk are a whole in this National Park and should be managed through the general management plan that is required to be in place for this National Park unit. Excluding this area and these elk from the GMPA process recently performed by the NPS is questionable. The NPS should consider an approach to the elk management as a whole and not have separate management plans for a subset of elk.

The tule elk have been behind an 8ft fence for decades, their population halving twice in the recent past. This is unethical and a disgrace to proper wildlife management. The NPS has repeatedly said these are natural ebbs and flows in population, but that can not be said when the animals are fenced out of plentiful water and essential minerals needed for their survival. The free ranging herds do not suffer these ebbs and flows and the Tomales Point herd would likely not have these without the fence. The fence should be removed and data should be collected on this herd to understand the effect of the fence on the herd, their health and populations.

The droughts the area has been under should clearly show that there is not ample water to sustain the elk population behind the fence. The NPS has supported this by placing water troughs in the elk reserve this past year. They have also confirmed the lack of selenium and copper in the reserve and noted that after a necropsied elk showed some of the lowest levels of these essential minerals ever recorded after its death.

How the National Park Service can justify the elk population falling by 50% while cows on the other side of the fence have access to perennial streams and ponds is repugnant. The NPS is legally required to protect the elk and by allowing them to perish painful deaths behind this fence is a violation of law and of the public trust.

It is time for the National Park Service to take responsibility for its mistakes and to prioritize the protection of the elk over special interests of the ranch leases. It is time to remove the barrier and allow a free roaming Tomales Point elk population in this National Park.

Point Reyes National Seashore should plan the prompt removal of the Elk Reserve fence on Tomales Point. This will give the Tule Elk freedom of movement to naturally water, forage, and mating. This will improve the general health and well-being of Tule Elk throughout the Seashore.

Thank you for the opportunity to share my public comments on the Tomales Point planning process for Point Reyes National Seashore with you. Your duty is to let spirit of wilderness preservation and protection guide your choices. You owe this to the huge majority of Americans who insist that this iconic place be free from private, for-profit, commercial business interests!

We will continue to press for just that, like taking down the Tomales Point fence.

**Correspondence ID:3595**

Correspondence: "I respectfully submit this public comment for your consideration regarding the GMP planning process for Tomales Point at Point Reyes National Seashore (PRNS). All the natural resources, from native plants to the Tule Elk, should be unimpaired in and beyond Tomales Point. The American public wants open and accessible public lands and waters in their National Parks. No wildlife should be caged or captive in a National Park. We must remove the Tule Elk Fence now, and let the Tule Elk and other wildlife roam free to prosper as is natural, healthy, and just. Please scope removal of the Tule Elk Fence in your planning for Tomales Point.

The costs for Tomales Point elk fence maintenance and to put out water and minerals is not solving the problem of Tule Elk health. There is not enough water and minerals for the different non-mingling Tomales Point herds. It is a band-aid for a constant would therefore please come up with a real solution for wild Elk, as they should not be confined in a zoo-like environment that does not have a sufficient amount of water and forage for this herd.

I respectfully ask that the Tule Elk Reserve fence be taken down now. National Park Service and Point Reyes National Seashore funds supplied by the American taxpayer should be used to create wild and healthy freedom for the Tule Elk and other wildlife. Public access to vast swaths of the Seashore now blocked by ranching barbed/electric wire and formidable gates, which is not acceptable on public lands.

Please investigate, enforce, and punish cattle ranching families that continue to degrade and pollute our Seashore's lands, waters, and air. Superintendent Kenkel and all of you at the NPS: It is time to get your priorities and mandates straight. Please serve the interests of wildlife, habitat, visitors, and posterity.

The Elk Fence on Tomales Point must be removed. Tule Elk need to mingle, associate, and mate to prolong genetic diversity and sustain present and long-term herd health, vitality, and viability.

The successful reintroduction of the elk herds in the Point Reyes National Seashore should be viewed as the goal of the general plan for not only the Tomales Point area but the entire National Seashore and the most cost-effective way to do that is to work for the elimination of cattle from that area. If this approach is not taken then there will be continued non-native plants being brought in which will necessitate more plans and strategies to eliminate, more engineering projects to contain manure run-off, control of native 'predator' species to protect the cattle which is contradictory to reestablishing the Seashore, just to name a few."

**Correspondence ID:3596**

Correspondence: Proposed plans for PRNS must include the removal of the elk fence at Tomales Point.

Reliable reports state the NPS has shouldered many of the operational costs over the years that should have been borne by the ranchers. Since most agencies have limited budgets, I'd like the Park Service to analyze how much it could save by making the ranches pay for any and all fencing, but especially the elk fence at Tomales Point. It should also look at how much it would save if the ranches were removed entirely from the park. Included in these analyses should be the value of increased public access to areas ranchers try to keep the public away from, the increased enjoyment of the park by the public, and the savings from not having to respond to rancher demands.

Pierce Point Ranch should be the only real "historical" ranch in PRNS. It should be developed as a working model of a ranch from the 19th Century, with no more than a few head of cattle and a few dairy cows, showcasing actual ranching and farming techniques of that era. Docents could explain the conditions, techniques, and context for working the land under the times and circumstances in place at the time. It should also tell the full story of the Native Americans that preceded European settlers and their fate. All other ranches should be removed from the park.

Confining Tule elk for the benefit of private ranching interests is a breach of the public trust.

Thank you for submitting my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore. Please remove the fence across Tomales Point so the Elk can be free to roam, feed, drink, associate, mate, and thrive naturally. It can be done! Please consider and use my comments to help Point Reyes be a beautiful place for wildlife and humans.

**Correspondence ID:3597**

Correspondence: I am a taxpayer and I want you to remove the fence confining the tule elk.

It is important our elk survive and are well cared for in a natural habitat. They should never be unnaturally confined behind a fence. Especially when this blocks the elk from much needed water and forage.

Tomales Point is not a zoo. The taxpayers do not want to incur the cost of feeding and providing water to wild animals. Nor do they want to visit a zoo. A simple solution, and one that is the most cost effective, is to stop over- "managing" the park. Take down the fence and remove the cattle, and let nature run its course.

Moving forward the Park Service should partner closely with the Coast Miwok and scientists to re-wild the park.

Correspondence: "Thank you for the opportunity to provide input on the updated Tule Elk Management Plan/General Management Plan for Pt. Reyes National Seashore. To help the National Park Service (NPS)

best structure its environmental review process, I offer the comments below. Please consider including these points in scoping your review and the presumed Environmental Impact Statement.

The Park Service should not be spending so much money to maintain fencing at Tomales Point Reserve. There are all the expenses for materials, then all the hidden costs and time for labor, operations, administration, and rancher-pleasing. As a concerned citizen for the elk, please spend the money to remove the fence and free the Elk.

Instead of paying for fence maintenance and supplemental water and minerals out at Tomales Point when Elk are actually starving to death--why doesn't the Park Service and Mr. Kenkel come up with a plan to remove tenant ranchers and let wildlife live naturally all across Point Reyes National Seashore?

Maintaining a captive Tule elk herd at Tomales Point will likely only become increasingly expensive with climate change and recurring, significant droughts. If the fence is removed, water troughs and mineral licks will be unnecessary.

Thank you for taking the time to read this comment, and for inviting public input. The land in Point Reyes National Seashore belongs to the public, and should be managed for public, not for private benefit."

**Correspondence ID:3607**

Correspondence: Tomales Point is the highlight of many visitors' experience in Point Reyes National Seashore. Thank you for inviting public comment in this planning process. By removing the 8-foot elk fence, you can begin the process of restoration of the entire peninsula's ecosystem.

As a taxpayer I expect the National Park Service to spend money wisely and frugally. I also expect the Park Service to prioritize wildlife over private enterprise. Therefore I ask the Park Service to stop spending money on erecting and maintaining a wildlife fence for the sole purpose of keeping native Tule Elk out of the parcels that are leased by private cattle and dairy ranch operations within a National Park.

The NPS should revise the PRNS Succession Policy to permanently retire grazing leases as ranchers choose to not renew them. This would create an historic opportunity to restore that 33% of the park that is currently surrounded by fences, full of cow manure and turn it into a program that will benefit not only Tule Elk, but expand the biodiversity throughout the park. The public would enthusiastically volunteer to help the NPS with such a program.

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

I respectfully submit this letter and request the National Park Service to be impartial in the next steps related to our incredible native wildlife in Point Reyes National Seashore.

**Correspondence ID:3608**

**Correspondence ID:3614**

Correspondence: "Thank you for inviting public input into the planning process for Tomales Point. The best way to advance the National Seashore's mission is to remove the fence at Pierce Point.

The Park Service will never be able to fully provide enough water, minerals, or forage for the captive Tule Elk at Tomales Point. Put the money into taking down the fence and letting Elk live and thrive throughout the Seashore.

There have been claims made over the years by ranching interests that the elk have damaged ranch operations or facilities. NPS should determine the facts here, and document the actual costs of any verifiable damage. Additionally, ranchers have claimed the elk need to be separated from their cattle because the elk will eat too much of the forage they want for their cows. The science clearly shows that elk eat far less than cows, weigh a fraction of cows' weight, and being browsers, do not deplete the grasses and shrubs as much as cows do. Therefore, when scoping the plan update, NPS needs to

compare the impacts of elk foraging vs. cattle grazing, and develop its plans consistent with the Organic Act of 1916 mandate of resource preservation and protection.

Point Reyes National Seashore should plan for prompt removal of the Elk Reserve fence on Tomales Point. This will achieve Tule Elk freedom of movement to naturally water, forage, and mate, and sustain optimal health and well-being of Tule Elk throughout the Seashore.

I urge you to use this opportunity to carry out the intentions of the creation of the park, which was to protect the biodiversity within the seashore. To do that, the sacrifices should be made by the few ranch and dairy families that have profited profusely over the years. Our National Park is owned by the people not by the few ranchers.”

Correspondence: Tomales Point is the highlight of many visitors' experience in Point Reyes National Seashore. Thank you for inviting public comment in this planning process. By removing the 8-foot elk fence, you can begin the process of restoration of the entire peninsula's ecosystem.

As a taxpayer I expect the National Park Service to spend money wisely and frugally. I also expect the Park Service to prioritize wildlife over private enterprise. Therefore I ask the Park Service to stop spending money on erecting and maintaining a wildlife fence for the sole purpose of keeping native Tule Elk out of the parcels that are leased by private cattle and dairy ranch operations within a National Park.

The NPS should revise the PRNS Succession Policy to permanently retire grazing leases as ranchers choose to not renew them. This would create an historic opportunity to restore that 33% of the park that is currently surrounded by fences, full of cow manure and turn it into a program that will benefit not only Tule Elk, but expand the biodiversity throughout the park. The public would enthusiastically volunteer to help the NPS with such a program.

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

I respectfully submit this letter and request the National Park Service to be impartial in the next steps related to our incredible native wildlife in Point Reyes National Seashore.

**Correspondence ID:3618**

Correspondence: I am a taxpayer and I want you to remove the fence confining the tule elk.

It is important our elk survive and are well cared for in a natural habitat. They should never be unnaturally confined behind a fence. Especially when this blocks the elk from much needed water and forage.

Tomales Point is not a zoo. The taxpayers do not want to incur the cost of feeding and providing water to wild animals. Nor do they want to visit a zoo. A simple solution, and one that is the most cost

effective, is to stop over- "managing" the park. Take down the fence and remove the cattle, and let nature run its course.

Moving forward the Park Service should partner closely with the Coast Miwok and scientists to re-wild the park.

Point Reyes National Seashore should plan the prompt removal of the Elk Reserve fence on Tomales Point. This will give the Tule Elk freedom of movement to naturally water, forage, and mating. This will improve the general health and well-being of Tule Elk throughout the Seashore.

Thank you for the opportunity to share my public comments on the Tomales Point planning process for Point Reyes National Seashore with you. Your duty is to let spirit of wilderness preservation and protection guide your choices. You owe this to the huge majority of Americans who insist that this iconic place be free from private, for-profit, commercial business interests!

We will continue to press for just that, like taking down the Tomales Point fence.

**Correspondence ID:3619**

Correspondence: "Many thanks for allowing the public, rightful owners of the land, to comment on the upcoming plan for Tomales Point within Point Reyes National Seashore. This area, along with any area within the national park should be allowed to be re-wild. All fences and evidence of fences should be removed.

What are the annual costs for the Tomales Point Reserve fence and the supplemental water and minerals for the Tule Elk trapped there? Why are Elk still trapped and causing this expense, when there are ample lands and waters for Elk to roam at Point Reyes National Seashore? It's not a zoo, it's a national park. Please take down the fence.

The park should put every effort into connecting Tomales Point and its wildlife to the rest of the park. A visitor to the park should not have to pass through cattle/dairy pasture to walk through the Philip Burton Wilderness and nor should the Tule Elk. Every effort should be directed in allowing the elk to roam freely across the entire area of the park.

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

I want to thank Superintendent Craig Kenkel for the opportunity to provide comments on the upcoming plan for our iconic Tule elk. It is of utmost importance for the plan to include numerous alternatives which requires the removal of the unethical fence across Tomales Point. It is time for our native elk to have the ability to freely roam throughout the National Seashore, versus being confined without sufficient sustenance to survive."

**Correspondence ID:3625**

Correspondence: "Thank you for reading my public comment for the Tomales Point planning process. We love Point Reyes National Seashore, but the Tule Elk Reserve is a really sad place out there. Why is a fence to trap wildlife even a good science idea? Please remove the Tule Elk Fence now.

It is not clear why the Park Service continues to spend taxpayer money for an unethical eight foot fence at the Tule Elk Reserve when the public has requested for years to remove the fence and let the Elk roam for free to get their water and food.

All money, time and energy should be spent on re-wilding the entire National Seashore and not subsidizing destructive cattle operations on these public lands.

A National Park was created in Point Reyes to protect one of the most scenic and biologically diverse areas in our country. It is being put at risk for the profits of a few private ranchers. This is not acceptable to the people of Marin, the SF Bay Area, and the nation, nor our native wildlife. It is time to remove the Elk fence.

Thank you for the opportunity to provide feedback on the upcoming plan for Elk Reserve in Point Reyes National Seashore. The 3-year timeframe proposed by the NPS appears to be too long of a period, as we have lost approximately 50% of our native Elk held captive behind this 8 foot fence due to lack of appropriate amount of food, water and minerals. In your upcoming plan, please ensure there are numerous alternatives available on the removal of this deadly fence. It is time for that fence to be removed."

**Correspondence ID:3626**

**Correspondence ID:3627**

Correspondence: "Regarding the upcoming plan for Tomales Point within Point Reyes National Seashore I request our National Park prioritize the wishes of the Miwok First Nation people. They "managed" that land for more than 10,000 and didn't disrupt the ecosystem. Allow them to determine how the land should be managed so that our future generations will be allowed to experience biodiversity, not cows, that exists there today. Maybe then the area will be allowed to thrive.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying - just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

Viewing the Tomales Point project from an objective approach, the most cost effective long-run plan is to take down the elk fences without the interference of cattle concerns and let the herds roam in a natural manner. The health of the elk herds could be clearly addressed, as well as the flora can be given its space for natural progression and seed dispersion. This would focus on only one plan to implement, for taxpayers and NPS staff, and not take the resources with two competing approaches.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!"

**Correspondence ID:3628**

**Correspondence ID:3629**

Correspondence: "I respectfully submit this public comment for your consideration regarding the GMP planning process for Tomales Point at Point Reyes National Seashore (PRNS). All the natural resources, from native plants to the Tule Elk, should be unimpaired in and beyond Tomales Point. The American public wants open and accessible public lands and waters in their National Parks. No wildlife should be caged or captive in a National Park. We must remove the Tule Elk Fence now, and let the Tule Elk and other wildlife roam free to prosper as is natural, healthy, and just. Please scope removal of the Tule Elk Fence in your planning for Tomales Point.

Without a fence at Tomales Point, the National Park Service wouldn't need to waste efforts and money bringing water up to the elk. The animals would have plenty of water available from Abbotts lagoon and other sources down in the valley.

Resources should be spent on taking down the elk fence and re-wilding the park.

Taking down the fence is the best option, according to ecologists.

I urge you to use this opportunity to carry out the intentions of the creation of the park, which was to protect the biodiversity within the seashore. To do that, the sacrifices should be made by the few ranch and dairy families that have profited profusely over the years. Our National Park is owned by the people not by the few ranchers.”

**Correspondence ID:3635**

Correspondence: "Public enjoyment of the Seashore should be open and available for present and future generations. My main comment to the National Park Service and Point Reyes National Seashore officials is the Elk Fence must come down.

Spending the public's money for a Tule Elk Fence and supplemental water and minerals is wasteful, and not a long-term, feasible solution. The Tule Elk are starving to death from lack of access to proper food. And the impact of global warming causes climate effects like long term drought out there. It's bad money after bad money. Free the Tule Elk from Tomales Point. Let the Elk have water and food for free around the Park.

Instead of paying for fence maintenance and supplemental water and minerals out at Tomales Point when Elk are actually starving to death--why doesn't the Park Service and Mr. Kenkel come up with a plan to remove tenant ranchers and let wildlife live naturally all across Point Reyes National Seashore?

Point Reyes has stunning biodiversity, and the restoration of native plants and wildlife will ensure that these important ecosystems last for generations.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity."

They "managed" that land for more than 10,000 and didn't disrupt the ecosystem. Allow them to determine how the land should be managed so that our future generations will be allowed to experience biodiversity, not cows, that exists there today. Maybe then the area will be allowed to thrive.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying -

just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

Viewing the Tomales Point project from an objective approach, the most cost effective long-run plan is to take down the elk fences without the interference of cattle concerns and let the herds roam in a natural manner. The health of the elk herds could be clearly addressed, as well as the flora can be given its space for natural progression and seed dispersion. This would focus on only one plan to implement, for taxpayers and NPS staff, and not take the resources with two competing approaches.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3640**

Correspondence: "Public enjoyment of the Seashore should be open and available for present and future generations. My main comment to the National Park Service and Point Reyes National Seashore officials is the Elk Fence must come down.

Spending the public's money for a Tule Elk Fence and supplemental water and minerals is wasteful, and not a long-term, feasible solution. The Tule Elk are starving to death from lack of access to proper food. And the impact of global warming causes climate effects like long term drought out there. It's bad money after bad money. Free the Tule Elk from Tomales Point. Let the Elk have water and food for free around the Park.

Instead of paying for fence maintenance and supplemental water and minerals out at Tomales Point when Elk are actually starving to death--why doesn't the Park Service and Mr. Kenkel come up with a plan to remove tenant ranchers and let wildlife live naturally all across Point Reyes National Seashore?

Point Reyes has stunning biodiversity, and the restoration of native plants and wildlife will ensure that these important ecosystems last for generations.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity."

**Correspondence ID:3641**

Correspondence: Regarding the upcoming plan for Tomales Point within Point Reyes National Seashore I request our National Park prioritize the wishes of the Miwok First Nation people. Correspondence: Tomales Point is the highlight of many visitors' experience in Point Reyes National Seashore. Thank you for inviting public comment in this planning process. By removing the 8-foot elk fence, you can begin the process of restoration of the entire peninsula's ecosystem.

The current plan of what is called a 'co-habitation' - which is a farce - is wasteful in a number of ways. Instead of letting the elk populations roam the land to access the water and flora they have evolved to need for subsistence, it often needs to be trucked in to keep populations at levels 'mandated by a plan'. Not only do these resources need to be expended to keep the herds alive - then later, National Park Service personnel go and cull the population when it exceeds their some-how-agreed upon 'rancher-acceptable' number.

Tomales Point and its elk herd should have a wildlife management approach to management. Free access for the elk to roam, restoration of the native grasses and the elimination of invasive plants, removal of private cattle and dairy operations, and unhindered access for the public to wander the land while respecting the natural flora and fauna would increase and enhance PRNS's popularity, as well as its natural biome.

The drought conditions are continuing. Due to this urgency the Park must now act to help not only the Tule elk but all other species within its borders. The most impactful thing the Park can do in the short term to assist the elk in their survival is to remove the elk fence. This is not only the most humane thing to do, it is the most cost-effective and reasonable action.

Thank you for taking the time to read this comment, and for inviting public input. The land in Point Reyes National Seashore belongs to the public, and should be managed for public, not for private benefit.

Correspondence: "To assist the NPS with its planned NEPA review of the Tomales Point area and Tule elk herd management in Pt. Reyes National Seashore, I suggest the following issues be included in your review process, and any eventual Environmental Impact Statement that comes out of it. These points

are intended to insure that the park resources, including the Tule elk and native plants and animals, get the maximum protection for the public's current and future benefit.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying - just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

The park should spend time and money on removing the fences, planting native grasses, cleaning up the water pollutants, and generally restoring Tomales Point back to its natural habitat.

The Tomales Point Elk Reserve fence must promptly be taken down. This should occur in conjunction with a renewed, science-based plan to cease rancher successions of leased lands, allowing Point Reyes National Seashore to revert to natural landscapes, waterscapes, habitats, and ecosystems.

It is time to end the mis-management of our native Tule elk in Point Reyes National Seashore. Please follow the scientific advice provided in 1993, and remove the fence across Tomales Point. It is important for the survival of this herd to be free-roaming with access to food and water.”

Correspondence: "Thank you for inviting public input into the planning process for Tomales Point. The best way to advance the National Seashore's mission is to remove the fence at Pierce Point.

If NPS removes the elk fence, population control of the herd will be greatly simplified. As seen with the free-roaming herds, numbers are much more stable as the elk are able to find water and forage as needed on their own. If fence removal resulted in a large expansion of the herd (very unlikely), I would like to see the elk allowed to expand throughout the park and onto the mainland, since they are indigenous to this area. In addition, individual elk could be relocated to start new herds in other parks and wilderness areas. If the cows are removed from PRNS, eventually the elk will be cleared of Johne's Disease, allowing for such safe transfers. As indigenous animals, their spread would enhance the diversity and resiliency of the environment.

Financial resources of the National Park Service (NPS) should be used to end the Tule Elk Reserve on Tomales Point, by removal of the rancher and NPS insisted eight foot fence and replace that with a wildlife-friendly smaller fence but a fence that keeps the cattle out of this preserved environment. Let's establish a Coastal Native Prairie Reserve in place of the wholly bad and inhumane Tule Elk Reserve. The Tule Elk get to roam free for food and water throughout the Seashore, and the current Reserve transforms into a wild habitat global study model during these times of severe climate heating and California megadrought.

I am taking the approach that the elk fence be removed from the Tomales Point area and all of the Point Reyes National Seashore because that was and is the intention of the setting-up of this National Park area to begin with. It was not envisioned as a prison area, that is the farthest thing that could be imagined, with cows over here and the elk behind a fence other there. "Oh give me a home where the bison and elk roam.." - not 'why are they behind that fence?'

The management of Tomales Point is an important part of the overall park. Inviting public comment, and then incorporating those preferences into the plan, will be key if public trust is to be restored in NPS."

Correspondence: "Please read and consider my public comment on the Tomales Point planning process for Point Reyes National Seashore. Tule Elk should be free to roam, gather, find water and food, and live more healthy lives--not be imprisoned for their entire lives behind a god-awful fence. Point Reyes is a national park, therefore please remove the fence now.

It is not clear why the Park Service continues to spend taxpayer money for an unethical eight foot fence at the Tule Elk Reserve when the public has requested for years to remove the fence and let the Elk roam for free to get their water and food.

Instead of US taxpayers footing the bill for a godawful fence to keep elk without enough water and food out at Tomales Point, the Park Service needs to take down the fence, remove the thousands of cattle impacting the land, air, and waters, and let nature be whole at Point Reyes National Seashore.

The original motivation for the fence was to protect financial interests, not for optimal ecological restoration. It must be removed.

The management of Tomales Point is an important part of the overall park. Inviting public comment, and then incorporating those preferences into the plan, will be key if public trust is to be restored in NPS."

I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

Viewing the Tomales Point project from an objective approach, the most cost effective long-run plan is to take down the elk fences without the interference of cattle concerns and let the herds roam in a natural manner. The health of the elk herds could be clearly addressed, as well as the flora can be given its space for natural progression and seed dispersion. This would focus on only one plan to implement, for taxpayers and NPS staff, and not take the resources with two competing approaches.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate,

and live their lives across the Seashore. The public knows this, you know this - so let's do it, together!  
Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3659**

Correspondence: "Thank you for the opportunity to comment on Tomales Point. Why is this area being treated separate from Point Reyes National Seashore? As it is within the boundaries of the seashore it should be interwoven within the fabric of the rest of the seashore and the ecosystem allowed to become whole instead of piecemeal. A visitor should be able to walk/hike the entirety of the park. And the native grasses and wildlife (including elk) should be able to roam freely within all areas of the park. Please remove the elk fences and let the park be an actual park.

The recent controversies regarding the treatment of the captive elk herd extract a cost on park management by forcing it to respond to the public's concerns and the demands the ranchers have become used to making. For example, NPS is now providing water sources and mineral licks for the elk to prevent recurring starvation and dying from thirst. In the past, NPS has built and repaired fences on behalf of the ranches. How much would the Park Service save if the elk were allowed to roam free? How much would it save if the ranchers were held to their lease terms and paid for improvements themselves? NPS should not be spending tax monies on private, for-profit ventures in our public park.

The Park Service should be looking at such alternate uses of Tomales Point as creating a wildlife corridor that could run throughout the park, and the removal of the elk pen. The re-establishment of a more balanced ecosystem where the elk thrive could lead to the return of natural predators such as mountain lions, and with our climate in serious trouble, restoration of native grasses, shrubs and trees should be a high priority for the Park Service.

Superintendent Kenkel and other PRNS officials should demonstrate leadership on a national scale and remove the Tule Elk Reserve's fence across Tomales Point so that a new, sustainable wildlife health model is created to right the wrong of past ill-conceived Park Service policy. It is their duty to protect all National Park natural resources for posterity.

Sadly, Point Reyes National Seashore is a landscape dominated by private, for-profit industrial cattle ranching businesses. These private business owners claim stewardship of the lands, waters, and air, and do everything in their power to evade, circumvent, ignore, abuse, and thumb their collective noses at the most basic and sound environmental principles, ethics, practices, and responsibilities. This selfish and unjust behavior should not occur in a National Park. Please take down the Elk fence, and prioritize our native wildlife over private and destructive cattle operations."

**Correspondence ID:3660**

Correspondence: Tomales Point is the highlight of many visitors' experience in Point Reyes National Seashore. Thank you for inviting public comment in this planning process. By removing the 8-foot elk fence, you can begin the process of restoration of the entire peninsula's ecosystem.

The current plan of what is called a 'co-habitation' - which is a farce - is wasteful in a number of ways. Instead of letting the elk populations roam the land to access the water and flora they have evolved to need for subsistence, it often needs to be trucked in to keep populations at levels 'mandated by a plan'. Not only do these resources need to be expended to keep the herds alive - then later, National Park Service personnel go and cull the population when it exceeds their some-how-agreed upon 'rancher-acceptable' number.

Tomales Point and its elk herd should have a wildlife management approach to management. Free access for the elk to roam, restoration of the native grasses and the elimination of invasive plants, removal of private cattle and dairy operations, and unhindered access for the public to wander the land while respecting the natural flora and fauna would increase and enhance PRNS's popularity, as well as its natural biome.

The drought conditions are continuing. Due to this urgency the Park must now act to help not only the Tule elk but all other species within its borders. The most impactful thing the Park can do in the short term to assist the elk in their survival is to remove the elk fence. This is not only the most humane thing to do, it is the most cost-effective and reasonable action.

Thank you for taking the time to read this comment, and for inviting public input. The land in Point Reyes National Seashore belongs to the public, and should be managed for public, not for private benefit.

Correspondence: "To assist the NPS with its planned NEPA review of the Tomales Point area and Tule elk herd management in Pt. Reyes National Seashore, I suggest the following issues be included in your review process, and any eventual Environmental Impact Statement that comes out of it. These points are intended to insure that the park resources, including the Tule elk and native plants and animals, get the maximum protection for the public's current and future benefit.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying - just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

The park should spend time and money on removing the fences, planting native grasses, cleaning up the water pollutants, and generally restoring Tomales Point back to its natural habitat.

The Tomales Point Elk Reserve fence must promptly be taken down. This should occur in conjunction with a renewed, science-based plan to cease rancher successions of leased lands, allowing Point Reyes National Seashore to revert to natural landscapes, waterscapes, habitats, and ecosystems.

It is time to end the mis-management of our native Tule elk in Point Reyes National Seashore. Please follow the scientific advice provided in 1993, and remove the fence across Tomales Point. It is important for the survival of this herd to be free-roaming with access to food and water.”

**Correspondence ID:3670**

Correspondence: Californians LOVE their wildlife. They are sacred. Cattle are a commercial enterprise. Do the Tule Elk a favor and Please Remove the Fence!

Please accept for the record these comments as input for the NPS's upcoming environmental review of its Tomales Point management plan update. These are important aspects that must be considered in determining the scope of the planning process and should be included in any environmental impact statement. My top concern is for the Park Service to remove the fence that keeps the tule elk penned in on grazing land that's insufficient to support a healthy herd.

It is not clear why the Park Service continues to spend taxpayer money for an unethical eight foot fence at the Tule Elk Reserve when the public has requested for years to remove the fence and let the Elk roam for free to get their water and food.

It is requested to stop using taxpayers' money to pay for the visual blight of the Elk Fence out on Tomales Point. Please stop trucking in water and minerals and whatever else to try to sustain a native herd in a non-native environment. Take down the fence, and use our taxpayers' money to actually turn the Seashore into a National Park that it deserves. Wildlife, natural habitat, clean water/soil/air, and public access should be the primary forces the Park Service supports - not a small group of politically-connected ranchers and their hoofed methane-operations.

The 1998 plan says "Natural processes will be relied on to control populations of native species ..." There is nothing natural about caging animals behind a fence. The existing fence at the Tule Elk Reserve should

be removed and replaced with a wildlife friendly fence that will allow Tule Elk to leave the reserve while still keeping cattle out.

Thank you for submitting my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore. Please remove the fence across Tomales Point so the Elk can be free to roam, feed, drink, associate, mate, and thrive naturally. It can be done! Please consider and use my comments to help Point Reyes be a beautiful place for wildlife and humans.

**Correspondence ID:3671**

Correspondence: "Kindly take down the elk fence from Tomales Point. It restricts the tule elk and prevents them from getting water and forage.

As a taxpayer I expect the National Park Service to spend money wisely and frugally. I also expect the Park Service to prioritize wildlife over private enterprise. Therefore I ask the Park Service to stop spending money on erecting and maintaining a wildlife fence for the sole purpose of keeping native Tule Elk out of the parcels that are leased by private cattle and dairy ranch operations within a National Park.

I am extremely disappointed that the National Park Service (NPS) continues to spend our taxpayer money for an unethical fence which traps Elk on Tomales Point at Point Reyes National Seashore. Taxpayers are insisting that the fence come down immediately, that ranchers move out, and wildlife be allowed to live naturally across all of our Park.

The first sentence of the Tule Elk Management Plan and Environmental Assessment, dated 1998 states "The purpose of this plan and environmental assessment is to guide the management, monitoring, and research of Tule Elk, *Cervus elaphus nannodes*, at Point Reyes National Seashore for the next five to ten years". Well here we are 24 years later and you're finally getting around to updating this horribly outdated plan. Meanwhile hundreds of beautiful Tule Elk have died behind that fence while the NPS did nothing. That fence has to go.

I hope the above concerns are addressed honestly and thoroughly. I, like millions of others, treasure our Seashore, and want it to be treated in a manner that preserves it and enhances it for future generations, something that is not happening now. I will be watching to make sure it is a transparent process, and look forward to improved management of our public commons."

Correspondence: "Removal of the elk fence at Tomales Point should be included in your plans for PRNS. It is the necessary and ethical step to take for a native species in a National Seashore.

The costs for Tomales Point elk fence maintenance and to put out water and minerals is not solving the problem of Tule Elk health. There is not enough water and minerals for the different non-mingling Tomales Point herds. It is a band-aid for a constant would therefore please come up with a real solution for wild Elk, as they should not be confined in a zoo-like environment that does not have a sufficient amount of water and forage for this herd.

If cattle ranchers are concerned about the spread of disease between the elk and bovine populations, then the cattle should be kept far enough away from the elk as necessary to allow passage through wildlife corridors. This allocation would allow two short run goals- one being that the elk could traverse the area to graze for necessary vegetation for nutritional well-being, as well as access to water; and secondly, cordoning off the unnatural effects of the different effects of cattle grazing on the area's vegetation which would allow the native flora a better environment to establish itself.

As an endemic species, Tule elk benefit the land, and allowing them to freely roam in Point Reyes National Seashore will enhance the park overall.

It is requested the personnel at the National Park Service re-review the 1993 report of the Scientific Advisory Panel on control of Tule Elk in PRNS, and include its recommendation in the upcoming plan. The independent advisory panel recommended to remove the fence across Tomales Point, and develop a plan to achieve a large, healthy, free-ranging elk population. Thank you Mr Kenkel for your attention to this recommendation."

Correspondence: Regarding the upcoming plan for Tomales Point within Point Reyes National Seashore I request our National Park prioritize the wishes of the Miwok First Nation people. They "managed" that land for more than 10,000 and didn't disrupt the ecosystem. Allow them to determine how the land should be managed so that our future generations will be allowed to experience biodiversity, not cows, that exists there today. Maybe then the area will be allowed to thrive.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying - just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

Viewing the Tomales Point project from an objective approach, the most cost effective long-run plan is to take down the elk fences without the interference of cattle concerns and let the herds roam in a natural manner. The health of the elk herds could be clearly addressed, as well as the flora can be given its space for natural progression and seed dispersion. This would focus on only one plan to implement, for taxpayers and NPS staff, and not take the resources with two competing approaches.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3678**

Correspondence: Californians LOVE their wildlife. They are sacred. Cattle are a commercial enterprise. Do the Tule Elk a favor and Please Remove the Fence!

Please accept for the record these comments as input for the NPS's upcoming environmental review of its Tomales Point management plan update. These are important aspects that must be considered in determining the scope of the planning process and should be included in any environmental impact statement. My top concern is for the Park Service to remove the fence that keeps the tule elk penned in on grazing land that's insufficient to support a healthy herd.

It is not clear why the Park Service continues to spend taxpayer money for an unethical eight foot fence at the Tule Elk Reserve when the public has requested for years to remove the fence and let the Elk roam for free to get their water and food.

It is requested to stop using taxpayers' money to pay for the visual blight of the Elk Fence out on Tomales Point. Please stop trucking in water and minerals and whatever else to try to sustain a native herd in a non-native environment. Take down the fence, and use our taxpayers' money to actually turn the Seashore into a National Park that it deserves. Wildlife, natural habitat, clean water/soil/air, and public access should be the primary forces the Park Service supports - not a small group of politically-connected ranchers and their hoofed methane-operations.

The 1998 plan says "Natural processes will be relied on to control populations of native species ..." There is nothing natural about caging animals behind a fence. The existing fence at the Tule Elk Reserve should be removed and replaced with a wildlife friendly fence that will allow Tule Elk to leave the reserve while still keeping cattle out.

Thank you for submitting my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore. Please remove the fence across Tomales Point so the Elk can be free to roam, feed, drink, associate, mate, and thrive naturally. It can be done! Please consider and use my comments to help Point Reyes be a beautiful place for wildlife and humans.

Correspondence: "Thank you for the opportunity to provide input on the updated Tule Elk Management Plan/General Management Plan for Pt. Reyes National Seashore. To help the National Park Service (NPS) best structure its environmental review process, I offer the comments below. Please consider including these points in scoping your review and the presumed Environmental Impact Statement.

It is not clear why the Park Service continues to spend taxpayer money for an unethical eight foot fence at the Tule Elk Reserve when the public has requested for years to remove the fence and let the Elk roam for free to get their water and food.

Resources budgeted for Point Reyes National Seashore should be used for preventing wildlife destruction, rather than additional money toward how to maintain an unethical 8 foot fence in the Elk Preserve.

First and foremost, NPS should remove the fence that separates the Tomales Point herd from private, for-profit ranching livestock and prevents the elk herd from finding forage and water in its own. This would allow a more natural existence, without interference from humans.

The successful reintroduction of the elk herds in the Point Reyes National Seashore should be viewed as the goal of the general plan for not only the Tomales Point area but the entire National Seashore and the most cost-effective way to do that is to work for the elimination of cattle from that area. If this

approach is not taken then there will be continued non-native plants being brought in which will necessitate more plans and strategies to eliminate, more engineering projects to contain manure runoff, control of native 'predator' species to protect the cattle which is contradictory to reestablishing the Seashore, just to name a few."

**Correspondence ID:3683**

Correspondence: "Kindly take down the elk fence from Tomales Point. It restricts the tule elk and prevents them from getting water and forage.

The current plan of what is called a 'co-habitation' - which is a farce - is wasteful in a number of ways. Instead of letting the elk populations roam the land to access the water and flora they have evolved to need for subsistence, it often needs to be trucked in to keep populations at levels 'mandated by a plan'. Not only do these resources need to be expended to keep the herds alive - then later, National Park Service personnel go and cull the population when it exceeds their some-how-agreed upon 'rancher-acceptable' number.

In developing alternatives to be evaluated, the NPS should include Tule Elk not being confined behind the fence. Alternatives should include adding currently leased land to the Tule Elk Reserve as the leaseholders retire them due to climate change or shifting economic pressures, as we are already seeing.

Point Reyes National Seashore management must scope a plan to remove the Tule Elk Reserve fence across Tomales Point. This must be done in conjunction with a serious, science-based, enforced plan to cease the practice of ranching on our public land, so that timely and effective Seashore wilderness restoration occurs with public participation, focused on natural and native features, habitats, wildlife, and visitor accessibility.

Thank you for the opportunity to provide feedback on the upcoming plan for Elk Reserve in Point Reyes National Seashore. The 3-year timeframe proposed by the NPS appears to be too long of a period, as we have lost approximately 50% of our native Elk held captive behind this 8 foot fence due to lack of appropriate amount of food, water and minerals. In your upcoming plan, please ensure there are

numerous alternatives available on the removal of this deadly fence. It is time for that fence to be removed.”

**Correspondence ID:3684**

Correspondence: Public enjoyment of the Seashore should be open and available for present and future generations. My main comment to the National Park Service and Point Reyes National Seashore officials is the Elk Fence must come down.

How much does it cost the National Park Service or Point Reyes National Seashore in Tomales Point Reserve for fence maintenance and supplemental water and minerals? How much does it cost us the taxpayers not only in materials, but in all the hidden costs of labor, operations, communications, negotiation, administration, and don't forget, pleasing the ranchers who shouldn't even be there due to their constant impairment to the Seashore.

We wonder why Point Reyes National Seashore officials, especially Superintendent Kenkel, persist with keeping the expense of a long ugly fence out at Tomales Point and to truck in water and minerals. It's obvious even to a non-scientist. There's not enough natural food and water to sustain the Tule Elk entrapped in a zoo pen out there. Take down the fence, and instead use the money to help the Tule Elk transition and thrive across the Seashore. Remove the ranchers and their cattle. Enough is enough. It's a NATIONAL PARK!

For climate change and biodiversity reasons, the Tomales Point scoping plan must include complete removal of the Tule Elk Reserve fence combined with an entirely new and enforced ranch succession plan. It must commit to ceasing continued ranchlands succession of leased parcels to ranchers, and restoration of native coastal prairie and wildlife habitat. It must emphasize the roles of indigenous Coast Miwok's ecological and scientific cultural knowledge and practices, and the importance of wildlife and natural forces in the restoration process.

Our native Tule elk in PRNS deserve a better quality of life, rather than being confined in an environment without sufficient forage, minerals and water. Please ensure the upcoming plan for our iconic elk has several options that involve the removal of the elk. The public has requested the NPS to protect the Tule elk, and now is the time to take action.

**Correspondence ID:3690**

Correspondence: "The following are comments addressing the upcoming plan for Tomales Point within Point Reyes National Seashore. The National Park Service should not be creating a separate plan for this area of the park, or any other area of the park as it should be included in the Park's General Management Plan and the park should be managed as one whole unit. The complex ecosystem within

the park should be treated as one entity, and the health of that entire system is the responsibility of the park service. To do otherwise can only be seen as irresponsible and cruel.

Allowing the continuation of cattle ranching in this area, Tomales Point in the Point Reyes National Seashore, is contradictory to the NPS trying to mitigate the negative impacts of climate change partially caused by this very practice. The NPS needs to do its part and at every step possible be a leader to achieve this end-result.

The long run goal is to phase out cattle from the Point Reyes National Seashore, altogether. This would allow a number of costly issues to be dropped as the progression of steps were accomplished, namely the need and upkeep of the elk fences, trucking in feed and water for the elk herds in the increasing occurrence of drought, culling the herds when successfully repopulating the areas and eradication of invasive species of plants brought in by cattle, cattle feed, and industrial machinery.

Ecological reports recommend the fence be removed. There is no good reason to keep the fence.

Thank you for submitting my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore. Please remove the fence across Tomales Point so the Elk can be free to roam, feed, drink, associate, mate, and thrive naturally. It can be done! Correspondence: "Please read and consider my public comment on the Tomales Point planning process for Point Reyes National Seashore. Tule Elk should be free to roam, gather, find water and food, and live more healthy lives--not be imprisoned for their entire lives behind a god-awful fence. Point Reyes is a national park, therefore please remove the fence now.

The elk fence has hidden costs that have not been analyzed or made public before. Besides the typical costs of fence construction and maintenance, there's the cost of park staff having to make sure the water tanks that serve the captive elk herd are maintained and kept filled, the mineral licks provided are sufficient to the herd's needs, and complaints from ranchers are responded to. Then there are the costs of the impacts on the area outside the fence: the massive amounts of invasive plants that have forced out the native, deep-rooted grasses that are true effective carbon sequesters, the elimination of habitat for indigenous animals of all sizes, the carbon created by the rotting of annual invasive gasses, and more. And because the fence only exists at the request of cattle ranchers, NPS should look at the costs

of the damage the cattle do with their methane pollution the atmosphere and their manure polluting the parks' streams, lagoons and bays. These ecological costs haven't been accounted for, and need to be.

Too many park resources are used to cater to the private ranchers. Ranch operations pollute the streams and waterways of the seashore with manure runoff, release methane into the atmosphere from cattle belches and farts, damaging our climate, and have caused the massive spread of invasive plants. NPS should be putting these resources into restoring the deep-rooted native grasses, wildflowers, mosses and other native plants that cannot survive destructive grazing practices caused by too many cattle on the land.

I am taking the approach that the elk fence be removed from the Tomales Point area and all of the Point Reyes National Seashore because that was and is the intention of the setting-up of this National Park area to begin with. It was not envisioned as a prison area, that is the farthest thing that could be imagined, with cows over here and the elk behind a fence other there. "Oh give me a home where the bison and elk roam.." - not 'why are they behind that fence?'

Thank you for reading and placing my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore (PRNS). It is time, finally, for PRNS officials, notably Craig Kenkel, to stop stonewalling and ignoring the American public from across the country, and use proven science to prioritize wilderness, wildlife and habitat over commercial ranching. Start with a plan to remove the fence at Tomales Point and prioritize the endemic Tule Elk."

**Correspondence ID:3694**

Correspondence: Public enjoyment of the Seashore should be open and available for present and future generations. My main comment to the National Park Service and Point Reyes National Seashore officials is the Elk Fence must come down.

How much does it cost the National Park Service or Point Reyes National Seashore in Tomales Point Reserve for fence maintenance and supplemental water and minerals? How much does it cost us the taxpayers not only in materials, but in all the hidden costs of labor, operations, communications, negotiation, administration, and don't forget, pleasing the ranchers who shouldn't even be there due to their constant impairment to the Seashore.

We wonder why Point Reyes National Seashore officials, especially Superintendent Kenkel, persist with keeping the expense of a long ugly fence out at Tomales Point and to truck in water and minerals. It's obvious even to a non-scientist. There's not enough natural food and water to sustain the Tule Elk entrapped in a zoo pen out there. Take down the fence, and instead use the money to help the Tule Elk transition and thrive across the Seashore. Remove the ranchers and their cattle. Enough is enough. It's a NATIONAL PARK!

For climate change and biodiversity reasons, the Tomales Point scoping plan must include complete removal of the Tule Elk Reserve fence combined with an entirely new and enforced ranch succession plan. It must commit to ceasing continued ranchlands succession of leased parcels to ranchers, and restoration of native coastal prairie and wildlife habitat. It must emphasize the roles of indigenous Coast Miwok's ecological and scientific cultural knowledge and practices, and the importance of wildlife and natural forces in the restoration process.

Our native Tule elk in PRNS deserve a better quality of life, rather than being confined in an environment without sufficient forage, minerals and water. Please ensure the upcoming plan for our iconic elk has several options that involve the removal of the elk. The public has requested the NPS to protect the Tule elk, and now is the time to take action.

**Correspondence ID:3696**

Correspondence: You want my input to the Tomales Point planning process for Point Reyes National Seashore? Why is there even a Tule Elk enclosure out there? Does everything have to please and serve the ranchers (who shouldn't even be there anymore)? The Tule Elk cannot even get enough water or food, and are dying off in really high numbers! Please get rid of the Tule Elk Fence and let the Elk roam free. If you need a fence, put up a wildlife-friendly one, and turn the place into a Native Coastal Plant Reserve.

It is not clear why the Park Service continues to spend taxpayer money for an unethical eight foot fence at the Tule Elk Reserve when the public has requested for years to remove the fence and let the Elk roam for free to get their water and food.

The park should put every effort into connecting Tomales Point and its wildlife to the rest of the park. A visitor to the park should not have to pass through cattle/dairy pasture to walk through the Philip Burton Wilderness and nor should the Tule Elk. Every effort should be directed in allowing the elk to roam freely across the entire area of the park.

Point Reyes has stunning biodiversity, and the restoration of native plants and wildlife will ensure that these important ecosystems last for generations.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3697**

Correspondence: "I appreciate the opportunity to provide input into this scoping process and ask that you remove the elk fence at Tomales Point.

The Park Service should not be spending so much money to maintain fencing at Tomales Point Reserve. There are all the expenses for materials, then all the hidden costs and time for labor, operations, administration, and rancher-pleasing. As a concerned citizen for the elk, please spend the money to remove the fence and free the Elk.

If cattle ranchers are concerned about the spread of disease between the elk and bovine populations, then the cattle should be kept far enough away from the elk as necessary to allow passage through wildlife corridors. This allocation would allow two short run goals- one being that the elk could traverse the area to graze for necessary vegetation for nutritional well-being, as well as access to water; and secondly, cordoning off the unnatural effects of the different effects of cattle grazing on the area's vegetation which would allow the native flora a better environment to establish itself.

I cannot find a reasonable sound argument for continued ranching or dairy in a National Park. There are numerous dairy and cattle ranches in West Marin and Sonoma counties, as well as all across California and the entire United States. Some owned by the same families as those that ranch in the park today. Tule elk are only native to California and only found in Point Reyes National Seashore. We are lucky the elk are located in a National Park where they should be protected. Why private dairy and beef cows are prioritized over those elk in a National Park is beyond anyone's logical reasoning. It is political and that does not make it right. The National Park should be above politics. We need our National Parks, which we pay for and support, to work for us, the people.

Thank you for taking the time to read this comment, and for inviting public input. The land in Point Reyes National Seashore belongs to the public, and should be managed for public, not for private benefit."

**Correspondence ID:3701**

Correspondence: "I respectfully submit this public comment for your consideration regarding the GMP planning process for Tomales Point at Point Reyes National Seashore (PRNS). All the natural resources, from native plants to the Tule Elk, should be unimpaired in and beyond Tomales Point. The American public wants open and accessible public lands and waters in their National Parks. No wildlife should be caged or captive in a National Park. We must remove the Tule Elk Fence now, and let the Tule Elk and other wildlife roam free to prosper as is natural, healthy, and just. Please scope removal of the Tule Elk Fence in your planning for Tomales Point.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying - just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

All money, time and energy should be spent on re-wilding the entire National Seashore and not subsidizing destructive cattle operations on these public lands.

Whether in California or elsewhere globally, climate change impacts nearly every aspect of our current and future environmental conditions. The Tule Elk fence across Tomales Point must be taken down in recognition of this. As conditions are now and for the foreseeable future with seasonal warming, megadrought, desertification, water scarcity, the native Tule Elk will have a better chance of surviving the challenges of this climate crisis, instead of being confined without sufficient water, forage and minerals.

As a long-time user of the seashore, I'm looking forward to seeing what the Park Service comes up with as an improved management plan. It's a good time to make some long-needed changes, particularly the elk fence removal. That alone will make a significant difference in one's experience of the park, and I'm sure it will be met with massive public approval. Thank you for considering my input. I'm excited to see the results."

**Correspondence ID:3705**

Correspondence: "Any proposed plans for PRNS should include the removal of the elk fence at Tomales Point.

Removing the elk fence is a frugal option, for a Park Service that apparently operates with limited resources.

All money, time and energy should be spent on re-wilding the entire National Seashore and not subsidizing destructive cattle operations on these public lands.

The Tomales Point Elk Reserve fence must promptly be taken down. This should occur in conjunction with a renewed, science-based plan to cease rancher successions of leased lands, allowing Point Reyes National Seashore to revert to natural landscapes, waterscapes, habitats, and ecosystems.

The successful reintroduction of the elk herds in the Point Reyes National Seashore should be viewed as the goal of the general plan for not only the Tomales Point area but the entire National Seashore and the most cost-effective way to do that is to work for the elimination of cattle from that area. If this approach is not taken then there will be continued non-native plants being brought in which will necessitate more plans and strategies to eliminate, more engineering projects to contain manure runoff, control of native 'predator' species to protect the cattle which is contradictory to reestablishing the Seashore, just to name a few."

**Correspondence ID:3709**

Correspondence: Tomales Point is a stunning place and I appreciate the chance to provide input for the planning process.

Maintenance of an 8-foot fence and providing water and nutrition for captive Tule elk is not a reasonable use of funds, when the Tule elk could find adequate food and water if they were allowed to freely roam.

The park should spend time and money on removing the fences, planting native grasses, cleaning up the water pollutants, and generally restoring Tomales Point back to its natural habitat.

A National Park was created in Point Reyes to protect one of the most scenic and biologically diverse areas in our country. It is being put at risk for the profits of a few private ranchers. This is not acceptable to the people of Marin, the SF Bay Area, and the nation, nor our native wildlife. It is time to remove the Elk fence.

If the Park Service is serious about managing Tomales Point, the Tule elk herds, and the rest of the park most effectively, it will follow the science in determining its plan. That means, first and foremost, removing the elk fence, and protecting and restoring the natural habitat that has been destroyed by cattle and dairy ranching. This is a great opportunity to show enlightened leadership, and I look forward to continuing my engagement in the process.

**Correspondence ID:3710**

**Correspondence ID:3711**

Correspondence: Foremost, remove the eight foot fence blocking the free flow of the tule elk herd on Tomales point. This particular herd finds itself trapped in a blocked area with no reliable water source or forage. This strip of land is blocked by fencing, Tomales Bay and the Pacific ocean. Other elk herds find water and food sources for survival because they are not blocked by a fence. The tule elk deserve free access to roam unhindered.

Park visitors come just to see these famous elk. Other elk find adequate food and water sources naturally since they are not fenced in. Allow the tule elk to get out of their dead-end stait trap. Give them a fence free thru access. Unfenced land where they can roam freely for food and water. Park visitors come just to see these popular elk herds roam in the wild living on natural resources which belong to the wildlife. Thank you. I look forward to visiting the free roaming tule elk.

**Correspondence ID:3712**

Correspondence: "I am a taxpayer who wants you to remove the fence confining the tule elk. It is important our elk survive and are well cared for in a natural habitat, vs confined behind a fence which keeps the elk away from much needed water and forage.

The Park Service continues to spend money on a fence to keep Tule Elk trapped out on Tomales Point at Point Reyes even though there's not enough food and water out there for the Elk, and now I have to pay for fence maintenance and to ship water and supplements out there. Stop the bad spending! Take down that fence and let the Tule Elk go get their food and water for free.

The park should spend time and money on removing the fences, planting native grasses, cleaning up the water pollutants, and generally restoring Tomales Point back to its natural habitat.

The Tomales Point management plan for Point Reyes National Seashore must include removal of the Tule Elk Reserve fence, freedom of movement and association by the existing Tule Elk herds throughout the Seashore, and transition from a Tule Elk Reserve to a protected Coastal Native Habitat Reserve. Please include in this plan, the creation of safe wildlife corridors to facilitate Tule Elk migration elsewhere into the Seashore and all manner of other endeavors true to National Park Service founding mandates for natural resources protection and the enjoyment of natural features by future generations. In addition, it must include immediate cessation of the ranching succession policy in favor of immediate removal of commercial cattle operations and its ranch residential infrastructure.

We ask, why should the "elk fence" across the width of Tomales Point on Point Reyes National Seashore be immediately removed? Because, at long last, after six decades of the Seashore's existence--it is the right, just, humane, and obvious thing to do for an American, even global, National Park, perched on the formidable and awesome Pacific Coast, still waiting for its true nature to be revealed."

**Correspondence ID:3715**

Correspondence: Tomales Point is a stunning place and I appreciate the chance to provide input for the planning process.

Maintenance of an 8-foot fence and providing water and nutrition for captive Tule elk is not a reasonable use of funds, when the Tule elk could find adequate food and water if they were allowed to freely roam.

The park should spend time and money on removing the fences, planting native grasses, cleaning up the water pollutants, and generally restoring Tomales Point back to its natural habitat.

A National Park was created in Point Reyes to protect one of the most scenic and biologically diverse areas in our country. It is being put at risk for the profits of a few private ranchers. This is not acceptable to the people of Marin, the SF Bay Area, and the nation, nor our native wildlife. It is time to remove the Elk fence.

If the Park Service is serious about managing Tomales Point, the Tule elk herds, and the rest of the park most effectively, it will follow the science in determining its plan. That means, first and foremost, removing the elk fence, and protecting and restoring the natural habitat that has been destroyed by cattle and dairy ranching. This is a great opportunity to show enlightened leadership, and I look forward to continuing my engagement in the process.

**Correspondence ID:3716**

Correspondence: Public enjoyment of the Seashore should be open and available for present and future generations. My main comment to the National Park Service and Point Reyes National Seashore officials is the Elk Fence must come down.

How much does it cost the National Park Service or Point Reyes National Seashore in Tomales Point Reserve for fence maintenance and supplemental water and minerals? How much does it cost us the taxpayers not only in materials, but in all the hidden costs of labor, operations, communications, negotiation, administration, and don't forget, pleasing the ranchers who shouldn't even be there due to their constant impairment to the Seashore.

We wonder why Point Reyes National Seashore officials, especially Superintendent Kenkel, persist with keeping the expense of a long ugly fence out at Tomales Point and to truck in water and minerals. It's obvious even to a non-scientist. There's not enough natural food and water to sustain the Tule Elk entrapped in a zoo pen out there. Take down the fence, and instead use the money to help the Tule Elk transition and thrive across the Seashore. Remove the ranchers and their cattle. Enough is enough. It's a NATIONAL PARK!

For climate change and biodiversity reasons, the Tomales Point scoping plan must include complete removal of the Tule Elk Reserve fence combined with an entirely new and enforced ranch succession plan. It must commit to ceasing continued ranchlands succession of leased parcels to ranchers, and restoration of native coastal prairie and wildlife habitat. It must emphasize the roles of indigenous Coast Miwok's ecological and scientific cultural knowledge and practices, and the importance of wildlife and natural forces in the restoration process.

Our native Tule elk in PRNS deserve a better quality of life, rather than being confined in an environment without sufficient forage, minerals and water. Please ensure the upcoming plan for our iconic elk has several options that involve the removal of the elk. The public has requested the NPS to protect the Tule elk, and now is the time to take action.

**Correspondence ID:3717**

Correspondence: "Thank you for the opportunity to provide input on the updated Tule Elk Management Plan/General Management Plan for Pt. Reyes National Seashore. To help the National Park Service (NPS) best structure its environmental review process, I offer the comments below. Please consider including these points in scoping your review and the presumed Environmental Impact Statement.

The Park Service will never be able to fully provide enough water, minerals, or forage for the captive Tule Elk at Tomales Point. Put the money into taking down the fence and letting Elk live and thrive throughout the Seashore.

The Park Service should put all resources to removing the elk fence, allow the elk to roam free, stop the killing of the elk, and plant native grasses for them to feed.

Removing the elk fence is the most impactful step the Park can take for Tomales Point, and this should be the plan review's top priority. This and total removal of all dairy and cattle operations from all of the park would have the strongest positive impacts, both ecologically and in terms of protection of the public's resources. The removal of both would benefit the return of native, deep-rooted grasses, allow the return of birds and wildlife that cannot survive in the barren fields where cattle have eaten the greenery down to the earth, and let the natural prairie reestablish itself. It could also serve as an outdoor laboratory for studying how to accelerate its healing and nurturing, information that will be increasingly important as we try to save our planet from the damages of global warming.

Thank you for reading and placing my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore (PRNS). It is time, finally, for PRNS officials, notably Craig Kenkel, to stop stonewalling and ignoring the American public from across the country, and use proven science to prioritize wilderness, wildlife and habitat over commercial ranching. Start with a plan to remove the fence at Tomales Point and prioritize the endemic Tule Elk.”

**Correspondence ID:3728**

Correspondence: "I respectfully submit this public comment for your consideration regarding the GMP planning process for Tomales Point at Point Reyes National Seashore (PRNS). All the natural resources, from native plants to the Tule Elk, should be unimpaired in and beyond Tomales Point. The American public wants open and accessible public lands and waters in their National Parks. No wildlife should be caged or captive in a National Park. We must remove the Tule Elk Fence now, and let the Tule Elk and other wildlife roam free to prosper as is natural, healthy, and just. Please scope removal of the Tule Elk Fence in your planning for Tomales Point.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying - just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

All money, time and energy should be spent on re-wilding the entire National Seashore and not subsidizing destructive cattle operations on these public lands.

Whether in California or elsewhere globally, climate change impacts nearly every aspect of our current and future environmental conditions. The Tule Elk fence across Tomales Point must be taken down in recognition of this. As conditions are now and for the foreseeable future with seasonal warming, megadrought, desertification, water scarcity, the native Tule Elk will have a better chance of surviving the challenges of this climate crisis, instead of being confined without sufficient water, forage and minerals.

As a long-time user of the seashore, I'm looking forward to seeing what the Park Service comes up with as an improved management plan. It's a good time to make some long-needed changes, particularly the elk fence removal. That alone will make a significant difference in one's experience of the park, and I'm sure it will be met with massive public approval. Thank you for considering my input. I'm excited to see the results."

**Correspondence ID:3731**

Correspondence: "I am a taxpayer who wants you to remove the fence confining the tule elk. It is important our elk survive and are well cared for in a natural habitat, vs confined behind a fence which keeps the elk away from much needed water and forage.

The Park Service continues to spend money on a fence to keep Tule Elk trapped out on Tomales Point at Point Reyes even though there's not enough food and water out there for the Elk, and now I have to pay for fence maintenance and to ship water and supplements out there. Stop the bad spending! Take down that fence and let the Tule Elk go get their food and water for free.

The park should spend time and money on removing the fences, planting native grasses, cleaning up the water pollutants, and generally restoring Tomales Point back to its natural habitat.

The Tomales Point management plan for Point Reyes National Seashore must include removal of the Tule Elk Reserve fence, freedom of movement and association by the existing Tule Elk herds throughout the Seashore, and transition from a Tule Elk Reserve to a protected Coastal Native Habitat Reserve. Please include in this plan, the creation of safe wildlife corridors to facilitate Tule Elk migration elsewhere into the Seashore and all manner of other endeavors true to National Park Service founding mandates for natural resources protection and the enjoyment of natural features by future generations. In addition, it must include immediate cessation of the ranching succession policy in favor of immediate removal of commercial cattle operations and its ranch residential infrastructure.

We ask, why should the "elk fence" across the width of Tomales Point on Point Reyes National Seashore be immediately removed? Because, at long last, after six decades of the Seashore's existence--it is the right, just, humane, and obvious thing to do for an American, even global, National Park, perched on the formidable and awesome Pacific Coast, still waiting for its true nature to be revealed."

**Correspondence ID:3732**

How much does it cost us the taxpayers not only in materials, but in all the hidden costs of labor, operations, communications, negotiation, administration, and don't forget, pleasing the ranchers who shouldn't even be there due to their constant impairment to the Seashore.

We wonder why Point Reyes National Seashore officials, especially Superintendent Kenkel, persist with keeping the expense of a long ugly fence out at Tomales Point and to truck in water and minerals. It's obvious even to a non-scientist. There's not enough natural food and water to sustain the Tule Elk entrapped in a zoo pen out there. Take down the fence, and instead use the money to help the Tule Elk transition and thrive across the Seashore. Remove the ranchers and their cattle. Enough is enough. It's a NATIONAL PARK!

For climate change and biodiversity reasons, the Tomales Point scoping plan must include complete removal of the Tule Elk Reserve fence combined with an entirely new and enforced ranch succession plan. It must commit to ceasing continued ranchlands succession of leased parcels to ranchers, and restoration of native coastal prairie and wildlife habitat. It must emphasize the roles of indigenous Coast Miwok's ecological and scientific cultural knowledge and practices, and the importance of wildlife and natural forces in the restoration process.

Our native Tule elk in PRNS deserve a better quality of life, rather than being confined in an environment without sufficient forage, minerals and water. Please ensure the upcoming plan for our iconic elk has several options that involve the removal of the elk. The public has requested the NPS to protect the Tule elk, and now is the time to take action.

**Correspondence ID:3735**

Correspondence: "I am a taxpayer who wants you to remove the fence confining the tule elk. It is important our elk survive and are well cared for in a natural habitat, vs confined behind a fence which keeps the elk away from much needed water and forage.

The Park Service continues to spend money on a fence to keep Tule Elk trapped out on Tomales Point at Point Reyes even though there's not enough food and water out there for the Elk, and now I have to pay

for fence maintenance and to ship water and supplements out there. Stop the bad spending! Take down that fence and let the Tule Elk go get their food and water for free.

The park should spend time and money on removing the fences, planting native grasses, cleaning up the water pollutants, and generally restoring Tomales Point back to its natural habitat.

The Tomales Point management plan for Point Reyes National Seashore must include removal of the Tule Elk Reserve fence, freedom of movement and association by the existing Tule Elk herds throughout the Seashore, and transition from a Tule Elk Reserve to a protected Coastal Native Habitat Reserve. Please include in this plan, the creation of safe wildlife corridors to facilitate Tule Elk migration elsewhere into the Seashore and all manner of other endeavors true to National Park Service founding mandates for natural resources protection and the enjoyment of natural features by future generations. In addition, it must include immediate cessation of the ranching succession policy in favor of immediate removal of commercial cattle operations and its ranch residential infrastructure.

We ask, why should the "elk fence" across the width of Tomales Point on Point Reyes National Seashore be immediately removed? Because, at long last, after six decades of the Seashore's existence--it is the right, just, humane, and obvious thing to do for an American, even global, National Park, perched on the formidable and awesome Pacific Coast, still waiting for its true nature to be revealed."

**Correspondence ID:3736**

Correspondence: Public enjoyment of the Seashore should be open and available for present and future generations. My main comment to the National Park Service and Point Reyes National Seashore officials is the Elk Fence must come down.

Since the Park Service recently concluded its multi-year process to update its General Management Plan Amendment (GMPA), one wonders why this part of park operations wasn't included in that process. Nonetheless, now is the time for a comprehensive analysis of NPS current management of Tomales Point, as well as past practices, and all associated costs. While NPS should adhere to its mandate as specified in the Organic Act of 1916 with an eye to providing the highest levels of protection for the natural resources within the park, it should examine the costs in staff time and materials, as well as ongoing maintenance costs, of the elk fence. It should compare that to the savings and benefits of removing the fence, including the environmental benefits of allowing the cattle-grazed areas a chance to repair themselves.

The National Park Service should partner with the First Nation people and create a wildlife sanctuary in Point Reyes National Seashore so that our elk are not hazed, nor culled, nor confined without sufficient food and water.

Removing the fence allows native tule elk to roam free, which is good for both elk and for park landscape. Please help make this happen.

The management of Tomales Point is an important part of the overall park. Inviting public comment, and then incorporating those preferences into the plan, will be key if public trust is to be restored in NPS.

**Correspondence ID:3737**

Correspondence: Public enjoyment of the Seashore should be open and available for present and future generations. My main comment to the National Park Service and Point Reyes National Seashore officials is the Elk Fence must come down.

Taxpayer dollars should not be spent on killing or neutering any animals, especially rare Tule Elk, once the herd is deemed "too large". The plan should allow for native wildlife to roam freely and die of natural causes.

Park funds should be used to monitor and enforce water quality and other environmental standards in Point Reyes National Seashore versus spending money on a bad fence idea to starve wildlife in a National Park.

The Tomales Point Elk Reserve fence must promptly be taken down. This should occur in conjunction with a renewed, science-based plan to cease rancher successions of leased lands, allowing Point Reyes National Seashore to revert to natural landscapes, waterscapes, habitats, and ecosystems.

I want to thank you for your serious consideration of my comments, and placing them into the public record for scoping analysis of Tomales Point. The most important thing is for the Park Service to get rid of that horrible fence out there. It's 2022! Please come up with a good plan for the Elk, wildlife, birds, native plants, and everything else that should thrive in a National Park. We are counting on you to help Point Reyes be all it can naturally be!

**Correspondence ID:3738**

Correspondence: "I am writing and requesting to please take down the elk fence from Tomales Point, as it prevents natural migration of tule elk. It also stops them from getting water and food.

It is not clear why the Park Service continues to spend taxpayer money for an unethical eight foot fence at the Tule Elk Reserve when the public has requested for years to remove the fence and let the Elk roam for free to get their water and food.

The long run goal is to phase out cattle from the Point Reyes National Seashore, altogether. This would allow a number of costly issues to be dropped as the progression of steps were accomplished, namely the need and upkeep of the elk fences, trucking in feed and water for the elk herds in the increasing occurrence of drought, culling the herds when successfully repopulating the areas and eradication of invasive species of plants brought in by cattle, cattle feed, and industrial machinery.

The difference in landscape between the Tule Elk Reserve and the ranches on the other side of the fence is stark. The Tule elk Reserve looks like a beautiful coastal prairie with lots of wildflowers and coyote brush. The land to the south looks barren and denuded and there is evidence of cow manure spraying - not what visitors come to Point Reyes to see. Please remove the fence in the Elk reserve, as this is the right step to take for our National Park.

Thank you for your attention to my public record comments on the Tomales Point planning process for Point Reyes National Seashore. Your responsibility is to the spirit of wilderness preservation and protection, and to the vast majority of Americans who have insisted that this iconic place be freed from private, for-profit, commercial business interests. We will continue to press for just that, like taking down the Tomales Point fence."

**Correspondence ID:3748**

Correspondence: "The elk fence at Tomales Point must be removed. This is an important and the right step for the upcoming management plan.

Recently, the NPS has started an unnatural process of providing emergency water via tanks. This practice is costly, and has limited effectiveness.

The NPS should revise the PRNS Succession Policy to permanently retire grazing leases as ranchers choose to not renew them. This would create an historic opportunity to restore that 33% of the park that is currently surrounded by fences, full of cow manure and turn it into a program that will benefit not only Tule Elk, but expand the biodiversity throughout the park. The public would enthusiastically volunteer to help the NPS with such a program.

Maintaining a captive Tule elk herd at Tomales Point will likely only become increasingly expensive with climate change and recurring, significant droughts. If the fence is removed, water troughs and mineral licks will be unnecessary.

Thank you for submitting my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore. Please remove the fence across Tomales Point so the Elk can be free to roam, feed, drink, associate, mate, and thrive naturally. It can be done! Please consider and use my comments to help Point Reyes be a beautiful place for wildlife and humans."

Correspondence: "I am writing and requesting to please take down the elk fence from Tomales Point, as it prevents natural migration of tule elk. It also stops them from getting water and food.

It is not clear why the Park Service continues to spend taxpayer money for an unethical eight foot fence at the Tule Elk Reserve when the public has requested for years to remove the fence and let the Elk roam for free to get their water and food.

The long run goal is to phase out cattle from the Point Reyes National Seashore, altogether. This would allow a number of costly issues to be dropped as the progression of steps were accomplished, namely the need and upkeep of the elk fences, trucking in feed and water for the elk herds in the increasing occurrence of drought, culling the herds when successfully repopulating the areas and eradication of invasive species of plants brought in by cattle, cattle feed, and industrial machinery.

The difference in landscape between the Tule Elk Reserve and the ranches on the other side of the fence is stark. The Tule elk Reserve looks like a beautiful coastal prairie with lots of wildflowers and coyote brush. The land to the south looks barren and denuded and there is evidence of cow manure spraying - not what visitors come to Point Reyes to see. Please remove the fence in the Elk reserve, as this is the right step to take for our National Park.

Thank you for your attention to my public record comments on the Tomales Point planning process for Point Reyes National Seashore. Your responsibility is to the spirit of wilderness preservation and

protection, and to the vast majority of Americans who have insisted that this iconic place be freed from private, for-profit, commercial business interests. We will continue to press for just that, like taking down the Tomales Point fence.”

**Correspondence ID:3759**

Correspondence: Public enjoyment of the Seashore should be open and available for present and future generations. My main comment to the National Park Service and Point Reyes National Seashore officials is the Elk Fence must come down.

Taxpayer dollars should not be spent on killing or neutering any animals, especially rare Tule Elk, once the herd is deemed "too large". The plan should allow for native wildlife to roam freely and die of natural causes.

Park funds should be used to monitor and enforce water quality and other environmental standards in Point Reyes National Seashore versus spending money on a bad fence idea to starve wildlife in a National Park.

The Tomales Point Elk Reserve fence must promptly be taken down. This should occur in conjunction with a renewed, science-based plan to cease rancher successions of leased lands, allowing Point Reyes National Seashore to revert to natural landscapes, waterscapes, habitats, and ecosystems.

I want to thank you for your serious consideration of my comments, and placing them into the public record for scoping analysis of Tomales Point. The most important thing is for the Park Service to get rid of that horrible fence out there. It's 2022! Please come up with a good plan for the Elk, wildlife, birds, native plants, and everything else that should thrive in a National Park. We are counting on you to help Point Reyes be all it can naturally be!

**Correspondence ID:3760**

Correspondence: Public enjoyment of the Seashore should be open and available for present and future generations. My main comment to the National Park Service and Point Reyes National Seashore officials is the Elk Fence must come down.

Since the Park Service recently concluded its multi-year process to update its General Management Plan Amendment (GMPA), one wonders why this part of park operations wasn't included in that process. Nonetheless, now is the time for a comprehensive analysis of NPS current management of Tomales Point, as well as past practices, and all associated costs. While NPS should adhere to its mandate as specified in the Organic Act of 1916 with an eye to providing the highest levels of protection for the natural resources within the park, it should examine the costs in staff time and materials, as well as ongoing maintenance costs, of the elk fence. It should compare that to the savings and benefits of removing the fence, including the environmental benefits of allowing the cattle-grazed areas a chance to repair themselves.

The National Park Service should partner with the First Nation people and create a wildlife sanctuary in Point Reyes National Seashore so that our elk are not hazed, nor culled, nor confined without sufficient food and water.

Removing the fence allows native tule elk to roam free, which is good for both elk and for park landscape. Please help make this happen.

The management of Tomales Point is an important part of the overall park. Inviting public comment, and then incorporating those preferences into the plan, will be key if public trust is to be restored in NPS.

**Correspondence ID:3762**

Correspondence: "I am commenting on the process of creating a plan for Tomales Point within Point Reyes National Park. I would hope the National Park Service would not address this area as somehow separate from the park itself but instead view the park in its entirety. As it stands today Tomales Point is more of a zoo within what is suppose to be a park but is in fact seen as private ranch land. And at this particular zoo the wild animals are fenced and the park service personnel let the animals die due to drought and lack of forage. Stop the insanity and take down the elk fence.

The Park Service continues to spend money on a fence to keep Tule Elk trapped out on Tomales Point at Point Reyes even though there's not enough food and water out there for the Elk, and now I have to pay for fence maintenance and to ship water and supplements out there. Stop the bad spending! Take down that fence and let the Tule Elk go get their food and water for free.

Park funds should be used to monitor and enforce water quality and other environmental standards in Point Reyes National Seashore versus spending money on a bad fence idea to starve wildlife in a National Park.

It is the responsibility of the Park Service to protect wildlife, and the most obvious solution is to remove the elk fence, allow the elk to roam, water, and feed, and for the Park Service to ameliorate climate change impacts, including removal of nonnative plants, improve fire resiliency, and allow wildlife and

natural processes to restore areas of the Seashore. A good first step is to end the lease agreements with the cattle ranchers.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity.”

Correspondence: Public enjoyment of the Seashore should be open and available for present and future generations. My main comment to the National Park Service and Point Reyes National Seashore officials is the Elk Fence must come down.

The Park Service will never be able to fully provide enough water, minerals, or forage for the captive Tule Elk at Tomales Point. Put the money into taking down the fence and letting Elk live and thrive throughout the Seashore.

The NPS should revise the PRNS Succession Policy to permanently retire grazing leases as ranchers choose to not renew them. This would create an historic opportunity to restore that 33% of the park that is currently surrounded by fences, full of cow manure and turn it into a program that will benefit not only Tule Elk, but expand the biodiversity throughout the park. The public would enthusiastically volunteer to help the NPS with such a program.

Point Reyes has stunning biodiversity, and the restoration of native plants and wildlife will ensure that these important ecosystems last for generations.

Thank you for taking the time to read this comment, and for inviting public input. The land in Point Reyes National Seashore belongs to the public, and should be managed for public, not for private benefit.

**Correspondence ID:3772**

Correspondence: "The following are comments addressing the upcoming plan for Tomales Point within Point Reyes National Seashore. The National Park Service should not be creating a separate plan for this area of the park, or any other area of the park as it should be included in the Park's General Management Plan and the park should be managed as one whole unit. The complex ecosystem within the park should be treated as one entity, and the health of that entire system is the responsibility of the park service. To do otherwise can only be seen as irresponsible and cruel.

The Park Service continues to spend money on a fence to keep Tule Elk trapped out on Tomales Point at Point Reyes even though there's not enough food and water out there for the Elk, and now I have to pay for fence maintenance and to ship water and supplements out there. Stop the bad spending! Take down that fence and let the Tule Elk go get their food and water for free.

Instead of paying for fence maintenance and supplemental water and minerals out at Tomales Point when Elk are actually starving to death--why doesn't the Park Service and Mr. Kenkel come up with a plan to remove tenant ranchers and let wildlife live naturally all across Point Reyes National Seashore?

Removing the elk fence is the most impactful step the Park can take for Tomales Point, and this should be the plan review's top priority. This and total removal of all dairy and cattle operations from all of the park would have the strongest positive impacts, both ecologically and in terms of protection of the public's resources. The removal of both would benefit the return of native, deep-rooted grasses, allow the return of birds and wildlife that cannot survive in the barren fields where cattle have eaten the greenery down to the earth, and let the natural prairie reestablish itself. It could also serve as an outdoor laboratory for studying how to accelerate its healing and nurturing, information that will be increasingly important as we try to save our planet from the damages of global warming.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity."

**Correspondence ID:3777**

Correspondence: "Please remove the elk fence from Point Reyes National Seashore in order for the elk herds to have access to sufficient amount of water, minerals and forage.

The American public, by a wide margin, does not support spending money to keep Tule Elk in captivity at Tomales Point in Point Reyes National Seashore. There is no viable, long-term monetary solution for supplemental water, minerals, or food for the Tomales Point herds. The only reasonable cost is to remove that harmful fence and let the Elk roam free as is natural and the right step to take.

Rather than maintaining the elk fence, troughs and mineral licks, the NPS could better use these resources to develop educational materials and programs about Tule elk.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

Point Reyes National Seashore, after 60 years from its founding, should be a national pride of astounding biodiversity, global climate research, and honor of the public trust in perpetuity. Please emphasize and prioritize the importance of protecting our native Tule elk in the upcoming plan, which would include the removal of the fence across Tomales Point."

Nonetheless, now is the time for a comprehensive analysis of NPS current management of Tomales Point, as well as past practices, and all associated costs. While NPS should adhere to its mandate as specified in the Organic Act of 1916 with an eye to providing the highest levels of protection for the natural resources within the park, it should examine the costs in staff time and materials, as well as ongoing maintenance costs, of the elk fence. It should compare that to the savings and benefits of removing the fence, including the environmental benefits of allowing the cattle-grazed areas a chance to repair themselves.

The National Park Service should partner with the First Nation people and create a wildlife sanctuary in Point Reyes National Seashore so that our elk are not hazed, nor culled, nor confined without sufficient food and water.

Removing the fence allows native tule elk to roam free, which is good for both elk and for park landscape. Please help make this happen.

The management of Tomales Point is an important part of the overall park. Inviting public comment, and then incorporating those preferences into the plan, will be key if public trust is to be restored in NPS.

**Correspondence ID:3783**

Correspondence: "Thank you for the opportunity to provide input on the updated Tule Elk Management Plan/General Management Plan for Pt. Reyes National Seashore. To help the National Park Service (NPS) best structure its environmental review process, I offer the comments below. Please consider including these points in scoping your review and the presumed Environmental Impact Statement.

It is not clear why the Park Service continues to spend taxpayer money for an unethical eight foot fence at the Tule Elk Reserve when the public has requested for years to remove the fence and let the Elk roam for free to get their water and food.

Resources budgeted for Point Reyes National Seashore should be used for preventing wildlife destruction, rather than additional money toward how to maintain an unethical 8 foot fence in the Elk Preserve.

First and foremost, NPS should remove the fence that separates the Tomales Point herd from private, for-profit ranching livestock and prevents the elk herd from finding forage and water in its own. This would allow a more natural existence, without interference from humans.

The successful reintroduction of the elk herds in the Point Reyes National Seashore should be viewed as the goal of the general plan for not only the Tomales Point area but the entire National Seashore and the most cost-effective way to do that is to work for the elimination of cattle from that area. If this approach is not taken then there will be continued non-native plants being brought in which will necessitate more plans and strategies to eliminate, more engineering projects to contain manure runoff, control of native 'predator' species to protect the cattle which is contradictory to reestablishing the Seashore, just to name a few."

**Correspondence ID:3784**

Correspondence: Public enjoyment of the Seashore should be open and available for present and future generations. My main comment to the National Park Service and Point Reyes National Seashore officials is the Elk Fence must come down.

Taxpayer dollars should not be spent on killing or neutering any animals, especially rare Tule Elk, once the herd is deemed "too large". The plan should allow for native wildlife to roam freely and die of natural causes.

Park funds should be used to monitor and enforce water quality and other environmental standards in Point Reyes National Seashore versus spending money on a bad fence idea to starve wildlife in a National Park.

The Tomales Point Elk Reserve fence must promptly be taken down. This should occur in conjunction with a renewed, science-based plan to cease rancher successions of leased lands, allowing Point Reyes National Seashore to revert to natural landscapes, waterscapes, habitats, and ecosystems.

I want to thank you for your serious consideration of my comments, and placing them into the public record for scoping analysis of Tomales Point. The most important thing is for the Park Service to get rid of that horrible fence out there. It's 2022! Please come up with a good plan for the Elk, wildlife, birds, native plants, and everything else that should thrive in a National Park. We are counting on you to help Point Reyes be all it can naturally be!

**Correspondence ID:3785**

Correspondence: Public enjoyment of the Seashore should be open and available for present and future generations. My main comment to the National Park Service and Point Reyes National Seashore officials is the Elk Fence must come down.

Since the Park Service recently concluded its multi-year process to update its General Management Plan Amendment (GMPA), one wonders why this part of park operations wasn't included in that process. Nonetheless, now is the time for a comprehensive analysis of NPS current management of Tomales Point, as well as past practices, and all associated costs. While NPS should adhere to its mandate as specified in the Organic Act of 1916 with an eye to providing the highest levels of protection for the natural resources within the park, it should examine the costs in staff time and materials, as well as ongoing maintenance costs, of the elk fence. It should compare that to the savings and benefits of removing the fence, including the environmental benefits of allowing the cattle-grazed areas a chance to repair themselves.

The National Park Service should partner with the First Nation people and create a wildlife sanctuary in Point Reyes National Seashore so that our elk are not hazed, nor culled, nor confined without sufficient food and water.

Removing the fence allows native tule elk to roam free, which is good for both elk and for park landscape. Please help make this happen.

The management of Tomales Point is an important part of the overall park. Inviting public comment, and then incorporating those preferences into the plan, will be key if public trust is to be restored in NPS.

**Correspondence ID:3786**

Correspondence: "Thank you for accepting my public comment on the Tomales Point planning process for Point Reyes National Seashore. I am very concerned. The Seashore's natural resources like the Tule Elk should be unimpaired.

Spending the public's money for a Tule Elk Fence and supplemental water and minerals is wasteful, and not a long-term, feasible solution. The Tule Elk are starving to death from lack of access to proper food. And the impact of global warming causes climate effects like long term drought out there. It's bad money after bad money. Free the Tule Elk from Tomales Point. Let the Elk have water and food for free around the Park.

In developing alternatives to be evaluated, the NPS should include Tule Elk not being confined behind the fence. Alternatives should include adding currently leased land to the Tule Elk Reserve as the leaseholders retire them due to climate change or shifting economic pressures, as we are already seeing.

Removing the Tomales Point elk fence will improve genetic diversity within the elk population.

Respectfully, the land in Point Reyes National Seashore belongs to the public, and should be managed for public, not for private benefit. It is imperative to keep the native Tule Elk as the priority, and remove the Elk fence.”

**Correspondence ID:3787**

Correspondence: “The elk fence at Tomales Point must be removed. This is an important and the right step for the upcoming management plan.

The current plan of what is called a 'co-habitation' - which is a farce - is wasteful in a number of ways. Instead of letting the elk populations roam the land to access the water and flora they have evolved to need for subsistence, it often needs to be trucked in to keep populations at levels 'mandated by a plan'. Not only do these resources need to be expended to keep the herds alive - then later, National Park Service personnel go and cull the population when it exceeds their some-how-agreed upon 'rancher-acceptable' number.

In developing alternatives to be evaluated, the NPS should include Tule Elk not being confined behind the fence. Alternatives should include adding currently leased land to the Tule Elk Reserve as the leaseholders retire them due to climate change or shifting economic pressures, as we are already seeing.

Ecological reports recommend the fence be removed. There is no good reason to keep the fence.

We ask, why should the "elk fence" across the width of Tomales Point on Point Reyes National Seashore be immediately removed? Because, at long last, after six decades of the Seashore's existence--it is the right, just, humane, and obvious thing to do for an American, even global, National Park, perched on the formidable and awesome Pacific Coast, still waiting for its true nature to be revealed.”

**Correspondence ID:3788**

**Correspondence ID:3789**

Correspondence: "I am writing the National Park Service to respectfully request to remove the eight foot fence at Tomales Point in order for our iconic Tule elk to roam free in our National Park.

Point Reyes National Seashore has finite resources and maintaining an 8-foot fence at Tomales Point is not a good use of taxpayer funds.

Viewing the Tomales Point project from an objective approach, the most cost effective long-run plan is to take down the elk fences without the interference of cattle concerns and let the herds roam in a natural manner. The health of the elk herds could be clearly addressed, as well as the flora can be given its space for natural progression and seed dispersion. This would focus on only one plan to implement, for taxpayers and NPS staff, and not take the resources with two competing approaches.

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. The park's top priority should be to ensure the Tule elk survive and even thrive. Remove the elk fence.

Thanks so much for your serious attention to my comments. I think the main thing for the Tomales Point scoping plan should be removal of that horrible fence out there. The elk need to roam so they can find water and food. Native plant restoration would be a great starting point to let the American people know you're listening to them (finally!). Please include the general public, and not the ranchers, in your planning and communications."

**Correspondence ID:3795**

Correspondence: “I am writing the National Park Service, to state that the Elk fence needs to be removed in order for the elk herds to roam freely in the park. This is the best next step for the survival of this endemic species.

Reliable reports state the NPS has shouldered many of the operational costs over the years that should have been borne by the ranchers. Since most agencies have limited budgets, I'd like the Park Service to analyze how much it could save by making the ranches pay for any and all fencing, but especially the elk fence at Tomales Point. It should also look at how much it would save if the ranches were removed entirely from the park. Included in these analyses should be the value of increased public access to areas ranchers try to keep the public away from, the increased enjoyment of the park by the public, and the savings from not having to respond to rancher demands.

Park funds should be used to monitor and enforce water quality and other environmental standards in Point Reyes National Seashore versus spending money on a bad fence idea to starve wildlife in a National Park.

The Park Service should consider not only the economic costs of maintaining the elk fence and the management of the elk herd, it should examine the reputational and ethical costs of doing so as well. More and more, the public is very unhappy about the needless deaths of the Tule elk, for no other reason than to protect private ranchers' profits. How many visitors are discouraged from coming to visit due to this wasteful and disagreeable practice? How many dollars are not spent in the park and surrounding areas because of it? How much distrust does the Park Service generate when people see it catering to the select few, at the cost of the iconic Tule elk and damage to the park's environs? Too much, that's for sure.

Thank you for reading and placing my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore (PRNS). It is time, finally, for PRNS officials, notably Craig Kenkel, to stop stonewalling and ignoring the American public from across the country, and use proven science to prioritize wilderness, wildlife and habitat over commercial ranching. Start with a plan to remove the fence at Tomales Point and prioritize the endemic Tule Elk.”

