

Point Reyes National Seashore  
General Management Plan Amendment  
Draft Environmental Impact Statement Correspondence  
March 2020  
Comments 5027 through 7624

All correspondence received during the public scoping comment period is presented in this and the accompanying machine-readable and text-searchable PDFs. They contain all of the correspondence that was entered into the National Park Service's [Planning, Environment, and Public Comment](#) (PEPC) website, including transcriptions of correspondence received via comment card, postal mail, or hand delivery. These documents have been modified to exclude any personal identifying information of individuals such as street address, email address, or telephone numbers. To search for a desired name or content, open and use the Find tool in your PDF reader. If you don't find the content in this file, download and search for it in the accompanying file. If you have any questions or would like a copy of any correspondence in its original form, please contact Melanie Gunn at 415-464-5131.

Due to limitations on the size of files that can be uploaded to nps.gov, this document has been divided into two 1181-page files (comments 1 through 5026 and comments 5027 through 7624).

Comments 5027 through 7624 are found in this file.

#5027

Name: Davis-DeBella, Paula

Correspondence: The National Park Service must use it's authority to Save Pt. Reyes National Seashore for the use of the American Public whose tax dollars paid many of their Ranchers for their lands 47 years. Although many of the Ranchers were paid money years ago and have still continued to ranch, and profit at the expense American Public and all the wildlife on he the lands they are using, their ranching practices do not rise to the level of "Stewardship of the Land. Instead", they are destroying the land and, and some of the ranches are expanding. This behavior was not what was intended by the Federal Government when the leases were grated years ago.

Please do the right thing and assist in restoring Pt. Reyes national Seashore lands by following the 1962 Lease mandates, which would restore the lands. Only Management Plan F would accomplish this.

Thank you,

Paula

#5028

Name: Wald, Johanna

Correspondence: Please adopt Alternative F and abandon Alternative B. The ranchers time is up. Re-turn to the original plan and phase out all ranching. Instead image Point Reyes for the natural values it was created to protect, including wildlife, wildlife habitat + native plants. Do not expand ag uses or the area in which grazing can occur. Do not kill Tule elk and do not issue transferable or grazing leases.

#5029

Name: leroy, olivier

Correspondence: Please protect Tule Elk , do your Job !!!

#5030

Name: Todd, Anya

Correspondence: I care about protecting California's wildlife. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

#5031

Name: N/A, N/A

Correspondence: Please keep the native elk alive and intact at the Point Reyes National Seashore. It is so very important to ecosystems, especially now when so many species are being lost globally, that we save all categories of life that we are able to.

#5032

Name: Simon, Dominique

Correspondence: I care about protecting California's wildlife. I oppose the National Park Service's plan to murder native tule elk and expand commercial cattle ranching and agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

We should prioritize the preservation of our PUBLIC lands and wildlife, not the interests of private ranchers. Commercial cattle ranches have no place on public lands and park land. They cause negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

#5033

Name: Serazio, Charlotte

Correspondence: I care about protecting California's wildlife. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

#5034

Name: Serazio, Sandra

Correspondence: I care about protecting California's wildlife. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

#5035

Name: Friedenber, Sarah

Correspondence: Commercial agriculture shouldn't be valued over wildlife!!

I deeply care about protecting California's wildlife. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

#5036

Name: Baxter, Joslyn

Correspondence: I care about protecting California's wildlife. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

#5037

Name: Clifford, Nancy

Correspondence: The preservation of native wild species must take precedence over farming and ranching activities. Grazing negatively affects ecosystems, causing water pollution and soil erosion, spreading invasive species and disease, and harming endangered species.

This land belongs to the wildlife. Grazers are intruders, invasive species and should not be determining policies.

#5038

Name: Menard, Jana

Correspondence: Commercial grazing is what needs to go, not the elk.

#5039

Name: Costa, Gonzalo

Correspondence: The interests of those who want to gain more profits shouldn't be more important than the delicate balance that we share with our environment. We are on the elk and other animals land, not the other way around. This won't end of these farmers are given what they're asking for, once they expand they'll want to expand more. Please show respect to those we share our land with. Thank you.

#5040

Name: N/A, N/A

Correspondence: The elk deserve to live, it's their home.

#5041

Name: Sharp, Ethan

Correspondence: We can't keep paving animals out of the way for the convenience of humans. These elk are no less important than we are. They, and all other animals, have a right to their habitat.

#5042

Name: N/A, N/A

Correspondence: I care about protecting California's wildlife. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

Wyoming has a short Elk season due to there not being many of them. This would make things worse for them!

#5043

Name: Brown, Diana

Correspondence: The primary use of our public lands should be to allow plants and animals to prosper. I urge you to put that goal above commercial enterprises.

#5044

Name: Ashton, Leo

Correspondence: I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

#5045

Name: Kirstin, Kristy

Correspondence: All non-human species were created, given breath to, and are Owned by GOD. NOT YOU. You have no right to kill, hunt, or abuse, ANY of GOD's creatures. They were made by GOD to enjoy their lives and are a gift for humans to enjoy. STOP worshipping MONEY. STOP murdering GOD's creatures. THEY ARE NOT YOURS.

#5046

Name: N/A, N/A

Correspondence: I care about protecting California's wildlife. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. #5048

Name: N/A, N/A

Correspondence: All wildlife must be permitted to show earth's compassion

#5048

Name: Beyer, Janice

Correspondence: Please do not destroy these beautiful elk that belong to all Americans in favor of agricultural private interests.

#5049

Name: McGee, Carolita

Correspondence: Please adopt Alternative F, which would discontinue farming and ranching opportunities in the park and expand visitor opportunities. The preservation of native wild species must take precedence over farming and ranching activities. Grazing negatively affects ecosystems, causing water pollution and soil erosion, spreading invasive species and disease, and harming endangered species.

#5050

Name: Gates, Genevieve

Correspondence: I care about protecting California's wildlife. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

#5051

Name: Sambrano , Rocio

Correspondence: Please don't kill the Elk! It's madness!

#5052

Name: Willner, Marcia

Correspondence: If wolves & cougars were given free reign to roam their natural habitats you probably wouldn't think you need to cull a deer population.

Please, let nature be nature. Do not kill deer. Stop poisoning & trapping their natural predators for farmers. There are no more spare animals for random or targeted killings.

If you stop allowing the killing if wolves, bobcats & cougars the need for culls would end. But you already know this.

#5053

Name: oshea, maureen

Correspondence: How come domestic animals get precedence over native animals? This does not sound right at all. Please reconsider this "solution" and come up with a more viable one. Thank you

#5054

Name: Berry, Nina

Correspondence: I care about protecting California's wildlife. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

#5055

Name: N/A, N/A

Correspondence: I do not believe that we should be killing any Tule Elk (Native or not) to create space for more ranch animals to be raised for food. I understand the ranchers want this space, however, our relationship with food needs to change before we start killing more other animals to make space to raise animals for food. Point Reyes is a National parkland it and the species that live there need to be treated as such. Are we going to simultaneously pass a bill to lower the amount of non-pasture raised animals allowed to hit the supermarkets in CA like we did with Chickens? Otherwise, what is the point? I am not seeing a shortage of pasture-raised animals for sale. If people want to eat that quality food it is available now.

**BE A LEADER CALIFORNIA - DON'T KILL ELK TO MAKE SPACE TO RAISE ANIMALS FOR FOOD!!**

#5056

Name: Gottlieb, Rabbi Lynn

Correspondence: Have you heard of climate devastation, and you want to contribute to it?

I am someone who spends a lot of time outdoors at PT Reyes National Seashore. The tule elk are a beautiful part of the park, and people come from around the world to see them. I honestly do NOT see any issue with the elk over-running the cattle there, and I hike all over the park! I care about protecting California's wildlife. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat. We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

#5057

Name: Cofresi, Shirley

Correspondence: We should be protecting our lands and wildlife's habitat! I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

Point Reyes National Seashore is for the public, not ranchers or other means of making money off the backs of our wildlife! Cattle are the most destructive animals, that's a fact. Water ways, lands, and air quality decreases whenever cattle or domestic herds are allowed to graze. A PROVEN FACT!

Your job is protecting our lands, air, waterways, and WILDLIFE! Do your job!

#5058

Name: Howard, Sharon

Correspondence: We lived in California for 5 years and drove from Folsom to Pt Reyes to show the elk to visiting family and friends ever year. These are beautiful as animals and found only here. Let them alone and commercial enterprise and ranchers need to realize they ate destroying wildlife habitat. There is no need for this.

#5059

Name: N/A, N/A

Correspondence: I care about protecting wildlife every where in this beautiful country and feel strongly about protecting OUR National Parks. It does not make sense to kill native tule elk for the safe of commercial agriculture in the Point Reyes National Seashore and Golden Gate National Recreational Ares. National parks exist for the protection of wildlife and for all of us to enjoy, not to be used for a few to make a profit. Please restore these lands for wild life habitat. Thank you.

#5060

Name: Dameron , Susan

Correspondence: Do not consider a plan that would permit elk to be killed while allowing the expansion of agricultural activities.

#5061

Name: Jammal, Anthony

Correspondence: Please value the wildlife such as the elk over farming and agriculture development. We need to preserve Point Reyes natural beauty and charm. Without it this area and the environment will suffer leading to a lower quality of life for its residents.

#5062

Name: B, A

Correspondence: Please don't allow this to take place and keep the elk safe

#5063

Name: N/A, N/A

Correspondence: Don't prioritize agriculture over the environment and wildlife. Point Reyes is a national treasure, and I've enjoyed visiting to see the elk and beautiful natural setting. They need to be protected and preserved, not further abused by ranchers.

I care about protecting California's wildlife. I oppose the National Park Service's plan to kill native Tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting

waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

#5064

Name: Nunez, Priscilla

Correspondence: Hi, I urge you to adopt Alternative F, which would discontinue farming and ranching opportunities in the park and expand visitor opportunities. The preservation of native wild species must take precedence over farming and ranching activities. Remind it that grazing negatively affects ecosystems, causing water pollution and soil erosion, spreading invasive species and disease, and harming endangered species.

#5065

Name: MacGregor, Steven

Correspondence: I care about protecting California's wildlife. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I find this act absolutely deplorable and I urge the National Park Service to instead restore the lands for wild animal habitat.

I find even the thought of this awful and the National Park Service should truly be ASHAMED of itself for even contemplating this idea.

We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

#5066

Name: Meyer, Jennifer

Correspondence: I think the best alternative for dealing with elk and cows is to build fences to separate them. I do not believe in killing any of the elk herd.

#5067

Name: Soares, David

Correspondence: This is a National Park, not farm, or range land. No culling of wildlife should be allowed that is not related to health and well being of the animals and/or habitat, period!

Thank you

#5068

Name: infield, maryan

Correspondence: This is a complete disaster for our environment-please reconsider

#5069

Name: Kilgore, Anne

Correspondence: This is absolutely appalling that my tax money is being used to pay people to kill animals so that ranchers (who apparently believe that are entitled to free stuff/help/land/benefits, otherwise know as welfare) can

benefit. If a company or entrepreneur can't make it financially without the government interfering that is not capitalism.

To be clear I don NOT want wildlife to be killed for anyone, much less ranchers who obviously believe they are entitled to my money. If they can't make it, then they need to out of business.

I do not understand why ranchers believe they deserve so much help while they do nothing for others. I am truly disgusted.

Parks are for the American people to enjoy, not for welfare ranchers to make a profit.

#5070

Name: infield, maryan

Correspondence: Please adopt alternative F

#5071

Name: Resa, Gloria

Correspondence: I care about protecting California's wildlife. I OPPOSE the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area.

We should prioritize the preservation of our public lands and wildlife, NOT the economic interests of private ranchers. Thank you for speaking up for the elk who call Point Reyes home!

#5072

Name: N/A, N/A

#5076

Name: Welker, Jeanne

Correspondence: PLEASE, Please adopt Alternative F.....

#5077

Name: Johnson, Jo

Correspondence: Please protect the elk at Point Reyes!

#5078

Name: Doyle, Gil

Correspondence: I care about protecting California's wildlife. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

Get a clue and do your job.

#5079

Name: Keenan, Kathy

Correspondence: Rather than expanding ranching and eliminating the native tule elk, which do not destroy the

environment, please adopt measures that will expand wildlife habitat, expell ranching (which harms the environment), and increase visitor resources.

#5080

Name: G., Laura

Correspondence: The national Park service should focus on protecting parks, their Flora, and fauna. The national Park service should not defer to corporations, companies, businesses or ranchers. That is not their responsibility. Protect the land, the plants and the animals.

#5081

Name: Brewer, Anna

Correspondence: Please protect California's wildlife. I oppose the National Park Service's plan to kill native tule elk and to expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. This is wildlife area. I urge the National Park Service to instead restore the lands for wild animal habitat.

We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

#5082

Name: Tintle, Bob

Correspondence: I expect the NPS to manage the Point Reyes National Seashore as a park not as for-profit agricultural enterprises. As part of the national park system, the seashore should be managed for the benefit of all not for the profit of a few ranchers and farmers.

For this reason and more, I urge the NPS to adopt Alternative F, which would discontinue ranching and farming opportunities in the park and expand visitor opportunities. I believe that preservation of native wild species should take precedence over ranching and farming activities. Need I remind you that grazing negatively impacts ecosystems causing soil erosion and water pollution, harming endangered species, and spreading invasive organisms and disease.

Thank you for allowing me to express my values.

#5083

Name: Adkins, Susie

Correspondence: Please do not kill these Elks just to please the ranchers. Too many of our wildlife are being killed because us humans are greedy and sometimes we could care less about anything or one else. The Elks are God's creation and therefore we should do what we can to protect them. Thank you in advance for saving them.

#5084

Name: Egan, Michele

Correspondence: I strongly oppose the National Park Service's plan to kill the Tule Elk of Point Reyes. I support non-lethal means of managing the herd either birth control or moving some members of the herd to another herd or establishing a new herd on other national park properties. I also support the ongoing presence of the existing ranches within the Point Reyes area. The ranches were there first and can be good stewards of our land, operating their agricultural enterprises AND preserving wildlife. That being said, those ranches should be given every tool to

be good stewards. That does not involve culling the herd of Tule Elk. The park service can not shoot it's way out of these challenges. Try birth control on the herd and/or relocation. Please do not kill the Tule elk. Sincerely  
Michele Egan

#5085

Name: Shortle-Turner, Tracy

Correspondence: Help protect the Elk!

#5086

Name: Mcgrath, Kelly

Correspondence: Please dont kill any Tule Elk. There are other solutions to this issue. Look for them. Thank you.

#5087

Name: SHIELDS, ROBERTA

Correspondence: Please accept this as a heartfelt, rational and substantiated comment about the harm that commercial ranching can inflict on wildlife and wild places. There is absolutely no reason why any number of native tule elk should be sacrificed to allow cattle to graze or otherwise infringe on land that should be the realm of wildlife not commercial "crops". That said, I don't think I can state my opinion and concerns any better than is done in the following statement: I care about protecting California's wildlife. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

#5088

Name: Wagner, David

Correspondence: I feel as if this plan is short-sighted and favors subsidized farmers and ranchers rather than wildlife.

#5089

Name: Friedmann, Michael

Correspondence: Please be kind to all the Animals and the Environment this is their Planet too, Thank You Very Much.

#5090

Name: Rice, Janet

Correspondence: I care about protecting California's wildlife. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. Name: Dundas, Ruth

Correspondence: \*Note - This is a COPY of a hand delivered comment with printed photos referred to in the text. There is no possibility for submission of photos online.

I DO NOT SUPPORT ALTERNATIVE B OF THE EIS GENERAL MANAGEMENT PLAN BECAUSE:

ENVIRONMENTAL VIOLATIONS " Creating a new ranchland zone encompassing one third of the Point Reyes National Seashore violates the mission of the National Seashore as written in the original 1962 Statute to provide for the maximum protection, restoration, and preservation of the natural environment.

Cattle and dairy ranching have contributed to the environmental degradation of the natural environment, including plant and wildlife:

" During the four years I worked in Point Reyes as a plant ecologist, I was not the only employee who believed the ranches had unacceptable environmental and social impacts. Barbara Moritsch Vegetation Management Branch Chief Point Reyes National Seashore

" The livestock polluted waters of Point Reyes National Seashore rank in the top 10 percent of US locations most contaminated by feces indicated by E. coli bacteria according to a report published by the Center for Biological Diversity

" The Park Services 2013 Coastal Watershed Assessment for Point Reyes National Seashore documented numerous examples of cattle ranching polluting water resources in the park and identified dairies and ranches as a principal threat to water quality.

" I submit 5 Photos as EXHIBIT A, taken in early September, 2019 which support this statement. Photos 1-3 from A ranch, B Ranch and E ranch show degradation of soil due to concentrated cattle movements. Photos 4-5 show water pollution with algal blooms on B Ranch where cattle come to water.

MAINTENANCE OF HISTORIC BUILDINGS MISLEADING AND INADEQUATELY PROVIDED FOR " Alternative B also violates the legislation of 1976, amendment directive to administer Point Reyes without impairment of its natural values, in a manner which provides for such recreational, educational, historic preservation, interpretation, and scientific research opportunities as are consistent with, and based upon, and supportive of the maximum protection, restoration, and preservation of the natural environment within the area (16 U.S.C. § 459c-6).

" The ranches have been listed on the National Register of Historic Places. The Ranchers themselves have been primarily responsible for maintaining their infrastructure including the historic homes and barns and this has been a failure. Only where the NPS has stepped in to provide skilled workers and funding has there been proper maintenance as in the case of the large Barn at the Home Ranch. There is no provision in the EIS to change this. The leases in the EIS appendices give the Ranchers primary responsibility for maintenance. The existing barns and home structures are an embarrassment to the National Park and the public visitors. The stench from Historic Ranch A is so overpowering at times, it can be smelled from Chimney Rock, where I work on Winter weekends. The abandoned cars and trailers being used as domiciles are not in keeping with Historic Place designation.

" It is the Historic BUILDINGS AND INFRASTRUCTURE that have been given Historic status, NOT THE CATTLE. This is MISLEADING to the public. The Cattle are not covered by the National Register of Historic Places.

" The reason for giving Ranchers 20 year leases is so that they feel that they are making a reasonable investment in keeping up their property. However, without owning the property to see a return on their investments, and the lack of assurance that they can continue ranching after the 20 year lease period is up, the Ranchers will not invest the needed funds into the preservation of historic buildings and agriculture. This concern was voiced by the Ranchers at the meeting of the Marin Conservation League at the Lagunitas School on September 5, 2019.

" There are many Historic Farms and Ranches in Marin County, such as the Jensen Ranch in Tomales, the Gale Ranch in Chileno Valley, the Burbank Ranch in Tomales, and the Parks Ranch in Tomales to name a few that predate most of the Point Reyes Ranches. These ranches are all privately owned and therefore privately maintained, with some help from MALT and similar organizations. There is no precedent for Ranchers paying for the cost of restoration while leasing land, even with 20 year leases. The investment is too great to justify.

" The Point Reyes Ranchers pay \$7-9 AUM for their grazing rights when average grazing fees in Marin County are \$15-20 AUM. The Ranchers also pay no property taxes. This is an unfair advantage to neighboring Marin County Ranchers, and should provide for ample funds for preserving buildings and infrastructure. However, over the years, the ranch buildings and infrastructure of the PR Ranches have suffered from neglect and disrepair. " No mention is made in the General Management Plan of the high cost of ranching to the Park and the Public. Marin County spent \$250,000 in legal fees of ranchers managed by PRNS in 2017 alone. The cost of the EIS so far is close to \$1,000,000. And there is no proposed budget for the hiring of staff and qualified professionals to oversee the ranching enterprises proposed in Alternative B.

" The responsibility of historic preservation and educational interpretation is the mandate of the NPS, not overseeing Commercial Ranching. The Park budget is so stretched that the educational services already present have been greatly curtailed. I see this as a volunteer. Our equipment is old and has not been replaced over the years. We have only one paid NPS ranger to oversee the work of the 75 volunteers that provide (for free) the educational interpretive services needed to handle the thousands of visitors we manage at the Outer Point in the winter months. There is no extra staff or financial resources to handle overseeing Ranchers. This is not addressed in the Proposed General Management Plan.

" There is no provision for ACCOUNTABILITY and TRANSPARENCY in the General Management Plan. Lease agreements, Regular Health Inspections and Inspections of Buildings with Updated Maintenance reports should be on the Parks website for the Public to access easily, as it is Public land that is supporting the Ranchers. This lack of transparency, at present and in the planning for the future, indicates the lack of staffing and funding for the NPS to adequately oversee the Ranching operations.

" One of the most prominent examples of the lack of resources for management of historic ranching buildings is the Home Ranch. The Rancher moved out two years ago and the park has let the buildings fall apart. The main house is overgrown with weeds and the fences are propped up with branches. This is the oldest and most historic Ranch in the Seashore, built in 1857, and yet it is the most disheveled and abandoned. I submit EXHIBIT B, 6 photos showing the current state of this most Historic of the ranches in Point Reyes.

" I also submit EXHIBIT C - 6 photos showing the disheveled condition of the buildings at B Ranch (showing a Trailer used for housing), A Ranch (with broken down cars in the yards) and the poor condition of the cattle guards at A Ranch, which have not been maintained for many years. The roads to the Outer Point are in terrible condition partly due to large dairy trucks and farm machinery that regularly use these roads.

**ELIMINATION BY LETHAL MEANS OF THE TULE ELK** " The Tule Elk are native to Point Reyes. The Cattle are not. Prioritizing commercial cattle ranching over the Wildlife is a violation of the founding mission of the National Seashore. " There are currently 660 Tule Elk in the Park. There are 5,196 cattle on land managed by the PRNS. " Tule Elk eat 9 lb. per day of dry forage. An average Adult Holstein eats 50 pounds daily of dry forage. " Cattle in the PRNS drink over 156,000 gallons of water per day. Yet 250 Tule elk were left to die in Pierce Point behind the fence that keeps them out of the range of the cattle. There were no cattle who died of the drought in the same year at PRNS.

These facts are not specified in the General Management Plan. And indicate that the Proposal B to cull the Tule Elk by lethal means is in violation of the founding mission of the PRNS.

DIVERSIFICATION " Johnes disease is a lethal disease threatening to all ruminants, including pigs, sheep, goats, cattle and elk. It is possible and perhaps likely that the JOHNES disease present in the Tule Elk came from the Cattle. Spreading manure on the fields may be spreading the disease as it is spread through fecal material and can lie dormant for 18 months. Bringing in additional species of animals may further spread the disease. " The idea of diversification opens up the possibility of grandfathering in the future of more farming activities. This could lead to further degradation of the environment. " There is no plan in the EIS to deal with predation by wild animals such as bobcats, mountain lions, weasels and coyotes on new animals such as chickens, sheep and goats, who are more vulnerable than cattle. This could lead to further problems with Ranchers vs. the Parks mission.

SUCCESSION " The three stage succession outlined in the Alternative B proposal is contrary to the founding legislation of the Point Reyes National Seashore. The original legislation provided for fair market price (\$340 million in today's value) paid to 27 ranchers for the purchase of their ranch lands. The 17 remaining families were allowed to continue ranching for their lifetime or 25 years, whichever was longer. It has now been 57 years and 31 ranches with 24 families are considered legacy families. Proposal B allows these 24 families to continue ranching for the 20 year lease period, and their families or neighboring ranchers to take over their leases if they decide to give them up. The third level of Succession in Proposal B is open to proposals from the community at large if the original families or neighbors do not want to take up the leases. This is in violation of the founding mission and even the enabling legislation of 1978 which entitled only the current families to continue ranching.

" In effect, Proposal B, assures that one third of the National Park will allow ranching to continue, whether of historical value, or not. And whether the damage to the environment and wildlife violates the Parks founding mission or not:

" Except for property which the Secretary specifically determines is needed for interpretive or resources management purposes of the seashore, the owner of improved property or of agricultural property on the date of its acquisition by the Secretary under sections 459c to 459c-7 of this title may, as a condition of such acquisition, retain for himself and his or her heirs and assigns a right of use and occupancy for a definite term of not more than twenty-five years, or, in lieu thereof, for a term ending at the death of the owner or the death of his or her spouse, whichever is later. " Enabling Legislation, Point Reyes National Seashore, 16 U.S. Code § 459c, September 16, 1962

## IMPACT ON VISITORS TO THE PARK

The EIS and General Management Plan makes no mention of the impact of the ranching on tourist visits to the Park and to the local economy.

" The number of annual visitors to Point Reyes in 2017 was 2,456,669. " 88.6% of annual visitors from 2017 were non-local " The economic value attributed to tourism at PRNS in 2017 was \$132,388,900 " Tourists come to Point Reyes for the purposes stated in the founding mission: recreational, educational, historic preservation, interpretation and to enjoy the environment and the wildlife. Tourists do not come to the National Seashore to see Commercial Cattle Ranching. There are 255 agricultural operations in Marin comprising 50 percent of Marin County. There is only one National Park.

MITIGATION AND RESTORATION IMPACT NOT ADEQUATELY ADDRESSED " None of the Parks Alternative Proposals discuss timelines or costs for mitigating the costs of addressing water pollution from cattle manure runoff, soil degradation and erosion from grazing cattle, impact to plant and wildlife, and pollution from greenhouse gases and Confined Animal Feeding Operations (CAFOs). There is no budget nor scope of focus on where to address staff and funds for a plan of action, and what the benefit would be to wildlife, water, climate change mitigation, or public visitation and use. This should be the core of an Environmental Impact Statement, especially dealing with Ranching in a National Park Wildlife Environment.

SUPPORT FOR ALTERNATIVE F, WITH REVISIONS " The only Alternative in the EIS General Management Plan which adheres to the founding mission of the Park, and supports environmental and wildlife over Commercial Ranching concerns, is F, with the provision of eliminating Ranching over a five-year period. But Alternative F has not seen the attention that Alternative B has, and needs revisions including the following: " A thorough Environmental Plan needs to be an integrated part of the Proposal. A budget and scope of work needs to be included, including impact to wildlife and plant life and assessment of and plans to restore the environmental damage caused by 150 years of cattle ranching.

" A plan of action with scope of work and budget needs to address the restoration and maintenance of the historic buildings that the NPS decides to save in its mandate of Historic and Cultural Education. An excellent example of this is seen at Pierce Point. Visitors can see the historic buildings, read the interpretive panels and come away with a very good idea of what dairy farming was like at the Historic Pierce Point Ranch. Historic buildings could likewise be repurposed for visitor services and much needed Park staff housing.

" There are many examples of Historic Ranch preservation and Educational and Cultural Resources throughout the National Park System. An excellent example is the Fruita Ranch at Capital Reef National Park, where a few livestock are kept and the apple orchards are maintained, along with well-kept historic buildings which house concessions and museums open to the public. The public can even pick apples in the orchard for a small fee. Everyone leaves Capital Reef with an understanding of what ranching was like in that Valley. This is in keeping with the mission and mandate of the NPS.

" If the Park is no longer embroiled in legal battles with the local community, environmental organizations and public at large, those funds could be used for more adequate staffing and funding of visitor programming in keeping with the National Parks mission: Our Mission " The National Park Service preserves unimpaired the natural and cultural resources and values of the National Park System for the enjoyment, education, and inspiration of this and future generations.

Correspondence: The National Park Service is the first, last and only defense of protection against everything, but especially the Trump Administration, which is hellbent on opening up National and Public lands to oil, gas and coal devastation, damning wildlife and national resources forever. Please take your commitment to protect our lands very seriously because this administration sure doesn't. Between Interior Secretary David Bernhardt and EPA head Andrew Wheeler, Trump has positioned the federal government to rape and pillage our natural heritage, with the blessing of Republicans and an ineffective Democratic Senate minority. You are the last defense. We will work with you to protect our lands!!!

Thank you.

Name: Jennings , Kathleen

Correspondence: My visit to Point Reyes left a lasting impression on me. The wildlife there was magestic. The deer seemed healthy and contented. They are a national.treasure. Please do not change or interfere with the lives of these creatures. Leave Poknt Reyes as it is. Thank you.

#5094

Name: Wood, Peter

Correspondence: Let the Elk live in peace!

I care about protecting California's wildlife. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

#5095

Name: Chase, Felicia

Correspondence: Please don't kill elk at a Point Reyes National Reserve.

#5096

Name: lacy, sharon

Correspondence: please adopt Alternative F, which would discontinue farming and ranching opportunities in the park and expand visitor opportunities. The preservation of native wild species must take precedence over farming and ranching activities. Grazing negatively affects ecosystems, causing water pollution and soil erosion, spreading invasive species and disease, and harming endangered species.

thank you for protecting the life left on this radiant planet.. sharon j. lacy

#5097

Correspondence: I vehemently oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

We must prioritize the preservation of our public lands and wildlife over the economic interests of private ranchers. Commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

#5098

Name: Mason, Beth

Correspondence: Please adopt Alternative F! It would discontinue farming and ranching opportunities in the park and expand visitor opportunities. After all it is a park- -not a ranch or farm- -that could attract visitors and revenue from them.

The preservation of native wild species must take precedence over farming and ranching activities! It is actually the widespread grazing of cattle that negatively affects ecosystems. Grazing also causes water pollution and soil erosion, spreading invasive species and disease, and harming endangered species.

Please consider anything other than killing these elk! They deserve to exist in their habitat unharmed by people and the impact of people's eating habits (beef) on territory that they have innocently inhabited for decades and/or centuries.

Thank you for taking comments from the public on this matter.

#5099

Name: Macneill, Sandra

Correspondence: My opinion is that plan F is the best and most ecological and sensible way to go. We should not have cattle ranches persisting eternally at our coasts, with their methane gas and manure runoff and detrimental impact on the natural wildlife of the area. Manure runoff polluting the only marine wilderness south of Alaska is not sustainable. Illegally disposing of cattle carcasses around the national seashore is not sustainable. Allowing cattle to give elk and other wildlife life-threatening diseases is not sustainable. Subsidizing and endorsing methane-producing confined animal feeding operations (CAFOs) in an era of climate change is not sustainable. Trucking hay for hundreds of miles as a supplemental feed, because pastures are overstocked and overgrazed, is not sustainable. And yet these practices continue. The cost of ranching to our park. The National Park Service has not provided any information on the dollar amount or portion of its budget that goes to ranching-related expenses. Ranching places increasing demands on dwindling park budgets, while park improvements and a backlog of maintenance, along with public programs and interpretation, go unfunded. Meanwhile, scarce resources go to support 24 ranchers operating in the Seashore, including killing wildlife to benefit their operations.

Let's look at our situation more globally and take all sides into consideration, follow the original plan to buy out the ranchers, and "go natural."

#5105

Name: Martinez, Janie

Correspondence: Please adopt Alternative F, which would discontinue farming and ranching opportunities in the park and expand visitor opportunities. NPS please preserve the native wild species that should take precedence over farming and ranching activities. I remind you that grazing negatively affects ecosystems, causing water pollution and soil erosion, spreading invasive species and disease, and harming endangered species. Thank you for your time.

#5106

Name: Hachey, Alma

Correspondence: As a member of the California-based international animal protection nonprofit organization In Defense of Animals with over 250,000 supporters, I oppose the National Park Service plan to kill native Tule elk, grow commercial crops, and permit ranchers to add chickens, turkeys, sheep, pigs, and goats to their exploitative operations.

As national park land, this property was specifically set aside to protect, restore, and preserve the natural environment including the wild animals who live there. The original intention was to phase out dairy and cattle ranching, not add more crops or animals to increase ranching profits.

The proposed plan does not address the damage from grazing, including water-quality degradation and soil erosion. Also, adding new crops will create more conflicts with native wild animals.

Please abandon this inhumane and destructive plan. I urge you to restore the Seashore's Pastoral Zone for wild animal habitat and repurpose historic ranch buildings for scientific research, interpretation, and public education.

#5108

Name: N/A, N/A

Correspondence: I urge reconsideration of alternative B in the Point Reyes National Seashore regarding the Tule Elk. Alternative F sounds more reasonable and ecologically sound. Discontinuing farming and ranching would allow the land to be less damaged since grazing causes soil erosion and water pollution. The agreement for ranching and farming was to last 25 years not forever. I understand that discontinuing this would cause economic

hardship but we cannot continue to harm our planet. Many people have had to change careers and move to different locations to work for many reasons. The future of farming and ranching was never guaranteed. The Elk deserve to live in peace. Thank you

#5109

Name: Smith, Gary

Correspondence: please adopt Alternative F, which would discontinue farming and ranching opportunities in the park and expand visitor opportunities. Some things are more important than money, like preserving natural habitat which could be lost forever. Increasing visitors would help preserve the habitat, produce revenue and keep the park safe for future generations.

Regards GSmith

Correspondence: This is in addition to my e-mail of this morning, September 16th.

Beyond just advocating for the option I prefer, ALTERNATIVE F, a better plan of all has occurred to me.

You of the National Park Service understand better than any organization how wildly successful the Yellowstone National Park has become. Millions of people visit, tens of thousands each season. There is a growing hunger among human beings to see the wild. Wildlife, wild vistas, wild weather, pristine environments.

Television and film makers have understood this too, and create glorious and popular programs about all kinds of wild creatures, great and small. Delicious and powerful wild spaces, hardly touched. Serene and carefully protected. Very, very nourishing on this threatened busy planet.

Point Reyes National Seashore Park is such a fabulous possible candidate. Utterly beautiful land, beautiful ocean views, and perfectly marvelous wild Tule Elk herds. So enchanting to look at.

Why not a National Park devoted to these rare views.. And to entrancing Tule elk and whatever creatures ultimately come to co-exist with them. For visitors, for hikers, for children, for students. Work that you do so wonderfully well.

No more cows, no more farming, no pigs or sheep, or row crops. A cool deep breath on the California coast. Boy, I'd buy a membership. Wouldn't you? Yes? Thank you, Pippa Scott

Correspondence: Hi, I think it's important for the National Park Service to focus on preserving natural habitats and wildlife, and for that reason to vote for the alternative F

#5118

Name: Helbush, Eric

Correspondence: I am not comfortable riding on roads with traffic, there aren't enough loop options, poor connectivity, unsure of bike-legal routes, etc

#5119

Name: Friedman, Steven

Correspondence: Hi, I support the improvements in public and bicycle access outlined under Alternatives B, C, D, E, and F. I support for the following trail connections and plan elements:

A connection between Devil's Gulch and Platform Bridge Road using existing ranch roads.

A connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail.

A connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads.

A connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads.

A connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads.

An Estero Trail loop using existing ranch roads.

A permitting process for larger-scale bicycling and trail events.

Collaboration with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

All of these improvements would enable me to visit the Seashore by bike, rather than car.

I would feel much safer riding in Pt. Reyes National Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic.

Riding opportunities are currently very limited and fragmented; Improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

Thank you so much!

#5120

Name: Carbonell, David

Correspondence: I live in Marin, and regularly visit Pt Reyes National Seashore. I would prefer to visit and recreate by bike in Pt Reyes, but unfortunately access is so limited that I end up hiking. I am writing to request increased access as well as new bike trails. This would allow me to enjoy the seashore by hiking AND biking. Any and all ideas to increase trail access to bikes are welcomed wholeheartedly by me.

#5132

Name: N/A, N/A

Correspondence: The Pt Reyes are is beautiful. I ride my road bike through that area (Olema, Pt Reyes Station, up toward Tomales, etc.) once a week and have done a couple of gravel rides coming down from Mt Tam. Heading over the road into Olema is very crowded on the weekends. The road itself is very rough and the cars are constantly whizzing by.

The dirt trail that drops from Mt Tam onto Sir Francis Drake gets pretty awful as you head down the hill to the road/parking area. Its over grown and rutted. It was be awesome to improve these trails and make more of the area open to riding.

The following connections would be awesome -Between Devil's Gulch and Platform Bridge Road using existing ranch roads. -Between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail. -A connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads. -Between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads. -Between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads. -An Estero Trail loop using existing ranch roads.

I love spending my free time outside and these improvements would enable me to do more exploring by bike and in a much safer way.

Correspondence: more bicycle access on public lands would enhance the public's access and enjoyment of that land

#5134

Name: Lanier, Warren

Correspondence: Having recently tried to find easily accessible loops for riding Mt. Bikes in the park, it quickly became obvious that there was almost no options to see very much of Pt. Reyes by bike that weren't simple "out and backs" on a single trail, and even more disheartening, there were incredibly limited places to ride at all.

I'm in support of more bike options to allow greater access to these amazing park lands, including the following objectives supported by MCBC:

- A connection between Devil's Gulch and Platform Bridge Road using existing ranch roads.
- A connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail.
- A connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads.
- A connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads.
- A connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads.
- An Estero Trail loop using existing ranch roads.
- A permitting process for larger-scale bicycling and trail events.
- Collaboration with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

Let work together to get out of our cars and get out into nature. The conflicts between trail users of the 80s and 90s have given way to a mutual love and respect of our wildlands. The easier and more accessible our public parks are, the more people will be invested in protecting and maintaining them.

The narrow highway and roads through the park are dangerous and uninviting to cyclists and Mt. Bikers. Loop trails, connections, ranch roads, and access to the coast would each improve park experiences and increase exposure for the public.

Please act to increase access and bring in more advocates for our National Parks and wildlands.