**Correspondence ID:3796**

**Correspondence ID:3797**

Correspondence: “We are writing and requesting to please take down the elk fence from Tomales Point, as it prevents natural migration of Tule elk. It also stops them from getting water and food! Unacceptable and cruel!

It is not clear why the Park Service continues to spend taxpayer money for an unethical eight foot fence at the Tule Elk Reserve when the public has requested for years to remove the fence and let the Elk roam for free to get their water and food! This is their natural habitat, not that of cattle ranchers' herds of cattle foraging on public lands!!!

The long run goal is to phase out cattle from the Point Reyes National Seashore, altogether. This would allow a number of costly issues to be dropped as the progression of steps were accomplished, namely the need and upkeep of the elk fences, trucking in feed and water for the elk herds in the increasing occurrence of drought, culling the herds when successfully repopulating the areas and eradication of invasive species of plants brought in by cattle, cattle feed, and industrial machinery!

The difference in landscape between the Tule Elk Reserve and the ranches on the other side of the fence is stark! The Tule elk Reserve looks like a beautiful coastal prairie with lots of wildflowers and coyote brush. The land to the south looks barren and denuded and there is evidence of cow manure spraying - not what visitors come to Point Reyes to see. Please remove the fence in the Elk reserve, as this is the right step to take for our National Park!

Thank you for your attention to our public record comments on the Tomales Point planning process for Point Reyes National Seashore! Your responsibility is to the spirit of wilderness preservation and protection, and to the vast majority of Americans who have insisted that this iconic place be freed from private, for-profit, commercial business interests! We will continue to press for just that, like taking down the Tomales Point fence!

This fence, placed at the behest of cattle ranchers, goes against any semblance of humanity for native animals, the Tule elk! This is all about greed and certainly not the protection of our environment and its fragile ecosystem! Please, we implore you to take the humane approach and take down this cruel fence that is killing our Tule elk NOW!

With our serious gratitude!”

**Correspondence ID:3798**

Correspondence: “I respectfully submit this public comment for your consideration regarding the GMP planning process for Tomales Point at Point Reyes National Seashore (PRNS). All the natural resources, from native plants to the Tule Elk, should be unimpaired in and beyond Tomales Point. The American public wants open and accessible public lands and waters in their National Parks. No wildlife should be caged or captive in a National Park. We must remove the Tule Elk Fence now, and let the Tule Elk and other wildlife roam free to prosper as is natural, healthy, and just. Please scope removal of the Tule Elk Fence in your planning for Tomales Point.

Without a fence at Tomales Point, the National Park Service wouldn't need to waste efforts and money bringing water up to the elk. The animals would have plenty of water available from Abbotts lagoon and other sources down in the valley.

Resources should be spent on taking down the elk fence and re-wilding the park.

Taking down the fence is the best option, according to ecologists.

I urge you to use this opportunity to carry out the intentions of the creation of the park, which was to protect the biodiversity within the seashore. To do that, the sacrifices should be made by the few ranch and dairy families that have profited profusely over the years. Our National Park is owned by the people not by the few ranchers.”

Correspondence: "Thank you for the opportunity to provide input on the updated Tule Elk Management Plan/General Management Plan for Pt. Reyes National Seashore. To help the National Park Service (NPS) best structure its environmental review process, I offer the comments below. Please consider including these points in scoping your review and the presumed Environmental Impact Statement.

As a private citizen I find the fact that my tax dollar is being used to fence and kill wild animals in a National Park abhorrent. Take down the fence and let the Tule Elk roam to find water and forage.

Rather than maintaining the elk fence, troughs and mineral licks, the NPS could better use these resources to develop educational materials and programs about Tule elk.

Removing the fence allows native tule elk to roam free, which is good for both elk and for park landscape. Please help make this happen.

I am grateful to have the opportunity to provide this preliminary feedback, and I look forward to participating in the next steps of this important planning process."

**Correspondence ID:3805**

Correspondence: "Thank you for accepting my public comment on the Tomales Point planning process for Point Reyes National Seashore. I am very concerned. The Seashore's natural resources like the Tule Elk should be unimpaired.

The Park Service should not be spending so much money to maintain fencing at Tomales Point Reserve. There are all the expenses for materials, then all the hidden costs and time for labor, operations, administration, and rancher-pleasing. As a concerned citizen for the elk, please spend the money to remove the fence and free the Elk.

Moving forward the Park Service should partner closely with the Coast Miwok and scientists to re-wild the park.

Superintendent Kenkel and other PRNS officials should demonstrate leadership on a national scale and remove the Tule Elk Reserve's fence across Tomales Point so that a new, sustainable wildlife health model is created to right the wrong of past ill-conceived Park Service policy. It is their duty to protect all National Park natural resources for posterity.

Thank you for your time and consideration in this matter."

**Correspondence ID:3806**

Correspondence: I am a frequent visitor of point Reyes National Seashore. I visit almost every weekend for solitude and exposure to nature. I consider myself very fortunately to have such a resource near my home. I am somewhat perplexed at how dairy ranching can coexist with a protected natural area. I'm also very concerned about the heard of elk that lived there as well as other wildlife that I often see struggling, and I imagine competing for food water and space. I've heard the arguments that grazing cattle helps maintain the balance of a natural area but I cannot agree with this at all. I've been to the natural areas I frequent the natural areas and there is much more diversity of both of plants and animal specie. Having a background in ecology I can assure you that a grays cattle field is a much less diverse and unhealthy environment than a naturally grazed coastal scrub area or mixed forest. Please do what is best for our elk and other wildlife and our beautiful natural areas. This park is a resource for these beings as well as for the people of our country. Both the beef and dairy industries are on the decline as of late. Regardless our national park should not be used for commercial enterprises such as the dairy industry which is also destructive to this environment. Thank you for your attention.

**Correspondence ID:3807**

Correspondence: Some things are just obvious. Removing the fence is better management for wildlife than setting up plastic water tanks and troughs, and trucking water up to the elk reserve. Using fences to manage wildlife at a National Seashore is national embarrassment. You can do extremely better.

**Correspondence ID:3808**

Correspondence: The Tule Elk BELONG there! Cattle, probably not... The NPS's priority must be protecting the Natural World. It's time, well past time, for man made priorities to be reconsidered!

**Correspondence ID:3809**

Correspondence: Please remove the eight foot fence at Tomales Point for the sake of our native Tule Elk. We must prioritize our native Tule elk over the domestic cattle raised for profit in PRNS.

The recent controversies regarding the treatment of the captive elk herd extract a cost on park management by forcing it to respond to the public's concerns and the demands the ranchers have become used to making. For example, NPS is now providing water sources and mineral licks for the elk to prevent recurring starvation and dying from thirst. In the past, NPS has built and repaired fences on behalf of the ranches. How much would the Park Service save if the elk were allowed to roam free? How much would it save if the ranchers were held to their lease terms and paid for improvements themselves? NPS should not be spending tax monies on private, for-profit ventures in our public park.

The long run goal is to phase out cattle from the Point Reyes National Seashore, altogether. This would allow a number of costly issues to be dropped as the progression of steps were accomplished, namely the need and upkeep of the elk fences, trucking in feed and water for the elk herds in the increasing occurrence of drought, culling the herds when successfully repopulating the areas and eradication of invasive species of plants brought in by cattle, cattle feed, and industrial machinery.

Maintaining a captive Tule elk herd at Tomales Point will likely only become increasingly expensive with climate change and recurring, significant droughts. If the fence is removed, water troughs and mineral licks will be unnecessary.

As a long-time user of the seashore, I'm looking forward to seeing what the Park Service comes up with as an improved management plan. It's a good time to make some long-needed changes, particularly the elk fence removal. That alone will make a significant difference in one's experience of the park, and I'm

sure it will be met with massive public approval. Thank you for considering my input. I'm excited to see the results.

**Correspondence ID:3810**

Correspondence: The confined Tule Elk are dying at astronomical rates each year, and the Park Service just keeps them penned up in a cage to suffer and die at Tomales Point. Please stop this. The Tule Elk Reserve fence needs to come down now. If you want a reserve/preserve, remove the 8-foot fence, put in a small wildlife-friendly fence, and turn the land into a Native Coastal Prairie Reserve.

If NPS removes the elk fence, population control of the herd will be greatly simplified. As seen with the free-roaming herds, numbers are much more stable as the elk are able to find water and forage as needed on their own. If fence removal resulted in a large expansion of the herd (very unlikely), I would like to see the elk allowed to expand throughout the park and onto the mainland, since they are indigenous to this area. In addition, individual elk could be relocated to start new herds in other parks and wilderness areas. If the cows are removed from PRNS, eventually the elk will be cleared of Johne's Disease, allowing for such safe transfers. As indigenous animals, their spread would enhance the diversity and resiliency of the environment.

The NPS should revise the PRNS Succession Policy to permanently retire grazing leases as ranchers choose to not renew them. This would create an historic opportunity to restore that 33% of the park that is currently surrounded by fences, full of cow manure and turn it into a program that will benefit not only Tule Elk, but expand the biodiversity throughout the park. The public would enthusiastically volunteer to help the NPS with such a program.

Because the well-publicized die-offs of the Tomales Point Tule elk over the past few years have captured the public's attention, it's important that NPS give full consideration to the benefits of removing the elk fence that pens the herd in. Since the fence is only for the benefit of the private ranches in the park, NPS should look at what the impacts on ranching would be with removal of the fence, and weigh that against benefits to the natural environment and the public at large. Since the vast majority of park visitors come for the elk, and not the cows, maintaining a healthy herd should be seen as more important than protecting the private interests of the ranchers.

It is requested the personnel at the National Park Service re-review the 1993 report of the Scientific Advisory Panel on control of Tule Elk in PRNS, and include it recommendation in the upcoming plan. The independent advisory panel recommended to remove the fence across Tomales Point, and develop a plan to achieve a large, healthy, free-ranging elk population. Thank you Mr Kenkel for your attention to this recommendation.

Correspondence: Removal of the elk fence at Tomales Point should be included in your plans for PRNS. It is the necessary and ethical step to take for a native species in a National Seashore.

Since the Park Service recently concluded its multi-year process to update its General Management Plan Amendment (GMPA), one wonders why this part of park operations wasn't included in that process. Nonetheless, now is the time for a comprehensive analysis of NPS current management of Tomales Point, as well as past practices, and all associated costs. While NPS should adhere to its mandate as specified in the Organic Act of 1916 with an eye to providing the highest levels of protection for the natural resources within the park, it should examine the costs in staff time and materials, as well as ongoing maintenance costs, of the elk fence. It should compare that to the savings and benefits of removing the fence, including the environmental benefits of allowing the cattle-grazed areas a chance to repair themselves.

The Coast Miwok people should decide how to bring the land back to the way their people left it, before impacted by European settlers in the mid-1800's. The Coast Miwok lived in unison with the Tule elk, the native wildlife and the native vegetation. Let's help recreate our National Park to how it was prior to the impact caused by commercial cattle operations.

First and foremost, NPS should remove the fence that separates the Tomales Point herd from private, for-profit ranching livestock and prevents the elk herd from finding forage and water in its own. This would allow a more natural existence, without interference from humans.

This is nothing natural nor appropriate of an eight foot fence on public lands purposely confining native wildlife for the sake of leased cattle ranching operations. It is time for our public land in PRNS to be returned to wilderness in its entirety, and remove all impacts of ranching from 1/3 of our National Park. This includes the removal of the Tomales Point fence. Thank you for your attention to its removal, and the focused protection of our native Tule elk.

**Correspondence ID:3813**

Correspondence: I am writing the National Park Service to respectfully request to remove the eight foot fence at Tomales Point in order for our iconic Tule elk to roam free in our National Park.

The elk fence has hidden costs that have not been analyzed or made public before. Besides the typical costs of fence construction and maintenance, there's the cost of park staff having to make sure the water tanks that serve the captive elk herd are maintained and kept filled, the mineral licks provided are sufficient to the herd's needs, and complaints from ranchers are responded to. Then there are the costs of the impacts on the area outside the fence: the massive amounts of invasive plants that have forced out the native, deep-rooted grasses that are true effective carbon sequesters, the elimination of habitat for indigenous animals of all sizes, the carbon created by the rotting of annual invasive gasses, and more. And because the fence only exists at the request of cattle ranchers, NPS should look at the costs of the damage the cattle do with their methane pollution the atmosphere and their manure polluting the parks' streams, lagoons and bays. These ecological costs haven't been accounted for, and need to be.

Financial resources of the National Park Service (NPS) should be used to end the Tule Elk Reserve on Tomales Point, by removal of the rancher and NPS insisted eight foot fence and replace that with a wildlife-friendly smaller fence but a fence that keeps the cattle out of this preserved environment. Let's establish a Coastal Native Prairie Reserve in place of the wholly bad and inhumane Tule Elk Reserve. The Tule Elk get to roam free for food and water throughout the Seashore, and the current Reserve transforms into a wild habitat global study model during these times of severe climate heating and California megadrought.

Removal of the Tule Elk Reserve fence across Tomales Point in Point Reyes National Seashore must happen now. This must be done urgently in light of the drought and fire conditions caused by climate change. It must include a completely revised and science-based plan, enhanced by Native American ecological knowledge and practices, to cease the ranch succession policies of the past in favor of transformation to natural habitats, with well-planned wildlife corridors to aid natural and assisted rewilding restoration processes.

Thank you for listening to the public and considering the wishes of the many instead of the profits of a few.

**Correspondence ID:3814**

Correspondence: The confined Tule Elk are dying at astronomical rates each year, and the Park Service just keeps them penned up in a cage to suffer and die at Tomales Point. Please stop this. The Tule Elk Reserve fence needs to come down now. If you want a reserve/preserve, remove the 8-foot fence, put in a small wildlife-friendly fence, and turn the land into a Native Coastal Prairie Reserve.

It is not clear why the Park Service continues to spend taxpayer money for an unethical eight foot fence at the Tule Elk Reserve when the public has requested for years to remove the fence and let the Elk roam for free to get their water and food.

The park should spend time and money on removing the fences, planting native grasses, cleaning up the water pollutants, and generally restoring Tomales Point back to its natural habitat.

I cannot find a reasonable sound argument for continued ranching or dairy in a National Park. There are numerous dairy and cattle ranches in West Marin and Sonoma counties, as well as all across California and the entire United States. Some owned by the same families as those that ranch in the park today. Tule elk are only native to California and only found in Point Reyes National Seashore. We are lucky the elk are located in a National Park where they should be protected. Why private dairy and beef cows are prioritized over those elk in a National Park is beyond anyone's logical reasoning. It is political and that does not make it right. The National Park should be above politics. We need our National Parks, which we pay for and support, to work for us, the people.

Thank you for allowing me to comment and for putting effort and resources to considering how to protect our precious and dwindling natural resources of our National Park.

**Correspondence ID:3815**

Correspondence: Thank you for accepting my public comment on the Tomales Point planning process for Point Reyes National Seashore. I am very concerned. The Seashore's natural resources like the Tule Elk should be unimpaired.

As a private citizen I find the fact that my tax dollar is being used to fence and kill wild animals in a National Park abhorrent. Take down the fence and let the Tule Elk roam to find water and forage.

Instead of US taxpayers footing the bill for a godawful fence to keep elk without enough water and food out at Tomales Point, the Park Service needs to take down the fence, remove the thousands of cattle impacting the land, air, and waters, and let nature be whole at Point Reyes National Seashore.

A National Park was created in Point Reyes to protect one of the most scenic and biologically diverse areas in our country. It is being put at risk for the profits of a few private ranchers. This is not acceptable to the people of Marin, the SF Bay Area, and the nation, nor our native wildlife. It is time to remove the Elk fence.

I urge you to use this opportunity to carry out the intentions of the creation of the park, which was to protect the biodiversity within the seashore. To do that, the sacrifices should be made by the few ranch and dairy families that have profited profusely over the years. Our National Park is owned by the people not by the few ranchers.

**Correspondence ID:3816**

Correspondence: You want my input to the Tomales Point planning process for Point Reyes National Seashore? Why is there even a Tule Elk enclosure out there? Does everything have to please and serve the ranchers (who shouldn't even be there anymore)? The Tule Elk cannot even get enough water or food, and are dying off in really high numbers! Please get rid of the Tule Elk Fence and let the Elk roam free. If you need a fence, put up a wildlife-friendly one, and turn the place into a Native Coastal Plant Reserve.

What are the annual costs for the Tomales Point Reserve fence and the supplemental water and minerals for the Tule Elk trapped there? Why are Elk still trapped and causing this expense, when there are ample lands and waters for Elk to roam at Point Reyes National Seashore? It's not a zoo, it's a national park. Please take down the fence.

Instead of paying for fence maintenance and supplemental water and minerals out at Tomales Point when Elk are actually starving to death--why doesn't the Park Service and Mr. Kenkel come up with a plan to remove tenant ranchers and let wildlife live naturally all across Point Reyes National Seashore?

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

The original studies done by the NPS on how to manage the Tule elk showed they should be allowed to roam free. I will be tracking this process to see what the Park Service's plans are in this regard. I and the vast majority of the public want better treatment of the elk, and better treatment of the Seashore itself. We do not want to see for-profit ranches degrading our beautiful park. This is the Park Service's opportunity to do this job right. You have my support in achieving this.

**Correspondence ID:3817**

Correspondence: Thank you for allowing the public to comment on the process of creating the upcoming plan for Tomales Point within Point Reyes National Seashore. I for one, as I think many others do, frequent national parks to see wildlife in their natural habitat. I don't go to the park to see cows and fences. If I wanted to go to a zoo I would choose to do just that. Take down the fence and allow all of the wildlife to roam freely within the entire park as that is why the park was created.

The current plan of what is called a 'co-habitation' - which is a farce - is wasteful in a number of ways. Instead of letting the elk populations roam the land to access the water and flora they have evolved to need for subsistence, it often needs to be trucked in to keep populations at levels 'mandated by a plan'. Not only do these resources need to be expended to keep the herds alive - then later, National Park Service personnel go and cull the population when it exceeds their some-how-agreed upon 'rancher-acceptable' number.

It is requested to stop using taxpayers' money to pay for the visual blight of the Elk Fence out on Tomales Point. Please stop trucking in water and minerals and whatever else to try to sustain a native herd in a non-native environment. Take down the fence, and use our taxpayers' money to actually turn the Seashore into a National Park that it deserves. Wildlife, natural habitat, clean water/soil/air, and public access should be the primary forces the Park Service supports - not a small group of politically-connected ranchers and their hoofed methane-operations.

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. The park's top priority should be to ensure the Tule elk survive and even thrive. Remove the elk fence.

We ask, why should the "elk fence" across the width of Tomales Point on Point Reyes National Seashore be immediately removed? Because, at long last, after six decades of the Seashore's existence--it is the right, just, humane, and obvious thing to do for an American, even global, National Park, perched on the formidable and awesome Pacific Coast, still waiting for its true nature to be revealed.

**Correspondence ID:3818**

Correspondence: Thank you for accepting my public comment on the Tomales Point planning process for Point Reyes National Seashore. I am very concerned. The Seashore's natural resources like the Tule Elk should be unimpaired.

The costs for Tomales Point elk fence maintenance and to put out water and minerals is not solving the problem of Tule Elk health. There is not enough water and minerals for the different non-mingling Tomales Point herds. It is a band-aid for a constant would therefore please come up with a real solution for wild Elk, as they should not be confined in a zoo-like environment that does not have a sufficient amount of water and forage for this herd.

It is requested to stop using taxpayers' money to pay for the visual blight of the Elk Fence out on Tomales Point. Please stop trucking in water and minerals and whatever else to try to sustain a native herd in a non-native environment. Take down the fence, and use our taxpayers' money to actually turn the Seashore into a National Park that it deserves. Wildlife, natural habitat, clean water/soil/air, and public access should be the primary forces the Park Service supports - not a small group of politically-connected ranchers and their hoofed methane-operations.

I am taking the approach that the elk fence be removed from the Tomales Point area and all of the Point Reyes National Seashore because that was and is the intention of the setting-up of this National Park area to begin with. It was not envisioned as a prison area, that is the farthest thing that could be imagined, with cows over here and the elk behind a fence other there. "Oh give me a home where the bison and elk roam.." - not 'why are they behind that fence?'

Thank you for the opportunity to provide feedback on the upcoming plan for Elk Reserve in Point Reyes National Seashore. The 3-year timeframe proposed by the NPS appears to be too long of a period, as we have lost approximately 50% of our native Elk held captive behind this 8 foot fence due to lack of appropriate amount of food, water and minerals. In your upcoming plan, please ensure there are numerous alternatives available on the removal of this deadly fence. It is time for that fence to be removed.

**Correspondence ID:3819**

Correspondence: Thank you for accepting my public comment on the Tomales Point planning process for Point Reyes National Seashore. I am very concerned. The Seashore's natural resources like the Tule Elk should be unimpaired.

**Correspondence ID:3820**

Correspondence: Thank you for allowing the public to comment on the process of creating the upcoming plan for Tomales Point within Point Reyes National Seashore. I for one, as I think many others do, frequent national parks to see wildlife in their natural habitat. I don't go to the park to see cows and fences. If I wanted to go to a zoo I would choose to do just that. Take down the fence and allow all of the wildlife to roam freely within the entire park as that is why the park was created.

The recent controversies regarding the treatment of the captive elk herd extract a cost on park management by forcing it to respond to the public's concerns and the demands the ranchers have become used to making. For example, NPS is now providing water sources and mineral licks for the elk to prevent recurring starvation and dying from thirst. In the past, NPS has built and repaired fences on behalf of the ranches. How much would the Park Service save if the elk were allowed to roam free? How much would it save if the ranchers were held to their lease terms and paid for improvements themselves? NPS should not be spending tax monies on private, for-profit ventures in our public park.

The Park Service should be looking at such alternate uses of Tomales Point as creating a wildlife corridor that could run throughout the park, and the removal of the elk pen. The re-establishment of a more balanced ecosystem where the elk thrive could lead to the return of natural predators such as mountain lions, and with our climate in serious trouble, restoration of native grasses, shrubs and trees should be a high priority for the Park Service.

Confining Tule elk for the benefit of private ranching interests is a breach of the public trust.

Thank you for your consideration in this important manner.

**Correspondence ID:3821**

Correspondence: Please read and consider my public comment on the Tomales Point planning process for Point Reyes National Seashore. Tule Elk should be free to roam, gather, find water and food, and live

more healthy lives--not be imprisoned for their entire lives behind a god-awful fence. Point Reyes is a national park, therefore please remove the fence now.

As a private citizen I find the fact that my tax dollar is being used to fence and kill wild animals in a National Park abhorrent. Take down the fence and let the Tule Elk roam to find water and forage.

The Coast Miwok people should decide how to bring the land back to the way their people left it, before impacted by European settlers in the mid-1800's. The Coast Miwok lived in unison with the Tule elk, the native wildlife and the native vegetation. Let's help recreate our National Park to how it was prior to the impact caused by commercial cattle operations.

Removing the elk fence is the most impactful step the Park can take for Tomales Point, and this should be the plan review's top priority. This and total removal of all dairy and cattle operations from all of the park would have the strongest positive impacts, both ecologically and in terms of protection of the public's resources. The removal of both would benefit the return of native, deep-rooted grasses, allow the return of birds and wildlife that cannot survive in the barren fields where cattle have eaten the greenery down to the earth, and let the natural prairie reestablish itself. It could also serve as an outdoor laboratory for studying how to accelerate its healing and nurturing, information that will be increasingly important as we try to save our planet from the damages of global warming.

Thank you for your attention to my comments. If you do only one thing: Remove the godawful eyesore of a fence out there. Would you want to be trapped without enough water or food? You can't say it's a natural process of attrition if you've got them captive. Remove the fence immediately. Create safe and easy wildlife corridors for the elk to move out. Make the ranchers stop harming wildlife and hassling human visitors. The American people in multiple surveys, letters, op-eds, articles, and more want a National Park at Point Reyes. Not a ranch.

**Correspondence ID:3822**

Correspondence: I am a taxpayer who wants you to remove the fence confining the tule elk. It is important our elk survive and are well cared for in a natural habitat, vs confined behind a fence which keeps the elk away from much needed water and forage.

When it comes to Tomales Point our National Park has failed us, the taxpayer, and rightful owners of the land. We should not be paying for the cost of installing and maintaining a fence so wild animals can't roam and forage for food and water in areas preserved for private cattle and dairy ranchers within a National Park.

Tomales Point and its elk herd should have a wildlife management approach to management. Free access for the elk to roam, restoration of the native grasses and the elimination of invasive plants, removal of private cattle and dairy operations, and unhindered access for the public to wander the land while respecting the natural flora and fauna would increase and enhance PRNS's popularity, as well as its natural biome.

Point Reyes has stunning biodiversity, and the restoration of native plants and wildlife will ensure that these important ecosystems last for generations.

I hope the above concerns are addressed honestly and thoroughly. I, like millions of others, treasure our Seashore, and want it to be treated in a manner that preserves it and enhances it for future generations,

something that is not happening now. I will be watching to make sure it is a transparent process, and look forward to improved management of our public commons.

**Correspondence ID:3823**

Correspondence: You want my input to the Tomales Point planning process for Point Reyes National Seashore? Why is there even a Tule Elk enclosure out there? Does everything have to please and serve the ranchers (who shouldn't even be there anymore)? The Tule Elk cannot even get enough water or food, and are dying off in really high numbers! Please get rid of the Tule Elk Fence and let the Elk roam free. If you need a fence, put up a wildlife-friendly one, and turn the place into a Native Coastal Plant Reserve.

What are the annual costs for the Tomales Point Reserve fence and the supplemental water and minerals for the Tule Elk trapped there? Why are Elk still trapped and causing this expense, when there are ample lands and waters for Elk to roam at Point Reyes National Seashore? It's not a zoo, it's a national park. Please take down the fence.

Instead of paying for fence maintenance and supplemental water and minerals out at Tomales Point when Elk are actually starving to death--why doesn't the Park Service and Mr. Kenkel come up with a plan to remove tenant ranchers and let wildlife live naturally all across Point Reyes National Seashore?

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

The original studies done by the NPS on how to manage the Tule elk showed they should be allowed to roam free. I will be tracking this process to see what the Park Service's plans are in this regard. I and the vast majority of the public want better treatment of the elk, and better treatment of the Seashore itself. We do not want to see for-profit ranches degrading our beautiful park. This is the Park Service's opportunity to do this job right. You have my support in achieving this.

**Correspondence ID:3824**

Correspondence: Thank you for the opportunity to comment on Tomales Point. Why is this area being treated separate from Point Reyes National Seashore? As it is within the boundaries of the seashore it should be interwoven within the fabric of the rest of the seashore and the ecosystem allowed to become whole instead of piecemeal. A visitor should be able to walk/hike the entirety of the park. And the native grasses and wildlife (including elk) should be able to roam freely within all areas of the park. Please remove the elk fences and let the park be an actual park.

The Park Service should not be spending so much money to maintain fencing at Tomales Point Reserve. There are all the expenses for materials, then all the hidden costs and time for labor, operations, administration, and rancher-pleasing. As a concerned citizen for the elk, please spend the money to remove the fence and free the Elk.

I respectfully ask that the Tule Elk Reserve fence be taken down now. National Park Service and Point Reyes National Seashore funds supplied by the American taxpayer should be used to create wild and healthy freedom for the Tule Elk and other wildlife. Public access to vast swaths of the Seashore now blocked by ranching barbed/electric wire and formidable gates, which is not acceptable on public lands.

Please investigate, enforce, and punish cattle ranching families that continue to degrade and pollute our Seashore's lands, waters, and air. Superintendent Kenkel and all of you at the NPS: It is time to get your priorities and mandates straight. Please serve the interests of wildlife, habitat, visitors, and posterity.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

Point Reyes National Seashore, after 60 years from its founding, should be a national pride of astounding biodiversity, global climate research, and honor of the public trust in perpetuity. Please emphasize and prioritize the importance of protecting our native Tule elk in the upcoming plan, which would include the removal of the fence across Tomales Point.

**Correspondence ID:3825**

Correspondence: Now that the National Park Service is looking at its management of the Tomales Point area of the Pt. Reyes National Seashore, there are a number of items NPS should take into consideration as it updates its plans. Please include consideration of these when scoping your environmental review process. The most critical of these is the permanent removal of the fence that keeps the Tomales Point Tule elk herd imprisoned on land that isn't sufficient to support a captive herd.

It's both cheaper and more ecological to let the elk be free, without a fence, than it is to try to manage them unnaturally, with trucked water tanks and salt licks.

The National Park Service should be spending all resources on restoring the natural habitat of the park, rather than fighting the public's will to protect our land, and our native Tule elk.

The first sentence of the Tule Elk Management Plan and Environmental Assessment, dated 1998 states "The purpose of this plan and environmental assessment is to guide the management, monitoring, and research of Tule Elk, *Cervus elaphus nannodes*, at Point Reyes National Seashore for the next five to ten years". Well here we are 24 years later and you're finally getting around to updating this horribly outdated plan. Meanwhile hundreds of beautiful Tule Elk have died behind that fence while the NPS did nothing. That fence has to go.

It is time to focus on the health of our National Seashore and protect the air, soil, water, native wildlife and native vegetation over the constant impact from private cattle operations. The ranchers espouse crackpot pseudoscience about false carbon sinks (pasture vs. native coastal prairie), regenerative ranching (oxymoron), methane digesters (new profit streams), while the objective and independent science-based literature state how a native landscape with native vegetation and wildlife will help fight climate change more effectively than cattle operations. Please prioritize our native landscape and native wildlife in Point Reyes.

**Correspondence ID:3826**

Correspondence: Thank you for the opportunity to comment on Tomales Point. Why is this area being treated separate from Point Reyes National Seashore? As it is within the boundaries of the seashore it should be interwoven within the fabric of the rest of the seashore and the ecosystem allowed to become whole instead of piecemeal. A visitor should be able to walk/hike the entirety of the park. And the native grasses and wildlife (including elk) should be able to roam freely within all areas of the park. Please remove the elk fences and let the park be an actual park.

It would be better and less expensive to allow Tule elk access to water sources, such as the spring and lagoon in the region directly below the Tomales Point reserve.

Instead of paying for fence maintenance and supplemental water and minerals out at Tomales Point when Elk are actually starving to death--why doesn't the Park Service and Mr. Kenkel come up with a plan to remove tenant ranchers and let wildlife live naturally all across Point Reyes National Seashore?

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. The park's top priority should be to ensure the Tule elk survive and even thrive. Remove the elk fence.

We need a long-range plan that supports a healthy population of native Tule Elk. It is time for the Park Service to prioritize our elk in PRNS over private cattle operations on our public land. Thank you in advance, for a plan that will include immediate removal of this unnatural and unethical eight foot fence.

**Correspondence ID:3827**

Correspondence: I am a taxpayer who wants you to remove the fence confining the tule elk. It is important our elk survive and are well cared for in a natural habitat, vs confined behind a fence which keeps the elk away from much needed water and forage.

Allowing the continuation of cattle ranching in this area, Tomales Point in the Point Reyes National Seashore, is contradictory to the NPS trying to mitigate the negative impacts of climate change partially caused by this very practice. The NPS needs to do its part and at every step possible be a leader to achieve this end-result.

We wonder why Point Reyes National Seashore officials, especially Superintendent Kenkel, persist with keeping the expense of a long ugly fence out at Tomales Point and to truck in water and minerals. It's obvious even to a non-scientist. There's not enough natural food and water to sustain the Tule Elk entrapped in a zoo pen out there. Take down the fence, and instead use the money to help the Tule Elk transition and thrive across the Seashore. Remove the ranchers and their cattle. Enough is enough. It's a NATIONAL PARK!

The Elk Fence on Tomales Point must be removed. Tule Elk need to mingle, associate, and mate to prolong genetic diversity and sustain present and long-term herd health, vitality, and viability.

With the public's participation, I expect a greatly improved management plan for Tomales Point and the Tule elk. This is a good way for the Park Service to demonstrate that it can properly manage the public's resources in a way that improves the health and diversity of the park, while improving relations with the general public. Thank you for the opportunity to provide input.

**Correspondence ID:3828**

Correspondence: I am a taxpayer who wants you to remove the fence confining the tule elk. It is important our elk survive and are well cared for in a natural habitat, vs confined behind a fence which keeps the elk away from much needed water and forage.

The costs for Tomales Point elk fence maintenance and to put out water and minerals is not solving the problem of Tule Elk health. There is not enough water and minerals for the different non-mingling

Tomales Point herds. It is a band-aid for a constant would therefore please come up with a real solution for wild Elk, as they should not be confined in a zoo-like environment that does not have a sufficient amount of water and forage for this herd.

Resources currently spent on maintaining the fence could be better spent on expanding interpretive displays of indigenous land stewardship practices and restoration of Coastal Miwok sites in Point Reyes National Seashore.

The fence should be removed, for the benefit of the elk herds and their survival.

As a long-time user of the seashore, I'm looking forward to seeing what the Park Service comes up with as an improved management plan. It's a good time to make some long-needed changes, particularly the elk fence removal. That alone will make a significant difference in one's experience of the park, and I'm sure it will be met with massive public approval. Thank you for considering my input. I'm excited to see the results.

**Correspondence ID:3829**

Correspondence: You want my input to the Tomales Point planning process for Point Reyes National Seashore? Why is there even a Tule Elk enclosure out there? Does everything have to please and serve the ranchers (who shouldn't even be there anymore)? The Tule Elk cannot even get enough water or food, and are dying off in really high numbers! Please get rid of the Tule Elk Fence and let the Elk roam free. If you need a fence, put up a wildlife-friendly one, and turn the place into a Native Coastal Plant Reserve.

What are the annual costs for the Tomales Point Reserve fence and the supplemental water and minerals for the Tule Elk trapped there? Why are Elk still trapped and causing this expense, when there are ample lands and waters for Elk to roam at Point Reyes National Seashore? It's not a zoo, it's a national park. Please take down the fence.

Instead of paying for fence maintenance and supplemental water and minerals out at Tomales Point when Elk are actually starving to death--why doesn't the Park Service and Mr. Kenkel come up with a plan to remove tenant ranchers and let wildlife live naturally all across Point Reyes National Seashore?

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

The original studies done by the NPS on how to manage the Tule elk showed they should be allowed to roam free. I will be tracking this process to see what the Park Service's plans are in this regard. I and the vast majority of the public want better treatment of the elk, and better treatment of the Seashore itself. We do not want to see for-profit ranches degrading our beautiful park. This is the Park Service's opportunity to do this job right. You have my support in achieving this.

**Correspondence ID:3830**

Correspondence: I am writing to you specifically to address your plans for Tomales Point in the Point Reyes National Seashore. As they currently stand, they need to be incorporated into the General Plan for the Seashore - not as a separate part of it. It does not make strategic or economic sense to treat

them as a part-as-to-of-themselves. The steps to restore the flora and fauna for all areas must be incorporated into the dynamics of the plan at the outset.

It is not clear why the Park Service continues to spend taxpayer money for an unethical eight foot fence at the Tule Elk Reserve when the public has requested for years to remove the fence and let the Elk roam for free to get their water and food.

The Coast Miwok people should decide how to bring the land back to the way their people left it, before impacted by European settlers in the mid-1800's. The Coast Miwok lived in unison with the Tule elk, the native wildlife and the native vegetation. Let's help recreate our National Park to how it was prior to the impact caused by commercial cattle operations.

The first sentence of the Tule Elk Management Plan and Environmental Assessment, dated 1998 states "The purpose of this plan and environmental assessment is to guide the management, monitoring, and research of Tule Elk, *Cervus elaphus nannodes*, at Point Reyes National Seashore for the next five to ten years". Well here we are 24 years later and you're finally getting around to updating this horribly outdated plan. Meanwhile hundreds of beautiful Tule Elk have died behind that fence while the NPS did nothing. That fence has to go.

We ask, why should the "elk fence" across the width of Tomales Point on Point Reyes National Seashore be immediately removed? Because, at long last, after six decades of the Seashore's existence--it is the right, just, humane, and obvious thing to do for an American, even global, National Park, perched on the formidable and awesome Pacific Coast, still waiting for its true nature to be revealed.

**Correspondence ID:3831**

Correspondence: Please see that the fence at Tomales is removed. The Elk need water to survive.

**Correspondence ID:3832**

Correspondence: I am a taxpayer who wants you to remove the fence confining the tule elk. It is important our elk survive and are well cared for in a natural habitat, vs confined behind a fence which keeps the elk away from much needed water and forage.

The costs for Tomales Point elk fence maintenance and to put out water and minerals is not solving the problem of Tule Elk health. **Correspondence ID:3833**

Correspondence: Thank you for the opportunity to comment on Tomales Point. Why is this area being treated separate from Point Reyes National Seashore? As it is within the boundaries of the seashore it should be interwoven within the fabric of the rest of the seashore and the ecosystem allowed to become whole instead of piecemeal. A visitor should be able to walk/hike the entirety of the park. And the native grasses and wildlife (including elk) should be able to roam freely within all areas of the park. Please remove the elk fences and let the park be an actual park.

The Park Service should not be spending so much money to maintain fencing at Tomales Point Reserve. There are all the expenses for materials, then all the hidden costs and time for labor, operations, administration, and rancher-pleasing. As a concerned citizen for the elk, please spend the money to remove the fence and free the Elk.

I respectfully ask that the Tule Elk Reserve fence be taken down now. National Park Service and Point Reyes National Seashore funds supplied by the American taxpayer should be used to create wild and healthy freedom for the Tule Elk and other wildlife. Public access to vast swaths of the Seashore now blocked by ranching barbed/electric wire and formidable gates, which is not acceptable on public lands. Please investigate, enforce, and punish cattle ranching families that continue to degrade and pollute our Seashore's lands, waters, and air. Superintendent Kenkel and all of you at the NPS: It is time to get your priorities and mandates straight. Please serve the interests of wildlife, habitat, visitors, and posterity.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

Point Reyes National Seashore, after 60 years from its founding, should be a national pride of astounding biodiversity, global climate research, and honor of the public trust in perpetuity. Please emphasize and prioritize the importance of protecting our native Tule elk in the upcoming plan, which would include the removal of the fence across Tomales Point.

**Correspondence ID:3834**

Correspondence: I want to thank you for taking my public comment on the Tomales Point scoping process at Point Reyes National Seashore. I cannot believe there is a Prison Fence restricting Tule Elk in our national park. What is that about? To please the cattle ranchers, and prevent the Tule Elk from being free to roam, associate, and live a good life? No more animal prisons in our national park. Point Reyes is not a zoo either. It is time to take down the elk fence.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

The NPS should put resources into creating a rewilded park. It will be necessary to plan on demolition and disposal of the many tons of concrete which now comprise the modern loafing barns at each PRNS dairy (one of which supposedly closed a year ago).

Taking down the fence is the best option, according to ecologists.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3835**

**Correspondence ID:3836**

Correspondence: In response to your letter dated March 31, 2022 asking for ideas on the Tomales Point Tule Elk Reserve planning process, I offer the following regarding the elk fence and how best to manage.

Taking away the fence is cheaper and more sensible than setting up enormous plastic water tanks and trucking water up to the elk reserve.

All money, time and energy should be spent on re-wilding the entire National Seashore and not subsidizing destructive cattle operations on these public lands.

Removing the Tomales Point elk fence will improve genetic diversity within the elk population.

The original studies done by the NPS on how to manage the Tule elk showed they should be allowed to roam free. I will be tracking this process to see what the Park Service's plans are in this regard. I and the vast majority of the public want better treatment of the elk, and better treatment of the Seashore itself. We do not want to see for-profit ranches degrading our beautiful park. **Correspondence ID:3839**

Correspondence: Regarding the upcoming plan for Tomales Point within Point Reyes National Seashore I request our National Park prioritize the wishes of the Miwok First Nation people. They "managed" that land for more than 10,000 and didn't disrupt the ecosystem. Allow them to determine how the land

should be managed so that our future generations will be allowed to experience biodiversity, not cows, that exists there today. Maybe then the area will be allowed to thrive.

Recently, the NPS has started an unnatural process of providing emergency water via tanks. This practice is costly, and has limited effectiveness.

The long run goal is to phase out cattle from the Point Reyes National Seashore, altogether. This would allow a number of costly issues to be dropped as the progression of steps were accomplished, namely the need and upkeep of the elk fences, trucking in feed and water for the elk herds in the increasing occurrence of drought, culling the herds when successfully repopulating the areas and eradication of invasive species of plants brought in by cattle, cattle feed, and industrial machinery.

The elk fence should be removed, for the benefit of the elk herds. Also, the barbed wire cow fences should be removed, as they don't belong in a national park, and they are not wildlife friendly.

I respectfully submit this letter and request the National Park Service to be impartial in the next steps related to our incredible native wildlife in Point Reyes National Seashore.

**Correspondence ID:3840**

Correspondence: You want my input to the Tomales Point planning process for Point Reyes National Seashore? Why is there even a Tule Elk enclosure out there? Does everything have to please and serve the ranchers (who shouldn't even be there anymore)? The Tule Elk cannot even get enough water or food, and are dying off in really high numbers! Allowing the continuation of cattle ranching in this area, Tomales Point in the Point Reyes National Seashore, is contradictory to the NPS trying to mitigate the negative impacts of climate change partially caused by this very practice. The NPS needs to do its part and at every step possible be a leader to achieve this end-result.

Why is the Park Service wasting taxpayer money on an inappropriate fence out at Tomales Point? The NPS should take down the fence, let the Tule Elk roam, and create a Coastal Native Habitat Reserve instead of keeping the Elk Pen out there. It's ridiculous that wildlife are treated like zoo animals in a National Park.

The Tomales Point management plan for Point Reyes National Seashore must include removal of the Tule Elk Reserve fence, freedom of movement and association by the existing Tule Elk herds throughout the Seashore, and transition from a Tule Elk Reserve to a protected Coastal Native Habitat Reserve. Please include in this plan, the creation of safe wildlife corridors to facilitate Tule Elk migration elsewhere into the Seashore and all manner of other endeavors true to National Park Service founding mandates for natural resources protection and the enjoyment of natural features by future generations. In addition, it must include immediate cessation of the ranching succession policy in favor of immediate removal of commercial cattle operations and its ranch residential infrastructure.

We ask, why should the "elk fence" across the width of Tomales Point on Point Reyes National Seashore be immediately removed? Because, at long last, after six decades of the Seashore's existence--it is the

right, just, humane, and obvious thing to do for an American, even global, National Park, perched on the formidable and awesome Pacific Coast, still waiting for its true nature to be revealed.

**Correspondence ID:3845**

Correspondence: Here's my public comment for the planning process about Tomales Point at Point Reyes National Seashore: Take down that monstrous 8-foot fence and Let the Elk roam free.

Spending the public's money for a Tule Elk Fence and supplemental water and minerals is wasteful, and not a long-term, feasible solution. The Tule Elk are starving to death from lack of access to proper food. And the impact of global warming causes climate effects like long term drought out there. It's bad money after bad money. Free the Tule Elk from Tomales Point. Let the Elk have water and food for free around the Park.

There have been claims made over the years by ranching interests that the elk have damaged ranch operations or facilities. NPS should determine the facts here, and document the actual costs of any verifiable damage. Additionally, ranchers have claimed the elk need to be separated from their cattle because the elk will eat too much of the forage they want for their cows. The science clearly shows that elk eat far less than cows, weigh a fraction of cows' weight, and being browsers, do not deplete the grasses and shrubs as much as cows do. Therefore, when scoping the plan update, NPS needs to compare the impacts of elk foraging vs. cattle grazing, and develop its plans consistent with the Organic Act of 1916 mandate of resource preservation and protection.

The difference in landscape between the Tule Elk Reserve and the ranches on the other side of the fence is stark. The Tule elk Reserve looks like a beautiful coastal prairie with lots of wildflowers and coyote brush. The land to the south looks barren and denuded and there is evidence of cow manure spraying - not what visitors come to Point Reyes to see. Please remove the fence in the Elk reserve, as this is the right step to take for our National Park.

Thank you for listening to the public and considering the wishes of the many instead of the profits of a few.

**Correspondence ID:3846**

The long run goal is to phase out cattle from the Point Reyes National Seashore, altogether. This would allow a number of costly issues to be dropped as the progression of steps were accomplished, namely the need and upkeep of the elk fences, trucking in feed and water for the elk herds in the increasing occurrence of drought, culling the herds when successfully repopulating the areas and eradication of invasive species of plants brought in by cattle, cattle feed, and industrial machinery.

The elk fence should be removed, for the benefit of the elk herds. Also, the barbed wire cow fences should be removed, as they don't belong in a national park, and they are not wildlife friendly.

I respectfully submit this letter and request the National Park Service to be impartial in the next steps related to our incredible native wildlife in Point Reyes National Seashore.

**Correspondence ID:3849**

Correspondence: Please accept for the record these comments as input for the NPS's upcoming environmental review of its Tomales Point management plan update. These are important aspects that must be considered in determining the scope of the planning process and should be included in any environmental impact statement. My top concern is for the Park Service to remove the fence that keeps the tule elk penned in on grazing land that's insufficient to support a healthy herd.

How much does it cost the National Park Service or Point Reyes National Seashore in Tomales Point Reserve for fence maintenance and supplemental water and minerals? How much does it cost us the taxpayers not only in materials, but in all the hidden costs of labor, operations, communications, negotiation, administration, and don't forget, pleasing the ranchers who shouldn't even be there due to their constant impairment to the Seashore.

Instead of US taxpayers footing the bill for a godawful fence to keep elk without enough water and food out at Tomales Point, the Park Service needs to take down the fence, remove the thousands of cattle impacting the land, air, and waters, and let nature be whole at Point Reyes National Seashore.

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. The park's top priority should be to ensure the Tule elk survive and even thrive. Remove the elk fence.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity.

**Correspondence ID:3850**

Correspondence: Regarding the upcoming plan for Tomales Point within Point Reyes National Seashore I request our National Park prioritize the wishes of the Miwok First Nation people. They "managed" that land for more than 10,000 and didn't disrupt the ecosystem. Allow them to determine how the land should be managed so that our future generations will be allowed to experience biodiversity, not cows, that exists there today. Maybe then the area will be allowed to thrive.

Recently, the NPS has started an unnatural process of providing emergency water via tanks. This practice is costly, and has limited effectiveness.

The long run goal is to phase out cattle from the Point Reyes National Seashore, altogether. This would allow a number of costly issues to be dropped as the progression of steps were accomplished, namely the need and upkeep of the elk fences, trucking in feed and water for the elk herds in the increasing occurrence of drought, culling the herds when successfully repopulating the areas and eradication of invasive species of plants brought in by cattle, cattle feed, and industrial machinery.

**Correspondence ID:3851**

Correspondence: Please remove the eight foot fence at Tomales Point for the sake of our native Tule Elk. We must prioritize our native Tule elk over the domestic cattle raised for profit in PRNS.

Without a fence at Tomales Point, the National Park Service wouldn't need to waste efforts and money bringing water up to the elk. The animals would have plenty of water available from Abbotts lagoon and other sources down in the valley.

Removal of the elk fence would give the Park a good opportunity to create a prairie preserve, located just on the outside of the existing elk preserve, by pushing back any cattle away from the current fence line. In fact, if the ranches are to remain, installing a wildlife-friendly fence south of the elk fence to let elk and other native animals move freely while keeping cattle at bay would let the park establish a specific prairie preserve where the flora and fauna have been degraded. This could be a site for studying the restoration of the native environment after decades of degradation by cattle.

For climate change and biodiversity reasons, the Tomales Point scoping plan must include complete removal of the Tule Elk Reserve fence combined with an entirely new and enforced ranch succession plan. It must commit to ceasing continued ranchlands succession of leased parcels to ranchers, and restoration of native coastal prairie and wildlife habitat. It must emphasize the roles of indigenous Coast Miwok's ecological and scientific cultural knowledge and practices, and the importance of wildlife and natural forces in the restoration process.

Thank you for the opportunity to provide feedback on the upcoming plan for Elk Reserve in Point Reyes National Seashore. The 3-year timeframe proposed by the NPS appears to be too long of a period, as we have lost approximately 50% of our native Elk held captive behind this 8 foot fence due to lack of appropriate amount of food, water and minerals. In your upcoming plan, please ensure there are numerous alternatives available on the removal of this deadly fence. It is time for that fence to be removed.

Correspondence: 1) Prohibit renewal of leases to private ranches, dairy farms within Point Reyes National Seashore, no exceptions.

Early environmentalists like Huey Johnson and Marty Griffin have publicly stated it was never the intention to lease to private ranches/dairies in perpetuity, within the Seashore. These landowners have been paid for their property and many own land outside the Seashore.

They should not be subsidized by taxpayer money and use up precious Seashore operating money and personnel to shore up and maintain their property.

These private landowners are terrible stewards of the land and contribute to it's degradation, through soil erosion and compaction, polluting the water, illegal dumping, degradation of stream banks and overgrowth of streams from their nutrient runoff, manure spreading with it's pathogens on Seashore land, killing of native wildlife when they cut their pastures, contributing to the decline of the endangered Snowy Plover who are preyed upon by the overabundance of crows who feed off the private landowners farming practices, methane production from their cattle contributing to global warming, and on and on. This is John Sansing's legacy, who should never have been kept in the position of Park Superintendent for 20 years but should have been rotated out. No wonder everyone says he was in bed with the ranchers!

There is no need to preserve private ranches/dairies within the Seashore when there are many others outside these boundaries that can provide for local agriculture.

Establish a demonstration ranch/dairy for educational purposes and put a plaque up about the history of these within the Seashore, period.

2) Allow and encourage Tule Elk to access the entire park and begin by taking down the fence at Pierce Point.

If not concerned about deer proliferating within the park then don't be concerned about Tule Elk proliferating. No hunting, culling, of Tule Elk within the Seashore.

Cattle cause brucellosis, not Tule Elk and they spread it to the Tule Elk.

It is the utmost cruelty to keep Tule Elk behind a fence with limited water and feed and to watch them die off in the drought, (more droughts will happen) with the resulting attrition of half the herd. That is not self-regulation in this pseudo outside zoo that you have created. It's starvation and dying of thirst. These native Tule Elk were almost completely extirpated and are unique to the Seashore. They should be appreciated for the unique native species that they are, rather than treated as pests. If the Interior Department cannot protect native species within a National Seashore, then what is your purpose? Recreational opportunities for the public-maybe you should build another Disneyland there!

**Correspondence ID:3854**

I respectfully submit this letter and request the National Park Service to be impartial in the next steps related to our incredible native wildlife in Point Reyes National Seashore.

**Correspondence ID:3855**

Correspondence: You want my input to the Tomales Point planning process for Point Reyes National Seashore? Why is there even a Tule Elk enclosure out there? Does everything have to please and serve the ranchers (who shouldn't even be there anymore)? The Tule Elk cannot even get enough water or food, and are dying off in really high numbers! Please get rid of the Tule Elk Fence and let the Elk roam free. If you need a fence, put up a wildlife-friendly one, and turn the place into a Native Coastal Plant Reserve.

What are the annual costs for the Tomales Point Reserve fence and the supplemental water and minerals for the Tule Elk trapped there? Why are Elk still trapped and causing this expense, when there are ample lands and waters for Elk to roam at Point Reyes National Seashore? It's not a zoo, it's a national park. Please take down the fence.

Instead of paying for fence maintenance and supplemental water and minerals out at Tomales Point when Elk are actually starving to death--why doesn't the Park Service and Mr. Kenkel come up with a plan to remove tenant ranchers and let wildlife live naturally all across Point Reyes National Seashore?

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

The original studies done by the NPS on how to manage the Tule elk showed they should be allowed to roam free. I will be tracking this process to see what the Park Service's plans are in this regard. I and the vast majority of the public want better treatment of the elk, and better treatment of the Seashore itself. We do not want to see for-profit ranches degrading our beautiful park. This is the Park Service's opportunity to do this job right. You have my support in achieving this.

**Correspondence ID:3856**

Correspondence: I want the fence at Tomales Point, which confines tule elk, to be removed. This is a necessary step for the NPS to take for our native elk.

Whatever the costs to maintain the Tule Elk Fence and to provide water towers and mineral supplements--the Tule Elk are dying off because of lack of proper, nutritious, healthy food and forage. The Elk are starving to death and dying of an inadequate supply of water at Tomales Point. The Park Service will never be able to be effective to supplement the Tule Elk food and water supply that is needed. Please do the right thing and take down the elk fence.

Instead of US taxpayers footing the bill for a godawful fence to keep elk without enough water and food out at Tomales Point, the Park Service needs to take down the fence, remove the thousands of cattle impacting the land, air, and waters, and let nature be whole at Point Reyes National Seashore.

Point Reyes has stunning biodiversity, and the restoration of native plants and wildlife will ensure that these important ecosystems last for generations.

I am grateful to have the opportunity to provide this preliminary feedback, and I look forward to participating in the next steps of this important planning process.

**Correspondence ID:3857**

Correspondence: I want to thank you for taking my public comment on the Tomales Point scoping process at Point Reyes National Seashore. I cannot believe there is a Prison Fence restricting Tule Elk in our national park. What is that about? To please the cattle ranchers, and prevent the Tule Elk from being free to roam, associate, and live a good life? No more animal prisons in our national park. Point Reyes is not a zoo either. It is time to take down the elk fence.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

The NPS should put resources into creating a rewilded park. It will be necessary to plan on demolition and disposal of the many tons of concrete which now comprise the modern loafing barns at each PRNS dairy (one of which supposedly closed a year ago).

Taking down the fence is the best option, according to ecologists.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3858**

Correspondence: Thank you for the opportunity to comment on Tomales Point. Why is this area being treated separate from Point Reyes National Seashore? As it is within the boundaries of the seashore it should be interwoven within the fabric of the rest of the seashore and the ecosystem allowed to become whole instead of piecemeal. A visitor should be able to walk/hike the entirety of the park. And the native grasses and wildlife (including elk) should be able to roam freely within all areas of the park. Please remove the elk fences and let the park be an actual park.

The Park Service should not be spending so much money to maintain fencing at Tomales Point Reserve. There are all the expenses for materials, then all the hidden costs and time for labor, operations, administration, and rancher-pleasing. As a concerned citizen for the elk, please spend the money to remove the fence and free the Elk.

I respectfully ask that the Tule Elk Reserve fence be taken down now. National Park Service and Point Reyes National Seashore funds supplied by the American taxpayer should be used to create wild and healthy freedom for the Tule Elk and other wildlife. Public access to vast swaths of the Seashore now blocked by ranching barbed/electric wire and formidable gates, which is not acceptable on public lands. Please investigate, enforce, and punish cattle ranching families that continue to degrade and pollute our Seashore's lands, waters, and air. Superintendent Kenkel and all of you at the NPS: It is time to get your priorities and mandates straight. Please serve the interests of wildlife, habitat, visitors, and posterity.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

Point Reyes National Seashore, after 60 years from its founding, should be a national pride of astounding biodiversity, global climate research, and honor of the public trust in perpetuity. Please emphasize and prioritize the importance of protecting our native Tule elk in the upcoming plan, which would include the removal of the fence across Tomales Point.

**Correspondence ID:3859**

Correspondence: Regarding the upcoming plan for Tomales Point within Point Reyes National Seashore I request our National Park prioritize the wishes of the Miwok First Nation people. **Correspondence ID:3860**

Correspondence: Please remove the elk fence from Point Reyes National Seashore in order for the elk herds to have access to sufficient amount of water, minerals and forage.

Allowing the continuation of cattle ranching in this area, Tomales Point in the Point Reyes National Seashore, is contradictory to the NPS trying to mitigate the negative impacts of climate change partially caused by this very practice. The NPS needs to do its part and at every step possible be a leader to achieve this end-result.

Resources budgeted for Point Reyes National Seashore should be used for preventing wildlife destruction, rather than additional money toward how to maintain an unethical 8 foot fence in the Elk Preserve.

The Tomales Point management plan for Point Reyes National Seashore must include removal of the Tule Elk Reserve fence, freedom of movement and association by the existing Tule Elk herds throughout the Seashore, and transition from a Tule Elk Reserve to a protected Coastal Native Habitat Reserve. Please include in this plan, the creation of safe wildlife corridors to facilitate Tule Elk migration elsewhere into the Seashore and all manner of other endeavors true to National Park Service founding mandates for natural resources protection and the enjoyment of natural features by future generations. In addition, it must include immediate cessation of the ranching succession policy in favor of immediate removal of commercial cattle operations and its ranch residential infrastructure.

If the Park Service is serious about managing Tomales Point, the Tule elk herds, and the rest of the park most effectively, it will follow the science in determining its plan. That means, first and foremost, removing the elk fence, and protecting and restoring the natural habitat that has been destroyed by cattle and dairy ranching. This is a great opportunity to show enlightened leadership, and I look forward to continuing my engagement in the process.

**Correspondence ID:3861**

**Correspondence ID:3862**

Correspondence: I am a taxpayer who wants you to remove the fence confining the tule elk. It is important our elk survive and are well cared for in a natural habitat, vs confined behind a fence which keeps the elk away from much needed water and forage.

The costs for Tomales Point elk fence maintenance and to put out water and minerals is not solving the problem of Tule Elk health. There is not enough water and minerals for the different non-mingling Tomales Point herds. It is a band-aid for a constant would therefore please come up with a real solution for wild Elk, as they should not be confined in a zoo-like environment that does not have a sufficient amount of water and forage for this herd.

Resources currently spent on maintaining the fence could be better spent on expanding interpretive displays of indigenous land stewardship practices and restoration of Coastal Miwok sites in Point Reyes National Seashore.

The fence should be removed, for the benefit of the elk herds and their survival.

As a long-time user of the seashore, I'm looking forward to seeing what the Park Service comes up with as an improved management plan. It's a good time to make some long-needed changes, particularly the elk fence removal. That alone will make a significant difference in one's experience of the park, and I'm sure it will be met with massive public approval. Thank you for considering my input. I'm excited to see the results.

**Correspondence ID:3869**

Correspondence: The elk fence at Tomales Point must be removed. This is an important and the right step for the upcoming management plan.

What are the annual costs for the Tomales Point Reserve fence and the supplemental water and minerals for the Tule Elk trapped there? Why are Elk still trapped and causing this expense, when there are ample lands and waters for Elk to roam at Point Reyes National Seashore? It's not a zoo, it's a national park. Please take down the fence.

Viewing the Tomales Point project from an objective approach, the most cost effective long-run plan is to take down the elk fences without the interference of cattle concerns and let the herds roam in a natural manner. The health of the elk herds could be clearly addressed, as well as the flora can be given its space for natural progression and seed dispersion. This would focus on only one plan to implement, for taxpayers and NPS staff, and not take the resources with two competing approaches.

The drought conditions are continuing. Due to this urgency the Park must now act to help not only the Tule elk but all other species within its borders. The most impactful thing the Park can do in the short term to assist the elk in their survival is to remove the elk fence. This is not only the most humane thing to do, it is the most cost-effective and reasonable action.

An independent, scientific panel provided a recommendation to the NPS, to remove the eight foot fence across Tomales Point, which currently confines the native Tule elk in an environment which does not allow the herds to be large, healthy and free-ranging. Please include numerous alternatives in the upcoming elk management plan that would remove the Tomales Point fence in order for our native wildlife to be free-roaming.

**Correspondence ID:3870**

Correspondence: Many thanks for allowing the public, rightful owners of the land, to comment on the upcoming plan for Tomales Point within Point Reyes National Seashore. This area, along with any area within the national park should be allowed to be re-wild. All fences and evidence of fences should be removed.

If NPS removes the elk fence, population control of the herd will be greatly simplified. As seen with the free-roaming herds, numbers are much more stable as the elk are able to find water and forage as needed on their own. If fence removal resulted in a large expansion of the herd (very unlikely), I would like to see the elk allowed to expand throughout the park and onto the mainland, since they are indigenous to this area. In addition, individual elk could be relocated to start new herds in other parks and wilderness areas. If the cows are removed from PRNS, eventually the elk will be cleared of Johne's Disease, allowing for such safe transfers. As indigenous animals, their spread would enhance the diversity and resiliency of the environment.

There have been claims made over the years by ranching interests that the elk have damaged ranch operations or facilities. NPS should determine the facts here, and document the actual costs of any verifiable damage. Additionally, ranchers have claimed the elk need to be separated from their cattle because the elk will eat too much of the forage they want for their cows. The science clearly shows that elk eat far less than cows, weigh a fraction of cows' weight, and being browsers, do not deplete the grasses and shrubs as much as cows do. Therefore, when scoping the plan update, NPS needs to compare the impacts of elk foraging vs. cattle grazing, and develop its plans consistent with the Organic Act of 1916 mandate of resource preservation and protection.

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

This is nothing natural nor appropriate of an eight foot fence on public lands purposely confining native wildlife for the sake of leased cattle ranching operations. It is time for our public land in PRNS to be returned to wilderness in its entirety, and remove all impacts of ranching from 1/3 of our National Park. This includes the removal of the Tomales Point fence. Thank you for your attention to its removal, and the focused protection of our native Tule elk.

**Correspondence ID:3871**

Correspondence: Tomales Point is a stunning place and I appreciate the chance to provide input for the planning process.

The costs for Tomales Point elk fence maintenance and to put out water and minerals is not solving the problem of Tule Elk health. There is not enough water and minerals for the different non-mingling Tomales Point herds. It is a band-aid for a constant wound therefore please come up with a real solution for wild Elk, as they should not be confined in a zoo-like environment that does not have a sufficient amount of water and forage for this herd.

We wonder why Point Reyes National Seashore officials, especially Superintendent Kenkel, persist with keeping the expense of a long ugly fence out at Tomales Point and to truck in water and minerals. It's obvious even to a non-scientist. There's not enough natural food and water to sustain the Tule Elk entrapped in a zoo pen out there. Take down the fence, and instead use the money to help the Tule Elk transition and thrive across the Seashore. Remove the ranchers and their cattle. Enough is enough. It's a NATIONAL PARK!

The elk fence should be removed, for the benefit of the elk herds. Also, the barbed wire cow fences should be removed, as they don't belong in a national park, and they are not wildlife friendly.

Our native Tule elk in PRNS deserve a better quality of life, rather than being confined in an environment without sufficient forage, minerals and water. Please ensure the upcoming plan for our iconic elk has several options that involve the removal of the elk. The public has requested the NPS to protect the Tule elk, and now is the time to take action.

**Correspondence ID:3872**

Correspondence: Regarding the upcoming plan for Tomales Point within Point Reyes National Seashore I request our National Park prioritize the wishes of the Miwok First Nation people. They "managed" that land for more than 10,000 and didn't disrupt the ecosystem. Allow them to determine how the land should be managed so that our future generations will be allowed to experience biodiversity, not cows, that exists there today. Maybe then the area will be allowed to thrive.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying - just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy

that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

Viewing the Tomales Point project from an objective approach, the most cost effective long-run plan is to take down the elk fences without the interference of cattle concerns and let the herds roam in a natural manner. The health of the elk herds could be clearly addressed, as well as the flora can be given its space for natural progression and seed dispersion. This would focus on only one plan to implement, for taxpayers and NPS staff, and not take the resources with two competing approaches.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3873**

Correspondence: I want to thank you for taking my public comment on the Tomales Point scoping process at Point Reyes National Seashore. I cannot believe there is a Prison Fence restricting Tule Elk in our national park. What is that about? To please the cattle ranchers, and prevent the Tule Elk from being free to roam, associate, and live a good life? No more animal prisons in our national park. Point Reyes is not a zoo either. It is time to take down the elk fence.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

The NPS should put resources into creating a rewilded park. It will be necessary to plan on demolition and disposal of the many tons of concrete which now comprise the modern loafing barns at each PRNS dairy (one of which supposedly closed a year ago).

Taking down the fence is the best option, according to ecologists.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3874**

Correspondence: Thank you for the opportunity to comment on Tomales Point. Why is this area being treated separate from Point Reyes National Seashore? As it is within the boundaries of the seashore it should be interwoven within the fabric of the rest of the seashore and the ecosystem allowed to become whole instead of piecemeal. A visitor should be able to walk/hike the entirety of the park. And the native grasses and wildlife (including elk) should be able to roam freely within all areas of the park. Please remove the elk fences and let the park be an actual park.

The Park Service should not be spending so much money to maintain fencing at Tomales Point Reserve. There are all the expenses for materials, then all the hidden costs and time for labor, operations, administration, and rancher-pleasing. As a concerned citizen for the elk, please spend the money to remove the fence and free the Elk.

I respectfully ask that the Tule Elk Reserve fence be taken down now. National Park Service and Point Reyes National Seashore funds supplied by the American taxpayer should be used to create wild and healthy freedom for the Tule Elk and other wildlife. Public access to vast swaths of the Seashore now blocked by ranching barbed/electric wire and formidable gates, which is not acceptable on public lands. Please investigate, enforce, and punish cattle ranching families that continue to degrade and pollute our Seashore's lands, waters, and air. Superintendent Kenkel and all of you at the NPS: It is time to get your priorities and mandates straight. Please serve the interests of wildlife, habitat, visitors, and posterity.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species. A national park shouldn't have invasive species like sheep and cattle. Especially when it replaces native wildlife. Shame on you.

Point Reyes National Seashore, after 60 years from its founding, should be a national pride of astounding biodiversity, global climate research, and honor of the public trust in perpetuity. Please emphasize and prioritize the importance of protecting our native Tule elk in the upcoming plan, which would include the removal of the fence across Tomales Point.

**Correspondence ID:3875**

Correspondence: I want to thank you for taking my public comment on the Tomales Point scoping process at Point Reyes National Seashore. I cannot believe there is a Prison Fence restricting Tule Elk in our national park. What is that about? To please the cattle ranchers, and prevent the Tule Elk from being free to roam, associate, and live a good life? No more animal prisons in our national park. Point Reyes is not a zoo either. It is time to take down the elk fence.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

**Correspondence ID:3876**

Correspondence: You want my input to the Tomales Point planning process for Point Reyes National Seashore? Why is there even a Tule Elk enclosure out there? Does everything have to please and serve the ranchers (who shouldn't even be there anymore)? The Tule Elk cannot even get enough water or

food, and are dying off in really high numbers! Please get rid of the Tule Elk Fence and let the Elk roam free. If you need a fence, put up a wildlife-friendly one, and turn the place into a Native Coastal Plant Reserve.

What are the annual costs for the Tomales Point Reserve fence and the supplemental water and minerals for the Tule Elk trapped there? Why are Elk still trapped and causing this expense, when there are ample lands and waters for Elk to roam at Point Reyes National Seashore? It's not a zoo, it's a national park. Please take down the fence.

Instead of paying for fence maintenance and supplemental water and minerals out at Tomales Point when Elk are actually starving to death--why doesn't the Park Service and Mr. Kenkel come up with a plan to remove tenant ranchers and let wildlife live naturally all across Point Reyes National Seashore?

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

The original studies done by the NPS on how to manage the Tule elk showed they should be allowed to roam free. I will be tracking this process to see what the Park Service's plans are in this regard. I and the vast majority of the public want better treatment of the elk, and better treatment of the Seashore itself. We do not want to see for-profit ranches degrading our beautiful park. This is the Park Service's opportunity to do this job right. You have my support in achieving this.

**Correspondence ID:3877**

This includes the removal of the Tomales Point fence. Thank you for your attention to its removal, and the focused protection of our native Tule elk.

**Correspondence ID:3878**

Correspondence: Here's my public comment for the planning process about Tomales Point at Point Reyes National Seashore: Take down that monstrous 8-foot fence and Let the Elk roam free.

Removal of the fence is a less expensive option than "management" of the herd.

The Coast Miwok people should decide how to bring the land back to the way their people left it, before impacted by European settlers in the mid-1800's. The Coast Miwok lived in unison with the Tule elk, the native wildlife and the native vegetation. Let's help recreate our National Park to how it was prior to the impact caused by commercial cattle operations.

The difference in landscape between the Tule Elk Reserve and the ranches on the other side of the fence is stark. The Tule elk Reserve looks like a beautiful coastal prairie with lots of wildflowers and coyote brush. The land to the south looks barren and denuded and there is evidence of cow manure spraying - not what visitors come to Point Reyes to see. Please remove the fence in the Elk reserve, as this is the right step to take for our National Park.

The management of Tomales Point is an important part of the overall park. Inviting public comment, and then incorporating those preferences into the plan, will be key if public trust is to be restored in NPS.

**Correspondence ID:3879**

Correspondence: Thank you for allowing the public to comment on the process of creating the upcoming plan for Tomales Point within Point Reyes National Seashore. I for one, as I think many others do, frequent national parks to see wildlife in their natural habitat. I don't go to the park to see cows and fences. If I wanted to go to a zoo I would choose to do just that. Take down the fence and allow all of the wildlife to roam freely within the entire park as that is why the park was created.

The Park Service will never be able to fully provide enough water, minerals, or forage for the captive Tule Elk at Tomales Point. Put the money into taking down the fence and letting Elk live and thrive throughout the Seashore.

The long run goal is to phase out cattle from the Point Reyes National Seashore, altogether. This would allow a number of costly issues to be dropped as the progression of steps were accomplished, namely the need and upkeep of the elk fences, trucking in feed and water for the elk herds in the increasing occurrence of drought, culling the herds when successfully repopulating the areas and eradication of invasive species of plants brought in by cattle, cattle feed, and industrial machinery.

I am taking the approach that the elk fence be removed from the Tomales Point area and all of the Point Reyes National Seashore because that was and is the intention of the setting-up of this National Park area to begin with. It was not envisioned as a prison area, that is the farthest thing that could be imagined, with cows over here and the elk behind a fence other there. "Oh give me a home where the bison and elk roam.." - not 'why are they behind that fence?'

Respectfully, the land in Point Reyes National Seashore belongs to the public, and should be managed for public, not for private benefit. It is imperative to keep the native Tule Elk as the priority, and remove the Elk fence.

**Correspondence ID:3880**

Correspondence: Thank you for the opportunity to comment on Tomales Point. Why is this area being treated separate from Point Reyes National Seashore? As it is within the boundaries of the seashore it should be interwoven within the fabric of the rest of the seashore and the ecosystem allowed to become whole instead of piecemeal. Taking down the fence is the best option, according to ecologists.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3882**

Correspondence: Now that the National Park Service is looking at its management of the Tomales Point area of the Pt. Reyes National Seashore, there are a number of items NPS should take into consideration as it updates its plans. Please include consideration of these when scoping your environmental review process. The most critical of these is the permanent removal of the fence that keeps the Tomales Point Tule elk herd imprisoned on land that isn't sufficient to support a captive herd.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying - just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

Pierce Point Ranch should be the only real "historical" ranch in PRNS. It should be developed as a working model of a ranch from the 19th Century, with no more than a few head of cattle and a few dairy cows, showcasing actual ranching and farming techniques of that era. Docents could explain the conditions, techniques, and context for working the land under the times and circumstances in place at the time. It should also tell the full story of the Native Americans that preceded European settlers and their fate. All other ranches should be removed from the park.

Point Reyes National Seashore should plan for prompt removal of the Elk Reserve fence on Tomales Point. This will achieve Tule Elk freedom of movement to naturally water, forage, and mate, and sustain optimal health and well-being of Tule Elk throughout the Seashore.

Thank you for taking the time to read this comment, and for inviting public input. The land in Point Reyes National Seashore belongs to the public, and should be managed for public, not for private benefit.

**Correspondence ID:3883**

Correspondence: I want to thank you for taking my public comment on the Tomales Point scoping process at Point Reyes National Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters! Thanks again for caring for our precious wildlife.

**Correspondence ID:3884**

Correspondence: This scoping planning process represents improper segmentation of the NEPA analysis. This planning could and should have been done as a part of the recent GMP planning. There are many connected and interrelated management actions and associated environmental impacts. NPS has allowed crass politics to supersede common sense and fidelity to law and science. This behavior was expected during the openly corrupt Trump era but it is now incredibly disappointing during the Biden administration. NPS should replace the bad GMP with a good one that removes the harmful commercial livestock grazing, eliminates the fence, and allows tule elk to roam freely.

**Correspondence ID:3885**

Correspondence: I want the fence at Tomales Point, which confines tule elk, to be removed. This is a necessary step for the NPS to take for our native elk.

As a taxpayer I expect the National Park Service to spend money wisely and frugally. I also expect the Park Service to prioritize wildlife over private enterprise. Therefore I ask the Park Service to stop spending money on erecting and maintaining a wildlife fence for the sole purpose of keeping native Tule Elk out of the parcels that are leased by private cattle and dairy ranch operations within a National Park.

We wonder why Point Reyes National Seashore officials, especially Superintendent Kenkel, persist with keeping the expense of a long ugly fence out at Tomales Point and to truck in water and minerals. It's obvious even to a non-scientist. There's not enough natural food and water to sustain the Tule Elk entrapped in a zoo pen out there. Take down the fence, and instead use the money to help the Tule Elk transition and thrive across the Seashore. Remove the ranchers and their cattle. Enough is enough. It's a NATIONAL PARK!

For climate change and biodiversity reasons, the Tomales Point scoping plan must include complete removal of the Tule Elk Reserve fence combined with an entirely new and enforced ranch succession plan. It must commit to ceasing continued ranchlands succession of leased parcels to ranchers, and restoration of native coastal prairie and wildlife habitat. It must emphasize the roles of indigenous Coast Miwok's ecological and scientific cultural knowledge and practices, and the importance of wildlife and natural forces in the restoration process.

Thank you for paying attention to my comments. Please include them in the official record. The Park Service, if nothing else, needs to remove the fence at Tomales Point so the Elk can find food, water, and live a more normal, healthy, wild life. The elk are literally dying behind that fence. Between the Park Service, the public, scientists, and Native American ecologists, there is a solution to making things better out at Point Reyes. Please listen to the public, and use their input....not just do what the ranchers want to make their money and ruin the place.

**Correspondence ID:3886**

Correspondence: Remove the Tomales Point Fence!!

**Correspondence ID:3887**

Correspondence: Here's my public comment for the planning process about Tomales Point at Point Reyes National Seashore: Take down that monstrous 8-foot fence and Let the Elk roam free.

Removal of the fence is a less expensive option than "management" of the herd.

The Coast Miwok people should decide how to bring the land back to the way their people left it, before impacted by European settlers in the mid-1800's. The Coast Miwok lived in unison with the Tule elk, the native wildlife and the native vegetation. Let's help recreate our National Park to how it was prior to the impact caused by commercial cattle operations.

The difference in landscape between the Tule Elk Reserve and the ranches on the other side of the fence is stark. The Tule elk Reserve looks like a beautiful coastal prairie with lots of wildflowers and coyote brush. The land to the south looks barren and denuded and there is evidence of cow manure spraying - not what visitors come to Point Reyes to see. Please remove the fence in the Elk reserve, as this is the right step to take for our National Park.

The management of Tomales Point is an important part of the overall park. Inviting public comment, and then incorporating those preferences into the plan, will be key if public trust is to be restored in NPS.

**Correspondence ID:3888**

Correspondence: Dear Supervisor Kenkel,

Thank you for providing a forum for input regarding the future Tomales Point in Point Reyes National Seashore.

In 1998, the Park Service's own environmental assessment concluded that the fence at Elk Reserve at Tomales Point must be removed. This removal would allow our native elk to have access to sufficient, healthy forage and water as well as be able to find mates outside the fence that would increase genetic diversity and resilience

The rapidly changing climate demands planning and vision. Wildlife corridors travelled by unfenced tule elk and visitors alike at the Seashore would be a positive step in meeting the challenges of our uncertain future.

Thank you,  
Carol Soto

**Correspondence ID:3889**

Correspondence: Many thanks for allowing the public, rightful owners of the land, to comment on the upcoming plan for Tomales Point within Point Reyes National Seashore. This area, along with any area

within the national park should be allowed to be re-wild. All fences and evidence of fences should be removed.

If NPS removes the elk fence, population control of the herd will be greatly simplified. As seen with the free-roaming herds, numbers are much more stable as the elk are able to find water and forage as needed on their own. If fence removal resulted in a large expansion of the herd (very unlikely), I would like to see the elk allowed to expand throughout the park and onto the mainland, since they are indigenous to this area. In addition, individual elk could be relocated to start new herds in other parks and wilderness areas. If the cows are removed from PRNS, eventually the elk will be cleared of Johne's Disease, allowing for such safe transfers. As indigenous animals, their spread would enhance the diversity and resiliency of the environment.

There have been claims made over the years by ranching interests that the elk have damaged ranch operations or facilities. NPS should determine the facts here, and document the actual costs of any verifiable damage. Additionally, ranchers have claimed the elk need to be separated from their cattle because the elk will eat too much of the forage they want for their cows. The science clearly shows that elk eat far less than cows, weigh a fraction of cows' weight, and being browsers, do not deplete the grasses and shrubs as much as cows do. Therefore, when scoping the plan update, NPS needs to compare the impacts of elk foraging vs. cattle grazing, and develop its plans consistent with the Organic Act of 1916 mandate of resource preservation and protection.

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

This is nothing natural nor appropriate of an eight foot fence on public lands purposely confining native wildlife for the sake of leased cattle ranching operations. It is time for our public land in PRNS to be returned to wilderness in its entirety, and remove all impacts of ranching from 1/3 of our National Park. This includes the removal of the Tomales Point fence. Thank you for your attention to its removal, and the focused protection of our native Tule elk.

Viewing the Tomales Point project from an objective approach, the most cost effective long-run plan is to take down the elk fences without the interference of cattle concerns and let the herds roam in a natural manner. The health of the elk herds could be clearly addressed, as well as the flora can be given

its space for natural progression and seed dispersion. This would focus on only one plan to implement, for taxpayers and NPS staff, and not take the resources with two competing approaches.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3891**

Correspondence: I want to thank you for taking my public comment on the Tomales Point scoping process at Point Reyes National Seashore. I cannot believe there is a Prison Fence restricting Tule Elk in our national park. What is that about? To please the cattle ranchers, and prevent the Tule Elk from being free to roam, associate, and live a good life? No more animal prisons in our national park. Point Reyes is not a zoo either. It is time to take down the elk fence.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

The NPS should put resources into creating a rewilded park. It will be necessary to plan on demolition and disposal of the many tons of concrete which now comprise the modern loafing barns at each PRNS dairy (one of which supposedly closed a year ago).

Taking down the fence is the best option, according to ecologists.

The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3892**

Correspondence: Regarding the upcoming plan for Tomales Point within Point Reyes National Seashore I request our National Park prioritize the wishes of the Miwok First Nation people. They "managed" that land for more than 10,000 and didn't disrupt the ecosystem. Allow them to determine how the land should be managed so that our future generations will be allowed to experience biodiversity, not cows, that exists there today. Maybe then the area will be allowed to thrive.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying - just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

Viewing the Tomales Point project from an objective approach, the most cost effective long-run plan is to take down the elk fences without the interference of cattle concerns and let the herds roam in a natural manner. The health of the elk herds could be clearly addressed, as well as the flora can be given its space for natural progression and seed dispersion. This would focus on only one plan to implement, for taxpayers and NPS staff, and not take the resources with two competing approaches.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3893**

Correspondence: You want my input to the Tomales Point planning process for Point Reyes National Seashore? Why is there even a Tule Elk enclosure out there? Does everything have to please and serve the ranchers (who shouldn't even be there anymore)? The Tule Elk cannot even get enough water or food, and are dying off in really high numbers! Please get rid of the Tule Elk Fence and let the Elk roam free. If you need a fence, put up a wildlife-friendly one, and turn the place into a Native Coastal Plant Reserve.

What are the annual costs for the Tomales Point Reserve fence and the supplemental water and minerals for the Tule Elk trapped there? Why are Elk still trapped and causing this expense, when there are ample lands and waters for Elk to roam at Point Reyes National Seashore? It's not a zoo, it's a national park. Please take down the fence.

Instead of paying for fence maintenance and supplemental water and minerals out at Tomales Point when Elk are actually starving to death--why doesn't the Park Service and Mr. Kenkel come up with a plan to remove tenant ranchers and let wildlife live naturally all across Point Reyes National Seashore?

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

The original studies done by the NPS on how to manage the Tule elk showed they should be allowed to roam free. I will be tracking this process to see what the Park Service's plans are in this regard. I and the vast majority of the public want better treatment of the elk, and better treatment of the Seashore itself. We do not want to see for-profit ranches degrading our beautiful park. This is the Park Service's opportunity to do this job right. You have my support in achieving this.

**Correspondence ID:3894**

The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3895**

Correspondence: I am writing and requesting to please take down the elk fence from Tomales Point, as it prevents natural migration of tule elk. It also stops them from getting water and food.

Spending the public's money for a Tule Elk Fence and supplemental water and minerals is wasteful, and not a long-term, feasible solution. The Tule Elk are starving to death from lack of access to proper food. And the impact of global warming causes climate effects like long term drought out there. It's bad money after bad money. Free the Tule Elk from Tomales Point. Let the Elk have water and food for free around the Park.

Financial resources of the National Park Service (NPS) should be used to end the Tule Elk Reserve on Tomales Point, by removal of the rancher and NPS insisted eight foot fence and replace that with a wildlife-friendly smaller fence but a fence that keeps the cattle out of this preserved environment. Let's establish a Coastal Native Prairie Reserve in place of the wholly bad and inhumane Tule Elk Reserve. The Tule Elk get to roam free for food and water throughout the Seashore, and the current Reserve transforms into a wild habitat global study model during these times of severe climate heating and California megadrought.

The Tomales Point management plan for Point Reyes National Seashore must include removal of the Tule Elk Reserve fence, freedom of movement and association by the existing Tule Elk herds throughout the Seashore, and transition from a Tule Elk Reserve to a protected Coastal Native Habitat Reserve. Please include in this plan, the creation of safe wildlife corridors to facilitate Tule Elk migration elsewhere into the Seashore and all manner of other endeavors true to National Park Service founding mandates for natural resources protection and the enjoyment of natural features by future generations.

In addition, it must include immediate cessation of the ranching succession policy in favor of immediate removal of commercial cattle operations and its ranch residential infrastructure.

The management of Tomales Point is an important part of the overall park. Inviting public comment, and then incorporating those preferences into the plan, will be key if public trust is to be restored in NPS.

**Correspondence ID:3896**

Correspondence: Thank you for accepting my public comment on the Tomales Point planning process for Point Reyes National Seashore. I am very concerned. The Seashore's natural resources like the Tule Elk should be unimpaired.

Maintenance of an 8-foot fence and providing water and nutrition for captive Tule elk is not a reasonable use of funds, when the Tule elk could find adequate food and water if they were allowed to freely roam.

Resources should be spent on taking down the elk fence and re-wilding the park.

Whether in California or elsewhere globally, climate change impacts nearly every aspect of our current and future environmental conditions. The Tule Elk fence across Tomales Point must be taken down in recognition of this. As conditions are now and for the foreseeable future with seasonal warming, megadrought, desertification, water scarcity, the native Tule Elk will have a better chance of surviving the challenges of this climate crisis, instead of being confined without sufficient water, forage and minerals.

Our native Tule elk in PRNS deserve a better quality of life, rather than being confined in an environment without sufficient forage, minerals and water. Please ensure the upcoming plan for our iconic elk has several options that involve the removal of the elk. The public has requested the NPS to protect the Tule elk, and now is the time to take action.

**Correspondence ID:3897**

Correspondence: In response to your letter dated March 31, 2022 asking for ideas on the Tomales Point Tule Elk Reserve planning process, I offer the following regarding the elk fence and how best to manage.

What are the annual costs for the Tomales Point Reserve fence and the supplemental water and minerals for the Tule Elk trapped there? Why are Elk still trapped and causing this expense, when there are ample lands and waters for Elk to roam at Point Reyes National Seashore? It's not a zoo, it's a national park. Please take down the fence.

The Park Service wastes taxpayer money on the self-fulfilling problems caused by its continued decades-long poor wildlife management choices out on Tomales Point. The already limited funds available should be used to remove the tule elk fence so elk can find sufficient food and water on their own across the Seashore.

The 1998 plan says "Natural processes will be relied on to control populations of native species ..." There is nothing natural about caging animals behind a fence. The existing fence at the Tule Elk Reserve should be removed and replaced with a wildlife friendly fence that will allow Tule Elk to leave the reserve while still keeping cattle out.

It is requested the personnel at the National Park Service re-review the 1993 report of the Scientific Advisory Panel on control of Tule Elk in PRNS, and include its recommendation in the upcoming plan. The independent advisory panel recommended to remove the fence across Tomales Point, and develop a plan to achieve a large, healthy, free-ranging elk population. Thank you Mr Kenkel for your attention to this recommendation.

**Correspondence ID:3898**

Correspondence: I am writing to you specifically to address your plans for Tomales Point in the Point Reyes National Seashore. As they currently stand, they need to be incorporated into the General Plan for the Seashore - not as a separate part of it. It does not make strategic or economic sense to treat them as a part-as-to-of-themselves. The steps to restore the flora and fauna for all areas must be incorporated into the dynamics of the plan at the outset.

Whatever the costs to maintain the Tule Elk Fence and to provide water towers and mineral supplements--the Tule Elk are dying off because of lack of proper, nutritious, healthy food and forage. The Elk are starving to death and dying of an inadequate supply of water at Tomales Point. The Park Service will never be able to be effective to supplement the Tule Elk food and water supply that is needed. Please do the right thing and take down the elk fence.

Why is the NPS having separate GMPs for the leased ranch lands and for the Tule Elk Reserve? Is this not all one national park? Are you going to have a separate GMP for the southern part of the Phil Burton Wilderness area? PRNS needs to be managed as one comprehensive and coordinated part, not sliced up in pieces. As a member of the public I don't see separate areas.

A National Park was created in Point Reyes to protect one of the most scenic and biologically diverse areas in our country. It is being put at risk for the profits of a few private ranchers. This is not acceptable to the people of Marin, the SF Bay Area, and the nation, nor our native wildlife. It is time to remove the Elk fence.