Best,

w

Name: Kallins, Wendi

Correspondence: I support the continued ranching in the Point Reyes National Seashore and mostly support the

preferred alternative. However, I do believe that it needs some refinement. Once a family has decided to quit ranching The ranch should revert to national park and not be passed on to a new rancher. This will allow some attrition without causing undo hardship to the current ranching families and can ultimately reduce the cattle to a more manageable level.

I'd like to see a relocation program for the Elk if possible. Most people simply don't understand why the culling is necessary to the health of the herd and relocation would help to address public outcry.

I support diversification of ranching but only if done in a sustainable manner using regenerative agricultural practices. Carbon sequestration should be a vital piece of ranching practices. Ranches outside the park are already showing how ranching can be done in a way that protects the local ecology and can reduce the carbon footprint.

I also support expanding the bicycle and pedestrian access to the park. Specifically I support: A connection between Devil's Gulch and Platform Bridge Road using existing ranch roads - I bike this all the time to get to Point Reyes and would love to do it off road.

A connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail.

A connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads.

A connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads.

A connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads.

An Estero Trail loop using existing ranch roads.

A permitting process for larger-scale bicycling and trail events.

Collaboration with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

#5136

Name: Valdivia, Lynn

Correspondence: Hi,

I ride on roads in the Pt Reyes area, but it is often unnerving to ride with the cars. Many drivers aggressively pass cyclists, which is very dangerous and detracts from the enjoyment of a bike ride. I would ride in the Pt Reyes area more often if there were safer and less car-filled routes.

I want to express my support and appreciation for improvements in access for the public and bicycles as outlined in alternatives B, C, D, E, and F. Additionally, support the following trail connections and plan elements:

\* A connection between Devil's Gulch and Platform Bridge Road using existing ranch roads.

\* A connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail.

\* A connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads.

\* A connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads.

- \* A connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads.
- \* An Estero Trail loop using existing ranch roads.
- \* A permitting process for larger-scale bicycling and trail events.
- \* Collaboration with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

These improvements would increase my enjoyment of the area for cycling and improve my safety by getting me out of the car traffic. Cycling opportunities are already very limited and fragmented. Connectivity improvements and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

Thank you.

Name: CASSEL, GILLIAN

Correspondence: Whenever people get out of their cars to walk, cycle, run, paddle, swim or just sit with nature, there is a ripple effect that is positive for the Earth and our communities in many ways. People enjoy themselves more, take time to "smell the roses", appreciate and respect nature, and pass on their appreciation of the beauty and importance of preserving nature in many ways: financial and other. Simply getting to know and appreciate nature improves knowledge, insight and thus the importance to human, plant, and animal long term existence.

Cycling through carefully planned trails in our National Parks is a wonderful way to facilitate this type of knowledge, appreciation and ongoing support.

Cycling through beautiful parts of the National Seashore in Marin would add so much pleasure and appreciation and do no harm to the park. The more people can experience nature without cars, with less gasoline, noise, congestion, and pollution, the better off are our parks and our planet.

Thank you, Gillian Cassel

#5138

Name: Stanley, Chris

Correspondence: I am writing to express my support for expanded access for mountain bikes in the Pt. Reyes National Seashore.

While always difficult to manage multiple user groups, the efforts of the park service to manage and consider increased access is appreciated.

While I do love the Pt Reyes National Seashore, I rarely visit due to the lack of access for bikes. While numerous trails exist, there is very limited access to bikes and those that are accessible do not have a sufficient length or loop option to make them very worthwhile. For other combinations, requiring riding on roads without significant bike lanes or room for bikes the preference is to avoid the area.

There are such great opportunities there that I feel would allow more access to bikes while still maintaining some horse only / hiker only access where deemed appropriate.

Please consider expanded access for some key areas such as these proposed improvements:

-A connection between Devil's Gulch and Platform Bridge Road using existing ranch roads.

-A connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail.

-A connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads.

-A connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads.

-A connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads.

Thank you for all of your help and consideration Chris

Correspondence: As someone who grew up backpacking in point Reyes as a young scout and later as a college student back home on break, i'm ecstatic that you're increasing access to the point Reyes landscape. Currently, enjoying point Reyes via bike puts riders at undue risk via the lack of separate, dedicated bike paths. We're forced to ride in the road with vehicles that occupy the vast majority of the road driven by drivers who are more likely to run you off the road than they are to give you the three feet mandated by the state when passing. We as a society need to start making travel by bike more accessible and more fun if we want a chance of combatting climate change. Encouraging the local population and visitors to enjoy the natural splendor that point Reyes provides is a great way to help others realize the benefits of traveling via bike.

Thanks fo much for listening to another idiot on a bike!

#5142

Name: Brady, Nessa

Correspondence: Hi I live in Mill Valley but spend a significant amount of time in Stinson beach and regularly take my life in my hands and ride my road bike on hWY 1. I would much prefer to be riding my mountain bike however there are so few trails in west Marin that it is next to impossible for me to ride my Mountain Bike. I am so excited to hear about the possibility of all the following trail connectors which would make it possible for me to leave my road bike at home and get out of the crazy hwy 1 traffic.

A connection between Devil's Gulch and Platform Bridge Road using existing ranch roads.

A connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail.

A connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads.

A connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads.

A connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads.

An Estero Trail loop using existing ranch roads.

A permitting process for larger-scale bicycling and trail events.

Collaboration with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

All of these developments sound so awesome for everybody, getting bikes out of the traffic and freeing up the roads and reducing bike/car collisions.

Please move forward with these projects

Nessa Brady

Correspondence: To whom it may concern:

I ask that you please adopt Alternative F and discontinue farming and ranching opportunities in Point Reyes National Seashore. The preservation of native wild species must take precedence over farming and ranching activities, and grazing negatively affects ecosystems, causing water pollution and soil erosion, spreading invasive species and disease, and harming endangered species.

I thank you in advance for your time and consideration. Best, Cristina

#5144

Name: Bagley , Patricia

Correspondence: "The proposed plan includes the killing of native Tule elk to provide more grass for cattle which graze in the seashore, the introduction of sheep, goats, chickens and pigs and the conversion of grasslands to row crops such as I read a couple articles about this but it's been a few weeks and I forgot about the Expansion part! I don't agree with this expansion or preservation of agriculture in this plan! I know dealing with the long time ranchers is complex but you dealt with the Oyster Farm business and there're still such business nearby. I think you are leaning too far in pro-agribusiness. Just cuz of fall out, which wasn't from everyone by any means. I think people had a harder time understanding the problem with oysters. There's plenty of farms and cattle in that whole area surrounding the PR Preserve!

There are so few wild-er places for Plant and Wildlife Reserves/Preserves on public land where millions can appreciate and enjoy the land and stunning ecosystems, over the few in business there. We have a responsibility beyond ourselves, beyond our own species, we must be Land Stewards, that's your job in the Point Reyes National Seashore. Set aside in the first place for its unique and breathtaking beauty! That Is It's Purpose!

Thank you for your consideration.

#5145

Name: Warden, Lisa

Correspondence: As a Bay Area resident, taxpayer, and chronic voter, I care deeply about protecting California's wildlife. I strongly oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. Correspondence: Obviously they aren't happy with their \$50 million and they are continuing to make money using the countries land to make their product by letting their animals eat and grow letting them make even more money! I have one thing to say to ranchers and pretty much all ranchers: fuck you

#5148

Name: Hodge, Carolyn

Correspondence: As a resident of Marin County I am a frequent visitor at least 12x per year to the Pt. Reye Seashor, by bicycle and car. I ride at least monthly both off road (Bollinas Ridge) and on the road Rte 1 from Bollinas to Limantour and Pt Reyes Station and Pt Reyes Seashore.

I appreciate the NPS effort to expand recreation and access for all types of users, especially bicyclists and people with disabilities. I support the improvements in public and bicycle access outlined under Alternatives B, C, D, E, and F.

- A connection between Devil's Gulch and Platform Bridge Road using existing ranch roads.
- A connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail.
- A connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads.
- A connection between Drakes Estero and Abbott's Lagoon Trail using existing ranch roads.
- A connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads.
- An Estero Trail loop using existing ranch roads.

Specifically expanding connections that would make cycling a better option to visit the seashore, and expanding off road connections for trail biking. I would feel much safer riding in Pt. Reyes National Seashore area on trails, pathways, and ranch roads, rather than on roads shared cars.

As a group cyclist with several local organizations, it would be a great way to get more visitors to enjoy Pt Reyes area NOT in a car if NPS allowed new permitting process for larger-scale bicycling and trail events.

Thank you!

#5149

Name: Watson, Jena

Correspondence: I support increasing the accessibility of Pt Reyes Station to bicycles and look forward to having the trailers connect in west Marin!

#5150

Name: Flores, Juliet

Correspondence: I care about protecting California's wildlife. I oppose the National Park Services plan to kill native Tule Elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

#5151

Name: vricella-stokes, josephine

Correspondence: Please do not make everything about money and human interest. Protect the fate of tule elk at Point Reyes National Seashore in California. Farmers and ranchers who have been leasing thousands of acres of the park to graze cattle apparently don't want to share these grasslands with elk, so the National Park Service is considering a plan that would permit elk to be killed while allowing the expansion of agricultural activities. Please do not allow this to happen

#5156

Name: Thompson, Helen

Correspondence: I oppose Californias National Park Services plan to kill Tule Elk at Point Reyes National Seashore for the sole purpose of expanding Commercial Agriculture. Our job is to protect Wildlife, not destroy it for a select few. These are public lands that have been set aside for the public to enjoy. Since 1970, over 60% of Wildlife has already been killed off at the hands of man. Now you want to kill off MORE. Your job is to conserve and protect Wildlife, not cater to private farmers who pollute water, the environment, abuse animals, etc. I urge you to do your job and protect the Tule Elk i stead of murdering them.

#5157

Name: latimer, jon

Correspondence: To who it may concern: My name is Jonathan Latimer - a cyclist and bike-packer of the Bay Area for 25 years. There are few roads that I have never cycled in these areas, but this last weekend a friend and I biked from San Rafael to Point Reyes for the first time, enjoying a stay at Sammuel P Taylor as well as the beautiful and stress free ride on the Cross Marin Trail. The ride was fantastic all the way into Camp Taylor, but after we set up camp and continued on, we found the end of the trail at the Platform Bridge, and found our experience became dramatically less "stress-free", to put it mildly. There was no shoulder for most of the ride from Platform Bridge, on into Point Reyes Station, which was a beautiful town with lots to see and do, but I dare say I might not attempt it again. Coming back after dinner was perilous. Cars were moving very fast, and again, not much of shoulder to ride on. Even with very bright lights it was difficult to see. I heard from some local cyclists that there are several proposals on the table to connect various paths and improve cycling access to these areas using a combination of existing ranch roads and the addition of some new trails. I cannot stress enough what a great idea this would be! In particular, I've heard of the following: 1) a connection between Devils Gulch and Platform Bridge Road; 2) a connection between Bolinas Ridge Trail and Five Brooks Stables; 3) a connection between Drakes Estero and Abbotts Lagoon Trail; 4) a connection between Marshall Beach Trailhead and Pierce Point Road. These would enable cyclist to enjoy multiple loops in and around the area while minimizing exposure to traffic and congesting, while simultaneously improving traffic and congestion by offering a healthy, viable and safe alternative to driving in and out of the area (biking!). I have no doubt that this would improve commerce in Point Reyes and the surrounding towns, while also minimizing the problems of car parking. Cyclists are a hungry, thirsty people, and are generally very generous with their money while visiting, while leaving little to no carbon footprint. This is a no-brainer! Please, please please! I would love to return to point Reyes many times over, and would frequent the beaches in the area if riding were more safe. Thanks for your time and consideration. -JL

#5158

Name: Weber, Clark

Correspondence: Please provide greater bike access to Pt Reyes. So many of the trails are underutilized at Pt Reyes, and to open up more trails that include bikes will make more of the park more accessible for everyone. I'd love to see bike access for the following trails:

- A connection between Devil's Gulch and Platform Bridge Road using existing ranch roads. - A connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail. - A connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads. - A connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads. - A connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads. - An Estero Trail loop using existing ranch roads. - A permitting process for larger-scale bicycling and trail events.

Thank you for considering bikes at Pt Reyes. As a frequent visitor for hiking and trail running, I welcome the opportunity to ride my bike on the trails as well.

#5159

Name: Scruggs, Raymond

Correspondence: Hi Pt. Reyes Park Service,

Opening and developing more trails to bicycles on Pt. Reyes would be a great addition to other bicycle trails in Marin. Especially because Pt. Reyes trails would be rather flat and beginner "friendly". Most trails for bikes in Marin include much difficult climbing which are difficult for new riders other than those under about 25 years old to begin riding off road.

#5160

Name: Randolph, Patricia

Correspondence: I have written the Madravenspeak living wildlife column the past 9 years for The Capital Times one hundred year old newspaper out of Madison, Wisconsin. Science reveals that 60% of mammals on earth are now livestock, 36% humans and only 4% wild mammals remain on the planet. "Leadership" has killed off the wild to graze the tamed, to destroy ancient aquifers, desertify public lands and wipe out wildlife across the planet for deforestation, accelerating climate crisis and a million species going extinct now. All human decisions:

[https://madison.com/ct/opinion/column/patricia-randolph-s-madravenspeak-earth-s-mammals-humans-and-livestock/article\\_30903c45-4889-5cf7-aac8-a09e3e4b432e.html](https://madison.com/ct/opinion/column/patricia-randolph-s-madravenspeak-earth-s-mammals-humans-and-livestock/article_30903c45-4889-5cf7-aac8-a09e3e4b432e.html)

Evidently this land was licensed for 25 years to grazing for private profit back in the early 1960's...like much of our public lands in the Taylor Grazing Act. It is high time to reclaim our public lands, purge the scourge of livestock and private profit and return the land to the biodiversity that supports all life including humans. Even the Vatican met in February, 2017 ( hardly your animal rights organization ) and declared biodiversity destruction co-equal to climate heating as the crises that threaten human survival on the earth...and all life.

Rid the land of grazing livestock and the scourge of their contribution to biodiversity destruction and climate horrors facing all of us - and return it to indigenous and wild mammals. You have a responsibility to go beyond political self interest and ignorance and cruelty to represent the public good and the earth's survival as a living planet with some of the biodiversity we were blessed with 50 years ago. In that fifty years 2/3 of wildlife on this planet has been destroyed, with an emphasis on large mammals and natural carnivores who keep balance and health for people and wildlife.

Otherwise, you are encouraging more prion diseases like Chronic Wasting disease, lyme disease, West Nile disease, other tick diseases and bubonic plague found in mule deer out west where natural carnivores were purged.

Correspondence: PLEASE stop the senseless killing of animals....they ttend to havee their own life cycle just as humans....be it old age or accidental....the killing of earths creatires for sport or fun or population control is so out dated....it must stop.... I personally ask you to reconsider your decision asap

#5165

Name: Trottier, Jaye

Correspondence: Regarding the conflict in Point Reyes National Seashore, CA between native Tule elk and cattle, I ask that the National Park Service NOT consider "Alternative B," which involves killing some of the elk and offering another 20-year lease agreement to the farming and ranching families.

The lessees would be allotted over 26,000 acres and allowed to maintain over 5,500 cows, while the Drakes Beach elk herd's population, which numbered a mere 124 animals in 2018, would be limited to 120 animals maximum, and the Limantour herd, which numbered 174 animals in 2018, would be "managed in consideration of ranch operations," meaning that there would be no limit to how many could be killed. Further, Alternative B allows for agricultural "diversification," so the lessees could even bring in pigs and sheep and plant row crops.

I instead strongly urge the NPS to adopt "Alternative F," which would discontinue farming and ranching opportunities in the park and expand visitor opportunities. The preservation of native wild species must take precedence over farming and ranching activities. Please note that grazing negatively affects ecosystems, causing water pollution and soil erosion, spreading invasive species and disease, and harming endangered species.

Please adopt Alternative F in place of Alternative B.

Thank you for your consideration. I respectfully ask that you withhold my personally identifiable information from public review. Thank you.

#5166

Name: Bregoff, Robert

Correspondence: I support whatever alternative would provide the most access to bicycle travelers on Wide trails and fire roads. I have always enjoyed bicycling to Pt. Reyes. Some road features that are necessary to herd management such as cattle guards, present a hazard to cyclists, and cattle can degrade existing fire roads and trails by increasing erosion and increasing the amount of animal excrement. Bike and pedestrian access is consistent with plans to return Pt. Reyes to a more natural area. Cars are cattle are not. With the limited roadway space it's important to support safe, quiet bicycle travel.

#5171

Name: Polina, Nancy

Correspondence: As a lifelong Californian and frequent visitor to Point Reyes, I find it imperative that we start valuing this nation's wildlife and public lands as opposed to bending to the whims of private ranchers. The National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area is abhorrent and will haunt us for generations to come should it proceed. The National Park Service should uphold its values by restoring the lands for wild animal habitat, rather than sanctioning such an arbitrary slaughter of these native creatures.

It is unsustainable to continuously prioritize the economic interests of private ranchers as these ranches cause irrevocable environmental damage. Please do not make the already vulnerable wildlife Point Reyes suffer for such an avaricious cause. National parks are meant to protect our natural resources and native wildlife, are they not? These elk are a part of what makes Point Reyes one of my favorite parks to visit. The majesty of California wildlife should be venerated, not exploited. Thank you for taking the time to read this, I sincerely hope that the National Park Service will recognize how vital it is that we work to preserve our national parks and the life that deserves to flourish within them.

#5172

Name: N/A, Dashi

Correspondence: Dear Superintendent,

I am a Petaluma & Inverness resident, and I visit Point Reyes National Seashore several times a week to hike trails and visit beaches to enjoy my public land and the native plants and wildlife. I have spent thousands of hours and miles walking in PORE and know the area very well. There are too many generalities in all the alternatives in the GMPA for me to endorse any one of them. Here are some of my concerns:

The dairy operations within the park, particularly near Drakes Bay and Pierce Point, are some of the most trampled, abused and unsightly areas of the park. Loafing and grazing have degraded the coastal prairie and invasive plant species are common where grazing has been heavy.

As for the Tule Elk, they are an ecologically important part of the landscape of Point Reyes National Seashore. It is a visitor's privilege to view the elk in the seashore and to hear them bugle. Their recovery is a success story for restoring native ecosystems, consistent with the mission of the National Park Service.

Ranching on public land is not a right, it is a privilege. Commercial lease holders should not dictate wildlife removal or exclusion policies. Confinement, fencing, removal, hazing, and killing of wildlife in the national park for the benefit private ranch operators is unacceptable.

Given the founding purposes of Point Reyes National Seashore, commercial leases or activities at the Seashore should not conflict nor interfere with the protection of natural or cultural resources or public access to the park.

Tax dollars subsidize ranching in the national park, but taxpayers have limited access to large parts of the Seashore, at times further limited by fences, locks, and signage posted by ranchers. The GMPA must ensure, and the NPS must enforce the public's right to access the park.

Allowing private ranches to expand operations at the Seashore would reduce public access to the park, damage wildlife habitat, and degrade water quality. I am opposed to the ranchers' demand to grow commercial row crops and introduce sheep, goats, pigs, turkeys or chickens to the national park, which could create conflicts with native wildlife and create pressure to kill native predators like bobcats, coyotes, and foxes.

I would like to see the Park provide the following information to support the best management decision:

- Provide the data that supports that the elk populations -as is- are causing a negative impact on park grasses. -
- Provide a complete management plan that addresses the impact on commercial traffic increases in the park to support new vegetable growing. -Provide a comprehensive plan on road damage and repairs that will be necessary with the increased commercial traffic to support vegetable growing, trucks to support the hauling of pigs, chickens, goat and sheep operations. -Provide a complete cost analysis to support the new land uses, including park staff, enforcement, fencing, pesticide use monitoring, and any additional cost associated with these land uses. -Explain why there is no mention of cattle reductions based on the smaller land available due to use for silage, new domestic animals and row cropping. -Provide a detailed report on the effect of silage mowing on nesting birds, deer, coyotes, badgers, weasels, and other native wildlife.

Thank you.

Name: Levine, William

Correspondence: I currently ride mountain bike in the Pt. Reyes area. I would you'd liketo ride more but there aren't enough loop options, trail and fire road options open to mountain bikes.

I am in favor of these options:

A connection between Devil's Gulch and Platform Bridge Road using existing ranch roads.

A connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin

A connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads.

A connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads.

A connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads.

An Estero Trail loop using existing ranch roads.

Collaboration with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

These improvements would enable me to visit the Seashore by bike, rather than car. I would feel much safer riding in Pt. Reyes National Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic.

Bicycling opportunities are currently very limited and fragmented; connectivity improvements and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

Name: Irving, Daniel

Correspondence: Hi there - i would like to see increased trail access for bikes to Pt Reyes Natl Seashore. I have a very strong connection to the seashore, i have been going there since i was a toddler and it was also where i proposed to my wife. I would love to spend more time there and i would if there were more trails available for bikes. I could then visit the seashore by bike and not car. It would increase safety (less Bike vs car incidents) and enable cyclists to better experience the beauty of this great destination.

I support the improvements outlined under alternatives B, C, D, E and F.

#5176

Name: Lin, Doris

Correspondence: The NPS' preferred plan prioritizes the economic interests of the commercial cattle industry over the lives of wild animals and the integrity of natural habitats. In addition to allowing the NPS to kill elk, it would extend ranch leases to up to 20 years (currently five year terms are offered), expand leases into an additional 7,600 acres of the park, and allow ranchers to diversify their businesses beyond cows to include other farmed animals.

Many of the park's visitors come to see these beautiful animals. Yet the existing tule elk are already outnumbered nearly ten to one by cows.

These are terrible proposals. Please reject them. Thank you. Doris

#5177

Name: Nichols, Peggy

Correspondence: I am sick and tired of these RANCHERS Entitlement issues!! These Parks are for the safety of our wildlife in these Parks. These Parks are for the enjoyment of the American people and safety of the wildlife. Just because these RANCHERS want more land for their cattle, and for free, doesn't mean we change laws and let them in!!! They want more space for their cattle, then I would suggest they go BUY Land from a private land owner like the rest of us have to do, then move their cattle there. The State Parks are for the American peoples enjoyment and safety of wildlife. There is also NO REASON to kill off any wildlife in these parks. Let Nature take care of itself!

#5178

Name: Cohen, Nathan

Correspondence: Hello,

I support expanding all bicycle opportunities in Pt. Reyes (road, ranch/fireroads, and singletrack mountain biking). My wife and I have ridden most of the paved roads in Pt. Reyes. While they are great, we have serious concerns with drivers and their safety, so we avoid high traffic times. It would be great to have alternate routes to avoid some of the high-traffic areas. Petaluma-Pt.Reyes Rd is one thoroughfare that is especially dangerous and frustrating, given the amount of traffic and narrow nature from Platform Bridge to HWY 1 at Pt. Reyes Station. We also love the Cross Marin trail and would love to see it expanded to Olema and Pt. Reyes Station. It seems there are many options to utilize existed ranch roads to accommodate new routes and opportunities for bike access. This could allow for a lot more safe routes to and within Pt. Reyes area that would draw in more people on bikes and really advance the culture of the area away from being completely car-centric.

Thank you, Nathan

#5180

Name: Tartaro, Jeanne

Correspondence: I am deeply concerned about California wildlife (and wildlife, in general). I am strongly against

the National Park Service's plan to kill native tule elk. This plan also includes the expansion of commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. Indeed, the killing of the tule elk is in response to the complaints of the ranchers, who apparently find their existence in THEIR natural habitat, inconvenient. These park areas are far more valuable as wild animal habitat and resource. The selfish interests of these ranchers is not even the slightest bit comparable to the needs of wildlife, like the tule elk, and the necessity of wild habitat. These commercial ranchers are having a disastrous impact on the parks by eroding soil, polluting water and harming endangered/threatened species. The idea that the parks would put commercial ranchers and their monetary interests ahead of the well-being of native wildlife is simply abhorrent as well as mind-boggling. These parks serve, first and foremost, as areas of protection for wildlife and natural resources. Shame on the National Park Service for even entertaining the idea of expanding commercial agriculture and killing tule elk. They are making a mockery of the reason why these parks exist.

#5183

Name: Henning, Blake

Correspondence: The Rocky Mountain Elk Foundation (RMEF) appreciates the opportunity to comment on the National Park Service (NPS) Point Reyes General Management Plan Amendment (Plan) and Draft Environmental Impact Statement (EIS). The mission of RMEF is to ensure the future of elk, other wildlife, their habitat and our hunting heritage. RMEF's 234,000 members include hunters, ranchers, guides, outfitters, other business owners, wildlife enthusiasts, and other conservationists who have both recreational and economic interests in hunting and enjoying elk on public lands. Since its creation in 1984, RMEF has permanently protected and enhanced more than 7.4 million acres of North America's most vital habitat for elk and other wildlife, including more than 170,000 acres in California. As such, RMEF has an interest in ensuring the future productivity of elk and other wildlife in California.

There are three herds of tule elk, numbering more than 600 animals within this National Park Service facility. All herds have Johnes disease, a contagious, chronic and sometime fatal infection, primarily impacting dairy cattle. Due to the high risk of transmitting the disease to other herds and livestock, RMEF does not support any Alternative within the Draft Plan that allows for movement or translocation of elk to areas outside of Point Reyes, as per California Department of Fish and Wildlife policy.

The Draft Plan and EIS withdrew recreational hunting from further analysis in the Plan. Targeted removals of elk and other game species via hunting have been successfully implemented in other states and RMEF encourages the NPS to reconsider recreational hunting (open to all public) as a viable management tool for future herd management within and outside of Point Reyes.

Thank you for the opportunity to comment on this important issue.

Sincerely, Blake L. Henning Chief Conservation Officer

Name: Goldin, Chris

Correspondence: Comments Regarding the current General Management Plan Amendment Draft Environmental Impact Statement for the Point Reyes National Seashore: 1. DIVERSIFICATION IMPACTS: Diversification represents a movement away from historic multi-generational beef and dairy ranching that is stated as a cultural and historic value in the Seashore. Commercial sustainability is not a legitimate NPS management goal. The Seashore lacks the authority to consider diversification and fails to analyze all foreseeable impacts of the proposed changes in use on Seashore resources. Diversification needs to be removed from all alternatives as it is outside the scope of the draft EIS.

2. SUCCESSION IMPACTS: Seashore's proposed policy moves away from historic and cultural values to allow existing ranch families to continue to operate and opens up the opportunity for anyone to come in and operate in the park. The framework allows for a future where the Seashore could be fundamentally altered and has a high potential to be incompatible with the purpose of the Seashore and the Organic Act to preserve the park unimpaired for the use and enjoyment of future generations.

3. INCREASED VISITOR USE IN MARINE WILDERNESS: The Seashore does not have the resources to manage the increased visitor usage in the marine wilderness and the draft EIS has failed to explore all of the environmental impacts to the marine wilderness area.

3. TULE ELK: Tule elk are considered a natural resource and constitute an important part of the Seashore's ecosystem. Any strategies to manage the elk populations should be in the context of managing resources like other natural resources within the Seashore and not for the benefit of commercial lease holders.

Name: Davis, Dylan

Correspondence: I find it to be unconscionable that as the protector of public lands you believe it is better to 'cull' the native Tule elk in favor of cows. The ranchers have more than enough land already, while our native species have almost none. Please do not allow the removal of more of our beautiful land for agricultural purposes. Farms and ranches are nice, but our National Parks are nicer.

#5186

Name: Fin, Amanda

Correspondence: I am fully support of developing alternative trails and routes for bicycling to point Reyes I have bicycled it many times with my two teenage sons and it stressful when the supported routes give to very fast cars and little shoulder Now my son rides this route and heads to Stimson with his friends all on bikes. Please please support bicycling in point Reyes area and open up routes. The more people who feel safe bicycling, the more that will do it.

Bicyclists are good for the local economy, they are hungry and thirsty and keep traffic lower

#5187

Name: Locke, Stephen

Correspondence: I wholeheartedly support the inclusion of bike pathways and rights-of-way into the Point Reyes National seashore. Riding out there on the roads is a hazard to both rider and driver. Having the alternative of bikeways consisting of trails and ranch roads would allow many people to experience the beauty and grandeur of the Point Reyes peninsula and ease road traffic at the same time. Having new connections and loop options would be a dream come true!

#5188

Name: Levin, Daniel

Correspondence: support the improvements in public and bicycle access outlined under Alternatives B, C, D, E, and F

A connection between Devil's Gulch and Platform Bridge Road using existing ranch roads.

A connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail.

A connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads.

A connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads.

A connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads.

An Estero Trail loop using existing ranch roads.

Collaboration with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands

All of these improvements would enable me to visit the Seashore by bike, rather than car.

I would feel much safer riding in Pt. Reyes National Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic.

Bicycling opportunities are currently very limited and fragmented; connectivity improvements and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

Name: Freeman, Lucy

Correspondence: This land was originally purchased from the farmers and ranchers to become a park for the use of all. Those ranchers were allowed to use the land for grazing even though they had sold and been paid for the land.

To now continue to let them have this service plus destroy the elk that live there naturally seems wrong in several ways.

#5190

Name: Levin, Sebastien

Correspondence: I have only been out to the Pt. Reyes Area a few times, but it has generally been a positive experience: beautiful area and huge potential for outdoor recreation. For background I am a bike; I enjoy mountain biking and gravel riding. With these two forms of biking, I am able to enjoy a multitude of trails, but still find it hard to get out Pt. Reyes for the following reasons: limited loop options, poor connectivity between trails, and it is unclear what is bike-legal. I would also encourage opening some areas to being developed for single track trails as this is generally done by local bike organizations who generally improve the quality of trails and environmental stewardship.

While the above is a pretty general comment, I also wanted to provide some specific feedback on current projects and plans being discussed. - I appreciate the additional bike and public access outlined under Alternatives B, C, D, E, and F. - I support the connection between Devil's Gulch to Platform Bridge Rd, Bolinas Ridge Trail to Five Brooks Stables, Drakes Estero to Abbotts Lagoon Trail, and Marshall Beach Trailhead to Pierce Point Rd. - The connection between Bolinas Trail at Olema Hill and Point Reyes Station seems like a good connection for the Cross Marin Trail. - The concept of an Estero Trail loop is also interesting to me. - I would also reiterate that I think we need better collaboration between ranchers and other stakeholders related to public access.

These changes would allow me to visit Pt. Reyes by bike rather than by car as well as improve the limited and fragment trail system, which would further encourage me to visit more.

#5191

Name: Popper, Steven

Correspondence: Folks at NPS:

Thank you for all you efforts to provide equal access to our local Parklands!

I enthusiastically support the fololwing:

A connection between Devil's Gulch and Platform Bridge Road using existing ranch roads.

A connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail.

A connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads.

A connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads.

A connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads.

An Estero Trail loop using existing ranch roads.

And, of course, Collaboration with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

These additional trail openings would enable me to visit the Seashore by bike, rather than car.

Also, I would feel much safer riding in Pt. Reyes National Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic.

And lastly, bicycling opportunities are currently very limited and fragmented; connectivity improvements and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

Thanks! Kind Regards- Steven Popper

Name: Gitschier, Jane

Correspondence: I have two issues with the EIS and its conclusions:

1. While the EIS concludes that the environmentally sound solution is option F, the National Park Service is promoting option B for the future. Clearly, there are parameters that are being considered "behind the report" that are not being revealed. If an option is to be promoted, then the public needs to be informed as to how that conclusion is made, and this report does not do that. What are the parameters that are being weighed OTHER than the Environmental Impact that leads to this proposed option? How are the various parameters weighed? The public must draw the conclusion from the disconnect between the obvious environmental benefits of F and the lack of such benefits in B that something else is at play, presumably the strong agricultural community support for the preservation of the ranches. Is this a rational decision? Is it in keeping with the goals and trajectories set out by the National Park Service in the early 1960's at the inception of PRNS, ie, to close the beef and dairy operations within 25 years? It does not appear so.

2. Second is that the environmental aspects of the cattle methane production through belching are not as clearly presented as they could be in this EIS. Methane has 23 times the effect of CO2 per molecule as a greenhouse gas. This means that every year, each cow in PRNS emits the equivalent of CO2 produced by a gasoline-powered car driven 7500 miles. Added to that is the issue of methane in the manure; how manure is managed in the dairies is not addressed in the report nor is any suggestion of regulating that. World-wide, agriculture, and particularly cattle, is a major contributor to climate change. The NPS has no business contributing to the destruction of our planet. The ranches are historic, but that is the past. Their day in the Seashore should be at an end.

#5193

Name: Gaponoff, Sharma

Correspondence: I first discovered the joys of visiting the Point Reyes National Seashore (PRNS) in the early 1970's when I was a college student. I was captivated by the surrounding beauty while riding equestrian trails and hiking. I have continued to enjoy many visits to the park, made memorable by observing small gatherings of magnificent Tule elk (this is the only National Park where these animals are found), and catching glimpses of bobcats, elephant seals and more in their native habitat. I especially enjoy my visits during the grey whale migration where I would go out to the point and watch mommas with calves heading north. But above all, I think it is the smell of the ocean wafting onshore as it mingles its perfume with that of the native plants. All of this makes me feel alive and happy. I have brought many guests, both US and international friends, to enjoy the magic of PRNS with me.

As a taxpayer to the State California and the Federal government, I fear all of this is about to change with the latest General Management Plans for continued care of PRNS. From what I read, all plans except one are the antithesis of how this National Seashore was established by Congress and how I expect my tax dollars to be spent by the National Park Service (NPS) in managing this unique publically owned area.

What I want: The NPS to due their duty for the benefit of the tax paying public for care and conservation of public lands, not for the benefit of private enterprises. Specifically, I expect my tax dollars for PRNS to be spent as spelled out in the purpose and establishment of PRNS by Congress in 1962 "to save and preserve, for the purposes of public recreation, benefit, and inspiration, a portion of the diminishing seashore of the United States that remains undeveloped.

Currently, there are approximately 35 ranch/dairy farms still operating on PRNS public lands. These private enterprises encompass a whopping 38% of PRNS land. They pay no property taxes. They are heavily subsidized by my tax dollars for personal profit while destroying natural habitat and displacing native species of plants and animals. According to the NPS August 2019 Environmental Impact Study (EIS), these private businesses "are causing extensive environmental damage", since much of the land they run their livestock on is consistently overgrazed. I find it astounding that according to NPS documents specific to PRNS, cattle and dairy cows on PRNS out-populate native Tule elk by 10:1. Despite this, the Tule elk are killed whenever they step on public PRNS land that these private enterprises are using. Also, NPS 2010 documents reveal that the cattle and dairy industries on PRNS produce over 133 hundred million tons of manure a year and account for 62% of carbon dioxide emissions (over 20 thousand metric tons).

Pt. Reyes National Seashore, which was once a rare coastal prairie ecosystem, has been transformed by 6,000 beef and dairy cows that eat, trample, and defecate on public PRNS land and the adjacent Golden Gate National Recreational Area (GGNRA) land 365 days a year. These ranch/dairy operations share the Seashore with one hundred native plant and animals species listed as rare, and threatened. These businesses continue to destroy a large portion of this unique habitat and associated species for personal gain. They also feel strongly that their businesses are entitled to be supported at taxpayers expense.

This is totally unacceptable.

The NPS pays well over 1/4 million dollars a year to help subsidize these 35 ranch/dairy operations. In contrast, over 2.5 million people visit PRNS every year, infusing literally hundreds of million dollars annually to the area. The NPS should be serving these 2.5 million visitors, rather than continue to serve the 35 ranch/dairy operations and push public interests far to the background.

As such, it makes complete business and environmental sense that the NPS take their responsibility for public service seriously, spending our tax money appropriately. It is the duty of the NPS to serve the public interest and not that of private for profit businesses at taxpayers expense. I strongly encourage the NPS to reject its A, B, C, D and E Point Reyes Seashore Draft Management Plans and adopt its Plan F. Plan F is the only plan that places the welfare of this tax-funded public treasure ahead of the unveiled benefit for 35 private ranch/dairy farm businesses. Plan F will secure for perpetuity, the restoration and preservation of the unique costal grassland environment, allowing all native plant and animal species to recover. All if this will benefit the public and be in complete compliance with the 1962 Congressional vision for PRNS in order to save and preserve, for the purposes of public recreation, benefit, and inspiration, a portion of the diminishing seashore of the United States that remains undeveloped.

Respectfully submitted, Sharma Gaponoff California and Federal taxpayer and frequent PRNS visitor

Name: McCann, Ellen

Correspondence: Stop favoring wildlife over cattle. Cattle aren't going to become extinct. Public land was intended to be just that, public land. We have very little say about how our land is used. Leasing to cattle ranchers is not a good use of public land. My choice, Tule deer over cows.

I read that only substantive comments will be considered. I'm just an every day citizen who is extremely concerned about the stewardship of our planet. It appears that we aren't doing a good job.

If you want substantive comments, listen to the scientists not the ranchers. It's time for the lawmakers to stand up for the people and do their job which is to look out for OUR best interest.

I don't know how many of these comments I fill out in a month; too many.

Do what you believe to be right. I vote for the planet.

#5195

Name: Otoole, Lynn

Correspondence: I care about protecting California's wildlife. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat. That is why these publicly owned lands were created.

We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly

#5196

Name: ROTH, TWILA

Correspondence: COMMERCIAL AGRICULTURE IS NOT NECESSARY HERE. THERE ARE MANY OTHERS PLACES AVAILABLE. PLEASE LEAVE THIS ARE FOR THE ELKS!!

#5197

Name: Severinghaus, Jean

Correspondence: I support wise access of biking to the Pt Reyes National Seashore, specifically for the following: 1) to enable people to enjoy this beautiful part of the County by bike, 2) to get people on bicycles off of busy roads, and onto pathways, trails, and unpaved ranch roads, 3) to create new loop options, and 4) to improve connectivity to existing routes on and adjacent to the Seashore.

As conditions currently stand I cannot ride my bicycle to access and to enjoy the seashore lands because it is unsafe to share the roads with car drivers.

And if I drive a car to bring a bike on a rack, I cannot make a simple loop outing by bike such as at the Estero Trail: I would like to do such a safe bike ride away from cars.

With global warming it is more critical than ever that we be able to access our public Park lands without driving a car. With non-car ranch roads connecting to get to the Seashore, and an electric bike, I would be able to access and enjoy the Seashore with my younger stronger family members! That would make us all happy.

Thank you.

#5198

Correspondence: Commercial agriculture should NOT be given priority over wildlife. Cattle ranching is one of the biggest contributors to climate change and is endangering the lives of ALL living Beings. It is time to protect nature and wildlife over commercial interests!!! Thank you.

#5207

Name: Maslin, Linda

Correspondence: The goal of our national parks is to protect wildlife and preserve our wildlands - not financially benefit animal agriculture. I have always cared about protecting California's wildlife. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park – polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

#5208

Name: Ayala, Mark

Correspondence: I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly-and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

#5209

Name: Gulseth , Geralyn

Correspondence: Please protect native elk in Point Reyes National Seashore.

I was shocked to learn that the NPS is planning to kill elk to make more room for ranching. This is inhumane and unnecessary.

Farmed animals already significantly outnumber the elk and increased ranching can have harmful effects on the land.

In addition, Many visitors come to the park to see the elk. All Americans are stakeholders in these beautiful lands and wildlife.

Please reject this plan.

#5210

Name: Banaszynski, Tracy

Correspondence: To NPS Staff,

Thank you for all you do to responsibly steward the public park lands in your care. I appreciate your service.

I am writing to respectfully and strongly oppose the killing of elk in Point Reyes National Seashore. Additionally, I do not believe ranchers should be given a new lease to graze cattle on the land. When there is a conflict between wildlife and farmed animals on National Park Land, wildlife must be given priority in our protection of them. The preservation of native wild species must take precedence over farming and ranching activities. We must remain

mindful that we need biodiversity for our survival as humans and that means protecting natural spaces that serve as habitats for other animals, plants, and insects. Grazing negatively affects ecosystems, causing water pollution and soil erosion, spreading invasive species and disease, and harming endangered species. Please protect Point Reyes National Seashore as a sanctuary for wildlife and for passive recreation.

Thank you for taking the time to read my comment.

Sincerely, Tracy Banaszynski

Name: Kowalewski, Mary

Correspondence: I am writing in support of protecting the tule elk herds at Point Reyes National Seashore.

The National Park Service was established to "conserve the scenery and the natural and historic objects and the wild life therein and leave them unimpaired for the enjoyment of future generations."

The tule elk first roamed in this area 10,000 years ago. The elk have been saved from extinction.

Ranching began here less than 200 years ago.

It's time to consider ending the ranch leases if the ranchers are unable to coexist with the elk herds.

Thank you.

#5216

Name: Dorcas-Werner, Dawna

Correspondence: Please find a way to share the land. Elk have just as much of a right to live as cattle. Wildlife shouldn't be killed just because they've wandered into an area with other animals.

#5217

Name: Turner, Lisa

Correspondence: I think we should remember these elk have been on the land long before we all came to be. Focus on small tourism impact where people would come visit and sit and watch these elk. Spend tourism dollars in these communities and everyone stop being so greedy and uncaring with how the land is managed. We all should take a deep breath and observe the quiet stillness of pure freedom

#5218

Name: Wood, Neila

Correspondence: LEAVE the ELK ALONE- -I am SICK and TIRED of the DAMN CATTLE RANCHERS taking everything away from the WILDLIFE- -this LAND belongs to the American People- -NOT YOU or your DAMN COWS! The NPS needs to get some BALLS and STAND UP to these BULLY'S- -I can see a cow anytime but to truly see a magnificent animal like the TULE ELK is quite an experience! Say NO to the cattle ranchers!

#5219

Name: N/A, N/A

Correspondence: I care about protecting California's wildlife. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat. We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes National parks exist to protect our natural resources and native wildlife This park should be managed accordingly.

#5220

Name: N/A, N/A

Correspondence: I am writing to make sure you take a stand to protect wildlife. Point Reyes National Seashore's preferred alternative hands over our public land to 24 ranching families. I visit the park to see wildlife, NOT the cows. I am AGAINST ranching in the seashore and want you to support Alternative F- - the only true alternative that will protect the land, the water, the biodiversity and the Tule Elk.

#5221

Name: Olenick, Roberta

Correspondence: I strongly support Alternative F, No Ranching, for Point Reyes National Seashore. This is a special area that I have visited on a number of occasions to view wildlife, including the native Tule elk.

The effects of cattle grazing, including associated calls for culling the elk, the impacts of proposed diversifying agriculture within the seashore and other developments allowed and/or promoted in the other alternatives all have significant negative impacts on the native plants and animals of the Seashore, water quality, soil/land protection - and visitor experience.

As a natural area established for the enjoyment of the general public (i.e. not just of ranchers and farmers) who flock to the area for wildlife viewing, hiking and other nature-related activities, it is time to return the Seashore back to nature.

The EIS says that the Seashore's land, water and wildlife would benefit were ranching to "cease."

I say, let the ranching cease.

Correspondence: Do the right thing

#5223

Name: Marshall, Richard

Correspondence: I recently toured the Pt. Reyes National Seashore with some out of town visitors. They wanted to see the Tule Elk. As we drove through the area they mentioned how beautiful the area was and how nice it would be if the park could replace the unattractive ranches. I'm not sure they ever believed me when I tried to explain that the ranches were part of the park. They were certain that industrial farming would never be allowed in a national park such as ours. Unfortunately, we seem to be headed in the wrong direction. The natural environment will be sacrificed for the benefit of companies if the park service moves ahead with their plan to extend ranch leases and reduce the Elk herds.

Please use the same good judgment which was used when Johnson's Oysters was closed. The park is intended for nature, not commercial enterprises to profit.

Thank you, Richard Marshall

#5224

Name: Brouillet, Louis

Correspondence: I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly-and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike

#5225

Name: Taylor, Janee

Correspondence: I oppose the National Park Service's plan to kill native tule elk in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to preserve our land, land that belongs to the American people, for wild animal habitat. Public land should be for wildlife and not for cattle ranchers whose only interest is profit.

#5226

Name: Sewald, Michelle

Correspondence: Does National Park or protected lands no longer mean anything? It has now become more important to let ranchers dictate where their livestock can graze than putting aside land that should be protected and enjoyed by everyone. Not to mention cattle and sheep are horrendously hard on the land and bring absolutely no biodiversity. Enough with a dying industry...let's bring balance back to the planet.

#5227

Name: Hassall, Michael

Correspondence: Plan F is the only alternative that will preserve and protect the native species of the park.

The ranchers were paid millions and given dozens of years to wind up their operations.

Why this even merits discussion defies logic.

#5228

Name: Lee, Heather

Correspondence: Dear Acting Director Smith: I am writing to submit my comments on the Point Reyes National Seashore General Management Plan Amendment Draft Environmental Impact Statement.

Under the Point Reyes Act, the Point Reyes National Seashore is to be managed for "maximum protection, restoration, and preservation of the natural environment." Prioritizing commercial agricultural leases, as currently is contemplated for these public lands, is inconsistent with the Act.

NEPA requires an equal, thorough and full evaluation of each action alternative. However, the current document improperly supports alternatives that perpetuate environmentally damaging ranching alternatives without sufficient analysis of the degradation these alternatives cause. Ranching has significant adverse environmental impacts to water quality, air quality, climate change, native species and their habitat (including species protected under the Endangered Species Act, the Migratory Bird Treaty and other laws) but fails sufficiently to evaluate these impacts. Foreseeable secondary impacts associated with animal agriculture, including transportation, water supply, as well as significant adverse impacts associated environmental justice and social issues related to subsidized animal agriculture also require analysis that has not been meaningfully provided. The document currently exhibits an improper bias toward continued and expanded ranching, without fully and fairly considering environmentally superior alternatives that will reduce or eliminate this unsustainable use.

Under federal laws governing the National Seashore, natural values, native wildlife, public access and enjoyment should take priority over commercial activities at Point Reyes. Animal agriculture, which is heavily subsidized at great taxpayer expense, is not economically or environmentally sustainable. The Point Reyes ranches enjoy not only subsidized grazing fees and housing, but also taxpayer-funded infrastructure and road improvements, and publicly funded projects.

Tule elk are an important native species, and a historical resource of great significance at Point Reyes. Their recovery is a result of successful native ecosystem restoration, which is a key element of the Park Service's mission. Tule elk should be allowed to roam free and forage in the park - not shot, removed, cruelly fenced to prevent them accessing water sources or otherwise improperly treated as a "problem" merely because they compete with non-native invasive domestic species. The Tule elk, not the ranched farm animals, are natural inhabitants of this land and should not be killed to perpetuate an industry that is not sustainable, destroys the native ecosystem, causes devastating and unmitigable harm to the environment and causes cruel treatment of domestic animals and wildlife. Cattle are the seashore's primary source of greenhouse gases; therefore, the Park Service's preferred alternative is inconsistent with its own "Climate Friendly Parks" plan.

Cattle ranching should only be allowed to the extent that it is fully consistent with preserving the natural environment, National Park purposes and federal law and regulations. Agricultural activities such as mowing and grazing must be prohibited to avoid harm to endangered species or wildlife habitat, impairment of water and air quality and other adverse impacts. Such activities also cause excessive erosion and the spread invasive plants/diseases and should be substantially reduced or avoided.

Any reasonable analysis would recognize that the animal agriculture should be amortized out of Point Reyes and the natural habitat restored. Planting artichokes or other row crops will attract birds and other native wildlife. In contrast, expanded ranching of cattle or any other domestic animals would only cause new wildlife conflicts, greater environmental damage and waste of taxpayer funds.

I appreciate the opportunity to comment. I urge the National Park Service to evaluate, fully consider and implement an alternative that will recognize the impropriety of continue or expanded ranching at Point Reyes and will restore and preserve this precious national treasure.

Very truly yours,

Heather Lee

Correspondence: Please don't permit elk to be killed for the expansion of agricultural activities at Point Reyes. Agricultural activities should be decreased.

#5231

Name: Mayeri, Beverly

Correspondence: Methane gas poses a serious danger to our climate because it traps heat in the atmosphere at more than 80 times the rate of carbon dioxide. Since cows belch methane and grass fed cows belch more than corn fed cows, it has been established that livestock produce 14 -18% of the greenhouse gases that cause global warming, more than cars, planes, and all other forms of transport put together. Our current system of meat and milk production is extremely damaging and we have to change how we think about cattle and cows because of the existential crisis of our planet. If we want our children to inherit a livable world and we want the oceans to be healthy and we want to protect the planet and diversity of living things on earth we need to make hard choices now like giving up all cow and cattle grazing on Pt Reyes National Park. Choosing packet F is the right choice because the mission of national parks is to protect native species, and cattle are harming the air, land, water and wildlife of the national seashore.

I have gotten information about cows' production of methane from [www.ecowatch.com](http://www.ecowatch.com), [www.scienceabc.com](http://www.scienceabc.com), [www.timeforchange.org](http://www.timeforchange.org)

Correspondence: National parks exist to protect our natural resources and native wildlife. Since I moved to California, nearly 40 years ago, Pt. Reyes National Seashore has been a much loved destination and the park I have visited most frequently. And my favorite hike has been the Tomales Point Trail and the chance to see the iconic Pt. Reyes tule elk. I've taken a group of children from a Sacramento food bank program there and this summer walked the trail with my grandchildren, ages 9 and 3. We were all delighted to view the elk in their native habitat. I doubt that anyone visits Pt. Reyes to view the dairy farms and ranches that pollute this amazing natural resource. We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers I strongly oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

#5233

Name: Williams, Gerry

Correspondence: Wildlife can exist only in specific places that, due to human encroachment, are dwindling to next to nothing. This area must be preserved to save the Elk and other animals that live there.

On the other hand, agriculture to serve humans can and does exist most everywhere on earth. Please prize the wildlife over the agriculture which doesn't have to be produced in this location.

#5246

Name: Chung, Ruby

Correspondence: Please do not kill these elks to make a way for ranchers. They belong there whereas ranchers do not. Government should protect wildlife, not run for profit

#5247

Name: N/A, N/A

Correspondence: The introduction of domestic animals other than cattle to Point Reyes National seashore as well as monoculture farming of crops such as artichoke will have major detrimental impacts to the ecosystems in the park. As Point Reyes currently sits, it is one of the best places to photograph badgers, bobcats and coyotes in all of the western United States. The farming of small domestic animals such as goats, chickens and pigs will cause immediate conflict with the native carnivores, as the domestic animals will be predated and the ranchers will likely terminate the natives using depredation permits. Monocultures of any variety will also be detrimental to the Point Reyes ecosystems, as monoculture crops tend to decrease biodiversity at all levels in the ecosystem. Any large scale use of pesticides will be detrimental to the endangered Red-legged frogs, and even organic fertilizers and pesticides can have negative impacts on amphibians. It is in the best interest of the park and the general public to preserve Point Reyes in its present state, as there are very few places left in California where native wildlife still flourishes.

I am a former resident of California. I used to love going to Pt. Reyes National Park to smell the soothing ocean air, see the native plants because they were there and occasionally see the Tule elk. Most Americans love seeing native animals on our lands. Cows are not an animal that is native to America but has taken over most of our parks and forests. Typically ranchers are getting a sweetheart deal, increasing herds, harming the environment without accountability and not paying taxes for such amenities. Ranchers seem to think they deserve to be able to do business in this fashion. What other American can go onto Public Lands, start a farm and have no accountability for water degradation, stomping out native plants, and deprive the other animal life of food and water? We are at a time in history when we must take bold steps and stand up to the ranchers and phase out operations on our beloved parks. Climate change is a serious issue that must be addressed without much compromise to ranchers. I am sorry if they have done business for decades. The intent of the park was not to allow cattle grazing in perpetuity. You must phase out cattle grazing and allow the park to recover from the harms already done. Methane gas is a potent greenhouse gas that is contributing greatly to our planet's demise. Please take the bold steps needed to help reverse these harms. Our future generations are depending on your decisions today.

Correspondence: Point Reyes National Seashore is supposed to be managed under the Point Reyes Act for "maximum protection, restoration, and preservation of the natural environment." There's no mandate for prioritizing commercial agricultural leases on these public lands.

Right now the Point Reyes ranches enjoy not only subsidized grazing fees and housing, but also taxpayer-funded infrastructure and road improvements, and publicly funded projects. But commercial activities at Point Reyes should be required to accommodate native wildlife - not the other way around.

We need a new vision for the Seashore: No ranching. (Alternative D) Phase out the ranches. Disallow all commercial livestock in the park. Prioritize wildlife over domestic cattle. Biodiversity should not be sacrificed to private ranching, Restore wildlife habitat and native plant communities Repurpose historic ranch buildings for scientific research, interpretation and public education.

#5266

Name: McKinnell, James

Correspondence: While I respect the interests of ranchers in Point Reyes, the Tule Elk are an important national resource. Restoring wild land and encouraging populations of wild life for future generations should be a primary goal for the Point Reyes National Park.

I would encourage you to end ranching in Point Reyes.

However, I would suggest you provide some option for the national park service to actively manage the elk population. One possible outcome from ending ranching is significant elk herd growth. Allowing the NPS to manage the herds in a sustainable fashion is a responsible next step. Furthermore, I would encourage you to specifically define hunting as the preferred means of herd management. The elk herd management programs on the National Elk refuge in Jackson Wyoming have been an important component of responsible herd management that still allows American citizens to appreciate the Elk herds. The same should be done at Point Reyes.

The Tule Elk are an important resource that should be conserved and protected. Dairy and cattle farming are important to the American way of life, but they do not belong in Point Reyes national park.

#5267

Correspondence: It is appalling that ranchers feel entitled to continue using land in a national park for their private businesses. Plus ranchers have been grazing cows in Point Reyes subsidized by American taxpayers. They pay less than ranchers would have to pay to graze their cows on private land.

Cows and other livestock destroy the environment, polluting water, eroding soil, and emitting climate-harming gases. Point Reyes is not a place to run livestock or grow commercial crops. Private ranching must not take

precedence over protecting beautiful Point Reyes National Park and its native tule elk. Please adopt Alternative F. Discontinue farming and ranching in Point Reyes National Park.

Correspondence: I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of safe and separate bicycling routes on trails, ranch roads, and pathways throughout the planning area, such as: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands. This infrastructure must be created in a way that does not negatively impact working ranches or the natural environment.

Currently, the paved roads in the Seashore can be busy with cars at time. The roads are narrow and rough in places. As we see there are many collisions between autos and cyclists on roads elsewhere in the county. The improvements outlined above would enable and encourage me to visit the Seashore more by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

"It is not what we have that will make us a great nation; it is the way in which we use it." -Theodore Roosevelt

If he were alive today, Theodore Roosevelt would be urging you to stop farming and ranching in the park and focus on expanding visitor opportunities.

The preservation of native wild species must take precedence over farming and ranching activities. Grazing negatively affects ecosystems, causing water pollution and soil erosion, spreading invasive species and disease, and harming endangered species.

By allowing farmers to use these lands, we will lose more biodiversity. This biodiversity is so important for current and future generations. For example, numerous studies have found that lower biodiversity helps the transmission of diseases from animals to humans (e.g. mad-cow disease, bird flu, and swine-flu).

Thank you for your consideration

Name: Bogdan Tejeda, Victoria

Correspondence: The EIS fails to mention the impacts of the alternatives on climate change. In fact, the term "climate change" does not appear at all in the document. This is a mistake that fails to adequately inform the public and fails the agency's duties under NEPA. Climate change is regarded as a reasonably foreseeable impact of a project, and this EIS's analysis of GHGs and climate change impacts of the alternatives fails. See 40 C.F.R. §§ 1508.7 (defining "cumulative impact"), 1508.8 (defining "effects" as including direct and reasonably foreseeable indirect effects), 1508.25(c) (providing that EISs must consider direct, indirect, and cumulative impacts).

The EIS only blithely provides that "While emissions of criteria pollutants and greenhouse gases would vary among the alternatives, these emissions would continue to be a small contributor to overall impacts when compared to emission sources and transport of emissions from outside the planning area." EIS at ix. At this stage approaching the climate crisis, all projects that contribute greenhouse gases (GHGs) must be weighed. See Fourth National Climate Assessment, USGCRP (2018) <https://nca2018.globalchange.gov/>. Even incremental impacts to climate change are significant. See *Mass. v. Env't Prot. Agency*, 549 U.S. 497, 524 (2007) (the smallest GHG emission- -along with the emissions of other reasonably foreseeable actions- -incrementally leads to global climate change.).

It is helpful that the EIS provides a snapshot of the CO<sub>2</sub>e reductions associated with each alternative's livestock operations. See, e.g., EIS 192-93. This information is not enough, though. Associated ranch activities must be factored into the analyses of alternatives. Asserting that "[t]he additional time and cost of analyzing the emissions using methods that are more detailed would not be informative to decision making" is false and unlawful. EIS at 189. Cumulative impacts of each alternative need to be taken into account, even if the largest GHG contributors are regional. See *Ctr. for Biological Diversity v. Nat'l Highway Traffic Safety Admin.*, 538 F.3d 1172, 1215-1217 (9th Cir. 2008) (finding that "[t]he impact of greenhouse gas emissions on climate change is precisely the kind of cumulative impacts analysis that NEPA requires agencies to conduct"); *High Country Conservation Advocates v. United States Forest Serv.*, No. 13-CV-01723-RBJ, 2014 WL 2922751, at \*8-11, 13-15 (D. Colo. June 27, 2014) (holding that it was arbitrary and capricious for federal agencies to omit analysis of GHG emissions and related costs in EISs for mining exploration projects).

Last, none of alternatives require GHG reductions. This must be corrected. The EIS suggests measures, such as manure management, that are practical and could be required. See EIS at 190.

Name: N/A, N/A

Correspondence: As a lifelong Inverness resident, I have had access to trails I enjoyed freely as a child be taken from me by greedy equestrians collaborating with the National Park in closed door meetings. My dad told me that riding on the roads was not safe in the 1970s, and it has become significantly more dangerous with the advent of cell phones and other distractions coupled with increased speed limits and millions more drivers on these narrow roads. For over 35 years I have been a Fire Captain and EMT in West Marin, and have been on scene of many vehicle vs bike accidents. The bicyclist lost in every situation, many having to be flown out by helicopter to get definitive care at a hospital. Bicycling is my sport of choice since I was 3 years old, and the community benefits by me being in top fitness as a Firefighter and a leader. At one point in time, I was ambushed by 6 Rangers and a Sheriff (who drove to the ambush in 4 vehicles), saying I was causing erosion with my mountain bike on a formerly paved road in the wilderness. I was aghast, as they all know me by name, and know my ongoing commitment to bettering the lives of the community. After kidnapping my bike, holding it for ransom for 3 and 1/2 months, they extorted \$550 from me to return my bike. What kind of world do we live in where it is a crime to "Possess a bicycle in a Wilderness Area"? For the youth coming up today, I hope for a better, safer world, where law enforcement is utilized to go after real criminals such as the Mexican Drug Cartel doing massive grows in the National Park at threat to the environment and any casual passersby. I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. Correspondence: According to the original agreement for the Point Reyes National Seashore, ranching should be phased out completely. As a tax payer I expect my monies to be used as outlined in the original agreement therefore all ranching operations in the planning area need to be discontinued and visitor opportunities need to expand. The government has already paid the ranchers money for their ranches, so the ranches themselves are government property. And if the ranches are government property that means the ranchers are probably not paying property taxes but living free off the land. The ranchers have been paid and should have taken steps at that time to relocate their operations. The ranchers need to relocate to private lands and allow the other people of the United States to enjoy all of the Point Reyes National Seashore. It's time to enforce the original agreement! No more extensions!

Correspondence: Point Reyes National Seashore is supposed to be managed under the Point Reyes Act for "maximum protection, restoration, and preservation of the natural environment." There's no mandate for prioritizing commercial agricultural leases on these public lands.

- Natural values, native wildlife, public access and enjoyment should take priority over commercial activities at Point Reyes.
- Tule elk are an important part of the landscape at Point Reyes. Their recovery is a result of successful native ecosystem restoration, which is a key element of the Park Service's mission. It's taken a lot of time, money and effort to restore tule elk to Point Reyes, the only national park where they live. Tule elk should be allowed to roam free and forage in the park - not shot, removed, fenced or treated as problem animals.
- Right now the Point Reyes ranches enjoy not only subsidized grazing fees and housing, but also taxpayer-funded infrastructure and road improvements, and publicly funded projects. But commercial activities at Point Reyes should be required to accommodate native wildlife - not the other way around.
- The Park Service shouldn't allow any new agricultural activities at Point Reyes. Planting artichokes or other row crops will attract birds. And introducing sheep, goats, pigs or chickens will attract native predators such as coyotes, bobcats and foxes. Expanded ranching would only create new wildlife conflicts.
- Cattle ranching should only be allowed if it's consistent with preserving the natural environment. And agricultural activities such as mowing shouldn't be allowed in park areas where they harm endangered species or wildlife habitat, impair water quality, cause excessive erosion or spread invasive plants/diseases.
- Cattle are the seashore's primary source of greenhouse gases. So the Park Service's preferred alternative is inconsistent with its own "Climate Friendly Parks" plan.

Please do the right thing. A National Park is for everyone. The animals should really come first . They were here first. Thank you, Leslie Leslie

Yes, I copied and pasted a form letter, but this in no way diminishes my strong support for access that would improve rider safety.

#5285

Name: N/A, Ali

Correspondence: I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. Instead, I urge the National Park Service to restore the lands for wild animal habitat.

We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed with that in mind.

#5286

Name: Gordon, Keith

Correspondence: As an American and a California I vehemently oppose the NPSs plan to kill native tule elk and expand commercial use of Point Reyes National Recreation Area.

The NPS must prioritize preserving and protecting what natural wildlife and animal habitat our country has left. Otherwise they serve no function.

When did management of national lands in this country become chiefly about making cattle ranchers and commercial interests happy? Is the NPS's job really to wipe away any 'inconvenience' to these profiteers who seek to use OUR public land to serve their own personal economic interests - like the native animals that were here long before their cattle. Cattle that pollute the water, erode the earth, and increase the ecologic pressure on the endangered animals who live in the park.

National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

Correspondence: Point Reyes is one of those special places that deserve to be returned to its natural state and protected forever. Cattle farming is important, but cows can be raised anywhere. There's only one Point Reyes. It's time to give the grass and land back to the Elk.

#5291

Name: Shaw, Casey

Correspondence: Considerate Folks of the NPS

It has come to my attention that your proposed management plan for the Point Reyes Seashore has prioritized 24 individual, for profit entities, over generations of natural Flora & Fauna.

I haven't read the underlying foundational mandates of the NPS's primary role in this country, but I suspect placing profit above protection is not your mandate.

In life I look for litmus test moments as an indicator of appropriate choices or actions. The fact that I feel embarrassed for the NPS's current position to prioritize cattle over indigenous Elk is a clear sign the NPS has lost its compass bearings. I would encourage you to reflect for a few moments on the true purpose of the NPS, and then give yourself an honest scorecard rating on how well your choices regarding the Point Reyes Seashore management plan reflect this true purpose.

Thanks for your time and consideration. I sincerely hope you will continue the good work embodied in the idea of standing up for the landscapes, plants and species which have no voice in the political process.

Casey Shaw

Correspondence: Commercial agriculture shouldn't be valued over wildlife. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat. We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways,

causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly. Thank you!

#5303

Name: N/A, N/A

Correspondence: Dear National Park Service,

First, thank you for providing Americans with access to wild and beautiful places to spend rejuvenating time outdoors. My family's life is immeasurably enriched by every minute we spend in our national parks. We've been to over half of them!

As a long-time Bay Area resident who makes frequent trips to Point Reyes (twice in the last 40 days!), I urge you to protect the Bay's remaining native species and adopt Alternative F. This plan discontinues farming and ranching opportunities in the park, to the benefit of this wildlife. As you know, grazing negatively affects ecosystems, causing water pollution and soil erosion, spreading invasive species and disease, and harming native (and often endangered) species.

Listen, I'm a big buyer of local dairy and produce, and will miss having Point Reyes represented in the marketplace. But these businesses will relocate to nearby pasture/fields, and wholesalers/retailers can continue to buy from a myriad of producers outside the park boundaries. It is absolutely worth it if we can make a dent in the relentless pursuit of human-focused activity in the Bay Area. We already have a massive footprint here though we're lucky enough to have preserved a meaningful amount of open space. We should aim to return some of that space to wildness whenever the opportunity arises- -here's one such opportunity.

The preservation of native wild species MUST take precedence over farming and ranching activities. This plan will also provide an increase in park visitors who will put dollars back into the area.

Thanks in advance for reading!

Name: Terry, Lauren

Correspondence: As a member of the California-based international animal protection nonprofit organization In Defense of Animals with over 250,000 supporters, I oppose the National Park Service plan to kill native Tule elk, grow commercial crops, and permit ranchers to add chickens, turkeys, sheep, pigs, and goats to their exploitative operations.

As national park land, this property was specifically set aside to protect, restore, and preserve the natural environment including the wild animals who live there. The original intention was to phase out dairy and cattle ranching, not add more crops or animals to increase ranching profits.

The proposed plan does not address the damage from grazing, including water-quality degradation and soil erosion. Also, adding new crops will create more conflicts with native wild animals.

Please abandon this inhumane and destructive plan. I urge you to restore the Seashore's Pastoral Zone for wild animal habitat and repurpose historic ranch buildings for scientific research, interpretation, and public education.

#5305

Name: Hancock, Melissa

Correspondence: Animal human conflict will always be a problem. But remember, the animals were there first. We, the humans, are encroaching upon them. We need to set in place a plan that will work for all involved.

#5306

Name: Gartland, Joel

Correspondence: Any improvements to allow and enable more and safer cycling in the park would be great and very much appreciated.

I would especially appreciate car-free connections from the Bolinas Ridge Trail to the park, which would really help wrt visiting the Seashore by bike, rather than car.

Joel Gartland

Name: Asuncion, Eric

Correspondence: I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly-and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

#5309

Name: McCoy, Alisha

Correspondence: I believe that alternative D is the best choice for our National Seashore. The Tule Elk herds are a great national asset which cause less stress on the environment than do ranch animals such as cattle. The EIS shows the negative impacts cattle have. Point Reyes ecosystems should be protected and non-historic grazing lands should be reduced, not increased. Thank you.

Correspondence: Please do not tell me that elk need to be less in their own environment and commercial farming needs to be more. How idiotic is this plan? There should be a limit on farm animals and the elk left alone on their own land. Commercial farming on Federal Park Land is not a good idea, to begin with. Who is paying the bribes on this expansion of damage caused by cows? This will end in a court fight and the elk will win because people

who love natural land will fight to keep it. Limit the farm animals and keep it wild for the elk and other forest critters.

#5314

Name: Cullen, Yvonne

Correspondence: Please adopt Alternative F to protect the park and allow people to use it as it should be used. Farming which would result in the culling of wildlife such as Elk is not appropriate in parkland which is there to preserve the environment and its wildlife for visitors, not to facilitate intensive farming.

Name: N/A, Natasha

Correspondence: The introduction of domestic animals other than cattle to Point Reyes National seashore as well as monoculture farming of crops such as artichoke will have major detrimental impacts to the ecosystems in the park.

As Point Reyes currently sits, it is one of the best places to see badgers, bobcats and coyotes in all of the western United States. The farming of small domestic animals such as goats, chickens and pigs will cause immediate conflict with the native carnivores, as the domestic animals will be predated and the ranchers will likely terminate the natives using depredation permits.

Monocultures of any variety will also be detrimental to the Point Reyes ecosystems, as monoculture crops tend to decrease biodiversity at all levels in the ecosystem. Any large scale use of pesticides will be detrimental to the endangered Red-legged frogs, and even organic fertilizers and pesticides can have negative impacts on amphibians.

It is in the best interest of the park and the general public to preserve Point Reyes in its present state, as there are very few places left in California where native wildlife still flourishes.

Name: Glazebrook, catriona

Correspondence: I am a long term resident of Marin County, have paid taxes here for over two decades and have Masters of Science in Resource Management & Administration and a Juris Doctorate. I oppose the continued use of the seashore for cattle ranching for environmental, social, and economic reasons.

As an outdoor enthusiast, and leader of nature hikes in Marin, many of the people who participate in my hikes, from all over the US and the world, come to California and Marin to enjoy and discover the natural beauty and enjoy the outdoors. Cattle ranching is Not a tourist attraction in the way that bird watching or enjoying pristine and protected coastlines are. I am impeded in enjoying the coastal lands due to those lands being used for the benefit of a few cattle ranchers. Participants that join me on my walks are unable to enjoy the protected coast that this area is meant to be. As the former executive director of the largest conservation organization in Texas I oversaw the The Great Texas Birding Classic in partnership with Texas Parks and Wildlife. This birding event, the largest in the country attracted many thousands of participants and raised money for conservation. Participants would identify as many different species of birds as possible. While the PRMS would be an ideal location for this type of activity - unfortunately it is tied up in cattle ranching.

The Birding Classic not only directly raised funds for conservation, but it drew in participants to travel throughout the region and generated revenue for local cities and towns and businesses all along the coastal corridor. The Birding Classic also had no negative impacts to the ecosystem.

This is only one potential way that local taxpayers and visitors could be enjoying our coast versus it being "closed" to cattle ranching. Birding would open the use and enjoyment of the area to many more people, and not impact the environment in the way that cattle grazing does.

#### ~~~~~Environmental Concerns

I managed one of the largest coastal sanctuaries in the United States stretching over 600 miles, & Sabal Palm Sanctuary, a 557-acre nature reserve. I developed habitat management plans and trail systems and directed species population surveys. I also advised private landowners and government agencies on species and habitat protection.

I am now the founder of Resilient Forests, developing and implementing habitat management plans for local and regional lands.

Cattle grazing is detrimental to native plant, bird and animal species and alters stream cover that can affect local fish populations. While I am sure you have many of the peer reviewed studies that prove these facts I turn attention to another pressing issue.

Habitat damage and loss today is far more serious given the increasing and rapid declines of national and local native species. A May 2019 report from the Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services (IPBES) counted 1,000,000 species threatened with extinction, a record number in human history. California wildlife face the local manifestations of these global issues. A 2014 study by the National Audubon Society identified 314 species of birds as climate-threatened or climate-endangered. 170 of those birds commonly occur in California, including beloved species like the Barn Owl, the Western Bluebird and the Black-crowned Night Heron.

California deer populations have also fallen from a peak of about 2 million in the 1960s to around 500,000 in 2017. Increases in Wildlife Diseases: Epidemics among wildlife populations represent another major factor in California's declining biodiversity. Mange, a skin infection caused by parasitic mites, has become increasingly precarious for many furred animals like deer, bobcats, foxes and coyotes. Our local marin deer populations have been showing an alarming increase in mange over the past decade.

According to a study begun by the National Parks Service in 1996, notoedric mange killed more than 50% of radio-collared bobcats in the Santa Monica Mountains. Black-tailed deer face attacks from non-native lice like the exotic fallow deer louse and the African blue louse. Deer species are also dying increasingly from adenovirus hemorrhagic disease, and there are concerns that another fatal disease known as Chronic Wasting Disease (CWD). Bats are also dying from the fungus which is estimated to have killed more than six million in the United States. In July 2019, the California Department of Fish and Wildlife announced that the fungus is now present in California.

The die off and ill health of our California species is caused by a variety of factors including warming climates and unusual shifts in seasonal weather patterns.

What is especially alarming is the rapid rate of decline of many of these species. For example, the tri-colored blackbird - one of our states most prolific species - has nosedived with major population losses occurring in just the past 6 years! These types of rapid declines are unusual to say the least.

According to studies conducted by state and federal forest management agencies, more than 147 million trees have died, nearly a third of the states total forested land (33 million acres) in the last ten years.

Called the worst epidemic of tree mortality in modern history by former Governor Jerry Brown, this statewide tree die-off is already driving dramatic losses in biodiversity. While we have paid particular attention to trees and forests, based on habitat assessments coastal plant species are also declining.

These declines in native species populations are not likely to go away - but are in fact more likely to accelerate with global climate change.

Scientists have calculated the severity of the 2008-2010 California drought by combining the NOAAs estimates of the Palmer Drought Severity Index (PDSI), an index of soil moisture variability, with the existing North American Drought Atlas, a spatial tree-ring based reconstruction of droughts developed at Columbia Universitys Lamont-Doherty Earth Observatory.

These resources provided complementary data on rainfall and soil moisture over the past millennium. The scientists concluded that rainfall deficits, combined with record high temperatures, have brought about drought conditions not experienced for over 1,200 years.

Dry soil equals dry trees. An imaging spectrometer able to use sunlight to measure and determine the water content of trees was stationed on board the Carnegie Airborne Observatory to view over forest lands in California to help predict where the next major die-offs will occur. The spectrometer has been proven to be very accurate and indicated that a large percentage of the trees had low water reserves. It estimated that 66 million trees were too dry to survive, the following year, over 60 million trees did indeed perish. Drier soil conditions also impact coastal species.

Trees create local weather patterns through transpiration. With major tree die offs and fires occurring and likely to continue in California, transpiration led weather systems will change leading to further environmental problems.

The allowed die off of 250 tule elk inside the fenced Pierce Point Elk Preserve at Californias Point Reyes National Seashore from 2012 to 2014, due to lack of access to year-round water also reflects not just troubling weather patterns that will increase - but reflect an abnormally industry driven approach to managing lands held for the enjoyment of the public and protection of the environment. While Tule Elk may have been blamed for the extreme conditions, these conditions had nothing to do with the Tule Elk - and will likely return. As long as we continue to manage land oblivious to the rapid climate changes occurring - we will face more problems trying to do business as usual.

Cattle grazing is a water heavy industry that will no doubt require more subsidies to continue as weather changes continue.

In addition to greenhouse gases, cloud induced heat has been proven to be a major factor in the warming of the Earth. Scientists from the University of Bristol have indicated that Greenland Ice sheet is melting six times faster than it was during the 1980s. The increased melt is due to increased occurrence of clouds that act like a blanket causing strongest warming at the surface.