Respectfully, the land in Point Reyes National Seashore belongs to the public, and should be managed for public, not for private benefit. It is imperative to keep the native Tule Elk as the priority, and remove the Elk fence.

**Correspondence ID:3899**

Correspondence: Many thanks for allowing the public, rightful owners of the land, to comment on the upcoming plan for Tomales Point within Point Reyes National Seashore. This area, along with any area within the national park should be allowed to be re-wild. All fences and evidence of fences should be removed.

If NPS removes the elk fence, population control of the herd will be greatly simplified. As seen with the free-roaming herds, numbers are much more stable as the elk are able to find water and forage as needed on their own. If fence removal resulted in a large expansion of the herd (very unlikely), I would like to see the elk allowed to expand throughout the park and onto the mainland, since they are indigenous to this area. In addition, individual elk could be relocated to start new herds in other parks and wilderness areas. If the cows are removed from PRNS, eventually the elk will be cleared of Johne's Disease, allowing for such safe transfers. As indigenous animals, their spread would enhance the diversity and resiliency of the environment.

There have been claims made over the years by ranching interests that the elk have damaged ranch operations or facilities. NPS should determine the facts here, and document the actual costs of any verifiable damage. Additionally, ranchers have claimed the elk need to be separated from their cattle because the elk will eat too much of the forage they want for their cows. The science clearly shows that elk eat far less than cows, weigh a fraction of cows' weight, and being browsers, do not deplete the grasses and shrubs as much as cows do. Therefore, when scoping the plan update, NPS needs to compare the impacts of elk foraging vs. cattle grazing, and develop its plans consistent with the Organic Act of 1916 mandate of resource preservation and protection.

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

This is nothing natural nor appropriate of an eight foot fence on public lands purposely confining native wildlife for the sake of leased cattle ranching operations. It is time for our public land in PRNS to be returned to wilderness in its entirety, and remove all impacts of ranching from 1/3 of our National Park. This includes the removal of the Tomales Point fence. Thank you for your attention to its removal, and the focused protection of our native Tule elk.

**Correspondence ID:3900**

Let us have REAL rangers who love wildlife!!!

**Correspondence ID:3905**

Correspondence: Thank you for the opportunity to comment on Tomales Point. Why is this area being treated separate from Point Reyes National Seashore? As it is within the boundaries of the seashore it should be interwoven within the fabric of the rest of the seashore and the ecosystem allowed to become whole instead of piecemeal. A visitor should be able to walk/hike the entirety of the park. And the native grasses and wildlife (including elk) should be able to roam freely within all areas of the park. Please remove the elk fences and let the park be an actual park.

The Park Service should not be spending so much money to maintain fencing at Tomales Point Reserve. There are all the expenses for materials, then all the hidden costs and time for labor, operations, administration, and rancher-pleasing. As a concerned citizen for the elk, please spend the money to remove the fence and free the Elk.

I respectfully ask that the Tule Elk Reserve fence be taken down now. National Park Service and Point Reyes National Seashore funds supplied by the American taxpayer should be used to create wild and healthy freedom for the Tule Elk and other wildlife. Public access to vast swaths of the Seashore now blocked by ranching barbed/electric wire and formidable gates, which is not acceptable on public lands. Please investigate, enforce, and punish cattle ranching families that continue to degrade and pollute our Seashore's lands, waters, and air. Superintendent Kenkel and all of you at the NPS: It is time to get your priorities and mandates straight. Please serve the interests of wildlife, habitat, visitors, and posterity.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

Point Reyes National Seashore, after 60 years from its founding, should be a national pride of astounding biodiversity, global climate research, and honor of the public trust in perpetuity. Please emphasize and prioritize the importance of protecting our native Tule elk in the upcoming plan, which would include the removal of the fence across Tomales Point.

**Correspondence ID:3906**

Correspondence: Here's my public comment for the planning process about Tomales Point at Point Reyes National Seashore: Take down that monstrous 8-foot fence and Let the Elk roam free.

Removal of the fence is a less expensive option than "management" of the herd.

The Coast Miwok people should decide how to bring the land back to the way their people left it, before impacted by European settlers in the mid-1800's. The Coast Miwok lived in unison with the Tule elk, the native wildlife and the native vegetation. Let's help recreate our National Park to how it was prior to the impact caused by commercial cattle operations.

The difference in landscape between the Tule Elk Reserve and the ranches on the other side of the fence is stark. The Tule elk Reserve looks like a beautiful coastal prairie with lots of wildflowers and coyote brush. The land to the south looks barren and denuded and there is evidence of cow manure spraying - not what visitors come to Point Reyes to see. Please remove the fence in the Elk reserve, as this is the right step to take for our National Park.

The management of Tomales Point is an important part of the overall park. Inviting public comment, and then incorporating those preferences into the plan, will be key if public trust is to be restored in NPS.

**Correspondence ID:3907**

Correspondence: Here's my public comment for the planning process about Tomales Point at Point Reyes National Seashore: Take down that monstrous 8-foot fence and Let the Elk roam free.

The Park Service continues to spend money on a fence to keep Tule Elk trapped out on Tomales Point at Point Reyes even though there's not enough food and water out there for the Elk, and now I have to pay for fence maintenance and to ship water and supplements out there. Stop the bad spending! Take down that fence and let the Tule Elk go get their food and water for free.

Tomales Point and its elk herd should have a wildlife management approach to management. Free access for the elk to roam, restoration of the native grasses and the elimination of invasive plants, removal of private cattle and dairy operations, and unhindered access for the public to wander the land while respecting the natural flora and fauna would increase and enhance PRNS's popularity, as well as its natural biome.

The NPS already studied this matter, decades ago, and determined the fence should be removed.

It is requested the personnel at the National Park Service re-review the 1993 report of the Scientific Advisory Panel on control of Tule Elk in PRNS, and include it recommendation in the upcoming plan. The independent advisory panel recommended to remove the fence across Tomales Point, and develop a plan to achieve a large, healthy, free-ranging elk population. Thank you Mr Kenkel for your attention to this recommendation.

**Correspondence ID:3908**

Correspondence: I want to thank you for taking my public comment on the Tomales Point scoping process at Point Reyes National Seashore. Correspondence: Regarding the upcoming plan for Tomales Point within Point Reyes National Seashore I request our National Park prioritize the wishes of the Miwok First Nation people. They "managed" that land for more than 10,000 and didn't disrupt the ecosystem. Allow them to determine how the land should be managed so that our future generations will be allowed to experience biodiversity, not cows, that exists there today. Maybe then the area will be allowed to thrive.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying - just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

Viewing the Tomales Point project from an objective approach, the most cost effective long-run plan is to take down the elk fences without the interference of cattle concerns and let the herds roam in a natural manner. The health of the elk herds could be clearly addressed, as well as the flora can be given its space for natural progression and seed dispersion. This would focus on only one plan to implement, for taxpayers and NPS staff, and not take the resources with two competing approaches.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3910**

Correspondence: Thank you for allowing the public to comment on the process of creating the upcoming plan for Tomales Point within Point Reyes National Seashore. I for one, as I think many others do, frequent national parks to see wildlife in their natural habitat. I don't go to the park to see cows and fences. If I wanted to go to a zoo I would choose to do just that. Take down the fence and allow all of the wildlife to roam freely within the entire park as that is why the park was created.

Removing the elk fence is a frugal option, for a Park Service that apparently operates with limited resources.

Why is the Park Service wasting taxpayer money on an inappropriate fence out at Tomales Point? The NPS should take down the fence, let the Tule Elk roam, and create a Coastal Native Habitat Reserve instead of keeping the Elk Pen out there. It's ridiculous that wildlife are treated like zoo animals in a National Park.

Removal of the Tule Elk Reserve fence across Tomales Point in Point Reyes National Seashore must happen now. This must be done urgently in light of the drought and fire conditions caused by climate change. It must include a completely revised and science-based plan, enhanced by Native American ecological knowledge and practices, to cease the ranch succession policies of the past in favor of transformation to natural habitats, with well-planned wildlife corridors to aid natural and assisted rewilding restoration processes.

If the Park Service is serious about managing Tomales Point, the Tule elk herds, and the rest of the park most effectively, it will follow the science in determining its plan. That means, first and foremost, removing the elk fence, and protecting and restoring the natural habitat that has been destroyed by cattle and dairy ranching. This is a great opportunity to show enlightened leadership, and I look forward to continuing my engagement in the process.

**Correspondence ID:3911**

Correspondence: Here's my public comment for the planning process about Tomales Point at Point Reyes National Seashore: Take down that monstrous 8-foot fence and Let the Elk roam free.

The Park Service continues to spend money on a fence to keep Tule Elk trapped out on Tomales Point at Point Reyes even though there's not enough food and water out there for the Elk, and now I have to pay for fence maintenance and to ship water and supplements out there. Stop the bad spending! Take down that fence and let the Tule Elk go get their food and water for free.

Tomales Point and its elk herd should have a wildlife management approach to management. Free access for the elk to roam, restoration of the native grasses and the elimination of invasive plants, removal of private cattle and dairy operations, and unhindered access for the public to wander the land while respecting the natural flora and fauna would increase and enhance PRNS's popularity, as well as its natural biome.

The NPS already studied this matter, decades ago, and determined the fence should be removed.

It is requested the personnel at the National Park Service re-review the 1993 report of the Scientific Advisory Panel on control of Tule Elk in PRNS, and include its recommendation in the upcoming plan. The independent advisory panel recommended to remove the fence across Tomales Point, and develop a

plan to achieve a large, healthy, free-ranging elk population. Thank you Mr Kenkel for your attention to this recommendation.

**Correspondence ID:3912**

Correspondence: I want to thank you for taking my public comment on the Tomales Point scoping process at Point Reyes National Seashore. I cannot believe there is a Prison Fence restricting Tule Elk in our national park. What is that about? To please the cattle ranchers, and prevent the Tule Elk from being free to roam, associate, and live a good life? No more animal prisons in our national park. Point Reyes is not a zoo either. It is time to take down the elk fence.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

The NPS should put resources into creating a rewilded park. It will be necessary to plan on demolition and disposal of the many tons of concrete which now comprise the modern loafing barns at each PRNS dairy (one of which supposedly closed a year ago).

Taking down the fence is the best option, according to ecologists.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3913**

Correspondence: Please remove the eight foot fence at Tomales Point for the sake of our native Tule Elk. We must prioritize our native Tule elk over the domestic cattle raised for profit in PRNS.

Without a fence at Tomales Point, the National Park Service wouldn't need to waste efforts and money bringing water up to the elk. The animals would have plenty of water available from Abbotts lagoon and other sources down in the valley.

Removal of the elk fence would give the Park a good opportunity to create a prairie preserve, located just on the outside of the existing elk preserve, by pushing back any cattle away from the current fence line. In fact, if the ranches are to remain, installing a wildlife-friendly fence south of the elk fence to let elk and other native animals move freely while keeping cattle at bay would let the park establish a specific prairie preserve where the flora and fauna have been degraded. This could be a site for studying the restoration of the native environment after decades of degradation by cattle.

For climate change and biodiversity reasons, the Tomales Point scoping plan must include complete removal of the Tule Elk Reserve fence combined with an entirely new and enforced ranch succession plan. It must commit to ceasing continued ranchlands succession of leased parcels to ranchers, and restoration of native coastal prairie and wildlife habitat. It must emphasize the roles of indigenous Coast Miwok's ecological and scientific cultural knowledge and practices, and the importance of wildlife and natural forces in the restoration process.

Thank you for the opportunity to provide feedback on the upcoming plan for Elk Reserve in Point Reyes National Seashore. The 3-year timeframe proposed by the NPS appears to be too long of a period, as we have lost approximately 50% of our native Elk held captive behind this 8 foot fence due to lack of appropriate amount of food, water and minerals. In your upcoming plan, please ensure there are numerous alternatives available on the removal of this deadly fence. It is time for that fence to be removed.

**Correspondence ID:3914**

Correspondence: As a naturalist leading classes for Point Reyes Field Institute and classes that were fundraisers for PRNSA for almost 20 years, I have had to opportunity to introduce guests from around the globe to PRNS. I have also taken College of Marin Community Education students to learn about the tule elk annually for 24 years I have NEVER has a visitor or student who traveled to Point Reyes to see cows, but I have had many who came to see the tule elk. This special piece of land is not only for locals, it is a treasure to be enjoyed by people outside CA and outside the US. I recommend immediated ceasing culling the tule elk, and removing the fence which was only put in the benefit commercial interests, not visitors to the National Park. Ultimately I would like to see the ranches removed and the land restored and returned to coastal prairie habitat for all native species. Ranch operations negatively impact many species including endandered species like the Snowy Plover which the Park has an obligation to protect. The increase in ravens due to ranch feeding practices increases predation on nests and fledglings. Mowing kills ground nesting birds. Native species have enough adversity with climate change and invasive plant species without adding additional human-caused problems.

**Correspondence ID:3915**

Correspondence: Here are my viewpoints on this topic:

- The Point Reyes National Seashore belongs to all Americans, not just to ranchers who profit from its use. The NPS must protect the Seashore and its wildlife.
- Fences have no place in Wilderness. The NPS needs to end the tragic, ongoing deaths of rare Tule elk at Point Tomales in the Phillip Burton Wilderness by taking down the fence so elk can access food and water.
- The NPS needs to prioritize the needs of native wildlife by putting an end to commercial ranching at Point Reyes like it was supposed to do decades ago.

**Correspondence ID:3916**

Correspondence: May 8, 2022

Dear Superintendent Kenkel,

Please remove the Tule Elk Reserve fence and create wildlife corridors. It is extremely important to do this to maintain the Point Reyes National Seashore for the enjoyment of people, the elk and other wildlife in the years to come, as it was intended. To me, the elk are the highlight of the seashore. Knowing that they cannot freely roam to graze, find water and mate with elk in other herds so that they can maintain healthy and necessary genetic diversity breaks my heart. It is truly tragic. Removing the fence and establishing wildlife corridors will not hurt the ranchers, which have absolutely no place in a national park in the first place. The rancher's leases should not be renewed. You have the power to help make this right. The letter, included below, which was provided by ForElk, summarizes my opinion on this matter and provides more details and references.

Please do the right thing by removing the Tule Elk Reserve fence, providing wildlife corridors and not renewing the rancher's leases.

Thank you.

We are thankful for the opportunity to give feedback on the National Park Service's planning process for the Tomales Point area in Point Reyes National Seashore. It is our position that the removal of the Tule Elk Reserve fence is the only way to accurately address the nutrient and water deficiency and associated Tule Elk population management problems in the Tomales Point area.

The removal of the Tule Elk Reserve fence is neither a radical or new idea. In fact, the National Park Service's own 1998 Environmental Assessment concluded that the only way to create a healthy free-roaming population of Tule Elk in the Seashore and associated parks would require the "elimination of exotic cervids and removal of the fence across Tomales Point" (National Park Service, 1998, p. 89).

The decline of the Tule Elk Reserve's herd by nearly half over the last few years is not natural self-regulation but a direct result of the lack of access to proper nutritional forage and adequate water sources during the increasingly hot summers caused by Climate Change. Because there are no perennial streams in the Tule Elk Reserve, the herd's population has been cruelly limited to which individuals can survive on limited nutrition and water. This is not a natural carrying capacity.

The Tomales Point herd is still relatively new and has very little genetic diversity compared to other natural herds. The entire Tule Elk subspecies experienced a severe bottleneck effect in the 20th century, and the Tule Elk Reserve fence causes further genetic selection limitations for the herd in the Tomales Point area. The loss of genetic diversity across generations can lead to harsh consequences, such as weakness, illness, disease, death and even extirpation if the National Park Service does not actively increase connectivity between the herds in the park and establish more free roaming herds within the Seashore's boundaries.

A study published last year on the genetic diversity of a Tule Elk metapopulation reintroduced in a similar time frame to the Tomales Point herd found that there was lack of migration among the groups, and almost every group was below the threshold to improve or maintain genetic diversity over the next 25 years (Batter, Bush & Sacks, 2021).

Compared to natural Rocky Mountain Elk populations in Idaho, where there has been considerable gene flow between geographically isolated groups, there was little migration among most groups even decades after introduction (Aycrigg & Garton, 2014). This suggests that genetically isolated populations, like the Tomales Point herd, will likely decline further due to inbreeding and genetic problems unless they are able to move freely and breed with the other free-roaming populations in Point Reyes National Seashore and the state. A 1987 study conducted in the Tomales Point Reserve backs up this claim. The authors argue that without the ability to increase genetic variation, the Tomales Point herd will suffer from the various problems associated with inbreeding, depression, and genetic drift to the point of extinction (Barrett & Gogan, 1987). Genetic variation in the herd could be improved or at least maintained through natural processes if the herd was able to freely roam throughout the Seashore

and breed with the other established free-roaming herds.

Although it is the National Park Service's responsibility to prioritize the natural resources (including the Tule Elk) of the Seashore, it is impossible to ignore agricultural and ranching operations within its boundaries. The National Park Service, among others, often claim that removal of the Tomales Point fence will have significantly harmful impacts on the tenant cattle ranch operations in the Seashore. It is our position that the current population size of the Tule Elk in Point Reyes will have little impact on cattle grazing in the Seashore.

This is backed up by a case study in the Owens Valley in Southern California. A socioeconomic analysis was conducted in 1985 by researchers in the Owens Valley which has had similar competition between various political, agricultural and environmental interests in the last few decades. Additionally, the population size of Tule Elk in the Owens Valley at this time fluctuated roughly between 200 and 300 individuals which is similar to the Tomales Point Herd in Point Reyes today. (Wantrup & Phillips, 1970) Obviously, Owens Valley and Point Reyes are not exactly the same but there are many undeniable similarities especially the central factor of competition between domestic livestock and the native Tule Elk.

The analysis concluded that Tule Elk populations in the Owens Valley could be significantly larger if the state was able to establish more free-roaming herds throughout the region. The social benefits of this would ultimately outweigh the social costs associated with the conflict between Tule Elk and livestock. The authors remark, "The competition between Elk and domestic livestock in the Owens valley is minor even during drought" (Wantrup & Phillips, 1970, p. 26). The Tomales Point fence is in clear conflict with the National Park Service's directive to protect the natural resources of the Seashore for the countless generations to come. This goal can only be actualized through the removal of the Tomales Point fence, the installation of wildlife corridors to increase connectivity among the Seashore's several Tule Elk herds, and long-term genetic monitoring.

The creation of wildlife corridors specifically is a feasible and realistic goal which would allow the Tomales Point herd to travel to the Southern portions of Point Reyes and alleviate the population density in the North. This was originally proposed in the 1998 Environmental Assessment (Appendix G) as one of the many options to increase connectivity and establish free-roaming herds (National Park Service, 1998). Today, wildlife corridors are still a viable alternative to increase connectivity between the herds in the Southern part of the Seashore, and allow the Tomales Point herd to stabilize its population size and health.

We are living at a critical moment in time as we are faced with unprecedented loss of biodiversity and wild places on a global scale. The public has set aside Point Reyes as a National Seashore--one of a few rapidly vanishing slices of wilderness in the West to be protected and Preserved. The decisions made today will have a profound impact on innumerable generations of visitors and wildlife. What will visitors see in fifty years if you do not act now? A living landscape and mosaic of wildlife, including the iconic Tule Elk--or a wasted landscape ruined by our own hubris and inaction?

It is your and all of our responsibility to ensure that the bugling Tule Elk are not another silenced instrument in the wild orchestra of the planet's natural world. We ask you to do the right thing, and make Point Reyes a National Seashore that lives up to the values it espouses

With Gratitude,

The ForElk Team

Re: Tomales Point Area Plan in Point Reyes National Seashore (PRNS)

Date: May 8th, 2022

Dear Superintendent Kenkel,

Thank you for this opportunity to submit comments on this planning process for the Tomales Point Area Plan. The National Park Service (NPS) invitation found here:

<https://content.govdelivery.com/accounts/USDOINPS/bulletins/3105906> is not only an important step for public engagement regarding public land, it can be an essential tool for park staff to potentially gain more insight from people such as myself, who have spent an extensive amount of time in the area under consideration or with the subject being discussed.

The Tomales Point Area, commonly known as the Tomales Point Tule Elk Preserve or Reserve has always been a very special place for me ever since I started hiking and photographing there many years ago. I have had an incredible amount of wonderful experiences along this beautiful and unique stretch of the Point Reyes Peninsula. More specifically, the majestic, iconic, and native Tule Elk in this area have had and continue to have a profound impact on my life. I would ask you to consider visiting the Mission Rewild website here - [www.missionrewild.org](http://www.missionrewild.org) to learn a little bit more for yourself.

Nevertheless, while I just stated that the Reserve has always been a very special place for me, I must share with you that it has also unfortunately become a source of lasting depression and distress - words I do not use lightly. Even now, nearly two years after I started documenting and sharing my observations publicly of dead and dying Tule Elk within the Reserve, I struggle through the anger, sadness, and disbelief of what I witnessed there. Even now, when I visit the Reserve, I have to be careful that I do not think too deeply about my experiences, both good and bad, for fear of losing my composure (for lack of a better word).

There is a reason I get attached to the wildlife I spend considerable amounts of time with. As a human being, I value such things as empathy, learning, growing, understanding, as well as curiosity about the natural world all around us and curiosity about those we share this planet with. As a professional wildlife photographer, I focus on immersing myself deeply into my craft. When one observes the ways of wildlife closely or has the privilege to be allowed into their space, it does not take long to see how much we share in common. Connecting with other sentient beings and wildlife like the Tule Elk is not a challenge for me.

I have concerns that this process for a Tomales Point Area Plan is not being sincerely undertaken for the betterment of the Tule Elk within the Reserve and is perhaps being used to justify past courses of action and failures by park service staff. I have concerns that private agriculture leaseholders within PRNS will yet again be prioritized over the wildlife and environmental health in the area under discussion. I am also very concerned that, even if another Environmental Impact Statement (EIS) is undertaken, the scientific findings detailing the best course of action will be ignored like they were in the latest General Management Plan (GMP) amendment, or even potentially limited in scope or to an extent as to justify negative reactions against the Tule Elk.

The NPS just this past year completed a GMP amendment for roughly 28,000 acres of PRNS and Golden Gate National Recreation Area (GGNRA) lands fenced off for subsidized private commercial agriculture leases. Why is the NPS not starting with a GMP for this Tomales Point Area Plan first before cutting straight to what looks like an Implementation Plan? This Tomales Point Area Plan should under current NPS planning procedures, follow guidelines as developed and set out in NPS "Management Policies 2006" seen here - [https://www.nps.gov/subjects/policy/upload/MP\\_2006.pdf](https://www.nps.gov/subjects/policy/upload/MP_2006.pdf).

According to the Tomales Point Area Plan press release, "The impetus for this planning process are the impacts to the tule elk population and other resources within the Reserve arising from the historic drought conditions over the past eight years." How can the NPS seemingly point to drought as the main culprit for the Tule Elk die-offs within the Reserve, when the wild free roaming Tule Elk outside of the Reserve do not suffer the same plight during drought years? Deceitfully shifting responsibility, blame, and poor management decisions such as the fence, and conveniently placing it all in the hands of uncontrollable mother nature, or perhaps an act of god is beyond ridiculous, it is dishonorable. The NPS must acknowledge once and for all that the fence put in place to prioritize leaseholder interests is the main culprit leading to Tule Elk die-offs within the Reserve. I ask that the NPS under your guidance please stop skirting around this fact. Furthermore, the word "impacts" does not accurately reflect the tragedy unfolding within the Reserve - these Tule Elk are suffering inhumanely and one could make a strong argument that the die-offs are more like kill-offs when considering all the facts at hand.

Again I invite you to look at our website with a specific section focusing on the Tule Elk here - <https://www.missionrewild.org/save-the-tule-elk> ... Please see for yourself a glimpse of the horror I found while visiting one of my favorite places.

It is crystal clear that taking down the fence is the solution for no fence = no massive Tule Elk die-offs in the Reserve. Removing the fence should be the utmost priority as it remains the most important step the NPS can take to improving the situation for the Tule Elk in the Reserve. It is the most obvious solution and the best overall course of action that happens to also be most in line with the founding mission of the National Parks. Please take down the fence as it has no place in any National Park, let alone, the only National Seashore on the West Coast.

Superintendent Kenkel, I sincerely hope that you have the opportunity to spend some much needed time alone with the Tule Elk in the Reserve, free of the pressures of your job. I would also offer to meet with you to discuss my experiences over the years observing and documenting these specific Tule Elk for I believe that you could come away from such a meeting with a deeper appreciation than you might already have. I know that you have only been in your current leadership role in PRNS for a relatively short time, but I sincerely hope that you have the opportunity to reflect on the unique and powerful position you are in. I hope that the wild ones like the Tule Elk and the many other lifeforms and energies that still exists here within our beloved Seashore speak to you and resonate within you, for if this happens, then we and the others who come after us as well as those wildlife we share this space with will all benefit tremendously from the legacy that you leave behind.

Sincerely,

Matthew Polvorosa Kline

Correspondence: Elk Management Plan

I am a full-time, Inverness resident and homeowner who is invested in making sure that our way of life, as we know it, is not destroyed by extremist views by turning The PRNS into an ELK Park. I am by no means against the elk being here, but I am for a balance of agricultural, pastoral lands, which were created to keep the area pastoral: free from housing developments, and risks of fire; and also for preserving natural resources and the native flora and fauna for all the public to enjoy, which is the role of The Point Reyes National Seashore, AKA The Park. But I don't see it as an all or nothing proposition with only the ranches or only the elk being allowed to remain here. The role of the park is to preserve natural resources, and in so doing, to maintain a reasonable "carrying capacity" of the fenced elk herd at Tomales Point, while the ranchers role is to provide stewardship of the land. The elk are not going to keep up the pastoral zone, which is, in itself, its own eco-system. Seriously, people are being misled and it's just ludicrous if people believe the elk to be responsible for taking on the stewardship of the land! It takes people in the form of 3-6 generations of skilled PRNS ranchers to do that! This is contrary to what many of the anti-ranch activists seem to believe.

Our whole way of life is being threatened here by mostly "outside-of-the-area" anti-ranch special interest groups:

1. Stewardship of the land to prevent The Park from turning into a firebomb as it did from the fuel overload by the vacated ranch lands at Woodard the late summer and early fall of 2020, AKA The Woodard Fire occurred. This very real threat exists out in the PRNS pastoral lands. A recent defunct dairy ranching operation by the Point is now full of highly flammable Coyote Brush.
2. Diminishing our cultural diversity, jobs, businesses that support ranching, and especially school enrollment as it did when a 4th generation rancher had to recently retire his ranch from the PRNS due to the drought and no family members willing to take over the ranch operations.
3. The issues associated with 2.5 million annual visitors literally loving our Park to death causing the myriad of problems associated with over-use by the public, which would be made all the worse if access to rescue from fire and other visitor emergencies (paid by us, the local taxpayers) were blocked by brush overgrowth, all occurring if the stewardship of the land provided by the ranchers were eliminated, not to mention the aesthetic of the ocean views being blocked by brush overgrowth!
4. The elk were imported here in the late 70's to help regain their numbers, which they achieved, and surpassed by the end of the drought in the late 70's and the fenced herd's numbers kept increasing all on their own, so that by the late 90's the herd's population increased to about 550 without intervention by The Park. Statewide they numbered about 3,200, at that time, so roughly 20% of the state's population of elk resided at Tomales Point in the PRNS in the late 90's. But again, the irony is that the elk were moved from other areas of the state, because they interfered with ranching operations; causing such problems as competition for forage thus destroying rancher's fencing, and irrigations systems, and, as in the case of the free range Drake's herd in our Park, these elk have even gorged the cattle! Yet, there is no sympathy for these poor, helpless domesticated animals (cows) for whose welfare the ranchers are responsible, and who would be derelict in their duty if they did not properly care for their (domesticated animals) cows! (Watt 2017)  
<https://www.ptreyeslight.com/article/tule-elk-point-reyes-long-history-relocation>

5. National Parks, State Parks, National Forests and the Point Reyes National Seashore have a Wildlife Management Plan-what I'll call Park Management 101: All manage wildlife in the same way. It is "Survival of the Fittest" or "Let Nature take it's Course." They simply cannot treat wild animals as domesticated ones. Then, what you have is a zoo. The cost recently went from \$10,000 to \$30,000 to 75,000 for one truckload of organic hay. The price of organic grain varies, but costs \$5,000-\$10,000 a truck load, not to mention the \$1,000's upon 1,000's of dollars it takes to bring water trucked in 3 times a day to water a herd of cows in this drought, as it would do so for the elk. It also is a full time 7-8 hour day for someone to truck the water in. Oh, and one might also want to hire a full time veterinarian. The Park simply does not have the money or the staff for such a huge financial undertaking. The Elk Activists should become the real elk supporters by starting an ADOPT AN ELK PROGRAM!

6. The only natural predator in our area to the Elk is the mountain lion. But it is unlikely that there would be enough mountain lions in the area to cull the herd, and they may prefer easier prey. The only other predator is man, the grizzly bear and wolves. Culling of the sick weak or infirm elk is not a popular solution in our area and yet the new GMP allowed for it by enlisting the help of the Graton Ranchero who are consulting with The Park on wildlife management.

7. Grassland is an ecosystem with its own diverse flora and fauna and even threatened and endangered species, and is a perfect habitat for carbon sequestration. If the ranching plan had allowed for more diversification in it, then the ranchers would also be able to start doing this.

• Source: <https://www.fs.fed.us/grasslands/ecoservices/index.shtml>

8. It is important to have more than one industry, or some diversification, in our area and our PRNS ranches do this for us. They bring sustainable and organic food production to us, which is one of our basic necessities of life and yet only about 1 % of our food is grown domestically and the rest is imported food, which is not as highly regulated as our food is here. And yet there are those who wish to eliminate our 20 or so 3-6 generation ranching families from our area. The elk cannot provide us with sustainably produced organic food. As they are certainly not hunted here nor can they raise crops.

9. The problems resulting from an overpopulation of elk are many, some of the more egregious ones are:

\*They can cause severe overgrazing and soil erosion of sensitive habitat.

\*They can cause serious injury to tourists who do not keep a respectful distance away from the elk, particularly the bull elk during the rut.

\*They can tax the water system of the seeps and ponds in their habitat (when overpopulation occurs.)

\*They can cause an imbalanced eco-system causing rare and native plants to be trampled or destroyed, so they vanish and cause severe habitat loss to deer and other animals that compete for grassland.

\*The elk can defecate wherever they want, and the water tests done by the anti-ranch special interest groups in the pouring rain did not test for which animal's feces showed up. In contrast, the ranchers must fence off their cattle from all riparian areas. The ranchers are heavily fined for any water violations.

\*They can get and spread Johne's Disease-so why is it a good idea to have herds of elk running free by cattle ranching operations as in the Drake and Limintour herds.

10. In reviewing the 1998 Elk Management I was horrified to read that eliminating the 2 dozen or so ranches in the PRNS was the main objective in 3 out of the 4 plans, the very ones who are here to steward or care for this land in the first place, but instead of a peaceful co-existence this plan seemed to

favor turning the PRNS into an Elk Park. The point being that the elk and cow it was concluded could not exist together so one of them had to go. So, the elk were favored and the cow, meaning really, the 3-6 generation ranchers that have put their blood, sweat and tears into their ranches, the very ones who are caring for the land-had to go! Does this make any sense at all? It's not like elk can be stewards of the land and care for it the way the ranchers do.

11. The other thing I noticed in the old 1998 Elk Plan was the irony that all of the adverse conditions that were mentioned to be caused by the elk are now being touted as being caused by the cattle by the anti-ranch special interest group activists.

12. So did our brothers and sisters (And yes, we can really say that.) at Graton Rancho cull the sick, weak or infirm elk of the Drakes Beach and Limintour herds, as I thought, was decided in the very newly revised GMP? No, they did not. (This was according to The Point Reyes Light, if it can be trusted.) They let the herds increase. Why was that? Could it be that doing so, along with the new GMP will make life so impossible for the ranchers that the succession plan which allows for the locally recognized tribe (Graton Rancho, perhaps?) to take over the 3-6 generation ranch families' lands. Now that is an irony, particularly when Deb Haaland, our Secretary of Interior is Native American, herself. What is to be made of this? (If the Point Reyes Light can be trusted)

13. Another related question is how could The Secretary of Interior get away with changing the previous GMP, which was favorable to ranching, AFTER the comment period, only to change it to a GMP that makes it nearly impossible for the ranchers in the PRNS to make a living, particularly the 5 remaining organic dairy ranchers that are regulated by no less than 8 agencies and the CA water board. And that the 20-year leases are not being honored and instead the ranchers are only being given 1-2 year leases, currently. How can they manage improvements and upkeep to their ranches with such short-term leases? And yes, I read this whole new GMP with dismay, particularly the part of not allowing the ranchers to grow their own forage. (Again, what wasn't negative in the GMP was in The Point Reyes Light newspaper, if it can be trusted.)

14. Some of the ranches that are located near the defunct Pierce Point Ranch, home to the fenced Tomales Point elk herd as well as, the Drakes herd are particularly vulnerable to the "elk activists" who harass the ranching operations by their protests on the leased-from-The Park-land, and these special interest groups use of surveillance videos trying to incriminate the ranchers when they have no understanding or knowledge of what the ranchers are doing as the ranchers care for their animals and land. They must be passionate about ranching to withstand this level of persecution and harassment, not just by this unfavorable-to-ranching new GMP made without due process, as was the other GMP. Both GMP's do discuss the Elk Plan. It is also interesting that during a Republican administration there was not this outcry against ranching by the anti-ranch special interest groups, but only during a Democratic administration. Keep in mind I am a moderate who likes to see both sides of an issue!

15. In my opinion this surveillance of the ranchers is un-American and very much like "Big Brother" is watching you plying the populace with anti-ranch propaganda, which should not have a place in our "free" American society! How ironic that it even exists here in a supposed bastion of open-mindedness and free-thinkers. Well, this occurs when extreme positions occur on both sides of the political spectrum, as is the case of the divisiveness of these anti-ranch special interest groups! I can only wonder how much of this is by conscience and how much of this is a good fundraiser for these anti-ranch groups to go after some 20 small, family farms who can't fight them the way The Corporate Agricultural-

Complex can. Is it an easy way to garner support to raise more money for their causes, and is this just collateral damage to them? In their wake it will cause an absolute devastation of our area.

16. Another question is, is this anti-ranch sentiment due to people's belief systems about diet. I'd also call this "Food Intolerance," which has a double meaning. One meaning is that one type of diet doesn't fit with everyone's very unique body chemistry and what may work for one person may not work for another. While having a food intolerance, for instance, being gluten intolerant, could mean that one has trouble digesting gluten and it causes a whole host of physical afflictions including weight gain because one's body has difficulty digesting or tolerating gluten. Those who espouse a vegan diet do not eat meat or dairy and so some may place moral arguments against eating meat and dairy. But nutritional expert Donna Gates of The Body Ecology Diet believes that a vegan diet is too high in sugar and carbs to be healthy for those who have to watch their blood sugar or have autoimmune, cardiac or other health related disorders. Probably, the most interesting diet expert is the doctor who wrote the book "Eat Right For Your Type," by Dr. Peter D'Adamo, also known as "The Blood Type Diet." He had done extensive research about one's blood type and how food affects one's immunity, and reactions to food causing intolerances and allergies. After all, the blood is your seat of immunity. He states that roughly ½ the population and the oldest blood type are the O blood types, who benefit from eating red meat. However, the A blood type which is roughly the other ½ of the population benefits from more of a plant based diet, but also benefits from the consumption of chicken and fish. He also describes what works best based on his research for the rare blood types of AB and B blood. So, if those who are vegan are against ranching based on moral grounds, then they are being judgmental to those who cannot tolerate a vegan diet physiologically due to being perhaps an O blood type as roughly half our population is, or to those with blood sugar or other immunity issues. So everyone's body chemistry is unique and trying to force your ethics on someone else is a bit intolerant.

17. Ironically there are feeding programs for elk, which are causing an over-population of elk in some of the western states such as northwest Wyoming, in Yellow Stone and The Grand Tetons. Those animals, (some 20,000 of them), are causing all sorts of environmental problems such as degradation of sensitive habitat, and erosion and suffer from Chronic Wasting Disease or "CWD" due to their over-population: CWD: "an always-fatal neurological disorder that causes stumbling, weight loss and sponge-like brain lesions in deer, elk and moose." The article goes on to say "its more about politics than the animals (welfare)." Because unlike in our immediate area where hunting is frowned upon there is greater economic benefit in selling hunting tags, but as here the elk are also a big tourist attraction because of their majestic size and beauty. <https://www.washingtonpost.com/nation/2022/03/16/wyoming-elk-chronic-wasting-disease/>

18. However, because hunting of the elk is a popular sport in these 22 state parks with feeding programs they are getting quite a bit of revenue selling hunting licenses, which in turn does help pay for having elk feeding programs. Although as in the PRNS the elk are also great tourist attractions for their beauty and grandeur. Since hunting is not allowed in the PRNS nor perhaps would we wish to have it in a 100 square mile area in fear of harming people, livestock and other threatened or endangered animals, then perhaps those suing The Park should "Adopt an Elk" to help pay for the cost of the \$75,000 truck load of organic hay and the 3 times a day delivery of water trucks during drought conditions, to come all the way out to the ranch area to feed and water the elk, as they do for the cows. If this were the case The Park would be free to do its own water testing and not rely on just the CA Water Board's tests to satisfy the anti-ranch special interest groups with this redundancy, and if the ranches actually got their 20 year leases renewed some would actually be able to fix their septic systems, while

others could focus on much needed improvements to help them continue their stewardship of the land and to continue their ranching operations with a bit more ease.

19. The ranchers are unable to advocate for themselves. The PRNS Park and the PRNS ranchers don't have the funding to continually fight these special interest groups that keep suing them, whenever they want to move forward with a sustainable business model! But these outside special interest groups use biased information against our ranching community and to divide our community, and to fundraise for their own benefit all the while causing a potential ecological, economic, educational and cultural diversity disaster in our area in their wake.

20. All the ranchers' need is to garner some positive public opinion and support. So many ranch supporters in the community continue to be so intimidated by the very vocal, anti-ranch proponents, (most of whom are not from our area), and the divisiveness that it brings to this community, that they are still too afraid to advocate for the ranchers! The PRNS ranchers need some advocacy, and they need a fair shake, and hopefully they will start getting it very soon.

Respectfully Submitted  
Cathy Richards

Correspondence: It is my position that the fence needs to be removed. It is the only way to address the nutrient and water deficiencies that the elk have experienced. The fence is both unsuccessful and cruel. Remove the fence!

**Correspondence ID:3923**

Correspondence: Commercial Ranching needs to end. This should already have occurred. Take down the fences.

**Correspondence ID:3924**

Correspondence: If the fence is to be removed and the Tomales Point herd of Tule Elk is allowed to move freely, then the spread of Johne's and other potential diseases from the Tomales Point Tule Elk herd to other ungulates should be addressed in the Environmental Impact Statement (EIS). Among other topics, the EIS should examine the incidence of Johne's disease in the Tomales Point Tule Elk herd and the other Tule Elk herds at Point Reyes National Seashore (PRNS); the incidence of Johne's Disease in the Columbian black-tailed deer herd that is behind the Tomales Point Tule Elk fence and within PRNS proper, and the likelihood of an increase in Johne's and other diseases within PRNS and outside of PRNS.

**Correspondence ID:3925**

Correspondence: Point Reyes is a National Seashore, not a National Cattle Ranch. American taxpayers across the nation reasonably expect a National Seashore to be managed for natural values, not for private herds of cattle on public lands.

The ecological damage inflicted by large, non-native ungulates is severe and extensive. The impacts of cattle grazing on native Tule elk are highly antagonistic to the health of this species. The presence of privately-owned cattle on public land is unwelcome and poorly advised. Many millions of acres of public land can be used for cattle grazing.

The presence of cattle at PNNS is incompatible with the mission and purpose of the National Seashore. The continued presence of cattle on Point Reyes NS can not be justified.

Correspondence: Marin Audubon Society Scoping Comments on Tomales Bay Area Plan

Marin Audubon Society appreciates the opportunity to submit scoping comments on the EIS and Management Plan for the Tomales Point wilderness area and Environmental Impact Statement that will be prepared for the Plan. Marin Audubon Society requests that the following questions and issues be addressed in the Management Plan and the EIS::

What has the NPS learned in the years since the current Management Plan was adopted that would change their management practices? What lessons are there from the CDFW and other entities that manage elk herds, that can guide the NPS in managing the Tule Elk?

Address the potential genetic impacts of keeping the Tomales Point herd isolated. The current situation allows for inbreeding and potential for genetic issues within the confined population. Wouldn't it be beneficial to the elk population to allow the herds to intermingle? -

Discuss other benefits to the elk of removing the fence, such as more available forage, water, minerals. Identify and discuss other potential adverse impacts of keeping the Elk isolated.

Describe and evaluate the forage vegetation, mineral sources and water sources available on Tomales Point for the elk during normal and dry years. Describe how the vegetation and water sources change during periods of drought.

How is the carrying capacity of a habitat determined? What is the carrying capacity of Tomales Point as defined in the current management plan? What is the estimated carrying capacity in the time frame of the revised plan? Discuss carrying capacity under normal weather years, dry years and projected ion rainfall estimates with climate change

Describe the Tule Elk confined population, including number of herds, areas occupied, movement patterns, interaction between herds, etc.

What is expected the elk would do if the fence were removed? Where is it predicted they would move? Is it expected they would connect with the existing unconfined herds or continue separate herds?

Some mortality related to drought conditions might be expected in any elk herd and actually any wildlife population. Compare the mortality during drought conditions of the confined and unconfined herds, at Point Reyes and herds in other parts of the state, during drought conditions.

Discuss predation on young elk in the unconfined herds and in the confined herds? Are there mountain lions within the Tomales Point fence enclosure that prey on young elk?

Identify and discuss other wildlife species that the fence confines, fox, mountain lions, bob cats, etc.)  
What is the impact on each of these species of being trapped in this enclosure?

Discuss anticipated management problems if the fence is removed and methods NPS would use to address them. Is it expected the elk would move onto private lands adjacent to the park, onto nearby highways?

Discuss the impacts visitors have on the elk? Does the presence of visitors limit elk use of any parts of the habitat? Do the elk avoid certain areas that are frequented by people? If so, what impact does this have on the population, if any?

What factors will the NPS consider in deciding whether or not to remove the fence? What is the purpose of retaining the fence when there are two free ranging herds? What are the concerns/risk?

**Correspondence ID:3927**

Correspondence: To whom it may concern,

Please make the Point Reyes elk a priority as you formulate the next management plan. The elk belong on this beautiful piece of California. The ranchers have been very well compensated and it's time for their full removal. Point Reyes is one of the most magnificent places on the west coast. It must be protected.

Thank you,  
Ron Letourneau

**Correspondence ID:3928**

Correspondence: It is my strong opinion that the NPS should return the park to as close to the natural state as possible. This would mean removing the fence separating not only the elk from grazing the entire park but other animals as well. The presence of commercial dairies has been demonstrated beyond a doubt to be having a detrimental effect on the environment both the land and ocean of Point Reyes. Those should be phased out as was the intention at the founding of the park. They have been expanded far beyond what existed at the Park's inception. Removing the fence, providing water for the elk and not killing them would be first steps in regaining the public's support for the NPS, which at this point is highly critical of its management.

**Correspondence ID:3929**

Correspondence: Thank you for the opportunity to submit comments for the pre-NEPA process re Tomales Point Tule Elk Preserve, specifically: maintenance or removal of the tule elk fence; population management of the Tomales Point tule elk herd; supplemental water for the elk in time of need; wilderness management and visitor use and infrastructure management at Pierce Point Ranch.

The Tule Elk at the Tomales Point Tule Elk Preserve represents all the elements of an imbalance of National Park policy and practice, tied to the history of the creation of national park lands by driving Indigenous peoples out of their homelands through violent actions and food source destruction, e.g., Tule Elk (see David Treuer's "Return the National Parks to the Tribes"). Now the Tule Elk at the Tule Elk Preserve are held behind fencing and left without needed water and food sources to survive. They are held for the benefit of dairy and beef cattle. If the Tule Elk are symbolic of Indigenous people, then dairy

and beef cattle are symbolic of the colonial settlers who drove Coast Miwok people out of the Point Reyes Peninsula, inserting themselves as the rightful landowners and heirs.

My question for the National Park Service is “Will you choose to fix this imbalance and change history?” My recommendation is to look to Indigenous ecological science and knowledge practices to explore solutions to fix this imbalance. Invite Indigenous scientists and cultural practitioners as decision makers and not just for a listening session. The Biden Administration has held discussions with Indigenous leaders all across the nation, use these broad consultation sessions to bring in Indigenous scientists. This planning process has the potential to actualize the goals of NEPA, White House Environmental Justice Policy, the National Park Service, the Biden Administration's America the Beautiful and California's 30 x 30 Initiative-- if there is a committed effort to include Indigenous scientists and cultural practitioners as decision makers.

For example, the Karuk Tribe has worked extensively on Roosevelt Elk management with UC Berkeley and state and federal agencies. This work addresses social and environmental injustice and goes further to “restoring local ecosystems and watersheds, expanding access to cultural foods and fibers, supporting local subsistence economies and community health, revitalizing cultural and ceremonial practices and enhancing self-governance and tribal sovereignty.” (<https://sipnuuk.karuk.us/digital-heritage/selected-topics-federal-indian-law-final-paper-karuk-sovereignty-elk-habitat-and> and <https://nature.berkeley.edu/karuk-collaborative/wp-content/uploads/2019/12/Sowerwine-et-al.-2019-JAFSCD-Enhancing-Food-Sovereignty.pdf>)

Imagine what we would learn, as Indigenous peoples, environmental advocates, park visitors, park employees and local community residents, if the Tule Elk are understood as a significant animal and relative. A relative that could teach all of us about how life is interconnected to all things. For thousands of years the life cycles of Tule Elk and human moved in synchronicity. A time to burn, to ensure Tule Elk grazed on nourishing grasses. A time to prepare and teach young hunters. Human, animal, plant and waters--contributed to the ecology of life.

Indigenous science was in place for thousands of years on the Point Reyes Peninsula and also at past Strawberry Festivals at Kule Loklo. Indigenous people gathered for ceremony of song, dance and prayer at the round house. Part of the ceremony was the pit roasting of a deer. This cultural practice of hunting to feed the community signified and renewed Indigenous relationships with the animal world-- sustenance for body and spirit. The community prayed and gave thanks to the deer for giving its life.

Tule Elk at the PRNS Preserve are suffering from malnutrition and lack of water. It's time to renew an Indigenous relationship with the Tule Elk by providing a healthy environment of native grasses and clean waters so our relatives can be healthy and strong. It's time to bring in Indigenous scientists and tear the fence down.

Artist and Yurok traditionalist Charlie Burns urged, “We cannot abandon our relationship to the animal world. I pray that aboriginal peoples will survive and that they fight the modern struggle of apathy. I always pray the modern empire will come to its senses and stop the destruction of our only Earth. Nature is giving early warning about the state of the planet, and it's not good.” (p 36, When I Remember I See Red: American Indian Art and Activism in California, editors, Frank LaPena, Mark Dean Johnson with Kristina Perea Gilmore, published by Crocker Art Museum, Sacramento and University of California Press, Oakland, 2019)

Tomales Point Area Plan  
Superintendent  
Point Reyes National Seashore  
1 Bear Valley Road  
Point Reyes Station, CA 94956

To Whom It May Concern:

We appreciate the opportunity to comment on the Tomales Point Area Plan (TPAP). Tomales Point is an area that has remarkable wilderness qualities. The area is also highly used by the public for solitude and access to the western shore of Tomales Bay. We appreciate being able to comment on this pre-scoping of the proposed area plan.

The Point Reyes National Seashore (PRNS) legislation and National Park Service (NPS) Policies provide guidance for development of the TPAP and for our comments regarding the proposed plan.

§ 459c-6. Administration of property

(a) Protection, restoration, and preservation of natural environment

Except as otherwise provided in sections 459c to 459c-7, . . . the property . . . shall be administered by the Secretary without impairment of its natural values, in a manner which provides for such recreational, educational, historic preservation, interpretation, and scientific research opportunities as are consistent with ... the maximum protection, restoration, and preservation of the natural environment within the area, subject to the provisions of sections 1, 2, 3, and 4 of this title ... and in accordance with other laws of general application relating to the national park system as defined by sections 1b and 1d of this title....5

NPS Management Policies (2006; 6.3.4.2 Wilderness Management Planning)

These policies state: "The superintendent of each park containing wilderness resources will develop and maintain a wilderness management plan or equivalent planning document to guide the preservation, management, and use of these resources. The wilderness management plan will identify desired future conditions, as well as establish indicators, standards, conditions, and thresholds beyond which management actions will be taken to reduce human impacts on wilderness resources. In evaluating environmental impacts, the National Park Service will take into account (1) wilderness characteristics and values, including the primeval character and influence of the wilderness; (2) the preservation of natural conditions (including the lack of man-made noise); and (3) assurances that there will be outstanding opportunities for solitude, that the public will be provided with a primitive and unconfined type of recreational experience, and that wilderness will be preserved and used in an unimpaired condition. Managers will be expected to appropriately address cultural resources management considerations in the development and review of environmental compliance documents impacting wilderness resources."

54 U.S.C. § 100502

"General management plans for the preservation and use of each System unit, including areas within the national capital area, shall be prepared and revised in a timely manner by the Director. On January 1 of each year, the Secretary shall submit to Congress a list indicating the current status of completion or

revision of general management plans for each System unit. General management plans for each System unit shall include--

(1) measures for the preservation of the area's resources;(2)indications of types and general intensities of development (including visitor circulation and transportation patterns, systems, and modes) associated with public enjoyment and use of the area, including general locations, timing of implementation, and anticipated costs;(3)identification of and implementation commitments for visitor carrying capacities for all areas of the System unit; and(4)indications of potential modifications to the external boundaries of the System unit, and the reasons for the modifications."

Director's Order #41: Wilderness Stewardship

## 6.2 Wilderness Character

The Wilderness Act (16 U.S.C. 1133(b)) directs that "each agency administering any area designated as wilderness shall be responsible for preserving [its] wilderness character." Wilderness character is the combination of biophysical, experiential, and symbolic ideals that distinguishes wilderness from other lands. The five qualities of wilderness character are (1) untrammeled, (2) undeveloped, (3) natural, (4) offers outstanding opportunities for solitude or primitive and unconfined recreation, and (5) other features of scientific, educational, scenic, or historical value. Accordingly, each wilderness park will integrate the concept of wilderness character into park planning, management, and monitoring in order to preserve the enduring benefits and values of wilderness for future generations. Whenever a park planning process that has the potential to affect wilderness character occurs, the park should determine how wilderness character can be both integrated into the planning effort and presented in the planning document. As a foundation, wilderness parks should develop a wilderness character narrative which describes what is unique and special about a specific wilderness, organized by each of the qualities of wilderness character.

## 6.3 Wilderness Planning

For every designated wilderness, a Wilderness Stewardship Plan will guide management actions to preserve wilderness character. Parks should notify the WASO Wilderness Stewardship Division Chief and work with their Regional Wilderness Coordinator during the Wilderness Stewardship Planning process. Parks with lands determined to be eligible, proposed, or recommended should also develop plans to preserve wilderness character. Wilderness Stewardship Plans should be completed within two years of designation, subject to funding. Preservation of wilderness character will be incorporated into appropriate sections of park planning and management documents. Also see Management Policies 2006, Section 6.3.4.2.

Our specific comments follow:

1. As stated in 54 U.S.C. § 100502, general management plans for the preservation and use of each System unit shall be prepared and revised in a timely manner by the Director. With this statute in mind, we believe the TPAP has segmented the requirement to develop a timely, updated, and comprehensive GMP. Segmentation occurs when an action is broken down into small parts to avoid the appearance of the significance of the total action. An action can be too narrowly defined, minimizing potential impacts to avoid a higher level of impacts. Because the 1980 Point Reyes General Management Plan (GMP) is almost 40 years old (and required by law to be updated), amending this outdated document by focusing primarily on Tomales Point will mislead the public and not meet the requirements of the National Environment Policy Act. For example, visitation, facilities such as parking, historic features, special status species numbers, and abundance, and water quality standards have all dramatically changed since 1980. In turn, the 1980 GMP did not consider NPS Management Policies that were significantly updated in 2006. And, the NPS Director's Order regarding wilderness stewardship was updated in 2013. Because of these issues, the public cannot fully understand what changes are being made to the 1980 GMP because

a complete document with changes has not been produced. A full GMP process would be required to fully understand management direction, based on updated policies, previous park actions such as new facilities, and the impacts of these new actions and their cumulative actions.

2. The PRNS does not have a wilderness plan as required by policy and law. However, overall 85% of the TPAP proposed planning area is designated wilderness and will have direct, indirect, and cumulative impacts on wilderness values throughout the park's 30,000 plus acres of wilderness. We believe additional data and baseline information need to be collected to ensure the overall Philip Burton Wilderness Area is managed to maintain its wilderness character, as required by law. At present, the lack of a comprehensive wilderness plan and baseline information (desired future conditions, measurable and monitored indicators, monitoring plan, wilderness character description, and standards) makes the characterization of cumulative indirect and direct impacts on wilderness values impossible.

3. We are concerned about how cumulative impacts will be addressed. Without baseline data regarding the rest of the park and adjacent areas, it seems impossible to quantify these

impacts from all the changes. The existing GMP data is limited and outdated; thus, the TPAP will have to update baseline data such as economic, air quality, and climate change impacts to fully address cumulative impacts. The CEQ regulations (40 CFR §§ 1500 -1508) define the cumulative impacts and effects that must be addressed and considered by Federal agencies in satisfying the requirements of the NEPA process. This includes direct, indirect, and cumulative impacts: Cumulative impact is the impact on the environment, which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions. Cumulative impacts can result from individually minor but collectively significant actions taking place over a period of time. (40 CFR § 1508.7)

4. All long-term strategies to manage the elk populations should be in the context of NPS policy and law as are other natural resources within PRNS. It has to be a comprehensive plan covering the entire park, including other wilderness areas outside of Tomales Point. Tule elk at Point Reyes should be managed in the context of the overall population level and not just the Tomales Point area. We strongly believe the continuation of a managed tule elk herd is important ecologically (restores natural processes as directed in NPS policies and park legislation) and provides for enjoyment for park visitors. In addition, we do not believe the park has sufficient data to set a carrying capacity number at this time. The park's legislation directs protection and restoration of the natural environment as the highest priority for park management. Overall carrying capacity for tule elk should be established in the park for the entire park, including areas that do not have elk populations, and scientifically based.

5. As stated NPS policy and law require superintendents to "identify visitor carrying capacities for managing public use. Superintendents will also identify ways to monitor for and address unacceptable impacts on park resources and visitor experiences." We recommend the TPAP address carrying capacity for this area and the entire park. Park visitation increased dramatically from 2020 to 2021, 2.0 to 2.8 million visitors respectively.

6. Recreational use along the shoreline and within the waters of Tomales Bay should be evaluated in the TPAP to see if it's meeting the requirements of the Wilderness Act.

We appreciate the opportunity to comment. Thank you for your public service in maintaining and preserving our precious parks.

Sincerely,

Tom Baty

Correspondence: We write to submit our public comment for the Tomales Point planning process at Point Reyes National Seashore.

It is our carefully considered opinion that NPS should remove the fence currently enclosing elk in the so-called preserve. We are not sure what purpose the fence serves, since we have often observed elk grazing on K, L, M, N, F and Home Ranches, and it is well-documented that elk outside the preserve are doing better than the captive animals within it.

Because tute elk are aboriginal inhabitants of the Point, because they are a state- and federally-protected endangered species, and because NPS is responsible for their presence outside the preserve, there is no intelligent solution to the current situation other than allowing the elk to roam free on the Point once more. This would allow the elk to continue to expand their range in the Point, and would start the necessary process of gradually phasing out the business of private cattle ranching in the Seashore, a business that is causing severe damage to the ecology of our national park.

Correspondence: Lets get on board with the original intent of the Park and stop allowing ranchers and way too many cows to damage the land, and water.

The Elk are rare - originally from this area and a unique treasure.

Stop taking ranching \$ and pressure from politicians who take ranching \$ and get on board with the job you are supposed to be doing!

**Correspondence ID:3934**

Correspondence: I appreciate this opportunity to make suggestions for what should be included in this study for updating the future management of Tomales Point.

I note that there are various reasons why large wild animals, including elk, bison, and white-tailed deer, have to be managed in several national parks.

These more specific points should be added to the bullet points of general topics to consider listed in the announcement::

- 1) consideration of the Tomales Point elk population in the context of all the tule elk in Point Reyes
- 2) acknowledging the absence of predators that would have helped control the elk population with less human intervention
- 3) presence and effects of Johne's Disease in the tule elk population
- 4) an update on contraception possibilities for the tule elk
- 5) what is the carrying capacity of the park for tule elk?
- 6) review of how much culling may be needed to control the elk population, and if so how that culling could be done
- 7) consideration of the possibility that the elk may spread beyond the park's boundary

**Correspondence ID:3935**

Correspondence: Please remove the fence at Tomales Point so the elk can access food and water. It's the right thing to do.

**Correspondence ID:3936**

Correspondence: I attempted to upload my comment and an appendix, but there is no way to link comments, so I will be emailing them directly to the superintendent. I will also be mailing a hardcopy.

Thank you,

Re: Tomales Point Area Plan Pre-Scoping

Dear Superintendent:

The National Park Service (NPS) announced that it has initiated a new planning process to address “complex wildlife, resource, and wilderness management issues” at Tomales Point at Point Reyes National Seashore (PRNS). The planning area includes the 2,900-acre Tomales Point Tule Elk Reserve where native tule elk, once thought to be extinct, were reintroduced in 1978.

The NPS anticipates completing the Environmental Impact Statement by the end of 2024. Once completed, this plan would replace the 1998 Tule Elk Management Plan and the NPS General Management Plan for the planning area. NPS discusses how this planning is separate from the recent General Management Plan Amendment which addressed ranching within the park and free-ranging tule elk.

Point Reyes National Seashore is one of a handful of national park units that permit livestock grazing. The purpose of the Tomales elk fence is to exclude tule elk from dairy and beef ranchleases. In the recent General Management Plan process, the NPS proposed to remove the elk fence and restore the Seashore to public use by sunsetting ranching under Alternative F, which would have allowed all elk to roam free. Instead, the NPS approved an alternative which keeps elk trapped behind the fence, expands commercial agricultural activities, and extends ranch

2

leases for up to 20 years. This is all related, and we believe that a separate Tomales Point Area Management Plan is too narrow.

1. Instead of a separate implementation planning process, this needs to be a General Management Plan Amendment. NPS is trying to use a narrow implementation planning process by starting with proposing to update its 1998 Elk Plan which detailed how to manage elk at Tomales Point, instead of starting at the top of its planning pyramid and deciding how the broader lands and resources of Tomales Point should be managed. A General Management Plan (GMP) amendment should be undertaken, not an updated yet narrow Elk Plan. The GMP should come first, not this Tomales elk implementation plan. Implementation plans should tier off a broader GMP amendment. Implementation plans can discuss in a detailed, site-specific way how to carry out the more-general GMP decisions. Yet PRNS wants to do this planning process in reverse, pre-determining the outcome of a revised Elk Plan at Tomales Point. Instead, NPS needs to review a GMP amendment for Tomales Point. See the NPS planning process descriptions below:  
General Management Plan -- This is a broad umbrella document that sets the longterm

goals for the park based on the foundation statement. The general management plan (1) clearly defines the desired natural and cultural resource conditions to be achieved and maintained over time; (2) clearly defines the necessary conditions for visitors to understand, enjoy, and appreciate the park's significant resources, and (3) identifies the kinds and levels of management activities, visitor use, and development that are appropriate for maintaining the desired conditions; and (4) identifies indicators and standards for maintaining the desired conditions

Implementation Plans -- These plans provide project- specific details needed to implement an action in an area of a park and explain how the action(s) helps achieve long-term goals.

(Part 2 of NPS Management Policies 2006.

[https://www.nps.gov/subjects/policy/upload/MP\\_2006.pdf](https://www.nps.gov/subjects/policy/upload/MP_2006.pdf) )

NPS says it intends to include both programmatic and site-specific analysis, and this should be clarified and explained.

2. The Tomales Elk Reserve fence needs to be removed. The public has overwhelmingly supported<sup>1</sup> protection of tule elk and restoration of Point Reyes National Seashore to natural conditions with wildlife, over commercial livestock management.

Free-roaming tule elk have already spread across the ranch-leases and reached the Tomales Point elk exclusion fence: there are presently elk on both side of the fence. Connectivity should be created by removing the fence.

<sup>1</sup> <https://www.sfchronicle.com/environment/article/At-Point-Reyes-the-contest-is-elk-vs-15203706.php>

3

3. Drought mortality of tule elk is unacceptable. NPS admits that the impetus for this planning process is the extreme drought conditions over the past several years (Dear Interested Party Tomales Point Area Plan PDF at

<https://parkplanning.nps.gov/document.cfm?parkID=333&projectID=108690&documentID=119614>). The Tomales Point Tule Elk herd has been the subject of national

controversy at Point Reyes National Seashore. In 2015 during an extreme drought, the NPS announced the population behind the elk fence declined from 540 to 2862.

While NPS attributes this recent elk die-off in its press release to "poor forage quality," and asserts "there is no evidence that the population decline is due to dehydration and a

lack of water," NPS is well aware of the scarcity of fresh water on the Tomales Point peninsula. Elk die- offs on Tomales Point occurred between 2012 and 2015, resulting in

the death of 250 elk that were attributed to a lack of fresh water by NPS personnel in April of 2015.<sup>2</sup> These news stories characterized the Park Service position as drought

being the suspected cause of the elk death, drying ponds and grasses, the latter of which became inedible, and quoted NPS biologist Dave Press as stating, "While we were out on

the range conducting our annual census, we observed the ponds had gone dry." (Later, after a public outcry over the fact that the Park Service had allowed the old stock ponds

in the enclosure to go dry, the Park Service changed its story, and in August 2015 officially denied that the lack of available water had played a role in the elk die-off).<sup>3</sup>

This denial is in spite of the fact that the biologists who wrote the 1998 Point Reyes National Seashore Tule Elk Plan expressed concern that the ponds were a factor in determining the ability of the elk enclosure to support its population:

The peninsula of Tomales Point ranges from a narrow tip to over a mile and a half wide at the fence line enclosing the elk range. There are no natural year-round streams. The natural streams have significant flows only during the rainy winter months. From late spring to late autumn, only spring-fed seeps would provide

water for elk if not for the existence of eight water impoundments originally built for cattle. Elk regularly use these impoundments, but it is unknown to what extent they may supply the population with an artificially high water source. The elk range does receive significant moisture in the form of summer fog and

4

condensation during the dry season. The impoundments are considered as a possible means to manage tule elk under this plan. The water impoundments are a factor in determining the ability of the elk range to support its population. While clearly an artificial construction, caution should be taken to ensure that any alteration of artificial water sources does not impact other species of special concern. Otherwise, a return of the elk range to its native condition of seep-fed springs is considered desirable to maintaining viable populations.

[https://www.nps.gov/pore/learn/management/upload/planning\\_tule\\_elk\\_mp\\_ea\\_1998.pdf](https://www.nps.gov/pore/learn/management/upload/planning_tule_elk_mp_ea_1998.pdf) at 12. (Emphasis added.)

In the context of the National Environmental Policy Act (NEPA) process for the General Management Plan being prepared to govern Point Reyes National Seashore and Golden Gate National Recreation Area, numerous commentors called NPS's attention to the lack of fresh water available to elk on Tomales Point during drought conditions. In August of 2020, after ponds dried up on Tomales Point, a group of volunteers brought in water for the elk to address concerns about dehydration<sup>4</sup>. Photographs of elk that died in the mud of dried-up watering holes attest to the reality that scarcity of fresh water appears to be at least a contributing cause to elk mortalities on Tomales Point. Once again in 2020, Park Service officials denied that lack of fresh water was a factor in the die-off<sup>5</sup>

In 2020, hikers photographed dead and emaciated elk behind the fence at Tomales Point and brought it to the attention of the NPS.

In April 2021, NPS issued a press release disclosing a population decline in the Tomales Point elk herd, from 445 animals to 293 animals<sup>6</sup>. This loss of 152 elk occurred in the midst of a prolonged drought. The ultimate cause of this die-off (and previous die-offs) is the confinement of the Tomales Point elk herd behind the fence, on lands that do not reliably provide for all of this elk herd's survival needs.

As NPS is well aware, the soils on Tomales Point are deficient in key minerals needed by tule elk to survive and thrive. The Sheridan-Baywood soil type, associated with copper deficiencies problematic for tule elk, is known to dominate Tomales Point, according to

5

the Park Service's own Tule Elk Management Plan<sup>7</sup>. These soil deficiencies and the dietary problems they cause for tule elk at Point Reyes are so well-known that they have been documented in multiple scientific studies. Gogan et al (1988) reported antler deformities in elk on Tomales Point, which they related to copper deficiencies<sup>8</sup>. Gogan et al. (1989) found that plants and soils at Tomales Point were deficient in copper (an essential trace element), molybdenum, and sulfur-sulfates, and that elk were showing "gross signs of copper deficiency," which may have been a contributing factor in the death of two elk in Spring of 1979<sup>9</sup>. Cobb (2010) found that the most common cause of death for tule elk at Point Reyes was starvation, often accompanied with copper and selenium deficiencies<sup>10</sup>.

While NPS officials have repeatedly denied that scarcity of water on Tomales Point is a serious issue for the elk, this assertion is beside the point, and does not absolve the National Park Service of its culpability for mismanaging NPS lands and resources and directly causing this unnatural biological crisis. Regardless of whether the repeated elk die-offs on Tomales Point are caused by a lack of fresh water, by inadequate forage quantity, by dietary deficiencies related to the particular soil composition on Tomales Point, or some combination of these factors, the inevitable conclusion is the same: Resources available to the tule elk population confined on the 2,600 acre Elk Reserve at Tomales Point are often inadequate to sustain the captive population in a healthy state, particularly under drought conditions. If the NPS is going to hold wild animals captive (which the undersigned groups find inappropriate), NPS has an obligation to provide them adequate food, water and anything else they need to stay healthy.

NPS has an affirmative legal responsibility to conserve tule elk, as elucidated in a letter to the NPS of August 31, 2020, authored by Katherine Meyer, Director of the Animal Law and Policy Clinic at Harvard Law School<sup>11</sup>. NPS also has an affirmative legal duty to provide wildlife and natural resources on Point Reyes National Seashore "maximum protection" and leave them "unimpaired for the enjoyment of future generations." 16 U.S.C. § 459c-6(a); 54 U.S.C. § 100101(a). The enabling legislation for this Park Service unit specifies that this National Seashore was established "to save and preserve, for purposes of public recreation, benefit, and inspiration, a portion of the diminishing seashore of the United States that remains undeveloped...." 6

538 (1962). Interdicting the freedom of movement of native wildlife for the benefit and convenience of livestock operations that lease Park Service lands, resulting in large-scale die-offs of tule elk, violates these legal mandates.

Under NPS policy, "Natural resources will be managed to preserve fundamental physical and biological processes, as well as individual species, features, and plant and animal communities. ... By preserving these components and processes in their natural condition, the Service will prevent resource degradation and therefore avoid any subsequent need for resource restoration." 12 Furthermore, "Biological or physical processes altered in the past by human activities may need to be actively managed to restore them to a natural condition or to maintain the closest approximation of the natural condition when a truly natural system is no longer attainable." 13 Under the alternative adopted for the Point Reyes National Seashore Tule Elk Management Plan, "The Seashore will attempt to manage free-ranging herds using minimal interventions to achieve viable populations as part of dynamic ecosystem processes." 14 Fence removal is necessary to restore the natural migrations and dispersals of tule elk on Point Reyes National Seashore, to maximize opportunities to achieve viable populations, and to restore dynamic ecosystem processes. Under the Point Reyes National Seashore Tule Elk Management Plan, "Their limitation to Tomales Point is an historical artifact of their reintroduction onto an area bounded by historic ranches and the intent to restrict their movements to a protected preserve. If they are to remain as part of the Seashore's fauna and ecological processes, they should eventually become free-ranging throughout most of the Seashore's natural zones where conditions allow." 15 More than two decades later, it is long past time for NPS to implement this goal of its own Tule Elk Management Plan. The Park Service's refusal to do so--along with increasing drought, die-offs, and the facts described herein--also constitutes significant new information about management of the Tomales Point herd that the agency must consider under NEPA. See 40 C.F.R. § 1502.9(d)(1); 40 C.F.R. § 1502.9(c)(1)(ii) (1978). To prevent an irreversible and irreversible commitment of resources while it analyzes this information, 40 C.F.R. §§ 1502.2(f), 1506.1(a), the agency cannot continue status quo management that causes another irreversible die-off of elk in the Tomales Point herd.

In April 2022 press release, the NPS references its Tule Elk Management Plan, and characterizes this year's elk die off as part of "a process called natural or self-regulation."

However, the cause of these repeated die-offs of rare native wildlife is completely unnatural: the 8-foot tall fence across the width of Tomales Point, blocking the natural

12 NPS. 2006. Management Policies, at p. 36.

13 Ibid., p. 37.

14 NPS. 1998. Point Reyes National Seashore Tule Elk Management Plan and Environmental Assessment at p. 50.

15 Ibid., at p. 40.

7

movements and migration of tule elk. This artificial barrier prevents elk from dispersing

naturally to areas with more abundant surface water, better forage quality, and/or adequate soils that support nutritionally appropriate vegetation. It is appalling that the Park Service is intentionally and artificially blocking the movements of native wildlife in a manner that results in their deaths. Furthermore, we are concerned that the periodic dieoffs of tule elk that result from their artificial confinement on Tomales Point could result in this population dropping below minimum viable population thresholds. Elk are harem breeders, with a few males doing most of the breeding, which skews the ratio of males to females contributing their genes to the following year's calves of the year. Tule elk on Point Reyes are known to have low genetic heterozygosity, making population viability a particular concern<sup>16</sup>. Compounded by genetic bottlenecks, these unnatural, drought-induced die-offs, may also increase the Tomales Point herd's susceptibility to disease such as Johne's Disease, a cattle-borne illness found in nearby dairy operations. The elk enclosure fence at Tomales Point Elk Reserve is an integral part of the Pastoral Zone landscape, which it borders, and it was designed explicitly to exclude elk from accessing Park Service lands leased for cattle grazing, for the convenience of ranching and dairying operations. This elk enclosure fence is out of compliance with Park Service policy, which states,

When the determination has been made through a planning process that it is appropriate for a facility to be constructed within park boundaries, all facilities will be integrated into the park landscape and environs with sustainable designs and systems to minimize environmental impact. Development will not compete with or dominate park features or interfere with natural processes, such as the seasonal migration of wildlife or hydrologic activity associated with wetlands.<sup>17</sup> Emphasis added. Its removal is necessary to come into conformance with Park Service policy. Point Reyes National Seashore is a unit of the National Park Service, not a zoo or safari park, where animals are artificially confined in an unnatural or quasi-natural setting. Maintaining this captive herd at Tomales Point "runs counter to the NPS policy of not maintaining captive herds for the enjoyment of visitors but instead to maintain wild populations within natural habitats." 1998 PRNS Tule Elk Management Plan at 54. Droughts may increase in frequency and intensity with climate change, and NPS needs to adapt its management accordingly--this should be reviewed in the EIS.

10

Photo: Mathew Polvorosa Kline, Tomales Elk Reserve, 2020.

All stock ponds, springs, seeps, and streams should be mapped and surveyed. Herd unit typical home ranges should be mapped and overlaid with water resources.

Planning for regular maintenance of stock ponds should be analyzed so that these drought disasters do not happen again.

See the Appendix for a detailed description of water resources and mapped elk herds on Tomales Point: Coda et al. 2020.

4. Hazardous downed fencing needs to be cleaned up. Wildlife photographer Matthew Polvorosa Kline discovered tule elk snagged in old and downed fencing inside the Tomales Elk Reserve, apparently causing death as the elk could not free itself. This is absolutely unacceptable in a famous National Seashore where the Organic Act mandates non-impairment of natural resources.

11

Tule elk bull with antler snagged in old, downed fencing inside Tomales Elk Reserve. Photo: Mathew Polvorosa Kline, Tomales Elk Reserve, 2020.

5. Population management of Tomales Elk Reserve elk needs to be scientific. Very high mortality from drought events occurred, as this an elk “zoo” not a natural habitat. Before 12

European contact, local tule elk may have been able to migrate completely out of Point Reyes area in times of drought, to more well-watered marshy areas such as the Central Valley. Future population management of tule elk herds should take a secondary stance until all commercial livestock are removed from the park unit, as beef and dairy cattle are the current limiting factor with respect to carrying capacity, forage resources, water supplies, range management, and other park resources. The Tomales Elk Reserve is an artificial population management area where NPS states it allows “nature to take its way,” yet the fence is not natural, and only present in order to originally keep tule elk from entering cattle ranch-leases. Now that free-roaming tule elk herds have expanded across the ranch-leases, even to the outer side of the Tomales Elk Reserve exclusion fence, this becomes a moot point. Elk are already present in the dairy and beef ranchleases. The Tomales Elk should be allowed to escape this arid peninsula and intermix with the free-roaming elk, as a national park unit intends.

Culling of elk within and outside of the Tomales Elk Reserve is unacceptable. Instead, alternatives should be analyzed that remove the fence and remove commercial livestock operations in the Seashore and Golden Gate National Recreation Area as a connected action to better tule elk management within the Seashore.

6. Supplemental water and minerals were supplied to Tomales Elk Reserve elk only after extreme public outcry, protests, and media attention: this is unacceptable. In 2021, attorneys from the Animal Law Clinic at Harvard Law School sued the NPS over the elk die-off at Tomales Point<sup>18</sup>. Conservationists petitioned the Park Service to remove the fence<sup>19</sup>, as hundreds protested against leasing parkland to commercial beef and dairy operations in the Seashore. Public outcry eventually pushed the NPS to temporarily supply water to the elk.

We do not want to rely on NPS to manage these elk herds during drought conditions. Again, the fence should come down and these trapped elk be allowed to roam into the larger Seashore area and find water resources. The free-roaming elk herds did not suffer drought mortality, and apparently have access to better water resources.

7. More than 85% of the Reserve is within the Philip Burton Wilderness, making elk management difficult. Wilderness management should not include an artificial fence that traps native wildlife in a poorly-watered area, where hikers experience dying elk and dead elk carcasses due to drought kill because elk could not naturally migrate to find better resources. This does not comport with Wilderness values. Park staff, under constant public pressure, found creative ways to use old routes to enter Tomales Point to

18 <https://apnews.com/article/ca-state-wire-animal-rights-parks-travel-lifestyle-0954273933da397a37140bc2e8923d19>

19 <https://www.westernwatersheds.org/wp-content/uploads/2021/04/Elk-Die-Off-2021-APA-petition-final.pdf>

13

deliver water by vehicles to the dying elk herds during the extreme drought of 2021, highlighting the difficulties of managing wildlife and also keeping to Wilderness mandates. Removing the fence would immediately alleviate this difficult management problem.

8. Invasive species should be managed with a detailed plan for control and elimination from the Tomales Point area. We noted invasive radish in the southern part of the Tomales Elk Reserve, apparently escaped from adjacent dairy silage fields. This nonnative weed should be controlled, and an Invasive Plant Management Plan developed.

9. Coastal prairie native plant communities need to be restored here, not just passively, but actively. During field visits we observed native coastal prairie grasses gradually being released from heavy livestock grazing pressure, that are beginning to expand into Tomales Point grasslands. Native grasses observed in Tomales Point:

- a. Purple needlegrass (*Stipa pulchra*)
- b. California oatgrass (*Danthonia californica*)
- c. Blue wildrye (*Elymus glaucus*)
- d. Creeping wildrye (*E. triticoides*)--in swales and low areas.
- e. Sandberg bluegrass (*Poa secunda*)
- f. Melic grass (*Melica imperfecta* or *torreyana*)
- g. Red fescue (*Festuca rubra*)
- h. Pacific reedgrass (*Calamagrostis nutkaensis*)
- i. Tufted hairgrass (*Deschampsia cespitosa*)

A diversity of ferns, forbs, and shrubs form a mosaic of open grassland and north coastal scrub habitats. Active restoration could involve local volunteers collecting seed from native plants, growing these in nurseries, and planting out into the area. A Native Plant Restoration Management Plan should be developed as part of this review. Management

(*Raphanus sativus*)  
plant in southern  
Tomales Point.

14

actions such as studying tule elk grazing influence on native plant communities, and Traditional Ecological Knowledge with local tribes such as cultural fire and prescribed

fire plans to open up some shrub areas should be reviewed.

10. Sensitive and Threatened/Endangered Species Need Inventorying, Monitoring, and Management. Federally threatened California red-legged frogs (*Rana draytonii*) may inhabit stock ponds and springs on Tomales Point, and management for this rare species should be analyzed with respect to drought, stock pond maintenance, and other water resources.

Salmonids may use streams and inshore coastal marine habitats, pinnipeds and cetaceans may use Tomales Point coastal habitats, snowy plovers may use beaches, rare butterflies may be present in recovering coastal prairies, and rare plants may occur on the peninsula. Other species could be present that need to be reviewed in this EIS. A narrow elk management plan ignores the many other significant biological resources that are potentially present on Tomales Point. This is another reason why a broad GMP amendment needs to be analyzed, not a narrow implementation plan just for elk.

11. Cultural Resources need to be surveyed and inventoried. This should include indigenous artifacts, cultural landscapes, and oral histories of surviving tribal representatives both federally recognized and not federally recognized tribes. Traditional Ecological Knowledge should be included in this analysis.

12. Pierce Point Ranch is managed well as a visitor experience that is interpreted as to its dairy history. This should serve as a model for other dairies and beef ranches as their commercial livestock operations are removed from the Seashore and Golden Gate National Recreation Area.

These many alternatives should be considered, especially the publicly popular removal of the Tomales Elk Reserve fence, allowing tule elk to connect to other free-roaming tule elk herds, and find adequate water and forage.

We hold that it is inappropriate for any agency to exclude native wildlife from suitable habitats on any public lands, least of all units of the National Park Service, on which the protection and preservation of native wildlife supersedes any and all commercial uses, including (and in this case, particularly) livestock production. We ask the National Park Service to come into compliance with its statutory mandates requiring responsible wildlife stewardship, freeing the confined tule elk population on Tomales Point and allowing them the freedom to roam throughout Point Reyes National Seashore and Golden Gate National Recreation Area and engage in the natural process of seeking out adequate forage and water necessary for their survival. Due to the emergent mortality events during recurring droughts, we urge NPS to provide solutions that can be applied to release the tule elk of Tomales Point from their unnatural confinement and maximize their chances of survival.

15

Thank you for your time. Please contact me at [lcunningham@westernwatersheds.org](mailto:lcunningham@westernwatersheds.org) if you have any questions.

Captive Tule Elk Herd at Tomales Point in Point Reyes National Seashore  
Lacks Water and Needs Help

In a disturbing replay of National Park Service (NPS) neglect during the drought of 2011-2015, the Park Service is again allowing the old stock ponds in the Tomales Point Tule Elk Reserve<sup>1</sup> to go dry. These ponds are an essential water source for the captive Tule elk<sup>2</sup> because there are no perennial streams in the reserve. During that drought, approximately 250 out of 500 elk died for lack of water. We are concerned that NPS is going to let that happen again.

In order to fully understand the effect of the current drought on the estimated 445 Tule elk in the reserve now<sup>3</sup> it is necessary to understand where the elk are located and where the ponds are that they rely on.

A detailed study by wildlife biologist McCrea Cobb was published in 2010 that delineated the home ranges of four distinct herds in the elk reserve which he named the North Herd, the Plateau Herd, the White Gulch Herd and the South Herd.

Below is a page from that study that delineates the four home ranges.

As Cobb's text below his map states, there is little spatial overlap among the four tule elk herds. That is clear from viewing the telemetry fixes of collared elk taken every three days from 2005 to 2008. In other words, individual elk from one herd rarely go into another herd's home range and that includes never using ponds located in another herd's home range.

1 The elk in the reserve are held captive behind an 8-foot, woven-wire fence that was built to hold the elk captive

contrary to NPS wildlife management policy that wildlife not be confined.

2 Tule elk are endemic to California. Once numbering approximately 500,00 animals, they were nearly wiped out by

market hunters and ranchers and are now at a population of only 5700 animals. They have very low genetic diversity.

3 [https://www.nps.gov/pore/learn/nature/tule\\_elk.htm#:~:text=The 2019 annual census of,445 individuals at Tomales Point.](https://www.nps.gov/pore/learn/nature/tule_elk.htm#:~:text=The 2019 annual census of,445 individuals at Tomales Point.)

2

<https://escholarship.org/uc/item/2wt3h3rc> at 37.

If you look closely between the White Gulch and South herds, you will see that Cobb has included the location of the Pierce Point Ranch complex and the trail down to McClures Beach to help orient the viewer. The entire road from the reserve entrance to the ranch complex is also depicted.

3

Below is a screen grab depicting the six ponds in the elk reserve that we found using Google Earth. To help orient the viewer we have also marked the Pierce Point Ranch complex. We have recently visited and photographed all six ponds.

The North Herd

Starting with the North Herd, there are two ponds in its home range, North Pond I and North Pond II. North Pond I is completely dry as seen below. Photo taken on August 21, 2020.

4

North Pond II is the biggest pond in the reserve. It has water, but it is way below capacity. See photo below taken on August 16, 2020.

5

The North herd seems safe now with one of its two ponds having some water, but now the herd has only one pond to drink from so it will consume that water faster than when there were two ponds with water.

The Plateau Herd

The next herd is the Plateau Herd. Comparing that herd's home range and the pond locations, the Plateau Herd has Central Pond I and Central Pond II in its home range. Central Pond I is dry. See photo below taken on August 21, 2020. Central Pond II is very close to dry. See photo below taken on August 21, 2020

6

It will likely go completely dry soon. When the Plateau elk consume the last drops of water from that pond they will have no water, at least none that we can find in Google Earth or on the ground ourselves.

The White Gulch Herd

The next herd is the White Gulch Herd. We could not locate a pond in its home range on Google Earth, but there is some sign of a seep that drains toward Tomales Bay. Whether it is running now is unknown. Its home range does overlap the Plateau Herd a bit, but it doesn't seem to overlap enough to include Central Pond II. Even if it did, that pond (above) will be dry soon. Cobb's map shows the White Gulch Herd seems to wander away from its home range more than the other three herds and water may play some role in that. There are some radio telemetry fixes showing White Gulch elk not far from the seep that ends up at McClures Beach which is a short distance from the South Herd's home range. That seep will be discussed below.

The South Herd

The last herd is the South Herd. South Pond I and South Pond II are within its home range. Both of these ponds are dry and have been for a while. Below is a photo of South Pond I. Photo taken on August 7, 2020.

7

This pond is a short distance off the left side of the road about a quarter mile before the historic Pierce Point Ranch. The pond went dry during the 2011-2015 drought when 250 elk died for lack of water in the reserve.

After the die off, Park Service official Dave Press stated that "the seashore is

developing a plan to truck water to an easily accessible pond if it runs dry again in the future.”<sup>4</sup> The easily accessible pond Mr. Press refers to is the pond in the photo above. By letter dated August 10, 2020, Jim Coda, a wildlife photographer, wrote to the park telling it that that pond was dry again and it was time for the park to act on its earlier commitment to fill it when it ran dry. To date it has provided no water for the elk.

Below is a photo of South Pond II which was taken on August 18, 2020.

<sup>4</sup> <https://www.ptreyeslight.com/article/seashore-elk-herds-rose-and-fell-fences-2014>  
8

According to the 1998 Tule Elk Management Plan, there were eight old stock ponds that the elk relied on for water in the reserve. The ponds were deemed very important to the elk's survival because the plan states there are no perennial streams in the reserve. We can only find six ponds which we have named based on their location. Over time, ponds tend to fill in and slowly disappear if not maintained. That may be why we could not find two of the ponds mentioned in the 1998 Plan. The six ponds we did find are probably shallower than they were in 1998 and even more so compared to when they were originally dug.

There is one other water source. It is a seep which flows down adjacent to the McClures Beach trail and ends in a pool at the beach. It is not clear from Cobb's map whether the White Gulch Herd or the South Herd is using the seep or possibly both herds. There is sign that elk are using the seep at the beach and a short distance up from the beach.

Here is a photo taken on August 19, 2020, of an elk that went to use it and died in the seep just before it reaches the beach. This is one of four dead elk found last week while checking ponds and surrounding areas.

9

The seep is flowing now, but its flow is decreasing and the pool at the beach is extremely shallow. The canyon that the trail and seep runs through is quite steep on both sides and the area the seep runs in is heavily overgrown with vegetation until it gets near the beach. The pool at the beach up to a short way behind the elk in the photo is the only easy access to the seep's water. The pool on the beach is extremely shallow at this time, about 1 to 2 inches, possibly an inch or so more in spots.

10

Below is a typical view of the steepness and heavy vegetation as seen from the trail. Photo taken on August 21, 2020.

The heavy vegetation hides the seep until it gets very close to the beach. Dave Press told us that based on a trail cam, NPS has determined that the elk don't use the seep during the daytime, probably because people are on the trail during the day. He also told us that NPS will not put water in the easily accessible pond near the road until the seep stops running, thereby contradicting what he was quoted as saying in the Point Reyes Light in 2015. And how long will it take before NPS finds out the seep has stopped flowing and it can get a tanker truck loaded and out to Pond I? And what about the Plateau Herd and its almost dry pond? Does anyone in the Seashore know what the word “empathy” means?

In summary, the North Herd has water for a while. The Plateau Herd is about to run out of water not many days from now. The White Gulch Herd doesn't appear to have any ponds in its home range, but it does appear to have a seep which may or

may not be flowing at this time. The next closest water would be the seep at McClures Beach which may stop flowing at any time. The South Herd is out of water except to the extent the McClures seep keeps flowing and the animals can go all day without drinking water.

This is absurd. NPS policy prohibits holding wild animals captive. The Park Service has an obligation to provide adequate water (and food) for these captive elk. If you're going to hold them captive, then you have an obligation to keep them alive.

11

If any elk die because any NPS personnel failed to care for the captured elk humanely, like zookeepers are required to do, those employees could be found guilty of animal abuse, neglect or cruelty.

NPS should fill the South Pond I immediately. It should also bring in water by helicopter for the Plateau Herd whose remaining pond (Central Pond II) is about to run out of water. While the reserve is a wilderness area, flying in water would not violate the Wilderness Act because mechanized vehicles are allowed where necessary to meet the minimum requirements for the administration of the area. Concerned citizens are contacting the Superintendent of the Seashore and asking her to please fill South Pond I with water to ensure the South Herd elk don't die. Furthermore, the park should also fly in water to fill Central Pond II, which is close to drying up, to prevent members of the Plateau Herd from dying.

Finally, all of this requires that holding the elk captive behind an 8-foot tall wovenwire fence without adequate water (and possibly forage) must end now. The fence is contrary to the 1916 NPS Organic Act and the Point Reyes legislation which both require NPS to give priority to elk and other natural resources, not to private, subsidized ranching, which is the only reason why the fence is there.

The Superintendent can be reached as follows:

Acting Superintendent Carey Feierabend

### **Correspondence ID:3937**

Correspondence: Please consider the overall environment as you consider Tomales bay. Our earth is screaming for fewer cows and more open space. Please remove the ranchers and cows from our PUBLIC lands. They are as far from sustainable as they can be and do not belong in our National Seashore. Remove the fences and barbed wire and let nature try to heal this land. At a minimum, as a veterinarian, I cannot stand by and watch as we starve those elk and watch them die while fencing them in. If the elk are to remain fenced, they must have adequate water and food. It is the only humane option.

Thank you,

Amy Allen

### **Correspondence ID:3938**

Correspondence: Dear NPS,

Proposed plans for Point Reyes National Seashore must include the removal of the elk fence at Tomales Point. Elk and other wildlife would have plenty of water available from Abbotts lagoon and other sources down in the valley. Unfortunately, two commercial interests (I Ranch and J Ranch) suck up the

region's water, for their modern high intensity dairy operations. It's outrageous that the enormous loafing barns of those two ranches, each exceeding 30,000 square feet in area, were built many years after that land was purchased by the federal government,

Taking away the fence is cheaper and more sensible than setting up enormous plastic water tanks and trucking water up to the elk reserve. PRNS should be managed as a nature park, NOT as an elk zoo adjacent to a collection of factory farms.

Please start questioning the way you have been conducting business. That is how progress is made in a well functioning society. Maintaining an open mind is necessary for truth to be revealed, and for injustices to be corrected.

A case in point is the Kenneth C. Patrick Visitor Center, which is named in memorial to the park ranger who was murdered in the line of duty in 1973. Most people don't know that Veronza Bowers, the man convicted for Ranger Patrick's murder, is almost certainly innocent! More info can be found at [www.veronza.org](http://www.veronza.org), or at one of the sites that advocate for the release of political prisoners. With the retrospect of almost five decades, we now know that the FBI ran shady operations (like COINTELPRO), specifically to target politically active citizens such as Mr. Bowers. With our modern knowledge of historical racism and 20th century political repression, we can safely say that the flimsy evidence for his case wouldn't merit a conviction.

Free the elk. Free Veronza. Let wilderness return to this precious national park.

**Correspondence ID:3939**

Correspondence: Dear Park Superintendent,

In regards to the Tomales Point Area Plan, I writing to ask you to remove the Tomales Point fence. Please prioritize the management of the Tule Elk Reserve and stop ceding our public resources to private beef and dairy operations. These operations harm the natural and cultural resources you have been trusted to protect and preserve. These operations exclude the public from public land and harm the native flora and fauna of Point Reyes. I believe this course of action will be the best way to implement the mission of the National Park Service and benefit the people who own this public land.

Thank you,  
Perry J. Gray

**Correspondence ID:3940**

Correspondence: It is my position that the removal of the Tule Elk Reserve fence is the only way to accurately address the nutrient and water deficiency and associated Tule Elk population management problems in the Tomales Point area.

The removal of the Tule Elk Reserve fence is neither a radical or new idea. In fact, the National Park Service's own 1998 Environmental Assessment concluded that the only way to create a healthy free-roaming population of Tule Elk in the Seashore and associated parks would require the "elimination of exotic cervids and removal of the fence across Tomales Point" (National Park Service, 1998, p. 89).

The decline of the Tule Elk Reserve's herd by nearly half over the last few years is not natural self regulation but a direct result of the lack of access to proper nutritional forage and adequate water sources during the increasingly hot summers caused by Climate Change. Because there are no perennial streams in the Tule Elk Reserve, the herd's population has been cruelly limited to which individuals can survive on limited nutrition and water. This is not a natural carrying

capacity.

The Tomales Point herd is still relatively new and has very little genetic diversity compared to other natural herds. The entire Tule Elk subspecies experienced a severe bottleneck effect in the 20th century, and the Tule Elk Reserve fence causes further genetic selection limitations for the herd in the Tomales Point area. The loss of genetic diversity across generations can lead to harsh consequences, such as weakness, illness, disease, death and even extirpation if the National Park Service does not actively increase connectivity between the herds in the park and establish more free roaming herds within the Seashore's boundaries.

A study published last year on the genetic diversity of a Tule Elk metapopulation reintroduced in a similar time frame to the Tomales Point herd found that there was lack of migration among the groups, and almost every group was below the threshold to improve or maintain genetic diversity over the next 25 years (Batter, Bush & Sacks, 2021).

Compared to natural Rocky Mountain Elk populations in Idaho, where there has been considerable gene flow between geographically isolated groups, there was little migration among most groups even decades after introduction (Aycrigg & Garton, 2014).

This suggests that genetically isolated populations, like the Tomales Point herd, will likely decline further due to inbreeding and genetic problems unless they are able to move freely and breed with the other free-roaming populations in Point Reyes National Seashore and the state. A 1987 study conducted in the Tomales Point Reserve backs up this claim. The authors argue that without the ability to increase genetic variation, the Tomales Point herd will suffer from the various problems associated with inbreeding, depression, and genetic drift to the point of extinction (Barrett & Gogan, 1987). Genetic variation in the herd could be improved or at least maintained through natural processes if the herd was able to freely roam throughout the Seashore and breed with the other established free-roaming herds.

Although it is the National Park Service's responsibility to prioritize the natural resources (including the Tule Elk) of the Seashore, it is impossible to ignore agricultural and ranching operations within its boundaries. The National Park Service, among others, often claim that removal of the Tomales Point fence will have significantly harmful impacts on the tenant cattle ranch operations in the Seashore. It is our position that the current population size of the Tule Elk in Point Reyes will have little impact on cattle grazing in the Seashore.

This is backed up by a case study in the Owens Valley in Southern California. A socioeconomic analysis was conducted in 1985 by researchers in the Owens Valley which has had similar competition between various political, agricultural and environmental interests in the last few decades. Additionally, the population size of Tule Elk in the Owens Valley at this time fluctuated roughly between 200 and 300 individuals which is similar to the Tomales Point Herd in Point Reyes today. (Wantrup & Phillips, 1970) Obviously, Owens Valley and Point Reyes are not exactly the same but there are many undeniable similarities especially the central factor of competition between domestic livestock and the native Tule Elk.

The analysis concluded that Tule Elk populations in the Owens Valley could be significantly larger if the state was able to establish more free-roaming herds throughout the region. The social benefits of this would ultimately outweigh the social costs associated with the conflict between Tule Elk and livestock. The authors remark, "The competition between Elk and domestic livestock in the Owens valley is minor even during drought" (Wantrup & Phillips, 1970, p. 26).

The Tomales Point fence is in clear conflict with the National Park Service's directive to protect the natural resources of the Seashore for the countless generations to come. This goal can only be actualized through the removal of the Tomales Point fence, the installation of wildlife corridors to increase connectivity among the Seashore's several Tule Elk herds, and long-term genetic

monitoring.

The creation of wildlife corridors specifically is a feasible and realistic goal which would allow the Tomales Point herd to travel to the Southern portions of Point Reyes and alleviate the population density in the North. This was originally proposed in the 1998 Environmental Assessment (Appendix G) as one of the many options to increase connectivity and establish free-roaming herds (National Park Service, 1998). Today, wildlife corridors are still a viable alternative to increase connectivity between the herds in the Southern part of the Seashore, and allow the Tomales Point herd to stabilize its population size and health.

We are living at a critical moment in time as we are faced with unprecedented loss of biodiversity and wild places on a global scale. The public has set aside Point Reyes as a National Seashore--one of a few rapidly vanishing slices of wilderness in the West to be protected and Preserved. The decisions made today will have a profound impact on innumerable generations of visitors and wildlife. What will visitors see in fifty years if you do not act now? A living landscape and mosaic of wildlife, including the iconic Tule Elk--or a wasted landscape ruined by our own hubris and inaction?

It is your and all of our responsibility to ensure that the bugling Tule Elk are not another silenced instrument in the wild orchestra of the planet's natural world. We ask you to do the right thing, and make Point Reyes a National Seashore that lives up to the values it espouses

**Correspondence ID:3941**

Correspondence: Please protect these majestic God made wild elk. They dont require much as opposedto cattle ranchers who require more and more land...including land guaranteed for these wild animals. Cattle ranchers have MONRY that seems to guarantee TAKING land that shouldnt belong to them an slaughtering these innocent animals .. slowly and cruelly. Money used for the wrong reasons is wrong and just evil. Please make the right decision and protect these beloved elk. Thank you for asking for my input. God bless.

**Correspondence ID:3942**

Correspondence: Point Reyes National Seashore (PTRE) announced comments are welcome to inform the planning for the Tomales Point Management Plan that will replace the Tule Elk Management Plan ('98) and those parts of the General Management Plan that addressed activities and management in Tomales Point. The resulting plan will address, at least in some part, the management of the Tule Elk and I offer the following comments.

In previous plans for PTRE the management of free-ranging Tule Elk were addressed. As a visitor and from news - information I was shocked that Tule Elk were not given the proper access to lands allowing for their health and well-being. The climate of the area appears to be changing, meaning wild free ranging wildlife should be able to move anywhere in the Tomales-Pierce Point area to access water, better feed, thermal protection, and distancing from human activity (when and where the elk chose). The area, once the Pierce Point Ranch and now closed dairy operation, should have all roads rehabilitated along with all fences removed. Fences block animal movements, can snare individuals, and are fully counter to the idea of a "free-ranging large wild mammal populations". As such, the fences are alien to the idea of natural activities of wild animals and plants in a unit of the National Park Service. Take down the fences to allow elk to move to find the habitats they need, avoiding mortality in the herd because they lack access to water, especially in the ever likely situation of droughts and a new droughty ecosystem. Taking down the fences eliminates any need for providing and maintaining an artificial watering system for wildlife, especially where animal disturbing water trucking is necessary to maintain

the watering system. Fences also don't belong in Wilderness Areas, and a good portion of the Tomales Point area is in the P. Burton Wilderness.

The park (PTRE) can maintain the Point Ranch Interpretive program to tell the story of the previous 100 plus years, where the park also can present how the fences needed to come down to help the free-ranging Tule Elk adapt to the changing climate - environment. The interpretive center can model how lands once operated in a livestock or dairy business can be returned to a more naturally functioning system where animals and plants can move or relocate to adapt to changing conditions.

Removing fencing will eliminate the onerous and costly annual efforts of delivering water, maintaining an artificial watering system, and explaining why wildlife have to die tangled in unmanaged wire fences. PTRE and the NPS has many more studies, projects, and activities to fund than a band-aid watering system for drought stressed Tule Elk and other wildlife.

It's time to help the natural system of PTRE return to it's former splendor by removing the fences and giving Tule Elk and other wildlife the freedom to move. PTRE can still tell the story of the cattle and dairy industries for the 100 plus years they operated, but also tell the story of how once agricultural lands can be restored to natural systems that can heal and hopefully flourish.

Thank you for this opportunity to comment on this important planning and future management program.

Bruce Connery

**Correspondence ID:3943**

Correspondence: This whole thing makes my stomach turn to think that we've come to a place in this capitalistic world where money and power always win... regardless of how many people write to you - begging for you to have an ounce of compassion for the Elk, for nature, for our planet, for humanity, for our fragile and precious eco-system and ocean. It feels futile and soul crushing. The actions taken by the authorities that rule this public land - land owned by the people, not corporations, is in-humane, short-sighted, greedy and corrupt. These actions must stop feeding the corporate machine and start working for the people, and honor the wishes of the public instead. I do not know anyone who is in support of shooting the elk. We all know in good conscience that it's an unnecessary and barbaric act of cruelty. So once more, I ask that you to dig deep within your soul - and this time, do the right thing. Restore our coast to what it was meant to be - a nature preserve for these majestic animals. Thank you.

**Correspondence ID:3944**

Correspondence: I hope you will include a survey of other NPS sites where large mammals have required management. My understanding is that there are quite a few. What criteria does NPS presently use to guide their decisions regarding wildlife management.

How many elk can the Park manage (1) inside the fence (2) if there were no fence, with consideration for the safety of visitors and neighbors.

In addition to cows, what other animals present in the Park might be in conflict with an expanded herd of elk.

Thank you for your consideration.

**Correspondence ID:3945**

Correspondence: I support removal of fencing to allow the elk to roam over a greater area.

- The drought mortality of native elk is unacceptable.
- Removing the fence is better management for wildlife than setting up plastic water tanks and troughs, and trucking water up to the elk reserve.
- Old and downed fencing is hazardous and needs to be removed. Elk become tangled in these fences and die.
- 85% of Tomales Point is in the Philip Burton Wilderness, making NPS management of tule elk herds here much more difficult during times of drought. The fence needs to come down.

**Correspondence ID:3946**

Correspondence: How is it that it is even an issue in 2022 whether to free the wild tule elk or not? National parks were created to offer a refuge for wild creatures to thrive & to be safe. National parks were also set aside so humans could have a place to visit where they could experience nature in her magnificent fullness & diversity.

To ruin all this glorious possibility at one of the most spectacular parks on the pacific coast to set up subsidized squalid farms full of separated domesticated animals living unnaturally & exploited for human consumption .is beyond horrifying. How can humans be so dense as offer leases to farms that are clearly inappropriate as well as a visual blight.

No wants to visit a sea side park & be confronted by mournful cattle in dry fields where the mothers have their babies ripped from them st birth so their milk can be given to humans? At Point Reyes one can see the calves isolated in tiny huts cut off from tier mothers & the sunshine & the earth. All for the benefit of humans yet I know of no one who still consumes milk as there are so many superior plant based “milks”that are not produced through suffering.

Why decimate the last of the tule elk ti support a dyeing unhealthy inhumane non sustainable dairy business?

Will we human keep destroying the natural world until all is gone?

The choice us clear:

Eliminate the dairy leases at Point Reyes National Seashore Park

Free the tule elk & provide them with water & adequate grazing grounds.

Encourage diversity of all flora & fauna.

Aligne with Nature not human greed.

Avoid short cuts for immediate profit at the expense a sustainable future.

REMOVE THE FENCE AT TOMALES POINT ASAP!!!!

**Correspondence ID:3947**

Correspondence: May 9, 2022

Point Reyes National Seashore

RE: Tomales Point Area Management Plan

A new management plan for Tomales Point is desperately needed. The on-going losses of the native species in this area speak to failings in the timely adaptation of natural resources management in the face of accelerating climate change. Elk deaths through starvation and dehydration are unacceptable, especially in a National Park. The Area Plan must address sustainable long-term (50 years) water and forage needs for the elk and the other native species

The Tomales Point Area Management Plan should not be restricted by the pending decisions regarding the broader Point Reyes Seashore General Management Plan. That pending plan faces significant legal hurdles that put the proposed 20 year private leases into serious question. Legal delays will push any

"final lease decisions" regarding the General Plan out 2-3 years, likely beyond the time when the Tomales Point Area Plan is scheduled for completion.

An NPS environmental analysis and subsequent EIS that assumes cattle and dairy operations to continue south of the Tomales Point Plan Area would be highly questionable and difficult to defend. The National Environmental Policy Act is clear regarding the perils and inappropriateness of "segmentation." The Tomales Plan must not assume that the current NPS "preferred alternative" for the General Plan is baseline, or is given precedence over a potential future that removes all domestic livestock from the Seashore. <sup>[L]</sup><sub>SEP</sub> The public and several environmental organizations are already advocating for a removal of the elk fencing that currently restricts the elk from accessing their basic survival needs for water and food. The fences were built to protect commercial leases and failed to protect native habitats. If NPS were to restrict a full review of fence removal because of potential impacts to cattle and dairy operations, the Tomales Point Plan will fail to meet the intent and purpose of NEPA. It is clearly in the public's interest for NPS to thoroughly assess fence removal in the context of a future removal of livestock from Pt Reyes National Seashore.

As the climate models continue to improve and the US and global emissions continue to rise, there should be no doubt that drought conditions will get significantly worse. Water and forage availability will decrease in the Tomales Point Area. The Area Plan must describe and address a future that will experience greater and more severe shortages of water and forage. NPS must describe what the "worst case" conditions could be, and what that will look like concerning food, forage and cover for the elk and the other native species.

The NPS is under tremendous scrutiny concerning Pt Reyes. The agency has lost the trust of over 50,000 citizens who were assured their comments would be seriously considered regarding the General Management Plan. The public responded with overwhelming demands for real change that would better protect our Seashore. But NPS chose "business as usual," the protection of a handful of private interests but not the public interest. It is incumbent on the NPS to undertake a transparent and trustworthy planning and review process this time.

The public has witnessed NPS failures to manage chronic and serious water quality violations, ignoring illegal dumps and the illegal killing of wildlife on 28,000 acres of public lands. It is time for the Pt Reyes NPS to show real accountability to us the public and our future generations.

Under the Public Trust Doctrine, Pt Reyes National Seashore is a Public Trust Resource. This doctrine holds that NPS is to protect these public trust resources for the public and future generations. The Area Plan and the EIS must describe how NPS will meet its fiduciary responsibilities under the Trust Doctrine, demonstrating how NPS will insure the long term well-being of the elk and the other native species. Specifically NPS must address the fencing at Tomales Point in the context of Public Trust natural resource protections.

The Tomales Point Area Plan must reflect the realities of a changing climate, longer and deeper droughts, more native species losses, greater protection needs of migratory and marine species, and more fires. Making the necessary changes in Point Reyes resource management provides the opportunity to fulfill the original intent of the enabling laws, to meet the purpose of the public's \$350 million investment (today's dollars), and for NPS to meet its Public Trust responsibilities.

Sincerely,

Daniel D. Heagerty

Correspondence: National Parks are for the preservation of wildlife and wild lands, not for farming and ranching. To put private business interests above the interests of wildlife is inconsistent with the purpose of the parks, and the use of tax dollars to maintain and sustain them.

Putting businesses raising domestic animals for food is also inconsistent with allowing people to enjoy the parks for recreation. I don't visit National Parks to see domestic cows or fishing fences. There are countless places anyone can go to see cows and commercial fishing. These business interests are interfering with the well-being of wild Tule Elk, which only live in a few places in the country. Instead, you're feeding and watering cattle that belong to private businesses and killing the Tule Elk. That is disgraceful. That would be like grazing cattle in Tuolumne Meadows and shooting the bears.

Take down the Tule Elk Reserve Fence. Remove the commercial farming, ranching and fishing. They should have been gone long ago. Stop caving in to business interests, and misusing my tax dollars.

I remember one of the first times I visited and hiked in Point Reyes with a close friend. She pointed into the fog saying, "Look! Look! The Tule Elk!" They were off in the distance. She explained to me how unique they are and how we were in one of the few places where they live. That was 35 years ago and I still remember it. That's why I go to National Parks. That's why people go to National Parks.

Take down that fence.

**Correspondence ID:3949**

**Correspondence ID:3950**

Correspondence: I am writing the National Park Service, to state that the Elk fence needs to be removed in order for the elk herds to roam freely in the park. This is the best next step for the survival of this endemic species.

Without a fence at Tomales Point, the National Park Service wouldn't need to waste efforts and money bringing water up to the elk. The animals would have plenty of water available from Abbotts lagoon and other sources down in the valley.

Park Service money should not be used to trap Elk behind a long tall fence on Tomales Point. Point Reyes Park Service financial resources should be used to get rid of ranchers who pump raw sewage into park lands and waters, build and hide dumps, and prevent public access to the park. Please prioritize native Tule elk over destructive cattle operations on our public land.

Point Reyes National Seashore management must scope a plan to remove the Tule Elk Reserve fence across Tomales Point. This must be done in conjunction with a serious, science-based, enforced plan to cease the practice of ranching on our public land, so that timely and effective Seashore wilderness restoration occurs with public participation, focused on natural and native features, habitats, wildlife, and visitor accessibility.

Our native Tule elk in PRNS deserve a better quality of life, rather than being confined in an environment without sufficient forage, minerals and water. Please ensure the upcoming plan for our iconic elk has several options that involve the removal of the elk. The public has requested the NPS to protect the Tule elk, and now is the time to take action.

**Correspondence ID:3952**

Correspondence: The land that belongs to the people is being destroyed, our waters our being polluted and the wildlife that belongs there is being destroyed by what I can only see as corruption. To capitulate and sell out to the dairy famers. It's really pathetic, but sadly to be expected from feckless spineless politicians, who care of nothing but short term votes/profits and campaigns funds. Why on earth would anyone in their right mind look at the situation in Point Reyes in a logical, compassionate way and think the proposed action is normal? As a tax payer I would like to see the Nation Park, be a national park,

belonging to the people. The whole thing stinks. Literally. I stand on the side of the Elk - I hope given the state of the world, and the planet you surprise us all and do the right thing.

**Correspondence ID:3953**

Correspondence: Thank you for inviting public input into the planning process for Tomales Point. The best way to advance the National Seashore's mission is to remove the fence at Pierce Point.

Allowing the continuation of cattle ranching in this area, Tomales Point in the Point Reyes National Seashore, is contradictory to the NPS trying to mitigate the negative impacts of climate change partially caused by this very practice. The NPS needs to do its part and at every step possible be a leader to achieve this end-result.

All National Park Service resources should be directed to restoring the land to benefit the biodiversity within the park. This is what the public wants and needs, and what we need to do to help fight a biodiversity and climate crisis.

Point Reyes has stunning biodiversity, and the restoration of native plants and wildlife will ensure that these important ecosystems last for generations.

As a long-time user of the seashore, I'm looking forward to seeing what the Park Service comes up with as an improved management plan. It's a good time to make some long-needed changes, particularly the elk fence removal. That alone will make a significant difference in one's experience of the park, and I'm sure it will be met with massive public approval. Thank you for considering my input. I'm excited to see the results.

**Correspondence ID:3954**

Correspondence: I appreciate the opportunity to provide input into this scoping process and ask that you remove the elk fence at Tomales Point.

Maintenance of an 8-foot fence and providing water and nutrition for captive Tule elk is not a reasonable use of funds, when the Tule elk could find adequate food and water if they were allowed to freely roam.

We wonder why Point Reyes National Seashore officials, especially Superintendent Kenkel, persist with keeping the expense of a long ugly fence out at Tomales Point and to truck in water and minerals. It's obvious even to a non-scientist. There's not enough natural food and water to sustain the Tule Elk entrapped in a zoo pen out there. Take down the fence, and instead use the money to help the Tule Elk transition and thrive across the Seashore. Remove the ranchers and their cattle. Enough is enough. It's a NATIONAL PARK!

The first sentence of the Tule Elk Management Plan and Environmental Assessment, dated 1998 states "The purpose of this plan and environmental assessment is to guide the management, monitoring, and research of Tule Elk, *Cervus elaphus nannodes*, at Point Reyes National Seashore for the next five to ten years". Well here we are 24 years later and you're finally getting around to updating this horribly outdated plan. Meanwhile hundreds of beautiful Tule Elk have died behind that fence while the NPS did nothing. That fence has to go.

An independent, scientific panel provided a recommendation to the NPS, to remove the eight foot fence across Tomales Point, which currently confines the native Tule elk in an environment which does not allow the herds to be large, healthy and free-ranging. Please include numerous alternatives in the upcoming elk management plan that would remove the Tomales Point fence in order for our native wildlife to be free-roaming.

**Correspondence ID:3955**

**Correspondence ID:3956**

Correspondence: "Thank you for inviting public input into the planning process for Tomales Point. The best way to advance the National Seashore's mission is to remove the fence at Pierce Point.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying - just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

Resources budgeted for Point Reyes National Seashore should be used for preventing wildlife destruction, rather than additional money toward how to maintain an unethical 8 foot fence in the Elk Preserve.

Maintaining a captive Tule elk herd at Tomales Point will likely only become increasingly expensive with climate change and recurring, significant droughts. If the fence is removed, water troughs and mineral licks will be unnecessary.

Our native Tule elk in PRNS deserve a better quality of life, rather than being confined in an environment without sufficient forage, minerals and water. Please ensure the upcoming plan for our iconic elk has several options that involve the removal of the elk. The public has requested the NPS to protect the Tule elk, and now is the time to take action.”

**Correspondence ID:3957**

Correspondence: “To assist the NPS with its planned NEPA review of the Tomales Point area and Tule elk herd management in Pt. Reyes National Seashore, I suggest the following issues be included in your review process, and any eventual Environmental Impact Statement that comes out of it. These points are intended to insure that the park resources, including the Tule elk and native plants and animals, get the maximum protection for the public's current and future benefit.

We keep reading that the Park Service doesn't care about the Elk out on Tomales Point at Point Reyes National Seashore. What's going on? Why does the Park Service spend taxpayer money for a fence and water and mineral supplements when it's cheaper to just let the Elk go live free and wild? Take down the fence and stop wasting our money for cruelty on innocent wildlife!

The park should spend time and money on removing the fences, planting native grasses, cleaning up the water pollutants, and generally restoring Tomales Point back to its natural habitat.

First and foremost, NPS should remove the fence that separates the Tomales Point herd from private, for-profit ranching livestock and prevents the elk herd from finding forage and water in its own. This would allow a more natural existence, without interference from humans.

Thank you for your consideration in this important manner.

“

**Correspondence ID:3958**

Correspondence: “To assist the NPS with its planned NEPA review of the Tomales Point area and Tule elk herd management in Pt. Reyes National Seashore, I suggest the following issues be included in your review process, and any eventual Environmental Impact Statement that comes out of it. These points are intended to insure that the park resources, including the Tule elk and native plants and animals, get the maximum protection for the public's current and future benefit.

Spending the public's money for a Tule Elk Fence and supplemental water and minerals is wasteful, and not a long-term, feasible solution. The Tule Elk are starving to death from lack of access to proper food. And the impact of global warming causes climate effects like long term drought out there. It's bad money after bad money. Free the Tule Elk from Tomales Point. Let the Elk have water and food for free around the Park.

The long run goal is to phase out cattle from the Point Reyes National Seashore, altogether. This would allow a number of costly issues to be dropped as the progression of steps were accomplished, namely the need and upkeep of the elk fences, trucking in feed and water for the elk herds in the increasing

occurrence of drought, culling the herds when successfully repopulating the areas and eradication of invasive species of plants brought in by cattle, cattle feed, and industrial machinery.

I cannot find a reasonable sound argument for continued ranching or dairy in a National Park. There are numerous dairy and cattle ranches in West Marin and Sonoma counties, as well as all across California and the entire United States. Some owned by the same families as those that ranch in the park today. Tule elk are only native to California and only found in Point Reyes National Seashore. We are lucky the elk are located in a National Park where they should be protected. Why private dairy and beef cows are prioritized over those elk in a National Park is beyond anyone's logical reasoning. It is political and that does not make it right. The National Park should be above politics. We need our National Parks, which we pay for and support, to work for us, the people.

An independent, scientific panel provided a recommendation to the NPS, to remove the eight foot fence across Tomales Point, which currently confines the native Tule elk in an environment which does not allow the herds to be large, healthy and free-ranging. Please include numerous alternatives in the upcoming elk management plan that would remove the Tomales Point fence in order for our native wildlife to be free-roaming.

“

**Correspondence ID:3959**

Correspondence: I am a taxpayer who wants you to remove the fence confining the tule elk. It is important our elk survive and are well cared for in a natural habitat, vs confined behind a fence which keeps the elk away from much needed water and forage.

The Park Service should not be spending so much money to maintain fencing at Tomales Point Reserve. There are all the expenses for materials, then all the hidden costs and time for labor, operations, administration, and rancher-pleasing. As a concerned citizen for the elk, please spend the money to remove the fence and free the Elk.

The NPS should put resources into creating a rewilded park. It will be necessary to plan on demolition and disposal of the many tons of concrete which now comprise the modern loafing barns at each PRNS dairy (one of which supposedly closed a year ago).

Removing the elk fence is the most impactful step the Park can take for Tomales Point, and this should be the plan review's top priority. This and total removal of all dairy and cattle operations from all of the park would have the strongest positive impacts, both ecologically and in terms of protection of the public's resources. The removal of both would benefit the return of native, deep-rooted grasses, allow the return of birds and wildlife that cannot survive in the barren fields where cattle have eaten the greenery down to the earth, and let the natural prairie reestablish itself. It could also serve as an outdoor laboratory for studying how to accelerate its healing and nurturing, information that will be increasingly important as we try to save our planet from the damages of global warming.

Thank you for listening to the public and considering the wishes of the many instead of the profits of a few.

**Correspondence ID:3960**

Correspondence: Preserve the Elk. End the dairy farming. These dairy farms are not native to the region, they are a blot on the landscape you claim to protect - for the benefit of a few families who use the system - like one big handout - while destroying the region - the whole thing makes a complete and utter mockery of the government effort to 'preserve' the Point Reyes seashore and lands. I stand with the Elk.

**Correspondence ID:3961**

Correspondence: The following are comments addressing the upcoming plan for Tomales Point within Point Reyes National Seashore. The National Park Service should not be creating a separate plan for this area of the park, or any other area of the park as it should be included in the Park's General Management Plan and the park should be managed as one whole unit. The complex ecosystem within the park should be treated as one entity, and the health of that entire system is the responsibility of the park service. To do otherwise can only be seen as irresponsible and cruel.

No matter what the Park Service spends to supplement water and minerals for the Tule Elk at Tomales Point, it will not matter. The Tule Elk are starving to death at Tomales Point due to continued drought, and megadrought. Please stop spending time and money on the fence and artificial approaches, and let the Elk roam free for natural sources of water and good nutrition.

Financial resources should not be spent on an Elk enclosure at Tomales Point, nor on trucking in water and minerals all the way out there, when the Elk are dying of thirst, malnutrition, and starvation. Financial resources should be spent to free the Elk so they can live a natural and healthy life across the entire Park.

For climate change and biodiversity reasons, the Tomales Point scoping plan must include complete removal of the Tule Elk Reserve fence combined with an entirely new and enforced ranch succession plan. It must commit to ceasing continued ranchlands succession of leased parcels to ranchers, and restoration of native coastal prairie and wildlife habitat. It must emphasize the roles of indigenous Coast Miwok's ecological and scientific cultural knowledge and practices, and the importance of wildlife and natural forces in the restoration process.

Respectfully, the land in Point Reyes National Seashore belongs to the public, and should be managed for public, not for private benefit. It is imperative to keep the native Tule Elk as the priority, and remove the Elk fence.

**Correspondence ID:3962**

Correspondence: Now that the National Park Service is looking at its management of the Tomales Point area of the Pt. Reyes National Seashore, there are a number of items NPS should take into consideration as it updates its plans. Please include consideration of these when scoping your environmental review process. The most critical of these is the permanent removal of the fence that keeps the Tomales Point Tule elk herd imprisoned on land that isn't sufficient to support a captive herd.

The American public, by a wide margin, does not support spending money to keep Tule Elk in captivity at Tomales Point in Point Reyes National Seashore. There is no viable, long-term monetary solution for supplemental water, minerals, or food for the Tomales Point herds. The only reasonable cost is to remove that harmful fence and let the Elk roam free as is natural and the right step to take.

Park Service money should not be used to trap Elk behind a long tall fence on Tomales Point. Point Reyes Park Service financial resources should be used to get rid of ranchers who pump raw sewage into park lands and waters, build and hide dumps, and prevent public access to the park. Please prioritize native Tule elk over destructive cattle operations on our public land.

Maintaining a captive Tule elk herd at Tomales Point will likely only become increasingly expensive with climate change and recurring, significant droughts. If the fence is removed, water troughs and mineral licks will be unnecessary.

The successful reintroduction of the elk herds in the Point Reyes National Seashore should be viewed as the goal of the general plan for not only the Tomales Point area but the entire National Seashore and the most cost-effective way to do that is to work for the elimination of cattle from that area. If this approach is not taken then there will be continued non-native plants being brought in which will necessitate more plans and strategies to eliminate, more engineering projects to contain manure run-off, control of native 'predator' species to protect the cattle which is contradictory to reestablishing the Seashore, just to name a few.

### **Correspondence ID:3963**

Correspondence: Public enjoyment of the Seashore should be open and available for present and future generations. My main comment to the National Park Service and Point Reyes National Seashore officials is the Elk Fence must come down.

When it comes to Tomales Point our National Park has failed us, the taxpayer, and rightful owners of the land. We should not be paying for the cost of installing and maintaining a fence so wild animals can't roam and forage for food and water in areas preserved for private cattle and dairy ranchers within a National Park.

Pierce Point Ranch should be the only real "historical" ranch in PRNS. It should be developed as a working model of a ranch from the 19th Century, with no more than a few head of cattle and a few dairy cows, showcasing actual ranching and farming techniques of that era. Docents could explain the conditions, techniques, and context for working the land under the times and circumstances in place at the time. It should also tell the full story of the Native Americans that preceded European settlers and their fate. All other ranches should be removed from the park.

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

Thank you for your attention to my comments. Tomales Point should be an open area, not fenced in because ranchers use false arguments against Tule Elk. Cattle by the thousands at Point Reyes Seashore cause exponentially more damage than a few hundred Tule Elk. The Park Service should protect and help wildlife and their habitats, not promote private, for-profit ranching. The fence needs to come down, and the ranchers need to stop interfering with wildlife, polluting streams, and hassling Park visitors. The ranchers need to either give up some of their privileges, or get out of the Park. The American people will be watching how you approach what's right for Tomales Point and our National Park.

**Correspondence ID:3964**

Correspondence: Proposed plans for PRNS must include the removal of the elk fence at Tomales Point.

Removal of the fence is a less expensive option than "management" of the herd.

Removal of the elk fence would give the Park a good opportunity to create a prairie preserve, located just on the outside of the existing elk preserve, by pushing back any cattle away from the current fence line. In fact, if the ranches are to remain, installing a wildlife-friendly fence south of the elk fence to let elk and other native animals move freely while keeping cattle at bay would let the park establish a specific prairie preserve where the flora and fauna have been degraded. This could be a site for studying the restoration of the native environment after decades of degradation by cattle.

First and foremost, NPS should remove the fence that separates the Tomales Point herd from private, for-profit ranching livestock and prevents the elk herd from finding forage and water in its own. This would allow a more natural existence, without interference from humans.

I want to thank you for your serious consideration of my comments, and placing them into the public record for scoping analysis of Tomales Point. The most important thing is for the Park Service to get rid of that horrible fence out there. It's 2022! Please come up with a good plan for the Elk, wildlife, birds, native plants, and everything else that should thrive in a National Park. We are counting on you to help Point Reyes be all it can naturally be!

**Correspondence ID:3965**

Correspondence: Public enjoyment of the Seashore should be open and available for present and future generations. My main comment to the National Park Service and Point Reyes National Seashore officials is the Elk Fence must come down.

Dismantling the elk fence will save the NPS money, as it is a less expensive and less invasive option.

Moving forward the Park Service should partner closely with the Coast Miwok and scientists to re-wild the park.

As an endemic species, Tule elk benefit the land, and allowing them to freely roam in Point Reyes National Seashore will enhance the park overall.

Respectfully, the land in Point Reyes National Seashore belongs to the public, and should be managed for public, not for private benefit. It is imperative to keep the native Tule Elk as the priority, and remove the Elk fence.

**Correspondence ID:3966**

Correspondence: Removal of the elk fence at Tomales Point should be included in your plans for PRNS. It is the necessary and ethical step to take for a native species in a National Seashore.

The current plan of what is called a 'co-habitation' - which is a farce - is wasteful in a number of ways. Instead of letting the elk populations roam the land to access the water and flora they have evolved to need for subsistence, it often needs to be trucked in to keep populations at levels 'mandated by a plan'. Not only do these resources need to be expended to keep the herds alive - then later, National Park

Service personnel go and cull the population when it exceeds their some-how-agreed upon 'rancher-acceptable' number.

All money, time and energy should be spent on re-wilding the entire National Seashore and not subsidizing destructive cattle operations on these public lands.

It is the responsibility of the Park Service to protect wildlife, and the most obvious solution is to remove the elk fence, allow the elk to roam, water, and feed, and for the Park Service to ameliorate climate change impacts, including removal of nonnative plants, improve fire resiliency, and allow wildlife and natural processes to restore areas of the Seashore. A good first step is to end the lease agreements with the cattle ranchers.

The National Park Service was created to conserve the scenery and leave our public lands unimpaired for the enjoyment of future generations. Based on the NPS' mission, the NPS must remove the unnatural eight foot fence, for the sake of our native wildlife and for the enjoyment of future generations.

**Correspondence ID:3967**

Correspondence: Proposed plans for PRNS must include the removal of the elk fence at Tomales Point.

The Park Service will never be able to fully provide enough water, minerals, or forage for the captive Tule Elk at Tomales Point. Put the money into taking down the fence and letting Elk live and thrive throughout the Seashore.

I respectfully ask that the Tule Elk Reserve fence be taken down now. National Park Service and Point Reyes National Seashore funds supplied by the American taxpayer should be used to create wild and healthy freedom for the Tule Elk and other wildlife. Public access to vast swaths of the Seashore now blocked by ranching barbed/electric wire and formidable gates, which is not acceptable on public lands. Please investigate, enforce, and punish cattle ranching families that continue to degrade and pollute our Seashore's lands, waters, and air. Superintendent Kenkel and all of you at the NPS: It is time to get your priorities and mandates straight. Please serve the interests of wildlife, habitat, visitors, and posterity.

Point Reyes National Seashore management must scope a plan to remove the Tule Elk Reserve fence across Tomales Point. This must be done in conjunction with a serious, science-based, enforced plan to cease the practice of ranching on our public land, so that timely and effective Seashore wilderness restoration occurs with public participation, focused on natural and native features, habitats, wildlife, and visitor accessibility.

The successful reintroduction of the elk herds in the Point Reyes National Seashore should be viewed as the goal of the general plan for not only the Tomales Point area but the entire National Seashore and the most cost-effective way to do that is to work for the elimination of cattle from that area. If this approach is not taken then there will be continued non-native plants being brought in which will necessitate more plans and strategies to eliminate, more engineering projects to contain manure runoff, control of native 'predator' species to protect the cattle which is contradictory to reestablishing the Seashore, just to name a few.

**Correspondence ID:3968**

Correspondence: I am a taxpayer who wants you to remove the fence confining the tule elk. It is important our elk survive and are well cared for in a natural habitat, vs confined behind a fence which keeps the elk away from much needed water and forage.

Taking away the fence is cheaper and more sensible than setting up enormous plastic water tanks and trucking water up to the elk reserve.

Why is the Park Service wasting taxpayer money on an inappropriate fence out at Tomales Point? The NPS should take down the fence, let the Tule Elk roam, and create a Coastal Native Habitat Reserve instead of keeping the Elk Pen out there. It's ridiculous that wildlife are treated like zoo animals in a National Park.

Ecological reports recommend the fence be removed. There is no good reason to keep the fence.

The National Park Service was created to conserve the scenery and leave our public lands unimpaired for the enjoyment of future generations. Based on the NPS' mission, the NPS must remove the unnatural eight foot fence, for the sake of our native wildlife and for the enjoyment of future generations.

**Correspondence ID:3969**

Correspondence: Proposed plans for PRNS must include the removal of the elk fence at Tomales Point.

Point Reyes National Seashore management must scope a plan to remove the Tule Elk Reserve fence across Tomales Point. This must be done in conjunction with a serious, science-based, enforced plan to cease the practice of ranching on our public land, so that timely and effective Seashore wilderness restoration occurs with public participation, focused on natural and native features, habitats, wildlife, and visitor accessibility.

The successful reintroduction of the elk herds in the Point Reyes National Seashore should be viewed as the goal of the general plan for not only the Tomales Point area but the entire National Seashore and the most cost-effective way to do that is to work for the elimination of cattle from that area. If this approach is not taken then there will be continued non-native plants being brought in which will necessitate more plans and strategies to eliminate, more engineering projects to contain manure run-off, control of native 'predator' species to protect the cattle which is contradictory to reestablishing the Seashore, just to name a few.

**Correspondence ID:3970**

Correspondence: Thank you for inviting public input into the planning process for Tomales Point. The best way to advance the National Seashore's mission is to remove the fence at Pierce Point.

It would be better and less expensive to allow Tule elk access to water sources, such as the spring and lagoon in the region directly below the Tomales Point reserve.

Pierce Point Ranch should be the only real "historical" ranch in PRNS. It should be developed as a working model of a ranch from the 19th Century, with no more than a few head of cattle and a few dairy cows, showcasing actual ranching and farming techniques of that era. Docents could explain the conditions, techniques, and context for working the land under the times and circumstances in place at the time. It should also tell the full story of the Native Americans that preceded European settlers and their fate. All other ranches should be removed from the park.

Maintaining a captive Tule elk herd at Tomales Point will likely only become increasingly expensive with climate change and recurring, significant droughts. If the fence is removed, water troughs and mineral licks will be unnecessary.

It is time to end the mis-management of our native Tule elk in Point Reyes National Seashore. Please follow the scientific advice provided in 1993, and remove the fence across Tomales Point. It is important for the survival of this herd to be free-roaming with access to food and water.

**Correspondence ID:3971**

Correspondence: Proposed plans for PRNS must include the removal of the elk fence at Tomales Point.

The Park Service will never be able to fully provide enough water, minerals, or forage for the captive Tule Elk at Tomales Point. Put the money into taking down the fence and letting Elk live and thrive throughout the Seashore.

I respectfully ask that the Tule Elk Reserve fence be taken down now. National Park Service and Point Reyes National Seashore funds supplied by the American taxpayer should be used to create wild and healthy freedom for the Tule Elk and other wildlife. Public access to vast swaths of the Seashore now blocked by ranching barbed/electric wire and formidable gates, which is not acceptable on public lands. Please investigate, enforce, and punish cattle ranching families that continue to degrade and pollute our Seashore's lands, waters, and air. Superintendent Kenkel and all of you at the NPS: It is time to get your priorities and mandates straight. Please serve the interests of wildlife, habitat, visitors, and posterity.

Point Reyes National Seashore management must scope a plan to remove the Tule Elk Reserve fence across Tomales Point. This must be done in conjunction with a serious, science-based, enforced plan to cease the practice of ranching on our public land, so that timely and effective Seashore wilderness restoration occurs with public participation, focused on natural and native features, habitats, wildlife, and visitor accessibility.

The successful reintroduction of the elk herds in the Point Reyes National Seashore should be viewed as the goal of the general plan for not only the Tomales Point area but the entire National Seashore and the most cost-effective way to do that is to work for the elimination of cattle from that area. If this approach is not taken then there will be continued non-native plants being brought in which will necessitate more plans and strategies to eliminate, more engineering projects to contain manure run-

off, control of native 'predator' species to protect the cattle which is contradictory to reestablishing the Seashore, just to name a few.

**Correspondence ID:3972**

Correspondence: Tomales Point is a stunning place and I appreciate the chance to provide input for the planning process.

We keep reading that the Park Service doesn't care about the Elk out on Tomales Point at Point Reyes National Seashore. What's going on? Why does the Park Service spend taxpayer money for a fence and water and mineral supplements when it's cheaper to just let the Elk go live free and wild? Take down the fence and stop wasting our money for cruelty on innocent wildlife!

The park should spend time and money on removing the fences, planting native grasses, cleaning up the water pollutants, and generally restoring Tomales Point back to its natural habitat.

Maintaining a captive Tule elk herd at Tomales Point will likely only become increasingly expensive with climate change and recurring, significant droughts. If the fence is removed, water troughs and mineral licks will be unnecessary.

Thank you for your attention to my comments. Tomales Point should be an open area, not fenced in because ranchers use false arguments against Tule Elk. Cattle by the thousands at Point Reyes Seashore cause exponentially more damage than a few hundred Tule Elk. The Park Service should protect and help wildlife and their habitats, not promote private, for-profit ranching. The fence needs to come down, and the ranchers need to stop interfering with wildlife, polluting streams, and hassling Park visitors. The ranchers need to either give up some of their privileges, or get out of the Park. The American people will be watching how you approach what's right for Tomales Point and our National Park.

**Correspondence ID:3973**

Correspondence: Tomales Point is a stunning place and I appreciate the chance to provide input for the planning process.

Allowing the continuation of cattle ranching in this area, Tomales Point in the Point Reyes National Seashore, is contradictory to the NPS trying to mitigate the negative impacts of climate change partially caused by this very practice. The NPS needs to do its part and at every step possible be a leader to achieve this end-result.

The long run goal is to phase out cattle from the Point Reyes National Seashore, altogether. This would allow a number of costly issues to be dropped as the progression of steps were accomplished, namely the need and upkeep of the elk fences, trucking in feed and water for the elk herds in the increasing occurrence of drought, culling the herds when successfully repopulating the areas and eradication of invasive species of plants brought in by cattle, cattle feed, and industrial machinery.

The difference in landscape between the Tule Elk Reserve and the ranches on the other side of the fence is stark. The Tule elk Reserve looks like a beautiful coastal prairie with lots of wildflowers and coyote brush. The land to the south looks barren and denuded and there is evidence of cow manure spraying - not what visitors come to Point Reyes to see. Please remove the fence in the Elk reserve, as this is the right step to take for our National Park.

This is nothing natural nor appropriate of an eight foot fence on public lands purposely confining native wildlife for the sake of leased cattle ranching operations. It is time for our public land in PRNS to be returned to wilderness in its entirety, and remove all impacts of ranching from 1/3 of our National Park. This includes the removal of the Tomales Point fence. Thank you for your attention to its removal, and the focused protection of our native Tule elk.

**Correspondence ID:3974**

Correspondence: Now that the National Park Service is looking at its management of the Tomales Point area of the Pt. Reyes National Seashore, there are a number of items NPS should take into consideration as it updates its plans. Please include consideration of these when scoping your environmental review process. The most critical of these is the permanent removal of the fence that keeps the Tomales Point Tule elk herd imprisoned on land that isn't sufficient to support a captive herd.

The costs for Tomales Point elk fence maintenance and to put out water and minerals is not solving the problem of Tule Elk health. There is not enough water and minerals for the different non-mingling Tomales Point herds. It is a band-aid for a constant would therefore please come up with a real solution for wild Elk, as they should not be confined in a zoo-like environment that does not have a sufficient amount of water and forage for this herd.

Instead of US taxpayers footing the bill for a godawful fence to keep elk without enough water and food out at Tomales Point, the Park Service needs to take down the fence, remove the thousands of cattle impacting the land, air, and waters, and let nature be whole at Point Reyes National Seashore.

For climate change and biodiversity reasons, the Tomales Point scoping plan must include complete removal of the Tule Elk Reserve fence combined with an entirely new and enforced ranch succession plan. It must commit to ceasing continued ranchlands succession of leased parcels to ranchers, and restoration of native coastal prairie and wildlife habitat. It must emphasize the roles of indigenous Coast Miwok's ecological and scientific cultural knowledge and practices, and the importance of wildlife and natural forces in the restoration process.

It is requested the personnel at the National Park Service re-review the 1993 report of the Scientific Advisory Panel on control of Tule Elk in PRNS, and include it recommendation in the upcoming plan. The independent advisory panel recommended to remove the fence across Tomales Point, and develop a plan to achieve a large, healthy, free-ranging elk population. Thank you Mr Kenkel for your attention to this recommendation.

**Correspondence ID:3975**

Correspondence: The following are comments addressing the upcoming plan for Tomales Point within Point Reyes National Seashore. The National Park Service should not be creating a separate plan for this area of the park, or any other area of the park as it should be included in the Park's General Management Plan and the park should be managed as one whole unit. The complex ecosystem within the park should be treated as one entity, and the health of that entire system is the responsibility of the park service. To do otherwise can only be seen as irresponsible and cruel.

It's both cheaper and more ecological to let the elk be free, without a fence, than it is to try to manage them unnaturally, with trucked water tanks and salt licks.

If cattle ranchers are concerned about the spread of disease between the elk and bovine populations, then the cattle should be kept far enough away from the elk as necessary to allow passage through wildlife corridors. This allocation would allow two short run goals- one being that the elk could traverse the area to graze for necessary vegetation for nutritional well-being, as well as access to water; and secondly, cordoning off the unnatural effects of the different effects of cattle grazing on the area's vegetation which would allow the native flora a better environment to establish itself.

Tomales Point and the Point Reyes National Seashore is to be an area where wildlife are given back their home. Taxpayers and visitors venture out that way to hear the roar of the Pacific Ocean and feel the sun and wind, and see the land as it was made in its beautiful creation. Taxpayers do not go out to Point Reyes to see miles of wire fences 'keeping Nature in check', and the destructive, exploitive industrial practices of corrupt politically influential parties rule the land.

An independent, scientific panel provided a recommendation to the NPS, to remove the eight foot fence across Tomales Point, which currently confines the native Tule elk in an environment which does not allow the herds to be large, healthy and free-ranging. Please include numerous alternatives in the upcoming elk management plan that would remove the Tomales Point fence in order for our native wildlife to be free-roaming.

**Correspondence ID:3976**

Correspondence: I am a taxpayer who wants you to remove the fence confining the tule elk. It is important our elk survive and are well cared for in a natural habitat, vs confined behind a fence which keeps the elk away from much needed water and forage.

Reliable reports state the NPS has shouldered many of the operational costs over the years that should have been borne by the ranchers. Since most agencies have limited budgets, I'd like the Park Service to analyze how much it could save by making the ranches pay for any and all fencing, but especially the elk fence at Tomales Point. It should also look at how much it would save if the ranches were removed entirely from the park. Included in these analyses should be the value of increased public access to areas ranchers try to keep the public away from, the increased enjoyment of the park by the public, and the savings from not having to respond to rancher demands.

Park funds should be used to monitor and enforce water quality and other environmental standards in Point Reyes National Seashore versus spending money on a bad fence idea to starve wildlife in a National Park.

Whether in California or elsewhere globally, climate change impacts nearly every aspect of our current and future environmental conditions. The Tule Elk fence across Tomales Point must be taken down in recognition of this. As conditions are now and for the foreseeable future with seasonal warming, megadrought, desertification, water scarcity, the native Tule Elk will have a better chance of surviving the challenges of this climate crisis, instead of being confined without sufficient water, forage and minerals.

The original studies done by the NPS on how to manage the Tule elk showed they should be allowed to roam free. I will be tracking this process to see what the Park Service's plans are in this regard. I and the vast majority of the public want better treatment of the elk, and better treatment of the Seashore itself. We do not want to see for-profit ranches degrading our beautiful park. This is the Park Service's opportunity to do this job right. You have my support in achieving this.

**Correspondence ID:3977**

Correspondence: I am writing the National Park Service, to state that the Elk fence needs to be removed in order for the elk herds to roam freely in the park. This is the best next step for the survival of this endemic species.

The American public, by a wide margin, does not support spending money to keep Tule Elk in captivity at Tomales Point in Point Reyes National Seashore. There is no viable, long-term monetary solution for supplemental water, minerals, or food for the Tomales Point herds. The only reasonable cost is to remove that harmful fence and let the Elk roam free as is natural and the right step to take.

All National Park Service resources should be directed to restoring the land to benefit the biodiversity within the park. This is what the public wants and needs, and what we need to do to help fight a biodiversity and climate crisis.

The public loves the elk, and are horrified when they learn that due to being penned in, significant numbers have perished due to thirst or lack of sustenance. As seen with the other, free-roaming herds in Pt. Reyes, it seems such needless harm will be eliminated if the herd is allowed to roam at will. If there is conflict between cattle and elk, the Park Service should have ranchers remove their cows, since this is a national park, not a feedlot.

As a long-time user of the seashore, I'm looking forward to seeing what the Park Service comes up with as an improved management plan. It's a good time to make some long-needed changes, particularly the elk fence removal. That alone will make a significant difference in one's experience of the park, and I'm sure it will be met with massive public approval. Thank you for considering my input. I'm excited to see the results.

**Correspondence ID:3978**

Correspondence: In response to your letter dated March 31, 2022 asking for ideas on the Tomales Point Tule Elk Reserve planning process, I offer the following regarding the elk fence and how best to manage.

No matter what the Park Service spends to supplement water and minerals for the Tule Elk at Tomales Point, it will not matter. The Tule Elk are starving to death at Tomales Point due to continued drought, and megadrought. Please stop spending time and money on the fence and artificial approaches, and let the Elk roam free for natural sources of water and good nutrition.

In developing alternatives to be evaluated, the NPS should include Tule Elk not being confined behind the fence. Alternatives should include adding currently leased land to the Tule Elk Reserve as the leaseholders retire them due to climate change or shifting economic pressures, as we are already seeing.

A National Park was created in Point Reyes to protect one of the most scenic and biologically diverse areas in our country. It is being put at risk for the profits of a few private ranchers. This is not acceptable to the people of Marin, the SF Bay Area, and the nation, nor our native wildlife. It is time to remove the Elk fence.

Thank you for your consideration in this important manner.

**Correspondence ID:3979**

Correspondence: Proposed plans for PRNS must include the removal of the elk fence at Tomales Point.

No matter what the Park Service spends to supplement water and minerals for the Tule Elk at Tomales Point, it will not matter. The Tule Elk are starving to death at Tomales Point due to continued drought, and megadrought. Please stop spending time and money on the fence and artificial approaches, and let the Elk roam free for natural sources of water and good nutrition.

Resources budgeted for Point Reyes National Seashore should be used for preventing wildlife destruction, rather than additional money toward how to maintain an unethical 8 foot fence in the Elk Preserve.

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

With the public's participation, I expect a greatly improved management plan for Tomales Point and the Tule elk. This is a good way for the Park Service to demonstrate that it can properly manage the public's resources in a way that improves the health and diversity of the park, while improving relations with the general public. Thank you for the opportunity to provide input.

**Correspondence ID:3980**

Correspondence: Please remove the elk fence from Point Reyes National Seashore in order for the elk herds to have access to sufficient amount of water, minerals and forage.

Removal of the fence is a less expensive option than "management" of the herd.

Invasive species, particularly ice plant, thistle and hemlock, are rampant in Point Reyes National Seashore outside of the elk reserve. Funds currently spent on the Tomales Point elk fence would be better spent on removing these plants in other parts of the park.

Whether in California or elsewhere globally, climate change impacts nearly every aspect of our current and future environmental conditions. The Tule Elk fence across Tomales Point must be taken down in recognition of this. As conditions are now and for the foreseeable future with seasonal warming, megadrought, desertification, water scarcity, the native Tule Elk will have a better chance of surviving the challenges of this climate crisis, instead of being confined without sufficient water, forage and minerals.

Thank you for your time and consideration in this matter.

**Correspondence ID:3981**

Correspondence: I am writing and requesting to please take down the elk fence from Tomales Point, as it prevents natural migration of tule elk. It also stops them from getting water and food.

Since the Park Service recently concluded its multi-year process to update its General Management Plan Amendment (GMPA), one wonders why this part of park operations wasn't included in that process. Nonetheless, now is the time for a comprehensive analysis of NPS current management of Tomales

Point, as well as past practices, and all associated costs. While NPS should adhere to its mandate as specified in the Organic Act of 1916 with an eye to providing the highest levels of protection for the natural resources within the park, it should examine the costs in staff time and materials, as well as ongoing maintenance costs, of the elk fence. It should compare that to the savings and benefits of removing the fence, including the environmental benefits of allowing the cattle-grazed areas a chance to repair themselves.

Park Service money should not be used to trap Elk behind a long tall fence on Tomales Point. Point Reyes Park Service financial resources should be used to get rid of ranchers who pump raw sewage into park lands and waters, build and hide dumps, and prevent public access to the park. Please prioritize native Tule elk over destructive cattle operations on our public land.

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. The park's top priority should be to ensure the Tule elk survive and even thrive. Remove the elk fence.

I hope the above concerns are addressed honestly and thoroughly. I, like millions of others, treasure our Seashore, and want it to be treated in a manner that preserves it and enhances it for future generations, something that is not happening now. I will be watching to make sure it is a transparent process, and look forward to improved management of our public commons.

**Correspondence ID:3982**

Correspondence: The confined Tule Elk are dying at astronomical rates each year, and the Park Service just keeps them penned up in a cage to suffer and die at Tomales Point. Please stop this. The Tule Elk Reserve fence needs to come down now. If you want a reserve/preserve, remove the 8-foot fence, put in a small wildlife-friendly fence, and turn the land into a Native Coastal Prairie Reserve.

It is an ill-founded strategy that will endlessly proliferate the same conditions over and over postponing if not abandoning the desired outcome. These efforts should not be viewed as 'job-security' as the public deserves the outcome spelled out in the original legislation setting the National Seashore up, the elimination of cattle ranching and the reestablishment of the flora and fauna of the Tomales Point ecosystem.

Park funds should be used to monitor and enforce water quality and other environmental standards in Point Reyes National Seashore versus spending money on a bad fence idea to starve wildlife in a National Park.

The NPS already studied this matter, decades ago, and determined the fence should be removed.

As a long-time user of the seashore, I'm looking forward to seeing what the Park Service comes up with as an improved management plan. It's a good time to make some long-needed changes, particularly the elk fence removal. That alone will make a significant difference in one's experience of the park, and I'm sure it will be met with massive public approval. Thank you for considering my input. I'm excited to see the results.

**Correspondence ID:3983**

Correspondence: Many thanks for allowing the public, rightful owners of the land, to comment on the upcoming plan for Tomales Point within Point Reyes National Seashore. This area, along with any area within the national park should be allowed to be re-wild. All fences and evidence of fences should be removed.

Removing the fence will reduce the costs associated with proper stewardship of these captive animals - water troughs, mineral licks and staff time to regularly monitor the health of the herd will be unnecessary if the fence is removed.

The NPS should put resources into creating a rewilded park. It will be necessary to plan on demolition and disposal of the many tons of concrete which now comprise the modern loafing barns at each PRNS dairy (one of which supposedly closed a year ago).

Taking down the fence is the best option, according to ecologists.

Thank you for your attention to my comments. If you do only one thing: Remove the godawful eyesore of a fence out there. Would you want to be trapped without enough water or food? You can't say it's a natural process of attrition if you've got them captive. Remove the fence immediately. Create safe and easy wildlife corridors for the elk to move out. Make the ranchers stop harming wildlife and hassling human visitors. The American people in multiple surveys, letters, op-eds, articles, and more want a National Park at Point Reyes. Not a ranch.

#### **Correspondence ID:3984**

Correspondence: To assist the NPS with its planned NEPA review of the Tomales Point area and Tule elk herd management in Pt. Reyes National Seashore, I suggest the following issues be included in your review process, and any eventual Environmental Impact Statement that comes out of it. These points are intended to insure that the park resources, including the Tule elk and native plants and animals, get the maximum protection for the public's current and future benefit.

It is an ill-founded strategy that will endlessly proliferate the same conditions over and over postponing if not abandoning the desired outcome. These efforts should not be viewed as 'job-security' as the public deserves the outcome spelled out in the original legislation setting the National Seashore up, the elimination of cattle ranching and the reestablishment of the flora and fauna of the Tomales Point ecosystem.

The long run goal is to phase out cattle from the Point Reyes National Seashore, altogether. This would allow a number of costly issues to be dropped as the progression of steps were accomplished, namely the need and upkeep of the elk fences, trucking in feed and water for the elk herds in the increasing occurrence of drought, culling the herds when successfully repopulating the areas and eradication of invasive species of plants brought in by cattle, cattle feed, and industrial machinery.

For climate change and biodiversity reasons, the Tomales Point scoping plan must include complete removal of the Tule Elk Reserve fence combined with an entirely new and enforced ranch succession plan. It must commit to ceasing continued ranchlands succession of leased parcels to ranchers, and restoration of native coastal prairie and wildlife habitat. It must emphasize the roles of indigenous Coast Miwok's ecological and scientific cultural knowledge and practices, and the importance of wildlife and natural forces in the restoration process.

I want to thank you for your serious consideration of my comments, and placing them into the public record for scoping analysis of Tomales Point. The most important thing is for the Park Service to get rid of that horrible fence out there. It's 2022! Please come up with a good plan for the Elk, wildlife, birds, native plants, and everything else that should thrive in a National Park. We are counting on you to help Point Reyes be all it can naturally be!

**Correspondence ID:3985**

Correspondence: Removal of the elk fence at Tomales Point should be included in your plans for PRNS. It is the necessary and ethical step to take for a native species in a National Seashore.

No matter what the Park Service spends to supplement water and minerals for the Tule Elk at Tomales Point, it will not matter. The Tule Elk are starving to death at Tomales Point due to continued drought, and megadrought. Please stop spending time and money on the fence and artificial approaches, and let the Elk roam free for natural sources of water and good nutrition.

Resources currently spent on maintaining the fence could be better spent on expanding interpretive displays of indigenous land stewardship practices and restoration of Coastal Miwok sites in Point Reyes National Seashore.

The fence should be removed, for the benefit of the elk herds and their survival.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity.

**Correspondence ID:3986**

Correspondence: Proposed plans for PRNS must include the removal of the elk fence at Tomales Point.

Maintenance of an 8-foot fence and providing water and nutrition for captive Tule elk is not a reasonable use of funds, when the Tule elk could find adequate food and water if they were allowed to freely roam.

Moving forward the Park Service should partner closely with the Coast Miwok and scientists to re-wild the park.

Removing the fence allows native tule elk to roam free, which is good for both elk and for park landscape. Please help make this happen.

I want to thank you for your serious consideration of my comments, and placing them into the public record for scoping analysis of Tomales Point. The most important thing is for the Park Service to get rid of that horrible fence out there. It's 2022! Please come up with a good plan for the Elk, wildlife, birds, native plants, and everything else that should thrive in a National Park. We are counting on you to help Point Reyes be all it can naturally be!

**Correspondence ID:3987**

Correspondence: I am writing to request the involvement of independent scientists, independent elk biologists and the public in the development of the elk general management. We deserve a seat at the table, and it is imperative the upcoming management plan be objective, and that it prioritizes the survival of our native Tule elk over private cattle ranching in PRNS.

As a private citizen I find the fact that my tax dollar is being used to fence and kill wild animals in a National Park abhorrent. Take down the fence and let the Tule Elk roam to find water and forage.

We wonder why Point Reyes National Seashore officials, especially Superintendent Kenkel, persist with keeping the expense of a long ugly fence out at Tomales Point and to truck in water and minerals. It's obvious even to a non-scientist. There's not enough natural food and water to sustain the Tule Elk entrapped in a zoo pen out there. Take down the fence, and instead use the money to help the Tule Elk transition and thrive across the Seashore. Remove the ranchers and their cattle. Enough is enough. It's a NATIONAL PARK!

Because the well-publicized die-offs of the Tomales Point Tule elk over the past few years have captured the public's attention, it's important that NPS give full consideration to the benefits of removing the elk fence that pens the herd in. Since the fence is only for the benefit of the private ranches in the park, NPS should look at what the impacts on ranching would be with removal of the fence, and weigh that against benefits to the natural environment and the public at large. Since the vast majority of park visitors come for the elk, and not the cows, maintaining a healthy herd should be seen as more important than protecting the private interests of the ranchers.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3988**

Correspondence: You want my input to the Tomales Point planning process for Point Reyes National Seashore? Why is there even a Tule Elk enclosure out there? Does everything have to please and serve the ranchers (who shouldn't even be there anymore)? The Tule Elk cannot even get enough water or food, and are dying off in really high numbers! Please get rid of the Tule Elk Fence and let the Elk roam free. If you need a fence, put up a wildlife-friendly one, and turn the place into a Native Coastal Plant Reserve.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying - just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

All money, time and energy should be spent on re-wilding the entire National Seashore and not subsidizing destructive cattle operations on these public lands.

The elk fence should be removed, for the benefit of the elk herds. Also, the barbed wire cow fences should be removed, as they don't belong in a national park, and they are not wildlife friendly.

I want to thank you for your serious consideration of my comments, and placing them into the public record for scoping analysis of Tomales Point. The most important thing is for the Park Service to get rid of that horrible fence out there. It's 2022! Please come up with a good plan for the Elk, wildlife, birds, native plants, and everything else that should thrive in a National Park. We are counting on you to help Point Reyes be all it can naturally be!

**Correspondence ID:3989**

Correspondence: I respectfully submit this public comment for your consideration regarding the GMP planning process for Tomales Point at Point Reyes National Seashore (PRNS). All the natural resources, from native plants to the Tule Elk, should be unimpaired in and beyond Tomales Point. The American public wants open and accessible public lands and waters in their National Parks. No wildlife should be caged or captive in a National Park. We must remove the Tule Elk Fence now, and let the Tule Elk and other wildlife roam free to prosper as is natural, healthy, and just. Please scope removal of the Tule Elk Fence in your planning for Tomales Point.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying - just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

Instead of US taxpayers footing the bill for a godawful fence to keep elk without enough water and food out at Tomales Point, the Park Service needs to take down the fence, remove the thousands of cattle impacting the land, air, and waters, and let nature be whole at Point Reyes National Seashore.

The NPS already studied this matter, decades ago, and determined the fence should be removed.

Thanks so much for your serious attention to my comments. I think the main thing for the Tomales Point scoping plan should be removal of that horrible fence out there. The elk need to roam so they can find water and food. Native plant restoration would be a great starting point to let the American people know you're listening to them (finally!). Please include the general public, and not the ranchers, in your planning and communications.

**Correspondence ID:3990**

Correspondence: In response to your letter dated March 31, 2022 asking for ideas on the Tomales Point Tule Elk Reserve planning process, I offer the following regarding the elk fence and how best to manage.

Since the Park Service recently concluded its multi-year process to update its General Management Plan Amendment (GMPA), one wonders why this part of park operations wasn't included in that process. Nonetheless, now is the time for a comprehensive analysis of NPS current management of Tomales Point, as well as past practices, and all associated costs. While NPS should adhere to its mandate as specified in the Organic Act of 1916 with an eye to providing the highest levels of protection for the natural resources within the park, it should examine the costs in staff time and materials, as well as ongoing maintenance costs, of the elk fence. It should compare that to the savings and benefits of removing the fence, including the environmental benefits of allowing the cattle-grazed areas a chance to repair themselves.

I respectfully ask that the Tule Elk Reserve fence be taken down now. National Park Service and Point Reyes National Seashore funds supplied by the American taxpayer should be used to create wild and healthy freedom for the Tule Elk and other wildlife. Public access to vast swaths of the Seashore now blocked by ranching barbed/electric wire and formidable gates, which is not acceptable on public lands. Please investigate, enforce, and punish cattle ranching families that continue to degrade and pollute our Seashore's lands, waters, and air. Superintendent Kenkel and all of you at the NPS: It is time to get your priorities and mandates straight. Please serve the interests of wildlife, habitat, visitors, and posterity.

We should not have a captive herd of Tule elk in the Point Reyes National Seashore. Tule elk should be allowed to roam free.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:3991**

Correspondence: Please accept for the record these comments as input for the NPS's upcoming environmental review of its Tomales Point management plan update. These are important aspects that must be considered in determining the scope of the planning process and should be included in any environmental impact statement. My top concern is for the Park Service to remove the fence that keeps the tule elk penned in on grazing land that's insufficient to support a healthy herd.

Since the Park Service recently concluded its multi-year process to update its General Management Plan Amendment (GMPA), one wonders why this part of park operations wasn't included in that process. Nonetheless, now is the time for a comprehensive analysis of NPS current management of Tomales Point, as well as past practices, and all associated costs. While NPS should adhere to its mandate as specified in the Organic Act of 1916 with an eye to providing the highest levels of protection for the natural resources within the park, it should examine the costs in staff time and materials, as well as ongoing maintenance costs, of the elk fence. It should compare that to the savings and benefits of removing the fence, including the environmental benefits of allowing the cattle-grazed areas a chance to repair themselves.

Tomales Point and its elk herd should have a wildlife management approach to management. Free access for the elk to roam, restoration of the native grasses and the elimination of invasive plants, removal of private cattle and dairy operations, and unhindered access for the public to wander the land while respecting the natural flora and fauna would increase and enhance PRNS's popularity, as well as its natural biome.

Confining Tule elk for the benefit of private ranching interests is a breach of the public trust.

Thank you for submitting my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore. Please remove the fence across Tomales Point so the Elk can be free to roam, feed, drink, associate, mate, and thrive naturally. It can be done! Please consider and use my comments to help Point Reyes be a beautiful place for wildlife and humans.

**Correspondence ID:3992**

Correspondence: You want my input to the Tomales Point planning process for Point Reyes National Seashore? Why is there even a Tule Elk enclosure out there? Does everything have to please and serve the ranchers (who shouldn't even be there anymore)? The Tule Elk cannot even get enough water or food, and are dying off in really high numbers! Please get rid of the Tule Elk Fence and let the Elk roam free. If you need a fence, put up a wildlife-friendly one, and turn the place into a Native Coastal Plant Reserve.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying - just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

All money, time and energy should be spent on re-wilding the entire National Seashore and not subsidizing destructive cattle operations on these public lands.

The elk fence should be removed, for the benefit of the elk herds. Also, the barbed wire cow fences should be removed, as they don't belong in a national park, and they are not wildlife friendly.

I want to thank you for your serious consideration of my comments, and placing them into the public record for scoping analysis of Tomales Point. The most important thing is for the Park Service to get rid of that horrible fence out there. It's 2022! Please come up with a good plan for the Elk, wildlife, birds, native plants, and everything else that should thrive in a National Park. We are counting on you to help Point Reyes be all it can naturally be!

**Correspondence ID:3993**

Correspondence: Please accept for the record these comments as input for the NPS's upcoming environmental review of its Tomales Point management plan update. These are important aspects that must be considered in determining the scope of the planning process and should be included in any environmental impact statement. My top concern is for the Park Service to remove the fence that keeps the tule elk penned in on grazing land that's insufficient to support a healthy herd.

No matter what the Park Service spends to supplement water and minerals for the Tule Elk at Tomales Point, it will not matter. The Tule Elk are starving to death at Tomales Point due to continued drought, and megadrought. Please stop spending time and money on the fence and artificial approaches, and let the Elk roam free for natural sources of water and good nutrition.

Removal of the elk fence would give the Park a good opportunity to create a prairie preserve, located just on the outside of the existing elk preserve, by pushing back any cattle away from the current fence line. In fact, if the ranches are to remain, installing a wildlife-friendly fence south of the elk fence to let elk and other native animals move freely while keeping cattle at bay would let the park establish a specific prairie preserve where the flora and fauna have been degraded. This could be a site for studying the restoration of the native environment after decades of degradation by cattle.

Tule Elk are not only rare beautiful animals they are also caretakers of the land. The elk help native grasses flourish, which helps carbon sequestering, thus reducing the threat of climate change. In this day and age the National Park service must lead our nation in restoring our parks to help reduce our nation's carbon footprint.

Thanks so much for your serious attention to my comments. I think the main thing for the Tomales Point scoping plan should be removal of that horrible fence out there. The elk need to roam so they can find water and food. Native plant restoration would be a great starting point to let the American people know you're listening to them (finally!). Please include the general public, and not the ranchers, in your planning and communications.

**Correspondence ID:3994**

Correspondence: I am commenting on the process of creating a plan for Tomales Point within Point Reyes National Park. I would hope the National Park Service would not address this area as somehow separate from the park itself but instead view the park in its entirety. As it stands today Tomales Point is more of a zoo within what is suppose to be a park but is in fact seen as private ranch land. And at this particular zoo the wild animals are fenced and the park service personnel deliberately let them die long, painful deaths due to drought and lack of forage. Stop the insanity and extreme animal cruelty and take down the elk fence immediately. It is a complete outrage. The Park Service is allowing a native species to die absolutely horrible deaths in order to accommodate a bunch of greedy private ranchers who shouldn't be operating in the park in the first place. Apparently the Park Service is working for the ranchers while killing the Elk and telling the public who cares about them to join the Elk and just drop dead.

Whatever the costs to maintain the Tule Elk Fence and to provide water towers and mineral supplements--the Tule Elk are dying off because of lack of proper, nutritious, healthy food and forage. The Elk are starving to death and dying of an inadequate supply of water at Tomales Point. The Park Service will never be able to be effective to supplement the Tule Elk food and water supply that is needed. Please do the right thing and take down the elk fence. The Tule Elk are a native species. It's their land and public land, not the ranchers' land.

Invasive species, particularly ice plant, thistle and hemlock, are rampant in Point Reyes National Seashore outside of the elk reserve. Funds currently spent on the Tomales Point elk fence would be better spent on removing these plants in other parts of the park.

The Tomales Point management plan for Point Reyes National Seashore must include removal of the Tule Elk Reserve fence, freedom of movement and association by the existing Tule Elk herds throughout the Seashore, and transition from a Tule Elk Reserve to a protected Coastal Native Habitat Reserve. Please include in this plan, the creation of safe wildlife corridors to facilitate Tule Elk migration elsewhere into the Seashore and all manner of other endeavors true to National Park Service founding mandates for natural resources protection and the enjoyment of natural features by future generations. In addition, please mandate the immediate cessation of the ranching succession policy in favor of immediate removal of commercial cattle operations and its ranch residential infrastructure, none of which belong in the park.

Thank you for your immediate attention to my comments. You need to act before one more Tule Elk die. Tomales Point should be an open area, not fenced in because ranchers use false arguments against Tule Elk. Cattle by the thousands at Point Reyes Seashore cause exponentially more damage than a few hundred Tule Elk and do not belong there. The Park Service should protect and help wildlife and their habitats, not promote private, for-profit ranching. The fence needs to come down, and the ranchers need to stop interfering with wildlife, polluting streams, and hassling Park visitors. In fact, the ranchers need to stop complaining and get out of the Park. The American people will be watching how you

approach what's right for Tomales Point and our National Park. Please remember that this is a public park, not a private ranch and that taxpayers like me are sick of paying for the destruction of the park by ranchers who do not belong there in the first place.

**Correspondence ID:3995**

Correspondence: Thank you for accepting my public comment on the Tomales Point planning process for Point Reyes National Seashore. I am very concerned. The Seashore's natural resources like the Tule Elk should be unimpaired.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

Pierce Point Ranch should be the only real "historical" ranch in PRNS. It should be developed as a working model of a ranch from the 19th Century, with no more than a few head of cattle and a few dairy cows, showcasing actual ranching and farming techniques of that era. Docents could explain the conditions, techniques, and context for working the land under the times and circumstances in place at the time. It should also tell the full story of the Native Americans that preceded European settlers and their fate. All other ranches should be removed from the park.

The Elk Fence on Tomales Point must be removed. Tule Elk need to mingle, associate, and mate to prolong genetic diversity and sustain present and long-term herd health, vitality, and viability.

We ask, why should the "elk fence" across the width of Tomales Point on Point Reyes National Seashore be immediately removed? Because, at long last, after six decades of the Seashore's existence--it is the right, just, humane, and obvious thing to do for an American, even global, National Park, perched on the formidable and awesome Pacific Coast, still waiting for its true nature to be revealed.

**Correspondence ID:3996**

Correspondence: Thank you for accepting my public comment on the Tomales Point planning process for Point Reyes National Seashore. I am very concerned. The Seashore's natural resources like the Tule Elk should be unimpaired.

It's both cheaper and more ecological to let the elk be free, without a fence, than it is to try to manage them unnaturally, with trucked water tanks and salt licks.

The Park Service wastes taxpayer money on the self-fulfilling problems caused by its continued decades-long poor wildlife management choices out on Tomales Point. The already limited funds available should be used to remove the tule elk fence so elk can find sufficient food and water on their own across the Seashore.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

The successful reintroduction of the elk herds in the Point Reyes National Seashore should be viewed as the goal of the general plan for not only the Tomales Point area but the entire National Seashore and the most cost-effective way to do that is to work for the elimination of cattle from that area. If this approach is not taken then there will be continued non-native plants being brought in which will necessitate more plans and strategies to eliminate, more engineering projects to contain manure run-

off, control of native 'predator' species to protect the cattle which is contradictory to reestablishing the Seashore, just to name a few.

**Correspondence ID:3997**

Correspondence: The following are comments addressing the upcoming plan for Tomales Point within Point Reyes National Seashore. The National Park Service should not be creating a separate plan for this area of the park, or any other area of the park as it should be included in the Park's General Management Plan and the park should be managed as one whole unit. The complex ecosystem within the park should be treated as one entity, and the health of that entire system is the responsibility of the park service. To do otherwise can only be seen as irresponsible and cruel.

Removing the fence will reduce the costs associated with proper stewardship of these captive animals - water troughs, mineral licks and staff time to regularly monitor the health of the herd will be unnecessary if the fence is removed.

If cattle ranchers are concerned about the spread of disease between the elk and bovine populations, then the cattle should be kept far enough away from the elk as necessary to allow passage through wildlife corridors. This allocation would allow two short run goals- one being that the elk could traverse the area to graze for necessary vegetation for nutritional well-being, as well as access to water; and secondly, cordoning off the unnatural effects of the different effects of cattle grazing on the area's vegetation which would allow the native flora a better environment to establish itself.

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

I urge you to use this opportunity to carry out the intentions of the creation of the park, which was to protect the biodiversity within the seashore. To do that, the sacrifices should be made by the few ranch and dairy families that have profited profusely over the years. Our National Park is owned by the people not by the few ranchers.

**Correspondence ID:3998**

Correspondence: Removal of the elk fence at Tomales Point should be included in your plans for PRNS. It is the necessary and ethical step to take for a native species in a National Seashore.

Spending the public's money for a Tule Elk Fence and supplemental water and minerals is wasteful, and not a long-term, feasible solution. The Tule Elk are starving to death from lack of access to proper food. And the impact of global warming causes climate effects like long term drought out there. It's bad money after bad money. Free the Tule Elk from Tomales Point. Let the Elk have water and food for free around the Park.

The NPS should put resources into creating a rewilded park. It will be necessary to plan on demolition and disposal of the many tons of concrete which now comprise the modern loafing barns at each PRNS dairy (one of which supposedly closed a year ago).

A National Park was created in Point Reyes to protect one of the most scenic and biologically diverse areas in our country. It is being put at risk for the profits of a few private ranchers. This is not acceptable

to the people of Marin, the SF Bay Area, and the nation, nor our native wildlife. It is time to remove the Elk fence.

Thank you for your attention to my comments. Tomales Point should be an open area, not fenced in because ranchers use false arguments against Tule Elk. Cattle by the thousands at Point Reyes Seashore cause exponentially more damage than a few hundred Tule Elk. The Park Service should protect and help wildlife and their habitats, not promote private, for-profit ranching. The fence needs to come down, and the ranchers need to stop interfering with wildlife, polluting streams, and hassling Park visitors. The ranchers need to either give up some of their privileges, or get out of the Park. The American people will be watching how you approach what's right for Tomales Point and our National Park.

**Correspondence ID:3999**

Correspondence: Dear National Park Service,

The elk fence at Tomales Point must be removed. This is an important and the right step for the upcoming management plan.

Point Reyes National Seashore has finite resources and maintaining an 8-foot fence at Tomales Point is not a good use of taxpayer funds.

Tomales Point and its elk herd should have a wildlife management approach to management. Free access for the elk to roam, restoration of the native grasses and the elimination of invasive plants, removal of private cattle and dairy operations, and unhindered access for the public to wander the land while respecting the natural flora and fauna would increase and enhance PRNS's popularity, as well as its natural biome.

Point Reyes National Seashore management must scope a plan to remove the Tule Elk Reserve fence across Tomales Point. This must be done in conjunction with a serious, science-based, enforced plan to cease the practice of ranching on our public land, so that timely and effective Seashore wilderness restoration occurs with public participation, focused on natural and native features, habitats, wildlife, and visitor accessibility.

Thanks so much for your serious attention to my comments. I think the main thing for the Tomales Point scoping plan should be removal of that horrible fence out there. The elk need to roam so they can find water and food. Native plant restoration would be a great starting point to let the American people know you're listening to them (finally!). Please include the general public, and not the ranchers, in your planning and communications.

Becky Bennett

**Correspondence ID:4000**

Correspondence: The following are comments addressing the upcoming plan for Tomales Point within Point Reyes National Seashore. The National Park Service should not be creating a separate plan for this area of the park, or any other area of the park as it should be included in the Park's General Management Plan and the park should be managed as one whole unit. The complex ecosystem within the park should be treated as one entity, and the health of that entire system is the responsibility of the park service. To do otherwise can only be seen as irresponsible and cruel.

When will the National Park Service and Point Reyes National Seashore officials stop spending money on a misbegotten Elk fence idea? Remove the fence, and let the Tule Elk roam. It is time to get rid of the cattle ranchers in our national park, as they're the ones forcing their will against the American public's will. Free the Elk and let Americans enjoy a true national park.

I respectfully ask that the Tule Elk Reserve fence be taken down now. National Park Service and Point Reyes National Seashore funds supplied by the American taxpayer should be used to create wild and healthy freedom for the Tule Elk and other wildlife. Public access to vast swaths of the Seashore now blocked by ranching barbed/electric wire and formidable gates, which is not acceptable on public lands. Please investigate, enforce, and punish cattle ranching families that continue to degrade and pollute our Seashore's lands, waters, and air. Superintendent Kenkel and all of you at the NPS: It is time to get your priorities and mandates straight. Please serve the interests of wildlife, habitat, visitors, and posterity.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

I respectfully submit this letter and request the National Park Service to be impartial in the next steps related to our incredible native wildlife in Point Reyes National Seashore.

**Correspondence ID:4001**

Correspondence: Superintendent Craig Kenkel May 9, 2022

NATIONAL PARK SERVICE

Point Reyes National Seashore

1 Bear Valley Road

Point Reyes Station, CA 94956

Department of the Interior Region 10

Dear Superintendent Kenkel,

Wilderness Watch thanks the National Park Service (NPS) for the opportunity to provide initial pre-scoping comments for the proposed planning process concerning the Tomales Point area and Wilderness in Point Reyes National Seashore. Wilderness Watch is a national nonprofit wilderness conservation organization dedicated to the protection and proper stewardship of the National Wilderness Preservation System.

Introduction

NPS has started pre-scoping for a new "area plan" for Tomales Point to address "complex wildlife, resource, and wilderness management issues." More than 85% of the 2,600 acre area is located within the Phillip Burton Wilderness. NPS' "impetus for this planning process are the impacts to the tule elk population and other resources within the Reserve arising from the historic drought conditions over the past eight years."

NPS plans to replace its 1998 Tule Elk Management Plan (available at <https://www.nps.gov/pore/getinvolved/planning-tule-elk-management-plan-1998.htm>) as it relates to the Tomales Point area by preparing both a programmatic and site-specific analysis with an EIS to comply with NEPA. NPS has identified several issues it plans to address, including:

- maintenance or removal of the tule elk fence;
- population management of the Tomales Point tule elk herd;
- supplemental water for the elk in times of need;
- wilderness management; and
- visitor use and infrastructure management at Pierce Point Ranch.

NPS's scoping letter seeks informal public input and ideas regarding the scope of the plan to help it refine the extent of the planning effort and identify a preliminary range of alternatives for consideration. NPS states that it “will review every comment received....” Wilderness Watch intends to hold NPS to that promise.

### Summary of Comments

Wilderness Watch believes that the elk fence is degrading the Wilderness character of the Phillip Burton Wilderness, in violation of the Wilderness Act and should be removed. The Wilderness Act recognizes Wilderness “as an area where the earth and its community of life are untrammelled by man....” Section 2(c) (meaning “free, unbound, unhampered, unchecked, having the freedom of the wilderness.” Howard Zahniser, drafter of the Wilderness Act). Since their reintroduction, tule elk have now again become a part of the Wilderness resource because they are a native indigenous species and part of the “community of life” of the Wilderness. Since they are a part of the Wilderness, there can be little dispute that the elk are not “untrammelled by man” because their freedom of movement is blocked by a manmade fence. The elk's conservation and the natural conditions of the Wilderness are being limited, or trammelled, because the elk cannot migrate from Tomales Point outside of their enclosure south of the fence. And even though the fence is located just outside the Wilderness boundary, its presence is a condition that is causing a violation of Section 2(c) of the Wilderness Act.

Moreover, because the elk can't move past the fence, an overpopulation of elk may even be degrading other natural conditions and the overall character of the Wilderness, which is also a violation of Section 4(b) of the Wilderness Act.

Wilderness Watch would like to encourage the Park Service to enlarge the planning process to start work on an overdue Wilderness Stewardship Plan for the entire Phillip Burton Wilderness, which agency policy requires. Moreover, any planning should be informed by data that should have been collected over the last 25 years based on mitigation measures in the 1998 Elk Plan.