While most climate models evaluate the impact of greenhouse gases the study proves that clouds alone could equate to 40,000 gigatons of extra ice melt by the end of the 21st century. This is equivalent to 1,500 years of domestic water supply of the USA and 5 inches of global sea level rise. The warmer temperatures would also eliminate moisture held in soils making it more difficult for native plant species to survive.

Cattle are also a direct source of a methane, a greenhouse gas that is ten times more damaging than carbon dioxide. 5,000 cattle release 600,000 KG of methane annually.

Additionally, UV-B radiation from the sun is presently harming tree and forest health (Environmental Canada 1997). NASA scientists analyzing 30 years of satellite data have found that the amount of ultraviolet (UV) radiation reaching Earth's surface has increased markedly over the last three decades.

Although CFCs have not recently increased in the upper stratosphere it takes decades to cleanse CFCs and other ozone-depleting substances from the atmosphere. CFCs have a life-span of 50-100 years and will be present until at least 2070-2090. In addition, significant increases of aerosols and particulate matter in the lower and upper stratosphere increase UVB radiance back to the surface of the planet. UV-B, damages the DNA, proteins, lipids and membranes of humans, animals and plants. Studies suggest that increases in UV-B radiation hitting the earth's surface affects tree and forest health.

Plants, which use sunlight for photosynthesis and are unable to avoid exposure to enhanced levels of UV-B radiation, are especially at risk. UV-B inhibits the photosynthesis and that exposure to increased UV-B can sterilize trees.

The lower and upper atmosphere has been anthropogenically changed via a variety of causes, the combination of which is affecting the ability of native species accustomed to specific temperature, solar radiation and seasonal variations to survive. The global species extinction rates is proof that the Earth's biosphere has become less hospitable to support the variety of species that we and past generations have enjoyed in California.

As the recent disaster in the Bahamas, leaving 70% of its land mass under water, shows we live in a dramatically climate changed world. We must not only act to restore our atmosphere to health but we must change the way we have historically done business and managed the environment and native species.

Our national, state and regional wildlife policies are seriously out dated and do not address the significant declines in species and the significant changes that are going to continue to wipe out many of our native species.

Most plans and practices compromise biodiversity and long term sustainability. Management plans that focus primarily on supporting uses that are damaging to the land are out of step with a climate changed world. In this case, where the stated goal of the Management plan is to preserve the natural environment, current ranching operations are occurring against the wording of the law and given the added stresses to native species most stop!

Micheli et al. (2010) have shown how keeping forests and other wildlands resilient to the effects of climate change improves the capacity of flora and fauna to adapt to current and future climate-related changes.

A key requirement of ecosystem resiliency is healthy soil. Soil, along with the billions of bacteria, fungi, and other microbes that live within it, carries out a variety of important ecological roles: it provides and cycles nutrients, absorbs and holds rainwater, filters pollutants, and offers physical support for plant roots.

Cattle ranching leads to a decrease in bio-diversity and is damaging to the land. Domestic cattle that are fed specific non-wild - non native foods do not supply the soil with the range of microbes that a wild animal like a Tule Elk provides and their hoofs damage native plants.

We must act now to heighten our attention on preserving the Point Reyes National Seashore managed under the Point Reyes Act for maximum protection, restoration, and preservation of the natural environment.. Preservation of natural habitats like the PRNS is crucial to play a role in the survival of species threatened with extinction. If we can protect and restore these lands, and species like Tule Elk that belong there - we take a step in the right direction of stemming the tide of extinction and protecting native species for future generations to enjoy.

~~~~~

Stop Economic Welfare for Cattle Ranching

As a local tax payer, I am incensed at the tax give aways provided to a few cattle ranchers at the Seashore. Without the economic subsidies provided by the state to benefit a few their ranching operations would not be sustainable. Ranches get subsidized grazing fees and housing, and enjoy taxpayer-funded infrastructure and other taxpayer funded projects.

Since when - are thousands of people and the government required to support an unsustainable industry on land that is supposed to be set aside and protected as a natural area? Government and tax payer subsidies and welfare for unsustainable and polluting industries is the reason why we are facing the terrible and globally reaching environmental problems, like climate change, we now face.

There are many environmental and health related problems with raising cattle for meat and milk. As we, and people of the world, face the tremendous changes occurring we must change our agricultural practices to be in greater alignment with restoring balance to our natural ecosystems. Providing government subsidies and tax dollars that I and other citizens pay to prop up unsustainable and ecologically damaging industries like cattle, and oil must end.

Name: LLoyd, Cynthia

Correspondence: I DO NOT AGREE WITH HE NPS'S CHOICE OF ALTERNATIVE B.

I do not support diversification activities that would allow the Seashore to authorize non-beef and dairy ranching agricultural practices in the future based on market conditions. The environmental impact of diversification has not been fully explored as required.

I do not support the leases moving beyond the the original ranch families

I do not support the culling of the Tule Elk

I do not support increase visitors traffic in designated wilderness areas such as Drake's Estero

#5319

Name: Palladini, Jennifer

Correspondence: Hello.

I am writing in response to the alternative management plans for elk and cattle. I am strongly against any plan that includes more long-term leases for cattle ranching or other agricultural activities on our public National Seashore. The cattle there have intense adverse effects on not just elk, but the vegetation communities and dependent insect and bird communities, water quality, and visitor access to our public lands.

I am in favor of plan F, which calls for a phasing out of cattle ranching and increasing visitor services and access to these regions of the Seashore. I frequent PRNS with my husband and two children ages 9 and 11. We've been coming regularly since they were infants. They know this park as well as anyone. We've hiked, backpacked, and kayaked many times.

I am consistently dismayed that so much of this property is off limits to the public, and for a purpose that is clearly incompatible with the National Park Service mission to "conserve the scenery and the natural and historic objects and the wild life therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations."

The idea that we have to protect cattle ranches in California as historic is preposterous. First of all, these aren't historic - they are of industrial scale. Second, we need not look far to find cattle ranches doing just fine outside the

park boundary and all across the state. I understand that ranchers in the park pay no property taxes, pay below-market rents and pay discounted grazing fees, while the NPS pays for improvements to roads and buildings. Why should we continue to subsidize these ranchers at great expense, environmental destruction, and at the loss of enhanced visitor access to these regions?

Finally, I was discouraged to sense bias in the language of the proposals themselves. Why would there be no mention of increase in visitation levels and economic activities associated with enhanced visitor access under Plan F? We would come more often if there was someplace to stay overnight. Hotels and guest houses are expensive, the only local campground is often full during the high season and holidays, forcing us to drive there and back in one day. It seems as if the National Seashore has lost sight of its primary goals - conserving scenery, wildlife, and providing for the enjoyment of those resources for future generations."

I hope the Park Service will come to its senses and remember what its mission is, and what it is not.

#5320

Name: Loosli, Edward

Correspondence: As a former resident of the S.F. Bay area, I was a frequent visitor to Pt. Reyes National Seashore (PRNS). Like most tourists, I came to PRNS to see the wonders of its natural areas, which include the magnificent tule elk. I did not come to see cattle, which are ubiquitous throughout the western United States and which have destroyed almost 1/3 of PRNS from over-grazing and pollution. Where the privately owned cattle graze inside PRNS, the former coastal prairie has been severely degraded and unfortunately under the Park Service "preferred alternative", this natural resource degradation will continue indefinitely and actually worsen. I now live in Oregon and still visit PRNS to see the tule elk whenever I am in Northern California.

I support Alternative F and reject all the other alternatives. It is with this personal knowledge and including an understanding of the founding of PRNS, that Alternative F is the only possible alternative to bring PRNS into compliance with the mission of the National Park Service and the founding documents of PRNS.

These comments and my personal history at PRNS also establish that I have "standing" in case it is necessary to engage the court system in bringing about the proper management of PRNS.

Within Alternative F, I question the possible use of "prescribed grazing" by private livestock, as cattle have shown to be a destroyer of the natural environment at PRNS, not an enhancer of the environment, which is why Alternative F in my preferred alternative.

The mission of the National Park Service is to protect and conserve the natural resources of each designated area. The EIS clearly shows that every alternative except Alternative F will not allow for the adequate protection and conservation of PRNS's natural resources. So, I question how it is possible that a different alternative was picked, which clearly exacerbates the current unacceptable land uses by private livestock which also clearly are harming the natural resources of PRNS, as shown by the EIS.

Regarding the "historic ranches" at PRNS, let me submit that the true historic grazers of this land are tule elk who's ancestors have grazed this land for thousands of years. In contrast, human's have only been grazing and defouling this land for a couple hundred years - hardly fitting the term "historic". That said, The "historic" designation applies to the ranch buildings, not the former coastal prairie habitat that has been severely impaired by cattle grazing.

I question the very idea of expanding private agricultural uses at PRNS. As it has been stated in the EIS, this will make matters even worse for the natural environment, not better and will violate the mission of both the Park Service and PRNS.

The private cattle businesses were bought out by the National Park Service in the 1960s and 1970s for millions of dollars. The cattlemen were given the option of staying on their former ranches for 25 years or for the life of the former ranch owner. Both these options have long expired and it is high time for PRNS to be restored to its former glory, complete with uninhibited free-roaming tule elk, which is why you must support Alternative F (without prescribed cattle grazing).

Name: Weiner, Ben

Correspondence: Writing to support alternatives B, C, D, E, and F and would love to be able to bike throughout the park, especially: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads.

I really appreciate your work to make this happen so I can spend more time enjoying more of Pt Reyes. I bike on the roads now, but would visit much more often if trails and gravel roads were opened within it that I could ride. This would be incredible and make Pt Reyes even more of a treasure for me. Love Pt Reyes so much.

#5323

Name: Schiffman, Sheila

Correspondence: Regarding lethally removing the tule elk herds at Point Reyes National Seashore and replace them with grazing herds, I would like to register my absolute rejection to this ridiculous "management" plan. Maybe have the ranchers reduce their cattle herds? One is there naturally, the other is not.

#5324

Name: Hall, Brad

Correspondence: I love riding in the Pt Reyes area, but I rarely if ever go to the national seashore because it is super difficult to access by bike. I really support the improvements in public and bicycle access outlined under Alternatives B, C, D, E, and F, because it would bring me to the seashore more and expand on the of the nations best areas of biking even more! I ride in that area all the time, but never go to the seashore because of the lack of bike infrastructure. Please open it up!!!!

#5325

Name: N/A, Kasey

Correspondence: This allocation of land back to for profit ranchers is absurd for the NPS to ponder as an option. Livestock has adverse effects from an ecological standpoint on everything from plant species to the tule elk population that call the Point Reyes seashore home. We have pushed nature out of it's land for long enough, we do not need to continue human encroachment. Have these ranchers ever thought of the idea of becoming elk herders/ breeders as compared to cattle farmers? Let a local species thrive while still harvesting meat. Educate those that are unaware of what cattle grazing can do. Find alternative solutions between two opposing sides that benefit both. It is not hard, just takes more work.

#5326

Name: Barca, Erin

Correspondence: I am writing in support of free-roaming tule wapiti herds at Point Reyes National Seashore, and I object to any fencing, removal/relocation, sterilization or killing of wapiti in the park. Commercial lease holders on our public lands shouldn't dictate wildlife removal or exclusion policies. While in operation, any cattle ranching must be managed to accommodate wapiti and other native fauna (and flora!), and shouldn't harm habitat for endangered species. It is ever more egregious that this is being allowed in a National Park. The -only- National Park where tule wapiti can be found.

I further oppose "diversification" that would allow ranchers to grow crops or introduce new livestock animals into the park such as chickens, goats and sheep. This would be disastrous for the park's wildlife as it will create new conflicts by attracting more native species to crops and livestock. It would likely lead to the killing of the park's bobcats, foxes, coyotes and birds, etc. The potential for an increase in the usage of pesticide is another concern, as there is growing evidence of its role in invertebrate, amphibian and songbird declines. Ranching has already done unacceptable damage to the region's ecology. What I have personally witnessed over the years absolutely disgusts me.

Instead I urge you to adopt Alternative F. This option would phase out ranching entirely within the park, with the exception of two locations with life-estates that will eventually retire. And it would not remove or kill any tule wapiti, allowing them to naturally expand and no longer be treated like livestock.

The important thing is to restore native flora and the watershed from the overgrazing, trampling and pollution wrought by cattle ranching. It is important to remove competition with native wildlife such as tule wapiti who actually belong in the park. Commercial industries do not belong here. The Park Service should also move as quickly as possible to finalize a method for restoring grazing leases to wildlife habitat and public access when the final ranching families retire.

It has long been a dream of mine to see Point Reyes, a biodiversity hotspot, in its true, unrepressed colors. In the form of thriving native plants no longer trampled and consumed by livestock nor outcompeted by the invasives that gain ground in their hoof steps. No more denuded hills and fields. This alone would herald in a great pulse of invertebrate and vertebrate life. What a beautiful, lovely, scented dream. Finally free of the saturating stench of cow flop and piss. No one in their right mind seeks wilder reaches to smell that. It does not belong. It should not be here.

The decision to follow our nation's laws and protect wildlife, native plants, and the ecosystems they collectively represent, unimpaired, within our National Parks is important not only to the people of California, but to the entire United States. At stake is the integrity of ALL of America's National Parks.

The Park Service should prioritize protecting the natural values of Point Reyes National Seashore. Please, follow the rule of law and give tule wapiti and other native species precedence over commercial interests currently impoverishing our federally protected lands. Stop allowing private interests to abuse it. It has been a privilege for ranchers to remain in our National Seashore, NOT a right. With these most recent pushes to kill and even eradicate tule wapiti and expand their incompatible business with even more livestock and more crops, makes it crystal clear that they have stayed well past their welcome. There are a mere 5,700 tule wapiti left spread thin across the entire state in 22 herds. There are 5,250,000 cattle. Fair market value was paid for these ranches in the 1960s and 1970s. It is high time that we allow a battered Point Reyes National Seashore to recover and return to natural conditions. Point Reyes is one of America's most special places and is too important to sacrifice to power politics and special interests.

Please honor and protect Point Reyes National Seashore. We and future generations will thank you for your upholding the National Park System.

Name: Evens, Jules

Correspondence: Response to the Point Reyes National Seashore General Management Plan Amendment To: GMP Amendment % Superintendent From: Jules Evens, Citizen Date: September 12, 2019

As a 40-year resident of West Marin, a former board member of the Point Reyes National Seashore Association, the author of *The Natural History of the Point Reyes Peninsula* (PRNSA 1988, 1993 and University of California Press 2008), I am writing to voice my disappointment with the focus and intent of the Draft General Management Plan Amendment and Environmental Impact Statement (GMPA) on the impacts of commercial ranching at Point Reyes National Seashore (PRNS) and Golden Gate National Recreation Area (GGNRA). Although the Biological Assessment covers potential impacts to many of the sensitive park resources, none of the alternatives in The Plan offer protection of natural resources or effective opportunities to manage the Park lands to promote ecological health. All but one of alternatives favor ranching interests over preservation of natural resources and ecological diversity. In its present iteration, this GMPA presents Hobson's choice to the public that provides no guidance toward protection and preservation of natural resources.

Examples of ecological degradation that will result from the Preferred Alternative (or frankly any of the alternatives) are too numerous to address in these comments. I will focus on just two native species-Tule Elk and Western Snowy Plover-that exemplify my concerns

**I. TULE ELK vs BOVINE SUBSIDIES** I oppose the proposal to remove or diminish the Tule Elk that is contemplated by the Plan. Of primary concern is Alternative B, which fails to provide any measures for the protection or restoration of natural resources and native wildlife habitat within the Seashore. (GGNRA managed lands, that is those south of the Bolinas-Fairfax Road, are free of livestock-NPS, pers. comm.)

Native coastal prairie at Point Reyes developed and evolved under light-grazing pressure by native Tule Elk that tended to roam seasonally from area to area, minimizing the intensity of their impact to the native plant communities. The shift from elk to cattle that accompanied European colonization of the peninsula changed the pattern of grazing from seasonal to year-round, increasing the grazing pressure and favoring a shift from coastal prairie, dominated by perennial graminoids and forbs, to rangeland dominated by annual grasses.

Currently there are 2,400 beef cattle and 3,315 dairy cattle (total = 5,715) on 28,000 acres covered in the GMPA. This compares with 730 Tule Elk (Pers. comm. NPS, latest census 2019), therefore elk comprise approx. 11 percent of ungulates in the Park (excluding mule deer). The Tule Elk is an iconic species on the Point Reyes

Peninsula. I've led many natural history trips to the Seashore over the years, attended by people from all over North America and the world. Among the favorite sites to visit are Drakes Beach and Limantour Estero. Inevitably, encounters with the free-ranging elk in those locations are considered high points of the day by Park visitors. The reintroduction and protection of those herds provides an object lesson, a testament, to the Parks commitment to fostering and repatriating native species within public lands. Often our group will proceed from those sites to the Outer Point. Along the way we pass the overgrazed and degraded landscapes surrounding some of the dairy ranches, particularly ranches A and B. Here, when asked, I am often at a loss to explain the rationale behind the Parks management of those landscapes-the scarred ground, the decrepit buildings, the fetid barnyards and barren feed lots. Clearly, these lands are not managed for natural resources or ecological integrity, rather as businesses subsidized by the taxpayer/landowner. Frankly, I have to admit to our guests that although ranchers accepted payment for their ranches and receive public subsidies under the Parks auspices, they tend to resist landuse management constraints, and get away with it, always with the consent of politicians and government officials. This despite the fact that the Park Service is mandated to manage Point Reyes National Seashore without impairing its natural values and for the maximum protection, restoration and preservation of the local natural environment.

II. SNOWY PLOVER SURVIVAL vs RAVEN SUBSIDIES. There has been a tremendous investment in protecting the federally threatened Western Snowy Plover at Point Reyes. The Park has devoted hundreds of thousands of dollars public funds (approx. \$65,000/year over the last 3-4 years) and approx. 470 volunteer hours/year toward plover protection since the project began in 1986. Among several recommendations in the Snowy Plover Management Plan (Hornaday et al. 2007) is: Manage breeding and wintering habitat of the Pacific coast population of the western snowy plover to ameliorate or eliminate threats and maximize survival and productivity. The Plover Management Plan estimates that recovery (projected date 2047) will cost \$149,946,000 plus additional costs that cannot be estimated. It is the responsibility of the Park and other public agencies to implement this Plan and foster plover recovery.

Common Ravens (*Corvus corax*) are a primary predator of plover nests (Hornaday et al. 2007, PORE website). The open feed lots and barnyards on the Point Reyes Peninsula in effect subsidize and propagate the local population of ravens. (Also attracts and subsidizes other mesopredators-raccoons, foxes, skunks, etc.). Ravens have consistently been the most significant nest predator at Point Reyes, accounting for 69 percent of all predation events over 5 years and destroying approximately 50 percent of nests (Hickey et al. 1995). (Snowy Plover Management Plan p. 49). Hatching success has improved with the seasonal construction of exclosures around nest sites, an admirable effort by Park resource managers that requires a significant investment of public funds, staff hours, and volunteer dedication. The GMPA mentions the raven issue under Environmental Consequences and asserts that NPS has coordinated with ranchers to limit raven access to supplemental feed and shelter . . . and worked with ranchers to install covered feed bins (p. 102), however the implementation and/or efficacy of this effort is not apparent or credible (see attached photograph). The GMPA discusses mitigating subsidy of the raven population by agricultural diversification with NPS working in coordination with ranchers, would continue to take actions to reduce feeding opportunities for ravens at ranches and dairies, such as covering feed troughs, cleaning up waste grain around troughs, removing and placing troughs in enclosed structures, and storing harvested crops in enclosed structures (p. 143). It is not clear to this frequent park visitor that any such action has actually been taken or will be taken in the future. Figure 1. Twenty-four Common Ravens attracted to a feedlot at B-Ranch, August 24, 2019. (Another dozen or more birds were roosted on fencing in the periphery.) Even larger concentrations of 75-100 ravens were noted in Aug 2019 at I-Ranch pastures (M.A. Flett, pers. comm.), although no photographs are available.

The Biological Assessment (BA) is replete with comments on adverse impacts of ranching practices at Point Reyes on the Western Snowy Plover: "Of particular concern is the indirect effect of raven predation on nesting snowy plovers because increased numbers of common ravens in the action area have been attributed to food subsidies from beef cattle and dairy ranching practices (Kelly et al. 2002; Roth et al. 2004). Kelly (2001) reported that the highest numbers of ravens occurred near dairy ranches in the action area." (BA p. 50)

"USFWS (2002b) finds an increase in the number of ravens as result of ranching activities likely could lead to higher levels of predation on western snowy plovers by these corvids. Ongoing research has documented the interrelationship between ranching activities and ravens. Specifically, ravens opportunistically feed upon left over grains, afterbirths, carcasses, and organisms killed or injured during silage harvest. (BA p. 50)

"Ranch management activities in the action area could pose a risk to western snowy plovers by supporting higher numbers of predatory species, especially common ravens that prey upon snowy plover eggs and chicks. (BA p. 78) Over the long term, nesting western snowy plovers could be indirectly affected due to predation from ravens. In spite of avoidance, minimization, and mitigation measures that could reduce this adverse indirect impact, continued ranching in the action area may affect, is likely to adversely affect the western snowy plover." (BA p. 79)

The 2019 plover nesting effort at Point Reyes provides a dire and instructive example of the situation: "Common ravens have also caused an unusual number of snowy plover nest failures so far this season. Of the 14 nests, eight have failed; of these eight failed nests, six were preyed upon by common ravens (75%)". (NPS website, accessed 13 Sept. 2019)

Although the adverse consequences of current ranching practices on plover reproductive success is explicitly stated in the BA, the alternatives provide no solution other than vague statements about the Park working with ranchers. The plover-raven issue is just one example of the failure to protect, preserve and foster natural resources within the Park by the alternatives outlined in the GMPA. Indeed, if any of the alternatives contemplated in the GMPA are pursued, the Park management will continue to work at cross-purposes with plover protection (and that of other natural resources). (One exception in Alternative F, that relies on protection by default.)

Admittedly, we live in Orwellian times, but the flagrant disregard for the integrity of the landscape and the conspicuous debasement of our natural resources under the current Park management (Alternative A) is unconscionable. The proposed alternatives will serve to perpetuate that trend. At a time when public lands are being sacrificed to private commercial extractive interests nationally, it is disheartening to see the NPS kowtow to political pressure and sacrifice ecological diversity to private agricultural interests on public lands.

The GMPA should strive to strengthen the intent of the Parks mandate (restoration and preservation) rather than further degrade the natural environment as Alternates A, B, and C would demonstrably do; these are inimical to the restoration and preservation of the Parks natural resources.

Where cessation of grazing occurs on lands under alternatives D and F, Impacts on wildlife related to dairy and beef ranching would cease, including disturbance, trampling, erosion, and nutrient inputs . . . Alternatives E and F would eliminate impacts of forage production, manure spreading, and diversification would reduce high-intensity-use areas compared to existing conditions. (GMPA, vii).

Alternative D would be a small step toward preservation by reducing the acreage degraded by cattle grazing. (Also greenhouse emissions.) Alternative E represents a minor improvement over current practices, but because it continues cattle grazing at essentially current levels, it will continue to have adverse impacts on the landscape. None of the alternatives provide ecologically sound or sustainable stewardship options, nor do they focus on avoidance of impairment of the Parks natural values or on maximum protection, restoration and preservation of the local natural environment. Given the choices available to the public, to the actual owners of the land, Alternative F, though not ideal, is the Hobsons choice preferred by this citizen.

Should any of the proposed alternatives be implemented that perpetuate, expand, or change agricultural practices within the Park, NPS resource managers should consider modeling of coupled human and natural systems (CHANS). Achieving sustainable CHANS requires an integrated systems approach to avoid unforeseen negative consequences. There is a robust literature on such coupled systems (Alberti et al. 2011, Kramer et al. 2017, Liu et al. 2015, Schluter et al. 2015, Schouten et al. 2013, Schreinemachers and Berger 2011, Van Schmidt et al. 2019).

A timely new book, *This Land* by Christopher Ketchum documents the destructive behavior of welfare ranchers who graze their cattle on public lands at the public expense with the complicity of government agencies whose mandate it is [was?] to protect those lands for future generations. The book describes a broken system leading to a broken ecosystem. If the alternatives contemplated by the GMPA are put into action, it will follow a familiar and tragic pattern of abuse of the Public Trust and provide another chapter for the sequel to this important book.

One caveat: Although I complain harshly about current conditions of the pastoral zone of the Park, I know and respect the resource management team that has been assembled at Point Reyes over the past twenty years, largely to the credit of Superintendents Don Neubacher and Cicely Muldoon. This team of land managers has worked assiduously (when and where allowed), to manage the natural resources with professionalism and ecological good sense.

Respectfully submitted-with concern, disappointment, and outrage-in honor those fought to protect this Island in Time. Jules Evens U.S. Fish and Wildlife Endangered Species Permit: TE 786728-5 California Department of Fish and Game Collecting Permit # 801092-04 Federal Bird Marking and Salvage Permit: # 09316-AN

Correspondence: Please adopt Alternative F, which would discontinue farming and ranching opportunities in the park and expand visitor opportunities.

#5330

Name: N/A, Brian

Correspondence: Aloha!

I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F!

I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to:

1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly-and by bike, rather than car.

I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

Thank you! Brian

Correspondence: Please adopt Alternative F to stop cattle ranching in the park and protect native species and elk.

#5332

Name: Mattison, Catherine

Correspondence: We need a new vision for the Seashore: No ranching. (Alternative F) - Phase out the ranches. - Disallow all commercial livestock in the park. - Prioritize wildlife over domestic cattle. - Biodiversity should not be sacrificed to private ranching.

• Point Reyes National Seashore is supposed to be managed under the Point Reyes Act for "maximum protection, restoration, and preservation of the natural environment." There's no mandate for prioritizing commercial agricultural leases on these public lands. • Natural values, native wildlife, public access and enjoyment should take priority over commercial activities at Point Reyes. • Tule elk are an important part of the landscape at Point Reyes. Their recovery is a result of successful native ecosystem restoration, which is a key element of the Park Service's mission. It's taken a lot of time, money and effort to restore tule elk to Point Reyes, the only national park where they live. Tule elk should be allowed to roam free and forage in the park - not shot, removed, fenced or treated as problem animals. • Right now the Point Reyes ranches enjoy not only subsidized grazing fees and housing, but also taxpayer-funded infrastructure and road improvements, and publicly funded projects. But commercial activities at Point Reyes should be required to accommodate native wildlife - not the other way around. • The Park Service shouldn't allow any new agricultural activities at Point Reyes. Planting artichokes or other row crops will attract birds. And introducing sheep, goats, pigs or chickens will attract native predators such as coyotes, bobcats and foxes. Expanded ranching would only create new wildlife conflicts.

Correspondence: adopt Alternative F, which would discontinue farming and ranching opportunities in the park and expand visitor opportunities. the preservation of native wild species must take precedence over farming and ranching activities. grazing negatively affects ecosystems, causing water pollution and soil erosion, spreading invasive species and disease, and harming endangered species.

#5336

Name: Swope, Robin

Correspondence: I am writing to urge NPS to adopt Alternative F, which would discontinue farming and ranching opportunities in the Point Reyes National Seashore and expand visitor opportunities. Our national parks belong to all Americans - not just those who pay to use the land and profit from it. Preservation of native wild species must take precedence over farming and ranching activities. As you know, grazing negatively affects ecosystems, causing water pollution and soil erosion, spreading invasive species and disease, and harming endangered species. As the climate crisis continues to worsen we have an obligation to do all we can to stop the destruction and reverse as much as possible. Numerous studies have shown how bad cattle are for the environment, Please do the right things and adopt Alternative F. Thank you.

Name: Johnston, Robert

Correspondence: Comments to the PRNS On the Draft EIS for the General Management Plan Amendment

Robert A. Johnston Sept. 18, 2019

I emphasize the actions I want you to take with **\*\*...\*\***, since this form does not allow underlining.

1. The DEIS is legally inadequate in that the impacts of the ranching alternatives are described as being reduced, when compared to existing conditions (Alternative A), but not in absolute terms when compared to legal standards. **\*\*In the Final EIS, please provide additional assessment of all significant adverse impacts in absolute terms and then compare these impact levels to all existing State and Federal standards.\*\*** The NPS is legally compelled to not "impair" the "natural resources" in the Seashore and so this analysis is required. The data are available for water quality and soil erosion, two major impact types.
2. The DEIS makes it clear that Alternative F is superior in terms of all natural resources impacts. If some of the abandoned farm buildings are used in future years for interpreting ranching history, then this alternative is also superior in terms of historic structures and districts. Ranching was only ever guaranteed for the original families and so the NPS does not have to allow these environmentally destructive land uses to continue. (The Secretary's order does not supersede the PRNS organic law.) **\*\*Please adopt Alternative F in the Final EIS and ROD.\*\***
3. The NEPA regulations make it clear that agencies must adopt mitigation measures and enforce them. The CEQ Guidelines (NEPA regulations) state that an EIS must include "appropriate mitigation measures" (40CFR1502.14(f)). The purpose of an EIS is to "avoid or minimize adverse impacts" (40CFR1502.1). An EIS must include a discussion of "means to mitigate adverse environmental impacts" (40CFR1502.16(h)). In the Record of

Decision (ROD), the agency shall adopt a “monitoring and enforcement program...for any mitigation.” (40CFR1505.2(c)).

The DEIS states that all mitigation measures are mandatory (p. D-1). In the discussion of the impacts on water resources, the DEIS says that ranching will cause “long-term adverse impacts” but the “use of mitigation would minimize and/or avoid these impacts” (p. 115). No means of guaranteeing that the mitigation measures listed in the DEIS take place are identified. Similarly, on pg. 117 the DEIS states that “ROAs would include... standards and mitigation measures. . .that would be required. . .to minimize impacts.” \*\*The FEIS and ROD must include binding commitments and funding to assure enforcement all of the ranch standards and mitigation measures in the Draft.\*\* The NMFS and F&WS biological assessments state that these sister agencies will require full enforcement of all existing rules on the ranches and also will provide “numerous added mitigation measures” after reviewing the DEIS. So, the NPS will have to commit to enforcing all mitigation measures and standards that affect fisheries and water quality. The NPS must likewise commit to the enforcement of all of the ranching standards and mitigation measures. The regional water quality board will likewise require the NPS to manage the ranches so as to meet all of their rules and standards. 4. The NPS has a very poor record of not managing range conditions very well in the Seashore. Their Residual Dry Matter (RDM) report is found at [https://www.nps.gov/pore/getinvolved/upload/planning\\_ranch\\_cmp\\_background\\_report\\_ucberkeley\\_residual\\_dry\\_matter\\_analysis\\_150830.pdf](https://www.nps.gov/pore/getinvolved/upload/planning_ranch_cmp_background_report_ucberkeley_residual_dry_matter_analysis_150830.pdf) This study shows that from 1987-2014 the RDM values fell below the desired levels and blame this on the drought. In ranching it is generally taken as a given that in dry years you reduce your herds so as to not denude the land of grasses, thereby causing soil erosion and the spread of invasive plants. The Park seems to not follow this basic policy. Table 3.1 shows a Park-wide average RDM below the "target" of 1,200 lbs/ac. for two years, meaning that at least several ranches, and perhaps most, were below the target level. Table 3.4 shows these Park-wide average RDMs also below the target for 2008 and 2009.

The report goes on to describe the 15 transects where the RDM was below the target for two or three other years. One bad year (low RDM) is typically allowed by the Park, but not two or more, as reducing herd size on the problem fields immediately should fix the problem in the next year. These study transects represent about 15 fields where herd management was not sufficient to restore the grasses in one year. The Park's Range Management Guidelines of 1990 need to be updated, according to the authors in this 2015 report. The authors recommend that the Park adopt more-detailed ranch monitoring rules and that the Fall RDM values be used to determine herd size for the following year. This statement implies that the Park has not done this in the past, which is egregious. Rangelands in this Park look very bad on many ranches in the Summer and Fall.

The accompanying tables and graphs in the report show most ranches out of compliance in 1987 and 1988, but many ranches are also out of compliance in some of the following years, in most cases for two years or more in a row, indicating that herds were not reduced in time to protect the fields from erosion. This report clearly shows that the Park has not managed the ranches sufficiently in order to protect the public's lands from soil erosion. \*\*So, the FEIS and ROD must include strong NPS commitments to the enforcement of ranch standards and mitigation measures.\*\* 4. A more-difficult issue is how to modify the ranch standards and mitigation measures in the future as experience dictates, due to inadequate results on the ground. \*\*The FEIS and ROD must include a binding policy governing all ranch lands stating that adaptive management will be employed by the NPS and ranch standards will be modified, as needed, to minimize or avoid adverse impacts.\*\* Perhaps the funding for this additional monitoring and regulation can be obtained by requiring the ranches to fund this work.

Thanks for considering my comments. Robert A. Johnston

Name: Rodgers, Darrell  
Correspondence: Hello,

I'm a resident of Marin County and am in favor of expanded bicycle use in the Point Reyes National Seashore area. Currently there are few options for cyclists and many of the current options are overcrowded with vehicle

traffic and unsafe. Not only do myself and my family enjoy hiking off pavement roads we also enjoy riding our bikes in these places that expose us to the nature we value so much.

After researching what NPS has in consideration these are the plan elements we support:

- . A connection between Devil's Gulch and Platform Bridge Road using existing ranch roads.
- . A connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail.
- . A connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads.
- . A connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads.
- . A connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads.
- . An Estero Trail loop using existing ranch roads.
- Collaboration with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

Thank you for your time and considerations of shared use!

Darrell Rodgers

Correspondence: Improve access for bikes in non-wilderness areas.

#5345

Name: Laurent, Bo

Correspondence: I have bicycled a few times on Point Reyes National Seashore, and I loved it! It's a beautiful place to ride.

However, what I didn't like was riding on roads with lots of car traffic and no bike lanes.

I support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F.

I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly-and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and

ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

Name: FOXX, N/A

Correspondence: I strongly oppose the National Park Service's plan to kill tule elk, a NATIVE species, in order to expand commercial agriculture for NON-NATIVE species, in Point Reyes National Seashore and Golden Gate National Recreation Area. The National Park Service is supposed to restore the lands for wild animal habitat, not cater to special interests. The preservation of our public lands and wildlife needs to be the PRIORITY, not the economic interests of private ranchers. National parks exist to protect our natural resources and native wildlife.

Cattle ranches have serious negative environmental impacts on the environment, including polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes.

Please, get your priorities straight.

#5347

Name: Wauschek, Michael

Correspondence: We need to leave the elk alone let them be they were their first before any of those ranchers were even born. Yes you may gain \$ for letting allow cattle on our parks. It is time change we need our elk back. Everytime I go by that park I think of the elk not cattle.

#5348

Name: Muldoon, Matthew

Correspondence: Hi. I expect you're aware that Marin County Bicycle Coalition is encouraging the cycling community to write you guys about expanding access for bike at Point Reyes National Seashore.

I'll skip the talking points- hopefully you've seen them many times by now- and simply say that I fully support every one of their suggestions for expanded access.

All their proposals are on existing pathways/trails/roads on leased ranch land. Compared to the impact of cattle on land, the impact of bikes would be insignificant.

Current access is limited but what there is is stunning. Greater bicycle access would permit more people to enjoy this spectacular land and would offer safer alternatives to those of us (like me) who regularly ride there.

Please give the MCBC's proposals your thoughtful consideration.

Sincerely,

Matt Muldoon

Correspondence: Please protect Tule elk as they are a unique species.

Thanks, Corinne

#5350

Name: Michaels, Brenda

Correspondence: Point Reyes National Park is public and belongs to all of us, including its natural habitants! Elk should be allowed to graze there. Farmers and ranchers using it, for grazing their cattle (which shouldn't be allowed in the first place), must allow Elk to graze. To kill these animals because of cattle grazing would be WRONG!

Please re-consider and allow Elk to graze on in their natural habitat!

Name: Pfeiffer, Mindy

Correspondence: To Whom It May Concern:

I am writing today to urge you not to shoot and kill any of the tule elk living in the Point Reyes area. These beautiful animals deserve the right to continue to live in their area, and by killing them you will be upsetting the balance of nature, not to mention the fact that many people, such as my husband and me, come to the area to see the elk and spend our tourist dollars.

I urge you not to put the interests of commercial agriculture above that of the wildlife, such as the tule elk that live in the area. We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

Thank you, Mindy Pfeiffer

#5354

Name: Barton, Jennifer

Correspondence: Point Reyes National Seashore is supposed to be managed under the Point Reyes Act for "maximum protection, restoration, and preservation of the natural environment." There's no mandate for prioritizing commercial agricultural leases on these public lands. Even so, Point Reyes ranches enjoy not only subsidized grazing fees and housing, but also taxpayer-funded infrastructure and road improvements, and publicly funded projects. But commercial activities at Point Reyes should be required to accommodate native wildlife - not the other way around. Natural values, native wildlife, public access and enjoyment should take priority over commercial activities at Point Reyes.

The Park Service shouldn't allow any new agricultural activities at Point Reyes. Planting artichokes or other row crops will attract birds. Activities such as mowing shouldn't be allowed in park areas where they harm endangered species or wildlife habitat, impair water quality, cause excessive erosion or spread invasive plants/diseases. And introducing sheep, goats, pigs or chickens will attract native predators such as coyotes, bobcats and foxes. Expanded ranching would only create new wildlife conflicts. Cattle ranching should only be allowed if it's consistent with preserving the natural environment. Cattle are the seashore's primary source of greenhouse gases, so the Park Service's preferred alternative is inconsistent with its own "Climate Friendly Parks" plan.

Tule elk are an important part of the landscape at Point Reyes. Their recovery is a result of successful native ecosystem restoration, which is a key element of the Park Service's mission. It's taken a lot of time, money and effort to restore tule elk to Point Reyes, the only national park where they live. Tule elk should be allowed to roam free and forage in the park - not shot, removed, fenced or treated as problem animals.

#5355

Name: Silver, Dan

Correspondence: I support phasing out of ranching, or Alternative F. It is time to prioritize native wildlife.

Thank you

#5356

Name: Handel, Brad

Correspondence: As a long time visitor of the park, I support the decision to cease all farming activities on the National Seashore. They have a negative impact on the local animal species, plants, and ocean life. Their existence is not compliant with the original goals of the park service when they bought the land from the farmers and created the National Seashore.

Another author was able to write out my views in a much better way. Please see the below and do your best to look at the situation with the lens of what's in the best interest of the land and the many animals who call the seashore their home.

All ranching operations in the planning area would be discontinued, and visitor opportunities on these lands would expand. The NPS would take no action to limit population growth or geographic extent of free-ranging elk in Point Reyes. Following cessation of ranching, the elk fence at Tomales Point would be removed, allowing that herd to be free-ranging as well.

Ranching was not one of the intended purposes of the parks. In the enabling legislation, Congress established Point Reyes National Seashore in 1962 "to save and preserve, for the purposes of public recreation, benefit, and inspiration, a portion of the diminishing seashore of the United States that remains undeveloped." The purchase of the ranches clearly indicates that the intent was to remove the ranching operations in support of the enabling legislation.

The parks were not intended to support ranching in perpetuity. To grant ranchers new 20-year leases and allow "diversification" by permitting pigs, chickens, sheep, and goats; horse boarding; row crops; processing of dairy products; and public farm stays and tours would be huge steps backwards, and will further harm the natural environment of the parks over the long term. If the NPS' Preferred Alternative is adopted it's likely that ranching on these park lands will never end, the land will continue to be degraded, and the millions of dollars the American people paid for these lands (money that has been kept by the ranchers) will be for naught. It's time to phase out the ranches and manage the parks for the superlative natural beauty and diversity they offer.

#5357

Name: Pagnini, Jen

Correspondence: The economic interests of cattle ranchers should not be what the National Park Service is trying to protect. Point Reyes National Seashore and Golden Gate National Recreation Area are places that need to be preserved for wild animal habitat. Please do not extend the use of anymore of our national lands to commercial agriculture business owners.

Correspondence: Please let us ride da bikes!

#5360

Name: Lukanuski, Mary

Correspondence: Hi, I'm an avid road and MTB cyclist. I would love to see safer alternatives to cycling on the roads, which can get very busy over the weekends AND more loop options so we cyclists can safely experience the extent of the Seashore. I would support the following loops: A connection between Devil's Gulch and Platform Bridge Road using existing ranch roads.

A connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail.

A connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads.

A connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads.

A connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads.

An Estero Trail loop using existing ranch roads.

I would love to see these developed so my family and I could experience the beauty of Point Reyes safely without a car!

Your attention is much appreciated.

Mary

#5361

Name: Butera, Joseph

Correspondence: Dear National Park Service:

My comments are concerning Point Reyes Seashore. This protected place should be for people not ranches and livestock.

Its time the Ranches/livestock LEAVE!!

Sincerely.

#5362

Name: Va, Stina

Correspondence: I support an elk management plan prioritizes the native heritage of of Point Reyes, which means a plan and policy that prioritizes Tule Elk and a policy that is truly committed to phasing out agriculture/dairy farms. Plenty of scientific evidence exists that dairy farms are not sustainable. In Point Reyes, that could not be more true. Since the introduction of livestock grazing, 14 wildlife species have become listed as endangered or threatened because of this. Sustaining the heritage of Point Reyes means protecting these native wild species.

#5363

Name: Vahlberg, John

Correspondence: I visited Pt Reyes last weekend by car for the first time, thinking it could be a cool place to ride. The answer was a resounding "no" because of the condition, width, and high-speed vehicle use of the roads I'd

have to ride on. I'm a team director for a high school mountain bike team, so I'm always looking for new places to go, and to bring the team to. I found myself thinking for much of the drive back from the lighthouse how amazing it would be to have bike trails (preferably dirt) that gave access to this amazing place, and that it was truly shameful that it was so car-centric in its accessibility when more than half my team doesn't have a drivers license yet.

I don't go places that are car-centric, I don't have time to waste driving around in a metal box (no matter how beautiful the place) when I can be outside and exercising. And it has to be safe enough to ride, or I just spend all my time on high alert for cars and I can't relax and enjoy the place at all (or I'm not comfortable with the risk in this case). Then I got an email notifying me of an ongoing plan and I thought "there's hope! maybe they'll actually do something to increase access to this place!"

So I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

If these improvements were made, Pt Reyes would become a regular destination for me - it is such an amazing place! I would have a safe pathway to the seashore on trails and ranch roads, and be able to stay off the narrow main road with the fast moving cars full of people who are watching their phones and the scenery. Bicycling opportunities are currently so limited and fragmented at Pt Reyes that they are useless to me and everyone I ride with. We're not talking about little kids riding half a mile on a dirt path out and back - we look for loops that are 15 miles minimum, and up to 60 miles. We particularly love loops and connections, not out-and-backs. Any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

#5364

Name: Mullen, Paula

Correspondence: I and most California residents care about protecting California's wildlife, especially in areas set aside specifically for wildlife and land preservation. I oppose the National Park Service's plan to kill native tule elk in Point Reyes National Seashore and Golden Gate National Recreation Area. I do not want wildlife killed to help the economic interests of private ranchers, whose ranches adversely affect the environment. This goes against what national parks are all about - protecting our wild spaces and the wildlife who live and truly belong there. These parks need to be managed responsibly, always adhering to the primary mission of preserving the land and wildlife.

Sincerely, Paula Mullen

#5365

Name: N/A, N/A

Correspondence: I'm a periodic visitor to Pt. Reyes. It's about time that the Park Service quit "apologizing" for ensuring that the land that it legally and fairly obtained decades ago does not remain semi-privatized. I was disgusted regarding the so-called controversy regarding oyster farming, for example.

Cows are not a natural part of the environment. They cause damage, interfere with wildlife, and inhibit public access. Such activities belong on private land. Even worse is the plan to kill some Tule Elk, to accommodate cows/private uses of public land.

#5366

Name: Va, Stina

Correspondence: As a member of the California-based international animal protection nonprofit organization In Defense of Animals with over 250,000 supporters, I oppose the National Park Service plan to kill native Tule elk, grow commercial crops, and permit ranchers to add chickens, turkeys, sheep, pigs, and goats to their exploitative operations.

As national park land, this property was specifically set aside to protect, restore, and preserve the natural environment including the wild animals who live there. The original intention was to phase out dairy and cattle ranching, not add more crops or animals to increase ranching profits.

The proposed plan does not address the damage from grazing, including water-quality degradation and soil erosion. Also, adding new crops will create more conflicts with native wild animals.

Please abandon this inhumane and destructive plan. I urge you to restore the Seashore's Pastoral Zone for wild animal habitat and repurpose historic ranch buildings for scientific research, interpretation, and public education.

#5367

Name: Couch, Sandra

Correspondence: Adopt Alternative F, which would discontinue farming and ranching opportunities in the park and expand visitor opportunities. Tell the NPS that the preservation of native wild species must take precedence over farming and ranching activities. Remind it that grazing negatively affects ecosystems, causing water pollution and soil erosion, spreading invasive species and disease, and harming endangered species.

#5368

Name: Diaz, Henry

Correspondence: I am writing in support of safer riding and expanded access at Pt Reyes National Seashore. I ride in this area and west Marin at least twice each a month during the 'dry' season. I also encounter visitors from around the country who wish to see this magnificent area. All would be benefited from these improvements, both riders on/off road and those in vehicles if we had safer access for cyclists. I cherish this great park and would love to see more of it, as well as to share it with all our visitors. Thanks for your attention and interest in this plan. Henry A Diaz

#5369

Correspondence: Have humans gone mad? Displacing revered wildlife in favor of agricultural concerns? How about accommodating the wildlife and telling the agricultural community they are NOT more important than the ecology, environment, greed, and their careless disregard for the beauty in our country will no longer be tolerated. And further, WHY is the obvious always required to be objected to, why doesn't BLM and Park Services, etc., take the side of and step in to PROTECT what we old dear (deer?). Just how much money goes into "convincing" governments to side with the greed and grift and the pursuit of personal wealth? ENOUGH!!! PROTECT OUR WILDLIFE! NOT the moneygrabbers.

#5374

Name: Rabin, Ariel

Correspondence: As a cyclist, I have been biking in the Pt Reyes area for over a decade... While the roads are spectacular, they are also crowded and busy nearly every weekend. I believe the trails and fire roads around West Marin are some of the most beautiful in California... Bear Valley Trail, Wildcat Beach from Five Brooks, Drakes Estero Trail are all amazing. However, so many of the great trails lead to turnaround points and its hard to connect these trails to one another without riding on the highway or busy roads. I am excited by the possibility of new trail access and connectivity for cyclists. I support the cycling access improvements outlined in Alternatives B, C, D, E and F that create:

A connection between Devil's Gulch and Platform Bridge Road using existing ranch roads A connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station as a connection for the Cross Marin Trail. A connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads. A connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads An Estero Trail loop using existing ranch roads. A connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads. Collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

These connections would open a lot of off-highway bike connectivity in Pt Reyes that would get cyclists off busy highways and park roads and make everyone feel safer. I would love to see expanded bike access in one of my favorite places in CA. Thank you for the consideration and I hope to see these alternatives accepted and someday opened to the public.

Correspondence: I agree and support everything that is written below. I was purely a road cyclist for many years and now have almost gone exclusively to gravel/dirt to avoid the cars and enjoy the serenity and beauty of our off road surroundings. It would be amazing to open up these ranch roads and trails to allow us cyclist have more access to the incredible PRNS. Thank you!

I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly-and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

Name: McCrea, Karen

Correspondence: Dear Sir/Madam,

Re: National Park Service (NPS)

I believe the above organisation recently unveiled a draft plan to shoot and kill some of the tule elk living in Point Reyes National Seashore. PLEASE don't be cruel. These animal beings have every right to walk this planet, just

like us. Only unlike human beings they don't wreck & litter it. Think about what you are doing, you must know in your heart that this isn't godly or right.

Thank you for your time.

Sincerely Karen McCrea

#5384

Name: Ackerman, Lynn

Correspondence: Do Not kill the elk. All animals can share the land.

#5385

Name: Parekh, Aanika

Correspondence: I care about protecting California's wildlife. I am 13 years old and I know enough about the world to understand we shouldn't be killing animals just for human needs. I OPPOSE the national park services plan to kill elk and expand on commercial agriculture. We have enough land for agriculture. I implore you to instead expand the land for these beautiful animals. We must prioritize the wellbeing and safety of the wild animals that are under our care. Not the needs of private farmers. The effects of commercial cattle ranchers cannot be undone. They will ruin the park and every animal who depends on it. National Parks were created to protect our resources and the native wildlife. The park should be managed accordingly. When making this decision please think about more than just humans want or what humans need. Think about the animals who depend on this land- more so than the humans do. The only difference is that they don't have to voice to say what they want. That's why I'm here and so many more like me are here: to speak for those who cannot speak for themselves.

Dear NPS officials:

Please accept, carefully consider, thoroughly address, and include in the appropriate administrative record my following comments on the National Park Service's (NPS) Draft General Management Plan Amendment for Point Reyes National Seashore (PORE). I have visited PORE and I deeply care about its future management.

I previously submitted extensive scoping comments. I am frankly appalled and outraged that NPS apparently ignored my concerns in preparing its preferred alternative. NPS seems to have been captured by Trumpian forces that gleefully put narrow commercial interests well ahead of the broad public interest. As such, by giving short shrift to the relevant law and science, NPS is doing serious damage to its reputation and credibility. Instead of following the NPS organic act mandates to "preserve and enjoy", NPS now appears to favor "pollute and destroy" as its mission. This must not be allowed to stand.