### Background

In 1962, Congress enacted legislation to create the Point Reyes National Seashore as part of the National Park System “to save and preserve, for purposes of public recreation, benefit, and inspiration, a portion of the diminishing seashore of the United States that remains undeveloped ....” Pub. L. No. 87-657 (codified at 16 U.S.C. § 459c et seq. (2018)). After acquiring most of the lands, the Park Service officially established the Point Reyes Seashore in 1972. 37 Fed. Reg. 23,366 (Oct. 20, 1972).

In 1976, Congress designated roughly 25,000 acres of land as the Point Reyes National Seashore Wilderness and roughly 8,000 acres of waters as Wilderness. Pub. L. No. 94-544 & 94-567 (renamed in 1985 as the Phillip Burton Wilderness; Pub. L. No. 99-68). The law directs that the Wilderness area “shall be administered by the Secretary of the Interior in accordance with the applicable provisions of the

Wilderness Act governing areas designated by that Act as wilderness areas” “without impairment of its natural values, in a manner which provides for such recreational, educational, historic preservation, interpretation, and scientific research opportunities as are consistent with, based upon, and supportive of the maximum protection, restoration, and preservation of the natural environment within the area, ....” Secs. 3 & 4, Pub. L. No. 94-544.

Wilderness designation predates introduction of Tule Elk by two years. In 1978, 10 Tule Elk, considered a native indigenous species, were reintroduced to the Tomales Point area after a 150 year absence from the Olema area of the Point Reyes peninsula. See 1998 Tule Elk Management Plan and EA, p. 8. To manage the elk, the Parks Service constructed a 3-mile long fence, which enclosed the elk to a 2,600 acre area, 85% of which is Wilderness. *Id.* After cattle were removed from the area in 1980, elk numbers increased rapidly to roughly 180 animals in 1990 and 465 animals by 1997. *Id.* Partly based on this increase, the Park Service initiated and finalized a revised plan for tule elk management, which culminated in the 1998 Tule Elk Management Plan. *Id.* at 9. Issues and concerns about non-conforming uses in Wilderness were briefly described in the 1998 Elk Management Plan, but were limited to a short statement that “[t]he management of tule elk has resulted in the use of helicopters for the capture of elk,” which Park superintendents authorized an “ ‘administratively determined minimum tool’ to manage wilderness areas.” *Id.* at 11.

The plan also mentions potential effects to Wilderness values based on the EA's alternatives. Negative effects to Wilderness values are described in the Environmental Consequences section of the EA for each of the alternatives. Only Alternative B would have had no negative Wilderness effects because it would have eliminated the elk's restricted range by allowing elk to move outside the current elk range beyond the fence and would have closed and removed cattle and dairy ranching in the seashore. EA at 51 & 60.

All other alternatives, including the proposed and selected Alternative A, would have numerous negative effects on Wilderness values. *Id.* at 58, 62, and 64. In fact, the selected alternative allows helicopter access and vehicle use in the Wilderness to capture and relocate and otherwise manage the elk. *Id.* at 57.

While the 1980 General Management Plan for Point Reyes NS states that “Natural resource management objectives in the GMP include: ... To preserve and manage as wilderness those lands so designated; ....” (*id.* at 32), the 1980 GMP is otherwise silent regarding Wilderness or a Wilderness Stewardship Plan. We know of no such plan for the Phillip Burton Wilderness.

## Wilderness Law and Conservation

The Wilderness Act establishes a National Wilderness Preservation System to safeguard our wildest landscapes in their “natural,” “untrammelled” condition. 16 U.S.C. § 1131(a). Wilderness is statutorily defined as “an area where the earth and its community of life are untrammelled by man” and an area “retaining its primeval character and influence... which is protected and managed so as to preserve its natural conditions....” *Id.* § 1131(c). Thus, wilderness “shall be administered for the use and enjoyment of the American people in such a manner as will leave them unimpaired for future use and enjoyment as wilderness, and so as to provide for the protection of these areas, the preservation of their wilderness character, and for the gathering and dissemination of information regarding their use and enjoyment as wilderness....” *Id.* § 1131(a) (emphasis added). The Act's opening section “sets forth the Act's broad mandate to protect the forests, waters, and creatures of the wilderness in their natural, untrammelled

state” and “show[s] a mandate of preservation for wilderness and the essential need to keep [nonconforming uses] out of it.” *Wilderness Soc’y v. U.S. Fish & Wildlife Serv.*, 353 F.3d 1051, 1061-62 (9th Cir. 2003) (en banc).

Wilderness designation places restrictions on agencies' wildlife management authority and requires agencies to ensure that any wildlife management activities in wilderness, including research, are conducted in a manner that preserves wilderness character. Congress provided a clear mandate for administering agencies: “[E]ach agency administering any area designated as wilderness shall be responsible for preserving the wilderness character of the area and shall so administer such area for such other purposes for which it may have been established as also to preserve its wilderness character.” 16 U.S.C. § 1133(b). Certain uses and activities, including helicopters and the use of electronic tracking installations, undermine the preservation of wilderness and are thus prohibited with narrow exception. 16 U.S.C. § 1133(c). These uses and activities may be authorized by an agency only where “necessary to meet minimum requirements for the administration of the area for the purpose of [the Wilderness Act].” 16 U.S.C. § 1133(c).

Conservation-related activities are subject to this overall statutory scheme.

#### NPS Policies for Wilderness Planning and Wildlife

While the Park Service has referred to actions in Wilderness as “management” in its policies (Management Policies 2006, Chapter 6, Wilderness Preservation and Management), it now uses more appropriate terminology, referring to its actions in Wilderness as Wilderness Stewardship. See Director's Order #41: Wilderness Stewardship, 2013, which states:

“For every designated Wilderness, a Wilderness Stewardship Plan will guide management actions to preserve wilderness character. Parks should notify the WASO Wilderness Stewardship Division Chief and work with their Regional Wilderness Coordinator during the Wilderness Stewardship Planning process. Parks with lands determined to be eligible, proposed, or recommended should also develop plans to preserve wilderness character. Wilderness Stewardship Plans should be completed within two years of designation, subject to funding. Preservation of wilderness character will be incorporated into appropriate sections of park planning and management documents. Also see Management Policies 2006, Section 6.3.4.2.”

Id. at Sec. 6.3 (available at [https://www.nps.gov/policy/DOrders/DO\\_41.pdf](https://www.nps.gov/policy/DOrders/DO_41.pdf)).

NPS' Management Policies 2006 states:

“The superintendent of each park containing wilderness resources will develop and maintain a wilderness management plan or equivalent planning document to guide the preservation, management, and use of these resources. The wilderness management plan will identify desired future conditions, as well as establish indicators, standards, conditions, and thresholds beyond which management actions will be taken to reduce human impacts on wilderness resources.

The park's wilderness management plan may be developed as a separate document or as an action component of another planning document. Whether prepared as a stand-alone plan or as part of another planning document, all wilderness management plans must meet the same standards for process and content as specified in this section 6.3.4. Wilderness management plans will be supported

by appropriate documentation of compliance with the National Environmental Policy Act and the National Historic Preservation Act. The plan will be developed with public involvement and will contain specific, measurable management objectives that address the preservation and management of natural and cultural resources within wilderness as appropriate to achieve the purposes of the Wilderness Act and other legislative requirements.”

Id. at Section 6.3.4.2 (available at: [https://www.nps.gov/subjects/policy/upload/MP\\_2006.pdf](https://www.nps.gov/subjects/policy/upload/MP_2006.pdf)).

With respect to wildlife in national parks, “in its 1978 rider to the Redwood National Park Expansion Act, Congress reiterated its intention that the National Park System be administered in furtherance of the 'purpose' (not purposes) of the Organic Act, that being, of course, the conservation of...wildlife resources.” *National Rifle Ass'n of America v. Potter*, 628 F. Supp. 903, 910 (D.D.C. 1986).

Moreover, “Wilderness preservation should be considered among the purest applications of the Service's responsibilities for protecting 'wildlife,' its habitat, and the conservation of associated resources.” Reference Manual 41: Wilderness Preservation and Management, 1999; see also Legislative Guidance Applicable to NPS Wilderness Preservation and Management 2013 (same, available at [https://www.nps.gov/orgs/1981/upload/Leg-Guidance-for-NPS-W\\_508.pdf](https://www.nps.gov/orgs/1981/upload/Leg-Guidance-for-NPS-W_508.pdf)).

#### Comments

Wilderness Watch requests that the Park Service refer more accurately to its potential or future actions in the Phillip Burton Wilderness as “stewardship” rather than “management.” NPS policies have adopted this language in their more recent DO #41. Management connotes “trammeling” and other actions not consistent with the Wilderness Act. From a planning perspective, the Park Service should therefore limit its actions to those developed in a Wilderness Stewardship Plan, as discussed below.

#### 1. NPS Policy Requires that the Park Service Develop a Wilderness Stewardship Plan for the Phillip Burton Wilderness.

In addition to the current planning effort, the Park Service should take this opportunity to start the process for a Wilderness Stewardship Plan for in the Phillip Burton Wilderness Area. This plan should not be limited to the Tomales area where the Elk are suffering from the drought, but should be prepared for the entire Phillip Burton Wilderness. And because 85% of the Tomales area is Wilderness, a Wilderness Stewardship Plan could help guide any proposed actions that relate to elk and other Wilderness values.

Because the proposal explicitly includes Wilderness in its list of issues and concerns, which makes up most of Tomales Point, it would make sense for the Park Service follow its directives and policy at DO #41, Sec. 6.3 and NPS Policies at 6.3.4.2, which state that “a Wilderness Stewardship Plan will guide management actions to preserve wilderness character,” and the agency “will develop and maintain a wilderness management plan or equivalent planning document to guide the preservation, management, and use of these resources.” At this time, no other “equivalent” planning document or guide, that we know of, exists, including the General Management Plan or its Amendment, that specifically addresses Wilderness stewardship. And while a Wilderness Stewardship Plan “may be developed as a separate document or as an action component of another planning document,” if this is only done for the Tomales Point area portion of the Phillip Burton Wilderness, the Park Service would forego this opportunity to develop a more comprehensive planning document for the entire Wilderness, something that will still be required in the future. So we suggest that the Park Service enlarge its planning effort

now, since it is already planning to prepare an EIS under NEPA, which is also required for Wilderness planning.

NPS policy, with regard to Wilderness, also states that “Natural resource management plans will be integrated with and cross-reference wilderness management plans. Pursuing a series of independent component projects in wilderness, such as single-species management, will not necessarily accomplish the over-arching goal of wilderness management.” 2006 Management Policies 2006, Section 6.3.7 (emphasis added). And that's exactly what the Park Service is proposing here--a single species management plan for elk, which will not necessarily accomplish the goal of wilderness stewardship without a stewardship plan.

Regardless of the approach the Park Service takes, a Wilderness Stewardship Plan “will be developed with public involvement and will contain specific, measurable management objectives that address the preservation and management of natural and cultural resources within wilderness as appropriate to achieve the purposes of the Wilderness Act and other legislative requirements.” Management Policies 2006, Section 6.3.4.2.

2. The Wilderness Act Requires Removal of the Elk Fence as the Proposed Action and Preferred Alternative, and likely the Final Action, for Any Plan Moving Forward.

Initially, the Park Service should state explicitly in its planning documents that it will commit to complying with the Wilderness Act and adhere to the letter and intent of its provisions.

There can be no dispute that the elk fence is causing trammeling of the natural conditions and community of life in the Phillip Burton Wilderness at Tomales Point. Trammeling includes the tule elk, a native indigenous species, which has been a part of the Wilderness since it was reintroduced, as well as the community of life upon which it and other species depend. The Wilderness Act's substantive provisions compel the Park Service to remove the fence, even though it is located outside the Wilderness boundary. See *Isaac Walton League of America Inc. v. Kimbell*, 516 F.Supp.2d 982, 996 (D. Minn. 2007) (finding wilderness-incompatible activities or conditions occurring outside of a wilderness boundary may “degrade the wilderness character from its present condition and thus result in a violation of [Section] 4(b) of the Wilderness Act.” The same principle applies here, where the elk fence is the “condition” outside the wilderness boundary that is causing trammeling and is degrading the natural conditions within the Wilderness by preventing migration of elk in and out of the Wilderness to where they can find adequate forage and water during prolonged droughts.

The Wilderness Act recognizes Wilderness “as an area where the earth and its community of life are untrammled by man....” Section 2(c). Untrammled means “free, unbound, unhampered, unchecked, having the freedom of the wilderness.” Howard Zahniser, drafter of the Wilderness Act. Clearly the elk are not untrammled by man if their freedom of movement is blocked by a manmade fence, restricting the animals to the Wilderness area and away from adequate forage and water elsewhere in the park. This problem is further exacerbated, and the Wilderness further degraded, by the ongoing prohibited uses (motorized uses, structures, etc.) authorized to manage this elk population in a captive state.

Since their reintroduction, tule elk have become a Wilderness natural resource because they are a native indigenous species. The elk are again a part of the ecological system or community of life of the Wilderness. The elk's conservation and the natural conditions of the Wilderness are being limited, or trammled, because the elk cannot migrate from Tomales Point outside of their enclosure south of the

fence. Therefore, even though the fence is located just outside the Wilderness boundary, its presence is causing a violation of Section 2(c) of the Wilderness Act. Moreover, because of the limits of movement imposed by the fence, an overpopulation of elk may even be degrading the natural conditions and character of the Wilderness, which is a violation of Section 4(b) of the Wilderness Act.

3. The New Plan's Environmental Analysis must Consider any Monitoring Data Gathered to Comply with Mitigation Measures in the 1998 Elk Plan FONSI Regarding the Effects from Elk on Wilderness Values and Threatened and Endangered Species.

In the 1998 Elk Plan's finding of no significant impact, or FONSI, the Park Service stated: "Additional mitigations planned include conducting an annual monitoring program, combined with ongoing research, to assess and track the effects of management actions on elk and their environment." FONSI, p. 1 (available at <https://www.nps.gov/pore/getinvolved/planning-tule-elk-management-plan-1998.htm>).

In particular, the FONSI listed specific monitoring in support of its mitigation measures. See *id.*, p. 2 (table). Data gathered in response to this monitoring should be made available to the public to help understand impacts and whether or not the mitigation measures were effective.

For example, the first item in the table requires "Monitor elk populations and their environment annually and analyze data to detect negative trends" to determine "Impacts" from "Overpopulation and its effects on habitat, [threatened and endangered] species, neighbors, and visitors." *Id.*, p. 2. This data is crucial to determine whether the confined elk population has had an adverse effect on Wilderness character and can be used to guide the development of a Wilderness Stewardship Plan.

Another mitigation measure was to "Conduct research to improve basis [sic] for decision making and better understanding the ecosystem and interactions between elk and park resources." *Id.* The data and understanding from this research would be enormously helpful to determine effects on Wilderness values, including the elk and the community of life it depends on.

And more specifically, in order to determine the effects of tule elk on Threatened and Endangered species, which require additional protections and conservation measures for recovery under the Endangered Species Act, the Park Service agreed to "Monitor threatened and endangered species in contact with tule elk with potential for effects." *Id.* For Tomales Point, these include the Myrtle's silverspot butterfly and the California red-legged frog. Again, these species and their habitats, or the community of life they depend on, are Wilderness values. But these species are additionally protected from any "take" or destruction or adverse modification of their critical habitat, which may occur if the elk are confined behind a fence. See Endangered Species Act, Sections 9, 7, and ESA Regulations.

If you have any questions, please direct them to the contact below.

For Wilderness Watch,

René Voss, Attorney at Law  
Member, Wilderness Watch Board of Directors

**Correspondence ID:4002**

Correspondence: You want my input to the Tomales Point planning process for Point Reyes National Seashore? Why is there even a Tule Elk enclosure out there? Does everything have to please and serve the ranchers (who shouldn't even be there anymore)? The Tule Elk cannot even get enough water or food, and are dying off in really high numbers! Please get rid of the Tule Elk Fence and let the Elk roam free. If you need a fence, put up a wildlife-friendly one, and turn the place into a Native Coastal Plant Reserve.

As a taxpayer I expect the National Park Service to spend money wisely and frugally. I also expect the Park Service to prioritize wildlife over private enterprise. Therefore I ask the Park Service to stop spending money on erecting and maintaining a wildlife fence for the sole purpose of keeping native Tule Elk out of the parcels that are leased by private cattle and dairy ranch operations within a National Park.

Removal of the elk fence would give the Park a good opportunity to create a prairie preserve, located just on the outside of the existing elk preserve, by pushing back any cattle away from the current fence line. In fact, if the ranches are to remain, installing a wildlife-friendly fence south of the elk fence to let elk and other native animals move freely while keeping cattle at bay would let the park establish a specific prairie preserve where the flora and fauna have been degraded. This could be a site for studying the restoration of the native environment after decades of degradation by cattle.

Removing the fence allows native tule elk to roam free, which is good for both elk and for park landscape. Please help make this happen.

It is time to end the mis-management of our native Tule elk in Point Reyes National Seashore. Please follow the scientific advice provided in 1993, and remove the fence across Tomales Point. It is important for the survival of this herd to be free-roaming with access to food and water.

**Correspondence ID:4003**

Correspondence: Please remove the eight foot fence at Tomales Point for the sake of our native Tule Elk. We must prioritize our native Tule elk over the domestic cattle raised for profit in PRNS.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

I am extremely disappointed that the National Park Service (NPS) continues to spend our taxpayer money for an unethical fence which traps Elk on Tomales Point at Point Reyes National Seashore. Taxpayers are insisting that the fence come down immediately, that ranchers move out, and wildlife be allowed to live naturally across all of our Park.

We should not have a captive herd of Tule elk in the Point Reyes National Seashore. Tule elk should be allowed to roam free.

We ask, why should the "elk fence" across the width of Tomales Point on Point Reyes National Seashore be immediately removed? Because, at long last, after six decades of the Seashore's existence--it is the right, just, humane, and obvious thing to do for an American, even global, National Park, perched on the formidable and awesome Pacific Coast, still waiting for its true nature to be revealed.

**Correspondence ID:4004**

**Correspondence ID:4005**

Correspondence: Tomales Point is a stunning place and I appreciate the chance to provide input for the planning process.

When it comes to Tomales Point our National Park has failed us, the taxpayer, and rightful owners of the land. We should not be paying for the cost of installing and maintaining a fence so wild animals can't roam and forage for food and water in areas preserved for private cattle and dairy ranchers within a National Park.

The park should put every effort into connecting Tomales Point and its wildlife to the rest of the park. A visitor to the park should not have to pass through cattle/dairy pasture to walk through the Philip Burton Wilderness and nor should the Tule Elk. Every effort should be directed in allowing the elk to roam freely across the entire area of the park.

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. The park's top priority should be to ensure the Tule elk survive and even thrive. Remove the elk fence.

I urge you to use this opportunity to carry out the intentions of the creation of the park, which was to protect the biodiversity within the seashore. To do that, the sacrifices should be made by the few ranch and dairy families that have profited profusely over the years. Our National Park is owned by the people not by the few ranchers.

**Correspondence ID:4006**

Correspondence: Thank you for the opportunity to provide input on the updated Tule Elk Management Plan/General Management Plan for Pt. Reyes National Seashore. To help the National Park Service (NPS) best structure its environmental review process, I offer the comments below. Please consider including these points in scoping your review and the presumed Environmental Impact Statement.

The current plan of what is called a 'co-habitation' - which is a farce - is wasteful in a number of ways. Instead of letting the elk populations roam the land to access the water and flora they have evolved to need for subsistence, it often needs to be trucked in to keep populations at levels 'mandated by a plan'. Not only do these resources need to be expended to keep the herds alive - then later, National Park Service personnel go and cull the population when it exceeds their some-how-agreed upon 'rancher-acceptable' number.

Removal of the elk fence would give the Park a good opportunity to create a prairie preserve, located just on the outside of the existing elk preserve, by pushing back any cattle away from the current fence line. In fact, if the ranches are to remain, installing a wildlife-friendly fence south of the elk fence to let elk and other native animals move freely while keeping cattle at bay would let the park establish a specific prairie preserve where the flora and fauna have been degraded. This could be a site for studying the restoration of the native environment after decades of degradation by cattle.

The original motivation for the fence was to protect financial interests, not for optimal ecological restoration. It must be removed.

It is time to focus on the health of our National Seashore and protect the air, soil, water, native wildlife and native vegetation over the constant impact from private cattle operations. The ranchers espouse crackpot pseudoscience about false carbon sinks (pasture vs. native coastal prairie), regenerative ranching (oxymoron), methane digesters (new profit streams), while the objective and independent science-based literature state how a native landscape with native vegetation and wildlife will help fight climate change more effectively than cattle operations. Please prioritize our native landscape and native wildlife in Point Reyes.

**Correspondence ID:4007**

Correspondence: I want the fence at Tomales Point, which confines tule elk, to be removed. This is a necessary step for the NPS to take for our native elk.

The Park Service continues to spend money on a fence to keep Tule Elk trapped out on Tomales Point at Point Reyes even though there's not enough food and water out there for the Elk, and now I have to pay for fence maintenance and to ship water and supplements out there. Stop the bad spending! Take down that fence and let the Tule Elk go get their food and water for free.

Resources currently spent on maintaining the fence could be better spent on expanding interpretive displays of indigenous land stewardship practices and restoration of Coastal Miwok sites in Point Reyes National Seashore.

Tule Elk are not only rare beautiful animals they are also caretakers of the land. The elk help native grasses flourish, which helps carbon sequestering, thus reducing the threat of climate change. In this day and age the National Park service must lead our nation in restoring our parks to help reduce our nation's carbon footprint.

I respectfully submit this letter and request the National Park Service to be impartial in the next steps related to our incredible native wildlife in Point Reyes National Seashore.

**Correspondence ID:4008**

Correspondence: Now that the National Park Service is looking at its management of the Tomales Point area of the Pt. Reyes National Seashore, there are a number of items NPS should take into consideration as it updates its plans. Please include consideration of these when scoping your environmental review process. The most critical of these is the permanent removal of the fence that keeps the Tomales Point Tule elk herd imprisoned on land that isn't sufficient to support a captive herd.

How much does it cost the National Park Service or Point Reyes National Seashore in Tomales Point Reserve for fence maintenance and supplemental water and minerals? How much does it cost us the taxpayers not only in materials, but in all the hidden costs of labor, operations, communications, negotiation, administration, and don't forget, pleasing the ranchers who shouldn't even be there due to their constant impairment to the Seashore.

Invasive species, particularly ice plant, thistle and hemlock, are rampant in Point Reyes National Seashore outside of the elk reserve. Funds currently spent on the Tomales Point elk fence would be better spent on removing these plants in other parts of the park.

Ecological reports recommend the fence be removed. There is no good reason to keep the fence.

I want to thank you for your serious consideration of my comments, and placing them into the public record for scoping analysis of Tomales Point. The most important thing is for the Park Service to get rid of that horrible fence out there. It's 2022! Please come up with a good plan for the Elk, wildlife, birds, native plants, and everything else that should thrive in a National Park. We are counting on you to help Point Reyes be all it can naturally be!

**Correspondence ID:4009**

Correspondence: I am writing and requesting to please take down the elk fence from Tomales Point, as it prevents natural migration of tule elk. It also stops them from getting water and food.

Tomales Point is not a zoo. The taxpayers do not want to incur the cost of feeding and providing water to wild animals. Nor do they want to visit a zoo. A simple solution, and one that is the most cost effective, is to stop "managing" the park. Take down the fence, remove the cattle, and let nature run its course.

There have been claims made over the years by ranching interests that the elk have damaged ranch operations or facilities. NPS should determine the facts here, and document the actual costs of any verifiable damage. Additionally, ranchers have claimed the elk need to be separated from their cattle because the elk will eat too much of the forage they want for their cows. The science clearly shows that elk eat far less than cows, weigh a fraction of cows' weight, and being browsers, do not deplete the grasses and shrubs as much as cows do. Therefore, when scoping the plan update, NPS needs to compare the impacts of elk foraging vs. cattle grazing, and develop its plans consistent with the Organic Act of 1916 mandate of resource preservation and protection.

The Elk Fence on Tomales Point must be removed. Tule Elk need to mingle, associate, and mate to prolong genetic diversity and sustain present and long-term herd health, vitality, and viability.

Our native Tule elk in PRNS deserve a better quality of life, rather than being confined in an environment without sufficient forage, minerals and water. Please ensure the upcoming plan for our iconic elk has

several options that involve the removal of the elk. The public has requested the NPS to protect the Tule elk, and now is the time to take action.

**Correspondence ID:4010**

Correspondence: I am writing and requesting to please take down the elk fence from Tomales Point, as it prevents natural migration of tule elk. It also stops them from getting water and food.

It is an ill-founded strategy that will endlessly proliferate the same conditions over and over postponing if not abandoning the desired outcome. These efforts should not be viewed as 'job-security' as the public deserves the outcome spelled out in the original legislation setting the National Seashore up, the elimination of cattle ranching and the reestablishment of the flora and fauna of the Tomales Point ecosystem.

Too many park resources are used to cater to the private ranchers. Ranch operations pollute the streams and waterways of the seashore with manure runoff, release methane into the atmosphere from cattle belches and farts, damaging our climate, and have caused the massive spread of invasive plants. NPS should be putting these resources into restoring the deep-rooted native grasses, wildflowers, mosses and other native plants that cannot survive destructive grazing practices caused by too many cattle on the land.

I cannot find a reasonable sound argument for continued ranching or dairy in a National Park. There are numerous dairy and cattle ranches in West Marin and Sonoma counties, as well as all across California and the entire United States. Some owned by the same families as those that ranch in the park today. Tule elk are only native to California and only found in Point Reyes National Seashore. We are lucky the elk are located in a National Park where they should be protected. Why private dairy and beef cows are prioritized over those elk in a National Park is beyond anyone's logical reasoning. It is political and that does not make it right. The National Park should be above politics. We need our National Parks, which we pay for and support, to work for us, the people.

The original studies done by the NPS on how to manage the Tule elk showed they should be allowed to roam free. I will be tracking this process to see what the Park Service's plans are in this regard. I and the vast majority of the public want better treatment of the elk, and better treatment of the Seashore itself. We do not want to see for-profit ranches degrading our beautiful park. This is the Park Service's opportunity to do this job right. You have my support in achieving this.

**Correspondence ID:4011**

Correspondence: I am writing to request the involvement of independent scientists, independent elk biologists and the public in the development of the elk general management. We deserve a seat at the table, and it is imperative the upcoming management plan be objective, and that it prioritizes the survival of our native Tule elk over private cattle ranching in PRNS.

It's both cheaper and more ecological to let the elk be free, without a fence, than it is to try to manage them unnaturally, with trucked water tanks and salt licks.

Rather than maintaining the elk fence, troughs and mineral licks, the NPS could better use these resources to develop educational materials and programs about Tule elk.

The difference in landscape between the Tule Elk Reserve and the ranches on the other side of the fence is stark. The Tule elk Reserve looks like a beautiful coastal prairie with lots of wildflowers and coyote brush. The land to the south looks barren and denuded and there is evidence of cow manure spraying - not what visitors come to Point Reyes to see. Please remove the fence in the Elk reserve, as this is the right step to take for our National Park.

I hope the above concerns are addressed honestly and thoroughly. I, like millions of others, treasure our Seashore, and want it to be treated in a manner that preserves it and enhances it for future generations, something that is not happening now. I will be watching to make sure it is a transparent process, and look forward to improved management of our public commons.

**Correspondence ID:4012**

Correspondence: Thank you for inviting public input into the planning process for Tomales Point. The best way to advance the National Seashore's mission is to remove the fence at Pierce Point.

It's both cheaper and more ecological to let the elk be free, without a fence, than it is to try to manage them unnaturally, with trucked water tanks and salt licks.

Rather than maintaining the elk fence, troughs and mineral licks, the NPS could better use these resources to develop educational materials and programs about Tule elk.

Tomales Point and the Point Reyes National Seashore is to be an area where wildlife are given back their home. Taxpayers and visitors venture out that way to hear the roar of the Pacific Ocean and feel the sun and wind, and see the land as it was made in its beautiful creation. Taxpayers do not go out to Point Reyes to see miles of wire fences 'keeping Nature in check', and the destructive, exploitive industrial practices of corrupt politically influential parties rule the land.

Thanks so much for your serious attention to my comments. I think the main thing for the Tomales Point scoping plan should be removal of that horrible fence out there. The elk need to roam so they can find water and food. Native plant restoration would be a great starting point to let the American people know you're listening to them (finally!). Please include the general public, and not the ranchers, in your planning and communications.

**Correspondence ID:4013**

Correspondence: Thank you for the opportunity to comment on Tomales Point. Why is this area being treated separate from Point Reyes National Seashore? As it is within the boundaries of the seashore it should be interwoven within the fabric of the rest of the seashore and the ecosystem allowed to become whole instead of piecemeal. A visitor should be able to walk/hike the entirety of the park. And the native grasses and wildlife (including elk) should be able to roam freely within all areas of the park. Please remove the elk fences and let the park be an actual park.

Tomales Point is not a zoo. The taxpayers do not want to incur the cost of feeding and providing water to wild animals. Nor do they want to visit a zoo. A simple solution, and one that is the most cost effective, is to stop "managing" the park. Take down the fence, remove the cattle, and let nature run its course.

All money, time and energy should be spent on re-wilding the entire National Seashore and not subsidizing destructive cattle operations on these public lands.

Removing the elk fence is the most impactful step the Park can take for Tomales Point, and this should be the plan review's top priority. This and total removal of all dairy and cattle operations from all of the park would have the strongest positive impacts, both ecologically and in terms of protection of the public's resources. The removal of both would benefit the return of native, deep-rooted grasses, allow the return of birds and wildlife that cannot survive in the barren fields where cattle have eaten the greenery down to the earth, and let the natural prairie reestablish itself. It could also serve as an outdoor laboratory for studying how to accelerate its healing and nurturing, information that will be increasingly important as we try to save our planet from the damages of global warming.

With the public's participation, I expect a greatly improved management plan for Tomales Point and the Tule elk. This is a good way for the Park Service to demonstrate that it can properly manage the public's resources in a way that improves the health and diversity of the park, while improving relations with the general public. Thank you for the opportunity to provide input.

**Correspondence ID:4014**

Correspondence: In response to your letter dated March 31, 2022 asking for ideas on the Tomales Point Tule Elk Reserve planning process, I offer the following regarding the elk fence and how best to manage.

The American public, by a wide margin, does not support spending money to keep Tule Elk in captivity at Tomales Point in Point Reyes National Seashore. There is no viable, long-term monetary solution for supplemental water, minerals, or food for the Tomales Point herds. The only reasonable cost is to remove that harmful fence and let the Elk roam free as is natural and the right step to take.

All National Park Service resources should be directed to restoring the land to benefit the biodiversity within the park. This is what the public wants and needs, and what we need to do to help fight a biodiversity and climate crisis.

The 1998 plan says "Natural processes will be relied on to control populations of native species ..." There is nothing natural about caging animals behind a fence. The existing fence at the Tule Elk Reserve should be removed and replaced with a wildlife friendly fence that will allow Tule Elk to leave the reserve while still keeping cattle out.

It is time to focus on the health of our National Seashore and protect the air, soil, water, native wildlife and native vegetation over the constant impact from private cattle operations. The ranchers espouse crackpot pseudoscience about false carbon sinks (pasture vs. native coastal prairie), regenerative ranching (oxymoron), methane digesters (new profit streams), while the objective and independent science-based literature state how a native landscape with native vegetation and wildlife will help fight climate change more effectively than cattle operations. Please prioritize our native landscape and native wildlife in Point Reyes.

**Correspondence ID:4015**

Correspondence: Any proposed plans for PRNS should include the removal of the elk fence at Tomales Point.

As a private citizen I find the fact that my tax dollar is being used to fence and kill wild animals in a National Park abhorrent. Take down the fence and let the Tule Elk roam to find water and forage.

The National Park Service should partner with the First Nation people and create a wildlife sanctuary in Point Reyes National Seashore so that our elk are not hazed, nor culled, nor confined without sufficient food and water.

The drought conditions are continuing. Due to this urgency the Park must now act to help not only the Tule elk but all other species within its borders. The most impactful thing the Park can do in the short term to assist the elk in their survival is to remove the elk fence. This is not only the most humane thing to do, it is the most cost-effective and reasonable action.

I am grateful to have the opportunity to provide this preliminary feedback, and I look forward to participating in the next steps of this important planning process.

**Correspondence ID:4016**

Correspondence: The elk fence at Tomales Point must be removed. This is an important and the right step for the upcoming management plan.

When will the National Park Service and Point Reyes National Seashore officials stop spending money on a misbegotten Elk fence idea? Remove the fence, and let the Tule Elk roam. It is time to get rid of the cattle ranchers in our national park, as they're the ones forcing their will against the American public's will. Free the Elk and let Americans enjoy a true national park.

The Coast Miwok people should decide how to bring the land back to the way their people left it, before impacted by European settlers in the mid-1800's. The Coast Miwok lived in unison with the Tule elk, the native wildlife and the native vegetation. Let's help recreate our National Park to how it was prior to the impact caused by commercial cattle operations.

For climate change and biodiversity reasons, the Tomales Point scoping plan must include complete removal of the Tule Elk Reserve fence combined with an entirely new and enforced ranch succession plan. It must commit to ceasing continued ranchlands succession of leased parcels to ranchers, and restoration of native coastal prairie and wildlife habitat. It must emphasize the roles of indigenous Coast Miwok's ecological and scientific cultural knowledge and practices, and the importance of wildlife and natural forces in the restoration process.

Thank you for submitting my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore. Please remove the fence across Tomales Point so the Elk can be free to roam, feed, drink, associate, mate, and thrive naturally. It can be done! Please consider and use my comments to help Point Reyes be a beautiful place for wildlife and humans.

**Correspondence ID:4017**

Correspondence: To assist the NPS with its planned NEPA review of the Tomales Point area and Tule elk herd management in Pt. Reyes National Seashore, I suggest the following issues be included in your review process, and any eventual Environmental Impact Statement that comes out of it. These points are intended to insure that the park resources, including the Tule elk and native plants and animals, get the maximum protection for the public's current and future benefit.

Taxpayer dollars should not be spent on killing or neutering any animals, especially rare Tule Elk, once the herd is deemed "too large". The plan should allow for native wildlife to roam freely and die of natural causes.

Rather than maintaining the elk fence, troughs and mineral licks, the NPS could better use these resources to develop educational materials and programs about Tule elk.

Because the well-publicized die-offs of the Tomales Point Tule elk over the past few years have captured the public's attention, it's important that NPS give full consideration to the benefits of removing the elk fence that pens the herd in. Since the fence is only for the benefit of the private ranches in the park, NPS should look at what the impacts on ranching would be with removal of the fence, and weigh that against benefits to the natural environment and the public at large. Since the vast majority of park visitors come for the elk, and not the cows, maintaining a healthy herd should be seen as more important than protecting the private interests of the ranchers.

We need a long-range plan that supports a healthy population of native Tule Elk. It is time for the Park Service to prioritize our elk in PRNS over private cattle operations on our public land. Thank you in advance, for a plan that will include immediate removal of this unnatural and unethical eight foot fence.

**Correspondence ID:4018**

Correspondence: Please remove the eight foot fence at Tomales Point for the sake of our native Tule Elk. We must prioritize our native Tule elk over the domestic cattle raised for profit in PRNS.

How much does it cost the National Park Service or Point Reyes National Seashore in Tomales Point Reserve for fence maintenance and supplemental water and minerals? How much does it cost us the taxpayers not only in materials, but in all the hidden costs of labor, operations, communications, negotiation, administration, and don't forget, pleasing the ranchers who shouldn't even be there due to their constant impairment to the Seashore.

Instead of US taxpayers footing the bill for a godawful fence to keep elk without enough water and food out at Tomales Point, the Park Service needs to take down the fence, remove the thousands of cattle impacting the land, air, and waters, and let nature be whole at Point Reyes National Seashore.

The Tomales Point management plan for Point Reyes National Seashore must include removal of the Tule Elk Reserve fence, freedom of movement and association by the existing Tule Elk herds throughout the Seashore, and transition from a Tule Elk Reserve to a protected Coastal Native Habitat Reserve. Please include in this plan, the creation of safe wildlife corridors to facilitate Tule Elk migration elsewhere into the Seashore and all manner of other endeavors true to National Park Service founding mandates for natural resources protection and the enjoyment of natural features by future generations. In addition, it must include immediate cessation of the ranching succession policy in favor of immediate removal of commercial cattle operations and its ranch residential infrastructure.

Thank you for taking the time to read this comment, and for inviting public input. The land in Point Reyes National Seashore belongs to the public, and should be managed for public, not for private benefit.

**Correspondence ID:4019**

Correspondence: I appreciate the opportunity to provide input into this scoping process and ask that you remove the elk fence at Tomales Point.

The current plan of what is called a 'co-habitation' - which is a farce - is wasteful in a number of ways. Instead of letting the elk populations roam the land to access the water and flora they have evolved to need for subsistence, it often needs to be trucked in to keep populations at levels 'mandated by a plan'. Not only do these resources need to be expended to keep the herds alive - then later, National Park Service personnel go and cull the population when it exceeds their some-how-agreed upon 'rancher-acceptable' number.

All National Park Service resources should be directed to restoring the land to benefit the biodiversity within the park. This is what the public wants and needs, and what we need to do to help fight a biodiversity and climate crisis.

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. The park's top priority should be to ensure the Tule elk survive and even thrive. Remove the elk fence.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity.

**Correspondence ID:4020**

Correspondence: Any proposed plans for PRNS should include the removal of the elk fence at Tomales Point.

As a private citizen I find the fact that my tax dollar is being used to fence and kill wild animals in a National Park abhorrent. Take down the fence and let the Tule Elk roam to find water and forage.

The National Park Service should partner with the First Nation people and create a wildlife sanctuary in Point Reyes National Seashore so that our elk are not hazed, nor culled, nor confined without sufficient food and water.

The drought conditions are continuing. Due to this urgency the Park must now act to help not only the Tule elk but all other species within its borders. The most impactful thing the Park can do in the short term to assist the elk in their survival is to remove the elk fence. This is not only the most humane thing to do, it is the most cost-effective and reasonable action.

I am grateful to have the opportunity to provide this preliminary feedback, and I look forward to participating in the next steps of this important planning process.

**Correspondence ID:4021**

Correspondence: Thank you for the opportunity to comment on Tomales Point. Why is this area being treated separate from Point Reyes National Seashore? As it is within the boundaries of the seashore it should be interwoven within the fabric of the rest of the seashore and the ecosystem allowed to become whole instead of piecemeal. A visitor should be able to walk/hike the entirety of the park. And the native grasses and wildlife (including elk) should be able to roam freely within all areas of the park. Please remove the elk fences and let the park be an actual park.

Since the Park Service recently concluded its multi-year process to update its General Management Plan Amendment (GMPA), one wonders why this part of park operations wasn't included in that process. Nonetheless, now is the time for a comprehensive analysis of NPS current management of Tomales Point, as well as past practices, and all associated costs. While NPS should adhere to its mandate as specified in the Organic Act of 1916 with an eye to providing the highest levels of protection for the natural resources within the park, it should examine the costs in staff time and materials, as well as ongoing maintenance costs, of the elk fence. It should compare that to the savings and benefits of removing the fence, including the environmental benefits of allowing the cattle-grazed areas a chance to repair themselves.

Resources budgeted for Point Reyes National Seashore should be used for preventing wildlife destruction, rather than additional money toward how to maintain an unethical 8 foot fence in the Elk Preserve.

The public loves the elk, and are horrified when they learn that due to being penned in, significant numbers have perished due to thirst or lack of sustenance. As seen with the other, free-roaming herds in Pt. Reyes, it seems such needless harm will be eliminated if the herd is allowed to roam at will. If there is conflict between cattle and elk, the Park Service should have ranchers remove their cows, since this is a national park, not a feedlot.

I want to thank Superintendent Craig Kenkel for the opportunity to provide comments on the upcoming plan for our iconic Tule elk. It is of utmost importance for the plan to include numerous alternatives which requires the removal of the unethical fence across Tomales Point. It is time for our native elk to have the ability to freely roam throughout the National Seashore, versus being confined without sufficient sustenance to survive.

**Correspondence ID:4022**

Correspondence: I appreciate the opportunity to provide input into this scoping process and ask that you remove the elk fence at Tomales Point.

The current plan of what is called a 'co-habitation' - which is a farce - is wasteful in a number of ways. Instead of letting the elk populations roam the land to access the water and flora they have evolved to need for subsistence, it often needs to be trucked in to keep populations at levels 'mandated by a plan'. Please remember your mission to protect and preserve nature for posterity.

**Correspondence ID:4023**

Correspondence: I am writing and requesting to please take down the elk fence from Tomales Point, as it prevents natural migration of tule elk. It also stops them from getting water and food.

The recent controversies regarding the treatment of the captive elk herd extract a cost on park management by forcing it to respond to the public's concerns and the demands the ranchers have become used to making. For example, NPS is now providing water sources and mineral licks for the elk to prevent recurring starvation and dying from thirst. In the past, NPS has built and repaired fences on behalf of the ranches. How much would the Park Service save if the elk were allowed to roam free? How much would it save if the ranchers were held to their lease terms and paid for improvements themselves? NPS should not be spending tax monies on private, for-profit ventures in our public park.

Too many park resources are used to cater to the private ranchers. Ranch operations pollute the streams and waterways of the seashore with manure runoff, release methane into the atmosphere from cattle belches and farts, damaging our climate, and have caused the massive spread of invasive plants. NPS should be putting these resources into restoring the deep-rooted native grasses, wildflowers, mosses and other native plants that cannot survive destructive grazing practices caused by too many cattle on the land.

The original motivation for the fence was to protect financial interests, not for optimal ecological restoration. It must be removed.

Respectfully, the land in Point Reyes National Seashore belongs to the public, and should be managed for public, not for private benefit. It is imperative to keep the native Tule Elk as the priority, and remove the Elk fence.

**Correspondence ID:4024**

Correspondence: I want to thank you for taking my public comment on the Tomales Point scoping process at Point Reyes National Seashore. I cannot believe there is a Prison Fence restricting Tule Elk in our national park. What is that about? To please the cattle ranchers, and prevent the Tule Elk from being free to roam, associate, and live a good life? No more animal prisons in our national park. Point Reyes is not a zoo either. It is time to take down the elk fence.

It's both cheaper and more ecological to let the elk be free, without a fence, than it is to try to manage them unnaturally, with trucked water tanks and salt licks.

Resources should be spent on taking down the elk fence and re-wilding the park.

I am taking the approach that the elk fence be removed from the Tomales Point area and all of the Point Reyes National Seashore because that was and is the intention of the setting-up of this National Park area to begin with. It was not envisioned as a prison area, that is the farthest thing that could be

imagined, with cows over here and the elk behind a fence other there. "Oh give me a home where the bison and elk roam.." - not 'why are they behind that fence?'

Thank you for your attention to my public record comments on the Tomales Point planning process for Point Reyes National Seashore. Your responsibility is to the spirit of wilderness preservation and protection, and to the vast majority of Americans who have insisted that this iconic place be freed from private, for-profit, commercial business interests. We will continue to press for just that, like taking down the Tomales Point fence.

**Correspondence ID:4025**

Correspondence: Thank you for the opportunity to provide input on the updated Tule Elk Management Plan/General Management Plan for Pt. Reyes National Seashore. To help the National Park Service (NPS) best structure its environmental review process, I offer the comments below. Please consider including these points in scoping your review and the presumed Environmental Impact Statement.

**Correspondence ID:4026**

Correspondence: To assist the NPS with its planned NEPA review of the Tomales Point area and Tule elk herd management in Pt. Reyes National Seashore, I suggest the following issues be included in your review process, and any eventual Environmental Impact Statement that comes out of it. These points are intended to insure that the park resources, including the Tule elk and native plants and animals, get the maximum protection for the public's current and future benefit.

Taxpayer dollars should not be spent on killing or neutering any animals, especially rare Tule Elk, once the herd is deemed "too large". The plan should allow for native wildlife to roam freely and die of natural causes.

Rather than maintaining the elk fence, troughs and mineral licks, the NPS could better use these resources to develop educational materials and programs about Tule elk.

Because the well-publicized die-offs of the Tomales Point Tule elk over the past few years have captured the public's attention, it's important that NPS give full consideration to the benefits of removing the elk fence that pens the herd in. Since the fence is only for the benefit of the private ranches in the park, NPS should look at what the impacts on ranching would be with removal of the fence, and weigh that against benefits to the natural environment and the public at large. Since the vast majority of park visitors come for the elk, and not the cows, maintaining a healthy herd should be seen as more important than protecting the private interests of the ranchers.

We need a long-range plan that supports a healthy population of native Tule Elk. It is time for the Park Service to prioritize our elk in PRNS over private cattle operations on our public land. Thank you in advance, for a plan that will include immediate removal of this unnatural and unethical eight foot fence.

**Correspondence ID:4027**

Correspondence: The elk fence at Tomales Point must be removed. This is an important and the right step for the upcoming management plan.

When will the National Park Service and Point Reyes National Seashore officials stop spending money on a misbegotten Elk fence idea? Remove the fence, and let the Tule Elk roam. It is time to get rid of the

cattle ranchers in our national park, as they're the ones forcing their will against the American public's will. Free the Elk and let Americans enjoy a true national park.

The Coast Miwok people should decide how to bring the land back to the way their people left it, before impacted by European settlers in the mid-1800's. The Coast Miwok lived in unison with the Tule elk, the native wildlife and the native vegetation. Let's help recreate our National Park to how it was prior to the impact caused by commercial cattle operations.

For climate change and biodiversity reasons, the Tomales Point scoping plan must include complete removal of the Tule Elk Reserve fence combined with an entirely new and enforced ranch succession plan. It must commit to ceasing continued ranchlands succession of leased parcels to ranchers, and restoration of native coastal prairie and wildlife habitat. It must emphasize the roles of indigenous Coast Miwok's ecological and scientific cultural knowledge and practices, and the importance of wildlife and natural forces in the restoration process.

Thank you for submitting my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore. Please remove the fence across Tomales Point so the Elk can be free to roam, feed, drink, associate, mate, and thrive naturally. It can be done! Please consider and use my comments to help Point Reyes be a beautiful place for wildlife and humans.

**Correspondence ID:4028**

Correspondence: Thank you for inviting public input into the planning process for Tomales Point. The best way to advance the National Seashore's mission is to remove the fence at Pierce Point.

No matter what the Park Service spends to supplement water and minerals for the Tule Elk at Tomales Point, it will not matter. The Tule Elk are starving to death at Tomales Point due to continued drought, and megadrought. Please stop spending time and money on the fence and artificial approaches, and let the Elk roam free for natural sources of water and good nutrition.

It is requested to stop using taxpayers' money to pay for the visual blight of the Elk Fence out on Tomales Point. Please stop trucking in water and minerals and whatever else to try to sustain a native herd in a non-native environment. Take down the fence, and use our taxpayers' money to actually turn the Seashore into a National Park that it deserves. Wildlife, natural habitat, clean water/soil/air, and public access should be the primary forces the Park Service supports - not a small group of politically-connected ranchers and their hoofed methane-operations.

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. The park's top priority should be to ensure the Tule elk survive and even thrive. Remove the elk fence.

It is time to end the mis-management of our native Tule elk in Point Reyes National Seashore. Please follow the scientific advice provided in 1993, and remove the fence across Tomales Point. It is important for the survival of this herd to be free-roaming with access to food and water.

**Correspondence ID:4029**

Correspondence: Dear Superintendent Kenkel,

Thank you for the ability to comment on the planning process addressing complex wildlife, resource, and wilderness management issues at Tomales Point Tule Elk Preserve. I write as a representative for Turtle Island Restoration Network, a marine and watershed protection non-profit organization based in Marin County, representing over 150,000 members across the globe.

While we do applaud the park for addressing the myriad of issues in the Preserve, it is concerning that this process is not undertaken as a General Management Plan Amendment. Given the challenges climate change will present, a more comprehensive management mechanism needs to be in place to review and implement necessary changes to ranching leases that have severe impacts on water quality and biodiversity in the National Seashore.

Staying within the bounds of this public comment opportunity, we ask that the park listens to public sentiment and does what is right for the ecosystem by removing the Tomales Elk Reserve fence. Removing the fence is the most effective tool to protect the park's natural resources and better utilizes taxpayer dollars for public interest and effective environmental stewardship.

It is evident that the Elk within the reserve do not have adequate resources to maintain sustainable populations. The 1998 Tomales Elk Management Plan states that there are no natural year-round streams and as drought conditions continue to worsen, allowing the elk to roam is the only option for this species to have a shot at survival. Continuing to truck in water forage and water is not the best use of taxpayer dollars. The most practical solution is to allow the Elk access to the natural occurring forage and water sources within the National Seashore. These resources should not be limited to just subsidized private ranching practices but to the entirety of the park's inhabitants that are a part of the ecosystem in Point Reyes.

The decline of available resources and a lack of migration among various Elk herds present a grave concern regarding the genetic viability of Tule Elk. The consistent die-offs and limited space will further the bottleneck effect of the Pierce Point Ranch Herd. Allowing the herds to mingle will help facilitate the protection of this natural resource and buffer continued die-off caused by lack of resources from climate change and ranching operations.

The costs associated with maintaining the fence and the delivery of water, forage, and salt licks can instead be allocated for necessary restoration projects within the Tomales Point Preserve. Non-native invasive species dominate the planning area, and the investment in active management utilizing Traditional Ecological Knowledge will further create a climate-resilient ecosystem generating a plethora of positive externalities for Tule Elk and all flora fauna within the park. Funds could also be allocated toward preserving and protecting indigenous artifacts and cultural resource sites, restoring and maintaining hiking trails, or supporting studies reintroducing park predators such as mountain lions or wolves,

Thank you for considering our comments. I look forward to seeing the parks management solutions to address the complex wildlife, resource, and wilderness management issues at Tomales Point Tule Elk Preserve.

Sincerely,

Scott Webb  
Advocacy Manager  
Turtle Island Restoration Network

**Correspondence ID:4030**

Correspondence: Thank you for reading my public comment for the Tomales Point planning process. We love Point Reyes National Seashore, but the Tule Elk Reserve is a really sad place out there. Why is a fence to trap wildlife even a good science idea? Please remove the Tule Elk Fence now.

What are the costs to maintain the Tule Elk Reserve fence, and to provide water and mineral supplements for the Tule Elk? What is the rationale for these expenditures, when removal of the fenceline across Tomales Point would allow Tule Elk to roam for free for water and forage.

Tomales Point and its elk herd should have a wildlife management approach to management. Free access for the elk to roam, restoration of the native grasses and the elimination of invasive plants, removal of private cattle and dairy operations, and unhindered access for the public to wander the land while respecting the natural flora and fauna would increase and enhance PRNS's popularity, as well as its natural biome.

The Tomales Point Elk Reserve fence must promptly be taken down. This should occur in conjunction with a renewed, science-based plan to cease rancher successions of leased lands, allowing Point Reyes National Seashore to revert to natural landscapes, waterscapes, habitats, and ecosystems.

Thank you for reading and placing my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore (PRNS). It is time, finally, for PRNS officials, notably Craig Kenkel, to stop stonewalling and ignoring the American public from across the country, and use proven science to prioritize wilderness, wildlife and habitat over commercial ranching. Start with a plan to remove the fence at Tomales Point and prioritize the endemic Tule Elk.

**Correspondence ID:4031**

Correspondence: To assist the NPS with its planned NEPA review of the Tomales Point area and Tule elk herd management in Pt. Reyes National Seashore, I suggest the following issues be included in your review process, and any eventual Environmental Impact Statement that comes out of it. These points are intended to insure that the park resources, including the Tule elk and native plants and animals, get the maximum protection for the public's current and future benefit.

Taxpayer dollars should not be spent on killing or neutering any animals, especially rare Tule Elk, once the herd is deemed "too large". The plan should allow for native wildlife to roam freely and die of natural causes.

Rather than maintaining the elk fence, troughs and mineral licks, the NPS could better use these resources to develop educational materials and programs about Tule elk.

Because the well-publicized die-offs of the Tomales Point Tule elk over the past few years have captured the public's attention, it's important that NPS give full consideration to the benefits of removing the elk fence that pens the herd in. Since the fence is only for the benefit of the private ranches in the park, NPS should look at what the impacts on ranching would be with removal of the fence, and weigh that against benefits to the natural environment and the public at large. Since the vast majority of park visitors come for the elk, and not the cows, maintaining a healthy herd should be seen as more important than protecting the private interests of the ranchers.

We need a long-range plan that supports a healthy population of native Tule Elk. It is time for the Park Service to prioritize our elk in PRNS over private cattle operations on our public land. Thank you in advance, for a plan that will include immediate removal of this unnatural and unethical eight foot fence.

**Correspondence ID:4032**

**Correspondence ID:4036**

Correspondence: Tomales Point is the highlight of many visitors' experience in Point Reyes National Seashore. Thank you for inviting public comment in this planning process. By removing the 8-foot elk fence, you can begin the process of restoration of the entire peninsula's ecosystem.

Spending the public's money for a Tule Elk Fence and supplemental water and minerals is wasteful, and not a long-term, feasible solution. The Tule Elk are starving to death from lack of access to proper food. And the impact of global warming causes climate effects like long term drought out there. It's bad money after bad money. Free the Tule Elk from Tomales Point. Let the Elk have water and food for free around the Park.

All National Park Service resources should be directed to restoring the land to benefit the biodiversity within the park. This is what the public wants and needs, and what we need to do to help fight a biodiversity and climate crisis.

The drought conditions are continuing. Due to this urgency the Park must now act to help not only the Tule elk but all other species within its borders. The most impactful thing the Park can do in the short term to assist the elk in their survival is to remove the elk fence. This is not only the most humane thing to do, it is the most cost-effective and reasonable action.

Thank you for taking the time to read this comment, and for inviting public input. The land in Point Reyes National Seashore belongs to the public, and should be managed for public, not for private benefit.

**Correspondence ID:4037**

Correspondence: I am a taxpayer who wants you to remove the fence confining the tule elk. It is important our elk survive and are well cared for in a natural habitat, vs confined behind a fence which keeps the elk away from much needed water and forage.

When it comes to Tomales Point our National Park has failed us, the taxpayer, and rightful owners of the land. We should not be paying for the cost of installing and maintaining a fence so wild animals can't roam and forage for food and water in areas preserved for private cattle and dairy ranchers within a National Park.

There have been claims made over the years by ranching interests that the elk have damaged ranch operations or facilities. NPS should determine the facts here, and document the actual costs of any verifiable damage. Additionally, ranchers have claimed the elk need to be separated from their cattle because the elk will eat too much of the forage they want for their cows. The science clearly shows that elk eat far less than cows, weigh a fraction of cows' weight, and being browsers, do not deplete the grasses and shrubs as much as cows do. Therefore, when scoping the plan update, NPS needs to compare the impacts of elk foraging vs. cattle grazing, and develop its plans consistent with the Organic Act of 1916 mandate of resource preservation and protection.

Whether in California or elsewhere globally, climate change impacts nearly every aspect of our current and future environmental conditions. The Tule Elk fence across Tomales Point must be taken down in recognition of this. As conditions are now and for the foreseeable future with seasonal warming, megadrought, desertification, water scarcity, the native Tule Elk will have a better chance of surviving the challenges of this climate crisis, instead of being confined without sufficient water, forage and minerals.

Respectfully, the land in Point Reyes National Seashore belongs to the public, and should be managed for public, not for private benefit. It is imperative to keep the native Tule Elk as the priority, and remove the Elk fence.

**Correspondence ID:4038**

Correspondence: I appreciate the opportunity to provide input into this scoping process and ask that you remove the elk fence at Tomales Point.

The current plan of what is called a 'co-habitation' - which is a farce - is wasteful in a number of ways. Instead of letting the elk populations roam the land to access the water and flora they have evolved to need for subsistence, it often needs to be trucked in to keep populations at levels 'mandated by a plan'. Not only do these resources need to be expended to keep the herds alive - then later, National Park

Service personnel go and cull the population when it exceeds their some-how-agreed upon 'rancher-acceptable' number.

All National Park Service resources should be directed to restoring the land to benefit the biodiversity within the park. This is what the public wants and needs, and what we need to do to help fight a biodiversity and climate crisis.

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity.

**Correspondence ID:4039**

Correspondence: I respectfully submit this public comment for your consideration regarding the GMP planning process for Tomales Point at Point Reyes National Seashore (PRNS). All the natural resources, from native plants to the Tule Elk, should be unimpaired in and beyond Tomales Point. The American public wants open and accessible public lands and waters in their National Parks. No wildlife should be caged or captive in a National Park. We must remove the Tule Elk Fence now, and let the Tule Elk and other wildlife roam free to prosper as is natural, healthy, and just. Please scope removal of the Tule Elk Fence in your planning for Tomales Point.

Whatever the costs to maintain the Tule Elk Fence and to provide water towers and mineral supplements--the Tule Elk are dying off because of lack of proper, nutritious, healthy food and forage. The Elk are starving to death and dying of an inadequate supply of water at Tomales Point. The Park Service will never be able to be effective to supplement the Tule Elk food and water supply that is needed. Please do the right thing and take down the elk fence.

Resources currently spent on maintaining the fence could be better spent on expanding interpretive displays of indigenous land stewardship practices and restoration of Coastal Miwok sites in Point Reyes National Seashore.

Tule Elk are not only rare beautiful animals they are also caretakers of the land. The elk help native grasses flourish, which helps carbon sequestering, thus reducing the threat of climate change. In this day and age the National Park service must lead our nation in restoring our parks to help reduce our nation's carbon footprint.

Thank you for submitting my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore. Please remove the fence across Tomales Point so the Elk can be free to roam, feed, drink, associate, mate, and thrive naturally. It can be done! Please consider and use my comments to help Point Reyes be a beautiful place for wildlife and humans.

**Correspondence ID:4040**

Correspondence: To assist the NPS with its planned NEPA review of the Tomales Point area and Tule elk herd management in Pt. Reyes National Seashore, I suggest the following issues be included in your review process, and any eventual Environmental Impact Statement that comes out of it. These points are intended to insure that the park resources, including the Tule elk and native plants and animals, get the maximum protection for the public's current and future benefit.

Taxpayer dollars should not be spent on killing or neutering any animals, especially rare Tule Elk, once the herd is deemed "too large". The plan should allow for native wildlife to roam freely and die of natural causes.

Rather than maintaining the elk fence, troughs and mineral licks, the NPS could better use these resources to develop educational materials and programs about Tule elk.

Because the well-publicized die-offs of the Tomales Point Tule elk over the past few years have captured the public's attention, it's important that NPS give full consideration to the benefits of removing the elk fence that pens the herd in. Since the fence is only for the benefit of the private ranches in the park, NPS should look at what the impacts on ranching would be with removal of the fence, and weigh that against benefits to the natural environment and the public at large. Since the vast majority of park visitors come for the elk, and not the cows, maintaining a healthy herd should be seen as more important than protecting the private interests of the ranchers.

We need a long-range plan that supports a healthy population of native Tule Elk. It is time for the Park Service to prioritize our elk in PRNS over private cattle operations on our public land. Thank you in advance, for a plan that will include immediate removal of this unnatural and unethical eight foot fence.

**Correspondence ID:4041**

Correspondence: I appreciate the opportunity to provide input into this scoping process and ask that you remove the elk fence at Tomales Point.

The current plan of what is called a 'co-habitation' - which is a farce - is wasteful in a number of ways. Instead of letting the elk populations roam the land to access the water and flora they have evolved to need for subsistence, it often needs to be trucked in to keep populations at levels 'mandated by a plan'. Not only do these resources need to be expended to keep the herds alive - then later, National Park Service personnel go and cull the population when it exceeds their some-how-agreed upon 'rancher-acceptable' number.

All National Park Service resources should be directed to restoring the land to benefit the biodiversity within the park. This is what the public wants and needs, and what we need to do to help fight a biodiversity and climate crisis.

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. The park's top priority should be to ensure the Tule elk survive and even thrive. Remove the elk fence.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into

a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity.

**Correspondence ID:4042**

Correspondence: Any proposed plans for PRNS should include the removal of the elk fence at Tomales Point.

As a private citizen I find the fact that my tax dollar is being used to fence and kill wild animals in a National Park abhorrent. Take down the fence and let the Tule Elk roam to find water and forage.

The National Park Service should partner with the First Nation people and create a wildlife sanctuary in Point Reyes National Seashore so that our elk are not hazed, nor culled, nor confined without sufficient food and water.

The drought conditions are continuing. Due to this urgency the Park must now act to help not only the Tule elk but all other species within its borders. The most impactful thing the Park can do in the short term to assist the elk in their survival is to remove the elk fence. This is not only the most humane thing to do, it is the most cost-effective and reasonable action.

I am grateful to have the opportunity to provide this preliminary feedback, and I look forward to participating in the next steps of this important planning process.

**Correspondence ID:4043**

Correspondence: Restore and protect the Tule elk. Take down the fence.

I respectfully submit this public comment for your consideration regarding the GMP planning process for Tomales Point at Point Reyes National Seashore (PRNS). All the natural resources, from native plants to the Tule Elk, should be unimpaired in and beyond Tomales Point. The American public wants open and accessible public lands and waters in their National Parks. No wildlife should be caged or captive in a National Park. We must remove the Tule Elk Fence now, and let the Tule Elk and other wildlife roam free to prosper as is natural, healthy, and just. Please scope removal of the Tule Elk Fence in your planning for Tomales Point.

Whatever the costs to maintain the Tule Elk Fence and to provide water towers and mineral supplements--the Tule Elk are dying off because of lack of proper, nutritious, healthy food and forage. The Elk are starving to death and dying of an inadequate supply of water at Tomales Point. The Park Service will never be able to be effective to supplement the Tule Elk food and water supply that is needed. Please do the right thing and take down the elk fence.

Resources currently spent on maintaining the fence could be better spent on expanding interpretive displays of indigenous land stewardship practices and restoration of Coastal Miwok sites in Point Reyes National Seashore.

Tule Elk are not only rare beautiful animals they are also caretakers of the land. The elk help native grasses flourish, which helps carbon sequestering, thus reducing the threat of climate change. **Correspondence ID:4045**

Correspondence: I respectfully submit this public comment for your consideration regarding the GMP planning process for Tomales Point at Point Reyes National Seashore (PRNS). All the natural resources, from native plants to the Tule Elk, should be unimpaired in and beyond Tomales Point. The American public wants open and accessible public lands and waters in their National Parks. No wildlife should be caged or captive in a National Park. We must remove the Tule Elk Fence now, and let the Tule Elk and other wildlife roam free to prosper as is natural, healthy, and just. Please scope removal of the Tule Elk Fence in your planning for Tomales Point.

When will the National Park Service and Point Reyes National Seashore officials stop spending money on a misbegotten Elk fence idea? Remove the fence, and let the Tule Elk roam. It is time to get rid of the cattle ranchers in our national park, as they're the ones forcing their will against the American public's will. Free the Elk and let Americans enjoy a true national park.

Too many park resources are used to cater to the private ranchers. Ranch operations pollute the streams and waterways of the seashore with manure runoff, release methane into the atmosphere from cattle belches and farts, damaging our climate, and have caused the massive spread of invasive plants.

NPS should be putting these resources into restoring the deep-rooted native grasses, wildflowers, mosses and other native plants that cannot survive destructive grazing practices caused by too many cattle on the land.

Point Reyes National Seashore management must scope a plan to remove the Tule Elk Reserve fence across Tomales Point. This must be done in conjunction with a serious, science-based, enforced plan to cease the practice of ranching on our public land, so that timely and effective Seashore wilderness restoration occurs with public participation, focused on natural and native features, habitats, wildlife, and visitor accessibility.

Thank you for reading and placing my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore (PRNS). It is time, finally, for PRNS officials, notably Craig Kenkel, to stop stonewalling and ignoring the American public from across the country, and use proven science to prioritize wilderness, wildlife and habitat over commercial ranching. Start with a plan to remove the fence at Tomales Point and prioritize the endemic Tule Elk.

**Correspondence ID:4046**

Correspondence: Thank you for the opportunity to comment on Tomales Point. Why is this area being treated separate from Point Reyes National Seashore? As it is within the boundaries of the seashore it should be interwoven within the fabric of the rest of the seashore and the ecosystem allowed to become whole instead of piecemeal. A visitor should be able to walk/hike the entirety of the park. And the native grasses and wildlife (including elk) should be able to roam freely within all areas of the park. Please remove the elk fences and let the park be an actual park.

The recent controversies regarding the treatment of the captive elk herd extract a cost on park management by forcing it to respond to the public's concerns and the demands the ranchers have become used to making. For example, NPS is now providing water sources and mineral licks for the elk to prevent recurring starvation and dying from thirst. In the past, NPS has built and repaired fences on behalf of the ranches. How much would the Park Service save if the elk were allowed to roam free? How much would it save if the ranchers were held to their lease terms and paid for improvements themselves? NPS should not be spending tax monies on private, for-profit ventures in our public park.

Pierce Point Ranch should be the only real "historical" ranch in PRNS. It should be developed as a working model of a ranch from the 19th Century, with no more than a few head of cattle and a few dairy cows, showcasing actual ranching and farming techniques of that era. Docents could explain the conditions, techniques, and context for working the land under the times and circumstances in place at the time. It should also tell the full story of the Native Americans that preceded European settlers and their fate. All other ranches should be removed from the park.

It is the responsibility of the Park Service to protect wildlife, and the most obvious solution is to remove the elk fence, allow the elk to roam, water, and feed, and for the Park Service to ameliorate climate change impacts, including removal of nonnative plants, improve fire resiliency, and allow wildlife and natural processes to restore areas of the Seashore. A good first step is to end the lease agreements with the cattle ranchers.

The successful reintroduction of the elk herds in the Point Reyes National Seashore should be viewed as the goal of the general plan for not only the Tomales Point area but the entire National Seashore and the most cost-effective way to do that is to work for the elimination of cattle from that area. If this

approach is not taken then there will be continued non-native plants being brought in which will necessitate more plans and strategies to eliminate, more engineering projects to contain manure runoff, control of native 'predator' species to protect the cattle which is contradictory to reestablishing the Seashore, just to name a few.

**Correspondence ID:4047**

Correspondence: I am writing the National Park Service to respectfully request to remove the eight foot fence at Tomales Point in order for our iconic Tule elk to roam free in our National Park.

Maintenance of an 8-foot fence and providing water and nutrition for captive Tule elk is not a reasonable use of funds, when the Tule elk could find adequate food and water if they were allowed to freely roam.

Why is the Park Service wasting taxpayer money on an inappropriate fence out at Tomales Point? The NPS should take down the fence, let the Tule Elk roam, and create a Coastal Native Habitat Reserve instead of keeping the Elk Pen out there. It's ridiculous that wildlife are treated like zoo animals in a National Park.

I am taking the approach that the elk fence be removed from the Tomales Point area and all of the Point Reyes National Seashore because that was and is the intention of the setting-up of this National Park area to begin with. It was not envisioned as a prison area, that is the farthest thing that could be imagined, with cows over here and the elk behind a fence other there. "Oh give me a home where the bison and elk roam.." - not 'why are they behind that fence?'

I look forward to the next steps in the planning process. Thank you for the opportunity to participate in this initial phase.

**Correspondence ID:4048**

Correspondence: Removal of the elk fence at Tomales Point should be included in your plans for PRNS. It is the necessary and ethical step to take for a native species in a National Seashore.

When will the National Park Service and Point Reyes National Seashore officials stop spending money on a misbegotten Elk fence idea? Remove the fence, and let the Tule Elk roam. It is time to get rid of the cattle ranchers in our national park, as they're the ones forcing their will against the American public's will. Free the Elk and let Americans enjoy a true national park.

There have been claims made over the years by ranching interests that the elk have damaged ranch operations or facilities. NPS should determine the facts here, and document the actual costs of any verifiable damage. Additionally, ranchers have claimed the elk need to be separated from their cattle because the elk will eat too much of the forage they want for their cows. The science clearly shows that elk eat far less than cows, weigh a fraction of cows' weight, and being browsers, do not deplete the grasses and shrubs as much as cows do. Therefore, when scoping the plan update, NPS needs to compare the impacts of elk foraging vs. cattle grazing, and develop its plans consistent with the Organic Act of 1916 mandate of resource preservation and protection.

The drought conditions are continuing. Due to this urgency the Park must now act to help not only the Tule elk but all other species within its borders. The most impactful thing the Park can do in the short

term to assist the elk in their survival is to remove the elk fence. This is not only the most humane thing to do, it is the most cost-effective and reasonable action.

Thank you for listening to the public and considering the wishes of the many instead of the profits of a few.

**Correspondence ID:4049**

I am grateful to have the opportunity to provide this preliminary feedback, and I look forward to participating in the next steps of this important planning process.

**Correspondence ID:4050**

Correspondence: The elk fence at Tomales Point must be removed. This is an important and the right step for the upcoming management plan.

It is not clear why the Park Service continues to spend taxpayer money for an unethical eight foot fence at the Tule Elk Reserve when the public has requested for years to remove the fence and let the Elk roam for free to get their water and food.

Financial resources should not be spent on an Elk enclosure at Tomales Point, nor on trucking in water and minerals all the way out there, when the Elk are dying of thirst, malnutrition, and starvation. Financial resources should be spent to free the Elk so they can live a natural and healthy life across the entire Park.

As an endemic species, Tule elk benefit the land, and allowing them to freely roam in Point Reyes National Seashore will enhance the park overall.

It is time to focus on the health of our National Seashore and protect the air, soil, water, native wildlife and native vegetation over the constant impact from private cattle operations. The ranchers espouse crackpot pseudoscience about false carbon sinks (pasture vs. native coastal prairie), regenerative ranching (oxymoron), methane digesters (new profit streams), while the objective and independent science-based literature state how a native landscape with native vegetation and wildlife will help fight climate change more effectively than cattle operations. Please prioritize our native landscape and native wildlife in Point Reyes.

**Correspondence ID:4051**

Correspondence: To assist the NPS with its planned NEPA review of the Tomales Point area and Tule elk herd management in Pt. Reyes National Seashore, I suggest the following issues be included in your review process, and any eventual Environmental Impact Statement that comes out of it. These points are intended to insure that the park resources, including the Tule elk and native plants and animals, get the maximum protection for the public's current and future benefit.

Since the vast majority of park visitors come for the elk, and not the cows, maintaining a healthy herd should be seen as more important than protecting the private interests of the ranchers.

We need a long-range plan that supports a healthy population of native Tule Elk. It is time for the Park Service to prioritize our elk in PRNS over private cattle operations on our public land. Thank you in advance, for a plan that will include immediate removal of this unnatural and unethical eight foot fence.

**Correspondence ID:4052**

Correspondence: I am writing and requesting to please take down the elk fence from Tomales Point, as it prevents natural migration of tule elk. It also stops them from getting water and food.

Removing the fence will reduce the costs associated with proper stewardship of these captive animals - water troughs, mineral licks and staff time to regularly monitor the health of the herd will be unnecessary if the fence is removed.

All National Park Service resources should be directed to restoring the land to benefit the biodiversity within the park. This is what the public wants and needs, and what we need to do to help fight a biodiversity and climate crisis.

Whether in California or elsewhere globally, climate change impacts nearly every aspect of our current and future environmental conditions. The Tule Elk fence across Tomales Point must be taken down in recognition of this. As conditions are now and for the foreseeable future with seasonal warming, megadrought, desertification, water scarcity, the native Tule Elk will have a better chance of surviving the challenges of this climate crisis, instead of being confined without sufficient water, forage and minerals.

Thank you for your attention to my public record comments on the Tomales Point planning process for Point Reyes National Seashore. Your responsibility is to the spirit of wilderness preservation and

protection, and to the vast majority of Americans who have insisted that this iconic place be freed from private, for-profit, commercial business interests. We will continue to press for just that, like taking down the Tomales Point fence.

**Correspondence ID:4053**

Correspondence: I am a taxpayer who wants you to remove the fence confining the tule elk. It is important our elk survive and are well cared for in a natural habitat, vs confined behind a fence which keeps the elk away from much needed water and forage.

Removing the fence will reduce the costs associated with proper stewardship of these captive animals - water troughs, mineral licks and staff time to regularly monitor the health of the herd will be unnecessary if the fence is removed.

The National Park Service is spending taxpayer money for a foolish Elk fence on Tomales Point. The leased ranching operations cause way more environmental harm and damage with thousands of cattle everywhere in the Park. The Park Service should spend money to educate the public about the damage cattle and ranchers cause on what should be a true National Park.

Tomales Point and the Point Reyes National Seashore is to be an area where wildlife are given back their home. Taxpayers and visitors venture out that way to hear the roar of the Pacific Ocean and feel the sun and wind, and see the land as it was made in its beautiful creation. Taxpayers do not go out to Point Reyes to see miles of wire fences 'keeping Nature in check', and the destructive, exploitive industrial practices of corrupt politically influential parties rule the land.

Thank you for reading and placing my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore (PRNS). It is time, finally, for PRNS officials, notably Craig Kenkel, to stop stonewalling and ignoring the American public from across the country, and use proven science to prioritize wilderness, wildlife and habitat over commercial ranching. Start with a plan to remove the fence at Tomales Point and prioritize the endemic Tule Elk.

**Correspondence ID:4054**

Correspondence: Removal of the elk fence at Tomales Point should be included in your plans for PRNS. It is the necessary and ethical step to take for a native species in a National Seashore.

When will the National Park Service and Point Reyes National Seashore officials stop spending money on a misbegotten Elk fence idea? Remove the fence, and let the Tule Elk roam. It is time to get rid of the cattle ranchers in our national park, as they're the ones forcing their will against the American public's will. Thank you for listening to the public and considering the wishes of the many instead of the profits of a few.

**Correspondence ID:4055**

Correspondence: To assist the NPS with its planned NEPA review of the Tomales Point area and Tule elk herd management in Pt. Reyes National Seashore, I suggest the following issues be included in your review process, and any eventual Environmental Impact Statement that comes out of it. These points are intended to insure that the park resources, including the Tule elk and native plants and animals, get the maximum protection for the public's current and future benefit.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying - just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

Tomales Point and its elk herd should have a wildlife management approach to management. Free access for the elk to roam, restoration of the native grasses and the elimination of invasive plants, removal of private cattle and dairy operations, and unhindered access for the public to wander the land while respecting the natural flora and fauna would increase and enhance PRNS's popularity, as well as its natural biome.

As an endemic species, Tule elk benefit the land, and allowing them to freely roam in Point Reyes National Seashore will enhance the park overall.

The successful reintroduction of the elk herds in the Point Reyes National Seashore should be viewed as the goal of the general plan for not only the Tomales Point area but the entire National Seashore and the most cost-effective way to do that is to work for the elimination of cattle from that area. If this approach is not taken then there will be continued non-native plants being brought in which will necessitate more plans and strategies to eliminate, more engineering projects to contain manure runoff, control of native 'predator' species to protect the cattle which is contradictory to reestablishing the Seashore, just to name a few.

**Correspondence ID:4056**

Correspondence: Removal of the elk fence at Tomales Point should be included in your plans for PRNS. It is the necessary and ethical step to take for a native species in a National Seashore.

When will the National Park Service and Point Reyes National Seashore officials stop spending money on a misbegotten Elk fence idea? Remove the fence, and let the Tule Elk roam. This is not only the most humane thing to do, it is the most cost-effective and reasonable action.

ITS ABOUT TIME THIS AGENCY RESPONDS TO THE ELK AND THE OTHER WILDLIFE AFFECTED BY THE FENCING ETC. THE DAM RANCHERS ARE NOT AND NEVER SHOULD BE ANY POINT OF CONSIDERATION IN REGARD TO THIS AREA.

Thank you for listening to the public and considering the wishes of the many instead of the profits of a few.

**Correspondence ID:4057**

Correspondence: Thank you for the opportunity to provide input on the updated Tule Elk Management Plan/General Management Plan for Pt. Reyes National Seashore. To help the National Park Service (NPS) best structure its environmental review process, I offer the comments below. Please consider including these points in scoping your review and the presumed Environmental Impact Statement.

What are the annual costs for the Tomales Point Reserve fence and the supplemental water and minerals for the Tule Elk trapped there? Why are Elk still trapped and causing this expense, when there are ample lands and waters for Elk to roam at Point Reyes National Seashore? It's not a zoo, it's a national park. Please take down the fence.

The park should put every effort into connecting Tomales Point and its wildlife to the rest of the park. A visitor to the park should not have to pass through cattle/dairy pasture to walk through the Philip Burton Wilderness and nor should the Tule Elk. Every effort should be directed in allowing the elk to roam freely across the entire area of the park.

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

Thank you for submitting my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore. Please remove the fence across Tomales Point so the Elk can be free to roam, feed, drink, associate, mate, and thrive naturally. It can be done! Please consider and use my comments to help Point Reyes be a beautiful place for wildlife and humans.

**Correspondence ID:4058**

Correspondence: I am writing and requesting to please take down the elk fence from Tomales Point, as it prevents natural migration of tule elk. It also stops them from getting water and food.

Removing the fence will reduce the costs associated with proper stewardship of these captive animals - water troughs, mineral licks and staff time to regularly monitor the health of the herd will be unnecessary if the fence is removed.

All National Park Service resources should be directed to restoring the land to benefit the biodiversity within the park. This is what the public wants and needs, and what we need to do to help fight a biodiversity and climate crisis.

Your responsibility is to the spirit of wilderness preservation and protection, and to the vast majority of Americans who have insisted that this iconic place be freed from private, for-profit, commercial business interests. We will continue to press for just that, like taking down the Tomales Point fence.

**Correspondence ID:4059**

Correspondence: The elk fence at Tomales Point must be removed. This is an important and the right step for the upcoming management plan.

Dismantling the elk fence will save the NPS money, as it is a less expensive and less invasive option.

Park funds should be used to monitor and enforce water quality and other environmental standards in Point Reyes National Seashore versus spending money on a bad fence idea to starve wildlife in a National Park.

I am taking the approach that the elk fence be removed from the Tomales Point area and all of the Point Reyes National Seashore because that was and is the intention of the setting-up of this National Park area to begin with. It was not envisioned as a prison area, that is the farthest thing that could be imagined, with cows over here and the elk behind a fence other there. "Oh give me a home where the bison and elk roam.." - not 'why are they behind that fence?'

Thank you for listening to the public and considering the wishes of the many instead of the profits of a few.

**Correspondence ID:4060**

Correspondence: Removal of the elk fence at Tomales Point should be included in your plans for PRNS. It is the necessary and ethical step to take for a native species in a National Seashore.

No matter what the Park Service spends to supplement water and minerals for the Tule Elk at Tomales Point, it will not matter. The Tule Elk are starving to death at Tomales Point due to continued drought, and megadrought. Please stop spending time and money on the fence and artificial approaches, and let the Elk roam free for natural sources of water and good nutrition.

Resources currently spent on maintaining the fence could be better spent on expanding interpretive displays of indigenous land stewardship practices and restoration of Coastal Miwok sites in Point Reyes National Seashore.

The fence should be removed, for the benefit of the elk herds and their survival.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity.

**Correspondence ID:4061**

Correspondence: Removal of the elk fence at Tomales Point should be included in your plans for PRNS. It is the necessary and ethical step to take for a native species in a National Seashore.

No matter what the Park Service spends to supplement water and minerals for the Tule Elk at Tomales Point, it will not matter. The Tule Elk are starving to death at Tomales Point due to continued drought, and megadrought. Please stop spending time and money on the fence and artificial approaches, and let the Elk roam free for natural sources of water and good nutrition.

Resources currently spent on maintaining the fence could be better spent on expanding interpretive displays of indigenous land stewardship practices and restoration of Coastal Miwok sites in Point Reyes National Seashore.

The fence should be removed, for the benefit of the elk herds and their survival.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity.

**Correspondence ID:4062**

Correspondence: Please remove the elk fence from Point Reyes National Seashore in order for the elk herds to have access to sufficient amount of water, minerals and forage.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

Financial resources should not be spent on an Elk enclosure at Tomales Point, nor on trucking in water and minerals all the way out there, when the Elk are dying of thirst, malnutrition, and starvation.

Financial resources should be spent to free the Elk so they can live a natural and healthy life across the entire Park.

The difference in landscape between the Tule Elk Reserve and the ranches on the other side of the fence is stark. The Tule elk Reserve looks like a beautiful coastal prairie with lots of wildflowers and coyote brush. The land to the south looks barren and denuded and there is evidence of cow manure spraying - not what visitors come to Point Reyes to see. Please remove the fence in the Elk reserve, as this is the right step to take for our National Park.

I urge you to use this opportunity to carry out the intentions of the creation of the park, which was to protect the biodiversity within the seashore. To do that, the sacrifices should be made by the few ranch and dairy families that have profited profusely over the years. Our National Park is owned by the people not by the few ranchers.

**Correspondence ID:4063**

Correspondence: To assist the NPS with its planned NEPA review of the Tomales Point area and Tule elk herd management in Pt. Reyes National Seashore, I suggest the following issues be included in your review process, and any eventual Environmental Impact Statement that comes out of it. These points are intended to insure that the park resources, including the Tule elk and native plants and animals, get the maximum protection for the public's current and future benefit.

Taxpayer dollars should not be spent on killing or neutering any animals, especially rare Tule Elk, once the herd is deemed "too large". The plan should allow for native wildlife to roam freely and die of natural causes.

Rather than maintaining the elk fence, troughs and mineral licks, the NPS could better use these resources to develop educational materials and programs about Tule elk.

Because the well-publicized die-offs of the Tomales Point Tule elk over the past few years have captured the public's attention, it's important that NPS give full consideration to the benefits of removing the elk fence that pens the herd in. Since the fence is only for the benefit of the private ranches in the park, NPS should look at what the impacts on ranching would be with removal of the fence, and weigh that against benefits to the natural environment and the public at large. Since the vast majority of park visitors come for the elk, and not the cows, maintaining a healthy herd should be seen as more important than protecting the private interests of the ranchers.

We need a long-range plan that supports a healthy population of native Tule Elk. It is time for the Park Service to prioritize our elk in PRNS over private cattle operations on our public land. Thank you in advance, for a plan that will include immediate removal of this unnatural and unethical eight foot fence.

**Correspondence ID:4064**

**Correspondence ID:4068**

Correspondence: Thank you for allowing the public to comment on the process of creating the upcoming plan for Tomales Point within Point Reyes National Seashore. I for one, as I think many others do, frequent national parks to see wildlife in their natural habitat. I don't go to the park to see cows and fences. If I wanted to go to a zoo I would choose to do just that. Take down the fence and allow all of the wildlife to roam freely within the entire park as that is why the park was created.

Maintenance of an 8-foot fence and providing water and nutrition for captive Tule elk is not a reasonable use of funds, when the Tule elk could find adequate food and water if they were allowed to freely roam.

Removal of the elk fence would give the Park a good opportunity to create a prairie preserve, located just on the outside of the existing elk preserve, by pushing back any cattle away from the current fence line. In fact, if the ranches are to remain, installing a wildlife-friendly fence south of the elk fence to let elk and other native animals move freely while keeping cattle at bay would let the park establish a specific prairie preserve where the flora and fauna have been degraded. This could be a site for studying the restoration of the native environment after decades of degradation by cattle.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

Our native Tule elk in PRNS deserve a better quality of life, rather than being confined in an environment without sufficient forage, minerals and water. Please ensure the upcoming plan for our iconic elk has several options that involve the removal of the elk. The public has requested the NPS to protect the Tule elk, and now is the time to take action.

**Correspondence ID:4069**

**Correspondence ID:4070**

Correspondence: I am writing and requesting to please take down the elk fence from Tomales Point, as it prevents natural migration of tule elk. It also stops them from getting water and food.

How much does it cost the National Park Service or Point Reyes National Seashore in Tomales Point Reserve for fence maintenance and supplemental water and minerals? How much does it cost us the taxpayers not only in materials, but in all the hidden costs of labor, operations, communications, negotiation, administration, and don't forget, pleasing the ranchers who shouldn't even be there due to their constant impairment to the Seashore.

The long run goal is to phase out cattle from the Point Reyes National Seashore, altogether. This would allow a number of costly issues to be dropped as the progression of steps were accomplished, namely the need and upkeep of the elk fences, trucking in feed and water for the elk herds in the increasing occurrence of drought, culling the herds when successfully repopulating the areas and eradication of invasive species of plants brought in by cattle, cattle feed, and industrial machinery.

Maintaining a captive Tule elk herd at Tomales Point will likely only become increasingly expensive with climate change and recurring, significant droughts. If the fence is removed, water troughs and mineral licks will be unnecessary.

I am grateful to have the opportunity to provide this preliminary feedback, and I look forward to participating in the next steps of this important planning process.

**Correspondence ID:4072**

Correspondence: Please remove the, elk, fence from “Point Reyes National Seashore” in order for the, elk, herds to have access to, sufficient, amount of water, minerals, and, forage! Your trapping and confining them is cruelty!

The National Park Service is accepting public comments for the management plan of “Tomales Point”, in “Point Reyes National Seashore”, where wildlife, such as the, native, Tule Elk, are fenced off from access to enough food, or, water! Even though “Point Reyes National Seashore” is the, only, National Park on the West Coast, and, is one of the most, biodiverse, regions in the country, land management revolves around protecting, private, ranching profits, and, NOT the well-being of the ecosystem! The, native, Tule Elk are confined to limited, space behind a fence, and the NPS MUST hear from the, environmental, community to change this!

Why are our taxes going to please ranchers at “Point Reyes National Seashore”? There is NO no good, valid, scientific reason for there to be a, huge, tall, fence at “Tomales Point” to keep Tule Elk captive, and, dying - just so ranchers can have cattle in our Park! We do NOT want our, tax, money going to support this, heartless, policy that goes against the, very, trust of the National Park Service! Please take down the, restrictive, fence, and, let the Elk be Elk! Get rid of the ranchers since we paid them millions of dollars to leave decades ago!

All National Park Service resources MUST be directed to restoring the land to benefit the biodiversity within the Park! This is what the public wants, and, is entitled to, and, what we need to do to help fight a biodiversity and climate crisis!

As an, endemic, species, Tule elk benefit the land, and, allowing them to, freely, roam in ““Point Reyes National Seashore”” will enhance the Park, overall.

Thank for your, serious, attention to our issues! The, main, thing for the ““Tomales Point”” scoping plan should be removal of that egregious, fence! The elk need to roam so they can find water, and, food! Native plant restoration would be a, great, starting point to let the American people know you are listening to them (finally!). Please include the, general, public, and, not the ranchers, in your planning, and, your communications!

**Correspondence ID:4073**

Correspondence: Public enjoyment of the Seashore should be open and available for present and future generations. My main comment to the National Park Service and Point Reyes National Seashore officials is the Elk Fence must come down.

Maintenance of an 8-foot fence and providing water and nutrition for captive Tule elk is not a reasonable use of funds, when the Tule elk could find adequate food and water if they were allowed to freely roam.

The Park Service should put all resources to removing the elk fence, allow the elk to roam free, stop the killing of the elk, and plant native grasses for them to feed.

Ecological reports recommend the fence be removed. There is no good reason to keep the fence.

Thank you for your attention to my comments. Tomales Point should be an open area, not fenced in because ranchers use false arguments against Tule Elk. Cattle by the thousands at Point Reyes Seashore cause exponentially more damage than a few hundred Tule Elk. The Park Service should protect and help wildlife and their habitats, not promote private, for-profit ranching. The fence needs to come down, and the ranchers need to stop interfering with wildlife, polluting streams, and hassling Park visitors. The ranchers need to either give up some of their privileges, or get out of the Park. The American people will be watching how you approach what's right for Tomales Point and our National Park.

**Correspondence ID:4074**

Correspondence: It is time to stop treating our Tule Elk like noxious animals to be controlled and exterminated. They are on our public lands and must be allowed to have access to food and water. That is why I am writing to demand that you take down the damn elk fence from Tomales Point! The fence on public land is ludicrous and prevents natural migration of tule elk and prevents them from their habitat and access to food and water.

The current plan of what is called a 'co-habitation' - which is a farce - is wasteful in a number of ways. Instead of letting the elk populations roam the land to access the water and flora they have evolved to need for subsistence, it often needs to be trucked in to keep populations at levels 'mandated by a plan'. Not only do these resources need to be expended to keep the herds alive - then later, National Park Service personnel go and cull the population when it exceeds their some-how-agreed upon 'rancher-acceptable' number.

Why is the NPS having separate GMPs for the leased ranch lands and for the Tule Elk Reserve? Is this not all one national park? Are you going to have a separate GMP for the southern part of the Phil Burton

Wilderness area? PRNS needs to be managed as one comprehensive and coordinated part, not sliced up in pieces. As a member of the public I don't see separate areas.

The Park Service should consider not only the economic costs of maintaining the elk fence and the management of the elk herd, it should examine the reputational and ethical costs of doing so as well. More and more, the public is very unhappy about the needless deaths of the Tule elk, for no other reason than to protect private ranchers' profits. How many visitors are discouraged from coming to visit due to this wasteful and disagreeable practice? How many dollars are not spent in the park and surrounding areas because of it? How much distrust does the Park Service generate when people see it catering to the select few, at the cost of the iconic Tule elk and damage to the park's environs? Too much, that's for sure.

Sadly, Point Reyes National Seashore is a landscape dominated by private, for-profit industrial cattle ranching businesses. These private business owners claim stewardship of the lands, waters, and air, and do everything in their power to evade, circumvent, ignore, abuse, and thumb their collective noses at the most basic and sound environmental principles, ethics, practices, and responsibilities. This selfish and unjust behavior should not occur in a National Park. Please take down the Elk fence, and prioritize our native wildlife over private and destructive cattle operations.

**Correspondence ID:4075**

Correspondence: The elk fence at Tomales Point must be removed. This is an important and the right step for the upcoming management plan.

It is not clear why the Park Service continues to spend taxpayer money for an unethical eight foot fence at the Tule Elk Reserve when the public has requested for years to remove the fence and let the Elk roam for free to get their water and food.

Financial resources should not be spent on an Elk enclosure at Tomales Point, nor on trucking in water and minerals all the way out there, when the Elk are dying of thirst, malnutrition, and starvation. Financial resources should be spent to free the Elk so they can live a natural and healthy life across the entire Park.

As an endemic species, Tule elk benefit the land, and allowing them to freely roam in Point Reyes National Seashore will enhance the park overall.

It is time to focus on the health of our National Seashore and protect the air, soil, water, native wildlife and native vegetation over the constant impact from private cattle operations. The ranchers espouse crackpot pseudoscience about false carbon sinks (pasture vs. native coastal prairie), regenerative ranching (oxymoron), methane digesters (new profit streams), while the objective and independent science-based literature state how a native landscape with native vegetation and wildlife will help fight climate change more effectively than cattle operations. Please prioritize our native landscape and native wildlife in Point Reyes.

**Correspondence ID:4076**

Correspondence: I am writing the National Park Service, to state that the Elk fence needs to be removed in order for the elk herds to roam freely in the park. This is the best next step for the survival of this endemic species.

Since the Park Service recently concluded its multi-year process to update its General Management Plan Amendment (GMPA), one wonders why this part of park operations wasn't included in that process. Nonetheless, now is the time for a comprehensive analysis of NPS current management of Tomales Point, as well as past practices, and all associated costs. While NPS should adhere to its mandate as specified in the Organic Act of 1916 with an eye to providing the highest levels of protection for the natural resources within the park, it should examine the costs in staff time and materials, as well as ongoing maintenance costs, of the elk fence. It should compare that to the savings and benefits of removing the fence, including the environmental benefits of allowing the cattle-grazed areas a chance to repair themselves.

Pierce Point Ranch should be the only real "historical" ranch in PRNS. It should be developed as a working model of a ranch from the 19th Century, with no more than a few head of cattle and a few dairy cows, showcasing actual ranching and farming techniques of that era. Docents could explain the conditions, techniques, and context for working the land under the times and circumstances in place at the time. It should also tell the full story of the Native Americans that preceded European settlers and their fate. All other ranches should be removed from the park.

Removal of the Tule Elk Reserve fence across Tomales Point in Point Reyes National Seashore must happen now. This must be done urgently in light of the drought and fire conditions caused by climate change. It must include a completely revised and science-based plan, enhanced by Native American ecological knowledge and practices, to cease the ranch succession policies of the past in favor of transformation to natural habitats, with well-planned wildlife corridors to aid natural and assisted rewilding restoration processes.

I hope the above concerns are addressed honestly and thoroughly. I, like millions of others, treasure our Seashore, and want it to be treated in a manner that preserves it and enhances it for future generations, something that is not happening now. I will be watching to make sure it is a transparent process, and look forward to improved management of our public commons.

**Correspondence ID:4077**

Correspondence: Public enjoyment of the Seashore should be open and available for present and future generations. My main comment to the National Park Service and Point Reyes National Seashore officials is the Elk Fence must come down.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

We wonder why Point Reyes National Seashore officials, especially Superintendent Kenkel, persist with keeping the expense of a long ugly fence out at Tomales Point and to truck in water and minerals. It's obvious even to a non-scientist. There's not enough natural food and water to sustain the Tule Elk entrapped in a zoo pen out there. Take down the fence, and instead use the money to help the Tule Elk transition and thrive across the Seashore. Remove the ranchers and their cattle. Enough is enough. It's a NATIONAL PARK!

The public loves the elk, and are horrified when they learn that due to being penned in, significant numbers have perished due to thirst or lack of sustenance. As seen with the other, free-roaming herds in Pt. Reyes, it seems such needless harm will be eliminated if the herd is allowed to roam at will. If

there is conflict between cattle and elk, the Park Service should have ranchers remove their cows, since this is a national park, not a feedlot.

With the public's participation, I expect a greatly improved management plan for Tomales Point and the Tule elk. This is a good way for the Park Service to demonstrate that it can properly manage the public's resources in a way that improves the health and diversity of the park, while improving relations with the general public. Thank you for the opportunity to provide input.

**Correspondence ID:4078**

Correspondence: Thank you for inviting public input into the planning process for Tomales Point. The best way to advance the National Seashore's mission is to remove the fence at Pierce Point.

The recent controversies regarding the treatment of the captive elk herd extract a cost on park management by forcing it to respond to the public's concerns and the demands the ranchers have become used to making. For example, NPS is now providing water sources and mineral licks for the elk to prevent recurring starvation and dying from thirst. In the past, NPS has built and repaired fences on behalf of the ranches. How much would the Park Service save if the elk were allowed to roam free? How much would it save if the ranchers were held to their lease terms and paid for improvements themselves? NPS should not be spending tax monies on private, for-profit ventures in our public park.

Resources currently spent on maintaining the fence could be better spent on expanding interpretive displays of indigenous land stewardship practices and restoration of Coastal Miwok sites in Point Reyes National Seashore.

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. The park's top priority should be to ensure the Tule elk survive and even thrive. Remove the elk fence.

Thank you for your attention to my public record comments on the Tomales Point planning process for Point Reyes National Seashore. Your responsibility is to the spirit of wilderness preservation and protection, and to the vast majority of Americans who have insisted that this iconic place be freed from private, for-profit, commercial business interests. We will continue to press for just that, like taking down the Tomales Point fence.

**Correspondence ID:4079**

Correspondence: To assist the NPS with its planned NEPA review of the Tomales Point area and Tule elk herd management in Pt. Reyes National Seashore, I suggest the following issues be included in your review process, and any eventual Environmental Impact Statement that comes out of it. These points are intended to insure that the park resources, including the Tule elk and native plants and animals, get the maximum protection for the public's current and future benefit.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying - just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

Tomales Point and its elk herd should have a wildlife management approach to management. Free access for the elk to roam, restoration of the native grasses and the elimination of invasive plants, removal of private cattle and dairy operations, and unhindered access for the public to wander the land while respecting the natural flora and fauna would increase and enhance PRNS's popularity, as well as its natural biome.

As an endemic species, Tule elk benefit the land, and allowing them to freely roam in Point Reyes National Seashore will enhance the park overall.

The successful reintroduction of the elk herds in the Point Reyes National Seashore should be viewed as the goal of the general plan for not only the Tomales Point area but the entire National Seashore and the most cost-effective way to do that is to work for the elimination of cattle from that area. If this approach is not taken then there will be continued non-native plants being brought in which will necessitate more plans and strategies to eliminate, more engineering projects to contain manure run-off, control of native 'predator' species to protect the cattle which is contradictory to reestablishing the Seashore, just to name a few.

**Correspondence ID:4080**

Correspondence: I am writing to you specifically to address your plans for Tomales Point in the Point Reyes National Seashore. As they currently stand, they need to be incorporated into the General Plan for the Seashore - not as a separate part of it. It does not make strategic or economic sense to treat them as a part-as-to-of-themselves. The steps to restore the flora and fauna for all areas must be incorporated into the dynamics of the plan at the outset.

Removing the elk fence is a frugal option, for a Park Service that apparently operates with limited resources.

The park should spend time and money on removing the fences, planting native grasses, cleaning up the water pollutants, and generally restoring Tomales Point back to its natural habitat.

I cannot find a reasonable sound argument for continued ranching or dairy in a National Park. There are numerous dairy and cattle ranches in West Marin and Sonoma counties, as well as all across California and the entire United States. Some owned by the same families as those that ranch in the park today. Tule elk are only native to California and only found in Point Reyes National Seashore. We are lucky the elk are located in a National Park where they should be protected. Why private dairy and beef cows are prioritized over those elk in a National Park is beyond anyone's logical reasoning. It is political and that does not make it right. The National Park should be above politics. We need our National Parks, which we pay for and support, to work for us, the people.

As a long-time user of the seashore, I'm looking forward to seeing what the Park Service comes up with as an improved management plan. It's a good time to make some long-needed changes, particularly the elk fence removal. That alone will make a significant difference in one's experience of the park, and I'm sure it will be met with massive public approval. Thank you for considering my input. I'm excited to see the results.

**Correspondence ID:4081**

Correspondence: In response to your letter dated March 31, 2022 asking for ideas on the Tomales Point Tule Elk Reserve planning process, I offer the following regarding the elk fence and how best to manage.

The American public, by a wide margin, does not support spending money to keep Tule Elk in captivity at Tomales Point in Point Reyes National Seashore. There is no viable, long-term monetary solution for supplemental water, minerals, or food for the Tomales Point herds. The only reasonable cost is to remove that harmful fence and let the Elk roam free as is natural and the right step to take.

The National Park Service is spending taxpayer money for a foolish Elk fence on Tomales Point. The leased ranching operations cause way more environmental harm and damage with thousands of cattle everywhere in the Park. The Park Service should spend money to educate the public about the damage cattle and ranchers cause on what should be a true National Park.

The first sentence of the Tule Elk Management Plan and Environmental Assessment, dated 1998 states "The purpose of this plan and environmental assessment is to guide the management, monitoring, and research of Tule Elk, *Cervus elaphus nannodes*, at Point Reyes National Seashore for the next five to ten years". Well here we are 24 years later and you're finally getting around to updating this horribly outdated plan. Meanwhile hundreds of beautiful Tule Elk have died behind that fence while the NPS did nothing. That fence has to go.

Thank you for the opportunity to provide feedback on the upcoming plan for Elk Reserve in Point Reyes National Seashore. The 3-year timeframe proposed by the NPS appears to be too long of a period, as we have lost approximately 50% of our native Elk held captive behind this 8 foot fence due to lack of appropriate amount of food, water and minerals. In your upcoming plan, please ensure there are numerous alternatives available on the removal of this deadly fence. It is time for that fence to be removed.

**Correspondence ID:4082**

Correspondence: I am writing the National Park Service, to state that the Elk fence needs to be removed in order for the elk herds to roam freely in the park. This is the best next step for the survival of this endemic species.

Allowing the continuation of cattle ranching in this area, Tomales Point in the Point Reyes National Seashore, is contradictory to the NPS trying to mitigate the negative impacts of climate change partially caused by this very practice. The NPS needs to do its part and at every step possible be a leader to achieve this end-result.

Financial resources of the National Park Service (NPS) should be used to end the Tule Elk Reserve on Tomales Point, by removal of the rancher and NPS insisted eight foot fence and replace that with a wildlife-friendly smaller fence but a fence that keeps the cattle out of this preserved environment. Let's establish a Coastal Native Prairie Reserve in place of the wholly bad and inhumane Tule Elk Reserve. The Tule Elk get to roam free for food and water throughout the Seashore, and the current Reserve transforms into a wild habitat global study model during these times of severe climate heating and California megadrought.

Tule Elk are not only rare beautiful animals they are also caretakers of the land. The elk help native grasses flourish, which helps carbon sequestering, thus reducing the threat of climate change. In this day and age the National Park service must lead our nation in restoring our parks to help reduce our nation's carbon footprint.

It is requested the personnel at the National Park Service re-review the 1993 report of the Scientific Advisory Panel on control of Tule Elk in PRNS, and include its recommendation in the upcoming plan. The independent advisory panel recommended to remove the fence across Tomales Point, and develop a plan to achieve a large, healthy, free-ranging elk population. Thank you Mr Kenkel for your attention to this recommendation.

**Correspondence ID:4083**

Correspondence: Removal of the elk fence at Tomales Point should be included in your plans for PRNS. It is the necessary and ethical step to take for a native species in a National Seashore.

The Park Service should not be spending so much money to maintain fencing at Tomales Point Reserve. There are all the expenses for materials, then all the hidden costs and time for labor, operations, administration, and rancher-pleasing. As a concerned citizen for the elk, please spend the money to remove the fence and free the Elk.

Moving forward the Park Service should partner closely with the Coast Miwok and scientists to re-wild the park.

The Tomales Point management plan for Point Reyes National Seashore must include removal of the Tule Elk Reserve fence, freedom of movement and association by the existing Tule Elk herds throughout the Seashore, and transition from a Tule Elk Reserve to a protected Coastal Native Habitat Reserve. Please include in this plan, the creation of safe wildlife corridors to facilitate Tule Elk migration elsewhere into the Seashore and all manner of other endeavors true to National Park Service founding mandates for natural resources protection and the enjoyment of natural features by future generations. In addition, it must include immediate cessation of the ranching succession policy in favor of immediate removal of commercial cattle operations and its ranch residential infrastructure.

Thank you for listening to the public and considering the wishes of the many instead of the profits of a few.

**Correspondence ID:4084**

Correspondence: I am writing the National Park Service, to state that the Elk fence needs to be removed in order for the elk herds to roam freely in the park. This is the best next step for the survival of this endemic species.

Allowing the continuation of cattle ranching in this area, Tomales Point in the Point Reyes National Seashore, is contradictory to the NPS trying to mitigate the negative impacts of climate change partially caused by this very practice. The NPS needs to do its part and at every step possible be a leader to achieve this end-result.

Financial resources of the National Park Service (NPS) should be used to end the Tule Elk Reserve on Tomales Point, by removal of the rancher and NPS insisted eight foot fence and replace that with a wildlife-friendly smaller fence but a fence that keeps the cattle out of this preserved environment. Let's establish a Coastal Native Prairie Reserve in place of the wholly bad and inhumane Tule Elk Reserve. The Tule Elk get to roam free for food and water throughout the Seashore, and the current Reserve transforms into a wild habitat global study model during these times of severe climate heating and California megadrought.

Tule Elk are not only rare beautiful animals they are also caretakers of the land. The elk help native grasses flourish, which helps carbon sequestering, thus reducing the threat of climate change. It is requested the personnel at the National Park Service re-review the 1993 report of the Scientific Advisory Panel on control of Tule Elk in PRNS, and include it recommendation in the upcoming plan. The independent advisory panel recommended to remove the fence across Tomales Point, and develop a plan to achieve a large, healthy, free-ranging elk population. Thank you Mr Kenkel for your attention to this recommendation.

**Correspondence ID:4085**

Correspondence: Removal of the elk fence at Tomales Point should be included in your plans for PRNS. It is the necessary and ethical step to take for a native species in a National Seashore.

Taking away the fence is cheaper and more sensible than setting up enormous plastic water tanks and trucking water up to the elk reserve.

Resources should be spent on taking down the elk fence and re-wilding the park.

The difference in landscape between the Tule Elk Reserve and the ranches on the other side of the fence is stark. The Tule elk Reserve looks like a beautiful coastal prairie with lots of wildflowers and coyote brush. The land to the south looks barren and denuded and there is evidence of cow manure spraying - not what visitors come to Point Reyes to see. Please remove the fence in the Elk reserve, as this is the right step to take for our National Park.

I want to thank you for your serious consideration of my comments, and placing them into the public record for scoping analysis of Tomales Point. The most important thing is for the Park Service to get rid of that horrible fence out there. It's 2022! Please come up with a good plan for the Elk, wildlife, birds, native plants, and everything else that should thrive in a National Park. We are counting on you to help Point Reyes be all it can naturally be!

**Correspondence ID:4086**

Correspondence: In response to your letter dated March 31, 2022 asking for ideas on the Tomales Point Tule Elk Reserve planning process, I offer the following regarding the elk fence and how best to manage.

The American public, by a wide margin, does not support spending money to keep Tule Elk in captivity at Tomales Point in Point Reyes National Seashore. There is no viable, long-term monetary solution for supplemental water, minerals, or food for the Tomales Point herds. The only reasonable cost is to remove that harmful fence and let the Elk roam free as is natural and the right step to take.

The National Park Service is spending taxpayer money for a foolish Elk fence on Tomales Point. The leased ranching operations cause way more environmental harm and damage with thousands of cattle everywhere in the Park. The Park Service should spend money to educate the public about the damage cattle and ranchers cause on what should be a true National Park.

The first sentence of the Tule Elk Management Plan and Environmental Assessment, dated 1998 states "The purpose of this plan and environmental assessment is to guide the management, monitoring, and

research of Tule Elk, *Cervus elaphus nannodes*, at Point Reyes National Seashore for the next five to ten years". Well here we are 24 years later and you're finally getting around to updating this horribly outdated plan. Meanwhile hundreds of beautiful Tule Elk have died behind that fence while the NPS did nothing. That fence has to go.

Thank you for the opportunity to provide feedback on the upcoming plan for Elk Reserve in Point Reyes National Seashore. The 3-year timeframe proposed by the NPS appears to be too long of a period, as we have lost approximately 50% of our native Elk held captive behind this 8 foot fence due to lack of appropriate amount of food, water and minerals. In your upcoming plan, please ensure there are numerous alternatives available on the removal of this deadly fence. It is time for that fence to be removed.

**Correspondence ID:4087**

Correspondence: Thank you for allowing the public to comment on the process of creating the upcoming plan for Tomales Point within Point Reyes National Seashore. I for one, as I think many others do, frequent national parks to see wildlife in their natural habitat. I don't go to the park to see cows and fences. If I wanted to go to a zoo I would choose to do just that. Take down the fence and allow all of the wildlife to roam freely within the entire park as that is why the park was created.

When will the National Park Service and Point Reyes National Seashore officials stop spending money on a misbegotten Elk fence idea? Remove the fence, and let the Tule Elk roam. It is time to get rid of the cattle ranchers in our national park, as they're the ones forcing their will against the American public's will. Free the Elk and let Americans enjoy a true national park.

Resources currently spent on maintaining the fence could be better spent on expanding interpretive displays of indigenous land stewardship practices and restoration of Coastal Miwok sites in Point Reyes National Seashore.

I am taking the approach that the elk fence be removed from the Tomales Point area and all of the Point Reyes National Seashore because that was and is the intention of the setting-up of this National Park area to begin with. It was not envisioned as a prison area, that is the farthest thing that could be imagined, with cows over here and the elk behind a fence other there. "Oh give me a home where the bison and elk roam.." - not 'why are they behind that fence?'

Thank you for reading and placing my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore (PRNS). It is time, finally, for PRNS officials, notably Craig Kenkel, to stop stonewalling and ignoring the American public from across the country, and use proven science to prioritize wilderness, wildlife and habitat over commercial ranching. Start with a plan to remove the fence at Tomales Point and prioritize the endemic Tule Elk.

**Correspondence ID:4088**

Correspondence: Thank you for reading my public comment for the Tomales Point planning process. We love Point Reyes National Seashore, but the Tule Elk Reserve is a really sad place out there. Why is a fence to trap wildlife even a good science idea? Please remove the Tule Elk Fence now.

The Park Service will never be able to fully provide enough water, minerals, or forage for the captive Tule Elk at Tomales Point. Put the money into taking down the fence and letting Elk live and thrive throughout the Seashore.

It is requested to stop using taxpayers' money to pay for the visual blight of the Elk Fence out on Tomales Point. Please stop trucking in water and minerals and whatever else to try to sustain a native herd in a non-native environment. Take down the fence, and use our taxpayers' money to actually turn the Seashore into a National Park that it deserves. Wildlife, natural habitat, clean water/soil/air, and public access should be the primary forces the Park Service supports - not a small group of politically-connected ranchers and their hoofed methane-operations.

The original motivation for the fence was to protect financial interests, not for optimal ecological restoration. It must be removed.

Sadly, Point Reyes National Seashore is a landscape dominated by private, for-profit industrial cattle ranching businesses. These private business owners claim stewardship of the lands, waters, and air, and do everything in their power to evade, circumvent, ignore, abuse, and thumb their collective noses at the most basic and sound environmental principles, ethics, practices, and responsibilities. This selfish and unjust behavior should not occur in a National Park. Please take down the Elk fence, and prioritize our native wildlife over private and destructive cattle operations.

**Correspondence ID:4089**

Correspondence: The confined Tule Elk are dying at astronomical rates each year, and the Park Service just keeps them penned up in a cage to suffer and die at Tomales Point. Please stop this. The Tule Elk Reserve fence needs to come down now. If you want a reserve/preserve, remove the 8-foot fence, put in a small wildlife-friendly fence, and turn the land into a Native Coastal Prairie Reserve.

As a private citizen I find the fact that my tax dollar is being used to fence and kill wild animals in a National Park abhorrent. Take down the fence and let the Tule Elk roam to find water and forage.

The park should spend time and money on removing the fences, planting native grasses, cleaning up the water pollutants, and generally restoring Tomales Point back to its natural habitat.

Point Reyes National Seashore management must scope a plan to remove the Tule Elk Reserve fence across Tomales Point. This must be done in conjunction with a serious, science-based, enforced plan to cease the practice of ranching on our public land, so that timely and effective Seashore wilderness restoration occurs with public participation, focused on natural and native features, habitats, wildlife, and visitor accessibility.

As a long-time user of the seashore, I'm looking forward to seeing what the Park Service comes up with as an improved management plan. It's a good time to make some long-needed changes, particularly the elk fence removal. That alone will make a significant difference in one's experience of the park, and I'm sure it will be met with massive public approval. Thank you for considering my input. I'm excited to see the results.

We ALL need to work together in order to Protect and SAVE The Point Reyes National Seashore and the Wildlife, including The TULE ELK, that live there as well!

This special Ecosystem needs to be protected from Ignorance and Greed!!

Tear the fence down at Tomales Point and SAVE THE TULE ELK!!!!

**Correspondence ID:4090**

Correspondence: I am commenting on the process of creating a plan for Tomales Point within Point Reyes National Park. I would hope the National Park Service would not address this area as somehow separate from the park itself but instead view the park in its entirety. As it stands today Tomales Point is more of a zoo within what is suppose to be a park but is in fact seen as private ranch land. And at this particular zoo the wild animals are fenced and the park service personnel let the animals die due to drought and lack of forage. Stop the insanity and take down the elk fence.

The current plan of what is called a 'co-habitation' - which is a farce - is wasteful in a number of ways. Instead of letting the elk populations roam the land to access the water and flora they have evolved to need for subsistence, it often needs to be trucked in to keep populations at levels 'mandated by a plan'. Not only do these resources need to be expended to keep the herds alive - then later, National Park Service personnel go and cull the population when it exceeds their some-how-agreed upon 'rancher-acceptable' number.

The National Park Service should be spending all resources on restoring the natural habitat of the park, rather than fighting the public's will to protect our land, and our native Tule elk.

Removing the elk fence is the most impactful step the Park can take for Tomales Point, and this should be the plan review's top priority. This and total removal of all dairy and cattle operations from all of the park would have the strongest positive impacts, both ecologically and in terms of protection of the public's resources. The removal of both would benefit the return of native, deep-rooted grasses, allow the return of birds and wildlife that cannot survive in the barren fields where cattle have eaten the greenery down to the earth, and let the natural prairie reestablish itself. It could also serve as an outdoor laboratory for studying how to accelerate its healing and nurturing, information that will be increasingly important as we try to save our planet from the damages of global warming.

I am grateful to have the opportunity to provide this preliminary feedback, and I look forward to participating in the next steps of this important planning process.

**Correspondence ID:4091**

Correspondence: I am writing the National Park Service, to state that the Elk fence needs to be removed in order for the elk herds to roam freely in the park. This is the best next step for the survival of this endemic species.

It is an ill-founded strategy that will endlessly proliferate the same conditions over and over postponing if not abandoning the desired outcome. These efforts should not be viewed as 'job-security' as the public deserves the outcome spelled out in the original legislation setting the National Seashore up, the elimination of cattle ranching and the reestablishment of the flora and fauna of the Tomales Point ecosystem.

Rather than maintaining the elk fence, troughs and mineral licks, the NPS could better use these resources to develop educational materials and programs about Tule elk.

The difference in landscape between the Tule Elk Reserve and the ranches on the other side of the fence is stark. The Tule elk Reserve looks like a beautiful coastal prairie with lots of wildflowers and coyote brush. The land to the south looks barren and denuded and there is evidence of cow manure spraying -

not what visitors come to Point Reyes to see. Please remove the fence in the Elk reserve, as this is the right step to take for our National Park.

We ask, why should the "elk fence" across the width of Tomales Point on Point Reyes National Seashore be immediately removed? Because, at long last, after six decades of the Seashore's existence--it is the right, just, humane, and obvious thing to do for an American, even global, National Park, perched on the formidable and awesome Pacific Coast, still waiting for its true nature to be revealed.

**Correspondence ID:4092**

Correspondence: I appreciate the opportunity to provide input into this scoping process and ask that you remove the elk fence at Tomales Point.

It is an ill-founded strategy that will endlessly proliferate the same conditions over and over postponing if not abandoning the desired outcome. These efforts should not be viewed as 'job-security' as the public deserves the outcome spelled out in the original legislation setting the National Seashore up, the elimination of cattle ranching and the reestablishment of the flora and fauna of the Tomales Point ecosystem.

The National Park Service should be spending all resources on restoring the natural habitat of the park, rather than fighting the public's will to protect our land, and our native Tule elk.

In addition, it must include immediate cessation of the ranching succession policy in favor of immediate removal of commercial cattle operations and its ranch residential infrastructure.

Thank you for allowing me to comment and for putting effort and resources to considering how to protect our precious and dwindling natural resources of our National Park.

**Correspondence ID:4094**

Correspondence: Please read and consider my public comment on the Tomales Point planning process for Point Reyes National Seashore. Tule Elk should be free to roam, gather, find water and food, and live more healthy lives--not be imprisoned for their entire lives behind a god-awful fence. Point Reyes is a national park, therefore please remove the fence now.

We keep reading that the Park Service doesn't care about the Elk out on Tomales Point at Point Reyes National Seashore. What's going on? Why does the Park Service spend taxpayer money for a fence and water and mineral supplements when it's cheaper to just let the Elk go live free and wild? Take down the fence and stop wasting our money for cruelty on innocent wildlife!

All National Park Service resources should be directed to restoring the land to benefit the biodiversity within the park. This is what the public wants and needs, and what we need to do to help fight a biodiversity and climate crisis.

Tule Elk are not only rare beautiful animals they are also caretakers of the land. The elk help native grasses flourish, which helps carbon sequestering, thus reducing the threat of climate change. In this day and age the National Park service must lead our nation in restoring our parks to help reduce our nation's carbon footprint.

As a long-time user of the seashore, I'm looking forward to seeing what the Park Service comes up with as an improved management plan. It's a good time to make some long-needed changes, particularly the elk fence removal. That alone will make a significant difference in one's experience of the park, and I'm sure it will be met with massive public approval. Thank you for considering my input. I'm excited to see the results.

**Correspondence ID:4095**

Correspondence: I want the fence at Tomales Point, which confines tule elk, to be removed. This is a necessary step for the NPS to take for our native elk.

We keep reading that the Park Service doesn't care about the Elk out on Tomales Point at Point Reyes National Seashore. What's going on? Why does the Park Service spend taxpayer money for a fence and water and mineral supplements when it's cheaper to just let the Elk go live free and wild? Take down the fence and stop wasting our money for cruelty on innocent wildlife!

Viewing the Tomales Point project from an objective approach, the most cost effective long-run plan is to take down the elk fences without the interference of cattle concerns and let the herds roam in a natural manner. The health of the elk herds could be clearly addressed, as well as the flora can be given its space for natural progression and seed dispersion. This would focus on only one plan to implement, for taxpayers and NPS staff, and not take the resources with two competing approaches.

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. The park's top priority should be to ensure the Tule elk survive and even thrive. Remove the elk fence.

We ask, why should the "elk fence" across the width of Tomales Point on Point Reyes National Seashore be immediately removed? Because, at long last, after six decades of the Seashore's existence--it is the right, just, humane, and obvious thing to do for an American, even global, National Park, perched on the formidable and awesome Pacific Coast, still waiting for its true nature to be revealed.

#### **Correspondence ID:4096**

Correspondence: Regarding the upcoming plan for Tomales Point within Point Reyes National Seashore I request our National Park prioritize the wishes of the Miwok First Nation people. They "managed" that land for more than 10,000 and didn't disrupt the ecosystem. Allow them to determine how the land should be managed so that our future generations will be allowed to experience biodiversity, not cows, that exists there today. Maybe then the area will be allowed to thrive.

Tomales Point is not a zoo. The taxpayers do not want to incur the cost of feeding and providing water to wild animals. Nor do they want to visit a zoo. A simple solution, and one that is the most cost effective, is to stop "managing" the park. Take down the fence, remove the cattle, and let nature run its course.

The Park Service should put all resources to removing the elk fence, allow the elk to roam free, stop the killing of the elk, and plant native grasses for them to feed.

Point Reyes National Seashore should plan for prompt removal of the Elk Reserve fence on Tomales Point. This will achieve Tule Elk freedom of movement to naturally water, forage, and mate, and sustain optimal health and well-being of Tule Elk throughout the Seashore.

It is time to focus on the health of our National Seashore and protect the air, soil, water, native wildlife and native vegetation over the constant impact from private cattle operations. The ranchers espouse crackpot pseudoscience about false carbon sinks (pasture vs. native coastal prairie), regenerative ranching (oxymoron), methane digesters (new profit streams), while the objective and independent science-based literature state how a native landscape with native vegetation and wildlife will help fight

climate change more effectively than cattle operations. Please prioritize our native landscape and native wildlife in Point Reyes.

**Correspondence ID:4097**

Correspondence: The following are comments addressing the upcoming plan for Tomales Point within Point Reyes National Seashore. The National Park Service should not be creating a separate plan for this area of the park, or any other area of the park as it should be included in the Park's General Management Plan and the park should be managed as one whole unit. The complex ecosystem within the park should be treated as one entity, and the health of that entire system is the responsibility of the park service. To do otherwise can only be seen as irresponsible and cruel.

How much does it cost the National Park Service or Point Reyes National Seashore in Tomales Point Reserve for fence maintenance and supplemental water and minerals? How much does it cost us the taxpayers not only in materials, but in all the hidden costs of labor, operations, communications, negotiation, administration, and don't forget, pleasing the ranchers who shouldn't even be there due to their constant impairment to the Seashore.

Tomales Point and its elk herd should have a wildlife management approach to management. Free access for the elk to roam, restoration of the native grasses and the elimination of invasive plants, removal of private cattle and dairy operations, and unhindered access for the public to wander the land while respecting the natural flora and fauna would increase and enhance PRNS's popularity, as well as its natural biome.

Tule Elk are not only rare beautiful animals they are also caretakers of the land. The elk help native grasses flourish, which helps carbon sequestering, thus reducing the threat of climate change. In this day and age the National Park service must lead our nation in restoring our parks to help reduce our nation's carbon footprint.

The National Park Service was created to conserve the scenery and leave our public lands unimpaired for the enjoyment of future generations. Based on the NPS' mission, the NPS must remove the unnatural eight foot fence, for the sake of our native wildlife and for the enjoyment of future generations.

**Correspondence ID:4098**

Correspondence: I am writing to you specifically to address your plans for Tomales Point in the Point Reyes National Seashore. As they currently stand, they need to be incorporated into the General Plan for the Seashore - not as a separate part of it. It does not make strategic or economic sense to treat them as a part-as-to-of-themselves. The steps to restore the flora and fauna for all areas must be incorporated into the dynamics of the plan at the outset.

The current plan of what is called a 'co-habitation' - which is a farce - is wasteful in a number of ways. Instead of letting the elk populations roam the land to access the water and flora they have evolved to need for subsistence, it often needs to be trucked in to keep populations at levels 'mandated by a plan'. Not only do these resources need to be expended to keep the herds alive - then later, National Park Service personnel go and cull the population when it exceeds their some-how-agreed upon 'rancher-acceptable' number.

Viewing the Tomales Point project from an objective approach, the most cost effective long-run plan is to take down the elk fences without the interference of cattle concerns and let the herds roam in a

natural manner. The health of the elk herds could be clearly addressed, as well as the flora can be given its space for natural progression and seed dispersion. This would focus on only one plan to implement, for taxpayers and NPS staff, and not take the resources with two competing approaches.

Whether in California or elsewhere globally, climate change impacts nearly every aspect of our current and future environmental conditions. The Tule Elk fence across Tomales Point must be taken down in recognition of this. As conditions are now and for the foreseeable future with seasonal warming, megadrought, desertification, water scarcity, the native Tule Elk will have a better chance of surviving the challenges of this climate crisis, instead of being confined without sufficient water, forage and minerals.

Thank you for your attention to my public record comments on the Tomales Point planning process for Point Reyes National Seashore. Your responsibility is to the spirit of wilderness preservation and protection, and to the vast majority of Americans who have insisted that this iconic place be freed from private, for-profit, commercial business interests. We will continue to press for just that, like taking down the Tomales Point fence.

**Correspondence ID:4099**

Correspondence: Thank you for the opportunity to provide input on the updated Tule Elk Management Plan/General Management Plan for Pt. Reyes National Seashore. To help the National Park Service (NPS) best structure its environmental review process, I offer the comments below. Please consider including these points in scoping your review and the presumed Environmental Impact Statement.

The American public, by a wide margin, does not support spending money to keep Tule Elk in captivity at Tomales Point in Point Reyes National Seashore. There is no viable, long-term monetary solution for supplemental water, minerals, or food for the Tomales Point herds. The only reasonable cost is to remove that harmful fence and let the Elk roam free as is natural and the right step to take.

If cattle ranchers are concerned about the spread of disease between the elk and bovine populations, then the cattle should be kept far enough away from the elk as necessary to allow passage through wildlife corridors. This allocation would allow two short run goals- one being that the elk could traverse the area to graze for necessary vegetation for nutritional well-being, as well as access to water; and secondly, cordoning off the unnatural effects of the different effects of cattle grazing on the area's vegetation which would allow the native flora a better environment to establish itself.

First and foremost, NPS should remove the fence that separates the Tomales Point herd from private, for-profit ranching livestock and prevents the elk herd from finding forage and water in its own. This would allow a more natural existence, without interference from humans.

The National Park Service was created to conserve the scenery and leave our public lands unimpaired for the enjoyment of future generations. Based on the NPS' mission, the NPS must remove the unnatural eight foot fence, for the sake of our native wildlife and for the enjoyment of future generations.

**Correspondence ID:4100**

Correspondence: Here's my public comment for the planning process about Tomales Point at Point Reyes National Seashore: Take down that monstrous 8-foot fence and Let the Elk roam free.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying - just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

Removal of the elk fence would give the Park a good opportunity to create a prairie preserve, located just on the outside of the existing elk preserve, by pushing back any cattle away from the current fence line. In fact, if the ranches are to remain, installing a wildlife-friendly fence south of the elk fence to let elk and other native animals move freely while keeping cattle at bay would let the park establish a specific prairie preserve where the flora and fauna have been degraded. This could be a site for studying the restoration of the native environment after decades of degradation by cattle.

Maintaining a captive Tule elk herd at Tomales Point will likely only become increasingly expensive with climate change and recurring, significant droughts. If the fence is removed, water troughs and mineral licks will be unnecessary.

Thank you for your attention to my comments. Tomales Point should be an open area, not fenced in because ranchers use false arguments against Tule Elk. Cattle by the thousands at Point Reyes Seashore cause exponentially more damage than a few hundred Tule Elk. The Park Service should protect and help wildlife and their habitats, not promote private, for-profit ranching. The fence needs to come down, and the ranchers need to stop interfering with wildlife, polluting streams, and hassling Park visitors. The ranchers need to either give up some of their privileges, or get out of the Park. The American people will be watching how you approach what's right for Tomales Point and our National Park.

**Correspondence ID:4101**

Correspondence: I am writing to request the involvement of independent scientists, independent elk biologists and the public in the development of the elk general management. We deserve a seat at the table, and it is imperative the upcoming management plan be objective, and that it prioritizes the survival of our native Tule elk over private cattle ranching in PRNS.

How much does it cost the National Park Service or Point Reyes National Seashore in Tomales Point Reserve for fence maintenance and supplemental water and minerals? How much does it cost us the taxpayers not only in materials, but in all the hidden costs of labor, operations, communications, negotiation, administration, and don't forget, pleasing the ranchers who shouldn't even be there due to their constant impairment to the Seashore.

We wonder why Point Reyes National Seashore officials, especially Superintendent Kenkel, persist with keeping the expense of a long ugly fence out at Tomales Point and to truck in water and minerals. It's obvious even to a non-scientist. There's not enough natural food and water to sustain the Tule Elk entrapped in a zoo pen out there. Take down the fence, and instead use the money to help the Tule Elk transition and thrive across the Seashore. Remove the ranchers and their cattle. Enough is enough. It's a NATIONAL PARK!

The elk fence should be removed, for the benefit of the elk herds. Also, the barbed wire cow fences should be removed, as they don't belong in a national park, and they are not wildlife friendly.

We ask, why should the "elk fence" across the width of Tomales Point on Point Reyes National Seashore be immediately removed? Because, at long last, after six decades of the Seashore's existence--it is the right, just, humane, and obvious thing to do for an American, even global, National Park, perched on the formidable and awesome Pacific Coast, still waiting for its true nature to be revealed.

**Correspondence ID:4102**

Correspondence: Any proposed plans for PRNS should include the removal of the elk fence at Tomales Point.

Removing the elk fence is a frugal option, for a Park Service that apparently operates with limited resources.

Invasive species, particularly ice plant, thistle and hemlock, are rampant in Point Reyes National Seashore outside of the elk reserve. Funds currently spent on the Tomales Point elk fence would be better spent on removing these plants in other parts of the park.

Removing the fence allows native tule elk to roam free, which is good for both elk and for park landscape. Please help make this happen.

We ask, why should the "elk fence" across the width of Tomales Point on Point Reyes National Seashore be immediately removed? Because, at long last, after six decades of the Seashore's existence--it is the right, just, humane, and obvious thing to do for an American, even global, National Park, perched on the formidable and awesome Pacific Coast, still waiting for its true nature to be revealed.

**Correspondence ID:4103**

Correspondence: Removal of the elk fence at Tomales Point should be included in your plans for PRNS. It is the necessary and ethical step to take for a native species in a National Seashore.

When it comes to Tomales Point our National Park has failed us, the taxpayer, and rightful owners of the land. We should not be paying for the cost of installing and maintaining a fence so wild animals can't roam and forage for food and water in areas preserved for private cattle and dairy ranchers within a National Park.

Why is the NPS having separate GMPs for the leased ranch lands and for the Tule Elk Reserve? Is this not all one national park? Are you going to have a separate GMP for the southern part of the Phil Burton Wilderness area? PRNS needs to be managed as one comprehensive and coordinated part, not sliced up in pieces. As a member of the public I don't see separate areas.

Confining Tule elk for the benefit of private ranching interests is a breach of the public trust.

Thanks so much for your serious attention to my comments. I think the main thing for the Tomales Point scoping plan should be removal of that horrible fence out there. The elk need to roam so they can find water and food. Native plant restoration would be a great starting point to let the American people know you're listening to them (finally!). Please include the general public, and not the ranchers, in your planning and communications.

**Correspondence ID:4105**

Correspondence: I am writing to request the involvement of independent scientists, independent elk biologists and the public in the development of the elk general management. We deserve a seat at the table, and it is imperative the upcoming management plan be objective, and that it prioritizes the survival of our native Tule elk over private cattle ranching in PRNS.

What are the annual costs for the Tomales Point Reserve fence and the supplemental water and minerals for the Tule Elk trapped there? Why are Elk still trapped and causing this expense, when there are ample lands and waters for Elk to roam at Point Reyes National Seashore? It's not a zoo, it's a national park. Please take down the fence.

Invasive species, particularly ice plant, thistle and hemlock, are rampant in Point Reyes National Seashore outside of the elk reserve. Funds currently spent on the Tomales Point elk fence would be better spent on removing these plants in other parts of the park.

For climate change and biodiversity reasons, the Tomales Point scoping plan must include complete removal of the Tule Elk Reserve fence combined with an entirely new and enforced ranch succession plan. It must commit to ceasing continued ranchlands succession of leased parcels to ranchers, and restoration of native coastal prairie and wildlife habitat. It must emphasize the roles of indigenous Coast Miwok's ecological and scientific cultural knowledge and practices, and the importance of wildlife and natural forces in the restoration process.

We need a long-range plan that supports a healthy population of native Tule Elk. It is time for the Park Service to prioritize our elk in PRNS over private cattle operations on our public land. Thank you in advance, for a plan that will include immediate removal of this unnatural and unethical eight foot fence.

**Correspondence ID:4106**

Correspondence: Thank you for inviting public input into the planning process for Tomales Point. The best way to advance the National Seashore's mission is to remove the fence at Pierce Point.

Reliable reports state the NPS has shouldered many of the operational costs over the years that should have been borne by the ranchers. Since most agencies have limited budgets, I'd like the Park Service to analyze how much it could save by making the ranches pay for any and all fencing, but especially the elk fence at Tomales Point. It should also look at how much it would save if the ranches were removed entirely from the park. Included in these analyses should be the value of increased public access to areas ranchers try to keep the public away from, the increased enjoyment of the park by the public, and the savings from not having to respond to rancher demands.

Why is the NPS having separate GMPs for the leased ranch lands and for the Tule Elk Reserve? Is this not all one national park? Are you going to have a separate GMP for the southern part of the Phil Burton Wilderness area? PRNS needs to be managed as one comprehensive and coordinated part, not sliced up in pieces. As a member of the public I don't see separate areas.

The difference in landscape between the Tule Elk Reserve and the ranches on the other side of the fence is stark. The Tule elk Reserve looks like a beautiful coastal prairie with lots of wildflowers and coyote brush. The land to the south looks barren and denuded and there is evidence of cow manure spraying - not what visitors come to Point Reyes to see. Please remove the fence in the Elk reserve, as this is the right step to take for our National Park.

Thank you for the opportunity to provide feedback on the upcoming plan for Elk Reserve in Point Reyes National Seashore. The 3-year timeframe proposed by the NPS appears to be too long of a period, as we have lost approximately 50% of our native Elk held captive behind this 8 foot fence due to lack of appropriate amount of food, water and minerals. In your upcoming plan, please ensure there are numerous alternatives available on the removal of this deadly fence. It is time for that fence to be removed.

**Correspondence ID:4107**

Correspondence: I am writing and requesting to please take down the elk fence from Tomales Point, as it prevents natural migration of tule elk. It also stops them from getting water and food.

The Park Service should not be spending so much money to maintain fencing at Tomales Point Reserve. There are all the expenses for materials, then all the hidden costs and time for labor, operations, administration, and rancher-pleasing. As a concerned citizen for the elk, please spend the money to remove the fence and free the Elk.

Moving forward the Park Service should partner closely with the Coast Miwok and scientists to re-wild the park.

The fence should be removed, for the benefit of the elk herds and their survival.

The original studies done by the NPS on how to manage the Tule elk showed they should be allowed to roam free. I will be tracking this process to see what the Park Service's plans are in this regard. I and the vast majority of the public want better treatment of the elk, and better treatment of the Seashore itself. We do not want to see for-profit ranches degrading our beautiful park. This is the Park Service's opportunity to do this job right. You have my support in achieving this.

**Correspondence ID:4108**

**Correspondence ID:4110**

Correspondence: Regarding the upcoming plan for Tomales Point within Point Reyes National Seashore I request our National Park prioritize the wishes of the Miwok First Nation people. They "managed" that land for more than 10,000 and didn't disrupt the ecosystem. Allow them to determine how the land should be managed so that our future generations will be allowed to experience biodiversity, not cows, that exists there today. Maybe then the area will be allowed to thrive.

The costs for Tomales Point elk fence maintenance and to put out water and minerals is not solving the problem of Tule Elk health. There is not enough water and minerals for the different non-mingling Tomales Point herds. It is a band-aid for a constant would therefore please come up with a real solution for wild Elk, as they should not be confined in a zoo-like environment that does not have a sufficient amount of water and forage for this herd.

The National Park Service is spending taxpayer money for a foolish Elk fence on Tomales Point. The leased ranching operations cause way more environmental harm and damage with thousands of cattle everywhere in the Park. The Park Service should spend money to educate the public about the damage cattle and ranchers cause on what should be a true National Park.

The Tomales Point Elk Reserve fence must promptly be taken down. This should occur in conjunction with a renewed, science-based plan to cease rancher successions of leased lands, allowing Point Reyes National Seashore to revert to natural landscapes, waterscapes, habitats, and ecosystems.

Thank you for allowing me to comment and for putting effort and resources to considering how to protect our precious and dwindling natural resources of our National Park.

**Correspondence ID:4111**

Correspondence: Removal of the elk fence at Tomales Point should be included in your plans for PRNS. It is the necessary and ethical step to take for a native species in a National Seashore.

Since the Park Service recently concluded its multi-year process to update its General Management Plan Amendment (GMPA), one wonders why this part of park operations wasn't included in that process. Nonetheless, now is the time for a comprehensive analysis of NPS current management of Tomales Point, as well as past practices, and all associated costs. While NPS should adhere to its mandate as specified in the Organic Act of 1916 with an eye to providing the highest levels of protection for the natural resources within the park, it should examine the costs in staff time and materials, as well as ongoing maintenance costs, of the elk fence. It should compare that to the savings and benefits of removing the fence, including the environmental benefits of allowing the cattle-grazed areas a chance to repair themselves.

Resources should be spent on taking down the elk fence and re-wilding the park.

The 1998 plan says "Natural processes will be relied on to control populations of native species ..." There is nothing natural about caging animals behind a fence. The existing fence at the Tule Elk Reserve should be removed and replaced with a wildlife friendly fence that will allow Tule Elk to leave the reserve while still keeping cattle out.

With the public's participation, I expect a greatly improved management plan for Tomales Point and the Tule elk. This is a good way for the Park Service to demonstrate that it can properly manage the public's resources in a way that improves the health and diversity of the park, while improving relations with the general public. Thank you for the opportunity to provide input.

**Correspondence ID:4112**

Correspondence: Thank you for reading my public comment for the Tomales Point planning process. We love Point Reyes National Seashore, but the Tule Elk Reserve is a really sad place out there. Why is a fence to trap wildlife even a good science idea? Please remove the Tule Elk Fence now.

Point Reyes National Seashore has finite resources and maintaining an 8-foot fence at Tomales Point is not a good use of taxpayer funds.

Financial resources should not be spent on an Elk enclosure at Tomales Point, nor on trucking in water and minerals all the way out there, when the Elk are dying of thirst, malnutrition, and starvation. Financial resources should be spent to free the Elk so they can live a natural and healthy life across the entire Park.

Point Reyes National Seashore should plan for prompt removal of the Elk Reserve fence on Tomales Point. This will achieve Tule Elk freedom of movement to naturally water, forage, and mate, and sustain optimal health and well-being of Tule Elk throughout the Seashore.

It is time to end the mis-management of our native Tule elk in Point Reyes National Seashore. Please follow the scientific advice provided in 1993, and remove the fence across Tomales Point. It is important for the survival of this herd to be free-roaming with access to food and water.

**Correspondence ID:4113**

Correspondence: Thank you for accepting my public comment on the Tomales Point planning process for Point Reyes National Seashore. I am very concerned. The Seashore's natural resources like the Tule Elk should be unimpaired.

Since the Park Service recently concluded its multi-year process to update its General Management Plan Amendment (GMPA), one wonders why this part of park operations wasn't included in that process. Nonetheless, now is the time for a comprehensive analysis of NPS current management of Tomales Point, as well as past practices, and all associated costs. While NPS should adhere to its mandate as specified in the Organic Act of 1916 with an eye to providing the highest levels of protection for the natural resources within the park, it should examine the costs in staff time and materials, as well as ongoing maintenance costs, of the elk fence. Invasive species, particularly ice plant, thistle and hemlock, are rampant in Point Reyes National Seashore outside of the elk reserve. Funds currently spent on the Tomales Point elk fence would be better spent on removing these plants in other parts of the park.

Tule Elk are not only rare beautiful animals they are also caretakers of the land. The elk help native grasses flourish, which helps carbon sequestering, thus reducing the threat of climate change. In this day and age the National Park service must lead our nation in restoring our parks to help reduce our nation's carbon footprint.

I look forward to the next steps in the planning process. Thank you for the opportunity to participate in this initial phase.

**Correspondence ID:4114**

Correspondence: I am writing to request the involvement of independent scientists, independent elk biologists and the public in the development of the elk general management. We deserve a seat at the table, and it is imperative the upcoming management plan be objective, and that it prioritizes the survival of our native Tule elk over private cattle ranching in PRNS.

Allowing the continuation of cattle ranching in this area, Tomales Point in the Point Reyes National Seashore, is contradictory to the NPS trying to mitigate the negative impacts of climate change partially caused by this very practice. The NPS needs to do its part and at every step possible be a leader to achieve this end-result.

Too many park resources are used to cater to the private ranchers. Ranch operations pollute the streams and waterways of the seashore with manure runoff, release methane into the atmosphere from cattle belches and farts, damaging our climate, and have caused the massive spread of invasive plants. NPS should be putting these resources into restoring the deep-rooted native grasses, wildflowers, mosses and other native plants that cannot survive destructive grazing practices caused by too many cattle on the land.

Removing the Tomales Point elk fence will improve genetic diversity within the elk population.

It is requested the personnel at the National Park Service re-review the 1993 report of the Scientific Advisory Panel on control of Tule Elk in PRNS, and include it recommendation in the upcoming plan. The

independent advisory panel recommended to remove the fence across Tomales Point, and develop a plan to achieve a large, healthy, free-ranging elk population. Thank you Mr Kenkel for your attention to this recommendation.

**Correspondence ID:4116**

Correspondence: I want to thank you for taking my public comment on the Tomales Point scoping process at Point Reyes National Seashore. I cannot believe there is a Prison Fence restricting Tule Elk in our national park. What is that about? To please the cattle ranchers, and prevent the Tule Elk from being free to roam, associate, and live a good life? No more animal prisons in our national park. Point Reyes is not a zoo either. It is time to take down the elk fence.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

Why is the Park Service wasting taxpayer money on an inappropriate fence out at Tomales Point? The NPS should take down the fence, let the Tule Elk roam, and create a Coastal Native Habitat Reserve instead of keeping the Elk Pen out there. It's ridiculous that wildlife are treated like zoo animals in a National Park.

Superintendent Kenkel and other PRNS officials should demonstrate leadership on a national scale and remove the Tule Elk Reserve's fence across Tomales Point so that a new, sustainable wildlife health model is created to right the wrong of past ill-conceived Park Service policy. It is their duty to protect all National Park natural resources for posterity.

I want to thank you for your serious consideration of my comments, and placing them into the public record for scoping analysis of Tomales Point. The most important thing is for the Park Service to get rid of that horrible fence out there. It's 2022! Please come up with a good plan for the Elk, wildlife, birds, native plants, and everything else that should thrive in a National Park. We are counting on you to help Point Reyes be all it can naturally be!

**Correspondence ID:4117**

Correspondence: I am writing to you specifically to address your plans for Tomales Point in the Point Reyes National Seashore. As they currently stand, they need to be incorporated into the General Plan for the Seashore - not as a separate part of it. It does not make strategic or economic sense to treat them as a part-as-to-of-themselves. The steps to restore the flora and fauna for all areas must be incorporated into the dynamics of the plan at the outset.

Allowing the continuation of cattle ranching in this area, Tomales Point in the Point Reyes National Seashore, is contradictory to the NPS trying to mitigate the negative impacts of climate change partially caused by this very practice. The NPS needs to do its part and at every step possible be a leader to achieve this end-result.

Removal of the elk fence would give the Park a good opportunity to create a prairie preserve, located just on the outside of the existing elk preserve, by pushing back any cattle away from the current fence line. In fact, if the ranches are to remain, installing a wildlife-friendly fence south of the elk fence to let elk and other native animals move freely while keeping cattle at bay would let the park establish a specific prairie preserve where the flora and fauna have been degraded. This could be a site for studying the restoration of the native environment after decades of degradation by cattle.

I am taking the approach that the elk fence be removed from the Tomales Point area and all of the Point Reyes National Seashore because that was and is the intention of the setting-up of this National Park area to begin with. It was not envisioned as a prison area, that is the farthest thing that could be imagined, with cows over here and the elk behind a fence other there. "Oh give me a home where the bison and elk roam.." - not 'why are they behind that fence?'

I urge you to use this opportunity to carry out the intentions of the creation of the park, which was to protect the biodiversity within the seashore. To do that, the sacrifices should be made by the few ranch and dairy families that have profited profusely over the years. Our National Park is owned by the people not by the few ranchers.

**Correspondence ID:4121**

Correspondence: Thank you for the opportunity to provide input on the updated Tule Elk Management Plan/General Management Plan for Pt. Reyes National Seashore. To help the National Park Service (NPS) best structure its environmental review process, I offer the comments below. Please consider including these points in scoping your review and the presumed Environmental Impact Statement.

Maintenance of an 8-foot fence and providing water and nutrition for captive Tule elk is not a reasonable use of funds, when the Tule elk could find adequate food and water if they were allowed to freely roam.

Why is the Park Service wasting taxpayer money on an inappropriate fence out at Tomales Point? The NPS should take down the fence, let the Tule Elk roam, and create a Coastal Native Habitat Reserve instead of keeping the Elk Pen out there. It's ridiculous that wildlife are treated like zoo animals in a National Park.

The original motivation for the fence was to protect financial interests, not for optimal ecological restoration. It must be removed.

I hope the above concerns are addressed honestly and thoroughly. I, like millions of others, treasure our Seashore, and want it to be treated in a manner that preserves it and enhances it for future generations, something that is not happening now. I will be watching to make sure it is a transparent process, and look forward to improved management of our public commons.

It's ridiculous that wildlife are treated like zoo animals in a National Park.

Superintendent Kenkel and other PRNS officials should demonstrate leadership on a national scale and remove the Tule Elk Reserve's fence across Tomales Point so that a new, sustainable wildlife health model is created to right the wrong of past ill-conceived Park Service policy. It is their duty to protect all National Park natural resources for posterity.

I want to thank you for your serious consideration of my comments, and placing them into the public record for scoping analysis of Tomales Point. The most important thing is for the Park Service to get rid of that horrible fence out there. It's 2022! Please come up with a good plan for the Elk, wildlife, birds, native plants, and everything else that should thrive in a National Park. We are counting on you to help Point Reyes be all it can naturally be!

#### **Correspondence ID:4124**

Correspondence: Now that the National Park Service is looking at its management of the Tomales Point area of the Pt. Reyes National Seashore, there are a number of items NPS should take into consideration as it updates its plans. Please include consideration of these when scoping your environmental review process. The most critical of these is the permanent removal of the fence that keeps the Tomales Point Tule elk herd imprisoned on land that isn't sufficient to support a captive herd.

If NPS removes the elk fence, population control of the herd will be greatly simplified. As seen with the free-roaming herds, numbers are much more stable as the elk are able to find water and forage as needed on their own. If fence removal resulted in a large expansion of the herd (very unlikely), I would like to see the elk allowed to expand throughout the park and onto the mainland, since they are indigenous to this area. In addition, individual elk could be relocated to start new herds in other parks and wilderness areas. If the cows are removed from PRNS, eventually the elk will be cleared of Johne's Disease, allowing for such safe transfers. As indigenous animals, their spread would enhance the diversity and resiliency of the environment.

In developing alternatives to be evaluated, the NPS should include Tule Elk not being confined behind the fence. Alternatives should include adding currently leased land to the Tule Elk Reserve as the leaseholders retire them due to climate change or shifting economic pressures, as we are already seeing.

I am taking the approach that the elk fence be removed from the Tomales Point area and all of the Point Reyes National Seashore because that was and is the intention of the setting-up of this National Park area to begin with. It was not envisioned as a prison area, that is the farthest thing that could be imagined, with cows over here and the elk behind a fence other there. "Oh give me a home where the bison and elk roam.." - not 'why are they behind that fence?'

The National Park Service was created to conserve the scenery and leave our public lands unimpaired for the enjoyment of future generations. Based on the NPS' mission, the NPS must remove the unnatural eight foot fence, for the sake of our native wildlife and for the enjoyment of future generations.

**Correspondence ID:4125**

Correspondence: I want to thank you for taking my public comment on the Tomales Point scoping process at Point Reyes National Seashore. I cannot believe there is a Prison Fence restricting Tule Elk in our national park. What is that about? To please the cattle ranchers, and prevent the Tule Elk from being free to roam, associate, and live a good life? No more animal prisons in our national park. Point Reyes is not a zoo either. It is time to take down the elk fence.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

Why is the Park Service wasting taxpayer money on an inappropriate fence out at Tomales Point? The NPS should take down the fence, let the Tule Elk roam, and create a Coastal Native Habitat Reserve instead of keeping the Elk Pen out there. It's ridiculous that wildlife are treated like zoo animals in a National Park.

Superintendent Kenkel and other PRNS officials should demonstrate leadership on a national scale and remove the Tule Elk Reserve's fence across Tomales Point so that a new, sustainable wildlife health model is created to right the wrong of past ill-conceived Park Service policy. **Correspondence ID:4129**

Correspondence: Tomales Point is a stunning place and I appreciate the chance to provide input for the planning process.

Since the Park Service recently concluded its multi-year process to update its General Management Plan Amendment (GMPA), one wonders why this part of park operations wasn't included in that process. Nonetheless, now is the time for a comprehensive analysis of NPS current management of Tomales Point, as well as past practices, and all associated costs. While NPS should adhere to its mandate as specified in the Organic Act of 1916 with an eye to providing the highest levels of protection for the natural resources within the park, it should examine the costs in staff time and materials, as well as ongoing maintenance costs, of the elk fence. It should compare that to the savings and benefits of removing the fence, including the environmental benefits of allowing the cattle-grazed areas a chance to repair themselves. Please remove the fence NOW.

We wonder why Point Reyes National Seashore officials, especially Superintendent Kenkel, persist with keeping the expense of a long ugly fence out at Tomales Point and to truck in water and minerals. It's obvious even to a non-scientist. There's not enough natural food and water to sustain the Tule Elk entrapped in a zoo pen out there. Take down the fence, and instead use the money to help the Tule Elk transition and thrive across the Seashore. Remove the ranchers and their cattle. Enough is enough. It's a NATIONAL PARK!

It is the responsibility of the Park Service to protect wildlife, and the most obvious solution is to remove the elk fence, allow the elk to roam, water, and feed, and for the Park Service to ameliorate climate change impacts, including removal of nonnative plants, improve fire resiliency, and allow wildlife and natural processes to restore areas of the Seashore. A good first step is to end the lease agreements with the cattle ranchers.

It is time to focus on the health of our National Seashore and protect the air, soil, water, native wildlife and native vegetation over the constant impact from private cattle operations. The ranchers espouse

crackpot pseudoscience about false carbon sinks (pasture vs. native coastal prairie), regenerative ranching (oxymoron), methane digesters (new profit streams), while the objective and independent science-based literature state how a native landscape with native vegetation and wildlife will help fight climate change more effectively than cattle operations. Please prioritize our native landscape and native wildlife in Point Reyes.

**Correspondence ID:4130**

Correspondence: I want the fence at Tomales Point, which confines tule elk, to be removed. This is a necessary step for the NPS to take for our native elk.

The American public, by a wide margin, does not support spending money to keep Tule Elk in captivity at Tomales Point in Point Reyes National Seashore. There is no viable, long-term monetary solution for supplemental water, minerals, or food for the Tomales Point herds. The only reasonable cost is to remove that harmful fence and let the Elk roam free as is natural and the right step to take.

Pierce Point Ranch should be the only real "historical" ranch in PRNS. It should be developed as a working model of a ranch from the 19th Century, with no more than a few head of cattle and a few dairy cows, showcasing actual ranching and farming techniques of that era. Docents could explain the conditions, techniques, and context for working the land under the times and circumstances in place at the time. It should also tell the full story of the Native Americans that preceded European settlers and their fate. All other ranches should be removed from the park.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

Thank you for your consideration in this important manner.

**Correspondence ID:4131**

Correspondence: Removal of the elk fence at Tomales Point should be included in your plans for PRNS. It is the necessary and ethical step to take for a native species in a National Seashore.

Removing the fence will reduce the costs associated with proper stewardship of these captive animals - water troughs, mineral licks and staff time to regularly monitor the health of the herd will be unnecessary if the fence is removed.

Instead of paying for fence maintenance and supplemental water and minerals out at Tomales Point when Elk are actually starving to death--why doesn't the Park Service and Mr. Kenkel come up with a plan to remove tenant ranchers and let wildlife live naturally all across Point Reyes National Seashore?

If we don't work to ensure wild animals thrive in our National Parks, where will we work to ensure our wildlife does not go extinct? Cattle and dairy cows are not threatened by extinction, while Tule elk are. This is especially true given our recent years of drought. The park's top priority should be to ensure the Tule elk survive and even thrive. Remove the elk fence.

Sadly, Point Reyes National Seashore is a landscape dominated by private, for-profit industrial cattle ranching businesses. These private business owners claim stewardship of the lands, waters, and air, and do everything in their power to evade, circumvent, ignore, abuse, and thumb their collective noses at the most basic and sound environmental principles, ethics, practices, and responsibilities. This selfish

and unjust behavior should not occur in a National Park. Please take down the Elk fence, and prioritize our native wildlife over private and destructive cattle operations.

**Correspondence ID:4132**

Correspondence: I am writing and requesting to please take down the elk fence from Tomales Point, as it prevents natural migration of tule elk. It also stops them from getting water and food.

Dismantling the elk fence will save the NPS money, as it is a less expensive and less invasive option.

Moving forward the Park Service should partner closely with the Coast Miwok and scientists to re-wild the park.

The original motivation for the fence was to protect financial interests, not for optimal ecological restoration. It must be removed.

Thank you for your consideration in this important manner.

**Correspondence ID:4133**

Correspondence: I am writing to you specifically to address your plans for Tomales Point in the Point Reyes National Seashore. As they currently stand, they need to be incorporated into the General Plan for the Seashore - not as a separate part of it. It does not make strategic or economic sense to treat them as a part-as-to-of-themselves. The steps to restore the flora and fauna for all areas must be incorporated into the dynamics of the plan at the outset.

The current plan of what is called a 'co-habitation' - which is a farce - is wasteful in a number of ways. Instead of letting the elk populations roam the land to access the water and flora they have evolved to need for subsistence, it often needs to be trucked in to keep populations at levels 'mandated by a plan'. Not only do these resources need to be expended to keep the herds alive - then later, National Park Service personnel go and cull the population when it exceeds their some-how-agreed upon 'rancher-acceptable' number.

Tomales Point and its elk herd should have a wildlife management approach to management. Free access for the elk to roam, restoration of the native grasses and the elimination of invasive plants, removal of private cattle and dairy operations, and unhindered access for the public to wander the land while respecting the natural flora and fauna would increase and enhance PRNS's popularity, as well as its natural biome.

Ecological reports recommend the fence be removed. There is no good reason to keep the fence.

Thank you for your consideration in this important manner.

**Correspondence ID:4134**

Correspondence: Tomales Point is the highlight of many visitors' experience in Point Reyes National Seashore. Thank you for inviting public comment in this planning process. By removing the 8-foot elk fence, you can begin the process of restoration of the entire peninsula's ecosystem.

When will the National Park Service and Point Reyes National Seashore officials stop spending money on a misbegotten Elk fence idea? Remove the fence, and let the Tule Elk roam. It is time to get rid of the

cattle ranchers in our national park, as they're the ones forcing their will against the American public's will. Free the Elk and let Americans enjoy a true national park.

Removal of the elk fence would give the Park a good opportunity to create a prairie preserve, located just on the outside of the existing elk preserve, by pushing back any cattle away from the current fence line. In fact, if the ranches are to remain, installing a wildlife-friendly fence south of the elk fence to let elk and other native animals move freely while keeping cattle at bay would let the park establish a specific prairie preserve where the flora and fauna have been degraded. This could be a site for studying the restoration of the native environment after decades of degradation by cattle.

I am taking the approach that the elk fence be removed from the Tomales Point area and all of the Point Reyes National Seashore because that was and is the intention of the setting-up of this National Park area to begin with. It was not envisioned as a prison area, that is the farthest thing that could be imagined, with cows over here and the elk behind a fence other there. "Oh give me a home where the bison and elk roam.." - not 'why are they behind that fence?'

The successful reintroduction of the elk herds in the Point Reyes National Seashore should be viewed as the goal of the general plan for not only the Tomales Point area but the entire National Seashore and the most cost-effective way to do that is to work for the elimination of cattle from that area. If this approach is not taken then there will be continued non-native plants being brought in which will necessitate more plans and strategies to eliminate, more engineering projects to contain manure run-off, control of native 'predator' species to protect the cattle which is contradictory to reestablishing the Seashore, just to name a few.

#### **Correspondence ID:4135**

Correspondence: Removal of the elk fence at Tomales Point should be included in your plans for PRNS. It is the necessary and ethical step to take for a native species in a National Seashore.

Removing the fence will reduce the costs associated with proper stewardship of these captive animals - water troughs, mineral licks and staff time to regularly monitor the health of the herd will be unnecessary if the fence is removed.

**Correspondence ID:4136**

Correspondence: Regarding the upcoming plan for Tomales Point within Point Reyes National Seashore I request our National Park prioritize the wishes of the Miwok First Nation people. They "managed" that land for more than 10,000 and didn't disrupt the ecosystem. Allow them to determine how the land should be managed so that our future generations will be allowed to experience biodiversity, not cows, that exists there today. Maybe then the area will be allowed to thrive.

The costs for Tomales Point elk fence maintenance and to put out water and minerals is not solving the problem of Tule Elk health. There is not enough water and minerals for the different non-mingling Tomales Point herds. It is a band-aid for a constant would therefore please come up with a real solution for wild Elk, as they should not be confined in a zoo-like environment that does not have a sufficient amount of water and forage for this herd.

Why is the Park Service wasting taxpayer money on an inappropriate fence out at Tomales Point? The NPS should take down the fence, let the Tule Elk roam, and create a Coastal Native Habitat Reserve instead of keeping the Elk Pen out there. It's ridiculous that wildlife are treated like zoo animals in a National Park.

Removal of the Tule Elk Reserve fence across Tomales Point in Point Reyes National Seashore must happen now. This must be done urgently in light of the drought and fire conditions caused by climate change. It must include a completely revised and science-based plan, enhanced by Native American ecological knowledge and practices, to cease the ranch succession policies of the past in favor of transformation to natural habitats, with well-planned wildlife corridors to aid natural and assisted rewilding restoration processes.

I am grateful to have the opportunity to provide this preliminary feedback, and I look forward to participating in the next steps of this important planning process.

**Correspondence ID:4137**

Correspondence: Please read and consider my public comment on the Tomales Point planning process for Point Reyes National Seashore. Tule Elk should be free to roam, gather, find water and food, and live more healthy lives--not be imprisoned for their entire lives behind a god-awful fence. Point Reyes is a national park, therefore please remove the fence now.

The recent controversies regarding the treatment of the captive elk herd extract a cost on park management by forcing it to respond to the public's concerns and the demands the ranchers have become used to making. For example, NPS is now providing water sources and mineral licks for the elk to prevent recurring starvation and dying from thirst. In the past, NPS has built and repaired fences on behalf of the ranches. How much would the Park Service save if the elk were allowed to roam free? How much would it save if the ranchers were held to their lease terms and paid for improvements themselves? NPS should not be spending tax monies on private, for-profit ventures in our public park.

The park should spend time and money on removing the fences, planting native grasses, cleaning up the water pollutants, and generally restoring Tomales Point back to its natural habitat.

The Elk Fence on Tomales Point must be removed. Tule Elk need to mingle, associate, and mate to prolong genetic diversity and sustain present and long-term herd health, vitality, and viability.

I urge you to use this opportunity to carry out the intentions of the creation of the park, which was to protect the biodiversity within the seashore. To do that, the sacrifices should be made by the few ranch and dairy families that have profited profusely over the years. Our National Park is owned by the people not by the few ranchers.

**Correspondence ID:4138**

Correspondence: The elk fence at Tomales Point must be removed. This is an important and the right step for the upcoming management plan.

Taking away the fence is cheaper and more sensible than setting up enormous plastic water tanks and trucking water up to the elk reserve.

Resources budgeted for Point Reyes National Seashore should be used for preventing wildlife destruction, rather than additional money toward how to maintain an unethical 8 foot fence in the Elk Preserve.

Point Reyes National Seashore management must scope a plan to remove the Tule Elk Reserve fence across Tomales Point. This must be done in conjunction with a serious, science-based, enforced plan to cease the practice of ranching on our public land, so that timely and effective Seashore wilderness restoration occurs with public participation, focused on natural and native features, habitats, wildlife, and visitor accessibility.

An independent, scientific panel provided a recommendation to the NPS, to remove the eight foot fence across Tomales Point, which currently confines the native Tule elk in an environment which does not allow the herds to be large, healthy and free-ranging. Please include numerous alternatives in the upcoming elk management plan that would remove the Tomales Point fence in order for our native wildlife to be free-roaming.

All the current plan does is contribute to the slow demise of the Tule elk. The primary purpose of the National Park Service is protecting the land and wildlife, not ranchers.

**Correspondence ID:4139**

**Correspondence ID:4141**

Correspondence: Kindly take down the elk fence from Tomales Point. It restricts the tule elk and prevents them from getting water and forage.

It is an ill-founded strategy that will endlessly proliferate the same conditions over and over postponing if not abandoning the desired outcome. These efforts should not be viewed as 'job-security' as the public deserves the outcome spelled out in the original legislation setting the National Seashore up, the elimination of cattle ranching and the reestablishment of the flora and fauna of the Tomales Point ecosystem.

It is requested to stop using taxpayers' money to pay for the visual blight of the Elk Fence out on Tomales Point. Please stop trucking in water and minerals and whatever else to try to sustain a native herd in a non-native environment. Take down the fence, and use our taxpayers' money to actually turn the Seashore into a National Park that it deserves. Wildlife, natural habitat, clean water/soil/air, and public access should be the primary forces the Park Service supports - not a small group of politically-connected ranchers and their hooved methane-operations.

The public loves the elk, and are horrified when they learn that due to being penned in, significant numbers have perished due to thirst or lack of sustenance. As seen with the other, free-roaming herds in Pt. Reyes, it seems such needless harm will be eliminated if the herd is allowed to roam at will. If there is conflict between cattle and elk, the Park Service should have ranchers remove their cows, since this is a national park, not a feedlot.

Thank you for your time and consideration in this matter.

**Correspondence ID:4142**

Correspondence: Please remove the eight foot fence at Tomales Point for the sake of our native Tule Elk. We must prioritize our native Tule elk over the domestic cattle raised for profit in PRNS.

No matter what the Park Service spends to supplement water and minerals for the Tule Elk at Tomales Point, it will not matter. The Tule Elk are starving to death at Tomales Point due to continued drought, and megadrought. Please stop spending time and money on the fence and artificial approaches, and let the Elk roam free for natural sources of water and good nutrition.

The NPS should revise the PRNS Succession Policy to permanently retire grazing leases as ranchers choose to not renew them. This would create an historic opportunity to restore that 33% of the park that is currently surrounded by fences, full of cow manure and turn it into a program that will benefit not only Tule Elk, but expand the biodiversity throughout the park. The public would enthusiastically volunteer to help the NPS with such a program.

Removing the elk fence is the most impactful step the Park can take for Tomales Point, and this should be the plan review's top priority. This and total removal of all dairy and cattle operations from all of the park would have the strongest positive impacts, both ecologically and in terms of protection of the public's resources. The removal of both would benefit the return of native, deep-rooted grasses, allow the return of birds and wildlife that cannot survive in the barren fields where cattle have eaten the greenery down to the earth, and let the natural prairie reestablish itself. It could also serve as an outdoor laboratory for studying how to accelerate its healing and nurturing, information that will be increasingly important as we try to save our planet from the damages of global warming.

It is time to end the mis-management of our native Tule elk in Point Reyes National Seashore. Please follow the scientific advice provided in 1993, and remove the fence across Tomales Point. It is important for the survival of this herd to be free-roaming with access to food and water.

**Correspondence ID:4143**

Correspondence: I want to thank you for taking my public comment on the Tomales Point scoping process at Point Reyes National Seashore. I cannot believe there is a Prison Fence restricting Tule Elk in our national park. What is that about? To please the cattle ranchers, and prevent the Tule Elk from being free to roam, associate, and live a good life? No more animal prisons in our national park. Point Reyes is not a zoo either. It is time to take down the elk fence.

The recent controversies regarding the treatment of the captive elk herd extract a cost on park management by forcing it to respond to the public's concerns and the demands the ranchers have become used to making. For example, NPS is now providing water sources and mineral licks for the elk to prevent recurring starvation and dying from thirst. In the past, NPS has built and repaired fences on behalf of the ranches. How much would the Park Service save if the elk were allowed to roam free? How much would it save if the ranchers were held to their lease terms and paid for improvements themselves? NPS should not be spending tax monies on private, for-profit ventures in our public park.

The NPS should revise the PRNS Succession Policy to permanently retire grazing leases as ranchers choose to not renew them. This would create an historic opportunity to restore that 33% of the park that is currently surrounded by fences, full of cow manure and turn it into a program that will benefit not only Tule Elk, but expand the biodiversity throughout the park. The public would enthusiastically volunteer to help the NPS with such a program.

I cannot find a reasonable sound argument for continued ranching or dairy in a National Park. There are numerous dairy and cattle ranches in West Marin and Sonoma counties, as well as all across California and the entire United States. Some owned by the same families as those that ranch in the park today. Tule elk are only native to California and only found in Point Reyes National Seashore. We are lucky the elk are located in a National Park where they should be protected. Why private dairy and beef cows are prioritized over those elk in a National Park is beyond anyone's logical reasoning. It is political and that does not make it right. The National Park should be above politics. We need our National Parks, which we pay for and support, to work for us, the people.

Thank you for allowing me to comment and for putting effort and resources to considering how to protect our precious and dwindling natural resources of our National Park.

**Correspondence ID:4145**

Correspondence: Please remove the eight foot fence at Tomales Point for the sake of our native Tule Elk. We must prioritize our native Tule elk over the domestic cattle raised for profit in PRNS.

No matter what the Park Service spends to supplement water and minerals for the Tule Elk at Tomales Point, it will not matter. The Tule Elk are starving to death at Tomales Point due to continued drought, and megadrought. Please stop spending time and money on the fence and artificial approaches, and let the Elk roam free for natural sources of water and good nutrition.

The NPS should revise the PRNS Succession Policy to permanently retire grazing leases as ranchers choose to not renew them. This would create an historic opportunity to restore that 33% of the park that is currently surrounded by fences, full of cow manure and turn it into a program that will benefit not only Tule Elk, but expand the biodiversity throughout the park. The public would enthusiastically volunteer to help the NPS with such a program.

Removing the elk fence is the most impactful step the Park can take for Tomales Point, and this should be the plan review's top priority. This and total removal of all dairy and cattle operations from all of the park would have the strongest positive impacts, both ecologically and in terms of protection of the public's resources. The removal of both would benefit the return of native, deep-rooted grasses, allow the return of birds and wildlife that cannot survive in the barren fields where cattle have eaten the greenery down to the earth, and let the natural prairie reestablish itself. It could also serve as an outdoor laboratory for studying how to accelerate its healing and nurturing, information that will be increasingly important as we try to save our planet from the damages of global warming.

It is time to end the mis-management of our native Tule elk in Point Reyes National Seashore. Please follow the scientific advice provided in 1993, and remove the fence across Tomales Point. It is important for the survival of this herd to be free-roaming with access to food and water.

**Correspondence ID:4149**

Correspondence: You want my input to the Tomales Point planning process for Point Reyes National Seashore? Why is there even a Tule Elk enclosure out there? Does everything have to please and serve the ranchers (who shouldn't even be there anymore)? The Tule Elk cannot even get enough water or food, and are dying off in really high numbers! Please get rid of the Tule Elk Fence and let the Elk roam free. If you need a fence, put up a wildlife-friendly one, and turn the place into a Native Coastal Plant Reserve.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying - just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

Instead of US taxpayers footing the bill for a godawful fence to keep elk without enough water and food out at Tomales Point, the Park Service needs to take down the fence, remove the thousands of cattle impacting the land, air, and waters, and let nature be whole at Point Reyes National Seashore.

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

The National Park Service was created to conserve the scenery and leave our public lands unimpaired for the enjoyment of future generations. Based on the NPS' mission, the NPS must remove the unnatural eight foot fence, for the sake of our native wildlife and for the enjoyment of future generations.

Correspondence: Please accept for the record these comments as input for the NPS's upcoming environmental review of its Tomales Point management plan update. These are important aspects that must be considered in determining the scope of the planning process and should be included in any environmental impact statement. My top concern is for the Park Service to remove the fence that keeps the tule elk penned in on grazing land that's insufficient to support a healthy herd.

Allowing the continuation of cattle ranching in this area, Tomales Point in the Point Reyes National Seashore, is contradictory to the NPS trying to mitigate the negative impacts of climate change partially caused by this very practice. The NPS needs to do its part and at every step possible be a leader to achieve this end-result.

Why is the Park Service wasting taxpayer money on an inappropriate fence out at Tomales Point? The NPS should take down the fence, let the Tule Elk roam, and create a Coastal Native Habitat Reserve instead of keeping the Elk Pen out there. It's ridiculous that wildlife are treated like zoo animals in a National Park.

The original motivation for the fence was to protect financial interests, not for optimal ecological restoration. It must be removed.

This is nothing natural nor appropriate of an eight foot fence on public lands purposely confining native wildlife for the sake of leased cattle ranching operations. It is time for our public land in PRNS to be returned to wilderness in its entirety, and remove all impacts of ranching from 1/3 of our National Park. This includes the removal of the Tomales Point fence. Thank you for your attention to its removal, and the focused protection of our native Tule elk.

**Correspondence ID:4156**

Correspondence: I am commenting on the process of creating a plan for Tomales Point within Point Reyes National Park. I would hope the National Park Service would not address this area as somehow separate from the park itself but instead view the park in its entirety. As it stands today Tomales Point is more of a zoo within what is suppose to be a park but is in fact seen as private ranch land. And at this particular zoo the wild animals are fenced and the park service personnel let the animals die due to drought and lack of forage. Stop the insanity and take down the elk fence.

It would be better and less expensive to allow Tule elk access to water sources, such as the spring and lagoon in the region directly below the Tomales Point reserve.

There have been claims made over the years by ranching interests that the elk have damaged ranch operations or facilities. NPS should determine the facts here, and document the actual costs of any verifiable damage. Additionally, ranchers have claimed the elk need to be separated from their cattle because the elk will eat too much of the forage they want for their cows. The science clearly shows that elk eat far less than cows, weigh a fraction of cows' weight, and being browsers, do not deplete the grasses and shrubs as much as cows do. Therefore, when scoping the plan update, NPS needs to compare the impacts of elk foraging vs. cattle grazing, and develop its plans consistent with the Organic Act of 1916 mandate of resource preservation and protection.

Maintaining a captive Tule elk herd at Tomales Point will likely only become increasingly expensive with climate change and recurring, significant droughts. If the fence is removed, water troughs and mineral licks will be unnecessary.

Respectfully, the land in Point Reyes National Seashore belongs to the public, and should be managed for public, not for private benefit. It is imperative to keep the native Tule Elk as the priority, and remove the Elk fence.

**Correspondence ID:4157**

Correspondence: I am writing and requesting to please take down the elk fence from Tomales Point, as it prevents natural migration of tule elk. It also stops them from getting water and food.

The American public, by a wide margin, does not support spending money to keep Tule Elk in captivity at Tomales Point in Point Reyes National Seashore. There is no viable, long-term monetary solution for supplemental water, minerals, or food for the Tomales Point herds. The only reasonable cost is to remove that harmful fence and let the Elk roam free as is natural and the right step to take.

All National Park Service resources should be directed to restoring the land to benefit the biodiversity within the park. This is what the public wants and needs, and what we need to do to help fight a biodiversity and climate crisis.

Point Reyes has stunning biodiversity, and the restoration of native plants and wildlife will ensure that these important ecosystems last for generations.

Thank you for reading and placing my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore (PRNS). It is time, finally, for PRNS officials, notably Craig Kenkel, to stop stonewalling and ignoring the American public from across the country, and use proven science to prioritize wilderness, wildlife and habitat over commercial ranching. Start with a plan to remove the fence at Tomales Point and prioritize the endemic Tule Elk.

**Correspondence ID:4158**

Correspondence: Thank you for allowing the public to comment on the process of creating the upcoming plan for Tomales Point within Point Reyes National Seashore. I for one, as I think many others do, frequent national parks to see wildlife in their natural habitat. I don't go to the park to see cows and fences. If I wanted to go to a zoo I would choose to do just that. Take down the fence and allow all of the wildlife to roam freely within the entire park as that is why the park was created.

The American public, by a wide margin, does not support spending money to keep Tule Elk in captivity at Tomales Point in Point Reyes National Seashore. There is no viable, long-term monetary solution for supplemental water, minerals, or food for the Tomales Point herds. The only reasonable cost is to remove that harmful fence and let the Elk roam free as is natural and the right step to take.

All National Park Service resources should be directed to restoring the land to benefit the biodiversity within the park. This is what the public wants and needs, and what we need to do to help fight a biodiversity and climate crisis.

The Tomales Point Elk Reserve fence must promptly be taken down. This should occur in conjunction with a renewed, science-based plan to cease rancher successions of leased lands, allowing Point Reyes National Seashore to revert to natural landscapes, waterscapes, habitats, and ecosystems.

I look forward to the next steps in the planning process. Thank you for the opportunity to participate in this initial phase.

**Correspondence ID:4160**

I for one, as I think many others do, frequent national parks to see wildlife in their natural habitat. I don't go to the park to see cows and fences. If I wanted to go to a zoo I would choose to do just that. Take down the fence and allow all of the wildlife to roam freely within the entire park as that is why the park was created.

When it comes to Tomales Point our National Park has failed us, the taxpayer, and rightful owners of the land. We should not be paying for the cost of installing and maintaining a fence so wild animals can't roam and forage for food and water in areas preserved for private cattle and dairy ranchers within a National Park.