As you know, under the NPS preferred alternative, fully one-third of PORE would be dedicated to cattle ranching for decades to come. The NPS' own Environmental Impact Statement (EIS) enumerates the impacts of cattle ranching to endangered species, wildlife habitat, water quality, and the climate. However, NPS seeks to ignore these impacts to satisfy 24 ranchers who sold their land to the public nearly 60 years ago yet still run their cattle in this national seashore. This is outrageous and a clear ripe-off of the taxpayers. Adding insult to injury, the NPS preferred alternative, on top of continuing the beef and dairy operations, would allow each rancher to expand to include commercial crops, pigs, sheep, goats, and up to 500 chickens-as well as open retail operations in the Seashore. The EIS avoids any discussion of how the NPS would respond when inevitable conflicts arise between livestock and native wildlife. But when conflicts arise, it could well mean a death sentence for bobcats, foxes, coyotes, raccoons, and birds that prey on the ranchers' small livestock. It is ridiculous for NPS to put itself in the bizarre position of having to approve killing of native wildlife to protect private livestock. This is backwards: the protection of native wildlife should always be a NPS and PORE priority.

I am especially concerned about the fate of native tule elk in PORE. This is reportedly the only NPS unit where these elk are present. This is a rare and iconic California species, which was once widespread but is now limited to a few key habitats. Given this rarity of a native species, I am appalled that cows reportedly outnumber tule elk 10 to 1 in PORE. This is already horribly backward, but the NPS preferred alternative would apparently allow culling 10-15 elk annually to maintain a population 120. Moreover, any free-roaming elk that forage on land leased for cattle would be shot.

The NPS preferred alternative would extend grazing leases from 5 to 20 years, with the addition of 7,600 more acres of the park currently unauthorized for cattle grazing. I understand that local ranches outside the park—that operate on their own land, not the public's land—are using more sustainable ranching practices in order to minimize their impacts to the environment. However, PORE ranchers do not. Under the NPS preferred alternative, methods to counter climate change, such as cutting methane and sequestering carbon, are voluntary.

The NPS preferred alternative talks about extensive monitoring of potential resource damage. However, I doubt that NPS would be able to "walk this talk." In reality, the NPS is already underfunded. Limited staff is already hard pressed to enforce existing grazing lease conditions, let alone the more intensive ranching foreseen under this plan. PORE has been overstocked and overgrazed. Poor ranching practices have led to soil erosion, water pollution, habitat destruction, invasive plants, and spreading cattle disease to the park's wildlife. How can NPS turn a blind eye to these harsh realities? Do NPS employees work for the private ranchers or the American people?

In addition, I concur with the following points:

- Point Reyes National Seashore is supposed to be managed under the Point Reyes Act for "maximum protection, restoration, and preservation of the natural environment." There's no mandate for prioritizing commercial agricultural leases on these public lands.
- Natural values, native wildlife, public access and enjoyment should take priority over commercial activities at Point Reyes. • Tule elk are an important part of the landscape at Point Reyes. Their recovery is a result of successful native ecosystem restoration, which is a key element of the Park Service's mission. It's taken a lot of time, money and effort to restore tule elk to Point Reyes, the only national park where they live. Tule elk should be allowed to roam free and forage in the park - not shot, removed, fenced or treated as problem animals.
- Right now the Point Reyes ranches enjoy not only subsidized grazing fees and housing, but also taxpayer-funded infrastructure and road improvements, and publicly funded projects. But commercial activities at Point Reyes should be required to accommodate native wildlife - not the other way around.
- The Park Service shouldn't allow any new agricultural activities at Point Reyes. Planting artichokes or other row crops will attract birds. And introducing sheep, goats, pigs or chickens will attract native predators such as coyotes, bobcats and foxes. Expanded ranching would only create new wildlife conflicts.
- Cattle ranching should not be allowed because it's inconsistent with preserving the natural environment. And agricultural activities such as mowing shouldn't be allowed in seashore areas where they harm endangered species or wildlife habitat, impair water quality, cause excessive erosion or spread invasive plants/diseases.
- Cattle are the seashore's primary source of greenhouse gases. So the Park Service's preferred alternative is inconsistent with its own "Climate Friendly Parks" plan.

In light of the above concerns, I strongly oppose and urge NPS to reject the preferred alternative. Indeed, the preferred alternative represents the opposite of what NPS and PORE should be doing.

Instead, I strongly support and urge NPS to adopt and implement Alternative F, for no more ranching. Consistent with the relevant law and science, and in recognition that these ranches were purchased long ago for public conservation purposes, the PORE ranches should be rapidly phased out. Commercial livestock grazing should be prohibited throughout PORE. The protection of native wildlife and plants, including special status species, should be the top priority. Biological diversity should be maintained and restored, and natural ecological processes allowed to occur without human interference. Degraded habitats should be restored to healthy conditions. Historic ranch buildings should be converted for public education or scientific research, or razed if they could not serve a legitimate public purpose.

Please include me on the notification list to be informed when the FEIS or a Supplemental DEIS becomes available for public review.

Thank you very much for considering my comments.

Sincerely,

Richard Spotts

Correspondence: I recently read the Op-Ed by Barbara Moritsch on the National Traveler and was alarmed to hear that the National Parks Service was seriously considering the reckless expansion of the cattle farms in Point Reyes. In this age where we can see the effects of climate change, we need every inch of parkland preserved. It is the moral imperative of the National Parks Service to preserve Point Reyes and the Tule Elk, and it is the law that the cattle ranchers should leave that land to its intended purpose. At least that was the intention when the NPS was given taxpayer money to buy the land from the cattle ranchers. It is time fulfill the promise that the NPS has made to the American people. The cattle ranchers have been given ample time to prepare themselves for this day. Adopt alternative F and discontinue all ranching operations at Point Reyes. It is not enough to just pay lip service to the ideals of environmentalism and preservation. The NPS must take action and do what is best for our country, and what is best for our planet! End cattle ranching in Point Reyes and we can begin to restore the park to its natural glory.

#5401

Name: Medina, Amy

Correspondence: Please don't do away with this park and the Tule Elk. We just visited there recently for the first time and were in awe of the natural beauty and the Elk. Places like this are rare and become fewer and fewer in this country. This is a special place mostly unspoiled by humans unlike other "parks" are littered with trash and graffiti. Also there are fewer and fewer safe places where nature can exist and aren't pushed out by humans.

#5402

Name: Taylor, Janee

Correspondence: I recently saw an old Huell Howser California Gold program where he visited the tule elk. They are magnificent animals and I don't know how you can even think of shooting them. The National Park is their home, not the commercially raised cattle. Please save them and their habitat.

#5403

Name: N/A, N/A

Correspondence: Thank you for the opportunity to comment on your plan.

After reading your general management plan, I support alternative "F" - the no ranching option. Livestock should not take priority over wildlife, and I do not believe livestock belongs in a national park, since according to your mission, the NPS 'preserves unimpaired the natural and cultural resources and values of the National Park System for the enjoyment, education, and inspiration of this and future generations.'

Please consider removing the livestock and allowing the land to recover from what appears to be immense damage so that wildlife might thrive and the land is there for all people to enjoy.

Thank you for your consideration. Jennifer Howe

#5404

Name: Hoff, Krista

Correspondence: I grew up visiting and volunteering in Point Reyes National Seashore. I do not support any lethal removal of the elk. I would like to see ranching operations decreased or eliminated entirely from the Seashore. Cattle have a negative impact on the local animal species, plants, and ocean life. Their existence is not compliant with the original goals of the park service when they bought the land from the farmers and created the National Seashore. Ranching was not one of the intended purposes of the parks. In the enabling legislation, Congress established Point Reyes National Seashore in 1962 "to save and preserve, for the purposes of public recreation, benefit, and inspiration, a portion of the diminishing seashore of the United States that remains undeveloped." The purchase of the ranches clearly indicates that the intent was to remove the ranching operations in support of the enabling legislation.

Therefore, I support Alternatives E and F.

Additionally, I would like to see increased access for bikes in the Seashore. Bike access improvements would enable me to visit the Seashore by bike, rather than car, reducing the carbon footprint needed to access the park. I would feel much safer riding with my family in Pt. Reyes National Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic.

Correspondence: I am sickened and heartbroken to hear of the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. The job of the National Park Service is to protect lands and the animal inhabitants, not destroy animal habitat.

I whole heartedly support the following statement: "We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native

wildlife. This park should be managed accordingly." There are plenty of cattle ranches in this country, we don't need more! These businesses have proven records of adding pollution, suffering and destruction. This is about money, not doing the right thing for the planet and the wildlife. Please do NOT approve of and execute this plan.

#5406

Name: Potter, Doris

Correspondence: I care deeply about California's wildlife. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. #5407

Name: Botts, Lindsey

Correspondence: Why is a National Park that was bought and paid for still being treated as ranch land. When I visit Point Reyes, I don't want to see ranches. I want to visit for the elk and the natural beauty. It's time ranching be taken out of the park. That was the agreement and you should stick to it.

Alternative F is the only alternative that is in keeping with the enabling legislation and stated purposes of the parks. If you look carefully at the DEIS, the data all support the adoption of Alternative F, not Alternative B. Alternative F would benefit soils, water quality, air quality, elk, and the experience of park visitors. Impacts of Alternative F on vegetation and soils cannot be easily summarized, but if the NPS would commit to habitat restoration after the cows are removed, both vegetation and wildlife would benefit overall from cessation of ranching. The same cannot be said about any of the other alternatives.

The parks were not intended to support ranching in perpetuity. To grant ranchers new 20-year leases and allow "diversification" by permitting pigs, chickens, sheep, and goats; horse boarding; row crops; processing of dairy products; and public farm stays and tours would be huge steps backward and will further harm the natural environment of the parks over the long term. If the NPS' Preferred Alternative is adopted it's likely that ranching on these park lands will never end, the land will continue to be degraded, and the millions of dollars the American people paid for these lands (money that has been kept by the ranchers) will be for naught. It's time to phase out the ranches and manage the parks for the superlative natural beauty and diversity they offer - it's time to adopt Alternative F.

Name: Tamura, Marcus

Correspondence: I am a wildland seed collector in the park and see firsthand the effects of grazing on the natural ecosystem where grazing is allowed. I'd also like to say that I've worked in many BLM lands in the west and currently eat beef and dairy products. That being said I've come to learn and value the unique diversity Point Reyes has to offer. From a botanical perspective the ranch lands of point Reyes encompass some very threatened and continually degrading habitat. One example is Bull point trail around Creamery Bay. I have run across many rare plant species here but have also seen throughout the year cattle completely destroy a vibrant population. I am not calling for the complete eradication of cattle. I understand from the ranchers perspective this is their livelihood and way or life. If I had it my way I would compromise by allowing ranching in certain areas that are already degraded to the point of no return. Other areas that still host many populations of sensitive species like Bull Point should be permanently closed from grazing. To adequately access this threshold there needs to be extensive plant and animals surveys done across all current lands open to grazing. Another point to make is that with the human caused decline of natural predators of Tule Elk, their population does need to be human managed. Their current numbers likely don't need to be controlled with a decrease in cattle but will need management in the future. Also cattle managers NEED stricter policies when it comes to transferring nonnative plants and animals. In the current age of Sudden Oak Death and New Zealand Mud Snails we need to set a precedent in nonnative pest BPMs. Neither the cattle or elk will be leaving point Reyes in the near future so we need to set policies that allow them to coexist while protecting the natural wonders that have attracts thousands of people to this area.

Correspondence: As a wildlife biologist, then employed by California DFG, I with my Supervisor, Oscar Brunetti, were involved in the removal of introduced exotic Fallow and Axis deer, in anticipation of the reintroduction of tule elk to the seashore. Among the things we learned, while autopsying the animals we killed was that livestock

pests, like liver flukes and lungworms were compromising the health of both the exotic deer and the resident native blacktail deer.

The only alternative that would correct this injury to native wildlife is Alternative F, but there would still need to be substantial work done on water sources that have been contaminated by livestock parasites, and treatment of the native wildlife that are hosting the parasites now. A source of funding for parasite management for wildlife is not discussed in any of the alternatives, and it is in the interest of the livestock operators to carry out pest remediation, so retaining some livestock grazing on the condition that pest and disease control are included might make those operations better in the interest of the elk, than complete elimination.

I write as a Certified Wildlife Biologist, and was alerted to this comment opportunity by The Wildlife Society, in which I maintain membership, though retired since 2002.

I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly-and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

Name: Dahl, Brenda

Correspondence: I'm writing to support the bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that aid the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would help motivate me to visit the Seashore more regularly by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. As you are aware there have been many serious and sometimes deadly bike-car collisions in the area. There are some agitated drivers who do not want to share roads with bikes.

Bicycling opportunities around the Seashore are currently very limited and fragmented, so any improvements in connectivity and the creation of new connected options would make it more enjoyable and safer for bike riders.

Thanks for listening!

Correspondence: Dear Sir, Madame,

Please adopt Alternative F, which would discontinue farming and ranching opportunities in the park and expand visitor opportunities. The preservation of native wild species must take precedence over farming and ranching activities. Grazing negatively affects ecosystems, causing water pollution and soil erosion, spreading invasive species and disease, and harming endangered species.

Kind Regards, Nady Corvers

#5434

Name: Levin, Jeff

Correspondence: September 18, 2019 Dear Sir:

Why in the world would anyone want to curtail one of the most successful wildlife reintroduction projects in California's history?

I have read there were once about 500,000 tule elk stretching from the lush floodplains of the Central Valley to the grassy coastal hills in California, but by 1874 they were thought to be extinct.

What I learned is that early mariners and explorers wrote about vast herds on the Point Reyes peninsula, but these herds were hunted relentlessly after the Gold Rush. Consequently, their habitat was converted to crops and cattle grazing land.

I understand that after a wealthy landowner, Henry Miller, discovered a dozen or so tule elk in Kern County, the herd grew. Gratefully, the elk became protected in 1971.

The effort to restore tule elk populations has progressed very well. I heard that in 1978, 10 tule elk were moved to the 2,600-acre Tomales Point Elk Reserve at Pierce Point. Apparently, their success there encouraged the Park Service to move 28 animals to the Limantour Beach area, in 1999.

According to what I read, within two years, the free-ranging herd had split up, with some apparently swimming across Drakes Estero, where they began grazing among the cows near the historic ranches.

There are now three elk herds. According to the winter count, 95 free-ranging elk live in the Drakes Beach area, and 130 hang out in the vicinity of Limantour Beach. There are 285 animals in the fenced reserve at Pierce Point.

It flies in the face of history to protect cattle grazing at the historic ranches when 500,000 tule elk narrowly escaped extinction because of it!

We now are graced by about 4,300 tule elk in 25 separate herds in California. Killing any of them in favor of cattle grazing is criminal.

Surely, our sacred public trust is honor, celebrate and protect the natural biodiversity of our national parks. Please do not constrict the long nurtured comeback of tule elk herds.

I can't imagine a single visitor to Pt. Reyes National Seashore just hoping to catch sight of cattle, or to see a ranch. In fact, I often travel to Pierce Point Road specifically in order to see at least one tule elk.

Please respect wildlife over cattle. The elk herd deserves and needs our protection. Their expansion is our success story. In good faith, we need to continue to support and celebrate their comeback from the brink of extinction.

Respectfully, Jeff Levin, LCSW

National Park Service Point Reyes National Seashore 1 Bear Valley Road Point Reyes Station, CA 94956

Comments on Draft EIS for Seashore Management Plan:

I am an Emeritus Professor of Wildlife Management, Department of Environmental Science, Policy, and Management, College of Natural Resources, University of California, Berkeley. I have visited PRNS regularly since it was established in 1962 and carried out research on wildlife and range matters there for several decades. I am quite familiar with the whole Seashore.

The proposed management plan (Alternative B) is clearly biased towards the ranchers who should have been long gone by now. The dairy farms in particular could not exist there without major subsidies, which come from me the taxpayer. I personally would much prefer to see elk when I visit rather than cattle, fences, mud, exotic plants, erosion, and dilapidated houses. I see plenty such things getting there. I understand there are some 5,000 head of cattle on the Seashore now. Decades ago I estimated the carrying capacity for elk to be about 5,000 head. This would have been the most important population of Tule elk to insure this animal against extinction. I see no analysis of the importance of this population of Tule elk to its long term future. One hundred fifty head restricted to Tomales Point is totally inadequate. Therefore, I am strongly against removing any elk from anywhere on the Seashore at this time. Only after the population reaches 5,000 would I support lethal removal of excess animals.

I have taken hundreds of college students to PRNS and they all have been amazed and dismayed that they see way more cattle than wildlife on these field trips. I believe the public (which of course owns the land) feels the same way. It is high time you remove all ranchers from the Seashore (Alternative F).

Sincerely, Reginald H. Barrett

Correspondence: Please do not allow ranching and dairying to continue on Point Reyes National Seashore.

These agricultural lands were bought and paid for long ago. The ranching should have ended years ago. Just as the Oyster Farm operation should have ended 50 years ago, so must the cattle operations stop right now - it is already 50 years overdue.

Remember, it is Point Reyes National Seashore, NOT Point Reyes National Cattle Ranch.

The claim, oft made, that cattle and dairy ranching on Point Reyes are "Historical" operations is ludicrous. What is historical are the elk, bobcats, coyotes, and other naturally occurring wildlife, NOT CATTLE!

Thank you for your consideration.

#5447

Name: Barrett, Katharine

Correspondence: I am a citizen who has traveled to Pt. Reyes National Seashore several times a years for more than 30 years to view the magnificent Tule Elk. It has been heartening to observe the increase in numbers of this iconic species and look forward to a time when the elk population has returned to the historic level and distribution described by scientists. I honor the multiple-use needs of the park as long as the competing demands of the local ranching community do not impinge on the primary needs of the primary species (elk) being conserved for future generations.

The new information the EIS process must consider is the degree to which cattle numbers must be curtailed in our National Park to maximize the carrying capacity for elk. As a taxpayer, I come to see the native elk not the introduced cattle, which I can easily observe throughout California. One dairy farm or cattle ranch, which school children and the public can visit to learn about cows and local history, is sufficient to fulfill that multiple land use in the park. Elk and cattle compete for grass. When estimating carrying capacity for these two species, I noted that rangeland scientists project two elk for one cow. There are currently about 5,000 cattle grazing in the park, outnumbering the 500 elk ten to one. With the commonly accepted ratio of two to one, elk numbers should be encouraged to rise substantially and cattle numbers should be held to one working ranch. The livestock industry has been and continues to be subsidized at taxpayers' expense. The public's interest in wildlife and native species is at an all-time National high. National public support for cattle ranching is at an historic low. Pt. Reyes National Seashore needs to honor the mission and the supporting scientific research for expansion of elk numbers throughout the park.

#5448

Name: Hogan, Jack

Correspondence: I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using

existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

In addition to the options above, I would strongly support the consideration of connecting the Bear Valley trail with Stewart fire road, perhaps via Glen Camp. This connection would provide a major gap closure between the northern and southern portions of the park.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly-and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

Best regards,

Jack Hogan

Correspondence: I have followed this situation very closely for years as I appreciate the beauty of Pt. Reyes as it is truly a special place. I have been hiking out there for over 20 years and have covered much of it and have been leading day hikes for the Sierra Club out there for 14 years. No more as your preferred option is a complete disgrace. This is a national seashore after all.

I realize that you have a tremendous balancing act with accommodating all different groups and am also aware that the ranchers played an integral part in this becoming a national seashore. I am also aware that in order to make it financially, ranchers need to be able to have all sorts of revenue options other than just grazing and milk but this is a national seashore and why are you expanding for profit ventures and compromising wildlife for chickens and goats. Perhaps you are getting pressure from our current administration but your preferred option is a disgrace and makes me not want to visit your park again. Truly sickening.

#5456

Name: Fraser, Susan

Correspondence: Alternative B, which involves killing some of the elk and offering another 20-year lease agreement to the farming and ranching families, is currently one of the options under consideration by the National Park Service at the Point Reyes National Seashore in California. The lessees would be allotted over 26,000 acres and allowed to maintain over 5,500 cows! Meanwhile, the Drakes Beach elk herd's population, which numbered a mere 124 animals in 2018, would be limited to 120 animals maximum-and the Limantour herd, which numbered 174 animals in 2018, would be "managed in consideration of ranch operations," meaning that there would be no limit to how many could be killed! Further, Alternative B allows for agricultural "diversification," so the lessees could even bring in pigs and sheep and plant row crops.

I am submitting my comment today to urge the National Park Service to adopt Alternative F, which would discontinue farming and ranching opportunities in the park and expand visitor opportunities. The preservation of native wild species must take precedence over farming and ranching activities. Grazing negatively affects ecosystems, causing water pollution and soil erosion, spreading invasive species and disease. Our wild areas are rapidly disappearing all over America. Please don't make Point Reyes another example of that.

Thank you.

Susan Bessire Fraser

Correspondence: I'm in favor of protecting the park. Isn't the idea of having a NATIONAL PARK so that we the people can enjoy it? Why is this not a plan to make the park a more inviting place for we the people? Parks are supposed to be supported and wildlife championed, not slaughtered. This park could be the crown jewel of the National Parks, instead it is looked at as a political chess piece so that a few can profit and the many can suffer. This location and the wild beauty of the many habitats is priceless. It is wrong for some to feel entitled to it because of their own greed. Wasn't the original "plan" to phase out the dairy ranches? The ranches have gotten the sweetest deal in history so far and they ought to just be glad they got a good of a run as they have. For the common and greater good this park should be managed as the national treasure it is. The plan for explosive growth of commercial agricultural will be the biggest mistake in National Park history. Once that gets established it will be near impossible to remove. Once the habitat is degraded and Elk slaughter, fields built upon with more equipment it will be done. The park will never be the same again, what is done can not be undone. And what about the farm traffic? Inverness and Point Reyes Station are already having congestion issues. The amount of farm equipment and trucks going down those narrow lanes will be a safety hazard. It's hard enough to pull out of the roadside gravel pull outs and steep driveways on curves with regular traffic, trucks will have a much harder time slowing down to avoid a collision. This plan is ALL BAD, please do not let this happen. I'd much rather see a call for public comments on how to make the park great again. Thank you!

Correspondence: Pepperwood Preserve is a local expert in rangeland management and its experience and research should be utilized in regulating cattle grazing - rotating fields, etc. As for managing the Tule elk, looking to the Yellowstone experience would suggest that encouraging the "top predators" would be beneficial. In Yellowstone, it was the wolf, for Pt Reyes, it would be the mountain lion. If ranching is eliminated (my preference), there would not be a problem. If ranching is continued, the lease agreements should have restrictions

on the ability to kill mountain lions. Ranchers regularly can get a permit to kill predators of their livestock, including mountain lions. This should be prohibited in the lease agreements.

Correspondence: The DEIS is greatly lacking in detail around carbon emissions, undeniably the problem of our time. It would be irresponsible of the NPS to not measure the impact and benefits of cattle and Tule elk simultaneously. The DEIS should, at a minimum, require existing ranches to meet new grazing practices, and reduce the number in their herds. At the same time, it seems some independent studies have shown that the grazing practices of the Tule elk achieve the same carbon sequestration benefits as grazing cattle and if carbon is the primary unit of measure for this decision, as the science community indicates it should be, then the NPS is missing data.

There is no comparative analysis indicating that the ultimate ecological health of the region (and indeed the broader atmosphere) would benefit from allowing the cattle to remain in its current numbers. The elk eat less, weigh less, yet stimulate grass growing in sufficient amounts that may more than offset their methane emissions (perhaps be a net-carbon sink/store). To this end, the carbon math may show that consistently keeping more elk than cattle would allow both to co-exist. Again, without an analysis, one that allows for some dairy cows to remain to support local businesses, NPS will be making a decision based solely on short-term economic (or political) interests and not the entire carbon cycle. NPS should include this analysis in the next DEIS.

A second argument for supporting the elk is around natural capital, the economic benefits of ecosystem services, well established by Stanford professor Gretchen Daily ([www.naturalcapitalproject.org](http://www.naturalcapitalproject.org)). Professor Daily should be contacted and her services retained as part of the next report. From her academic website: "Daily's scientific research is on countryside biogeography and the future dynamics of biodiversity change; on the scope for harmonizing biodiversity conservation and agriculture; on quantifying the production and value of ecosystem services across landscapes; and on new policy and finance mechanisms for integrating conservation and human development in major decisions."

Finally, there is the sheer cruelty of not allowing a free-roaming species like elk to migrate to water. If cattle ranches remain, then free and safe passage to natural water sources must be part of the new plan. This would mean granting nature-based easements across existing ranch land. To learn more about nature corridors, see WWF's Freedom to Roam: <https://www.worldwildlife.org/projects/freedom-to-roam>

To be sure, the outcome of this policy will receive national attention given new carbon emission targets.

Thank you, Beth Rattner

Correspondence: I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly-and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

Name: Lindstrom, W

Correspondence: I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. It is way past time to revert the properties back to the era before dairy and cattle ranching. More and more people are changing up their diets to plant-based meals, becoming vegetarians, and healthier eating habits. These commercial cattle ranches have serious negative environmental impacts on the park, they pollute the waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

Correspondence: Please protect the iconic Tule Elk of Point Reyes Seashore.

#5468

Name: John, Nathan

Correspondence: Hello,

I am writing today to express my strong support for "Alternative F" as outlined within the General Management Plan Amendment Draft Environmental Impact Statement for Point Reyes National Seashore and the North District of Golden Gate National Recreation Area. Barring "Alternative F", my secondary preference is for "Alternative E".

I am deeply opposed to any and all of the alternatives that contemplate reduction, lethal management, or removal of any existing or new Tule Elk herds within the area under consideration.

The reason for my position is simple: I am considering the questions under consideration within the current EIS within the broader land use and ecological context of the greater Bay Area.

It is undeniable that:

A) There currently exist many ranchlands of comparable quality and character to those found within the NPS-controlled lands under discussion within this EIS; B) The amount of ranching activity occurring on the NPS-controlled lands under consideration is fairly modest (i.e. impacts to ranching on these lands do not negatively impact the people or economy of the region as a whole); and C) That the current Tule Elk population is at roughly 1% of its pre-colonial levels; that therefore D) Opportunities for Californians to observe Tule Elk are extremely limited; and most importantly that E) Tule Elk are a significant missing link in the deeply damaged ecology of California's coastal ecosystems

Given the above, it seems unconscionable that Tule Elk populations should be either numerically reduced, or made more difficult to observe, within the approximately 30,000 acres of NPS-controlled land under discussion on behalf of a land use (ranching) which by most estimates occupies almost 40,000,000 acres of land in the state of California.

While I applaud the National Park Service's ethos of historical preservation, and their efforts to model the harmonious integration of human and natural use, it seems clear that in this case the needs of the very fragile Tule Elk population should be put before the needs of any individual or particular members of a group (ranchers) that is, on the whole, over-dominant within the larger framework of Californian land use.

Instead, the NPS should take this opportunity to send a clear message that it prioritizes the re-wilding of the public lands under its control, and the rehabilitation of species and ecosystems damaged by human activities.

The Alternatives that serve the broad public interest to the greatest degree are in this case those which expand access to (and the health of) a scant natural resource (Tule Elk) - that is to say Alternative F, or less-so, Alternative E - though this may cause some amount of economic distress to the particular ranchers whose operations occur within the EIS area.

Thank you for your attention to this matter; I sincerely hope that your group will take action to protect the continued re-habilitation of one of California's many unique native species.

Yours,

Nathan John

Correspondence: I care about protecting California's wildlife. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

#5471

Name: Sharp, Jennifer

Correspondence: As a member of the California-based international animal protection nonprofit organization In Defense of Animals with over 250,000 supporters, I oppose the National Park Service plan to kill native Tule elk, grow commercial crops, and permit ranchers to add chickens, turkeys, sheep, pigs, and goats to their exploitative operations.

As national park land, this property was specifically set aside to protect, restore, and preserve the natural environment including the wild animals who live there. The original intention was to phase out dairy and cattle ranching, not add more crops or animals to increase ranching profits.

The proposed plan does not address the damage from grazing, including water-quality degradation and soil erosion. Also, adding new crops will create more conflicts with native wild animals.

Please abandon this inhumane and destructive plan. I urge you to restore the Seashore's Pastoral Zone for wild animal habitat and re-purpose historic ranch buildings for scientific research, interpretation, and public education.

#5472

Name: Curtis, Hazel

Correspondence: Please Stop killing Tule Elk in national park to make way for livestock. This is ruthless and reckless especially, at a time when nature should be protected and preserved. These wild life ungulates are natural threads in ecosystem and national parks are meant to be safe havens for their preservation and continuance of life, not tampering and destroying it for give aways to ranchers who already minopolise. 70% of wild lufe habitat. Please leave them to live out their lives as they ought not squeeze them out to take away their only home and kill them to stock freezers. This is very distressing and disturbing.

#5473

#5476

Name: N/A, N/A

Correspondence: The introduction of domestic animals other than cattle to Point Reyes National seashore, as well as monoculture farming of crops such as artichoke will have major detrimental impacts to the ecosystems in the park. As Point Reyes currently sits, it is one of the best places to photograph badgers, bobcats and coyotes in all of the western United States. The farming of small domestic animals such as goats, chickens and pigs will cause immediate conflict with the native carnivores, as the domestic animals will be predated and the ranchers will likely terminate the native predators using depredation permits. Monocultures of any variety will also be detrimental to the Point Reyes ecosystems, as monoculture crops tend to decrease biodiversity at all levels in the ecosystem. Any large scale use of pesticides will be detrimental to the endangered Red-legged frogs, and even organic fertilizers and pesticides can have negative impacts on amphibians. It is in the best interest of the park and the general public to preserve Point Reyes in its present state, as there are very few places left in California where native wildlife still flourishes.

Correspondence: My wife and I have visited Point Reyes National Seashore several times. Our most recent visit was in March of this year (2019) where we participated in a NPS sponsored invasive plant (ice plant) removal project. Our previous visit was some 6 years ago. Since our visit 6 years ago and the visit in March of this year we noticed several changes to the park. We hiked the Drakes Bay trail which we had done previously and observed that the fencing in several places had been changed. The most obvious was the damage done to the shoreline of a pond adjacent to the trail. On our previous hike the shoreline of the pond was heavily vegetated and we saw otters swimming in the pond. On our most recent hike fencing had been installed along the shoreline of the pond forcing cattle to walk along the shoreline and the result was the shoreline vegetation had been completely destroyed and there were no otters in the pond. The new fencing forced the cattle to walk along the narrow strip between the fence and the pond shore and it was obvious that the cattle were defecating directly into the pond or near enough to the pond that runoff during rainy periods polluted the pond. In addition there was a lot of erosion along the fence uphill from the pond resulting in heavily rutted ground resulting in lots of soil runoff into the pond. It was apparent that the cattle were doing lots of damage. We also noted that several ponds appeared to contain lots of algae growth likely caused by the high nitrogen levels as a result of cattle manure getting into the water.

We also noted that many of the farmsteads had a run-down appearance. It seemed apparent that there was little if any concern about how this affected the aesthetics of the park. It seems to be increasingly clear that there is a lack of concern about the native vegetation and wildlife of the park on the part of the ranchers. As this seems to be an incompatible situation, I prefer option F-resulting in phasing out of ranching activities within Point Reyes National Seashore.

Correspondence: Dear NPS,

Thank you for taking the time to review our community's input on the proposed expanded access to our beloved Point Reyes National Seashore. As an avid, local cyclist and hiker, I am thrilled at the opportunity to access more of Pt. Reyes by bicycle, as I currently find the road to be less and less hospitable to cyclists. I am also part of a large cycling community, and the majority of them are choosing to ride on the road less and less due to the ubiquity of distracted drivers. Having more cycling access to off-road options is a dream that I believe you can make a reality.

I would specifically like to voice my strong support for opening bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

Thank you for your consideration of the needs, wants, and safety of the cyclists in your community and beyond.  
Sincerely, Vanessa Hauswald

#5494

Name: Hood, Valeri

Correspondence: As a hiker, in my late 60's I find that the bike 'culture' is out of hand. Our open spaces have been marketed/targeted to the tourism industry- and out of town, out of state, out of country bikers head here in

hordes. There is no ranger or police presence in the watershed. As my husband and I travel throughout the country, we are seeing this situation on the increase everywhere we go. People don't follow even the basic common courtesies: not slowing down when approaching pedestrians, illegally riding after hours, riding on single track, pedestrian only trails all over our county. Animals have very little area left to them- major wildlife corridors are disrupted by cars, bikes, people and increasingly, illegally ridden e-bikes and scooters. People also run their dogs along with their bikes, and pedestrians do not obey leash laws.

We also face extreme fire danger- across the country - -the more people in back country, the more risk- both of fire and the further complication and/or impossibility of evacuation. Imagine what would happen on any weekend if there was a fire and mass evacuation? There would be NO WAY bikes could exit- NO WAY fire trucks could manouever on the roads. We are already in a super dangerous position. No one claims that we have an emergency evacuation plan- there isn't one.

In our town of Fairfax, we are already maxed out in neighborhood parking, yet the cars with bikes keep coming in increasing numbers. The weekends are a gridlock- from San Anselmo, through Fairfax- up to Mount Tamalpais and out to west Marin. There is absolute gridlock every weekend on the road to Stinson. The traffic is becoming increasingly perilous on our emergency evacuation routes- Sir Francis Drake Blvd. and the Bolinas Fairfax Road. What is the emergency evacuation plan for any of our parklands?

Our local rangers have been decreased in number- cut in half. With no new rangers or any kind of enforcement, there is a push to increase the number of bikes. This makes no sense.

Please follow common sense policy. More rangers now-fire safety measures- - that's where the money should be spent- - fewer bikes, enforce leash laws- allow the wild animals declining in numbers, to have some place where they are not totally inundated with people yelling, running, biking and off leash dogs.

Bikes degrade trails. There are no laws enforced for bike riders. Our lands must not buckle to demands of this new lobby.

We are losing what was so precious- sense of place, sense of space, sense of quiet. And Common sense.

Respectfully yours,

Valeri Hood and Bert Bartsch

Correspondence: I'm writing today in support of public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly- -and by bike, rather than car. Currently, I have not even attempted to cycle on the Seashore roads due to fear of cycling next to fast moving vehicular traffic. I would feel much, much safer cycling on trails, pathways, and ranch roads.

Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

Name: Buchanan, Kathleen

Correspondence: Don't lease out more land than the wildlife can live on. I can't believe you are leasing out public lands. These lands belong to all the people and don't need to be shut out of public lands. Ranchers should have to buy their own feed for their livestock. Since they graze they can charge more for their product. It should be up to the American people to allow this to be done.

Name: Zaitlin, J.A.

Correspondence: I wish to support the "no ranching" alternative. Ranching operations pollute the water with cow manure. I understand that 133 million pounds of cow manure is produced annually by ranches managed by PRNS. This activity does not belong in a national seashore.

The seashore was purchased for the public with the expressed intent of preserving to the maximum extent its natural state, not commercial operations that result in water pollution and habitat destruction.

#5499

Name: Jacobson, Edward

Correspondence: Beef production, with best practices grazing rotation, can probably be made compatible with healthy grasslands at Pt. Reyes. It is hard to imagine that dairy farming has been or can be. In any event, the existing elk herd(s) should be maintained, with lethal removal, when necessary, provided by citizen hunters who apply in a lottery and hunt managed by the California Department of Fish and Wildlife in conjunction with the National Park Service. NPS knows how to do this from its management of big game hunting on National Parks and Preserves in various states.

From the EIS: " Impacts on the Drakes Beach herd would be significant because it would no longer exist. Overall viability of the tule elk population in Point Reyes or in California would not be affected; however, removal of a

native species for ranching considerations would be unprecedented in the national park system and would be inconsistent with state management of elk on ranchlands outside the park. Under alternative D, cessation of ranching on 7,500 acres would have beneficial impacts on elk by removing existing fencing, reducing hazing, and providing additional grazing opportunities compared to existing conditions. Alternative E would reduce impacts from hazing. Alternative F would eliminate impacts on elk related to hazing and fencing and would allow for the free-range population to expand across the planning area"

#5501

Name: Fedorov, Karen

Correspondence: As a member of the California-based international animal protection nonprofit organization In Defense of Animals with over 250,000 supporters, I oppose the National Park Service plan to kill native Tule elk, grow commercial crops, and permit ranchers to add chickens, turkeys, sheep, pigs, and goats to their exploitative operations.

As national park land, this property was specifically set aside to protect, restore, and preserve the natural environment including the wild animals who live there. The original intention was to phase out dairy and cattle ranching, not add more crops or animals to increase ranching profits. This is OUR land, not farmers and ranchers!!

The proposed plan does not address the damage from grazing, including water-quality degradation and soil erosion. Also, adding new crops will create more conflicts with native wild animals.

Please abandon this inhumane and destructive plan. I urge you to restore the Seashore's Pastoral Zone for wild animal habitat and repurpose historic ranch buildings for scientific research, interpretation, and public education.

Correspondence: I feel it's idiotic and illogical to consider culling the Tule Elk. Their Success Story coming back from the brink of extinction is a representative of how humans can occasionally reverse some of the damage they have done to the flora and fauna of the world. And this is in the name of ranching? Cattle ranching is a huge industry, not only in Marin County, but all of California and much of the US, Canada, etc. We're not hurting our economy by letting these go. Giving them favor over the natural aspects of Pt. Reyes is counter intuitive to what a Nat'l Seashore (Park) is supposed to be. Yes, many focus on history, and Pt Reyes has lots of that, but it is an incredibly unique part of the planet in terms of NATURAL history. I feel it's time to become less anthropocentric and show some caring for this place and what it holds. I'm not saying to immediately get rid of the ranches, but DO consider phasing them out. Turn their infrastructure into educational facilities, or something to that effect.

Also note that in terms of history, there is very little representation of the Coast Miwok, who thrived there much longer than we have.

FYI, I'm a 61 year old male; been visiting the Park since I was 8: Elementary School field trips, Cub Scouts, Boy Scouts, personal visits, etc. Now I volunteer there. I started out as a Winter Wildlife Docent, then did some Harbor Seal Monitoring, two seasons of being a Tule Elk Docent and I now volunteer at Bear Valley as an Interpretive Ranger. At the same time, I returned to school to study the Natural Sciences. I love this place and care deeply for it, including the history. I've heard many arguments about the issue of Ranching vs. Elk, and no one's ever convinced me that the ranches need to be there, nor have I seen any reason to remove the elk.

Stop thinking about humans so much. Use your brains and rethink this - - Please! Leave the Tule Elk be. Be nice. Be kind.

Correspondence: I am a native Californian and my family has been here for generations. Our beautiful mountains, beaches, forests and our incredible wildlife are precious. The Tule Elk are a treasure and it sickens me to think of them being killed. Cattle already graze on millions of acres of public land. Please don't give in to greed. Tourists and residents want to enjoy nature, not see it destroyed.

#5508

Name: N/A, N/A

Correspondence: i am writing out of concern for native Tule Elk. I have read of the plan to kill at least a part of the herd and find that unacceptable. They are a natural part of the landscape and nature and should be left alone

Ranchers have enough land already and do not need more. They take habitat from other wildlife so they can grease more cows and that causes har to other species as well as adding more pollution. It is well documented that ranching causes ethane which affects the environment. It is time to stop catering to ranchers and start thinking of the wildlife and their needs as well as the effects of ranching on climate change which is upon us and is already causing harm to put it mildly.

I hope that you will do the ethical and responsible thing for wildlife and the planet.

Thank you for your time..

#5510

Name: Wilke, Dana

Correspondence: I strongly oppose allowing cattle and ranchers to put their animals on OUR PUBLIC lands to graze and destroy the fragile ecosystem that currently exists. These are public lands meant for recreation use and not to be privatized or for individuals to benefit from the use of PUBLIC lands. Cattle and farming significantly degrade land, reduce habitats, and the land is not available to individual users like me. Point Reyes is an incredibly beautiful area with so many natural spaces to hike and enjoy and so many amazing creatures like elk, sea birds, and more. These animals are already facing habitat loss and a host of other problems because of climate change. The least we can do is let them live in their homes for as long as possible before climate change disrupts that. If you

allow farming on OUR lands all of that will go away and no one will want to visit a beautiful place that was once beautiful but is no more.

It's a National Park and the National Park mission statement reads, "The National Park Service preserves unimpaired the natural and cultural resources and values of the National Park System for the enjoyment, education, and inspiration of this and future generations." You are not living up to that mission if you allow agricultural practices onto the land. No one will be inspired, you will have forever degraded the land so future generations can no longer enjoy that beauty that was once there. Please do not allow agricultural practices on the lands. You are essentially saying that those farmers are more important and so are the cattle than the public's enjoyment and use of the space as a natural space for the current generation and all generations to come. Look back to your mission statement and ask yourself - does this decision fit within the means of what the National Park Service is meant to do?

Correspondence: I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F.

As a lifelong Marin county resident, and frequent user of the area with my family, we take great joy in experiencing our natural resources - both by car, on foot and by bike. Sadly, traveling by bicycle is the most challenging, and least safe method of enjoying the Pt. Reyes area due to a combination of lack of trail access, heavy auto traffic and narrow shoulders on most roads.

I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. Name: Hale, Margaret

Correspondence: Dear NPS: I am not an avid hiker but when my wine or hike group of women decides on the latter, we often head to the Estero Trail, at Pt. Reyes National Seashore. I have hiked there off and on for more than 20 years. It is a wonderful, very popular, trail in breathtaking country.

How distressing, then, to learn not just of the level of degradation this iconic national treasure has already suffered, but to also how much further compromised it might become if the National Park Service does not act in the best interests of the public and the parkland. In a time when elements in our national government are doggedly working to rollback environmental and public health protections, California must serve as a beacon for democratically and scientifically based decision-making - not special interests or those with the most power and money.

Please do not count me as a nuts-and-raisins tree hugger. I fully believe there can be a compromise - compromise being a solution that is greatly missing in our political and social worlds these days. But to think that the current situation should continue unabated, or that the true and original inhabitants of Pt. Reyes - the Tule Elk, found only at Pt. Reyes - might be culled or killed off to support or increase dairy and cattle farming does not fit with what has been long held to be the mission of our National Park Service. There is sufficient, indeed at times overwhelming, scientific evidence to show the damage Pt. Reyes has already suffered from overgrazing of cattle: loss of native species and the introduction of invasive species and, not least, damage and risk to sea life and ocean health.

In an ideal world, all ranching would simply be stopped, and the Tule Elk and other species allowed to reestablish themselves. But I understand this may not be feasible. Certainly, however, there can be reduced ranching, and dairy farms - the most destructive of all - phased out in reasonable but not lengthy times. When last I hiked the Estero Trail, my girlfriend and I were charged by a cow (protecting an unseen calf, assume) and had to pick our way through piles of fresh cow manure. We gave up before reaching Sunset Beach, where weve enjoyed many a picnic over the decades.

Please consider regular tax-paying folk like us, and our future generations, when you decide the future of this magnificent park.

Sincerely,

Margaret Ellen Hale

Name: Griffin, Joyce -Martin

Correspondence: Response to NPS update of EIS updating the Point Reyes National Seashore management plan to address cattle ranching impacts and grazing conflicts with native wildlife such as tule elk, & H.R.6687 - Jared Huffman, 115th Congress (2017-2018).

At Point Reyes National Seashore approximately 15 private ranching enterprises currently graze beef and dairy cattle on 24 lease units that make up more than 18,000 acres of the park's 71,000 acres.

Of the six alternatives, ABCDEF, only F is acceptable, which phases out cattle ranching in five years.

In this world undergoing accelerated convergence of environmental and technological movements more than ever people need the solace that only nature can give. And wild lands filled with native flora and fauna are even more necessary with our rapidly growing population, overcrowding, climate change, and job changes. Point Reyes National Seashore, which belongs to the public, was seen 60 years ago as a solution by local visionaries and politicians, who worked hard for an agreed upon deal to create a wild and natural seashore, while paying farmers and giving them 25 years to phase out their dairy and beef cattle farms, returning the land to nature.

Along the way, the vision was changed and deals were made to allow farmers to stay beyond their original paid contract. Now with serious threat of climate change and shift to technology, science tells us that growing dairy and beef cattle in a National Park is contrary to principal of National Parks, climate change and public health. "The livestock-polluted waters of Point Reyes National Seashore rank in the top 10 percent of U.S. locations most contaminated by feces indicated by E. coli bacteria, according to a new report published on the investigative journalism website The Revelator. 11/21/17 The livestock-polluted waters of Point Reyes National Seashore rank in the top 10 percent of U.S. locations most contaminated by feces indicated by E. coli bacteria, according to a new report published on the investigative journalism website The Revelator.11/21/17 If we rest on the history of ranching in PRNS we must first know the history of Miwok Native Americans, who lived and cherished the seashore of Point Reyes long before cattle ranching, and did so without pollution. They, like us, would like to see their presence honored, and allow the return of PRNS to its natural habitat.

PRNS cattle have become a public health issue. We cannot rest on our laurels and greed of romanticizing the history of decades of concentrated dairy farming and ranching to push forth the same worn ideas.

We must look at the science; and science tells us cattle ranching in concentrated form is a catastrophic burden to nature and high quality environmental health. We need all the natural nature we can get; and, we can return to the original national seashore park objective by holding the cattle ranchers to their original long-overdue contract. This is 2019 and we are in critical danger; PRNS is public lands and ranching is a private enterprise; they don't mix. Keeping large dairy and beef farmers in PRNS will not save us, or them; just say no.