The NPS should revise the PRNS Succession Policy to permanently retire grazing leases as ranchers choose to not renew them. This would create an historic opportunity to restore that 33% of the park that is currently surrounded by fences, full of cow manure and turn it into a program that will benefit not only Tule Elk, but expand the biodiversity throughout the park. The public would enthusiastically volunteer to help the NPS with such a program.

Point Reyes National Seashore management must scope a plan to remove the Tule Elk Reserve fence across Tomales Point. This must be done in conjunction with a serious, science-based, enforced plan to cease the practice of ranching on our public land, so that timely and effective Seashore wilderness restoration occurs with public participation, focused on natural and native features, habitats, wildlife, and visitor accessibility.

We need a long-range plan that supports a healthy population of native Tule Elk. It is time for the Park Service to prioritize our elk in PRNS over private cattle operations on our public land. Thank you in advance, for a plan that will include immediate removal of this unnatural and unethical eight foot fence.

**Correspondence ID:4163**

Correspondence: Please remove the eight foot fence at Tomales Point for the sake of our native Tule Elk. We must prioritize our native Tule elk over the domestic cattle raised for profit in PRNS.

No matter what the Park Service spends to supplement water and minerals for the Tule Elk at Tomales Point, it will not matter. The Tule Elk are starving to death at Tomales Point due to continued drought, and megadrought. Please stop spending time and money on the fence and artificial approaches, and let the Elk roam free for natural sources of water and good nutrition.

The NPS should revise the PRNS Succession Policy to permanently retire grazing leases as ranchers choose to not renew them. This would create an historic opportunity to restore that 33% of the park that is currently surrounded by fences, full of cow manure and turn it into a program that will benefit not only Tule Elk, but expand the biodiversity throughout the park. The public would enthusiastically volunteer to help the NPS with such a program.

Removing the elk fence is the most impactful step the Park can take for Tomales Point, and this should be the plan review's top priority. This and total removal of all dairy and cattle operations from all of the park would have the strongest positive impacts, both ecologically and in terms of protection of the public's resources. The removal of both would benefit the return of native, deep-rooted grasses, allow the return of birds and wildlife that cannot survive in the barren fields where cattle have eaten the greenery down to the earth, and let the natural prairie reestablish itself. It could also serve as an outdoor laboratory for studying how to accelerate its healing and nurturing, information that will be increasingly important as we try to save our planet from the damages of global warming.

It is time to end the mis-management of our native Tule elk in Point Reyes National Seashore. Please follow the scientific advice provided in 1993, and remove the fence across Tomales Point. It is important for the survival of this herd to be free-roaming with access to food and water.

**Correspondence ID:4164**

Correspondence: Thank you for inviting public input into the planning process for Tomales Point. The best way to advance the National Seashore's mission is to remove the fence at Pierce Point.

As a taxpayer I expect the National Park Service to spend money wisely and frugally. I also expect the Park Service to prioritize wildlife over private enterprise. Therefore I ask the Park Service to stop spending money on erecting and maintaining a wildlife fence for the sole purpose of keeping native Tule Elk out of the parcels that are leased by private cattle and dairy ranch operations within a National Park.

Financial resources of the National Park Service (NPS) should be used to end the Tule Elk Reserve on Tomales Point, by removal of the rancher and NPS insisted eight foot fence and replace that with a wildlife-friendly smaller fence but a fence that keeps the cattle out of this preserved environment. Let's establish a Coastal Native Prairie Reserve in place of the wholly bad and inhumane Tule Elk Reserve. The Tule Elk get to roam free for food and water throughout the Seashore, and the current Reserve transforms into a wild habitat global study model during these times of severe climate heating and California megadrought.

We should not have a captive herd of Tule elk in the Point Reyes National Seashore. Tule elk should be allowed to roam free.

Point Reyes National Seashore, after 60 years from its founding, should be a national pride of astounding biodiversity, global climate research, and honor of the public trust in perpetuity. Please emphasize and prioritize the importance of protecting our native Tule elk in the upcoming plan, which would include the removal of the fence across Tomales Point.

**Correspondence ID:4165**

Correspondence: I am commenting on the process of creating a plan for Tomales Point within Point Reyes National Park. I would hope the National Park Service would not address this area as somehow separate from the park itself but instead view the park in its entirety. As it stands today Tomales Point is more of a zoo within what is suppose to be a park but is in fact seen as private ranch land. And at this particular zoo the wild animals are fenced and the park service personnel let the animals die due to drought and lack of forage. Stop the insanity and take down the elk fence.

The recent controversies regarding the treatment of the captive elk herd extract a cost on park management by forcing it to respond to the public's concerns and the demands the ranchers have become used to making. For example, NPS is now providing water sources and mineral licks for the elk to prevent recurring starvation and dying from thirst. In the past, NPS has built and repaired fences on behalf of the ranches. How much would the Park Service save if the elk were allowed to roam free? How much would it save if the ranchers were held to their lease terms and paid for improvements themselves? NPS should not be spending tax monies on private, for-profit ventures in our public park.

The Park Service should put all resources to removing the elk fence, allow the elk to roam free, stop the killing of the elk, and plant native grasses for them to feed.

Tomales Point and the Point Reyes National Seashore is to be an area where wildlife are given back their home. Taxpayers and visitors venture out that way to hear the roar of the Pacific Ocean and feel the sun and wind, and see the land as it was made in its beautiful creation. Taxpayers do not go out to Point

Reyes to see miles of wire fences 'keeping Nature in check', and the destructive, exploitive industrial practices of corrupt politically influential parties rule the land.

I hope the above concerns are addressed honestly and thoroughly. I, like millions of others, treasure our Seashore, and want it to be treated in a manner that preserves it and enhances it for future generations, something that is not happening now. I will be watching to make sure it is a transparent process, and look forward to improved management of our public commons.

The current plan of what is called a 'co-habitation' - which is a farce - is wasteful in a number of ways. Instead of letting the elk populations roam the land to access the water and flora they have evolved to need for subsistence, it often needs to be trucked in to keep populations at levels 'mandated by a plan'. Not only do these resources need to be expended to keep the herds alive - then later, National Park Service personnel go and cull the population when it exceeds their some-how-agreed upon 'rancher-acceptable' number.

Resources currently spent on maintaining the fence could be better spent on expanding interpretive displays of indigenous land stewardship practices and restoration of Coastal Miwok sites in Point Reyes National Seashore.

Point Reyes has stunning biodiversity, and the restoration of native plants and wildlife will ensure that these important ecosystems last for generations.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity.

**Correspondence ID:4171**

Correspondence: Thank you for the opportunity to comment on Tomales Point. Why is this area being treated separate from Point Reyes National Seashore? As it is within the boundaries of the seashore it should be interwoven within the fabric of the rest of the seashore and the ecosystem allowed to become whole instead of piecemeal. A visitor should be able to walk/hike the entirety of the park. And the native grasses and wildlife (including elk) should be able to roam freely within all areas of the park. Please remove the elk fences and let the park be an actual park.

Reliable reports state the NPS has shouldered many of the operational costs over the years that should have been borne by the ranchers. Since most agencies have limited budgets, I'd like the Park Service to analyze how much it could save by making the ranches pay for any and all fencing, but especially the elk

fence at Tomales Point. It should also look at how much it would save if the ranches were removed entirely from the park. Included in these analyses should be the value of increased public access to areas ranchers try to keep the public away from, the increased enjoyment of the park by the public, and the savings from not having to respond to rancher demands.

It is requested to stop using taxpayers' money to pay for the visual blight of the Elk Fence out on Tomales Point. Please stop trucking in water and minerals and whatever else to try to sustain a native herd in a non-native environment. Take down the fence, and use our taxpayers' money to actually turn the Seashore into a National Park that it deserves. Wildlife, natural habitat, clean water/soil/air, and public access should be the primary forces the Park Service supports - not a small group of politically-connected ranchers and their hoofed methane-operations.

Removal of the Tule Elk Reserve fence across Tomales Point in Point Reyes National Seashore must happen now. This must be done urgently in light of the drought and fire conditions caused by climate change. It must include a completely revised and science-based plan, enhanced by Native American ecological knowledge and practices, to cease the ranch succession policies of the past in favor of transformation to natural habitats, with well-planned wildlife corridors to aid natural and assisted rewilding restoration processes.

The successful reintroduction of the elk herds in the Point Reyes National Seashore should be viewed as the goal of the general plan for not only the Tomales Point area but the entire National Seashore and the most cost-effective way to do that is to work for the elimination of cattle from that area. If this approach is not taken then there will be continued non-native plants being brought in which will necessitate more plans and strategies to eliminate, more engineering projects to contain manure runoff, control of native 'predator' species to protect the cattle which is contradictory to reestablishing the Seashore, just to name a few.

**Correspondence ID:4172**

Correspondence: Kindly take down the elk fence from Tomales Point. It restricts the tule elk and prevents them from getting water and forage.

When will the National Park Service and Point Reyes National Seashore officials stop spending money on a misbegotten Elk fence idea? Remove the fence, and let the Tule Elk roam. It is time to get rid of the cattle ranchers in our national park, as they're the ones forcing their will against the American public's will. Free the Elk and let Americans enjoy a true national park.

Why is the Park Service wasting taxpayer money on an inappropriate fence out at Tomales Point? The NPS should take down the fence, let the Tule Elk roam, and create a Coastal Native Habitat Reserve instead of keeping the Elk Pen out there. It's ridiculous that wildlife are treated like zoo animals in a National Park.

The drought conditions are continuing. Due to this urgency the Park must now act to help not only the Tule elk but all other species within its borders. The most impactful thing the Park can do in the short term to assist the elk in their survival is to remove the elk fence. This is not only the most humane thing to do, it is the most cost-effective and reasonable action.

Thank you for listening to the public and considering the wishes of the many instead of the profits of a few.

**Correspondence ID:4173**

Correspondence: I am writing and requesting to please take down the elk fence from Tomales Point, as it prevents natural migration of tule elk. It also stops them from getting water and food.

Point Reyes National Seashore has finite resources and maintaining an 8-foot fence at Tomales Point is not a good use of taxpayer funds.

Invasive species, particularly ice plant, thistle and hemlock, are rampant in Point Reyes National Seashore outside of the elk reserve. Funds currently spent on the Tomales Point elk fence would be better spent on removing these plants in other parts of the park.

The Park Service should consider not only the economic costs of maintaining the elk fence and the management of the elk herd, it should examine the reputational and ethical costs of doing so as well. More and more, the public is very unhappy about the needless deaths of the Tule elk, for no other reason than to protect private ranchers' profits. How many visitors are discouraged from coming to visit due to this wasteful and disagreeable practice? How many dollars are not spent in the park and surrounding areas because of it? How much distrust does the Park Service generate when people see it catering to the select few, at the cost of the iconic Tule elk and damage to the park's environs? Too much, that's for sure.

I urge you to use this opportunity to carry out the intentions of the creation of the park, which was to protect the biodiversity within the seashore. To do that, the sacrifices should be made by the few ranch and dairy families that have profited profusely over the years. Our National Park is owned by the people not by the few ranchers.

**Correspondence ID:4174**

**Correspondence ID:4177**

Correspondence: Thank you for accepting my public comment on the Tomales Point planning process for Point Reyes National Seashore. I am very concerned. The Seashore's natural resources like the Tule Elk should be unimpaired.

Recently, the NPS has started an unnatural process of providing emergency water via tanks. This practice is costly, and has limited effectiveness.

The National Park Service is spending taxpayer money for a foolish Elk fence on Tomales Point. The leased ranching operations cause way more environmental harm and damage with thousands of cattle everywhere in the Park. The Park Service should spend money to educate the public about the damage cattle and ranchers cause on what should be a true National Park.

Because the well-publicized die-offs of the Tomales Point Tule elk over the past few years have captured the public's attention, it's important that NPS give full consideration to the benefits of removing the elk fence that pens the herd in. Since the fence is only for the benefit of the private ranches in the park, NPS should look at what the impacts on ranching would be with removal of the fence, and weigh that against benefits to the natural environment and the public at large. Since the vast majority of park visitors come for the elk, and not the cows, maintaining a healthy herd should be seen as more important than protecting the private interests of the ranchers.

Respectfully, the land in Point Reyes National Seashore belongs to the public, and should be managed for public, not for private benefit. It is imperative to keep the native Tule Elk as the priority, and remove the Elk fence.

**Correspondence ID:4178**

Correspondence: Thank you for inviting public input into the planning process for Tomales Point. The best way to advance the National Seashore's mission is to remove the fence at Pierce Point.

As a taxpayer I expect the National Park Service to spend money wisely and frugally. I also expect the Park Service to prioritize wildlife over private enterprise. **Correspondence ID:4181**

Correspondence: In response to your letter dated March 31, 2022 asking for ideas on the Tomales Point Tule Elk Reserve planning process, I offer the following regarding the elk fence and how best to manage.

Allowing the continuation of cattle ranching in this area, Tomales Point in the Point Reyes National Seashore, is contradictory to the NPS trying to mitigate the negative impacts of climate change partially caused by this very practice. The NPS needs to do its part and at every step possible be a leader to achieve this end-result.

Resources currently spent on maintaining the fence could be better spent on expanding interpretive displays of indigenous land stewardship practices and restoration of Coastal Miwok sites in Point Reyes National Seashore.

Superintendent Kenkel and other PRNS officials should demonstrate leadership on a national scale and remove the Tule Elk Reserve's fence across Tomales Point so that a new, sustainable wildlife health model is created to right the wrong of past ill-conceived Park Service policy. It is their duty to protect all National Park natural resources for posterity.

Thank you for your attention to my comments. If you do only one thing: Remove the godawful eyesore of a fence out there. Would you want to be trapped without enough water or food? You can't say it's a natural process of attrition if you've got them captive. Remove the fence immediately. Create safe and easy wildlife corridors for the elk to move out. Make the ranchers stop harming wildlife and hassling human visitors. The American people in multiple surveys, letters, op-eds, articles, and more want a National Park at Point Reyes. Not a ranch.

The Park Service should consider not only the economic costs of maintaining the elk fence and the management of the elk herd, it should examine the reputational and ethical costs of doing so as well. More and more, the public is very unhappy about the needless deaths of the Tule elk, for no other reason than to protect private ranchers' profits. How many visitors are discouraged from coming to visit due to this wasteful and disagreeable practice? How many dollars are not spent in the park and surrounding areas because of it? How much distrust does the Park Service generate when people see it catering to the select few, at the cost of the iconic Tule elk and damage to the park's environs? Too much, that's for sure.

I urge you to use this opportunity to carry out the intentions of the creation of the park, which was to protect the biodiversity within the seashore. To do that, the sacrifices should be made by the few ranch and dairy families that have profited profusely over the years. Our National Park is owned by the people not by the few ranchers.

Correspondence: Here's my public comment for the planning process about Tomales Point at Point Reyes National Seashore: Take down the 8-foot fence and allow the Elk to roam free.

It's both cheaper and more ecological to let the elk be free, without a fence, than it is to try to manage them unnaturally, with trucked water tanks and salt licks. And the elk are happier as well.

I respectfully ask that the Tule Elk Reserve fence be taken down now. National Park Service and Point Reyes National Seashore funds supplied by the American taxpayer should be used to create wild and healthy freedom for the Tule Elk and other wildlife. Public access to vast swaths of the Seashore is now blocked by ranching barbed/electric wire and formidable gates, which is not acceptable on public lands. Please investigate, enforce, and punish cattle ranching families that continue to degrade and pollute our Seashore's lands, waters, and air. Superintendent Kenkel and all of you at the NPS: It is time to get your

priorities and mandates set in accordance with your jobs. Please serve the interests of wildlife, habitat, visitors, and posterity.

The difference in landscape between the Tule Elk Reserve and the ranches on the other side of the fence is stark. The Tule elk Reserve looks like a beautiful coastal prairie with lots of wildflowers and coyote brush. The land to the south looks barren and denuded and there is evidence of cow manure spraying - not what visitors come to Point Reyes to see. Please remove the fence in the Elk reserve, as this is the right step to take for our National Park.

Thank you for your consideration in this important manner.

Correspondence: I am writing as physician and health care advocate because I have serious concerns about the U.S. Fish and Wildlife Service and the National Park Service's troubled programs for protecting animals and plants, including the Tule Elk, under the Endangered Species Act. I am very disturbed because of the fact that this program is plagued by long delays, increasing the risk of extinction and making recovery more difficult and expensive.

At this time, I am strongly urging the National Park Service to please take down the elk fence from Tomales Point, I support this request because the presence of this fence prevents natural migration of tule elk and it also prevents the elk from being able to have free access to needed supplies of water and food.

It is very important for the park service to understand that Point Reyes National Seashore has finite resources and the cost of maintaining an 8-foot fence at Tomales Point is not a good use of taxpayer funds.

I am alerting the National Park Service to the fact that the presence of invasive species, including ice plant, thistle and hemlock, are rampant in Point Reyes National Seashore outside of the elk reserve. The national funds that are currently being spent to maintain the Tomales Point elk fence would be better utilized to direct the removal of these invasive plants in other parts of the park.

The Park Service should consider not only the economic costs of maintaining the elk fence and the management of the elk herd, but the Park Service should examine the reputational and ethical costs of doing so as well. It is crucial for the Park Service to understand that the general public is very unhappy about the needless deaths of the Tule elk, because the deaths of these endangered elk are occurring for no other reason than to protect private ranchers' profits.

Please remember that the wasteful and disagreeable practices by the National Park Service regarding the denial of access of food and water to the tule elk angers local families and is actually discouraging visitors from coming to visit due to the current Park Service policies regarding protective treatment of the tule elk or the choice not to ensure protection for the endangered tule elk.

How many dollars are not spent in the park and surrounding areas because of the current lack of animal protective policies of the Park Service regarding the tule elk. How much distrust does the Park Service generate when people observe the Park Service focusing on protection for rancher's profits at the cost of the iconic Tule elk and damage to the park's environs? Please realize that the level of public distrust for the present Park Service's animal protection policies or lack of these policies for the tule elk is significant.

At this time, I thank you for your consideration of my letter and request. I strongly urge the Park Service to please use this opportunity to carry out and honor the intentions of the creation of the park, which was to protect the biodiversity within the seashore. To honor these intentions, the sacrifices should be made by the few ranch and dairy families that have profited profusely over the years. I am reminding you that the national mandate for the U.S. Park Service is that the Point Reyes National Park Seashore is owned by the American people and not by the few ranchers.

Sincerely,  
Jean Marie Naples, MD-Ph.D

Correspondence: Thank you for inviting public input into the planning process for Tomales Point. The best way to advance the National Seashore's mission is to remove the fence at Pierce Point.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

Moving forward the Park Service should partner closely with the Coast Miwok and scientists to re-wild the park.

The NPS already studied this matter, decades ago, and determined the fence should be removed.

The management of Tomales Point is an important part of the overall park. Inviting public comment, and then incorporating those preferences into the plan, will be key if public trust is to be restored in NPS.

**Correspondence ID:4191**

Correspondence: Just for once, why can't the park service do something right. The Tule elk were there way before the cattle. Just tell the ranchers to go back to their old grazing grounds. Give the elk some

healthy food. How would you feel if someone took your home from you and said you had no more rights to buy or grow your own food and would have to beg on the street. Oh, and they took your voice away so they could not hear you complain. I am a taxpayer who wants you to remove the fence confining the Tule elk. It is important our elk survive and are well cared for in a natural habitat, vs confined behind a fence which keeps the elk away from much needed water and forage.

It is unconscionable the National Park Service, who is to protect public lands and natural resources, continues to incur costs for the ugly Elk Fence and supplemental water and nutrients when getting rid of the cattle ranchers and letting Elk roam free in the Park would work free for the rest of time.

All National Park Service resources should be directed to restoring the land to benefit the biodiversity within the park. This is what the public wants and needs, and what we need to do to help fight a biodiversity and climate crisis.

Removing the fence allows native tule elk to roam free, which is good for both elk and for park landscape. Please help make this happen.

The management of Tomales Point is an important part of the overall park. Inviting public comment, and then incorporating those preferences into the plan, will be key if public trust is to be restored in NPS.

Correspondence: Tomales Point is the highlight of many visitors' experience in Point Reyes National Seashore. Thank you for inviting public comment in this planning process. By removing the 8-foot elk fence, you can begin the process of restoration of the entire peninsula's ecosystem.

No matter what the Park Service spends to supplement water and minerals for the Tule Elk at Tomales Point, it will not matter. The Tule Elk are starving to death at Tomales Point due to continued drought, and megadrought. Please stop spending time and money on the fence and artificial approaches, and let the Elk roam free for natural sources of water and good nutrition.

Why is the NPS having separate GMPs for the leased ranch lands and for the Tule Elk Reserve? Is this not all one national park? Are you going to have a separate GMP for the southern part of the Phil Burton Wilderness area? PRNS needs to be managed as one comprehensive and coordinated part, not sliced up in pieces. As a member of the public I don't see separate areas.

Maintaining a captive Tule elk herd at Tomales Point will likely only become increasingly expensive with climate change and recurring, significant droughts. If the fence is removed, water troughs and mineral licks will be unnecessary.

We need a long-range plan that supports a healthy population of native Tule Elk. It is time for the Park Service to prioritize our elk in PRNS over private cattle operations on our public land. Thank you in advance, for a plan that will include immediate removal of this unnatural and unethical eight foot fence.

Correspondence: To assist the NPS with its planned NEPA review of the Tomales Point area and Tule elk herd management in Pt. Reyes National Seashore, I suggest the following issues be included in your review process, and any eventual Environmental Impact Statement that comes out of it. These points are intended to insure that the park resources, including the Tule elk and native plants and animals, get the maximum protection for the public's current and future benefit.

Since the Park Service recently concluded its multi-year process to update its General Management Plan Amendment (GMPA), one wonders why this part of park operations wasn't included in that process. Nonetheless, now is the time for a comprehensive analysis of NPS current management of Tomales Point, as well as past practices, and all associated costs. While NPS should adhere to its mandate as specified in the Organic Act of 1916 with an eye to providing the highest levels of protection for the natural resources within the park, it should examine the costs in staff time and materials, as well as ongoing maintenance costs, of the elk fence. It should compare that to the savings and benefits of removing the fence, including the environmental benefits of allowing the cattle-grazed areas a chance to repair themselves.

Park Service money should not be used to trap Elk behind a long tall fence on Tomales Point. Point Reyes Park Service financial resources should be used to get rid of ranchers who pump raw sewage into park lands and waters, build and hide dumps, and prevent public access to the park. Please prioritize native Tule elk over destructive cattle operations on our public land.

As an endemic species, Tule elk benefit the land, and allowing them to freely roam in Point Reyes National Seashore will enhance the park overall.

The successful reintroduction of the elk herds in the Point Reyes National Seashore should be viewed as the goal of the general plan for not only the Tomales Point area but the entire National Seashore and the most cost-effective way to do that is to work for the elimination of cattle from that area. If this approach is not taken then there will be continued non-native plants being brought in which will necessitate more plans and strategies to eliminate, more engineering projects to contain manure run-off, control of native 'predator' species to protect the cattle which is contradictory to reestablishing the Seashore, just to name a few.

Correspondence: Here's my public comment for the planning process about Tomales Point at Point Reyes National Seashore: Take down that monstrous 8-foot fence and Let the Elk roam free.

The recent controversies regarding the treatment of the captive elk herd extract a cost on park management by forcing it to respond to the public's concerns and the demands the ranchers have become used to making. For example, NPS is now providing water sources and mineral licks for the elk to prevent recurring starvation and dying from thirst. In the past, NPS has built and repaired fences on behalf of the ranches. How much would the Park Service save if the elk were allowed to roam free? How much would it save if the ranchers were held to their lease terms and paid for improvements themselves? NPS should not be spending tax monies on private, for-profit ventures in our public park.

Pierce Point Ranch should be the only real "historical" ranch in PRNS. It should be developed as a working model of a ranch from the 19th Century, with no more than a few head of cattle and a few dairy cows, showcasing actual ranching and farming techniques of that era. Docents could explain the conditions, techniques, and context for working the land under the times and circumstances in place at the time. It should also tell the full story of the Native Americans that preceded European settlers and their fate. All other ranches should be removed from the park.

The 1998 plan says "Natural processes will be relied on to control populations of native species ..." There is nothing natural about caging animals behind a fence. The existing fence at the Tule Elk Reserve should be removed and replaced with a wildlife friendly fence that will allow Tule Elk to leave the reserve while still keeping cattle out.

Thank you for submitting my comments into the public record for the Tomales Point planning process at Point Reyes National Seashore. Please remove the fence across Tomales Point so the Elk can be free to roam, feed, drink, associate, mate, and thrive naturally. It can be done! Please consider and use my comments to help Point Reyes be a beautiful place for wildlife and humans.

**Correspondence ID:4204**

Correspondence: Please read and consider my public comment on the Tomales Point planning process for Point Reyes National Seashore. As an environmentally motivated voter who values our unique native species, I believe that Tule Elk should be free to roam, gather, find water and food, and live more healthy lives--not be imprisoned for their entire lives behind a fence. Point Reyes is a national park, therefore please remove the fence.

Removing the fence will reduce the costs associated with proper stewardship of these captive animals - water troughs, mineral licks and staff time to regularly monitor the health of the herd will be unnecessary if the fence is removed.

The long run goal is to phase out cattle from the Point Reyes National Seashore, altogether. This would allow a number of costly issues to be dropped as the progression of steps were accomplished, namely the need and upkeep of the elk fences, trucking in feed and water for the elk herds in the increasing occurrence of drought, culling the herds when successfully repopulating the areas and eradication of invasive species of plants brought in by cattle, cattle feed, and industrial machinery.

First and foremost, NPS should remove the fence that separates the Tomales Point herd from private, for-profit ranching livestock and prevents the elk herd from finding forage and water in its own. This would allow a more natural existence, without interference from humans.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity.

Correspondence: I am writing to request the involvement of independent scientists, independent elk biologists and the public in the development of the elk general management. We deserve a seat at the table, and it is imperative the upcoming management plan be objective, and that it prioritizes the survival of our native Tule elk over private cattle ranching in PRNS.

If NPS removes the elk fence, population control of the herd will be greatly simplified. As seen with the free-roaming herds, numbers are much more stable as the elk are able to find water and forage as needed on their own. If fence removal resulted in a large expansion of the herd (very unlikely), I would like to see the elk allowed to expand throughout the park and onto the mainland, since they are indigenous to this area. In addition, individual elk could be relocated to start new herds in other parks and wilderness areas. If the cows are removed from PRNS, eventually the elk will be cleared of Johne's Disease, allowing for such safe transfers. As indigenous animals, their spread would enhance the diversity and resiliency of the environment.

The Park Service wastes taxpayer money on the self-fulfilling problems caused by its continued decades-long poor wildlife management choices out on Tomales Point. The already limited funds available should be used to remove the tule elk fence so elk can find sufficient food and water on their own across the Seashore.

The Elk Fence on Tomales Point must be removed. Tule Elk need to mingle, associate, and mate to prolong genetic diversity and sustain present and long-term herd health, vitality, and viability.

It is time to focus on the health of our National Seashore and protect the air, soil, water, native wildlife and native vegetation over the constant impact from private cattle operations. The ranchers espouse crackpot pseudoscience about false carbon sinks (pasture vs. native coastal prairie), regenerative ranching (oxymoron), methane digesters (new profit streams), while the objective and independent science-based literature state how a native landscape with native vegetation and wildlife will help fight climate change more effectively than cattle operations. Please prioritize our native landscape and native wildlife in Point Reyes.

Point Reyes is a national park, therefore please remove the fence.

Removing the fence will reduce the costs associated with proper stewardship of these captive animals - water troughs, mineral licks and staff time to regularly monitor the health of the herd will be unnecessary if the fence is removed.

The long run goal is to phase out cattle from the Point Reyes National Seashore, altogether. This would allow a number of costly issues to be dropped as the progression of steps were accomplished, namely the need and upkeep of the elk fences, trucking in feed and water for the elk herds in the increasing occurrence of drought, culling the herds when successfully repopulating the areas and eradication of invasive species of plants brought in by cattle, cattle feed, and industrial machinery.

First and foremost, NPS should remove the fence that separates the Tomales Point herd from private, for-profit ranching livestock and prevents the elk herd from finding forage and water in its own. This would allow a more natural existence, without interference from humans.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity.

Correspondence: Please read and consider my public comment on the Tomales Point planning process for Point Reyes National Seashore. As an environmentally motivated voter who values our unique native species, I believe that Tule Elk should be free to roam, gather, find water and food, and live more healthy lives--not be imprisoned for their entire lives behind a fence. Point Reyes is a national park, therefore please remove the fence.

RE: L7617 Public Civic Engagement for Tomales Point Area Plan for Point Reyes Seashore

May 9, 2022

Dear Superintendent Kenkel;

The Watershed Alliance of Marin (WAM) is commenting herewith on the planning process to address complex wildlife, resource, and wilderness management issues at the Pierce Point historic ranch and especially the Tomales Point Tule Elk Preserve.

The National Park Service is entrusted with protecting a species that has been on the brink of extinction for about 150 years. All efforts to protect and return Tule Elk's ecologic function in a healthy ecosystem, particularly at Tomales Point, is of utmost importance to the public. We have a once in a lifetime opportunity to restore the beauty and wholeness of Pt. Reyes while healing the troubled legacy of colonial conquest and its residue still in evidence today. Adopting the ways of Traditional Ecological Knowledge (TEK) should be explored and implemented to the fullest extent in restoring the Seashore to a level of balance--with people interacting and managing the landscape for health, as native peoples did for thousands of years.

We endorse the letter of the Sierra Club Federal Lands Committee of the Bay Chapter, in particular these points here:

National Park Service (NPS) planning procedures (and General Management Plan (GMP) statute) require that you start a planning process with a GMP which is at the top of the NPS planning pyramid. That is where decisions are made as to how land areas are to be managed in the future. That is what was recently done for your GMP for the ranching area. What is not explained is how Tomales Point is different from the ranching area.

Starting with the 1998 Tomales Point Elk Plan (which was a plan for keeping the elk locked up at Tomales Point) seems to us to indicate that the plan is [still] to keep the elk locked up there. Why else would you now be discussing things such as when to shoot the elk, and whether to give them water (but apparently not food), if you weren't already planning on keeping them there? NPS must start with a GMP for the management of all the resources of Tomales Point [emphasis ours]. Only if you were to decide in a GMP to keep the elk locked up at Tomales Point would you need to decide when to shoot the elk and whether to give them water (and, hopefully, food). (May 9, 2022 Sierra Club Federal Lands Bay Chapter Committee letter to Superintendent Craig Kenkel)

Two members of WAM's board have served both as Tule Elk docents and as watershed experts, such that we are very familiar with the issues surrounding the elk, their habitat, and the history at Pt. Reyes. Rekindling the Tule Elk Docent Program should occur.

With awareness of the two ongoing lawsuits, there should be no excuse for neglect of the Elk. Addressing their welfare must be prioritized especially during the legal process. As such, we ask for quick removal of the fence that threatens their existence given that their genetic pool is severely depleted, with less than 221 within the fenced Tomales Point area and where over half the captive herd has died in the past few years and with only 5,000 to 6,000 elk remaining in existence in California. Understanding the breadth of Tule Elk history and habitat throughout California reinforces the need for them to roam and function as herd ungulates should, as part of a vast ecological network benefiting multiple species of plants and animals.

At Pt. Reyes, the first people are the Coast Miwok and Southern Pomo tribes: the Federated Indians of Graton Rancheria. We respect their confidentiality and consultation requirements by agencies. To support our plan requests and hopefully the tribe's, we are borrowing heavily from the vast historic cultural resource accounts of *Tending the Wild* by M. Kat Anderson University of California Press, 2005. Gleaned from a decade of documenting native people's cultural resource practices, this work retains the traditions and historic practices of the first people of California. Other experts that can answer to Tule Elk biology, history and habitat are Tule Elk biologist Julie Phillips and California Ecology expert, Artist and Author, Laura Cunningham.

To understand the significant sustaining relationship between people and the Tule Elk and other wildlife we will quote heavily from the book. *Tending the Wild* is the compilation of science, tribal traditions, use of resources through oral history of the indigenous first Californians. Tule elk are indigenous only to California. Baseline earlier accounts critical to understanding the Tule Elk history and ecological function are contained here. We hope this excerpt would inspire a return to protecting and enhancing their significance in the ecosystem:

"Jean-Francois de Galaup, Comte de La Perouse, a French seafarer described California in 1786 as a land of inexpressible fertility. He and others were taken with the prodigious congregation of wildlife, rookeries of seals, shoals of fish, pods of whales, flocks of birds and herds of pronghorn antelope. The immense numbers of tule elk in the Central Valley, for example, rivaled the ungulate numbers in Africa's Serengeti." (Page 14, *Tending the Wild* by M. Kat Anderson University of California Press, 2005)

"As many as half a million tule elk (*Cervus elaphus nannodes*) fed on the lush grasses and forbs of the valley grassland. Herds as large as one thousand to three thousand were reported. Historically, tule elk in central California ranged over the entire San Joaquin and Sacramento Valleys and adjacent foothills through the Livermore and Sunol Valleys across to Santa Clara Valley. Don Sebastian Vizcaino spotted abundant tule elk when he landed at Monterey on December 10, 1602. In 1848 the traveler James Lynch witnessed the San Joaquin plains covered with tule elk "as far as the eye could reach." The animals' heads rose in surprise at the approach of his regiment, and the multitude of horns reminded him of a "young forest." Edward Bosqui spotted tule elk between Merced and Stockton and said, "At times we saw bands of elk, deer and antelope in such numbers they actually darkened the plains for miles and looked in the distance like herds of cattle." During the Gold Rush, well after the first European settlement, elk might be seen in bands of forty or fifty, grazing on the edge marshes, near Stockton. Their whistles could be heard nearly a mile away." (Pages 19-20, *Tending the Wild* by M. Kat Anderson University of California Press, 2005)

"The majority of the bighorn sheep disappeared by 1900, felled by diseases transmitted by domestic livestock and illegal hunting. Elk in turn were wantonly destroyed. "Elk were here in great numbers....

They were mercilessly killed by hunters, killed not for their flesh, but for the fun of the killing." By 1904 only three bands of tule elk, a mere 145 individuals, were left, living within the confines of the Miller and Lux Ranch near Bakersfield." (Page 95, *Tending the Wild* by M. Kat Anderson University of California Press, 2005)

#### "Maintaining and Expanding the Coastal Prairies

... Native people have inhabited the northern coastal area for more than eight thousand years; the intersection of water and land and the proximity of food-rich marine communities made life inviting here.

This biologically diverse community of the coastal prairie contains many plant species important to Indians

for construction, cordage materials, fish poisons, foods, household items, and medicines. At what is now the Point Reyes National Seashore, the tidytips, California buttercups and gold fields--all annuals gathered for their edible seed by the Coast Miwok--still bloom every spring.

Originally the fertile prairies supported herds of tule elk, pronghorn antelope, and mule deer. More than one thousand tule elk composed a single herd. Scientists concur that this plant community very likely developed under relatively mild grazing pressure but with short fire return interval. Fires from lightning storms might occur as rarely as once every eighty to one hundred years, not frequent enough to maintain the openness of the land. There is ample evidence from historical documents that local tribes maintained

the coastal prairie through burning, usually in late summer or fall....

Archibald Menzies, the naturalist who accompanied George Vancouver on the *Discovery*, in his voyage around the world, landed on the west side of Tomales Bay on October 20, 1793. He jotted in his journal: "we landed headland... [T]he grass & brush wood on this headland had been lately burned [sic] down so that I had little opportunity here to augment my botanical collection, the few plants I saw were not different from those I had before met with at San Francisco and Monterey excepting a few species of *Sisyrinchium* with yellow flowers which I brought on board live plants for the garden."

George Gibbs [interpreter in 1851] "Prairies of rich grass lie on their southern slopes and especially on their tops, from whence their name of Bald Hills is derived. . . . Late in the season, however, the grass is often burned and dependence cannot always be placed upon the usual ground... Elk are very abundant in these mountains and the ground was marked everywhere with their footprints." Page 165-167, *Tending the Wild* by M. Kat Anderson University of California Press, 2005)

#### "Stimulating Growth by Picking and Pinching

Stripping stalks of leaves or cutting off young shoots may seem like rough ways to handle plants but these actions were very similar to those of grazing tule elk or pronghorn antelope. Since many native plant species are well adapted to regular herbivory, able to quickly compensate for the loss of biomass, both human harvesting of greens and the munching of ungulates, set plants back temporarily but had the longer-term effect of stimulating their growth. Herbivory studies have shown that concentrated grazing followed by rest periods for native herbs does not harm them and that in some cases plants browsed by mule deer and elk produce significantly higher numbers of flowers and fruits than plants that are not eaten. Plant ecologists call the phenomenon of increased growth after herbivory overcompensation. Stephen Edwards, director of the East Bay Regional Parks Botanic Garden has hypothesized that the now-extinct megafauna in California provided constant disturbance through grazing over millions of years, creating an environment favoring overcompensation and other adaptations to intense browsing." (Page 271, *Tending the Wild* by M. Kat Anderson University of California Press, 2005)

## Restoring Landscapes with Native Knowledge

### Active Management and the Role of Indigenous Knowledge

"[For ecosystem integrity, t]he idea of active management on public lands in the United States can be traced at least as far back as the 1963 Leopold Report to the National Park Service. In recommending that each large national park restore "the biotic association [and] conditions that prevailed when the area

was first visited by the white man," the report's authors acknowledged that most biotic communities are in

a constant state of change due to natural or man-caused processes of ecologic succession" and that in these successional communities "it is necessary to manage the habitat to achieve or stabilize it at a desired stage.

... Knowing how historic landscapes came to be and how they were maintained by indigenous peoples, we can develop restoration programs with a better chance of success and a greater level of historic authenticity." (Page 335, Tending the Wild by M. Kat Anderson University of California Press, 2005)

"The Society for Ecological Restoration (SER) international has recognized that indigenous peoples and their land management practices should be part of any serious effort to restore and preserve ecosystems.

The art and science of the new field of ecological restoration, therefore, will necessarily integrate traditional indigenous ecological knowledge into its philosophies, methods and practicums." (Page 337, Tending the Wild by M. Kat Anderson University of California Press, 2005)

Given the challenges of restoring degraded ranch lands where the Tule Elk are currently held captive, the possibilities for enhancing the size of the herd must be explored. The role of the National Park Service must be greater than what it currently is allowing. Removing the fence is critical to the Tule Elk's survival evidenced by the Limantour and Drake herds. Restoration and using TEK must be part of any plan.

Sincerely,

Judy Schriebman

Watershed Alliance of Marin

The National Parks Conservation Association (NPCA) thanks you for the opportunity to comment on this pre-scoping/pre-NEPA stage of the Tomales Point Area Plan (TPAP). We appreciate that the NPS has noted that "[t]he plan will review cultural and natural resources, management considerations in wilderness, and visitor use and access." As the NPS proceeds towards a NEPA process, we recommend:

- \* the NPS develop more than one alternative that focuses on the removal of the Tule Elk fence and discusses approaches on "how" to manage free roaming elk.

- \* the NPS address the current lack of a wilderness plan for the Seashore.

- \* the NPS address increased visitation and carrying capacity concerns Seashore-wide.

Thank you for your consideration of these brief comments.

Neal Desai

Senior Program Director, Pacific Region

National Parks Conservation Association

Correspondence: There is an important long-term issue here, along with another inescapable issue facing activities and planning for resource management and protection in many parks across the nation

Two issues intertwine:

Wilderness and climate change.

Wilderness management restricts invasive activities, or even actions reasonably undertaken in other areas of National Parks.

However, the continued survival of many species within a National Park may require supportive action to retain sustainable populations or to balance an ecosystem.

A contributory problem is that development in many areas across the nation render the Parks as the sole enclave for an ecosystem, or habitat for specific species.

In earlier eras, species might migrate to find other areas sustainable for survival but that option has rapidly disappeared for many species, surrounded, as the protected Parks are by development.

Climate change has resulted in major changes in appropriate conditions for habitat, with major effects on drought, or alteration of available water sources, or alteration of water levels.

Similarly, wild fires may damage major areas of a National Park

There may be a need for system-wide guidance for this inevitably imminent situation facing many parks.

Measures previously ruled inappropriate for wilderness may now be necessary to maintain the resources a Park is mandated to protect .

Perhaps an exception needs to be granted for protection of certain resources.

For example , in the southwestern deserts there were measures to provide water basins or other structures to serve endangered or threatened species..

The concern is one species in this park, but is a situation occurring elsewhere or reasonably expected, so national guidance should be necessary for effective policy.

the actions undertaken here may serve as precedent.

The future is here.

RE: L7617 Tomales Point Planning Process

Dear Mr. Kenkel:

I am writing on behalf of our clients, Jack Gescheidt, Laura Chariton, Skyler Thomas, and the Animal Legal Defense Fund, in response to your letter dated March 31, 2022, requesting comments regarding the scope of the planning process “to replace the 1998 Tule Elk Management Plan for Tomales Point and to address, where appropriate, any updates to the park’s General Management Plan as it relates to the Tomales Point area.” Our clients appreciate that the Park Service has taken the first step to update its management plan for the area and would like to encourage the agency to keep certain issues front-and-center throughout the planning process, as discussed in greater detail below.

In order to properly evaluate the issue of “maintenance or removal of the tule elk fence,” as identified in your above-cited letter, the Park Service must consider the extraordinary death toll of the Tule elk population currently confined behind the fence at Tomales Point. In only the last year (2021), over 25% of the animals (72 elk) have died due to a lack of food and water in the “reserve” where they are confined. This decrease in population is in addition to similar massive declines of 152 elk the year prior (2020) and 257 elk in the previous drought of 2013-2015. This means that in the last two years alone, the elk population at Tomales Point has declined by over 50%. These deaths are not natural or expected parts of population shifts in the wild; they are the direct result of confining animals in a zoo-like setting--behind a fence where they cannot access sufficient food or water sources--and then failing to treat them with even the minimal standards required of those who keep wild animals in captivity, such as provision of sufficient food and water. See, e.g., Animal Welfare Act, 7 U.S.C. §§ 2131, 2143(a)(2)(A) (requiring animals in zoos to be treated humanely, and provided sufficient food and water).

The genetic diversity of the Tule elk at Tomales Point is also key to consideration of this issue. As experts determined when the 1998 Elk Management Plan was published, the Tomales Point herd already had a low level of genetic variation, and the genetic viability of the herd has declined significantly since then. This is due not only to the animals' inability to get past the fence to sufficient food and water sources and the resulting die-offs, but also their inability to co-mingle with other elk herds in order to reduce or avoid inbreeding. Should the Tule elk confined at Tomales Point not be able to obtain access to sufficient food and water, and to interact with other members of their species in the near future, the genetic viability of this herd will continue to decline to the point where it cannot be salvaged.

In addition to considering the removal of the Tule elk fence, the Park Service should consider providing supplemental forage and minerals, as well as supplemental water, to the Tule elk in the interim during drought conditions. In this regard, concerns the Park Service has expressed about the downsides to supplemental feeding apply only in cases of long-term feeding programs, not short-term supplementation programs. Indeed, we note that the Fish and Wildlife Service has recently begun providing supplemental feeding to manatees in Florida because of their lack of natural food sources. Curt Anderson, An Experimental Program Gave Florida Manatees 160,000 Pounds of Lettuce. They Ate All of It., KARE11, (Mar. 23, 2022, 11:58 AM)

<https://www.kare11.com/article/tech/science/environment/florida-manatee-feeding-program/507-6a6954bc-4e07-400d-a7c6-34f3cd376e0b>. Thus, as long as the elk are confined behind a human-made fence that prevents them from accessing the resources they need to survive, they should be provided adequate food and water.

Our clients--as well as the public as a whole--are also vehemently opposed to the killing of any Tule elk as a way to "manage" the population. The Tule elk are native to the land and are required by federal law to be protected and preserved--not killed in order to allow for other uses of the land. Rather, should the population need to be controlled for some reason, other less drastic measures should be taken, such as the use of immunocontraception, as contemplated and recommended in the 1998 Tule Elk Management Plan.

Moreover, the schedule for this planning process outlined by the Park Service is far too long in duration. Under that schedule, the NPS would not issue a final Environmental Impact Statement and Record of Decision for the revised plan until March 31, 2025, at the earliest. This schedule is far too drawn out, especially given the massive number of Tule elk deaths in only the last year and the incredibly high likelihood that upcoming years will see similar large-scale die-offs. Not only is this wildlife suffering horrific pain and distress from this situation, but there can be no question that the sheer volume of deaths is seriously depleting any genetic viability of the remaining population. Accordingly, a delay of almost three additional years (if not longer) before the planning process is actually completed poses a serious risk to the preservation of this wildlife, especially if the Park Service continues to refuse to provide any forage for these animals. Rather, this planning process should be completed much more quickly, specifically within one year.

In support of and in addition to the above comments, we include as attachments documents filed to date in *Gescheidt, et al., v. Haaland, et al.*, case no. 21-4734-HSG, in the United States District Court for the Northern District of California, as well as non-privileged communications between the parties in that case. We also believe that the entire administrative record in that case should be considered as part of the Park Service's planning process. To that end, we also attach the index of all documents included in the administrative record. While NPS is already in possession of all of these documents, if for some reason the agency requires actual copies of the documents, please let us know and we will be happy to provide them.

Thank you for undertaking this first step in the process of updating the management plans for Tomales Point, and please do not hesitate to contact us with any questions or if we can be of further assistance in this process.

PLEASE SEE a signed copy of these comments and all attachments, available at the following link:  
[https://www.dropbox.com/s/8fdlaxgisay40r8/32 Index to Administrative Record.pdf?dl=0](https://www.dropbox.com/s/8fdlaxgisay40r8/32%20Index%20to%20Administrative%20Record.pdf?dl=0)

If these documents are not accessible to you for any reason, please contact me at [kbarnekow@law.harvard.edu](mailto:kbarnekow@law.harvard.edu) in order to coordinate an alternative method.

**Correspondence ID:4218**

Correspondence: Dear National Park Service,

In Defense of Animals is an animal advocacy group representing 25,000 members in California, and 250,000 members internationally, of whom potentially visit United States National Parks. Our members prioritize the protection of animals both wild and domesticated and unanimously believe all wild animals in United States national park system should be completely free of confinement, suffering, and poor treatment.

We appreciate the opportunity to provide feedback on the National Park Service's planning process for the Tomales Point area in Point Reyes National Seashore. In short, we request the immediate removal of the Tule Elk Reserve fence as the only remedy to a deadly situation that has killed half the Reserve's elk in just two years -- and will kill many more elk this (2022) summer and autumn if elk are not freed of their fenced compound before the end of 2022.

Even many of surviving elk of this brutal forced culling can be in terrible, strained health. This artificial enclosure is antithetical to what national park unit's were established to create, namely wild habitat for wild animals.

Problematically, this very "scoping process" and the Park Service's plan to develop a "draft planning document" and "environmental review" by the end of 2024 means that dozens or scores more Tule elk in the Reserve will likely suffer and die of malnutrition and thirst by then. This brutal outcome is as disturbing -- and deadly -- as the captivity of Tule elk inside the Tule Elk Reserve in the first place.

Additional Tule elk death-by-slow-policy-implementation is easily predicted and must be avoided. It often seems as if elk deaths are the intended result of this maddeningly typical, overly-long bureaucratic process which is in part responsible for keeping Tule elk confined inside a national park unit in the first place. Even if elk deaths are not the intention, they continue to be the result.

Instead, immediate common sense action is required, as detailed here:

Step 1: Dismantle the Tomales Point "Tule Elk Reserve" fence. Immediately. This does not require extensive additional study, only common sense. This will benefit Tule elk by freeing them to access thousands more acres of the park which have additional water and forage. Elk need only be provided

access to it, instead of devising complicated management actions while keeping them confined within the Reserve.

Elk taking advantage of their newfound freedom south of the fenceline will likely be gradual and the Reserve's southernmost sub-herd most likely to first explore south. The White Gulch area sub-herd would likely be next to realize their range to the south has expanded.

Note these sub-herd area appellations are inaccurate, but useful in describing elk herds approximate distance from the fenceline. Their meanings will become increasingly inaccurate over time as elk move, mingle and mate in ways impossible to predict. Studies are not needed to predict their movements, and any studies labeled "scientific" which attempt to predict their movements are unnecessary, and as already stated, a deadly waste of precious little time before summer-autumn heat and drought return to California this year and weaken and kill more elk in the Reserve.

In other words, don't waste more months and years preposterously attempting to predict with additional time-consuming, costly, inaccurate, unnecessary and ultimately deadly, studies, because more elk will die in confinement this year if action isn't taken by this summer (2022).

To repeat: simply remove the artificial, 3-mile-long, 8-foot-tall structure which prevents the rare Tule elk at Point Reyes National Park from actually being free-roaming wild animals, as they are mandated to be inside a national park unit, and which is consistent with the park's founding charter to prioritize protection of its "natural resources" including its wild animals.

Private, for-profit cattle operations should now, and should always have been taking, a back seat to the health and welfare and freedom of Tule elk who have thus far denied it. End this deadly affront now.

Predictably, ranchers may complain and exaggerate the minor impacts of a few dozen, and eventually a few score, or even a hundred freed elk will have on ranching areas. But the park's Tule elk do no harm to livestock, do not predate or fight with livestock, and do relatively little damage to ranch structures like fences.

The Tule elk of Point Reyes must no longer be confined by fences that exist at the whim of commercial cattle operations which lease land they do not own. Tule elk and other wildlife should not be controlled to benefit private ranches leasing land inside a public park. The cow's tail should not be wagging the wildlife dog.

Wild animals must be freed, and it is the ranch cows that should be contained behind low, non-barbed wire fences cows can't jump, but which are Tule elk permeable. And these fences should only exist until all cattle are eventually moved out of the Seashore. But in the transitional period, to be determined, elk can cross safely under (if young) and over (if mature) non-barbed wire fences. These fences should consist of three strands of straight wire, not barbed wire, and no lower than 18" from the ground, and no higher than 36-36" from the ground. Thus commercial cows will be contained on ranchlands, but elk and deer injuries and deaths will be dramatically reduced, or even eliminated.

Cows are domesticated, for-profit animals on the way out of the park, not the reason a national park exists, or why Point Reyes National Seashore was created.

The National Park Service has referred to the Reserve having a "carrying capacity" that is "natural," on both the NPS website and by its representatives in the media. We consider these terms inapplicable for

what is a non-natural, man-made habitat: a fenced compound. Currently, the Tule elk of Point Reyes, who have been entrusted to the National Park Service's care, are no longer wild animals. They are denied the freedom of movement that must be afforded wild animals, to accurately label them wild animals inside a national park unit. As a result of their fenced confinement, the Tule elk inside the Reserve at Tomales Point are more like zoo animals desperately requiring zookeeper care, which has not been consistently provided. Only citizen activism has driven the National Park Service to install supplemental water in troughs and mineral supplements. While these stop-gap measures are better than nothing, they are not replacements for a healthy habitat and freedom beyond their fenced areas. This applies to all three herds at Point Reyes, not just the Reserve's herd.

The removal of the Tule Elk Reserve fence is not a radical idea and has been recommended by the National Park Service's own 1998 Environmental Assessment, which concluded that the only way to create a healthy free-roaming population of Tule Elk in the Seashore and associated parks would require the, "...elimination of exotic cervids and removal of the fence across Tomales Point" (National Park Service, 1998, p. 89; italics added).

Additionally, because the Tomales Point herd is still relatively new and has little genetic diversity compared to other natural herds, the Tule Elk Reserve's fence causes further genetic limitations because the herd can't intermingle with the park's other two herds.

An array of opponents of dismantling the Reserve's fence, from Congressman Jared Huffman to the Sierra Club's Sierra Magazine, have argued that removing the fence would result in an overpopulation of Tule elk because the Seashore lacks natural predators like wolves. (This is also one of the arguments justifying the recent decision to shoot elk as a population control.) But this imagined problem, and argument, is not only specious, but frankly ridiculous, for a number of reasons.

First, it ignores the reality of global warming, and assumes, without any scientific basis, that herd growth could mimic pre-global warming growth rates when precipitation and forage were more plentiful. Elk populations are not likely to ever again so rapidly expand during what is now predictable global warming-induced seasonal drought.

Second, giving Tule elk access to the park's additional tens of thousands of acres would allow for at least a decade or more of a more natural, healthy herd intermingling, breeding and expansion. Elk herd growth is a natural and desirable outcome, not an outcome to be feared or avoided.

Third, Tule elk should be allowed to expand beyond the park's 71,000 acres, if in their natural movements and breeding, they choose to. There is no evidence they would harm the environment, out-compete other species, nor have much impact upon adjacent human populations except perhaps require lowering roadway speed limits and post wildlife warning signs for vehicular traffic, as is done in other areas of Marin county with high deer populations.

Fourth, the cost of expanding Tule elk range by dismantling fences would be less than the current cost of subsidizing Point Reyes ranches at taxpayer expense. Instead of spending hundreds of thousands of dollars per year to repair roads and fences from dairy and beef ranches damage, including road damage from heavy farm machinery, cattle denuding soils and polluting the park's land and waterways, the removal of commercial livestock would allow the elk and deer native ungulate populations to expand and accelerate their healing impact on the land that domesticated cattle inflict.

Fifth, and perhaps best of all, Point Reyes National Seashore would be transformed from a national park unit where Tule elk are fatally corralled, starved and shot like malignant zoo animals, into a wild Tule elk breeding ground from which healthy sub-herds could be moved to other areas of California. These other areas in need of re-wilding would benefit from the ecological contribution of importing California-native ungulates. Meanwhile, Point Reyes National Seashore could become host to the state's largest, healthy population of wild Tule elk on public land, finally more closely aligning with the national park system mission since its 1962 founding.

Park tourism would increase, drawn to see the expansion of its famous Tule elk population, already a major visitor attraction. And decommissioning ranches would allow additional visitor parking and facilities expansion to accommodate the increase in visitation. This would mean the entrance fees now being considered amid looming budget deficits -- created in part by funneling funds to commercial cattle operations -- would become unnecessary.

In short, immediately freeing all the park's Tule elk from their fenced, artificial confinement and moving commercial cattle operations out over a longer time period of a few years would realize countless benefits, ecological, historical, financial, legal (ending two current and likely future lawsuits), as well as symbolic and inspirational benefits to a National Park Service currently tarnished with the relentless and expanding controversy generated by fencing and killing wildlife only to benefit commercial cattle operations.

We are at a crucial crossroads. The environmental crisis of anthropogenic global warming is already upon us. Numerous scientific studies have shown commercial cattle operations, like the 5,000 cows at Point Reyes National Seashore, are a major, if not its largest, contributor. The U.S. government created Point Reyes National Seashore as a national park unit to be a bulwark against commercial exploitation and environmental destruction -- also typified by commercial cattle operations. Point Reyes, so close to major population centers, is a rare, precious, but compromised wilderness area in desperate need of, and deserving of immediate protection and preservation.

The decisions the National Park Service makes this year, in 2022, acting on behalf of American citizens, will have a profound impact on future generations who will enjoy either this wild, vital landscape with a mosaic of wild animals, including the iconic Tule Elk, or the continued destruction of 28,000+ acres by the greed and willful, short-sighted destruction wrought by commercial cattle operations. Will the National Park Service have the courage to join the large and growing movement of citizens willing to speak out and take action to protect and defend this magnificent treasure on the brink of so much greater potential? We sincerely hope so.

- In Defense of Animals

Correspondence: Dear Park Service,

I am writing to fully support removing fence barriers and allowing the magnificent Tule Elk to roam freely in the park. They should not be penned in and delivered water, they should be allowed to naturally roam. Having only had the opportunity to see the magnificent elk once or twice I hope that in giving them freedom to roam they will have more a chance of healthy survival.

Thank you,  
Jeni

**Correspondence ID:4220**

Correspondence: Dear National Park Service,

Thank for the opportunity to provide input and comments. Here are the thoughts and comments that I would like to submit to you:

I am against fencing in Tule elk, a native species, on public land in the Point Reyes National Seashore. I care about our wildlife, our public land and resources, and living in co-existence with the wild species around us. It is not acceptable to me that our native Tule elk are suffering and dying, in significant part, due to being trapped behind human-erected fencing. It is not acceptable to me that this fencing is intended specifically to prevent native Tule elk from accessing acres and acres of public lands in an effort to protect the few commercial dairy farms, beef/cattle ranching and other private commercial agricultural interests who want to use the public lands for their private commercial interests.

It is difficult knowing that many native Tule elk behind the fencing have suffered and died painful, horrible deaths (and at alarming rates/in large numbers). The fencing prevents the elk from accessing appropriate fresh water, forage and needed nutrients. Available evidence strongly suggests that the Tule elk trapped behind the fencing have not had appropriate access to needed forage and water, especially during drought conditions. (While I recognize that at times, water troughs and tanks and trucked water have been brought in for the trapped Tule elk, it has not succeeded in preventing a large and unnatural numbers of deaths in this herd.) I am not aware of the free-roaming Tule elk suffering similar mortality numbers as those Tule elk confined behind the fencing. I would like to see the fencing come down as soon as possible.

I am really concerned about the genetic strength and longevity of the Tule elk population in our national park land, especially the Tule elk confined behind the fencing. I am concerned about the Tule elk being able to establish a genetically robust gene pool. I am concerned that the large number of deaths of the Tule elk behind the fencing is creating even more of a genetic bottleneck. I am concerned that the genetic diversity of the Tule elk in the park is being unacceptably weakened and harmed by confining a portion of the Tule elk behind fencing.

I do not like the idea of continued commercial agricultural operations on public land, and I especially do not want to see any expansions of private use on the public land. All commercial agricultural uses were supposed to have ceased by now. I disagree with having any management plan for any part of the Point Reyes National Seashore that not only extends ranching leases for decades more and expands commercial agricultural use on this public land, but does so at the expense of the native Tule elk, other local wildlife and the health of the ecosystem as a whole. This public land should be wild, supporting wildlife for all members of the public; I do not think private individuals should be allowed to use any part of this public land for their own private use, especially for private commercial agricultural operations.

I have a concern about the degradation of the native ecosystem as a whole in and around where these cattle and dairy operations are allowed to continue. My concerns include: the degradation of the native coastal grasslands; the fecal/bacterial contamination and other pollution of the local waters (creeks, streams, lagoons, etc., including run-off pollution into coastal zones and the ocean) and the land surrounding these local waters, arising from dairy/cattle operations; the physical damage and degradation to the banks and land around these waters; and the spread of invasive weeds. I also am concerned about the National Park Service's lack of investigation and appropriate responsive action to

remedy the fecal/bacterial contamination and pollution of the waters and surrounding land resulting from the dairy and cattle ranches on this public park land.

I want to see the stewards of this public land and its waters managing the park for our native wildlife, for the integrity of the ecosystem as a whole, and for the public as a whole. I do not want to see the use of exclusion fencing on our public land to keep native Tule elk confined and away from private ranching operations. I do not want private, for-profit ranches operating on our public land.

I see a benefit, both in terms of protecting the wildland and wildlife and in saving the public money, if the fence is removed. Removing the fencing is a big step toward restoring that portion of the park with the whole wild land ecosystem. It will allow unrestricted movement of all the local wildlife. Removing the fencing will eliminate the public financial expense (both in terms of time and materials) related to the upkeep costs of the fencing itself. Removing the fencing will eliminate any Tule elk getting caught in the fencing and potentially being injured or killed as a result. Removing the fencing also eliminates the time and financial expense to set up water tanks/troughs and truck water up to the confined Tule elk. I really would like to see this public land being returned to its more natural state, with the local ecosystem and wildlife and the public at large prioritized over private interests.

Thank you for the opportunity to submit my comments and thoughts on this matter.

**Correspondence ID:4221**

Correspondence: Thank you for inviting public input into the planning process for Tomales Point. The best way to advance the National Seashore's mission is to remove the fence at Pierce Point.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

Moving forward the Park Service should partner closely with the Coast Miwok and scientists to re-wild the park.

The original motivation for the fence was to protect financial interests, not for optimal ecological restoration. It must be removed.

I hope the above concerns are addressed honestly and thoroughly. I, like millions of others, treasure our Seashore, and want it to be treated in a manner that preserves it and enhances it for future generations, something that is not happening now. I will be watching to make sure it is a transparent process, and look forward to improved management of our public commons.

**Correspondence ID:4222**

Correspondence: Here's my public comment for the planning process about Tomales Point at Point Reyes National Seashore: Take down that monstrous 8-foot fence and Let the Elk roam free.

The Park Service continues to spend money on a fence to keep Tule Elk trapped out on Tomales Point at Point Reyes even though there's not enough food and water out there for the Elk, and now I have to pay for fence maintenance and to ship water and supplements out there. Stop the bad spending! Take down that fence and let the Tule Elk go get their food and water for free.

Tomales Point and its elk herd should have a wildlife management approach to management. Free access for the elk to roam, restoration of the native grasses and the elimination of invasive plants, removal of private cattle and dairy operations, and unhindered access for the public to wander the land while respecting the natural flora and fauna would increase and enhance PRNS's popularity, as well as its natural biome.

The NPS already studied this matter, decades ago, and determined the fence should be removed.

It is requested the personnel at the National Park Service re-review the 1993 report of the Scientific Advisory Panel on control of Tule Elk in PRNS, and include its recommendation in the upcoming plan. The independent advisory panel recommended to remove the fence across Tomales Point, and develop a plan to achieve a large, healthy, free-ranging elk population. Thank you Mr Kenkel for your attention to this recommendation.

**Correspondence ID:4223**

Correspondence: My input to the Tomales Point planning process for Point Reyes National Seashore. Why is there even a Tule Elk enclosure out there? Does everything have to please and serve the ranchers (who shouldn't even be there anymore)? The Tule Elk cannot even get enough water or food, and are dying off in really high numbers!

PLEASE get rid of the Tule Elk Fence and LET THE ELK ROAM FREE.

If you need a fence, put up a wildlife-friendly one, and turn the place into a Native Coastal Plant Reserve. Point Reyes is a NATIONAL SEASHORE, so belongs to the American People, not farmers.

Taking away the fence is cheaper and more sensible than setting up enormous plastic water tanks and trucking water up to the elk reserve.

Instead of US taxpayers footing the bill for a godawful fence to keep elk without enough water and food out at Tomales Point, the Park Service needs to take down the fence, remove the thousands of cattle impacting the land, air, and waters, and let nature be whole at Point Reyes National Seashore.

Removal of the Tule Elk Reserve fence across Tomales Point in Point Reyes National Seashore must happen now. This must be done urgently in light of the drought and fire conditions caused by climate change. It must include a completely revised and science-based plan, enhanced by Native American ecological knowledge and practices, to cease the ranch succession policies of the past in favor of transformation to natural habitats, with well-planned wildlife corridors to aid natural and assisted rewilding restoration processes.

This is nothing natural nor appropriate of an eight foot fence on public lands purposely confining native wildlife for the sake of leased cattle ranching operations. It is time for our public land in PRNS to be returned to wilderness in its entirety, and remove all impacts of ranching from 1/3 of our National Park. This includes the removal of the Tomales Point fence. Thank you for your attention to its removal, and the focused protection of our native Tule elk.

**Correspondence ID:4224**

Correspondence: Regarding the upcoming plan for Tomales Point within Point Reyes National Seashore I request our National Park prioritize the wishes of the Miwok First Nation people. They "managed" that

land for more than 10,000 and didn't disrupt the ecosystem. Allow them to determine how the land should be managed so that our future generations will be allowed to experience biodiversity, not cows, that exists there today. Maybe then the area will be allowed to thrive.

Why are my taxes going to please ranchers out at Point Reyes National Seashore? There's no good science reason for there to be some huge fence out at Tomales Point to keep Tule Elk captive and dying - just so ranchers can have cattle in our Park. I don't want my tax money going to support this cruel policy that goes against the very trust of the National Park Service. Please take down that bad fence, and let the Elk be Elk. Get rid of the ranchers as we paid them millions of dollars to leave decades ago.

Viewing the Tomales Point project from an objective approach, the most cost effective long-run plan is to take down the elk fences without the interference of cattle concerns and let the herds roam in a natural manner. The health of the elk herds could be clearly addressed, as well as the flora can be given its space for natural progression and seed dispersion. This would focus on only one plan to implement, for taxpayers and NPS staff, and not take the resources with two competing approaches.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:4225**

Correspondence: Re: Tomales Point scoping process at Point Reyes National Seashore. I cannot believe there is a Prison Fence restricting Tule Elk in our national park. What is that about? To please the cattle ranchers, and prevent the Tule Elk from being free to roam, associate, and live a good life? No more animal prisons in our national park. Point Reyes is not a zoo either. It is time to take down the elk fence.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

The NPS should put resources into creating a rewilded park. It will be necessary to plan on demolition and disposal of the many tons of concrete which now comprise the modern loafing barns at each PRNS dairy (one of which supposedly closed a year ago).

Taking down the fence is the best option, according to ecologists.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:4226**

Correspondence: Many thanks for allowing the public, rightful owners of the land, to comment on the upcoming plan for Tomales Point within Point Reyes National Seashore. This area, along with any area within the national park should be allowed to be re-wild. All fences and evidence of fences should be removed.

If NPS removes the elk fence, population control of the herd will be greatly simplified. As seen with the free-roaming herds, numbers are much more stable as the elk are able to find water and forage as needed on their own. If fence removal resulted in a large expansion of the herd (very unlikely), I would like to see the elk allowed to expand throughout the park and onto the mainland, since they are indigenous to this area. In addition, individual elk could be relocated to start new herds in other parks and wilderness areas. If the cows are removed from PRNS, eventually the elk will be cleared of Johne's Disease, allowing for such safe transfers. As indigenous animals, their spread would enhance the diversity and resiliency of the environment.

There have been claims made over the years by ranching interests that the elk have damaged ranch operations or facilities. NPS should determine the facts here, and document the actual costs of any verifiable damage. Additionally, ranchers have claimed the elk need to be separated from their cattle because the elk will eat too much of the forage they want for their cows. The science clearly shows that elk eat far less than cows, weigh a fraction of cows' weight, and being browsers, do not deplete the grasses and shrubs as much as cows do. Therefore, when scoping the plan update, NPS needs to compare the impacts of elk foraging vs. cattle grazing, and develop its plans consistent with the Organic Act of 1916 mandate of resource preservation and protection.

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

This is nothing natural nor appropriate of an eight foot fence on public lands purposely confining native wildlife for the sake of leased cattle ranching operations. It is time for our public land in PRNS to be returned to wilderness in its entirety, and remove all impacts of ranching from 1/3 of our National Park. This includes the removal of the Tomales Point fence. Thank you for your attention to its removal, and the focused protection of our native Tule elk.

**Correspondence ID:4227**

Correspondence: I want to thank you for taking my public comment on the Tomales Point scoping process at Point Reyes National Seashore. I cannot believe there is a Prison Fence restricting Tule Elk in our national park. What is that about? To please the cattle ranchers, and prevent the Tule Elk from being free to roam, associate, and live a good life? No more animal prisons in our national park. Point Reyes is not a zoo either. It is time to take down the elk fence.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

The NPS should put resources into creating a rewilded park. It will be necessary to plan on demolition and disposal of the many tons of concrete which now comprise the modern loafing barns at each PRNS dairy (one of which supposedly closed a year ago).

Taking down the fence is the best option, according to ecologists.

The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:4228**

Correspondence: I am a taxpayer who wants you to remove the fence confining the tule elk. It is important our elk survive and are well cared for in a natural habitat, vs confined behind a fence which keeps the elk away from much needed water and forage.

The costs for Tomales Point elk fence maintenance and to put out water and minerals is not solving the problem of Tule Elk health. There is not enough water and minerals for the different non-mingling Tomales Point herds. It is a band-aid for a constant wound therefore please come up with a real solution for wild Elk, as they should not be confined in a zoo-like environment that does not have a sufficient amount of water and forage for this herd.

Resources currently spent on maintaining the fence could be better spent on expanding interpretive displays of indigenous land stewardship practices and restoration of Coastal Miwok sites in Point Reyes National Seashore.

The fence should be removed, for the benefit of the elk herds and their survival.

As a long-time user of the seashore, I'm looking forward to seeing what the Park Service comes up with as an improved management plan. It's a good time to make some long-needed changes, particularly the elk fence removal. That alone will make a significant difference in one's experience of the park, and I'm sure it will be met with massive public approval. Thank you for considering my input. I'm excited to see the results.

**Correspondence ID:4229**

Correspondence: Thank you for allowing the public to comment on the process of creating the upcoming plan for Tomales Point within Point Reyes National Seashore. I for one, as I think many others do, frequent national parks to see wildlife in their natural habitat. I don't go to the park to see cows and fences. If I wanted to go to a zoo I would choose to do just that. Take down the fence and allow all of the wildlife to roam freely within the entire park as that is why the park was created.

Removing the elk fence is a frugal option, for a Park Service that apparently operates with limited resources.

Why is the Park Service wasting taxpayer money on an inappropriate fence out at Tomales Point? The NPS should take down the fence, let the Tule Elk roam, and create a Coastal Native Habitat Reserve instead of keeping the Elk Pen out there. It's ridiculous that wildlife are treated like zoo animals in a National Park.

Removal of the Tule Elk Reserve fence across Tomales Point in Point Reyes National Seashore must happen now. This must be done urgently in light of the drought and fire conditions caused by climate

change. It must include a completely revised and science-based plan, enhanced by Native American ecological knowledge and practices, to cease the ranch succession policies of the past in favor of transformation to natural habitats, with well-planned wildlife corridors to aid natural and assisted rewilding restoration processes.

If the Park Service is serious about managing Tomales Point, the Tule elk herds, and the rest of the park most effectively, it will follow the science in determining its plan. That means, first and foremost, removing the elk fence, and protecting and restoring the natural habitat that has been destroyed by cattle and dairy ranching. This is a great opportunity to show enlightened leadership, and I look forward to continuing my engagement in the process.

**Correspondence ID:4230**

Correspondence: Please remove the eight foot fence at Tomales Point for the sake of our native Tule Elk. We must prioritize our native Tule elk over the domestic cattle raised for profit in PRNS.

Allowing the continuation of cattle ranching in this area, Tomales Point in the Point Reyes National Seashore, is contradictory to the NPS trying to mitigate the negative impacts of climate change partially caused by this very practice. The NPS needs to do its part and at every step possible be a leader to achieve this end-result.

I respectfully ask that the Tule Elk Reserve fence be taken down now. National Park Service and Point Reyes National Seashore funds supplied by the American taxpayer should be used to create wild and healthy freedom for the Tule Elk and other wildlife. Public access to vast swaths of the Seashore now blocked by ranching barbed/electric wire and formidable gates, which is not acceptable on public lands. Please investigate, enforce, and punish cattle ranching families that continue to degrade and pollute our Seashore's lands, waters, and air. Superintendent Kenkel and all of you at the NPS: It is time to get your priorities and mandates straight. Please serve the interests of wildlife, habitat, visitors, and posterity.

Ecological reports recommend the fence be removed. There is no good reason to keep the fence.

I urge you to use this opportunity to carry out the intentions of the creation of the park, which was to protect the biodiversity within the seashore. To do that, the sacrifices should be made by the few ranch and dairy families that have profited profusely over the years. Our National Park is owned by the people not by the few ranchers.

Please make a difference

**Correspondence ID:4231**

Correspondence: You want my input to the Tomales Point planning process for Point Reyes National Seashore? Why is there even a Tule Elk enclosure out there? Does everything have to please and serve the ranchers (who shouldn't even be there anymore)? The Tule Elk cannot even get enough water or food, and are dying off in really high numbers! Please get rid of the Tule Elk Fence and let the Elk roam free. If you need a fence, put up a wildlife-friendly one, and turn the place into a Native Coastal Plant Reserve.

What are the annual costs for the Tomales Point Reserve fence and the supplemental water and minerals for the Tule Elk trapped there? Why are Elk still trapped and causing this expense, when there

are ample lands and waters for Elk to roam at Point Reyes National Seashore? It's not a zoo, it's a national park. Please take down the fence.

Instead of paying for fence maintenance and supplemental water and minerals out at Tomales Point when Elk are actually starving to death--why doesn't the Park Service and Mr. Kenkel come up with a plan to remove tenant ranchers and let wildlife live naturally all across Point Reyes National Seashore?

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

The original studies done by the NPS on how to manage the Tule elk showed they should be allowed to roam free. I will be tracking this process to see what the Park Service's plans are in this regard. I and the vast majority of the public want better treatment of the elk, and better treatment of the Seashore itself. We do not want to see for-profit ranches degrading our beautiful park. This is the Park Service's opportunity to do this job right. You have my support in achieving this.

**Correspondence ID:4232**

Correspondence: Please remove the elk fence from Point Reyes National Seashore in order for the elk herds to have access to sufficient amount of water, minerals and forage.

It is an ill-founded strategy that will endlessly proliferate the same conditions over and over postponing if not abandoning the desired outcome. These efforts should not be viewed as 'job-security' as the public deserves the outcome spelled out in the original legislation setting the National Seashore up, the elimination of cattle ranching and the reestablishment of the flora and fauna of the Tomales Point ecosystem.

Why is the NPS having separate GMPs for the leased ranch lands and for the Tule Elk Reserve? Is this not all one national park? Are you going to have a separate GMP for the southern part of the Phil Burton Wilderness area? PRNS needs to be managed as one comprehensive and coordinated part, not sliced up in pieces. As a member of the public I don't see separate areas.

First and foremost, NPS should remove the fence that separates the Tomales Point herd from private, for-profit ranching livestock and prevents the elk herd from finding forage and water in its own. This would allow a more natural existence, without interference from humans.

Thank you for listening to the public and considering the wishes of the many instead of the profits of a few.

**Correspondence ID:4233**

Correspondence: I am a taxpayer who wants you to remove the fence confining the tule elk. It is important our elk survive and are well cared for in a natural habitat, vs confined behind a fence which keeps the elk away from much needed water and forage.

Tomales Point is not a zoo. The taxpayers do not want to incur the cost of feeding and providing water to wild animals. Nor do they want to visit a zoo. A simple solution, and one that is the most cost

effective, is to stop "managing" the park. Take down the fence, remove the cattle, and let nature run its course.

Moving forward the Park Service should partner closely with the Coast Miwok and scientists to re-wild the park.

Point Reyes National Seashore should plan for prompt removal of the Elk Reserve fence on Tomales Point. This will achieve Tule Elk freedom of movement to naturally water, forage, and mate, and sustain optimal health and well-being of Tule Elk throughout the Seashore.

Thank you for your attention to my public record comments on the Tomales Point planning process for Point Reyes National Seashore. Your responsibility is to the spirit of wilderness preservation and protection, and to the vast majority of Americans who have insisted that this iconic place be freed from private, for-profit, commercial business interests. We will continue to press for just that, like taking down the Tomales Point fence.

**Correspondence ID:4234**

Correspondence: Many thanks for allowing the public, rightful owners of the land, to comment on the upcoming plan for Tomales Point within Point Reyes National Seashore. This area, along with any area within the national park should be allowed to be re-wild. All fences and evidence of fences should be removed.

If NPS removes the elk fence, population control of the herd will be greatly simplified. As seen with the free-roaming herds, numbers are much more stable as the elk are able to find water and forage as needed on their own. If fence removal resulted in a large expansion of the herd (very unlikely), I would like to see the elk allowed to expand throughout the park and onto the mainland, since they are indigenous to this area. In addition, individual elk could be relocated to start new herds in other parks and wilderness areas. If the cows are removed from PRNS, eventually the elk will be cleared of Johne's Disease, allowing for such safe transfers. As indigenous animals, their spread would enhance the diversity and resiliency of the environment.

There have been claims made over the years by ranching interests that the elk have damaged ranch operations or facilities. NPS should determine the facts here, and document the actual costs of any verifiable damage. Additionally, ranchers have claimed the elk need to be separated from their cattle because the elk will eat too much of the forage they want for their cows. The science clearly shows that elk eat far less than cows, weigh a fraction of cows' weight, and being browsers, do not deplete the grasses and shrubs as much as cows do. Therefore, when scoping the plan update, NPS needs to compare the impacts of elk foraging vs. cattle grazing, and develop its plans consistent with the Organic Act of 1916 mandate of resource preservation and protection.

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

This is nothing natural nor appropriate of an eight foot fence on public lands purposely confining native wildlife for the sake of leased cattle ranching operations. It is time for our public land in PRNS to be returned to wilderness in its entirety, and remove all impacts of ranching from 1/3 of our National Park.

This includes the removal of the Tomales Point fence. Thank you for your attention to its removal, and the focused protection of our native Tule elk.

**Correspondence ID:4235**

Correspondence: Removal of the elk fence at Tomales Point should be included in your plans for PRNS. It is the necessary and ethical step to take for a native species in a National Seashore.

It is not clear why the Park Service continues to spend taxpayer money for an unethical eight foot fence at the Tule Elk Reserve when the public has requested for years to remove the fence and let the Elk roam for free to get their water and food.

The Park Service wastes taxpayer money on the self-fulfilling problems caused by its continued decades-long poor wildlife management choices out on Tomales Point. The already limited funds available should be used to remove the tule elk fence so elk can find sufficient food and water on their own across the Seashore.

Removing the elk fence is the most impactful step the Park can take for Tomales Point, and this should be the plan review's top priority. This and total removal of all dairy and cattle operations from all of the park would have the strongest positive impacts, both ecologically and in terms of protection of the public's resources. The removal of both would benefit the return of native, deep-rooted grasses, allow the return of birds and wildlife that cannot survive in the barren fields where cattle have eaten the greenery down to the earth, and let the natural prairie reestablish itself. It could also serve as an outdoor laboratory for studying how to accelerate its healing and nurturing, information that will be increasingly important as we try to save our planet from the damages of global warming.

Thank you for your attention to my comments. If you do only one thing: Remove the godawful eyesore of a fence out there. Would you want to be trapped without enough water or food? You can't say it's a natural process of attrition if you've got them captive. Remove the fence immediately. Create safe and easy wildlife corridors for the elk to move out. Make the ranchers stop harming wildlife and hassling human visitors. The American people in multiple surveys, letters, op-eds, articles, and more want a National Park at Point Reyes. Not a ranch.

**Correspondence ID:4236**

Correspondence: The confined Tule Elk are dying at astronomical rates each year, and the Park Service just keeps them penned up in a cage to suffer and die at Tomales Point. Please stop this. The Tule Elk Reserve fence needs to come down now. If you want a reserve/preserve, remove the 8-foot fence, put in a small wildlife-friendly fence, and turn the land into a Native Coastal Prairie Reserve.

The elk fence has hidden costs that have not been analyzed or made public before. Besides the typical costs of fence construction and maintenance, there's the cost of park staff having to make sure the water tanks that serve the captive elk herd are maintained and kept filled, the mineral licks provided are sufficient to the herd's needs, and complaints from ranchers are responded to. Then there are the costs of the impacts on the area outside the fence: the massive amounts of invasive plants that have forced out the native, deep-rooted grasses that are true effective carbon sequesters, the elimination of habitat for indigenous animals of all sizes, the carbon created by the rotting of annual invasive gasses, and more. And because the fence only exists at the request of cattle ranchers, NPS should look at the costs of the damage the cattle do with their methane pollution the atmosphere and their manure polluting

the parks' streams, lagoons and bays. These ecological costs haven't been accounted for, and need to be.

All money, time and energy should be spent on re-wilding the entire National Seashore and not subsidizing destructive cattle operations on these public lands.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

I respectfully submit this letter and request the National Park Service to be impartial in the next steps related to our incredible native wildlife in Point Reyes National Seashore.

**Correspondence ID:4237**

Correspondence: The NPS plan for Point Reyes National Seashore must be revised to address the recent overwhelming voice of people who support ending the leases to the ranches and restoring the park to its grandeur where the native Tule Elk will thrive. The cattle ranches have been non-compliant in addressing the pollution and degradation caused by their operations. The fencing must be removed for the Tule Elk to survive. The beauty that was once Pt.Reyes National Seashore has been compromised by the NPS allowing the cattle ranches to remain in the park. They must go. The Tule Elk belong in the park with the native grasses and eventually the park may recover from years of abuse by the cattle ranches.

**Correspondence ID:4238**

Correspondence: The elk fence at Tomales Point must be removed. This is an important and the right step for the upcoming management plan.

We keep reading that the Park Service doesn't care about the Elk out on Tomales Point at Point Reyes National Seashore. What's going on? Why does the Park Service spend taxpayer money for a fence and water and mineral supplements when it's cheaper to just let the Elk go live free and wild? Take down the fence and stop wasting our money for cruelty on innocent wildlife!

The park should spend time and money on removing the fences, planting native grasses, cleaning up the water pollutants, and generally restoring Tomales Point back to its natural habitat.

Removing the Tomales Point elk fence will improve genetic diversity within the elk population.

I respectfully submit this letter and request the National Park Service to be impartial in the next steps related to our incredible native wildlife in Point Reyes National Seashore.

**Correspondence ID:4239**

Correspondence: You want my input to the Tomales Point planning process for Point Reyes National Seashore? Why is there even a Tule Elk enclosure out there? Does everything have to please and serve the ranchers (who shouldn't even be there anymore)? The Tule Elk cannot even get enough water or food, and are dying off in really high numbers! Please get rid of the Tule Elk Fence and let the Elk roam free. If you need a fence, put up a wildlife-friendly one, and turn the place into a Native Coastal Plant Reserve.

What are the annual costs for the Tomales Point Reserve fence and the supplemental water and minerals for the Tule Elk trapped there? Why are Elk still trapped and causing this expense, when there

are ample lands and waters for Elk to roam at Point Reyes National Seashore? It's not a zoo, it's a national park. Please take down the fence.

Instead of paying for fence maintenance and supplemental water and minerals out at Tomales Point when Elk are actually starving to death--why doesn't the Park Service and Mr. Kenkel come up with a plan to remove tenant ranchers and let wildlife live naturally all across Point Reyes National Seashore?

We need our National Parks to remind us of what we can all aspire to and why we love this nation. It is their beauty and grandeur that call us to be a better version of ourselves. We need our National Parks to stand for the protection of our wild lands. Take down that fence and become a beacon of light in an otherwise very politicized world.

The original studies done by the NPS on how to manage the Tule elk showed they should be allowed to roam free. I will be tracking this process to see what the Park Service's plans are in this regard. I and the vast majority of the public want better treatment of the elk, and better treatment of the Seashore itself. We do not want to see for-profit ranches degrading our beautiful park. This is the Park Service's opportunity to do this job right. You have my support in achieving this.

**Correspondence ID:4240**

Correspondence: I am a taxpayer who wants you to remove the fence confining the tule elk. It is important our elk survive and are well cared for in a natural habitat, vs confined behind a fence which keeps the elk away from much needed water and forage.

Tomales Point is not a zoo. The taxpayers do not want to incur the cost of feeding and providing water to wild animals. Nor do they want to visit a zoo. A simple solution, and one that is the most cost effective, is to stop "managing" the park. Take down the fence, remove the cattle, and let nature run its course.

Moving forward the Park Service should partner closely with the Coast Miwok and scientists to re-wild the park.

Point Reyes National Seashore should plan for prompt removal of the Elk Reserve fence on Tomales Point. This will achieve Tule Elk freedom of movement to naturally water, forage, and mate, and sustain optimal health and well-being of Tule Elk throughout the Seashore.

Thank you for your attention to my public record comments on the Tomales Point planning process for Point Reyes National Seashore. Your responsibility is to the spirit of wilderness preservation and protection, and to the vast majority of Americans who have insisted that this iconic place be freed from private, for-profit, commercial business interests. We will continue to press for just that, like taking down the Tomales Point fence.

**Correspondence ID:4241**

Correspondence: You want my input to the Tomales Point planning process for Point Reyes National Seashore? Why is there even a Tule Elk enclosure out there? Does everything have to please and serve the ranchers (who shouldn't even be there anymore)? The Tule Elk cannot even get enough water or food, and are dying off in really high numbers! Please get rid of the Tule Elk Fence and let the Elk roam free. If you need a fence, put up a wildlife-friendly one, and turn the place into a Native Coastal Plant Reserve.

The Park Service continues to spend money on a fence to keep Tule Elk trapped out on Tomales Point at Point Reyes even though there's not enough food and water out there for the Elk, and now I have to pay for fence maintenance and to ship water and supplements out there. Stop the bad spending! Take down that fence and let the Tule Elk go get their food and water for free.

Invasive species, particularly ice plant, thistle and hemlock, are rampant in Point Reyes National Seashore outside of the elk reserve. Funds currently spent on the Tomales Point elk fence would be better spent on removing these plants in other parts of the park.

The first sentence of the Tule Elk Management Plan and Environmental Assessment, dated 1998 states "The purpose of this plan and environmental assessment is to guide the management, monitoring, and research of Tule Elk, *Cervus elaphus nannodes*, at Point Reyes National Seashore for the next five to ten years". Well here we are 24 years later and you're finally getting around to updating this horribly outdated plan. Meanwhile hundreds of beautiful Tule Elk have died behind that fence while the NPS did nothing. That fence has to go.

It is time to end the mis-management of our native Tule elk in Point Reyes National Seashore. Please follow the scientific advice provided in 1993, and remove the fence across Tomales Point. It is important for the survival of this herd to be free-roaming with access to food and water.

**Correspondence ID:4242**

Correspondence: Dear National Park Service,

Tule elk management at Point Reyes Seashore over the last decade has proven to be not only inadequate but fatally misguided, and deadly for its supposedly protected inhabitants. Over 50% of the herd held captive inside the Tomales Point "Tule Elk Reserve" has died in just the last two years. Nearly 500 Tule elk have been killed inside the Reserve in the last decade, dead from thirst or starvation or both.

Park Service claims that this massive number of Tule elk deaths is "natural" or reflect a "carrying capacity" are utter nonsense, and non-science. Fencing animals inside a compound and then denying them access to adequate year-round food and water is not only unnatural, it is negligent, counter to the purpose of a national park to protect its wildlife from intentional abuse, and likely even criminal.

The simple, shameful reality is that current policies at Point Reyes National Seashore today and for decades have favored the financial well-being of commercial cattle operations over the health, well-being and the lives of the park's Tule elk and countless other mammal, animal and plant species being currently and consistently harmed by the cattle operations. These commercial businesses are the park's major source of land degradation, water contamination (by cattle manure and urine), Pacific Ocean pollution and atmospheric pollution by bovine methane emissions.

The solution to this atrocious ecological situation is simple. First and immediately remove the 3-mile-long Elk Reserve fence and allow its captive elk to access all of Point Reyes Seashore and beyond, including of course the 28,000 acres wrongly fenced off for cattle.

Second, rapidly phase out all commercial cattle operations within, say, the next three years. This simple action would dramatically reduce the leading source of this precious natural park unit's ecological damage.

For the purpose of the limited scope of this public comment form, dismantling the 3-mile-long fence could begin immediately and have only minimal impact on cattle operations whose owners will likely complain bitterly, but suffer only minor inconveniences. This would go far to reduce the deaths of more Tule elk likely this year (2022) when summer and autumn heat and drought return.

Thank you for your consideration.

Sincerely,  
Jack Gescheidt, Founder  
The TreeSpirit Project

**Correspondence ID:4243**

Correspondence: Here's my public comment for the planning process about Tomales Point at Point Reyes National Seashore: Take down that monstrous 8-foot fence and Let the Elk roam free.

The Park Service continues to spend money on a fence to keep Tule Elk trapped out on Tomales Point at Point Reyes even though there's not enough food and water out there for the Elk, and now I have to pay for fence maintenance and to ship water and supplements out there. Stop the bad spending! Take down that fence and let the Tule Elk go get their food and water for free.

Tomales Point and its elk herd should have a wildlife management approach to management. Free access for the elk to roam, restoration of the native grasses and the elimination of invasive plants, removal of private cattle and dairy operations, and unhindered access for the public to wander the land while respecting the natural flora and fauna would increase and enhance PRNS's popularity, as well as its natural biome.

The NPS already studied this matter, decades ago, and determined the fence should be removed.

It is requested the personnel at the National Park Service re-review the 1993 report of the Scientific Advisory Panel on control of Tule Elk in PRNS, and include it recommendation in the upcoming plan. The independent advisory panel recommended to remove the fence across Tomales Point, and develop a plan to achieve a large, healthy, free-ranging elk population. Thank you Mr Kenkel for your attention to this recommendation.

**Correspondence ID:4244**

Correspondence: I want to thank you for taking my public comment on the Tomales Point scoping process at Point Reyes National Seashore. I cannot believe there is a Prison Fence restricting Tule Elk in our national park. What is that about? To please the cattle ranchers, and prevent the Tule Elk from being free to roam, associate, and live a good life? No more animal prisons in our national park. Point Reyes is not a zoo either. It is time to take down the elk fence.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

The NPS should put resources into creating a rewilded park. It will be necessary to plan on demolition and disposal of the many tons of concrete which now comprise the modern loafing barns at each PRNS dairy (one of which supposedly closed a year ago).

Taking down the fence is the best option, according to ecologists.

Thanks so much for reviewing my comments, putting them in the public record, and actually using them! Tomales Point cannot continue as it is, with Tule Elk held captive, starving and dying of thirst. You're the National Park Service, and should protect native wildlife. Let the elk go free to feed, drink, mingle, mate, and live their lives across the Seashore. The public knows this, you know this - so let's do it, together! Help wildlife and habitat thrive, not the ranching polluters!

**Correspondence ID:4245**

Correspondence: Proposed plans for PRNS must include the removal of the elk fence at Tomales Point.

The elk fence has hidden costs that have not been analyzed or made public before. Besides the typical costs of fence construction and maintenance, there's the cost of park staff having to make sure the water tanks that serve the captive elk herd are maintained and kept filled, the mineral licks provided are sufficient to the herd's needs, and complaints from ranchers are responded to. Then there are the costs of the impacts on the area outside the fence: the massive amounts of invasive plants that have forced out the native, deep-rooted grasses that are true effective carbon sequesters, the elimination of habitat for indigenous animals of all sizes, the carbon created by the rotting of annual invasive gasses, and more. And because the fence only exists at the request of cattle ranchers, NPS should look at the costs of the damage the cattle do with their methane pollution the atmosphere and their manure polluting the parks' streams, lagoons and bays. These ecological costs haven't been accounted for, and need to be.

It is requested to stop using taxpayers' money to pay for the visual blight of the Elk Fence out on Tomales Point. Please stop trucking in water and minerals and whatever else to try to sustain a native herd in a non-native environment. Take down the fence, and use our taxpayers' money to actually turn the Seashore into a National Park that it deserves. Wildlife, natural habitat, clean water/soil/air, and public access should be the primary forces the Park Service supports - not a small group of politically-connected ranchers and their hoofed methane-operations.

Confining Tule elk for the benefit of private ranching interests is a breach of the public trust.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity.

**Correspondence ID:4246**

Correspondence: Dear Superintendent Kenkel:

I am writing on behalf of the nearly 900 members and supporters of Californians for Western Wilderness (CalUWild), a citizens organization dedicated to encouraging and facilitating participation in legislative

and administrative actions affecting wilderness and other public lands in the West. Our members use and enjoy the public lands in California and all over the West.

Pt Reyes National Seashore is a unit of the National Park System. The Organic Act requires that park resources be maintained unimpaired for the enjoyment of present and future generations.

Preservation of ranching was not one of the reasons that the Seashore was established in 1962. And few, if any, visitors come to see dairy and beef cattle operations. There are plenty of other places in Marin County to see those. There are no other places with Tule Elk, however. Thus, the primary focus of any plan must be the preservation and long-term protection of the Tomales Point Tule Elk herd.

This means removing the fence, so that they can roam freely in search of water and forage with sufficient moisture (since lack of that was one of the reasons given by the Park Service for the recent die-off)

Because much of Tomales Point is in designated Wilderness, it is not appropriate for water installations to be put in place there, should it be determined that supplemental water is necessary.. Any such installations should be outside the designated Wilderness, and elk be given easy and free-roaming access to them.

Ranching operations should be curtailed and eliminated across the Seashore as rapidly as possible. That is the only way that Tule Elk can be successfully managed. Predator populations should be encouraged and restored to the extent possible.

Allowing a more "natural" ecosystem regime for Tule Elk will have the added benefit of also helping to restore native plant populations in the Seashore by restoring the grazing regime that existed there before ranching was established.

Finally, the local Miwok people must be consulted and included in any plan, both with the planning and actual management, subsequently.

Thank you for the opportunity to comment. Please inform us as the decision making process in this matter proceeds and please also inform us of further opportunities to be involved in your public decision-making processes.

Respectfully submitted,  
Michael J. Painter  
Coordinator

**Correspondence ID:4247**

Correspondence: To assist the NPS with its planned NEPA review of the Tomales Point area and Tule elk herd management in Pt. Reyes National Seashore, I suggest the following issues be included in your review process, and any eventual Environmental Impact Statement that comes out of it. These points are intended to insure that the park resources, including the Tule elk and native plants and animals, get the maximum protection for the public's current and future benefit.

With the fence gone, effort and money would be saved. Tule elk would have plenty of water available from the valley below.

All National Park Service resources should be directed to restoring the land to benefit the biodiversity within the park. This is what the public wants and needs, and what we need to do to help fight a biodiversity and climate crisis.

Removal of the Tule Elk Reserve fence across Tomales Point in Point Reyes National Seashore must happen now. This must be done urgently in light of the drought and fire conditions caused by climate change. It must include a completely revised and science-based plan, enhanced by Native American ecological knowledge and practices, to cease the ranch succession policies of the past in favor of transformation to natural habitats, with well-planned wildlife corridors to aid natural and assisted rewilding restoration processes.

Thank you for serious attention to my suggestions for the Tomales Point planning process. It is time for the Tule Elk Reserve to be dismantled, for the Tule Elk to roam free for water and forage, for funds to be spent on transition from ranchlands to native habitat, and for the current reserve to be transformed into a Native Coastal Habitat research area open to the public, with indigenous knowledge and practices at the forefront. Please remember your mission to protect and preserve nature for posterity.

**Correspondence ID:4248**

Correspondence: I am a taxpayer who wants you to remove the fence confining the tule elk. It is important our elk survive and are well cared for in a natural habitat, vs confined behind a fence which keeps the elk away from much needed water and forage.

Tomales Point is not a zoo. The taxpayers do not want to incur the cost of feeding and providing water to wild animals. Nor do they want to visit a zoo. A simple solution, and one that is the most cost effective, is to stop "managing" the park. Take down the fence, remove the cattle, and let nature run its course.

Moving forward the Park Service should partner closely with the Coast Miwok and scientists to re-wild the park.

Point Reyes National Seashore should plan for prompt removal of the Elk Reserve fence on Tomales Point. This will achieve Tule Elk freedom of movement to naturally water, forage, and mate, and sustain optimal health and well-being of Tule Elk throughout the Seashore.

Thank you for your attention to my public record comments on the Tomales Point planning process for Point Reyes National Seashore. Your responsibility is to the spirit of wilderness preservation and protection, and to the vast majority of Americans who have insisted that this iconic place be freed from private, for-profit, commercial business interests. We will continue to press for just that, like taking down the Tomales Point fence.

**Correspondence ID:4249**

Correspondence: Please remove the elk fence from Point Reyes National Seashore in order for the elk herds to have access to sufficient amount of water, minerals and forage.

It is an ill-founded strategy that will endlessly proliferate the same conditions over and over postponing if not abandoning the desired outcome. These efforts should not be viewed as 'job-security' as the public deserves the outcome spelled out in the original legislation setting the National Seashore up, the

elimination of cattle ranching and the reestablishment of the flora and fauna of the Tomales Point ecosystem.

Why is the NPS having separate GMPs for the leased ranch lands and for the Tule Elk Reserve? Is this not all one national park? Are you going to have a separate GMP for the southern part of the Phil Burton Wilderness area? PRNS needs to be managed as one comprehensive and coordinated part, not sliced up in pieces. As a member of the public I don't see separate areas.

First and foremost, NPS should remove the fence that separates the Tomales Point herd from private, for-profit ranching livestock and prevents the elk herd from finding forage and water in its own. This would allow a more natural existence, without interference from humans.

Thank you for listening to the public and considering the wishes of the many instead of the profits of a few.

**Correspondence ID:4250**

Correspondence: I want to thank you for taking my public comment on the Tomales Point scoping process at Point Reyes National Seashore. I cannot believe there is a Prison Fence restricting Tule Elk in our national park. What is that about? To please the cattle ranchers, and prevent the Tule Elk from being free to roam, associate, and live a good life? No more animal prisons in our national park. Point Reyes is not a zoo either. It is time to take down the elk fence.

As a taxpayer I expect the National Park Service to spend money wisely and frugally. I also expect the Park Service to prioritize wildlife over private enterprise. Therefore I ask the Park Service to stop spending money on erecting and maintaining a wildlife fence for the sole purpose of keeping native Tule Elk out of the parcels that are leased by private cattle and dairy ranch operations within a National Park.

Instead of US taxpayers footing the bill for a godawful fence to keep elk without enough water and food out at Tomales Point, the Park Service needs to take down the fence, remove the thousands of cattle impacting the land, air, and waters, and let nature be whole at Point Reyes National Seashore.

The Tomales Point management plan for Point Reyes National Seashore must include removal of the Tule Elk Reserve fence, freedom of movement and association by the existing Tule Elk herds throughout the Seashore, and transition from a Tule Elk Reserve to a protected Coastal Native Habitat Reserve. Please include in this plan, the creation of safe wildlife corridors to facilitate Tule Elk migration elsewhere into the Seashore and all manner of other endeavors true to National Park Service founding mandates for natural resources protection and the enjoyment of natural features by future generations. In addition, it must include immediate cessation of the ranching succession policy in favor of immediate removal of commercial cattle operations and its ranch residential infrastructure.

The original studies done by the NPS on how to manage the Tule elk showed they should be allowed to roam free. I will be tracking this process to see what the Park Service's plans are in this regard. I and the vast majority of the public want better treatment of the elk, and better treatment of the Seashore itself. We do not want to see for-profit ranches degrading our beautiful park. This is the Park Service's opportunity to do this job right. You have my support in achieving this.

**Correspondence ID:4251**

Correspondence: California's beautiful native Tomales Point Tule Elk deserve our help to survive. Prioritizing grazing cattle is killing these Tule Elk.

Almost half of the Tomales Point Tule Elk Reserves herd died in the last few years due to lack of access to forage and inadequate sources of water. Removal of the Tule Elk Reserve fence is the only way to enable the Tule Elk to obtain sufficient food and water and will help to resolve the lack of genetic diversity which also threatens the Tomales Point herd.

Removing the fence gives the Tomales Point Tule Elk a fighting chance. Please do this for them.

**Correspondence ID:4252**

Correspondence: I am writing the National Park Service, to state that the Elk fence needs to be removed in order for the elk herds to roam freely in the park. This is the best next step for the survival of this endemic species.

Maintenance of an 8-foot fence and providing water and nutrition for captive Tule elk is not a reasonable use of funds, when the Tule elk could find adequate food and water if they were allowed to freely roam.

Viewing the Tomales Point project from an objective approach, the most cost effective long-run plan is to take down the elk fences without the interference of cattle concerns and let the herds roam in a natural manner. The health of the elk herds could be clearly addressed, as well as the flora can be given its space for natural progression and seed dispersion. This would focus on only one plan to implement, for taxpayers and NPS staff, and not take the resources with two competing approaches.

Removal of the Tule Elk Reserve fence across Tomales Point in Point Reyes National Seashore must happen now. This must be done urgently in light of the drought and fire conditions caused by climate change. It must include a completely revised and science-based plan, enhanced by Native American ecological knowledge and practices, to cease the ranch succession policies of the past in favor of transformation to natural habitats, with well-planned wildlife corridors to aid natural and assisted rewilding restoration processes.

We need a long-range plan that supports a healthy population of native Tule Elk. It is time for the Park Service to prioritize our elk in PRNS over private cattle operations on our public land. Thank you in advance, for a plan that will include immediate removal of this unnatural and unethical eight foot fence.

**Correspondence ID:4253**

Correspondence: The following are comments addressing the upcoming plan for Tomales Point within Point Reyes National Seashore. The National Park Service should not be creating a separate plan for this area of the park, or any other area of the park as it should be included in the Park's General Management Plan and the park should be managed as one whole unit. The complex ecosystem within the park should be treated as one entity, and the health of that entire system is the responsibility of the park service. To do otherwise can only be seen as irresponsible and cruel.

It is not clear why the Park Service continues to spend taxpayer money for an unethical eight foot fence at the Tule Elk Reserve when the public has requested for years to remove the fence and let the Elk roam for free to get their water and food.

Tomales Point and its elk herd should have a wildlife management approach to management. Free access for the elk to roam, restoration of the native grasses and the elimination of invasive plants, removal of private cattle and dairy operations, and unhindered access for the public to wander the land while respecting the natural flora and fauna would increase and enhance PRNS's popularity, as well as its natural biome.

Removing the elk fence is the most impactful step the Park can take for Tomales Point, and this should be the plan review's top priority. This and total removal of all dairy and cattle operations from all of the park would have the strongest positive impacts, both ecologically and in terms of protection of the public's resources. The removal of both would benefit the return of native, deep-rooted grasses, allow the return of birds and wildlife that cannot survive in the barren fields where cattle have eaten the greenery down to the earth, and let the natural prairie reestablish itself. It could also serve as an outdoor laboratory for studying how to accelerate its healing and nurturing, information that will be increasingly important as we try to save our planet from the damages of global warming.

Thank you for taking the time to read this comment, and for inviting public input. The land in Point Reyes National Seashore belongs to the public, and should be managed for public, not for private benefit.

**Correspondence ID:4254**

Correspondence: RE: Scoping Comments on the Tomales Point Area Plan for Point Reyes National Seashore

The Resource Renewal Institute (RRI) appreciates the opportunity to provide the scoping comments before the National Park Service (NPS) initiates a formal National Environmental Policy Act (NEPA) process for the 2,900-acre Tomales Point Tule Elk Reserve (the planning area).

Since the 1970s, RRI's founder, the late-environmentalist Huey Johnson, has dedicated energies to the protection of the lands, waters, and wildlife of Point Reyes National Seashore for current and future generations. For example, in the 1970s, Huey founded the Trust for Public Land and, through that organization, acquired various parcels from the RCA Corporation in the 1970s. In 1976 and 1977, the Trust for Public Land announced the purchase of 2,300 acres (G Ranch and what is now Niman Ranch/Commonweal area) of coastal Marin property for eventual inclusion into the Golden Gate National Recreation Area (GOGA) and Point Reyes National Seashore (PORE). More recently, RRI has dedicated significant volunteer and staff time and resources to research NPS management of PORE and GOGA lands and to participate in various public processes related to the aforementioned management.

RRI has read the NPS letter dated March 31, 2022, and understands the intent of the planning effort is to replace the 1998 Tule Elk Management Plan for Tomales Point and to update the park's General Management Plan as it relates to the planning area. To date, we are aware that the NPS has identified multiple issues as part of the planning effort including the maintenance or removal of the tule elk fence; population management of the Tomales Point tule elk herd; supplemental water for the elk; wilderness management; and visitor use and infrastructure at Pierce Point Ranch. Finally, we applaud the NPS at PORE for providing meaningful opportunities for Tribes to participate in the decision-making process that affects tribal interests.

RRI's scoping comments intend to provide substantive comments regarding management activities with the Tomales Point Area; however, we also acknowledge that the outcomes associated with the Tomales

Point Area Plan (TPAP) are predicated on assumptions about adjacent land management practices found in the NPS Record of Decision (ROD) for the General Management Plan (GMPA) completed at PORE and GOGA, which is currently being challenged in court. As such, we provide a collection of proposed alternatives for the TPAP NEPA process that provide dynamic responses to management challenges currently being experienced in the planning area. RRI recommends that TPAP alternatives recognize the connection between the planning area and the adjacent lands at PORE, to the south of the Tomales Point Area.

**\*Problem Statement\***

The public has expressed concern over the NPS management of the Tomales Point tule elk herd, which has resulted in numerous die-offs in recent years.

Between 2012 and 2015 the population at Tomales Point declined by approximately 50% dropping from 540 to 283. The loss of animals is believed to be related to drought conditions, mineral deficiencies, and a population level above carrying capacity within the enclosure.

Once again, in 2021, the NPS announced a die-off of 221 elk in the Tomales Point Herd. Since then an additional 72 tule elk have died. As proposed during the 2012-2015 drought, the loss of animals is believed to be related to drought conditions, mineral deficiencies, and a population level above carrying capacity within the enclosure.

During each die-off incident, the free-ranging tule elk herds in PORE did not experience any die-offs, with populations remaining stable or declining slightly.

These "boom and bust" cycles had been anticipated in numerous publications and white papers developed since tule elk were reintroduced to PORE. Large mammalian herbivores in a restricted reserve may grow to a number that exceeds the ability of the habitat to sustain them (McShea et al. 1997b). This finite amount of food resources, when coupled with the effects of crowding, was anticipated to eventually lower reproductive rates, increase mortality, and lead to a reduction in the rate of population growth. (Porter 1992).

In addition to overpopulation, tule elk at Tomales Point are known to suffer from nutritional copper deficiencies due to poor soil/forage and Johne's disease, a cattle-borne form of paratuberculosis which transplanted elk likely to have been contracted from cattle at PORE between 1978 and 1979 (Gogan and Barrett 1986).

As a result of recent droughts, and the die-offs of tule elk at Tomales point that followed, the general public demanded a response. Initially, activists delivered water to the tule elk at Tomales Point. Eventually, the NPS bowed to public pressure and decided to forgo its "hands-off" management policy, and have delivered water and mineral supplements to the Tomales Point tule elk herd; questions remain about the viability of a business-as-usual management strategy for the Tomales Point Area. Since the release of the 1998 Tule Elk Management Plan, new questions exist about vegetative succession and forage quality since the cessation of ranching in the planning area. In addition, climate-induced uncertainty in precipitation patterns and air temperature have revealed new questions about hydrology in the planning area. Both of these issues affect tule elk population dynamics, along with other wildlife species--including threatened and endangered species.

RRI believes the following alternatives should be considered to address the management challenges the NPS currently faces in the planning area:

## \*Proposed Alternatives\*

### A. No Action Alternative

The "No Action" alternative is required by the National Environmental Policy Act (NEPA).

### B. Elk Fence Removal Alternative

The "boom and bust" cycles associated with the artificial island ecosystem at the northern end of the National Seashore are a direct result of a 7-foot-tall, 2.4-mile elk fence at Tomales Point that bifurcates the planning area from the result of the Point Reyes Peninsula. Gogan and Barrett (1986) state: "There is an inherent conflict in attempting to manage within a Park Service natural zone an ungulate population existing under unnatural conditions, i.e., restrained by fencing to a small area without any opportunity to disperse."

The presence of the elk fence was a stipulation associated with transplanting tule elk to PORE. In their 1971 "Report on Survey of Potential Transplant Sites for Tule Elk", the California's Tule Elk Interagency Task Force stated: "An elk fence is mandatory, to the extent they cannot move to adjacent private lands and cause depredation problems or to adjacent service lands where dairy cattle are grazing."

If the existence of the elk fence is predicated on concerns regarding conflicts on adjacent NPS lands where dairy cattle are grazing, there is an opportunity to explore the possibility of fence removal based on the newly developed NPS's ROD Succession Policy for beef and dairy ranches at PORE and GOGA. The ROD and Succession policy both demonstrate the potential for conversion of dairy ranches to beef ranches in the near future, the conversion of commercial cattle ranches to lands management by Tribal governments, or the possible closure of ranch operations altogether.

Removal of the elk fence would have little effect on wilderness, so long as cattle cannot move into the wilderness area.

This alternative help the NPS meet CDFW elk management goals for the confined herds are including:

- 1) reduce the number of confined herds and reduce the frequency for removing excess animals;
- 2) enhance habitat within enclosures; and
- 3) enhance opportunities for public use and enjoyment of elk that includes wildlife viewing and education.

In particular this option would help meet the following objectives:

Objective 1.1. Eliminate one or more confined herds by 2025.

Goal 2. Enhance habitat within enclosures;

Objective 2.1. Enhance elk habitats by at least 5% by 2028.

Goal 3. Enhance opportunities for public use and enjoyment of elk that include wildlife viewing and education.

Objective 3.1. Increase elk viewing and educational opportunities by 20% by 2023.

### C. Elk Range Expansion Alternative

Elimination of the range restriction for the confined herd would satisfy CDFW goals as expressed in the 2018 Elk Conservation and Management Plan; however, the NPS could use this planning process to envision the re-establishment of a healthy tule elk population on a range which has returned to a natural successional regime outside of the planning area.

RRI believes this alternative is consistent with overall elk management plan goals and objectives from the California Department of Fish and Wildlife (CDFW) 2018 Elk Plan.

#### D. Tule Elk Corridor Alternative

Tule elk in California have been through a series of genetic bottlenecks with undetermined effects. The population of tule elk at Point Reyes' has been estimated to contain the lowest level of genetic variation (or heterozygosity) of all the herds in the state of California, based upon an analysis of translocations and bottlenecks (McCullough et al. 1996). This low level of genetic variation is due to CDFW policy that prohibits the translocation of tule elk from PORE due to the prevalence of Johne's disease. The Point Reyes elk herd relies on its genetic makeup and diversity to cope with ' the challenges of its environment (see aforementioned challenges in the Problem Statement).

A corridor should be explored to help connect the Tomales Point herd to the other herds in PORE to enhance genetic diversity.

#### \*Critical Information Required for the NEPA Process\*

Effective conservation and management of elk requires reliable information on population size, density, age structure, fecundity (birth rates), mortality (death rates), sex ratio, and their use of habitats throughout the year and over time. This information will be necessary in the planning process moving forward.

In California Department of Fish and Wildlife's (CDFW) Elk Conservation and Management Plan (2018), CDFW state's that they are currently collaborating with the NPS to 1) identify/establish specific vegetation management thresholds for Tomales Point; and 2) determine the prevalence of Johne's disease within tule elk at Tomales Point. RRI understands that the former was scheduled to be completed in 2021, while the later work is ongoing. Please provide the most up-to-date information on both of these processes with CDFW to help RRI and the public ascertain a more complete understanding of forage availability and disease prevalence within the planning area.

Please disclose the current costs for maintenance of the elk fence at Tomales Point.

Please disclose costs associated with the removal of the elk fence at Tomales Point.

Please disclose the Tomales Point elk management activities (e.g., hazing) and associated costs.

Please produce information on water resources within the planning area, such as stock pond, spring, and seep abundance, distribution, and estimated productivity. Please produce visual aids (i.e., maps) that present spatial and topographical characteristics of these water resources.

Please disclose the annual costs associated with providing supplemental water and mineral supplements, to date, to provide the public with the full costs associated with that program.

Please produce an inventory of threatened and endangered species within the planning area. Please provide visual aids (i.e., maps) that present spatial representation of species distribution within the planning area.

Please produce an inventory of flora and fauna within the planning area. Please provide visual aids (i.e., maps) that present spatial representation of species distribution within the planning area.

Please produce Please provide visual aids (i.e., maps) that present spatial and topographical representation public recreational opportunities within the planning area.

**\*Conclusion\***

In 1979, a statewide tule elk management plan was prepared by the Tule Elk Interagency Task Force with an overall goal "to ensure the continued growth of healthy, free-roaming tule elk herds of sizes that are ecologically compatible with the suitable habitats of California."

The Tomales Point elk herd's limitation to Tomales Point is an historical artifact of their reintroduction onto an area bounded by historic ranches areas the intent to restrict their movements to a protected preserve. If they are to remain as part of the Seashore's fauna and ecological processes, they should eventually become free- ranging throughout most of the Seashore's zones where conditions allow.

RRI believes that the management decisions born out of this planning process can help the state of California realize this long-held vision for the tule elk.

Sincerely,

Chance Cutrano  
Director of Programs  
Resource Renewal Institute  
8 Bolinas Rd, Suite 3A  
Fairfax, CA 94930

**Correspondence ID:4255**

Correspondence: Thank you for the opportunity to comment on Tomales Point. Why is this area being treated separate from Point Reyes National Seashore? As it is within the boundaries of the seashore it should be interwoven within the fabric of the rest of the seashore and the ecosystem allowed to become whole instead of piecemeal. A visitor should be able to walk/hike the entirety of the park. And the native grasses and wildlife (including elk) should be able to roam freely within all areas of the park. Please remove the elk fences and let the park be an actual park.

The Park Service should not be spending so much money to maintain fencing at Tomales Point Reserve. There are all the expenses for materials, then all the hidden costs and time for labor, operations, administration, and rancher-pleasing. As a concerned citizen for the elk, please spend the money to remove the fence and free the Elk.

I respectfully ask that the Tule Elk Reserve fence be taken down now. National Park Service and Point Reyes National Seashore funds supplied by the American taxpayer should be used to create wild and

healthy freedom for the Tule Elk and other wildlife. Public access to vast swaths of the Seashore now blocked by ranching barbed/electric wire and formidable gates, which is not acceptable on public lands. Please investigate, enforce, and punish cattle ranching families that continue to degrade and pollute our Seashore's lands, waters, and air. Superintendent Kenkel and all of you at the NPS: It is time to get your priorities and mandates straight. Please serve the interests of wildlife, habitat, visitors, and posterity.

A national park should have a minimum of fencing, especially fencing that prevents natural migration of a native species.

Point Reyes National Seashore, after 60 years from its founding, should be a national pride of astounding biodiversity, global climate research, and honor of the public trust in perpetuity. Please emphasize and prioritize the importance of protecting our native Tule elk in the upcoming plan, which would include the removal of the fence across Tomales Point.

**Correspondence ID:4256**

Correspondence: I am writing to you specifically to address your plans for Tomales Point in the Point Reyes National Seashore. As they currently stand, they need to be incorporated into the General Plan for the Seashore - not as a separate part of it. It does not make strategic or economic sense to treat them as a part-as-to-of-themselves. The steps to restore the flora and fauna for all areas must be incorporated into the dynamics of the plan at the outset.

The current plan of what is called a 'co-habitation' - which is a farce - is wasteful in a number of ways. Instead of letting the elk populations roam the land to access the water and flora they have evolved to need for subsistence, it often needs to be trucked in to keep populations at levels 'mandated by a plan'. Not only do these resources need to be expended to keep the herds alive - then later, National Park Service personnel go and cull the population when it exceeds their some-how-agreed upon 'rancher-acceptable' number.

Rather than maintaining the elk fence, troughs and mineral licks, the NPS could better use these resources to develop educational materials and programs about Tule elk.

As an endemic species, Tule elk benefit the land, and allowing them to freely roam in Point Reyes National Seashore will enhance the park overall.

Thank you for your attention to my comments. Tomales Point should be an open area, not fenced in because ranchers use false arguments against Tule Elk. Cattle by the thousands at Point Reyes Seashore cause exponentially more damage than a few hundred Tule Elk. The Park Service should protect and help wildlife and their habitats, not promote private, for-profit ranching. The fence needs to come down, and the ranchers need to stop interfering with wildlife, polluting streams, and hassling Park visitors. The ranchers need to either give up some of their privileges, or get out of the Park. The American people will be watching how you approach what's right for Tomales Point and our National Park.

Correspondence: Re: Tomales Point Area Plan + Elk Herds  
April 10, 2022

Dear PRNS Superintendent:  
North Bay Seismic Design

PO Box 55, Inverness, California 94937

Tel/Fax: (415) 663-8161

NBSD@horizoncable.com

I am writing you to urge to you preserve the Elk herds in the Point Reyes National Seashore, and to help the best interests of these noble wild creatures.

I dive (when abalone season is open .... ), surf, live, and work in the Park or within 2 miles of the Park boundaries, and have done so for 3-4 decades (diving since 4/1/1986, living since early 1998).

I love to interact with the Tule Elk, whom I see as some of the very last wilderness available anywhere I have been to, and which give the Park credibility and reason for its existence. The Elk herds should protected, now and forever.

For that reason, I would propose the following:

- Removal of the Elk Fence;
- Limited population management of the Tomales Point Tule Elk herd, and only for the best interests of the herd;
- Provision of water in times of need;

As for visitor use at Pierce Point Ranch, I know from personal experience these noble animals tolerate humans well (in the Park, not elsewhere necessarily, like the Lost Coast), and therefore there should be no or very limited restrictions for visitors, even as clueless as some of these tend to be; even elephant seals have adjusted well recently to clueless humans lacking respect for giants.

Us humans have done enough damage with our greed and selfishness all over the planet; it is time to reverse the insane damage we have done to life everywhere, and learn to live within our means while learning to respect the fabric of life which surrounds us. It does not belong to us, but instead it is our responsibility to protect it.

Thank you for taking my comments into consideration.

### **Correspondence ID:4258**

Correspondence: Dear Superintendent:

The National Park Service (NPS) announced that it has initiated a new planning process to address "complex wildlife, resource, and wilderness management issues" at Tomales Point at Point Reyes National Seashore (PRNS). The planning area includes the 2,900-acre Tomales Point Tule Elk Reserve where native tule elk, once thought to be extinct, were reintroduced in 1978.

The NPS anticipates completing the Environmental Impact Statement by the end of 2024. Once completed, this plan would replace the 1998 Tule Elk Management Plan and the NPS General Management Plan for the planning area. NPS discusses how this planning is separate from the recent General Management Plan Amendment which addressed ranching within the park and free-ranging tule elk.

Point Reyes National Seashore is one of a handful of national park units that permit livestock grazing. The purpose of the Tomales elk fence is to exclude tule elk from dairy and beef ranch leases. In the recent General Management Plan process, the NPS proposed to remove the elk fence and restore the Seashore to public use by sunseting ranching under Alternative F, which would have allowed all elk to roam free. Instead, the NPS approved an alternative which keeps elk trapped behind the fence, expands commercial agricultural activities, and extends ranch leases for up to 20 years. This is all related, and we believe that a separate Tomales Point Area Management Plan is too narrow.

1. Instead of a separate implementation planning process, this needs to be a General

Management Plan Amendment. NPS is trying to use a narrow implementation planning process by starting with proposing to update its 1998 Elk Plan which detailed how to manage elk at Tomales Point, instead of starting at the top of its planning pyramid and deciding how the broader lands and resources of Tomales Point should be managed. A General Management Plan (GMP) amendment should be undertaken, not an updated yet narrow Elk Plan. The GMP should come first, not this Tomales elk implementation plan. Implementation plans should tier off a broader GMP amendment. Implementation plans can discuss in a detailed, site-specific way how to carry out the more-general GMP decisions. Yet PRNS wants to do this planning process in reverse, pre-determining the outcome of a revised Elk Plan at Tomales Point. Instead, NPS needs to review a GMP amendment for Tomales Point. See the NPS planning process descriptions below:

General Management Plan - This is a broad umbrella document that sets the longterm goals for the park based on the foundation statement. The general management plan (1) clearly defines the desired natural and cultural resource conditions to be achieved and maintained over time; (2) clearly defines the necessary conditions for visitors to understand, enjoy, and appreciate the park's significant resources, and (3) identifies the kinds and levels of management activities, visitor use, and development that are appropriate for maintaining the desired conditions; and (4) identifies indicators and standards for maintaining the desired conditions

Implementation Plans -These plans provide project- specific details needed to implement an action in an area of a park and explain how the action(s) helps achieve long-term goals.

(Part 2 of NPS Management Policies 2006.

[https://www.nps.gov/subjects/policy/upload/MP\\_2006.pdf](https://www.nps.gov/subjects/policy/upload/MP_2006.pdf) )

NPS says it intends to include both programmatic and site-specific analysis, and this should be clarified and explained.

2. The Tomales Elk Reserve fence needs to be removed. The public has overwhelmingly supported<sup>1</sup> protection of tule elk and restoration of Point Reyes National Seashore to natural conditions with wildlife, over commercial livestock management.

Free-roaming tule elk have already spread across the ranch-leases and reached the Tomales Point elk exclusion fence: there are presently elk on both side of the fence. Connectivity should be created by removing the fence.

3. Drought mortality of tule elk is unacceptable. NPS admits that the impetus for this planning process is the extreme drought conditions over the past several years (Dear Interested Party Tomales Point Area Plan PDF at

<https://parkplanning.nps.gov/document.cfm?parkID=333&projectID=108690&documentID=119614>). The Tomales Point Tule Elk herd has been the subject of national controversy at Point Reyes National Seashore. In 2015 during an extreme drought, the NPS announced the population behind the elk fence declined from 540 to 2862.

While NPS attributes this recent elk die-off in its press release to "poor forage quality," and asserts "there is no evidence that the population decline is due to dehydration and a lack of water," NPS is well aware of the scarcity of fresh water on the Tomales Point peninsula. Elk die- offs on Tomales Point occurred between 2012 and 2015, resulting in the death of 250 elk that were attributed to a lack of fresh water by NPS personnel in April of 2015.<sup>2</sup> These news stories characterized the Park Service position as drought being the suspected cause of the elk death, drying ponds and grasses, the latter of which became inedible, and quoted NPS biologist Dave Press as stating, "While we were out on

the range conducting our annual census, we observed the ponds had gone dry." (Later, after a public outcry over the fact that the Park Service had allowed the old stock ponds in the enclosure to go dry, the Park Service changed its story, and in August 2015 officially denied that the lack of available water had played a role in the elk die-off).<sup>3</sup> This denial is in spite of the fact that the biologists who wrote the 1998 Point Reyes National Seashore Tule Elk Plan expressed concern that the ponds were a factor in determining the ability of the elk enclosure to support its population:

The peninsula of Tomales Point ranges from a narrow tip to over a mile and a half wide at the fence line enclosing the elk range. There are no natural year-round streams. The natural streams have significant flows only during the rainy winter months. From late spring to late autumn, only spring-fed seeps would provide water for elk if not for the existence of eight water impoundments originally built for cattle. Elk regularly use these impoundments, but it is unknown to what extent they may supply the population with an artificially high water source. The elk range does receive significant moisture in the form of summer fog and condensation during the dry season. The impoundments are considered as a possible means to manage tule elk under this plan. The water impoundments are a factor in determining the ability of the elk range to support its population. While clearly an artificial construction, caution should be taken to ensure that any alteration of artificial water sources does not impact other species of special concern. Otherwise, a return of the elk range to its native condition of seep-fed springs is considered desirable to maintaining viable populations.

[https://www.nps.gov/pore/learn/management/upload/planning\\_tule\\_elk\\_mp\\_ea\\_1998.pdf](https://www.nps.gov/pore/learn/management/upload/planning_tule_elk_mp_ea_1998.pdf) at 12. (Emphasis added.)

In the context of the National Environmental Policy Act (NEPA) process for the General Management Plan being prepared to govern Point Reyes National Seashore and Golden Gate National Recreation Area, numerous commentators called NPS's attention to the lack of fresh water available to elk on Tomales Point during drought conditions. In August of 2020, after ponds dried up on Tomales Point, a group of volunteers brought in water for the elk to address concerns about dehydration<sup>4</sup>. Photographs of elk that died in the mud of dried-up watering holes attest to the reality that scarcity of fresh water appears to be at least a contributing cause to elk mortalities on Tomales Point. Once again in 2020, Park Service officials denied that lack of fresh water was a factor in the die-off<sup>5</sup>.

In 2020, hikers photographed dead and emaciated elk behind the fence at Tomales Point and brought it to the attention of the NPS.

In April 2021, NPS issued a press release disclosing a population decline in the Tomales Point elk herd, from 445 animals to 293 animals<sup>6</sup>. This loss of 152 elk occurred in the midst of a prolonged drought. The ultimate cause of this die-off (and previous die-offs) is the confinement of the Tomales Point elk herd behind the fence, on lands that do not reliably provide for all of this elk herd's survival needs.

As NPS is well aware, the soils on Tomales Point are deficient in key minerals needed by tule elk to survive and thrive. The Sheridan-Baywood soil type, associated with copper deficiencies problematic for tule elk, is known to dominate Tomales Point, according to the Park Service's own Tule Elk Management Plan<sup>7</sup>. These soil deficiencies and the dietary problems they cause for tule elk at Point Reyes are so well-known that they have been documented in multiple scientific studies. Gogan et al (1988) reported antler deformities in elk on Tomales Point, which they related to copper deficiencies<sup>8</sup>. Gogan et al. (1989) found that plants and soils at Tomales Point were deficient in copper (an

essential trace element), molybdenum, and sulfur-sulfates, and that elk were showing "gross signs of copper deficiency," which may have been a contributing factor in the death of two elk in Spring of 1979. Cobb (2010) found that the most common cause of death for tule elk at Point Reyes was starvation, often accompanied with copper and selenium deficiencies<sup>10</sup>.

While NPS officials have repeatedly denied that scarcity of water on Tomales Point is a serious issue for the elk, this assertion is beside the point, and does not absolve the National Park Service of its culpability for mismanaging NPS lands and resources and directly causing this unnatural biological crisis. Regardless of whether the repeated elk die-offs on Tomales Point are caused by a lack of fresh water, by inadequate forage quantity, by dietary deficiencies related to the particular soil composition on Tomales Point, or some combination of these factors, the inevitable conclusion is the same: Resources available to the tule elk population confined on the 2,600 acre Elk Reserve at Tomales Point are often inadequate to sustain the captive population in a healthy state, particularly under drought conditions. If the NPS is going to hold wild animals captive (which the undersigned groups find inappropriate), NPS has an obligation to provide them adequate food, water and anything else they need to stay healthy.

NPS has an affirmative legal responsibility to conserve tule elk, as elucidated in a letter to the NPS of August 31, 2020, authored by Katherine Meyer, Director of the Animal Law and Policy Clinic at Harvard Law School<sup>11</sup>. NPS also has an affirmative legal duty to provide wildlife and natural resources on Point Reyes National Seashore "maximum protection" and leave them "unimpaired for the enjoyment of future generations." 16 U.S.C. § 459c-6(a); 54 U.S.C. § 100101(a). The enabling legislation for this Park Service unit specifies that this National Seashore was established "to save and preserve, for purposes of public recreation, benefit, and inspiration, a portion of the diminishing seashore of the United States that remains undeveloped ...." Pub. L. No. 87-657, 76 Stat. 538 (1962). Interdicting the freedom of movement of native wildlife for the benefit and convenience of livestock operations that lease Park Service lands, resulting in large-scale die-offs of tule elk, violates these legal mandates.

Under NPS policy, "Natural resources will be managed to preserve fundamental physical and biological processes, as well as individual species, features, and plant and animal communities .... By preserving these components and processes in their natural condition, the Service will prevent resource degradation and therefore avoid any subsequent need for resource restoration."<sup>12</sup> Furthermore, "Biological or physical processes altered in the past by human activities may need to be actively managed to restore them to a natural condition or to maintain the closest approximation of the natural condition when a truly natural system is no longer attainable."<sup>13</sup> Under the alternative adopted for the Point Reyes National Seashore Tule Elk Management Plan, "The Seashore will attempt to manage free-ranging herds using minimal interventions to achieve viable populations as part of dynamic ecosystem processes."<sup>14</sup> Fence removal is necessary to restore the natural migrations and dispersals of tule elk on Point Reyes National Seashore, to maximize opportunities to achieve viable populations, and to restore dynamic ecosystem processes. Under the Point Reyes National Seashore Tule Elk Management Plan, "Their limitation to Tomales Point is an historical artifact of their reintroduction onto an area bounded by historic ranches and the intent to restrict their movements to a protected preserve. If they are to remain as part of the Seashore's fauna and ecological processes, they should eventually become free-ranging throughout most of the Seashore's natural zones where conditions allow."<sup>15</sup> More than two decades later, it is long past time for NPS to

implement this goal of its own Tule Elk Management Plan. The Park Service's refusal to do so--along with increasing drought, die-offs, and the facts described herein--also constitutes significant new information about management of the Tomales Point herd that the agency must consider under NEPA. See 40 C.F.R. § 1502.9(d)(1); 40 C.F.R. § 1502.9(c)(1)(ii) (1978). To prevent an irreversible and irreversible commitment of resources while it analyzes this information, 40 C.F.R. §§ 1502.2(f), 1506.1(a), the agency cannot continue status quo management that causes another irreversible die-off of elk in the Tomales Point herd.

In April 202 press release, the NPS references its Tule Elk Management Plan, and characterizes this year's elk die off as part of "a process called natural or self-regulation." However, the cause of these repeated die-offs of rare native wildlife is completely unnatural: the 8-foot tall fence across the width of Tomales Point, blocking the natural movements and migration of tule elk. This artificial barrier prevents elk from dispersing naturally to areas with more abundant surface water, better forage quality, and/or adequate soils that support nutritionally appropriate vegetation. It is appalling that the Park Service is intentionally and artificially blocking the movements of native wildlife in a manner that results in their deaths. Furthermore, we are concerned that the periodic dieoffs of tule elk that result from their artificial confinement on Tomales Point could result in this population dropping below minimum viable population thresholds. Elk are harem breeders, with a few males doing most of the breeding, which skews the ratio of males to females contributing their genes to the following year's calves of the year. Tule elk on Point Reyes are known to have low genetic heterozygosity, making population viability a particular concern<sup>16</sup>. Compounded by genetic bottlenecks, these unnatural, drought-induced die-offs, may also increase the Tomales Point herd's susceptibility to disease such as Johne's Disease, a cattle-borne illness found in nearby dairy operations. The elk enclosure fence at Tomales Point Elk Reserve is an integral part of the Pastoral Zone landscape, which it borders, and it was designed explicitly to exclude elk from accessing Park Service lands leased for cattle grazing, for the convenience of ranching and dairying operations. This elk enclosure fence is out of compliance with Park Service policy, which states, "When the determination has been made through a planning process that it is appropriate for a facility to be constructed within park boundaries, all facilities will be integrated into the park landscape and environs with sustainable designs and systems to minimize environmental impact. Development will not compete with or dominate park features or interfere with natural processes, such as the seasonal migration of wildlife or hydrologic activity associated with wetlands."<sup>17</sup> Emphasis added. Its removal is necessary to come into conformance with Park Service policy. Point Reyes National Seashore is a unit of the National Park Service, not a zoo or safari park, where animals are artificially confined in an unnatural or quasi-natural setting. Maintaining this captive herd at Tomales Point "runs counter to the NPS policy of not maintaining captive herds for the enjoyment of visitors but instead to maintain wild populations within natural habitats." 1998 PRNS Tule Elk Management Plan at 54. Droughts may increase in frequency and intensity with climate change, and NPS needs to adapt its management accordingly--this should be reviewed in the EIS. All stock ponds, springs, seeps, and streams should be mapped and surveyed. Herd unit typical home ranges should be mapped and overlaid with water resources. Planning for regular maintenance of stock ponds should be analyzed so that these drought disasters do not happen again.

See the Appendix for a detailed description of water resources and mapped elk herds on Tomales Point: Coda et al. 2020.

4. Hazardous downed fencing needs to be cleaned up. Wildlife photographer Matthew Polvorosa Kline discovered tule elk snagged in old and downed fencing inside the Tomales Elk Reserve, apparently causing death as the elk could not free itself. This is absolutely unacceptable in a famous National Seashore where the Organic Act mandates non-impairment of natural resources.

10

Tule elk bull with antler snagged in old, downed fencing inside Tomales Elk Reserve. Photo: Mathew Polvorosa Kline, Tomales Elk Reserve, 2020.

Tule elk bull with antler snagged in old, downed fencing inside Tomales Elk Reserve. Photo: Mathew Polvorosa Kline, Tomales Elk Reserve, 2020.

5. Population management of Tomales Elk Reserve elk needs to be scientific. Very high mortality from drought events occurred, as this an elk "zoo" not a natural habitat. Before

11

European contact, local tule elk may have been able to migrate completely out of Point Reyes area in times of drought, to more well-watered marshy areas such as the Central Valley. Future population management of tule elk herds should take a secondary stance until all commercial livestock are removed from the park unit, as beef and dairy cattle are the current limiting factor with respect to carrying capacity, forage resources, water supplies, range management, and other park resources. The Tomales Elk Reserve is an artificial population management area where NPS states it allows "nature to take its way," yet the fence is not natural, and only present in order to originally keep tule elk from entering cattle ranch-leases. Now that free-roaming tule elk herds have expanded across the ranch-leases, even to the outer side of the Tomales Elk Reserve exclusion fence, this becomes a moot point. Elk are already present in the dairy and beef ranchleases. The Tomales Elk should be allowed to escape this arid peninsula and intermix with the free-roaming elk, as a national park unit intends.

Culling of elk within and outside of the Tomales Elk Reserve is unacceptable. Instead, alternatives should be analyzed that remove the fence and remove commercial livestock operations in the Seashore and Golden Gate National Recreation Area as a connected action to better tule elk management within the Seashore.

6. Supplemental water and minerals were supplied to Tomales Elk Reserve elk only after extreme public outcry, protests, and media attention: this is unacceptable. In 2021, attorneys from the Animal Law Clinic at Harvard Law School sued the NPS over the elk die-off at Tomales Point 18. Conservationists petitioned the Park Service to remove the fence 19, as hundreds protested against leasing parkland to commercial beef and dairy operations in the Seashore. Public outcry eventually pushed the NPS to temporarily supply water to the elk.

We do not want to rely on NPS to manage these elk herds during drought conditions. Again, the fence should come down and these trapped elk be allowed to roam into the larger Seashore area and find water resources. The free-roaming elk herds did not suffer drought mortality, and apparently have access to better water resources.

7. More than 85% of the Reserve is within the Philip Burton Wilderness, making elk management difficult. Wilderness management should not include an artificial fence that traps native wildlife in a poorly-watered area, where hikers experience dying elk and dead elk carcasses due to drought kill because elk could not naturally migrate to find better resources. This does not comport with Wilderness values. Park staff, under

constant public pressure, found creative ways to use old routes to enter Tomales Point to  
18 <https://apnews.com/article/ca-state-wire-animal-rights-parks-travel-lifestyle-0954273933da397a37140bc2e8923d19>

19 <https://www.westernwatersheds.org/wp-content/uploads/2021/04/Elk-Die-Off-2021-APA-petition-final.pdf>

12

deliver water by vehicles to the dying elk herds during the extreme drought of 2021, highlighting the difficulties of managing wildlife and also keeping to Wilderness mandates. Removing the fence would immediately alleviate this difficult management problem.

8. Invasive species should be managed with a detailed plan for control and elimination from the Tomales Point area. We noted invasive radish in the southern part of the Tomales Elk Reserve, apparently escaped from adjacent dairy silage fields. This nonnative weed should be controlled, and an Invasive Plant Management Plan developed.

9. Coastal prairie native plant communities need to be restored here, not just passively, but actively. During field visits we observed native coastal prairie grasses gradually being released from heavy livestock grazing pressure, that are beginning to expand into Tomales Point grasslands. Native grasses observed in Tomales Point:

- a. Purple needlegrass (*Stipa pulchra*)
- b. California oatgrass (*Danthonia californica*)
- c. Blue wildrye (*Elymus glaucus*)
- d. Creeping wildrye (*E. triticoides*)-in swales and low areas.
- e. Sandberg bluegrass (*Poa secunda*)
- f. Melic grass (*Melica imperfecta* or *torreyana*)
- g. Red fescue (*Festuca rubra*)
- h. Pacific reedgrass (*Calamagrostis nutkaensis*)
- i. Tufted hairgrass (*Deschampsia cespitosa*)

A diversity of ferns, forbs, and shrubs form a mosaic of open grassland and north coastal scrub habitats. Active restoration could involve local volunteers collecting seed from native plants, growing these in nurseries, and planting out into the area. A Native Plant Restoration Management Plan should be developed as part of this review. Management  
13

actions such as studying tule elk grazing influence on native plant communities, and Traditional Ecological Knowledge with local tribes such as cultural fire and prescribed fire plans to open up some shrub areas should be reviewed.

10. Sensitive and Threatened/Endangered Species Need Inventorying, Monitoring, and Management. Federally threatened California red-legged frogs (*Rana draytonii*) may inhabit stock ponds and springs on Tomales Point, and management for this rare species should be analyzed with respect to drought, stock pond maintenance, and other water resources.

Salmonids may use streams and inshore coastal marine habitats, pinnipeds and cetaceans may use Tomales Point coastal habitats, snowy plovers may use beaches, rare butterflies may be present in recovering coastal prairies, and rare plants may occur on the peninsula. Other species could be present that need to be reviewed in this EIS. A narrow elk management plan ignores the many other significant biological resources that are potentially present on Tomales Point. This is another reason why a broad GMP amendment needs to be analyzed, not a narrow implementation plan just for elk.

11. Cultural Resources need to be surveyed and inventoried. This should include indigenous artifacts, cultural landscapes, and oral histories of surviving tribal representatives both federally recognized and not federally recognized tribes. Traditional Ecological Knowledge should be included in this analysis.

12. Pierce Point Ranch is managed well as a visitor experience that is interpreted as to its dairy history. This should serve as a model for other dairies and beef ranches as their commercial livestock operations are removed from the Seashore and Golden Gate National Recreation Area.

These many alternatives should be considered, especially the publicly popular removal of the Tomales Elk Reserve fence, allowing tule elk to connect to other free-roaming tule elk herds, and find adequate water and forage.

We hold that it is inappropriate for any agency to exclude native wildlife from suitable habitats on any public lands, least of all units of the National Park Service, on which the protection and preservation of native wildlife supersedes any and all commercial uses, including ( and in this case, particularly) livestock production. We ask the National Park Service to come into compliance with its statutory mandates requiring responsible wildlife stewardship, freeing the confined tule elk population on Tomales Point and allowing them the freedom to roam throughout Point Reyes National Seashore and Golden Gate National Recreation Area and engage in the natural process of seeking out adequate forage and water necessary for their survival. Due to the emergent mortality events during recurring droughts, we urge NPS to provide solutions that can be applied to release the tule elk of Tomales Point from their unnatural confinement and maximize their chances of survival.

**Correspondence ID:4259**

Correspondence: Dear Superintendent Kenkel,  
Point Reyes Seashore  
Ranchers Association

For nearly two decades, the Point Reyes Seashore Ranchers Association (PRSRA) has engaged with the Point Reyes National Seashore (PRNS) regarding tule elk management. Seashore Ranchers are directly affected by PRNS elk management decisions. In 1974, Mervin McDonald, our neighbor, friend, and beef rancher, was kicked off the Pierce Ranch on Tomales Point so that the National Park Service could introduce tule elk. To avoid conflicts with other ranching within PRNS, an activity that pre-existed the PRNS by more than a century, a fence was constructed to keep the elk off the ranch lands. This was a sensible decision, as the introduction of elk was not to harm the ranching. Ranching was a historic, cultural use that PRNS was, and still is, charged to protect.

As predicted, the introduction of elk into an area without elk predators resulted in overpopulation of elk. In 1998, a National Environmental Policy Act (NEPA) process was initiated to create an elk management plan to contend with the population problem. The 1998 Environmental Assessment (EA) considered opening or removing the Tomales Point elk fence. The document clearly describes the conflicts that this course of action "would create". It states:

"Agricultural land uses in the seashore are approved for a period of years with lease and permit renewals occurring over the next 20 years. Removing the fence or installing gates could easily be implemented only after ranching activities terminate." [emphasis added]

Therefore, in 1998, it was understood that the fence was necessary and should stay to protect the ranches. The current, operative plan is still the 1998 Elk Management Plan. The plan directed the PRNS to move a portion of the elk to the Limantour wilderness. More specifically, the relocated elk were to be established within the new 18,000-acre elk range (attachment A). Note that the proposed elk range

did not overlap the ranch lands (attachment B). The plan presented to the public states:

"Managing elk using relocations and scientific techniques would not result in the displacement of ranching activities within the seashore and existing conditions would continue within the seashore as a result of the ability to manage elk on the restricted Tomales Point elk range."

The California Department of Fish and Game and the National Park Service recognized the potential conflicts between introduced tule elk and established ranching activities. These concerns were evaluated in the EA and there are statements and promises in the 1998 Elk Management Plan that should have fully protected the ranchers. These statements and promises encouraged the public to support the preferred plan alternative. The PRNS clearly understood its responsibility to manage pursuant to the plan. A few years later, PRNS informed the public, in its publication "2001, A Year in Review" (attachment C):

"Since their release, the new herd has been carefully monitored to ensure animals remain within the seashore boundaries, do not interfere with cattle ranches within the park and are not shedding the organism that causes Johne's disease." [emphasis added]

During the years following the relocation, PRNS actively managed the elk to keep them off ranch lands. If elk wandered out of the designated elk range and onto a seashore ranch, PRNS staff would put them back. Inexplicably, PRNS later stopped managing the elk and allowed the elk to populate the ranch lands, contrary to the plan as PRNS and the public understood the plan. PRNS staff also halted the successful elk contraception program that was underway at Point Reyes. The scientist from the Science and Conservation Center, Dr. Jay F. Kirkpatrick, who was directly involved with the Point Reyes tule elk contraception program, in a letter (attachment D) stated:

"While the number of elk treated (cows only) was below that to achieve zero population growth, it had a stabilizing effect on the entire herd and actually slowed growth to historic lows." "After the completion of the project [tule elk contraception], PORE reluctantly continued using the approach for about two more years but there were political reasons why PORE finally chose to retreat from this approach. The real tragedy was that they had everything in place to continue on, increase application and make a significant change in the elk population." "I am dismayed that such a scientifically valid approach was jettisoned by the park and everyone sat around for over 15 years watching the problem get larger and larger with little more than hand wringing."

This PRNS decision to halt elk management unsurprisingly resulted in the very conflicts analyzed in the EA. Later, the PRNS changed its position and claimed that the 1998 Elk Management Plan did not contemplate elk on the ranch lands and that the plan gave them no direction to manage. This new Tomales Point Area plan must be clear so that reinterpretation of the plan will not happen.

#### Point Reyes Seashore Ranchers Association

The recent General Management Plan Amendment (GMPA) Environmental Impact Statement (EIS) attempted to resolve the problems caused by tule elk on the ranch lands. The GMPA updated the elk management on all of land used for ranching. PRSRA families are not adequately protected by the new elk management plan. The PRNS has decided to leave an unworkable maximum number of elk on the ranches and the ranches will suffer continued adverse effects. Nevertheless, PRSRA will abide by the plan as described in the Final EIS for the GMPA.

PRSRA understands that there are new drought conditions that are affecting the elk on Tomales Point. New management techniques - improving water sources using minimum tools, improving forage quality where brush has invaded by way of fire and/or targeted grazing by other species, managing populations by way of contraception and/or culling, etc. should be analyzed in the upcoming EIS.

”

Updates to NEPA documents are used to inform portions of the analyses where conditions have changed - not to ignore the current plan and to start from scratch. Here, drought conditions are new. Protecting ranch lands from elk impacts is not new. Removing or altering the fence is not appropriate or allowable. Fence removal was fully evaluated in 1998. The relevant conditions have not changed. The analysis was done in 1998 in a legal NEPA process. The current analysis to update the 1998 Elk EA and Management Plan should not reconsider the removal of the Tomales Point elk fence because certain members of the public don't like the fence.

Just as the recent GMPS EIS was carefully limited to within the ranching boundaries, this new Tomales Point Area Plan must be limited to the Tomales Point Area - behind the Tomales Point Fence. There can be no crossover of affects, or spill over effects of this new plan on the ranch lands. All elk impacts to the ranch lands were fully evaluated in the GMPA EIS. The GMPA includes maximum numbers of elk that can be on ranch lands. The Tomales Point Elk herd is not currently on ranch lands. Allowing any of these elk to enter any existing ranch lands within PRNS would be allowing a new herd to be established. This is prohibited by the recent GMPA. It would also create new impacts and risks to ranchers not considered in the recent GMPA EIS.

PRSRAs suggests that the "Tomales Point Area Plan" be renamed "Tomales Point Elk Range Plan". Tomales Point Elk Range is a defined area - an area defined by a fence. "Tomales Point Area" could be interpreted as an area that extends beyond the existing fence line. Authorized agricultural uses exist outside of the Tomales Point Elk Range and should not be included in this EIS. If this Tomales Point Area Plan is properly limited to the Tomales Point Elk Range, PRSRA will be happy to help with the process as necessary.

PRSRAs members have been identifying elk impacts and have attempted to work with PRNS on this issue since PRNS began to allow tule elk to leave the designated elk range and take up residency on seashore ranches. Attached are some of the relevant communications between PRNS and PRSRA (attachments E, F, G).

Dr. Laura A. Watt is arguably one of the foremost experts on the establishment, planning processes, law, policy and history of the Point Reyes National Seashore. In her paper entitled *The Continuously Managed Wild: Tule Elk at Point Reyes National Seashore* (attachment J), she states:

At Point Reyes, the question of which herds are more wild-those on Tomales Point behind a fence, or those raiding the cattle pastures in the pastoral zone-is symptomatic of a muddled approach to wildlife management that is putting the seashore's historic ranching operations in danger.

Dr. Watt's paper, as published in the *Journal of International Wildlife Law and Policy*, contains data and analysis that should be used in this current Tomales Point Area Plan EIS.

PRSRAs has also been actively participating in the most recent planning processes. Attached are the PRSRAs scoping comments for the Comprehensive Ranch Management Plan EA (attachment H) as well as the scoping comments for the GMPA EIS (attachment I). The background information and tule elk sections are relevant to this Tomales Point Area Plan. Also attached is a copy of the 2014 Elk Report prepared by Ethan L. Lane (attachment K).

PRSRAs appreciates the opportunity to comment on yet another PORE planning process. As the Association has mentioned in prior communications, we are concerned with the piecemeal approach to updating the 1980 General Management Plan. Keeping these various plan amendments properly separated can be a challenge. It is important that this Point Reyes Area Plan does not include or overlap with any other planning area where the analyses have been completed. Here, the Tomales Point Elk Range fence is a clear and unambiguous boundary. It is comforting to PRSRAs that this Tomales Point Area Plan will not affect any ranch lands currently authorized for agricultural production.

Thank you,

PRSRAs

Correspondence: To Point Reyes National Seashore Planning Team:

May 6, 2022

Please consider the following scoping issues in your process for developing a Tomales Point Area Plan at Point Reyes National Seashore:

A. Need to supplement water and feed for tule elk in the Tomales Point Tule Elk Reserve based on:

1. Determination of whether elk significantly utilized supplemental water supplied in troughs during the last half of year 2021 south and then north of Upper Pierce Point Ranch.
2. Impact of supplementation facilities (tanks, pipes and troughs) and means to supply and maintain them on the preservation of the aesthetic and natural values (sensitive plant species and mosaic of rare coastal prairie and scrub) that were the reasons for the designation of Tomales Point in the John Burton Wilderness Area at Tomales Point.

B. Assess Optimum Population Size | Density of Elk Throughout the Seashore Considering:

1. Establishment of an upper limit or range of the total population of elk in the Reserve (carrying capacity) based on past annual censuses that would minimize their deaths due to deficient forage quality and quantity caused by future droughts. This density of elk needs to be evaluated and adjusted to maintain its positive effects on preservation of sensitive plant species and rare mosaic of coastal prairie / scrub, particularly in the Reserve.
2. Removal of the 8-foot enclosing fence to allow elk access to the Pastoral Zone, which could naturally limit their density to their carrying capacity in the Reserve similar to what may be occurring in the free ranging Limantour Herd.
3. Assess and address mitigation for the potential economic costs of free ranging elk to ranch leasees throughout the Pastoral Zone based on estimated and actual costs currently incurred by leasees on "C" dairy and "D" non-dairy livestock Ranches where elk are congregating.
4. Propose methods for assessing and maintaining carrying capacity of elk throughout the Seashore including the Pastoral Zone and Reserve. Such methods for maintaining carrying capacity should include contraception, lethal removal, and translocation.

C. General Considerations:

Various proposed, alternative management actions and their analysis should range from the status-quo to the complete removal of livestock while allowing free ranging native ungulates (elk and deer) throughout the Seashore. To guide the selection of the preferred alternative, the economic costs to the ranch leasees and the National Park Service (taxpayer) must be assessed for implementation and operation of all alternatives. This is in addition to an assessment of the alternatives' positive and negative effects to the natural environment.

The above proposals were more fully addressed in a letter dated June 24, 2021 to Secretary of Interior Deb Haaland and Deputy Director of NPS, Shawn Bengé, attached. Five professional wildlife managers familiar with these issues, including myself, signed it. For implementation of the proposal, the letter also called for an amendment to the General Management Plan for the Seashore and establishment of an expert panel to help formulate solutions.

Scoping for the Tomales Point Area Plan and EIS should consider this letter's salient points and numerous references. They include the pragmatic efficiency of maintaining elk density in the Reserve when it comes near its carrying capacity as it recovers from its current decline. In addition, a high priority should be given by NPS to Calif. Dept. of Fish & Wildlife's goal to

"Reduce the number of confined (tule elk) herds and the frequency for removing excess animals" as stated in its "2018 Elk Conservation and Management Plan".

Attachment: Ur. to Sec. Haaland

**Correspondence ID:4261**

Correspondence: Dear Superintendent Kenkel:

I submitted comments on the above-referenced subject on April 27, 2022. Those comments are incorporated herein by reference.

In my previous letter, I focused on the fact that you intend to do planning in reverse by starting with an elk implementation plan and then going backwards under NPS planning procedures and writing a general management plan (GMP) in line with the already-decided implementation plan. I gave several reasons why you can't do that under the NPS GMP statute and your planning and NEPA procedures.

I focus here on what the GMP should cover. A GMP is supposed to cover an entire park. PRNS is approximately 72,000 acres in size of which approximately 18,000 acres are ranched. The portion of GGNRA that you manage is approximately 20,000 acres in size of which approximately 10,000 acres are ranched. Tomales Point is small in comparison, approximately 2,900 acres in size.

When you did a GMP that only covered the ranching areas, contrary to what GMPs are supposed to cover, you indirectly made decisions on how areas outside the ranching area would be managed by keeping land management boundaries in place without regard to whether that was detrimental to management of those unaddressed areas and their natural resources, including elk. Therefore, this GMP should cover not only Tomales Point and the other areas not covered by the 2021 Ranching GMP, but the ranching area itself. If you don't open the 2021 GMP to necessary amendment, it will preclude management options for Tomales Point, like removal of the elk fence or creating a fenced corridor to allow Tomales Point elk to breed with the wild, free-roaming Limantour herd. I believe the 2021 GMP is subject to legal challenge for that reason alone.

Sincerely,

**Correspondence ID:4262**

Correspondence: Captive Tule Elk Herd at Tomales Point in Point Reyes National Seashore Lacks Water and Needs Help

In a disturbing replay of National Park Service (NPS) neglect during the drought of 2011-2015, the Park Service is again allowing the old stock ponds in the Tomales Point Tule Elk Reserve<sup>1</sup> to go dry. These ponds are an essential water source for the captive Tule elk<sup>2</sup> because there are no perennial streams in the reserve. During that drought, approximately 250 out of 500 elk died for lack of water. We are concerned that NPS is going to let that happen again.

In order to fully understand the effect of the current drought on the estimated 445 Tule elk in the reserve now<sup>3</sup> it is necessary to understand where the elk are located and where the ponds are that they rely on.

A detailed study by wildlife biologist McCrea Cobb was published in 2010 that delineated the home ranges of four distinct herds in the elk reserve which he named the North Herd, the Plateau Herd, the White Gulch Herd and the South Herd.

Below is a page from that study that delineates the four home ranges. As Cobb's text below his map states, there is little spatial overlap among the four tule elk herds. That is clear from viewing the telemetry fixes of collared elk taken every three days from 2005 to 2008. In other words, individual elk from one herd rarely go into another herd's home range and that includes never using ponds located in another herd's home range.

**Correspondence ID:4263**

Correspondence: Dear Superintendent Kenkel:

**INTRODUCTION**

I am responding to your March 31, 2022, notice to interested parties and your news release of the same date inviting comments on how to develop a plan for the future management of 2,900-acre Tomales Point. I have read your notice and press release and, unfortunately, your announced method for developing a plan for Tomales Point is deeply flawed, as explained below.

Any discussion of what you plan to do has to begin with applicable law. In 1978 Congress passed the following NPS legislation:

General management plans for the preservation and use of each System unit ... shall be prepared and revised in a timely manner by the Director ... General management plans for each System unit shall include-

- (1) measures for the preservation of the area's resources;
- (2) indications of types and general intensities of development (including visitor circulation and transportation patterns, systems, and modes) associated with public enjoyment and use of the area, including general locations, timing of implementation, and anticipated costs;
- (3) identification of and implementation commitments for visitor carrying capacities for all areas of the System unit; and

1 NPS has always stated that Tomales Point was 2,600 acres in size, but here it is described as being 2,900

acres, an unexplained increase in size of nearly 12%.

- (4) indications of potential modifications to the external boundaries of the System unit [or part thereof], and the reasons for the modifications.

54 U.S.C. § 100502. (Emphasis added.)

You should be very familiar with this law because you just completed a general management plan (GMP) for 18,000 acres of Point Reyes National Seashore (PRNS) and 10,000 acres of Golden Gate National Recreation Area (GGNRA) that is fenced off and dedicated to private, subsidized, commercial ranching. Nowhere in your notice to interested parties do you explain why you did a GMPA for the ranching area and why you are not doing one for Tomales Point.

In order to implement this law, NPS has written detailed procedures to be followed for all NPS planning. These procedures are in Part 2 of NPS Management Policies 2006. [https://www.nps.gov/subjects/policy/upload/MP\\_2006.pdf](https://www.nps.gov/subjects/policy/upload/MP_2006.pdf) The procedures provide, in part, as follows:

**2.1.1 Decision-making**

The National Park Service will use planning to bring logic, analysis, public involvement, and accountability into the decision-making

process. Park planning and decision-making will be conducted as a continuous, dynamic cycle, from broad visions shared with the public to individual, annual work assignments and evaluations. Each park will be able to demonstrate to decision-makers, staff, and the public how decisions relate to one another in terms of a comprehensive, logical, and trackable rationale.

\*\*\*

## 2.2 Major Elements of Park Planning and Decision-making

A documented, comprehensive, logical, trackable rationale for decisions will be created through several levels of planning that are complementary and become increasingly detailed. The process begins with determining why the park was established and what resource conditions and visitor experiences should exist there; the process will become increasingly focused on how resource conditions and visitor experiences should be achieved.

The following planning elements are part of an interrelated framework that will inform NPS decision-making:

2

+ Foundation Statement - The planning process begins with the development of a foundation statement that is based on the park's enabling legislation or presidential proclamation and that documents the park purpose, significance, fundamental resources and values and primary interpretive themes. It also includes any relevant laws and executive orders that apply to the national park system or to the individual park unit.

+ General Management Plan - This is a broad umbrella document that sets the long-term goals for the park based on the foundation statement. The general management plan (1) clearly defines the desired natural and cultural resource conditions to be achieved and maintained over time [i.e., how Tomales Point resources should be managed over time]; (2) clearly defines the necessary conditions for visitors to understand, enjoy, and appreciate the park's significant resources, and (3) identifies the kinds and levels of management activities, visitor use, and development that are appropriate for maintaining the desired conditions; and (4) identifies indicators and standards for maintaining the desired conditions.

\*\*\*

+ Implementation Plans - These plans provide project-specific details needed to implement an action [from the GMP] in an area of a park and explain how the action(s) helps achieve long-term goals [of the GMP].

(Emphasis and holding added.)

In summarizing these last three paragraphs, the Foundation Statement is to set forth the park's purpose, as described in the founding legislation, and to include any laws relevant to planning, such as the 1916 NPS Organic Act ("to conserve the scenery and the natural and historic objects and the wild life therein" and to allow human use only to the extent it won't harm resources)<sup>2</sup> and the park legislation ("shall be administered ... without impairment of its natural values ... consistent

with, based upon, and supportive of the maximum protection, restoration, and preservation of the natural environment." )<sup>3</sup> The GMP sets the long-term goals for the park (or, in this case, Tomales Point) including clearly defining the desired natural and cultural conditions to be achieved and maintained over time and the kinds of management activities appropriate for maintaining those desired conditions. Implementation Plans are written to carry out in more specific detail the long-term goals of GMPs. For example, if a long-term goal of a GMP for

2 54 U.S.C. § 100101

3 16 U.S.C. § 459c-6 (Emphasis added.)

3

Tomales Point were to restore the vegetation of Tomales Point from its current nonnative vegetation to the coastal prairie that existed before cattle were brought to Tomales Point, an implementation plan would address in detail how to accomplish that long-term goal. Similarly, if a GMP decided that Tomales Point should be used to hold a herd of wild elk captive, an implementation plan might consist of building an elk-proof fence across the peninsula to contain the elk. It might also include what criteria would control any culling and whether to provide the herd with water or forage, to the extent necessary to keep them alive and healthy.

That brings me to your plan as laid out in the notice to interested parties and your news release.

You are going in reverse under the above-described NPS planning procedures. You are trying to begin with an implementation plan for keeping the elk captive at Tomales Point, a place where, even you admit, lacks adequate water, minerals and forage for the elk during droughts, and then, after finishing that, you plan to create a GMP for the management of Tomales Point that is consistent with that narrow-focused captive elk plan you will have just developed. That is the reverse of how the NPS planning system actually works where, as shown above, the GMP step comes before the implementation steps under it. The GMP is where the decision is made, with public input, as to how a park (or, here, Tomales Point) and its resources are to be managed. Implementation plans, such as an elk management plan, carry out in site-specific detail the more general decisions about resource management made in a GMP. In a nutshell, you are starting from where you want to end up in the planning process and writing the GMP to be consistent with that. This is contrary to the GMP statute, the GMP planning procedures, NPS's NEPA procedures, the NPS Organic Act and the PRNS legislation.

#### DISCUSSION

In the second and third paragraphs of your notice to interested parties, you outline four points for how you see the planning process proceeding. Your points and my comments in response are set forth below.

Point 1. You state in the second paragraph of your notice to interested parties that the planning process will culminate in a Tomales Point management plan, and you anticipate doing an EIS for the process.

The above language is somewhat vague about the planning process. After reading all four points of your plan, I realize you do not plan to do a GMP first, in accord with NPS planning procedures, but you plan instead to start with updating the old 1998 Elk Plan and then you are going to go in reverse in your planning system steps to the top of the planning pyramid where you plan to modify the 1980 GMP to be

4

consistent with the already-decided, lower-level implementation plan regarding the elk.

You need to start with a GMP, like you did recently for ranching, for several reasons.

The first reason you must start with a GMP is because the GMP is the first step in NPS's planning system. That is clear from what is quoted above. Implementation plans follow and carry out decisions in a GMP, not the other way around.

The second reason you must start with a GMP is because the 1980 GMP did not address keeping the elk at Tomales Point. Thus, you have nothing to update in the 1980 GMP. This calls into question the basis for even doing the 1998 Elk Plan in the first place given that there was no decision in the 1980 GMP to hold elk captive at Tomales Point and thus no decision to implement in an implementation plan. The 1998 Elk Plan was unauthorized under the NPS planning procedures.

The third reason you must start with a GMP is that even if the 1980 GMP did address the elk at Tomales Point, it's been 42 years since the 1980 GMP was completed. The GMP statute says GMPs "shall be prepared and revised in a timely manner." 54 U.S.C. § 100502. Your planning procedures state that "GMP reviews may be needed every 10-to-15 years but may be needed sooner if conditions change significantly." NPS Management Policies 2006 at § 2.3.1.12.

We are way past the 10-to-15-year mark. Furthermore, there is that language "may be needed sooner if conditions change significantly." You have stated in your press release that you are starting this new planning process because "[c]urrent management guidance ... did not anticipate these drought conditions or consider climate change, resulting in emergency actions taken to provide supplemental water and minerals for the Tule elk." (Emphasis added.) Obviously, your finding of an "emergency" shortens the normal 10-to-15-year period under the planning procedures.

The fourth reason you need to start with a GMP is that the administrative record contains evidence of the fact that the park determined in the late 1990s that it was the appropriate time to do a new, park-wide GMP. Later, when the park was set to release a draft GMP and DEIS that contained a number of alternatives, including some to reduce ranching, the then-Superintendent was transferred to another park and the GMP planning process mysteriously ended. There was never an explanation as to why the superintendent was transferred or why the GMP planning process was terminated.

Point 2. You also state in that second paragraph of your notice that the Park Service intends to include both programmatic and site-specific analysis to inform  
5

wilderness and elk herd management decisions that can be implemented when the plan is final.

Trying to combine both programmatic and site-specific analysis to inform wilderness and elk herd management decisions<sup>4</sup> that can be implemented when the plan is final is contrary to NPS Management Policies 2006 and the DO-12 NEPA Handbook. I will await the DEIS to address this in detail. You attempted to do this with your GMP A for the ranching area but fell far short of accomplishing it. All the leases and their ranch operating agreements (ROAs) for the 31 ranches will require EAs (and possibly some EISs) because that is where site-specific analysis and implementation plans will necessarily occur. That this is necessary is very clear in

reading the NPS management policies and the DO-12 NEPA Handbook.

Point 3. You also state in that second paragraph of your notice that the intent of the planning effort is to replace the 1998 tule elk management plan for Tomales Point and to address, where appropriate, any updates to the park's 1980 GMP as it relates to the Tomales Point area.

Point 3 is like Point 1 in that they both involve the relationship between GMPs and implementation plans. Incorporated herein by reference is my discussion under Point 1.

As is clear from the GMP statute and the NPS planning procedures, you have to start with a GMP here. Implementation plans have no role in the NPS planning system unless and until there is a GMP that has a decision in it that needs to be implemented. As discussed above, the 1980 GMP did not address whether elk should be held captive at Tomales Point at all.

All of this also calls into question the very validity of the 1998 Elk Plan as something to build on because it was, and is, an implementation plan and implementation plans under NPS's planning procedures are only done to carry out decisions previously made in GMPs. 5 Since the 1980 GMP made no decision to keep the elk locked up at Tomales Point, there was no basis under NPS's planning procedures for doing the 1998 elk implementation plan to hold the elk there then and, similarly, there is no basis for revising and using that implementation plan now. It is, and always has been, a nullity.

4 The planning process is about more than wilderness and elk herd management. It should be about what is

the best way to protect, restore and preserve the natural environment of Tomales Point while allowing human use

but only to the extent it doesn't impair the natural environment, all in accordance with your responsibilities under

the NPS Organic Act and the PRNS legislation.

5 As discussed above, a GMP is "a broad umbrella document that sets the long-term goals for the park ... [It] clearly defines the desired natural and cultural resource conditions to be achieved and maintained over time [i.e.,

how Tomales Point should be managed over time]." Implementation plans "provide project-specific details

needed to implement an action in an area of the park and explain how the action(s) help achieve long term goals [of

the GMP]." NPS Management Policies 2006, Part 2. (Emphasis and holding added.)

6

When NPS began to think about a management plan for the elk locked up at Tomales Point in the mid-1990s, that is when NPS should have realized there was no GMP decision to hold the elk at Tomales Point and a GMP should have been done then covering, preferably, all of PRNS, or at least Tomales Point.<sup>6</sup> The 10- to 15-year period under NPS planning procedures for GMP reviews had passed since the short and extremely general 1980 GMP that mostly focused on GGNRA.<sup>7</sup>

As discussed under Point 1, you cannot re-do a 24-year-old, low level, implementation plan that had no GMP elk decision above it to implement regarding management of the Tomales Point and use it to create/revise a new (or revised) GMP for Tomales Point. This is a backwards approach that is contrary to law and your management policies. You must start with a GMP, and if that GMP results in

a decision to not keep the elk (and other wildlife) locked up at Tomales Point, there will be no need to do a new or updated version of the 1998 elk implementation plan. You are trying to avoid doing an actual GMP for Tomales Point because you don't want to open to the public the question of how Tomales Point should be managed, especially with respect to the elk, and it is at that level that that decision has to be made. Your determination to drive the NPS planning system in reverse makes this entire planning process a sham.

Whether the 1980 GMP had covered the Tomales Point elk or not, NPS needs to do an original GMP (and EIS) which would focus on various subject matters at Tomales Point, including whether elk should be held captive there without adequate water, minerals, and forage for the benefit of private ranching (and at the cost of almost 500 elk deaths in the past nine years - and counting). Skipping the GMP, which is the vehicle for deciding how an area should be managed, and starting with an implementation plan, which is supposed to only implement resource decisions made in the upper-level planning step of a GMP, is not consistent with the GMP statute or NPS's planning procedures. It's obvious from your description of how you intend to proceed that you have already decided to keep the elk locked up at Tomales Point just like NPS had already decided to keep the public park lands dedicated to ranching before the GMP A process for the ranching area was completed with statements in the press like: "It's not a question of whether ranching will continue, but how it will be done."

Point 4. In the third paragraph of your notice, you go on to state that NPS has identified a number of issues that it intends to address as part of the planning effort, namely (1) maintenance or removal of the tule elk fence, (2) population management of the Tomales Point tule elk herd, (3) supplemental water for the elk in times of need (supplemental food is not mentioned even though nearly 500 of the 6 Actually, as noted above, a new GMP planning process was started at about that time, but it was mysteriously discontinued.

7 GGNRA has already done a new GMP for all the land it manages.

7

elk have starved to death in the past nine years) (4) wilderness management and (5) "visitor use and infrastructure management at Pierce Point Ranch."

This all flies in the face of the GMP statute, the resource protection language in both the Organic Act and the PRNS legislation, the planning procedures and the DO-12 NEPA Handbook.

The first issue, "maintenance or removal of the elk fence," is raising the question of whether Tomales Point should be used for holding an elk herd captive. That kind of basic question is what a GMP is for. How should Tomales Point be managed? If the 1980 GMP had decided that a herd of elk should be held captive at Tomales Point, it would not be appropriate to raise the question at the later implementation stage. To do so would make NPS planning circular. Under NPS planning and NEPA procedures you don't reopen decisions made at the GMP level in a subsequent, lower-planning level implementation plan. NPS DO-12 Handbook, § 7.4. <https://www.nps.gov/goga/learn/management/upload/-1939-NPS-2001-DO-12-Handbook.pdf>

The fence question is certainly relevant to the Tomales Point planning process and is another reason why you must proceed with a GMP and not an implementation plan because the question here is a GMP-level one of whether Tomales Point should

be used to hold a wild herd of elk captive, especially when the area they would be held captive in is unfit for them.

The very fact that you just completed a ranching GMP that used the fence to define the northern boundary of the ranching area is very strong indication that there is no way you will now seriously consider removing the fence and allowing the elk to roam in a natural, wild state and consume water, minerals and forage that you have set aside by the fence for what you've decided is a higher use of public park land, namely private, subsidized, commercial ranching. Again, the ranching GMPA is more evidence that you have already made up your mind that the elk herd will continue to be confined to Tomales Point.

The second and third issues about "population management of the elk herd" and "supplemental water for elk in times of need" (but not supplemental food, even though lack of food is what you always say has been killing them), strongly hints at the fact that you have already decided to keep the herd locked up (and starving) at Tomales Point. Otherwise, why write a plan on managing Tomales Point elk population numbers (culling) and on whether to give the Tomales Point elk water (but not food) unless you have already decided to keep the elk locked up at Tomales Point? Again, this whole planning process you are proposing is an already-decided sham.

8

You should be deciding first, in a GMP, how Tomales Point should be managed in accordance with the Organic Act ("to conserve the scenery and the natural and historic objects and the wild life therein" and to allow human use only to the extent it won't harm resources)<sup>8</sup> and the language in the PRNS legislation requiring you to manage the seashore "without impairment of its natural values, in a manner which provides for such recreational, educational, historic preservation, interpretation, and scientific research opportunities as are consistent with, based upon, and supportive of the maximum protection, restoration, and preservation of the natural environment."<sup>9</sup> Only after a GMP planning process that results in a decision to keep the elk locked up at Tomales Point would it be time to attempt to write a defensible implementation plan on how to manage the elk and other wildlife in that locked-up unnatural environment that is not suitable for sustaining elk (and other wildlife) during a drought. <sup>10</sup>

The fourth issue you intend to address is "wilderness management." Point Reyes was designated a wilderness on October 18, 1976, and the designation included Tomales Point. 90 STAT. 2515. Your wilderness management policies provide, in part, as follows:

The Superintendent of each park containing wilderness resources will develop and maintain a wilderness management plan or equivalent planning document to guide the preservation, management and use of these resources. The wilderness management plan will identify desired future conditions, as well as established indicators, standards, conditions, and thresholds beyond which management actions will be taken to reduce human impacts on wilderness resources.

Management Policies 2006, § 6.3.4.2.

It is my understanding that in spite of the NPS directive above the Seashore has never developed a wilderness management plan in the past 46 years as to Tomales Point (or the rest of the wilderness area in the Seashore). Obviously, it is time to do

one for Tomales Point and, preferably, all 33,373 acres of wilderness in the park. This is all the more reason to not start the planning process for Tomales Point with an update to the nullity called the 1998 Elk Plan.

The fifth issue to address in the planning process is, as you describe it, "visitor use and infrastructure management at Pierce Point Ranch." Like wilderness management, Pierce Point Ranch is totally unrelated to updating an

8 54 U.S.C. § 100101

9 16 U.S.C. § 459c-6 (Emphasis added.)

10 Elk are not the only animals that the woven-wire fence prevents from roaming as nature intends. The fence also prevents deer and smaller animals, such as coyotes and bobcats, from getting past it and roaming into and

out of the elk reserve.

9

implementation plan for holding elk at Tomales Point. Furthermore, why list visitor use as an issue limited to Pierce Point Ranch? You need to cover visitor use as it relates to the entire Tomales Point. Most people actually skip the ranch on their hikes to the two biggest destinations, Tomales Point and McClures Beach. Thus, visitor use in general is yet another reason to start with a GMP, not an elk implementation plan that never had any Tomales Point elk decision in the 1980 GMP to authorize it in the first place. Visitor use and Pierce Point Ranch should be two separate issues and they have nothing to do with elk management at Tomales Point and the updating of an elk implementation plan. They should be part of a new GMP along with all the other normal GMP/NEPA topics such as soils, vegetation, water quality and quantity, wildlife, endangered species, etc.

CONCLUSION

In summary, proceeding as you propose to do here is wrong for all the reasons discussed above. It will also involve more cost and management time than if you just follow your planning procedures and do the GMP now, as you did with ranching, and do any implementation plan(s) later, as necessitated by the GMP.

Correspondence: Dear Superintendent Kenkel ;

Enclosed please find 16,623 comments from Center for Biological Diversity supporters urging you to tear down the Tomales Point elk fence and manage Tomales Point for native wildlife and natural ecosystems - not livestock owners.

The Park Service should ensure elk connectivity corridors and let Tomales Point elk, connect with the park's two free-roaming herds in Limantour Wilderness and Drakes Beach. And no culling or hunting of elk should happen here. There's ample carrying capacity to allow the Tomales elk to expand throughout Point Reyes - no need for elk "population management." These beautiful native animals, not private cattle operations, should be the first priority in Point Reyes grasslands.

Additionally, the Service should work actively to restore Tomales Point's natural coastal prairie vegetation; consult with tribal entities (Coast Miwok and Graton Rancheria) on a cultural inventory of important sites, archeology, and cultural landscapes at Tomales Point; and use prescribed fire/cultural fire to maintain the area's grassland and shrubland mosaic.

Finally, an economic analysis of the value of elk ecotourism on Tomales Point must be

a part of the planning process.

Thank you for your attention to the enclosed letters.