Correspondence: Ptotect native wild life in Pt.Reyes

#5534

Name: N/A, N/A

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of

the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#5535

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#5537

Name: Jackson, Garry

Correspondence: As a resident of Marin County and frequent visitor all parts of Pt Reyes National Seashore, including the very popular Pierce Point trail, I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and the area should be protected and used to serve the public good, and not for the benefit of the livestock industry. The cattle ranches already occupy tremendous acreage in the Park and surrounding Counties, they don't also need to eliminate these elk and take that land.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#5538

Name: Koessel, Karl

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

Thank you for your attention to my opinion.

Sincerely,

Karl Koessel

#5539

Name: Oelker, Gregg

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry. Cows do not belong in this beautiful area. It's time to let this area go back to its natural state.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#5540

Name: La Belle, Deborah

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#5577

Name: N/A, N/A

Correspondence: I fervently oppose permitting public lands to be utilized for grazing of non-native species, especially where this will impinge upon the limited and dwindling territory that exists for native species to utilize. In particular, grazing of livestock serves no useful purpose for anyone but profiteers, a tiny fraction of the population. Allowing this to happen would be short-sighted and unethical and cause disastrous harm to our wild heritage. As stewards of our wild lands, the NPS must protect our natural heritage.

#5578

Correspondence: Please keep the Tule Elk herd at Point Reyes protected.

#5589

Name: Milliken, Rosalind

Correspondence: Ranchers may be used to using National Land at a discount, making a profit using our wealth to create their richness, but now that we have Tule Elk grazing, their profit no longer benefits the national need for wildlife. We cannot afford to let their personal profit diminish the national wealth. Less milk and beef herds means ranchers and dairy people can get more money for less work. That is how capitalism works. Restoring the Tule Elk and other wild life brings more wealth to the community as more people will make the park a destination. Ranchers won't lose if they lose their licenses. The communities around will gain if they do. It is a matter of who will profit, one industry vs another.

#5590

Name: Rodriguez, Sonia

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#5607

Name: Jacques, Karen

Correspondence: I am utterly opposed to this extremely cruel plan to kill a native species, tule elk, to allow still more cattle grazing at Point Reyes. A huge portion of our public lands, including Point Reyes already allow cattle grazing and there is already far too much cattle grazing at far too great a cost to native species on our public lands. I have visited point Reyes and one of the reasons is the tule elk. I consider the killing of the tule elk to be profoundly unethical and yet one more example of the contempt that the federal government shows toward wild life and wild places. Please stop putting cattle ranchers above the people who visit Point Reyes and above wildlife.

#5608

Name: Rubio, Karen

Correspondence: Dear National Park Service:

Please do not allow the grazing of beef and dairy Livestock grazing benefits only a few ranchers and degrades the environment. This area MUST be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations. The agency MUST choose Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and preserve it for future generations.

#5609

Name: Coe, Pin

#5619

Name: Bernstein, F.

Correspondence: Wildlife cannot speak for themselves, therefore, I am speaking for them. The wildlife in this area was here long before the cattle and deserve to stay. Cattle can graze in other areas. It is not reasonable to kill off animals that are natural to the area so other animals can be brought in and raised for someone's profit.

Protect the wildlife. Do not take their lives or the land they live on.

#5620

Name: Kramer, Ann

Correspondence: I recently visited Point Reyes NP Seashore for the second time. I've been making it a practice to visit the National Parks within the Western States as I'm a California resident and plan to retire soon. I enjoy the rolling hills of Point Reyes NP, the climate, the assorted wildlife, the Lagoon, and the city. It's a beautiful spot. I've seen, on my two visits, Bobcats, a Weasel, River Otters, Badgers, Hawks, Osprey, Elk, Coyotes, Herrier and a skunk! It is refreshing to see wildlife in it's natural habitat free from encroachment. I learned of the proposed changes to the park by the National Park Service. The plan to cull (kill) the elk herd to maintain 120 and to convert some of the land to crops and farm animals was stunning and sad to me. I had to read it a couple of times to believe what I was reading. It is incomprehensible to me how a National Park could be developing land with crops and more farm animals when there are abundant acres of farm crops all over California. I think it is the mission of National Parks to protect and preserve what is wild and natural. How do crops and farm animals serve that goal? My understanding of PRNS was that when the park became a dedicated national park, the ranches in the area were allowed to continue their ranches for 25 years or the life of the owner. That has long been surpassed and it looks as though there is no intention for the ranches to be eliminated or finished. It's an odd thing for me to drive through a NP with cows in every sector of the park. I have to surmise this tolerance and violation of the original agreement is a contributor to these current decisions which will further put the nature and wildlife at peril. How will a bobcat or a coyote or a hawk or any other predator be treated when they invade crops? What

about small animals? Is a predator likely to know this is hands off? There is already a bit of a war going on with ranchers and coyotes. How will these new rules provide sanctuary for wildlife? We are undergoing a reversal in our current political environment for concern for environment, protection of wildlife and endangered species, provision of migration paths, protection of national parks and wetlands. This administration has consistently catered to money and industry over the welfare of our country, it's people and our natural resources. I did not expect this to extend to California and I am further disheartened and angry to see these decisions. I'm strongly against what the National Park system is allowing here. This would be an opportunity in the least to set an example for the nation and how to manage cattle and nature in some coexistence, to live with respect for one another. We are, after all, on their land. Respect for the natural should, in the least, be a priority in a National Park. I implore you to reconsider this decision. It is obvious that these decisions are based on money and the undermining of what a National Park is intended to be.

A Cree proverb: "Only when the last tree has died and the last river has been poisoned and the last fish has been caught will we realize we can't eat money."

And, we can't breathe it, or visit it, or find our connection with ourselves and nature in it either.

Ann Kramer

Correspondence: We enjoy the park on a weekly bases and have hiked most of the trails in the park. I have also in the past ridden my bike but find the traffic to be too much of a risk for me these days. We have ridden the trails that are available but would like to see more bike trails opened up for adventures throughout the park. I appreciate and support the improvements in public and bicycle access outlined under Alternatives B, C, D, E, and F. I also support the following trail connections and plan elements:

- A connection between Devil's Gulch and Platform Bridge Road using existing ranch roads. - A connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail. - A connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads. - A connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads. -A connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads. - An Estero Trail loop using existing ranch roads. - Collaboration with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

#5639

Name: Hecker, Dominique

Correspondence: Hello. I was born and raised in Petaluma and currently live I'm apart of Petaluma that is in Marin County. The great joy where I live is the native wildlife. I have lived a vegan lifestyle for eleven years. I do not agree with animal agriculture. It is a practice that has destructive impacts on our environment and thus, resources. I also don't agree with killing native animals to make way for people to make money off of raising animals for food/clothes/etc... please protect wildlife habitat and native Tule Elk, amongst many other native animals that cattle have an impact on. Please protect the land for the people, not for businesses to exploit animals and make money off of them. Please protect wildlife habitat for the sake of our resources (clean air, clean water, healthy soil...) as these should be for the people who live here instead of used or destroyed by animals for the sake of profit. Humans don't need to eat livestock to live healthy lives. I am currently enrolled in a food nutrition class and meat isn't even on the newest version of the periodic table. A non-necessity that is shrouded by so much

inhumanity and environmental destruction should not be protected by the government, our resources and wildlife habitat should.

#5640

Name: N/A, Athena

Correspondence: It is absolutely wrong on all levels to kill a herd of elk minding their business in their natural habitat so that YOU can attempt to breathe life back into the dying animal agriculture industry. We have too much meat as it is, billions of pounds of meat from cattle goes bad every year because PEOPLE DONT EAT THAT HORRIBLE SHIT ANYMORE! The world is dying because of people like you! Get your shit together!

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#5659

Name: NORDEMAN, VALERIE

Correspondence: Native plants and animals are more important in our national parks and forests than cattle. Even if cattle have been traditionally grazed in an area for many years, this does not make it right. Public lands are for wild animals, not for free grazing for ranchers.

#5660

Name: Shah, Nandita

Correspondence: All our national parks are public property and should not be given out to commercial interests like the dairy industry. How can it possibly be that elk are targetted to be killed in their own home to make way for the dairy cows in public land? National parks are supposed to preserve wildlife, aren't they? Please don't allow any killing of any wild animals at Point Reyes National Park or any other national park (including bison in Yellowstone for the same reason)

#5661

Name: Roberts, Gail

Correspondence: Why on earth should American tax payers support these wealthy cattle ranchers by letting their

cattle graze on publicly owned lands? No wonder they are wealthy - they are getting free food for their animals at the expense of the wild animals who Americans want to keep alive and well. Let the damn ranchers buy their own land and leave the National Lands for the animals who have a right to be there. I am so ashamed of America and the corruption and greed that is destroying this country.

Correspondence: Please protect natural lands

#5668

Name: Leflore-Huber , Elisa

Correspondence: I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. Please restore those lands for the wild animals.

It is unfair that the interest of private ranchers come first.

Thank you for your consideration to this matter.

#5669

Name: Swartz, Jill

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#5670

Name: Flagg, Bob

Correspondence: The animal agriculture industry has routinely taken advantage of preferential access to land, water, and other resources, and that is currently the case in Point Reyes National Seashore in Marin County, CA. Over 5,000 cattle who are being exploited for beef and dairy production are grazing in the public park, and pose a threat to the environment, wildlife, and the public good.

The ranchers' leases are set to expire, and the National Park Service (NPS) is asking for public comments to help them determine whether or not to extend the leases or to take another approach. Shockingly, several NPS proposals include killing the native Tule Elk in order to continue grazing livestock. Please write and urge the NPS to end livestock grazing at Point Reyes National Park and to allow this precious land to remain as wildlife habitat and to be used for the public good, not for the benefit of the livestock industry.

#5671

Name: Maas, Nayomee

Correspondence: I am a citizen who has traveled to Pt. Reyes National Seashore several times a years for more than 30 years . The rule elk have become what I look forward to seeing the most. It has been heartening to observe the increase in numbers of this iconic species and look forward to a time when the elk population has returned to the historic level and distribution described by scientists. I honor the multiple-use needs of the park as long as the competing demands of the local ranching community do not impinge on the primary needs of the primary species (elk) being conserved for future generations.

The new information the EIS process must consider is the degree to which cattle numbers must be curtailed in our National Park to maximize the carrying capacity for elk. As a taxpayer, I come to see the native elk not the

introduced cattle, which I can easily observe throughout California. One dairy farm or cattle ranch, which school children and the public can visit to learn about cows and local history, is sufficient to fulfill that multiple land use in the park.

Elk and cattle compete for grass. When estimating carrying capacity for these two species, I noted that rangeland scientists project two elk for one cow. There are currently about 5,000 cattle grazing in the park, outnumbering the 500 elk ten to one. With the commonly accepted ratio of two to one, elk numbers should be encouraged to rise substantially and cattle numbers should be held to one working ranch. The livestock industry has been and continues to be subsidized at taxpayers' expense. The public's interest in wildlife and native species is at an all-time National high. National public support for cattle ranching is at a historic low. Pt. Reyes National Seashore needs to honor the mission and the supporting scientific research for expansion of elk numbers throughout the park.

This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

Thank you for your consideration in this sensitive matter.

With compassion,

Keiko Barrett

#5673

Name: Harvey, Aileen

Correspondence: I am appalled every time I read an article about how the Nat. Park Service is considering killing elk in the Pt. Reyes Nat. Seashore so that they don't disturb cattle. Elk are native to the area. Cows are certainly not. Not to mention the negative impact cows have on the environment, creating green-house gasses, polluting the waterways and negatively impacting the health of the people who eat them and drink their milk...milk meant for the calves, who are taken away from their mothers.

#5674

Name: Jacobsen, Barbara

Correspondence: Please protect our beautiful Tule Elks.....don't give in to the cattle industry! Thank you, Barbara

#5675

Name: Riggelman, Nancy

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#5676

Name: Castro, Patricia

Correspondence: Please stop cattle grazing in Point Reyes. the grazing of beef and dairy cattle destroys the natural ecosystem and poses a threat to the environment, native wildlife and the public good.

I am especially concerned about Option B and any other proposal to kill the native Tule Elk or other wildlife just to benefit ranching operations.. Please adopt Option F to discourage grazing and allow this land to remain a wildlife habitat and not put it to use for the benefit of the livestock industry.

Point Reyes National Seashore is a family favorite to visit and my sisters and I love to to vacation there. It is a beautiful location and cannot be replaced or reproduced.

#5677

Name: Owen-Smith, Gail

Correspondence: I support protection of the Tule Elk in any future plans. Thank you for considering my position.

#5678

Name: Hedge, Joanne

Correspondence: Enough is enough with the cattle industry. Along with fossil fuel extraction, both contribute to what is now a climate crisis. Last time we checked, Tule Elk were useful, natural parts of the open space wild lands ecosystem. President Trump's Interior Department and the NPS are pushing in direct opposition to the park service's original mission. Species die-off is bad enough; this habitat damage is utterly wrong. Move the 5,000 cattle and cows to land zoned for agribusiness operations, and save Point Reyes National Park! Thank you.

#5679

Name: Watson, Mimi

Correspondence: Please make managing the park for the advantage of the general population of humans as well as the health an biodiversity of the animals your highest priority. The cattle grazers are NOT in anyone's best interest!

#5680

#5704

Name: Gnatek, Timothy

Correspondence: I'm writing to plea for expanded access to bicycles in the Point Reyes National Seashore. I am not a cyclist, however as an active hiker and runner on many public lands both here in Marin County and abroad I have the full confidence that bicyclists are fellow users of the park who should be welcomed and encouraged to participate in accessing these lands. I have many friendly interactions with cyclists and in my experience, increasing access to this user group only expands their engagement as stakeholders and willingness to advocate for more pressing matters affecting all us who hold these lands dear, including conservation and preservation.

In particular, bicycle access in Point Reyes is extremely limited compared to hikers and equestrians, and there are many immediate access points on RANCH ROADS that would not only create a more equal opportunity for these users, but also create important connector paths that can make cycling legitimate and safe for traveling through the park.

I believe these are sensible and conservative offers to provide riders with park access:

A connection between Devil's Gulch and Platform Bridge Road using existing ranch roads.

A connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail.

A connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads.

A connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads.

A connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads.

An Estero Trail loop using existing ranch roads.

Collaboration with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

I look forward to increasingly sharing my park visits with more cyclists.

Thank you for your attention.

Tim Gnatek

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#5731

Name: Balocating, Samuel

Correspondence: The Tule Elk is such a beautiful animal and to know that their habitat and livelihood is being threatened is a sad sad day. Who knows how many will remain in the future?

The agriculture industry is already large enough and we do not need to hurt one set of species to make room for another.

The environment, pollution, wildlife will be severely affected. Let us not threaten anymore the fragile ecosystem and wildlife habitat that have roamed there for ages.

May we now continue with future generations enjoy these majestic creatures, let us be able to visit them with our families, school activity field trips, and only one trekkers be able to see these lovely Tule Elks and others in their full glory at peace with one and nature. In turn, giving us humans the same peace we observe from them.

-Samuel

#5735

Name: Barrett, Heather

Correspondence: I am a citizen who has traveled to Pt. Reyes National Seashore several times a years for more than 15 years with family and friends to view the Tule Elk. It has been heartening to observe the increase in numbers of this iconic species and look forward to a time when the elk population has returned to the historic level and distribution described by scientists. I honor the multiple-use needs of the park as long as the competing demands of the local ranching community do not impinge on the primary needs of the primary species (elk) being conserved for future generations.

The new information the EIS process must consider is the degree to which cattle numbers must be curtailed in our National Park to maximize the carrying capacity for elk. As a taxpayer, I come to see the native elk not the introduced cattle, which I can easily observe throughout California. One dairy farm or cattle ranch, which school children and the public can visit to learn about cows and local history, is sufficient to fulfill that multiple land use in the park.

Elk and cattle compete for grass. When estimating carrying capacity for these two species, I noted that rangeland scientists project two elk for one cow. There are currently about 5,000 cattle grazing in the park, outnumbering the 500 elk ten to one. With the commonly accepted ratio of two to one, elk numbers should be encouraged to rise substantially and cattle numbers should be held to one working ranch. The livestock industry has been and continues to be subsidized at taxpayers' expense. The public's interest in wildlife and native species is at an all-time National high. National public support for cattle ranching is at an historic low. Pt. Reyes National Seashore needs to honor the mission and the supporting scientific research for expansion of elk numbers throughout the park.

#5736

Name: rolstone, darrell

Correspondence: Beef cattle can be raised anywhere....whereas the Tule Elk are very delicate and need their own natural environment. Please work toward a "harmony" with nature.....and not just the financial benefits of a few individuals! Thank you! Darrell Rolstone

#5737

Name: Smith, Joan

Correspondence: The livestock industry is particularly damaging to the environment. The area of Point Reyes must be protected and preserved. We cannot depend on industry and corporate farming practices to protect our land, water and air. We know that the cattle and dairy industry is the biggest contributor to methane production and climate disruption. We do not need such industry in Point Reyes.

#5738

Name: Bobek, Lu

Correspondence: Keep the Tule Elk, stop the cattle grazing.

#5739

Name: Adams, Reade

Correspondence: Please adopt Alternative F, which would discontinue farming and ranching opportunities in the park and expand visitor opportunities. The preservation of native wild species must take precedence over farming and ranching activities. Grazing negatively affects ecosystems, causing water pollution and soil erosion, spreading invasive species and disease, and harming endangered species. Please support Alternative F.

#5740

Name: Jones, Susan

Correspondence: Save precious wildlife. Do not pander to the destructive ranching industry. Move forward with preservation. Thank you.

#5741

Name: schuck, jacqueline

Correspondence: To whom it may concern,

I urge you not to renew and or extent the ranchers' leases and killing beautiful and native Tule Elk in order to continue grazing livestock is barbaric and outdated with what people that support national parks want.

I am writing to urge you to end livestock grazing at Point Reyes National Park and to allow this precious land to remain as wildlife habitat and to be used for the public good, not for the benefit of the livestock industry. The animal agriculture industry has routinely taken advantage of preferential access to land, water, and other resources for decades and currently over 5,000 cattle who are being exploited for beef and dairy production are grazing in the public park, and pose a threat to the environment, wildlife, and the public good.

Sincerely,

Jacqueline Schuck

#5742

Name: Desmond, Sheila

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing of livestock and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

Thank you.

#5763

Name: Chinn, Jeanne

Correspondence: I vote Alternative F - NO RANCHING.

Please take the cattle out of Pt. Reyes Na Seashore, take the fencing out, and it is time to let the Elk roam free of the hazing, yearly killing, and suffering caused by ranchers and farmers over way too much time. An agreement had been made, the NPS needs to back up their original agreement - 25 years has far passed and it is time now for ranching to leave and open the gates for the Elk to roam free. Do Not bring in more livestock. Do Not bring in

agriculture. This is Public Trust Lands, it is a place for wildlife to live in peace, and for our generations and future generations to enjoy the freedom of wildlife on their habitat. I vote ALTERNATIVE F - NO RANCHING Thank you, Jeanne Wetzel Chinn

#5764

#5775

Name: K., Miriam

Correspondence: Point Reyes National Seashore is supposed to be managed under the Point Reyes Act for "maximum protection, restoration, and preservation of the natural environment." There's no mandate for prioritizing commercial agricultural leases on these public lands. Natural values, native wildlife, public access and enjoyment should take priority over commercial activities at Point Reyes. Tule elk are an important part of the landscape at Point Reyes. Their recovery is a result of successful native ecosystem restoration, which is a key element of the Park Service's mission. It's taken a lot of time, money and effort to restore tule elk to Point Reyes, the only national park where they live. Tule elk should be allowed to roam free and forage in the park - not shot, removed, fenced or treated as problem animals. Right now the Point Reyes ranches enjoy not only subsidized grazing fees and housing, but also taxpayer-funded infrastructure and road improvements, and publicly funded projects. But commercial activities at Point Reyes should be required to accommodate native wildlife - not the other way around. The Park Service shouldn't allow any new agricultural activities at Point Reyes. Planting artichokes or other row crops will attract birds. And introducing sheep, goats, pigs or chickens will attract native predators such as coyotes, bobcats and foxes. Expanded ranching would only create new wildlife conflicts. Cattle ranching should only be allowed if it's consistent with preserving the natural environment. And agricultural activities such as mowing shouldn't be allowed in park areas where they harm endangered species or wildlife habitat, impair water quality, cause excessive erosion or spread invasive plants/diseases. Cattle are the seashore's primary source of greenhouse gases. So the Park Service's preferred alternative is inconsistent with its own "Climate Friendly Parks" plan. Please... 'STOP' the SLAUGHTER of ALL animals!

Seriously, Miriam K.

#5776

Name: Horn, Suzanne

Correspondence: Please end livestock grazing at Point Reyes National Park and to allow this precious land to remain as wildlife habitat and to be used for the public good, not for the benefit of the livestock industry.

#5777

Name: Kane, Janice

Correspondence: 'F' is the only proposal that fulfills the original purpose of the park. I have been a rancher & understand the feelings of the ranchers but there has already been a 20 year extension. It is time to revert & To enforce the original intent. Thank you Janice Kane

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#5791

Name: Hall, Stacy

Correspondence: Over 5,000 cattle who are being exploited for beef and dairy production are grazing in Point Reyes National Seashore in Marin County, California, and they pose a threat to the environment, wildlife, and the public good.

The ranchers' leases are about to expire, and unfortunately several NPS proposals include slaughtering native Tule Elk in order to continue grazing livestock for profit. Please end livestock grazing at Point Reyes National Park and to allow this precious land to remain as wildlife habitat and for the public good, NOT for the benefit of the livestock industry. Thank you for your thoughtful consideration. :)

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#5794

Name: Fite, Gregory

Correspondence: Point Reyes National Seashore is a unique treasure to all of us. The tule elk herd is one of its many special features. In order to protect and preserve this iconic and varied landscape, excessive cattle grazing must be curtailed. There are many other locations near there where it's better to run cattle, but not Point Reyes National Seashore.

#5795

Name: Pannell, Bonnie

Correspondence: The livestock industry, just like the fossil fuel industry, is heavily subsidized by tax payer dollars. Both negatively impact the environment. If we, as a state, country and world are going to take strong action to remediate global warming, then we need to cut back drastically on both. Since the lease is running out for cattle grazing at the Point Reyes National Seashore, I submit that this would be a good time to not renew it. I support the following scripted letter and recommendation.

I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

Correspondence: Demolition and Removal of Nike Missile Site Structures and Utilities, Sweeney Ridge Golden Gate National Recreation Area » Demolition and Removal of Nike Missile Site Structures and Utilities, Sweeney Ridge » Document List

Purpose and Need: The buildings associated with the Nike Missile Site at Sweeney Ridge were closed in 1974 and became part of GGNRA in 1984. The structures have deteriorated over time; although the walls remain in fair condition, the roofs are collapsing and lead paint is peeling from the walls, posing a safety hazard to the public and park staff. In addition, the site has become a popular location for graffiti and dumping. An effort was made in 2010 to stabilize the buildings, including boarding up doors and windows with plywood for public safety. Despite continued efforts by park staff to prevent entry into the buildings, the boards are repeatedly removed and the structures continue to be an attractive nuisance and safety hazard, diminishing the visitor experience at Sweeney Ridge.

Because of the safety risk these structures pose and the lack of integrity that keep them from being deemed historical, GGNRA will be removing all five structures and adjacent abandoned above ground utilities. Before work is started, hazmat testing will be required as there may be lead and asbestos to mitigate.

The structures planned for removal are: • Standby Generator Building • Interconnecting Corridor Building • Hipar Building • Readt Building • Sentry Station • Two water tanks. • Antennas, wood utility poles and cables southwest of Readt Bldg. • Trash and all loose debris within 30' radius of buildings

#5802

Name: Jones, Majda

Correspondence: Thank you for considering comments from the concerned public.

I visit PT Reyes at least once a year to hike and enjoy the natural beauty.

I grew up with a grandfather who farmed. I now live in a semi rural area. I used to live on and own a horse ranch. So I know and respect the farming life.

However, as I watch wilderness being constrained and plundered all over our country, I can no longer accept cattle ranching as more important than wildlife. Humans who farm have alternatives when they must constrain or eliminate their activities. Wildlife have no alternatives; they face death.

There is no excuse for shooting Tule Elk in favor of cattle. Cattle exist nearly everywhere there is farmland. Tule elk exist only here, at Point Reyes. Sometimes there are difficult choices to face, where humans must make sacrifices for the voiceless wild. This is one of those times.

Just because farming has existed for generations on Point Reyes does not mean it must always continue there. The trade offs here are clear: This is Tule Elks' only possible living place. Farmers can move.

Thank you, Majda Jones

#5803

Name: Yetter, Guadalupe

Correspondence: Please do not allow the ranchers at Point Reyes California to cull the Tule Elk. Piece by piece the natural beauty of California has been taken apart and with it the natural resources in it destroyed. The Tule Elk will continue to decline in numbers and future generations will never be able to enjoy them. Our family makes it a point to make the long 5 hour drive to see them in their natural habitat. We will spot a couple of Elk Bulls and then.. not to far off, a group of elk cows. I know my words do not carry any weight compared to that of the ranchers, but at least I can say that my family has seen the Tule elk live and unfettered and let me tell you what a sight that is.

#5804

Name: Segale, Ellen

Correspondence: Rule elk are native, ranchers are not. I support the elk!

#5805

#5808

Name: Yamada, June

Correspondence: Protect Point Reyes from livestock farming.

#5809

Name: Placone, Richard

Correspondence: To the NPS:

In determining whether or not to continue cattle grazing on the Point Reyes National Preserve, I remind you of this - science has demonstrated that one of the factors in Global Warming is the large consumption of beef cattle and other animals. AS a scientific organization I need not explain to you why this is so. But by stopping the grazing in this precious seaside reserve, you will be contributing to keeping this region open and free for public enjoyment and the protection of the plant and animal environment.

Industry of one sort or another already occupies much of the ecologically sensitive reserves in this country. Constant attempts at further encroachment are made every day - in the Grand Canyon for uranium mining; all over the mid-west and even in California for expanded fracking for oil and gas (both deadly greenhouse gas producers); in the few ocean sanctuaries we have for the protection of marine life and ecological systems.

These lands belong to the American people and not to any single or group of industrial interests. Ecologically sensitive and especially beautiful areas are preserved for the benefit of the American people now and for those to come.

Point Reyes is a very special place in California. It should not be pasture for some rancher's cattle.

Finally the fact that the NPS would even think of killing the native Elk to make room for cattle is beyond the pale.

Thank you.

Richard and Jeanne Placone Palo Alto, California

#5821

Name: Wheeler, Terri

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the profit of the planet-killing and public health-threatening livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

I have many fond memories from my own childhood of viewing the Tule Elk through binoculars from across Tomales Bay and of visiting Point Reyes, and it is important to preserve this public land and its native wildlife for future generations. I want my tax dollars to be used to preserve the Point Reyes National Seashore and its native wildlife, not to support the livestock industry's profit. Let's not follow the horrible example of the Brazilian government in burning down the Amazon rainforest so that the cattle industry can make money selling the flesh from the animals they graze there. Stop the damage to this beautiful area now; don't make it worse by killing the native wildlife and letting the ranchers destroy the natural beauty of the Point Reyes National Seashore.

#5822

Name: Pardo, Daniela

Correspondence: I really care about protecting California's nature, environment, and wildlife. I oppose the National Park Service's Plan to kill native tule elk and expand ranching land in Point Reyes National Seashore and Golden Gate National Recreation Area. I ask you please, National Park Service to instead restore the lands for wild animal habitat. Please preserve the public lands and wildlife. Do not expand the area for private ranchers. Commercial ranchers have serious environmental impacts on the park. They pollute waterways, cause soil erosion, and harm the many endangered and threatened animals who live on Point Reyes. National parks are supposed to exist to protect our national resources and native wildlife. thank you.

#5823

Name: Goatcher, Roxana

Correspondence: I'm am writing in opposition to culling the native wildlife of Point Reyes National Seashore. I live in Marin and frequent Tomales Bay and the beautiful seashore the National Park Service has preserved for so long. The culling of the native elk does not benefit the land, environment, or grand majority of residents. Expanding grazing land has been proven to be detrimental to the surrounding environments and habitats. We love our land and feel strongly about continuing its preservation and hope the NPS maintain their stewardship of the land that fewer and fewer native animals can call home. The state of land and animals should not be dictated by those few who stand to gain financially. Do not take these lives in vain. Thank you for all your hard work and all you do. We support the NPS and feel deeply that our country's richness & wealth does not lie in money alone but in our resources, our unique land and parks from sea to shining sea.

Sincerely with all my heart, Roxana Goatcher

#5824

Name: Silverman, Marc

Correspondence: The animal agriculture industry has routinely taken advantage of preferential access to land, water, and other resources, Over 5,000 cattle who are being exploited for beef and dairy production are grazing in Point Reyes National Seashore in Marin County, CA. #5840

Name: Tompkins, Laura

Correspondence: I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. STRONGLY support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly-and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

Correspondence: For years I have been aware of the issue regarding cattle grazing on National Park Service Land at Point Reyes National Seashore. This is a significant time as it is allowing the public's input into the use of this National treasure.

Point Reyes, to the greatest extent possible, should be returned to a natural state. It is a public treasure and regardless of different issues regarding animal agriculture, the land should be returned to wildlife, and for the us, the public, to be able to witness what will be restored wilderness.

I recommend the adoption of Option F. Thank you for your consideration

#5847

Name: Milford, Mona

Correspondence: Keep Point Reyes wild and beautiful. Cattle belong on ranches, not on our wild lands. Killing wildlife for ranching would be wrong on every level

#5848

Name: Sullivan, Margaret

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

Correspondence: Tule Elk BELONG here; cattle do not. The greedy profits of a few should not outweigh the long term benefits to our native CA wildlife. Please do not be swayed by the money here.

#5862

Name: Hammonds, William

Correspondence: I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly-and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

Name: McGuinness, CB

Correspondence: The new study focuses on the drop in sheer numbers of birds, not extinctions. The bird population in the United States and Canada was probably around 10.1 billion nearly half a century ago and has fallen 29% to about 7.2 billion birds, according to a study in Thursdays journal Science .

This is what I read in the Washington Post today, September 19, 2019. This is what I read before sitting down to write my comment about the management plan proposals for the Point Reyes National Seashore. This is what I read after I spent part of my day working on habitat restoration within the park. I am a volunteer, not an employee. My deep love for Point Reyes, my home for over 25 years, inspires me to spend hours pulling out weeds by hand with the hope that enough native plants will survive to make a difference. Sometimes visitors look around at the endlessness of ice plant and wonder why we bother. They only see an insurmountable problem. But we who actively love the park see possibilities in every single flower we save. If people like us gave up, those flowers wouldnt be here and all of the other species that depend on them would disappear, too.

The Washington Post article went on to report that Experts say habitat loss was the No. 1 reason for bird loss. Despite the increasingly obvious need to protect habitat and despite the national park mandate To conserve the scenery and the natural and historic objects and the wild life therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations. (Organic Act of 1916 establishing the National Park Service), the Seashore is considering proposals that would most certainly destroy habitat and native species. Most of these proposals seem only to consider how a relatively small group of people can make the biggest profit possible off public land without considering the full cost (financially, environmentally, and socially) of the proposals to the rest of the community. If the ranchers were to honor the promise that they made over 50 years ago when the government bought their land, then only Alternative F should be considered. The ranches should be phased out, the old buildings saved for historic interest, and the park could then focus its resources on restoring the habitat damaged by overgrazing.

If that choice, though planned from the inception of PRNS, seems too dramatic, then Alternative E would be a less terrible choice. By phasing out some of the ranches, Alternative E could reduce their negative impacts while maintaining the benefit of grazing in pastures of invasive grasses. In addition, I think that the park needs to determine how many cows the land can support, and the ranchers must not exceed that number. I am, however, opposed to any measure that favors the cows over the elk. I do not want fences that would prevent the elk from reaching water sources, and I do not want elk killed to reduce competition with cattle. By granting shorter leases, the park would theoretically have the authority to ensure that the ranches adhere to the parks mandate. However, given the degraded condition of some of the ranches, the park doesnt seem to be doing enough currently to protect our natural resources.

The other proposals would dishonor the parks mandate further. I am appalled that a proposal to kill even more native elk on public land to gratify ranchers would be considered. Doing so would seem to undo the hard work the park did to reintroduce the elk. The website for PRNS describes Tule Elk as endemic to California, which makes protecting them far more imperative than maintaining unsustainably large herds of the ubiquitous cow.

There also seems to be little thought for how the plans would actually be implemented. Where would water for crops come from, and how would that increased water usage affect the native plants and animals that also rely on the water? How would growers protect their crops from deer, rabbits, gophers, and birds? Deer fencing would only keep out deer, but other hungry animals would find their way to the crops or chickens. Surely the national park would not permit the killing of even more native animals to protect farms that lack even the veneer of being historical as justification. Some of those crops could become invasive and decrease native plant diversity in the same way that ice plant does. Whoever brought those plants into this area either didnt consider the potential effects or believed theyd be negligible. But were still trying to undo the damage of this invasive plant, and the financial and environmental cost is enormous. We should not keep making the same foolish mistakes of assuming that the introduction of new plants, animals, and land management practices will have no negative consequences. Furthermore, even organic farms use fertilizers and pesticides. How would runoff would affect water quality? Excess nitrogen, even from organic sources, can result in algae blooms. Even carefully applied pesticides can harm beneficial insects and amphibians, which would have an impact on any creature that relies on them for food.

The presence of farm stands and B&Bs would most certainly increase traffic. Thats their purpose. But our community is already suffering from a huge increase in tourism and its associated evils: traffic, accidents, pollution from running or even idling cars, overburdened septic systems, noise... Where is the budget for more first responders? Infrastructure? We already subsidize the ranches, and the ranchers seem to thank us only by increasing their demands and acting as though theyre victims of government overreach.

There is great attention paid to the historical importance of ranches in this area. But why is there not the same attention given to the history of the Coast Miwok? Their history in this area stretches further back than that of the earliest ranches. What if we honored their history with the same dedication and resources that are generally paid to the relatively short ranching history?

Private profit on public land should not dictate park policy. Id rather see the parks limited resources go toward interpretation and conservation, which would also provide jobs. More rangers educating visitors, more signs, more programs to protect natives! Where else can people see Tule Elk or Point Reyes meadowfoam? Point Reyes National Seashore should be celebrated by everyone-not managed for profit for a minority.

Correspondence: Do not kill the elk in point Reyes. That's a monstrous idea.

#5866

Name: Korney, Li

Correspondence: Please note that many California and US citizens appreciate the local elk and wildlife. We spend tourist dollars to enjoy area cabins, bed and breakfasts, eat at local restaurants, and enjoy quiet among the area National Mark lands.

I don't want to see more ranches, there are plenty in California. The ranch profits are also not growing locally, so why erode more Park land and nature to aid a dying interest? Some of the ranches can be converted to plant based farming, but then the elk shall be blamed for injuring the plants. We want the local elk populations preserved. Most have fenced territory that do not harm the existing ranches anyway.

I have friends in Asia who travelled to see the elk and visit the lovely redwoods nearby. The wildlife and parks are known further than you may realize. It is not right to destroy local tourism for the interests of a few selfish ranchers. Elk tourism creates money for numerous smaller businesses who sell smoked fish, fruit, antiques, Native American history, cabin rentals, hiking and fishing experiences.... do not kill the diversity of future tourism , and kill an important member of the local food chain / biodiversity, for the benefit of a few ranchers. This is public land, for the benefit of all citizens. Keep it that way.

When the government purchased Pt. Reyes National Seashore, its purpose was "to protect and preserve the native flora and fauna." Overgrazing of cattle has resulted in soil erosion, degradation of water quality, damage to endangered species habitats, and the spread of invasive plants in the park.

The livelihood of the ranchers has taken precedence over the elk, as is evidenced by the drought of 2012-2014. During that time, the Tomales Point herd was fenced-in to keep them away from the cows. As a result, 46% of the elk died off because they were denied access to areas where they could reach water and food. The herd dropped from 540 to 286. No cows died during that same period of time. This is just one example of how the benefit of the ranchers is coming first, at the expense of the native elk and other native flora and fauna. I strongly urge the NPS to stand up for the intended use of the Park - - to protect and preserve the native flora and fauna.

Sincerely, Janet Seltzer

#5887

Name: Abrams , Allan

Correspondence: I and my family have vacationed at Pt. Reyes National Seashore (PRNS) annually for the past 6 years. We have visited every natural and manmade point of interest on the Pt.Reyes peninsula and surrounding natural areas in Marin County. According to the NPS Report on the Tule Elk reintroduction to PRNS, there is a scientific consensus that a healthy ecological balance can be maintained on existing wild range land, if the elk herd is limited to about 440 head.

What is happening to the local ecology where 5000 cattle graze? How has the numbers of commercial beef cattle increased since the elk were reintroduced?

I AM ABSOLUTELY AGAINST ANY REDUCTION OF THE ELK HERD AT PRNS BY FATAL MEANS OR BY TRANSPLANTING THEM TO OTHER WILD AREAS IF ITS GOAL IS TO MAINTAIN OR INCREASE THE EXISTING BEEF CATTLE FARMING PRACTICES.

#5888

#5900

Name: Katz, Barry

Correspondence: The Tule Elk is among those species threatened if we allow our State and National Parks, i.e., Point Reyes, to be misused for cattle grazing. Of all the short sided stupidest ideas this one wins the prize. Let the ranchers graze their cattle on other property like their own. Making money or raising livestock should not hold priority over preserving the ecosystem for this beautiful area of California. This is not a wise use of public lands created as a preserve for plants and animals. And we certainly don't need methane polluting cattle in this case contributing to the global warming of the planet. This conflict has been going on for more than a hundred years in this country. The beef lobby should quit trying to buy off the legislature and the respective bureaucrats. That's corruption and it needs to stop now!

#5901

Name: Clark, Bridget

Correspondence: As a native to Marin, I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly-and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

Thank you for your consideration.

Bridget Clark

Correspondence: Point Reyes is not a farm! The land belongs to the Elk & the visitors & locals who love love it. Send the cows home. Thank-You

#5906

Name: Manley, Harriot

Correspondence: Thanks for considering options for improving access and making safe routes for all kinds of bicycles in Point Reyes National Seashore. I grew up in Marin, and know what a treasured asset this gorgeous park is, for visitors and locals. If we can improve access without damaging the park or threatening wildlife, I'm all for it. I suspect that improving and enhancing existing routes through farmlands could actually reduce impacts. Win win all around.

In addition, I support the efforts of Marin's informed and passionate cycling community, which supports these points:

I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. Correspondence: Killing native Tule Elk to make oom for grazing beef and dairy cattle?? Insanity! Especially when the tides are turning for more plant-based diets. Especially when the public is now getting hip to the money and evil in Big Ag! NO!!

#5909

Name: Frame, Linda

Correspondence: Please do not allow the cattle industry access to Point Reyes. The wildlife needs to be protected. The cattle do not need to graze on anymore public land.

#5910

Name: Swanson, Maureen

Correspondence: Please do not use the Point Reyes land for raising cattle. I have visited this area since I was in my 20's and am now 60. I always enjoyed the natural habitat and hoping to spot wildlife. Don't ruin it! The world is changing. People are turning to healthier alternatives and meat is not one of them. We do not NEED more beef production. It doesn't make business sense. More people travel to that area to see wildlife than cattle. I just wouldn't bother to visit any longer so it's lost revenue from a tourist standpoint and gains nothing with beef

becoming less and less a part of a healthy diet. Or turn the cows loose to graze if they will mix with the elk and live out their lives there as a refuge. Now THAT I would visit!

#5911

Name: Miller, Joe

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. #5913

Name: Johnston, James

Correspondence: My name is James Johnston and I live in the San Francisco Bay Area. My wife & I have enjoyed visiting Point Reyes National Seashore on a number of occasions. Major ranching operations run by private owners, however, have not enhanced our enjoyment. The ranches, apart from the abandoned and interpretive Pierce Point Ranch, are private and not a part of the park I can freely explore and visit due to the fact that they are active, commercial ranches. Most importantly, it's clear from hiking through some of the areas that the cattle significantly degrade the ecosystem. Vegetation is trampled and soil is compacted, and considerable waste from the animals is scattered on the landscape. Picking my way through cattle manure was not great. Native tule elk, which were hunted to near-extinction, are forced to compete with a huge number of cattle for limited land.

I am therefore not in favor of the park's preferred plan. My preference is for alternative F, which is to completely phase out all ranching from Pt Reyes. Barring that, any plan which significantly reduces ranching from the status quo would be better than the NPS-preferred alternative B.

\* The NPS has a mandate to preserve cultural as well as natural features, for the general benefit of current and future generations who visit the park. The ranch buildings can be preserved, and interpretive exhibits set up - similar to Pierce Point Ranch. Very small numbers of cattle - perhaps a dozen or so at most - could even be kept in a small space so that visitors can get a better sense of what an active ranch was like. It is not necessary nor desirable, however, to keep thousands of cattle in a full-scale commercial ranching operation which is not generally open to visitors.

\* Pt Reyes is not the only location in California, or even Marin County, where ranching can take place. It is, however, one of the very few places left in the United States with undeveloped shoreline outside of Alaska. While many people consume the commercial products produced at Pt Reyes, these benefits can be obtained from raising cattle elsewhere, not on a national seashore and NPS site. It would be best to allow the park to recover to a more natural state, as it would be one of very few ocean-side places like that left in the United States.

\* Continued cattle grazing causes significant local environmental damage. Cattle manure pollutes the water. The vegetation is trampled, which reduces biodiversity and prevents the land from returning to the undisturbed state it was in before it was ranched. Cattle outnumber tule elk by a significant margin. The tule elk herd is kept to a very unnaturally small size in order to make room for cattle. If anything, this is severely unbalanced and the margin should be reversed, with the elk herd allowed to grow considerably.

\* Commercial cattle leasing is not contributing to the visitor experience. If anything, it detracts from it as visitors are not welcome on ranches. Alternative F clearly spells out that visitor facilities would be improved the most under that proposal - many would benefit instead of a select few commercial farmers. Existing camping facilities at Pt Reyes are extremely limited and competitive. Establishing new ones, as outlined in Alternative F, would significantly improve the visitor experience.

\* The park was established with the provision that existing ranches would be phased out after 25 years. The land was never intended to be leased out in perpetuity. This policy of continued leasing is not consistent with what took place in other NPS sites when private landowners were bought out. The National Park Service is not the Bureau of Land Management and should not be run as such. What is the difference between a National Park Service site and a BLM site if both are leasing land in perpetuity for commercial agricultural operations? I have never seen that done at other NPS sites I have visited - and I've been to many. Elsewhere, I usually see interpretive signs by old dwellings which were vacated long ago. That is how it should be here.

\* Expanding ranching operations by adding crops and other small livestock brings further negative environmental impacts to the park while offering the ranchers an increase in income. The National Park Service is not a welfare organization. The rights of the general public to enjoy the park and have it maintained in a pristine state should not be degraded for the financial benefit of a few private farmers running commercial agricultural operations.

\* Beef and dairy cattle are one of the leading causes of greenhouse gasses in our food supply. The National Park Service has many an exhibit explaining the problems we collectively face from global warming. As I recall, I found one such exhibit at Pt Reyes on a recent visit. The Pt Reyes NPS web site even has a page explaining how the Seashore is "doing its part" by using electric vehicles and solar panels. Yet, the climate impact of all the cattle farming vastly outweighs these small token things the park service is doing. If the park service is serious about doing its part to fight climate change, it must stop leasing to one of the largest polluters on the planet: animal agriculture. The EIS does not discuss how the greenhouse gasses from ranching are being offset in order to prevent further damage to our planet, and therefore, Pt Reyes itself.

In summary, please discontinue all leases to commercial ranching operations.

#5937

Name: Clinton, Arthur

Correspondence: I care about protecting California's wildlife. I have hiked in this area on numerous occasions and love seeing the elk. The first time I saw the elk, a few hundred feet from me, I was mystified. I want others to

be able to have that same feeling. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

#5938

Correspondence: We go to Point Reyes to enjoy its beauty, and Tule elk are an important part of the beauty of Point Reyes. They were recovered after successful native ecosystem restoration, a key element of the Park Service's mission.

It took a lot of time, money and effort to restore tule elk to Point Reyes, the only national park where they live.

Tule elk are beautiful animals and should be allowed to roam free and forage in the park - not shot, removed, fenced or treated as problem animals.

Thank you.

Correspondence: Killing elk for cattle? Wrong-headed, evil, destructive - HIGHLY - destructive for the environment. Animal agriculture is the second leading cause of climate change, loss of vital environment and species, filthy water, and complete eradication of rare species.

To destroy wildlife for cattle is so ignorantly WRONG I wonder who benefits besides cattlemen and how much are they shoving in various pockets to get their way? If this country, indeed the whole world does not turn to more plant-based diets the planet we live on will be utterly destroyed - already millions of acres of forest, jungle, plains has been wiped out for cattle grazing. The grain that could be used to feed PEOPLE is instead being used to feed cattle.....

People with intelligence, courage, love of country and planet must ensure that cattle and cattlemen are NOT EVER allowed to destroy more precious wildlife flora and fauna to assure a steady stream of dollars in their bank accounts. No human on earth requires MEAT of any kind for health... it's propaganda fed to us since this country

began. It is way past time to realize what we are doing to our planet and ourselves by this never-ending, ever-expanding breeding, grazing, destruction that cattle and other livestock bring to our lives. NO MORE!

Plus the fact, need I mention AGAIN, that i strongly protest the use of my tax dollars for the killing of wildlife in order for cattlemen to make huge profits of endangering our planet and our lives!

Correspondence: SIERRA CLUB COMMENT ON POINT REYES GENERAL MANAGEMENT PLAN EIS

## INTRODUCTION

Thank you for the opportunity to comment on the Draft Environmental Impact Statement (DEIS) for a General Management Plan Amendment (GMPA) for the management of areas of Point Reyes National Seashore (PRNS) and Golden Gate National Recreation Area (GGNRA) now managed for dairy farming and beef cattle ranching and full-time residential use. The Sierra Club's position is that all the ranching alternatives involve the impairment of natural resources and that three NPS laws prohibit actions that will impair natural resources. Consequently, the Park Service should prepare a supplemental DEIS with ranching alternatives that comply with applicable laws requiring the protection of natural resources and it should then circulate that supplemental DEIS for public comment.

## APPLICABLE LAWS

PRNS and GGNRA are units of the national park system and, as such, must be managed primarily to protect the natural resources of the parks. The three applicable laws in this regard are as follows:

The first is the 1916 NPS Organic Act which applies to all units of the national park system, including PRNS and GGNRA. The Organic Act provides as follows: § 100101 (a) In General- The Secretary . . . shall promote and regulate the use of the National Park System by means and measures that conform to the fundamental purpose of the System units, which purpose is to conserve the scenery, natural and historic objects, and wild life in the System

units and to provide for the enjoyment of the scenery, natural and historic objects, and wild life in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.54 U.S.C. § 100101(a). (Emphasis added.) With respect to the Organic Act, the Ninth Circuit Court of Appeals has held (in a case in which the Sierra Club was an intervening defendant, alongside NPS) that the language quoted above means that "resource protection [is] the overarching concern" in the management of national park system units. *Bicycle Trails Council of Marin v. Babbitt*, 82 F.3d 1445, 1453 (9th Cir. 1996).

The other two laws are the PRNS and GGNRA statutes. The PRNS legislation provides, in pertinent part, as follows: § 459c-6. Administration of property(a) Protection, restoration, and preservation of natural environment Except as otherwise provided in sections 459c to 459c-7 . . . the property . . . shall be administered by the Secretary without impairment of its natural values, in a manner which provides for such recreational, educational, historic preservation, interpretation, and scientific research opportunities as are consistent with . . . the maximum protection, restoration, and preservation of the natural environment within the area . . . 16 U.S.C. § 459c-6. (Emphasis added.) The GGNRA legislation provides, in pertinent part, as follows: §460bb - Establishment In order to preserve for public use and enjoyment certain areas of Marin and San Francisco Counties, California, possessing outstanding natural, historic, scenic, and recreational values, and in order to provide for the maintenance of needed recreational open space necessary to urban environment and planning, the Golden Gate National Recreation Area (hereinafter referred to as the "recreation area") is hereby established. In the management of the recreation area, the Secretary ... shall utilize the resources in a manner which will provide for recreation and educational opportunities consistent with sound principles of land use planning and management. In carrying out the provisions of this subchapter, the Secretary shall preserve the recreation area, as far as possible, in its natural setting, and protect it from development and uses which would destroy the scenic beauty and natural character of the area.16 U.S.C. § 460bb.

#### RANCHING'S IMPACTS ON NATURAL RESOURCES REQUIRE A NEW SUPPLEMENTAL EIS

The DEIS makes it clear that continued cattle ranching as proposed in the current ranching alternatives will have detrimental environmental consequences on all natural resources, including soils, water quality, air quality, vegetation and wildlife (especially elk). Consequently, all the ranching alternatives violate the Park Service's duties under the three statutes and are therefore unlawful. Under these circumstances it makes no sense for the Park Service to go forward with a Final EIS. In view of the above, the Park Service needs to develop new ranching alternatives that do not violate the three laws quoted above and recirculate a supplemental DEIS for public comment. It should provide that all ranching operations that are permitted to operate in the PRNS and GGNRA should be modified so that going forward there are no negative impacts on the water quality and that range condition improves to good or excellent condition throughout the entire pastoral zone.

In the new alternatives, the Sierra Club opposes any diversification in the pasture subzone. There is no reason to allow hay, haylage and silage, and chickens, sheep and goats outside the ranch core. Such activities will have detrimental environmental consequences and have no purpose other than to increase ranch revenue. The Sierra Club also opposes continued leasing of any ranches if the current lessee or family does not renew the lease.

The new alternatives must identify the source of funds to fully implement the alternative and the effects of any reduction in funding on any other existing programs must be described. The FEIS should assume no increase in overall funding for PORE to pay for the implementation of the selected alternative, since PORE funding in real dollars has been declining for some years.

#5980

Correspondence: I am totally against this plan. Point Reyes has long been a favorite unique place along the California Coast. I love visiting there and seeing the Tule Elk as well as the unique geology and beaches. It is a settled town and place that cannot be give up to cattle that will totally change the land, the wetlands and the uniqueness of this beautiful coastal extremely iconic place for most Californians and visitors from all over the

world. The Coastal Commission should NEVER approve such a plan that would ruin such a uniquely beautiful part of California's Coastline. Please do not implement these most horrid changes to this Environmental treasure! I consider it part on my home!

Harry Blumenthal

#5981

Name: Brewer, Georgia

Correspondence: I'm a California resident and US taxpayer. I strongly object to the proposal to dedicate one third of Point Reyes National Seashore to cattle ranching and other commercial agricultural activities.

Our national parks are supposed to be for the enjoyment of us all, rather than for the commercial gain of a few.

The Point Reyes Seashore - which I have visited numerous times - is supposed to be managed under the Point Reyes Act for "maximum protection, restoration, and preservation of the natural environment."

Preserving our national natural heritage, including the flora and fauna of Point Reyes, is what I expect the Park Service to do with the tax dollars that Americans like me pay you! For example, Tule elk should be allowed to roam free and forage in the park - not be shot, removed, fenced or otherwise treated as problem animals.

Tule elk are not the problem - the problem is cattle! Not only are cattle ranching and other agricultural activities harmful to the natural environment - by impairing water quality, creating erosion, spreading disease, etc - they also create unnecessary wildlife conflicts. Commercial activities at Point Reyes should be required to accommodate native wildlife - not lead to the unfair and inhumane eradication of that wildlife!

I say we've done enough for the Point Reyes ranches by subsidizing their grazing fees and housing, and funding infrastructure and road improvements.

I ask you, NPS, to do your job and preserve Point Reyes for all of us, and for the generations to come.

#5982

Name: Carlton, Alan

Correspondence: COMMENT ON POINT REYES GENERAL MANAGEMENT PLAN EIS

The statutory purpose of National Parks, including Seashores, under the National Parks Organic Act is: "To conserve the scenery and the natural and historic objects and the wild life therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations." In 1976, Congress amended Point Reyes' legislation to address resource management. "[E]xcept as otherwise provided" NPS shall administer Point Reyes without "impairment of its natural values, in a manner which provides for such recreational, educational, historic preservation, interpretation, and scientific research opportunities as are consistent with, and based upon, and supportive of the maximum protection, restoration, and preservation of the natural environment within the area" (16 U.S.C. § 459c-6).

The EIS makes it clear that continued cattle ranching will have detrimental environmental consequences on soils, water quality, vegetation, and wildlife, including tule elk. The preferred Alternative B is not the alternative that would do the most to reduce those detrimental consequences and meet the statutory purposes required by statute to be "supportive of the maximum protection, restoration, and preservation of the natural environment within the area"

The most protection and the least detrimental consequences to the environment from continued ranching are a combination of Alternatives D and E Alternative E would eliminate dairy ranching, which has more detrimental

consequences than beef ranching. Alternative D would reduce the detrimental consequences by reducing the grazing acreage by 7500 acres, eliminating the detrimental consequences of grazing on those acres. Thus, the least detrimental environmental consequences would result from adopting Alternative E with a reduction of 7500 acres of grazing land. Note that the historical dairy ranches can be preserved without cattle.

The Management Activities and Mitigation Measures must provide that ranching operations should be managed using Best Management Practices to avoid harm to natural resources from overgrazing, severe trampling, erosion, topsoil loss, air pollution, and water contamination by nitrates, phosphates and pathogens found in animal urine and feces. Grazing should be rotated periodically to allow rest and restoration of leased lands. All ranching activities should be managed in a way that minimizes impacts and improves and restores the native habitat values of the Seashore's grasslands and coastal prairies. There must be rigorous enforcement of all management regulations. Leases should be short term and not renewed if Best Management Practices have been violated.

There should be no diversification in the pasture subzone. There is no reason to allow hay, haylage and silage, and chickens, sheep and goats outside the ranch core. Such activities will have detrimental environmental consequences and have no purpose other than to increase ranch revenue. Nor should there be continued leasing of any ranches if the current lessee or family does not renew the lease.

#5991

Name: Edison, Miranda

Correspondence: Please take a stand for wildlife and support tulle Elk. These are creatures not meant for culling but to live in a harmony with an ecosystem that was once all theirs. On a day when people are protesting climate change, I believe it is more vital to support wild animals which contribute less to it than do cattle. How wonderful is it to see these subspecies? It reminds us in a larger way of who we are and what we need to do. Please save the tulle Elk.

#5992

Name: Hartung, Bridgette

Correspondence: I urge you to adopt Alternative F, which would discontinue farming and ranching opportunities in the park and expand visitor opportunities. The preservation of native wild species must take precedence over farming and ranching activities. Grazing negatively affects ecosystems, causing water pollution and soil erosion, spreading invasive species and disease, and harming endangered species.

#5993

Name: Bruce, Patrik

Correspondence: I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly-and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

#5994

Name: Butler, Susan

Correspondence: Dear parks planning,I respectfully ask that you reconsider your plan to allow more grazing in the Pt Reyes area. at a time of extreme climate risk we do not need more cattle and less wildlife. wild species need more protected space. not less. don't make this decision from your desk go for a walk in nature and think about it and how your actions play into the bigger picture of our coast and our planet. regards, Susan Butler

#5995

Name: Bush, Sakina

Correspondence: Point Reyes National Park belongs to all of us. I value the few remaining wild and scenic places left in California and am writing to urge you to protect Point Reyes private business interests that would try to limit the protection, restoration, and preservation of this park. As a valuable part of our public heritage, wildlife and public access should take priority over commercial leases. I understand the value of agriculture, but it should not have undue influence in Point Reyes.

The recovery of Tule Elk is essential to native ecosystem restoration in Point Reyes which is an important to the Park's Service's mission. Tule Elk should not be shot, removed, or fenced. It is infuriating to me that private business people, ranchers, are subsidized. Our tax dollars should be funding the protection and restoration of our threatened ecologies, not promoting their demise.

#5996

Correspondence: Tule elk are an important part of the landscape at Point Reyes. Their recovery is a result of successful native ecosystem restoration, which is a key element of the Park Service's mission. It's taken a lot of time, money and effort to restore tule elk to Point Reyes, the only national park where they live. Tule elk should be allowed to roam free and forage in the park - not shot, removed, fenced or treated as problem animals.

The Park Service shouldn't allow any new agricultural activities at Point Reyes. Planting artichokes or other row crops will attract birds. And introducing sheep, goats, pigs or chickens will attract native predators such as coyotes, bobcats and foxes. Expanded ranching would only create new wildlife conflicts.

#6001

Name: Pritchett, Susan

Correspondence: Leave the elk where they are! Why do we always have to destroy one animal to accommodate ranching (i.e., wild horses, elk).

#6002

Correspondence: It is unclear to me as to why the NPS in the Point Reyes National Seashore appears to want to expand ranch and dairy activity through diversification within the park boundaries. For purposes of my comments when I refer to the park and NPS I mean Point Reyes National Seashore. As a local and frequent user of the park I have the following comments and questions: " Effect of cow waste on the water quality within the park affecting all native species, including seal pupping throughout the park. What studies show that effects and what are they? " Water quality in the park has tested very low in the past. What is the parks plan for improving water quality in the park and how ranches/dairies could possibly mitigate negative impact of cows on water quality? Has there been recent testing, what are the numbers, and how do they compare to past tests. " What is the effect of poor water quality on existing flora and fauna. Has it been studied? " The causal relationship of cow waste on the Johnes disease within the park: current infection rate in existing cow population and relationship to manure spreading in forage within the park. Has it been studied? " The practice of spreading cow manure slurry within the park and the effects of said activity on water quality, native flora and fauna, and the potential spreading of Johnes disease. Has it been studied? " What are the long term effects of bovine herds on erosion within the park? Has it been studied? " The lack of study of ranch/dairy operations on conflict with wild species other than elk. For example: What about the killing of native animals (nesting birds, juvenile mammals) when mechanically harvesting planted forage? How many animals have been killed during harvest? Has it been monitored and/or studied? " In discussions with park staff I was disappointed to hear that there has not been a program to monitor and hold responsible, with penalties, ranch/dairy conflicts with all wild species. " It has been reported that 112 native species compete with cows for forage. What are the negative effects on the native species of ranch/dairy? " With global warming affecting already unreliable rainfall in Northern California, how is it possible that the land can support ranches/dairies and native species? " A clear explanation of how ranch/dairy operations have become cultural as a mitigating factor while the oyster farm was not. It seems to me that the number of ranch/dairy operations in the area outside the park show that the ranch/dairy culture is secure in West Marin. " With park staff having been cut, how will the park monitor the expansion of permitted ranch/dairy operations and their effect on the flora and fauna in the park? Just trusting the ranch/dairy operation to comply is unacceptable. " If the operation of ranches/dairies is continued, what is the market rate for ranchland and how does the park determine fees to ranch/dairy operations. No discounts seem appropriate as the operators have been paid for the land. " Why has the NPS allowed existing ranches/dairies to take over land abandoned by family stakeholders instead of returning said lands to the public and native species? What benefits to the public or native species has this practice provided? " What benefit to the park and visitors would voiding the legislated requirement of ranch/dairy operators be kept in specific families. Should ranch/dairy leasing continue, there should be no open transfer of leases. " Why would it be beneficial to the public and native species to allow the planting of row crops within designated areas. What studies have been done on potential effects of said activities? Question of potential introduction of non-native flora. Would farm stands be allowed? " Within the published surveys done by the park I find no evidence that the continued existence of ranches/dairies is a priority to visitors to the park. " The surveys reveal that the greatest interest and desires of visitors is the preserved wildland and sanctuary for endangered Tule Elk. Why isnt that the main focus of the park? 41% of land in America is dedicated to cows; either their grazing or the raising of their food. What is the need to keep them in the park when so much of the country is already dedicated for cows. I think it is time for ranches/dairies within the park to end. Keep Point Reyes National

Seashore as wild as possible and protect the endangered Tule Elk. The land has been paid for and the need for ranches/dairies does not fill a cultural need significant enough that it requires the killing of Tule Elk as well as the negative impacts on the land and other wildlife in the park. The ranches/dairies should be gone within the proposed 5 year period without chance to rezone as implied (I believe to be Alternative F).

Name: N/A, N/A

Correspondence: I am writing in support of the free-roaming Tule elk herds at Point Reyes National Seashore. They don't have the ability to defend themselves against human insanity but I sure do. My voice is their voice and I'm using it to object to any fencing, removal, sterilization or killing of elk in the park.

The Tule elk recovery process has been a success story and putting an end to this story is a truly sickening display of how much some people care nothing for the natural world. Public lands by definition should be "open to all persons."

I am fully aware that cattle ranching and farming are needed to feed the community but that doesn't mean these operations get to dictate how PUBLIC lands are used. There are ways for commercial operations and wildlife to exist peacefully, it takes some ingenuity and serious conversations which I know for some people can be a daunting task but it needs to be figured out. I would like to know why Rep. Jared Huffman (D-Calif.) teamed up with Rob Bishop (R-Utah) to make an end run around an ongoing public-planning process. I don't think it's right on any level that congressional representatives are being given a say over a local issue when local voices are being ignored.

The mission of the National Park Service, as listed on your own site, is as follows: "The National Park Service preserves unimpaired the natural and cultural resources and values of the National Park System for the enjoyment, education, and inspiration of this and future generations. The Park Service cooperates with partners to extend the benefits of natural and cultural resource conservation and outdoor recreation throughout this country and the world." I wanted to remind you of that as it seems like the new directive of the NPS is very much going against its own purpose for being. Prioritizing the protection of natural areas should be first and foremost, not an afterthought.

I don't know if you've ever been to Point Reyes so I'm going to tell you about a very powerful experience I had while hiking there one foggy morning. My boyfriend and I headed out on the Tomales Point Trail that morning and could barely see the trail ahead of us never mind off to the sides where we heard the Tule elk calling out to each other. Their bugling is eerie under normal circumstances and even more so when you can't see them through the fog. Upon hearing the sound we both stopped to appreciate the moment we were given. We continued on and out of the fog we started to see a dark shape materialize out of nowhere. A couple of the elk were making their way down the hill and across the trail to the other side to graze. The elk were just as surprised to see us as we were to see them as the fog hindered all visibility. Not wanting to scare the elk we stayed back to respect their space and waited until they passed to the other side. Before completely clearing the trail one of them spotted us, saw that we weren't a threat, and continued grazing. To be acknowledged in such a way by a majestic creature is an experience like no other. To honor that special moment I got a tattoo of a stag with magnificent antlers that provides me with a daily reminder that nature is both strong and fragile.

The lands that are designated as National Parks are treasures not to be squandered to the highest bidder. I urge you to remind yourself of the NPS mission and the real reason for your existence. I feel blessed to be able to access such natural beauty and can relate to Theodore Roosevelt when he said, "There are no words that can tell the hidden spirit of the wilderness, that can reveal its mystery, its melancholy, and its charm."

#6008

Name: Ketelsen, Deborah  
Correspondence: Dear NPS,

It has come to my attention that the NPS has placed a larger value on Cattle rather than Tule Elk which have been part of Pt. Reyes National Seashore for decades. The Tule Elk populations have dwindled since the 1800's due to hunting and cattle ranching and now you basically want to exterminate them. That is what will happen if the NPS continues to allow the killing of Tule Elk if they "happen" to wander onto cattle grazing lands.

I love the outdoors, nature and everything she provides, and it puzzles me that NPS would allow such a thing. Seriously? Cattle over ELk? How many people benefit off the Cattle? A few lucky ranchers that get to graze their cattle on Public Lands. If you surveyed all the taxpayers in CA, you really think we would agree to this behavior?

Please take some serious time to re-think your archaic philosophy. I believe it goes against everything the Nation Park Service stands for. It's time to make a change.

Deborah Ketelsen

Correspondence: Discuss how wildlife and natural scenery motivate you to visit Point Reyes and other national parks. Point Reyes National Seashore is supposed to be managed under the Point Reyes Act for "maximum protection, restoration, and preservation of the natural environment." There's no mandate for prioritizing commercial agricultural leases on these public lands. Natural values, native wildlife, public access and enjoyment should take priority over commercial activities at Point Reyes. Tule elk are an important part of the landscape at Point Reyes. Their recovery is a result of successful native ecosystem restoration, which is a key element of the Park Service's mission. It's taken a lot of time, money and effort to restore tule elk to Point Reyes, the only national park where they live. Tule elk should be allowed to roam free and forage in the park - not shot, removed, fenced or treated as problem animals. Right now the Point Reyes ranches enjoy not only subsidized grazing fees and housing, but also taxpayer-funded infrastructure and road improvements, and publicly funded projects. But commercial activities at Point Reyes should be required to accommodate native wildlife - not the other way around. The Park Service shouldn't allow any new agricultural activities at Point Reyes. Planting artichokes or other row crops will attract birds. And introducing sheep, goats, pigs or chickens will attract native predators such as coyotes, bobcats and foxes. Expanded ranching would only create new wildlife conflicts. Cattle ranching should only be allowed if it's consistent with preserving the natural environment. And agricultural activities such as mowing shouldn't be allowed in park areas where they harm endangered species or wildlife habitat, impair water quality, cause excessive erosion or spread invasive plants/diseases. Cattle are the seashore's primary source of greenhouse gases. So the Park Service's preferred alternative is inconsistent with its own "Climate Friendly Parks" plan.

#6018

Name: Trost, Kimberly

Correspondence: To Whom It May Concern: I care about protecting California's wildlife. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

Thank you.

#6019

Name: Stein, Alvin

Correspondence: Stop the proposal to kill wildlife at point Reyes or myself and others will start a campaign to reduce tax dollars to your agency. This is immoral, unnecessary and costly to most citizens who are aware of the situation. Besides, ranchers are failing to protect their own livelihoods and want we recreational folks to support them. Wrong on all fronts. Thanks for your consideration.

#6020

And introducing sheep, goats, pigs or chickens will attract native predators such as coyotes, bobcats and foxes. Expanded ranching would only create new wildlife conflicts.

Cattle are the seashore's primary source of greenhouse gases. So the Park Service's preferred alternative is inconsistent with its own "Climate Friendly Parks" plan.

#6027

Name: Hiestand, Nancy

Correspondence: Last weekend I observed many Tule elk in Point in Point Reyes National Seashore as I hiked to Tomales Point. I was alarmed to learn today that the General Management Plan is proposing to dedicate one third of the national seashore to cattle ranching. Even more alarming is the plan to kill elk that are in that designated area. These are majestic animals whose population is already low. The Point Reyes Act calls for maximum protection and restoration of the natural environment. Making cattle ranching a priority does not fit with this mandate of protection.

I strongly support preservation of the natural ecosystem and the plants and animals that thrive there. Public access and enjoyment are also more important than commercial leases. The effort to aid the recovery of Tule elk by restoring the native ecosystem has so far been successful. Moving forward, the elk must be allowed to roam free, not fenced or shot. If there must be commercial enterprises, they must accommodate native wildlife.

I ask that the Park Service disallow any new agricultural activities at Point Reyes. Planting row crops will attract birds. Introducing additional domesticated farm animals will attract native predators such as coyotes, bobcats and foxes. More ranching would create new wildlife conflicts.

If cattle ranching should be allowed, it must be consistent with preserving the natural environment. Mowing shouldn't be allowed in park areas where it could harm endangered species or wildlife habitat, impair water quality, cause excessive erosion or spread invasive plants/diseases.

Please keep in mind the mission of the National Park Service.

Correspondence: Wild animals should always come before cattle in our parks. People do not visit parks to see cattle operations. This is so short sighted to favor cattle ranchers over the elk. I would like to see the cattle operations removed from the park entirely.

#6030

Name: Walton, John

Correspondence: As a frequent visitor to this park I encourage you to re-prioritize the National Park services mission to manage Point Reyes under the Point Reyes Act for "maximum protection, restoration, and preservation of the natural environment."

Tule elk are an important part of the landscape at Point Reyes. Their recovery is a result of successful native ecosystem restoration, which is a key element of the Park Service's mission. It's taken a lot of time, money and effort to restore tule elk to Point Reyes, the only national park where they live. Tule elk should be allowed to roam free and forage in the park - not shot, removed, fenced or treated as problem animals.

The impact from cattle ranching leads to soil erosion, water pollution, invasive plants, declines in fish and bird populations, conflicts with wildlife, and even more greenhouse gas emissions. Given our current climate crisis we should be doing EVERYTHING we can to decrease greenhouse gas.

Placing the financial interests of the ranchers above those of the public and the planet is simply wrong-headed and reckless. Please reconsider your plan and priorities.

Regards,

John Walton

#6040

Name: Glover, Storm

Correspondence: To whom it may concern:

My name is Storm Glover and I am an advocate for increasing bicycle access in the Pt. Reyes area.

I currently do not ride my bicycle in the area often, mostly due to the fast-moving vehicular traffic and limited trail access. I often ride past the area, wishing there was a way I could connect more of the roads and trails. I am also unsure of bike-legal routes and do not want to take those risks.

I appreciate and support the improvements in public and bicycle access outlined under Alternatives B, C, D, E and F. I strongly support proposals that would lead to the planning and implementation of bicycle routes on trails,

ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

These improvements are important to me because it would increase the ease of access for all bicycles to visit the Seashore. I would feel much safer riding in the Pt. Reyes and surrounding areas on trails, pathways and ranch roads, rather than on roads shared with fast-moving traffic. Bicycling opportunities are currently very limited and fragmented; connectivity improvements and the creation of new loop options would inspire me to spend more time at the Seashore and surrounding areas on my bike.

Looking forward to seeing the progress here.

Best, Storm Glover

Correspondence: Dear NPS,

I understand that you are reviewing the possibility of expanding bike access to the Pt. Reyes national seashore. I write as both an avid hiker and mountain biker. Please consider opening up more of the non wilderness parts of Pt. Reyes to mountain bikers. There simply are not enough places to ride - it's way out of balance with too many areas designated as off limited to mountain bikers. I enjoy sharing the trails with horses, hikers and bikers alike. Please do what you can to bring more balance to this, especially by opening up ranch roads to mountain bikers at Pt. Reyes.

Thanks for your consideration of my views.

Correspondence: Protect the elk and all of the natural world!

The small, mostly isolated population of Tule Elk are in danger due to cattle ranching at Point Reyes National Seashore. Point Reyes is currently the only national park in the country that hosts this subspecies of elk. Today, there are around 4,000 Tule Elk in total, all residing in California. This is in stark contrast to the population of 500,000 that existed in California just over 100 years ago.

Natural values, native wildlife, public access and enjoyment should take priority over commercial activities at Point Reyes.

Thank you.

Correspondence: We must protect our national parks at all costs. They are the legacy of every citizen of the United States. Their preservation and the waterways, natural resources, forests and the wild life therein as well as any recreational facilities must be maintained in good faith for generations to come without the invasion or destruction by fossil fuel companies or any third party trying to their resources for their own advantage or gain. This was clearly the intent of our forefathers and honored until the present time when the economic interests fossil fuel industry, corporate greed and shortsightedness threaten their existence and maintenance. These properties were meant to be recreational, inspirational, and educational, not to be threatened as resources for economic gain. Many were reserved as cultural assets and for the benefit of Native American communities residing within or nearby. Furthermore, in this time of rapid, negative , they climate change, they are essential to preserve endangered ecosystems and the very air we breathe.

#6057

Name: Garza, Anna

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

My family, grandchildren, and I often spend time on the Point Reyes Peninsula. The land, natural habitats, and wildlife there is very important to us as Californian citizens. We want to see this area protected and preserved for generations to come. I am horrified at the suggestion that the Tule Elk be killed off for the personal benefit of cattle ranchers. One animal is not more important than another. The Tule have resided on this land long before ranchers began to take advantage of it.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of

the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

Correspondence: I grew up in Marin. The day I got my driver's license I drove to Limantour. Whenever we could, our family enjoyed bicycling, hiking, beach walking and eating oysters in West Marin. When we would see Tule Elk, we would get so excited, because they are different and unique to the area. ANYTHING you do to curtail their freedom or harm them pisses me off. West Marin is one of the most beautiful places in the world and should not be regulated by cattle ranchers. The last time I was hiking in Marin I actually spent most of the time dodging cow patties! Elk are more harmonious with the natural environment than cows. You got rid of an oyster farm because it was not "natural". Get rid of the cows! Leave the Tule Elk to graze where they want. West Marin is a destination for tourists and nature lovers because of it's beauty and wildlife. Please protect the wild creatures that live there!

#6063

I go to Point Reyes regularly and I have always been disturbed that much of this public land is given over to dairy and cattle farming. I am outraged about this. Buy them out, let the people living there now stay for the rest of their lives - give them jobs in the park if they want; but get rid of all the cattle and then restore the land. You could get thousands of volunteers from the Bay Area to participate in restoration activities; there are millions of people in the Bay Area.

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

A national park is no place for livestock! I love seeing the wild tule elk there! Cattle contribute to global warming too, the world needs to learn to eat less meat.

A National Park should be a model for ecological principles.

Correspondence: To Whom it May Concern,

I am writing to OPPOSE The Point Reyes National Seashore General Management Plan Amendment and Environmental Impact Statement proposal that will dedicate one third of Point Reyes National Seashore to cattle ranching and includes plans to kill Tule elk that use the area. The stated mission of The National Park Service (NPS) is to preserve unimpaired the natural and cultural resources and values of the National Park System. When so many, many wildlife species are in steep decline in North America and worldwide, I am stunned to learn that the NPS is considering actions that could negatively effect the Tule Elk population when they number only around 600 animals. Expanding livestock grazing and shooting/hunting elk that wander into grazing areas is a despicable policy. Wildlife populations are at a significant and critical turning point due to loss of habitat and poor decisions and pressure by humans. Point Reyes National Seashore needs to focus on enhancing and protecting the Tule Elk and their habitat, not selling out to livestock interests! The National Parks are national treasures. Further erosion of ideals and policies related to preserving and managing these amazing assets is a sad statement about humanity. I implore the National Park Service to fulfill its mission!

Correspondence: My family of four recently visited Pt Reyes and the Tule Elk preserve in August. We loved our time hiking and listening to the sound of the Tule Elk. We visited Pt Reyes specifically because of the beauty of the park and the unique and wild majesty of the Tule elk. Pt Reyes National Seashore must be managed under the Point Reyes Act for "maximum protection, restoration, and preservation of the natural environment." The public interest, including taxpayer values, and protection of natural resources must be top priorities-and not the protection of a few private commercial interests. There is plenty of agricultural land and cows nearby on non-public land. Tule elk are an essential visitor draw and an important part of the landscape at Point Reyes. Their recovery is a result of successful native ecosystem restoration, which is a key element of the Park Service's mission. Tule elk should be allowed to roam free and forage in the park - not killed to allow domestic cattle. That is a horrible and tragic choice. Stop subsidizing private cattle owners and grazing fees and housing. Follow the Park Service mandate and protect public resources including the tule elk-a national treasure. The Park Service shouldn't allow any new private ventures in public land. Expanded ranching or agriculture would only create new wildlife conflicts. Analyze the cost to taxpayers to subsidize these private interests Analyze climate change impacts: Cattle are the seashore's primary source of greenhouse gases. So the Park Service's preferred alternative is inconsistent with its own "Climate Friendly Parks" plan. Protecting wildlife at a time of changing climate must be a federal agency priority.

Correspondence: You are going to shoot, and allow shooting, of Tule Elk to benefit the dairy industry?? Are you kidding me?

The National Park Service is siding with cattle ranching over the sole remaining and dwindling population of endemic Tule Elk?

What the hell is wrong with you? More to the point, how much are you being paid (bribed) to push this ill-fated plan?

#6086

Correspondence: To Whom It May Concern,

I recently heard that there is discussion that you may hunt/kill the Native Elk to allow more grazing for exploited cows, etc. This is very concerning to me given that this is public land. Please let the native elk live and wander in their natural habitat and stop leasing our public land for more cattle. The Elk deserve their land and it is not for you to decide to kill them so more private companies exploiting animals can prosper even more than they already are. I strongly urge you to take care of the native animals on our land and let the Elk stay.

Thank You, Sabrina Lundquist

Correspondence: Hello,

I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly-and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

Thank you, Ric Kelen

Correspondence: Thank you for taking public comments about Point Reyes National Park. To begin I am a huge fan of the outdoors and frequent our national parks and recreation areas with my family and friends. I'm very concerned about the elk population and what opening this area up to ranchers will do to the natural habitat. Please consider what we really need globally is to reduce greenhouse gases. Cattle farming will only increase these gases and add to the decline of the human race. We need to be progressive on a local level and promote leaving the natural habitat in place for future generations. You can be the forward thinking and acting force for others to follow. It will let the elk breed freely and let us all enjoy this pristine land for generations to come. This is an important issue and I'm so thankful you are open to hearing all sides.

#6099

Name: Maurer, James

Correspondence: I visit my cousins Ginny, Mary Kay and their families who live in Sonoma County every few years. Although that is the primary reason for my trips to California from Wisconsin the natural beauty and temperate climate is an extra bonus. I have been to Point Reyes National Seashore many times alone and with my cousins when they are off work. It is a place that has a wide diversity of habitats and stunning vistas. When Ginny emailed me information concerning the expansion of agricultural grazing on PRNS property I was extremely dismayed.

After studying the details I believe that it is obvious that expanding cattle and or dairy cow grazing is in direct conflict with the preservation of the native wildlife habitat which includes the fragmented habitat of the fragile population of the Tule elk. I also understand that the preferred plan of the National Park Service includes culling the already low population of Tule Elk by encouraging shooting Tule elk that cross into areas specifically designated for ranching. The NPS should put the sustainability of wildlife and their habitats as their top priority on PRNS property and not succumb to pressure from local cattle ranchers. To be clear I am in complete opposition to this grazing expansion option.

Correspondence: Do some to protect and save our California Tule Elk. My family visited Pointey Reyes last week to visit elephant habitat, near the Chimney Road. Thankfully, we could see two big groups of them by the beach.

On the way back in the car, my father -in-law has found a mother and a young Tule Elks standing, watching us in the distance on top of a small hill. They have been the owner of this land, since before we human build our own houses here. It's sad that their habitat is threatened as times goes, while people have rifles.

We visited bear camp visitor center, met this campaign front of the yard.

#6108

Name: Albertine , Gisele

Correspondence: To Whom it May Concern,

Thank you for accepting my comments on the NPS DEI on Point Reyes National Seashore.

I am strongly against using National Park Land for grazing cattle. Cattle are bad for our air and native wildlife. I don't go to National Parks to see cattle, but to see native wildlife, which will be damaged, even destroyed, by cattle grazing as a direct result of trampling land, polluting our water, and indirectly by the management involved in raising cattle..

My question is, why are a few ranchers getting priority over the public at large, and on PUBLIC land? Why are they even subsidized by taxpayer money?

Tule Elk are native animals, and should be given priority in our National Parks. We have already destroyed so many non-human species, for the sake of a few humans' wealth.

Please do as you state in your mission, protect and conserve "native species and ecosystem processes."

Prioritize and protect Tule Elk and all native species.

#6109

Name: Couch, Crystal

Correspondence: I am writing to STRONGLY URGE the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing and poses a threat to the environment and local wildlife. The land must be protected and used to serve the public good; the public land does not exist just for the financial benefit of the livestock industry. Decisions must be made that consider the common good - not just the bank accounts of an industry.

I STRONGLY OPPOSE Option B AND ANY OTHER PROPOSAL that would negatively impact Tule Elk or other wildlife to the SOLE benefit of ranching operations, and encourage the agency to adopt Option F to DISCONTINUE GRAZING and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#6115

Name: Shumaker, H. Dennis

Correspondence: Please do not favor cattle grazing to the detriment of the Tule Elk at Point Reyes.

- Wildlife and natural scenery are the primary reason I & my family visit National Monuments & National Parks. • Point Reyes National Seashore is supposed to be managed under the Point Reyes Act for "maximum protection, restoration, and preservation of the natural environment." The NPS has no mandate for prioritizing commercial agricultural leases on these public lands.

- The natural beauty of a National Monument or Park and the health & welfare of its native wildlife must take priority in NPS planning over any commercial activities at Point Reyes. • Tule elk are an important part of the landscape at Point Reyes. Their recovery is a direct result of the successful native ecosystem restoration by the NPS, which is a key element of the its Congressionally mandated mission. It has taken a lot of time, money and effort to restore tule elk to Point Reyes, the only national park where they live. Tule elk must continue to roam free and forage in the park - not shot, removed, fenced or treated as problem animals. The only problem here is cattle. • Right now the Point Reyes ranches enjoy not only subsidized grazing fees and housing, but also taxpayer-funded infrastructure and road improvements, and publicly funded projects. But commercial activities at Point Reyes must be required to accommodate native wildlife - not the other way around. • The NPS should never allow any new agricultural activities at Point Reyes. Planting artichokes or other row crops will attract birds. And introducing sheep, goats, pigs or chickens will attract native predators such as coyotes, bobcats and foxes. Expanded ranching would only create new wildlife conflicts. • Cattle ranching should only be allowed at Point Reyes if it's consistent with preserving the natural environment. And agricultural activities such as mowing must never be allowed in park areas where they harm endangered species or wildlife habitat, impair water quality, cause excessive erosion or spread invasive plants/diseases. • Cattle are the seashore's primary source of greenhouse gases. So the Park Service's preferred alternative is inconsistent with its own "Climate Friendly Parks" plan.

Name: Brewer, Anna

Correspondence: I object! For "maximum protection, restoration, and preservation of the natural environment" , Point Reyes National Seashore has to be managed under the Point Reyes Act! grazing is a private enterprise, what right do these ranchers have to put their cattle out in this protected natural area! This is unheard of and outright ILLEGAL! We want native wildlife protected at Point Reyes and Tule elk are an important part of this landscape now that they have recovered. No way to have them killed or fenced in again, this is truly contrary to the original plans. leave them be, and let them live without any disturbances from 2 legged invaders with their to be slaughtered cattle which does not belong here!

#6122

Name: Khalsa, Arjan

Correspondence: I ride my road bike from my San Rafael home to Point Reyes once a week. I wish there were bike trails within the park. My total ride is usually around 50 miles. When I arrive in the park, usually entering from the Olema hill and turning towards Bear Valley, I need to adjust to poor road conditions and limited shoulder space on the roads. Samuel P Taylor has better road conditions now and also has a bike path. Pt. Reyes generally has neither.

When I ride out towards Inverness and the northern beaches, the road conditions are terrible. Terrible. That said, Abbots Lagoon, Kehoe Beach, McClures Beach, and the Pierce Point areas are precious. I wish there was better bike access.

To me, the Bear Valley Visitors Center area is the heart of the park. I have taken school children (I used to teach), family, colleagues, and friends to this area for 40 years. I have seen fox, osprey, and white deer, along with countless other birds, mammals, and reptiles. I love the acorn woodpeckers right in the picnic area. But bike access is poor. Wouldn't it be great if family's could safely ride into Bear Valley and then onto the Miwok Village, and more easily make their way to Arch Rock?

I have visited Point Reyes National Seashore on a regular basis since the 1970's. I must have entered the park close to 750 times in my adult life and have visited most every portion of park. Our family moved to San Rafael in 1994 in large part because of our desire to visit Point Reyes often. We are avid hikers, bikers, bird-watchers, and nature lovers.

Correspondence: Dear NPS why can't you let these beautiful Tule elk live like they always have and not try to treat them like livestock. We always enjoy seeing them when we visit the Pt. Reyes lighthouse. Nature will thin the herd. Protect the Tule elk.

#6127

Name: Gee, Megan

Correspondence: I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly-and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

Correspondence: National Parks are for the use and enjoyment of the general public, not private industries! Why do we continue to subsidize ranching and agriculture on public lands when the only benefits are for those private industries? I have been to Point Reyes many times and loved seeing the elk on the coastal prairie. Expanded ranching and agriculture can only help degrade that environment, the very environment the National Seashore was meant to protect. Moreover, a management plan that includes killing a native species, elk, in favor of an invasive one, cows, seems completely contrary to the goals of national protected area.

In short, I do not agree with replacing conservation with cows and agriculture. Point Reyes National Seashore should not become Point Reyes National Cow and Farm Land.

Correspondence: To add to my letter: I choose Alternative "F." I am grateful that you are willing to give all Tule Elks their - Home back. They will be able to intermingle, and interbreeding, hence diseases will stop. There is other land for cattle, but not for the Tule Elk, especially the Drakes Beach Elk.

Dear National Parks Service, I am for Tule Elk to live since the dawning of their existence. As you know, but is worth a review, according to California Department of Fish and Wildlife, there are only approximately 5,700 Tule Elk today, while back in 1800, there were approximately 500,000 living in California, still - their only home. By 1870, only a few pair of Tule Elks were alive, but most believed that they were completely hunted to extinction. The protected status of Tule Elks still have not achieved their collective true herd status. According to The Sacramento Bee, at the end of 2018, Drakes Beach herd is comprised of only 124 Tule Elks, and in total 21 herds totaling 3,800 (so I don't know which is correct). Tule Elks are not only to be saved from death, but should be given the land their home as in year 1800. The Tule Elk (*Cervus canadensis nannodes*), the Flagship species for the California Floristic Province, one of the world's 25 biodiversity hotspots and most endangered Eco regions in North America need to continue to have their own space - their own home in order to connect with other Tule Elks for "managing" them is leading to inbreeding, which can have diseases. It is not about "deserve," but the right to - live. Cattle are considered invasive species, no matter what kind. So, especially when Tule Elk are listed as a protective species, I am alarmed and shocked that there is any question to not only end the killings of Tule Elk, but to find new places for the cattle to be, that actually may be better for the cattle in the first place. Please end the killings of Tule Elk, and focus on relocating the cattle, who again, are invasive species to there part of California, and were never meant to live together in the first place.

Sincerely, Shaiyel Seltzer

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

As a frequent consumer of grass-fed beef, free-range meats etc, I regularly support local businesses such as those ranching in Point Reyes. However I strongly believe the tule elk have eminent domain so to speak. They were here first, and we need to make every effort to return open space to as wild a condition as possible, as a bulwark against the rapid disappearance of species due to human activity. Ranchers can ranch elsewhere in Marin and Sonoma counties- -let the tule elk have Point Reyes back. Please adopt Option F- -thank you!

Correspondence: I am writing to urge the National Park Service to discontinue grazing beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing that poses a threat to the environment and local wildlife. The land should be protected and used to serve the public good and not solely to benefit the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife for the benefit of ranching operations. I encourage the National Park Service to adopt Option F to discontinue grazing and, instead, allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

Thank you for your care, concern, and consideration of this important issue.

#6140

Name: Thompson, Lawrence

Correspondence: When I visit Point Reyes, I want a nature experience. I don't want to see cattle, which are a major contributor to global warming. The Park Service's preferred alternative is INCONSISTENT with its own "Climate Friendly Parks" plan. Agricultural activities such as mowing shouldn't be allowed in park areas where they harm endangered species or wildlife habitat, impair water quality, cause excessive erosion or spread invasive plants/diseases. Mowing should be minimized because it contributes to global warming from fossil fuel use. No new agricultural activities should be allowed.

Tule elk are an enjoyable part of the landscape; their recovery is a result of successful native ecosystem restoration, which is a key element of the Park Service's mission. This is the only national park where they live, so they should be allowed to roam free and forage in the park, not bothered in any way.

#6141

Name: Esteve, Gregory

Correspondence: Tule elk are an important part of the landscape at Point Reyes. Their recovery is a result of successful native ecosystem restoration, which is a key element of the Park Service's mission. It's taken time, money and effort to restore tule elk to Point Reyes, the only national park where they live. Tule elk should be allowed to roam free and forage in the park - not shot, removed, fenced or treated as problem animals.

Cattle ranching should only be allowed if it's consistent with preserving the natural environment. And agricultural activities such as mowing shouldn't be allowed in park areas where they harm endangered species or wildlife habitat, impair water quality, cause excessive erosion or spread invasive plants/diseases. Commercial activities at Point Reyes should be required to accommodate native wildlife - not the other way around.

Cattle are the seashore's primary source of greenhouse gases. So the Park Service's preferred alternative is inconsistent with its own "Climate Friendly Parks" plan.

Point Reyes National Seashore is supposed to be managed under the Point Reyes Act for "maximum protection, restoration, and preservation of the natural environment." Natural values, native wildlife, public access and enjoyment should take priority over commercial activities at Point Reyes. There's no mandate for prioritizing commercial agricultural leases on these public lands.

#6142

Name: Lea, Susan

Correspondence: Hello, for more than 50 years I have headed out to Pt. Reyes and enjoyed the seashore and running paths. I personally observed cattle ranching in balance with the Tule Elk, so I wonder how it got to a place where there is an imbalance and lack of harmony? For 40 years, I heard of NO problems, so what is going on that has changed??? What are the optimum numbers for the elk and for the cattle that work so both can share this habitat? Please provide us with the studies and reports from which you are making your decisions. Of course, Tule Elk were present before cattle, but cattle make it possible for the ranchers to remain on the land, and we'd rather have ranchers than commercial resorts.

#6143

Name: Lowry, Marsha

Correspondence: The Point Reyes National Seashore is supposed to be managed under the Point Reyes Act for "maximum protection, restoration, and preservation of the natural environment." To use the lands for commercial agricultural uses is not what the area is supposed to be used for. It took a lot of hard work to reestablish the Tule elk in the area and are an important part of the landscape at Point Reyes. They are the natives, and should NOT have to justify their existence there. NOT treated as a pest. Agricultural grazing should only be allowed to keep Non native grasses & weeds in "check" Please consider the ramifications of these actions on the natural wildlife of the area, which you are entrusted to protect for ALL the community/public. Thank you for considering my views... Marsha Lowry

#6144

Name: Pierce, Nuri

Correspondence: Dear Sirs,

I see with alarm that our wild lands still insisting in giving priority to ranchers even if they sold their rights for their cattle to forage at Point Reyes to the people of America years ago.

It is time to face the fact that we are losing biodiversity at an alarming scale and cattle or sheep will not protect us from a future of diminishing returns and impoverished environment. As a botanist I have seen first hand the damages from cattle and the need for wild areas to safeguard our future. As I understand it has taken many years to restore the elk to the area, and they should be allowed to behave as wild animals that they are and not pursued and eliminated for getting in the way of business. No mowing, crops or alteration of the landscape should be allowed.

Businesses are the reasons why we are losing our natural world and we are in the situation we are today. It is the small decisions, keeping places wild at the local level that will permit the situation to improve. People want their businesses to survive and if they get more and more advantages there will be more and more people every time asking for more and more until there is not more wild left.

Please respect the Parks mission and support a natural environment, safeguarding the land for future generations. Thank you

We must move away from the use of animals for food. It is destroying our health and our planet. More than that, it is just wrong to kill animals for food, or for any reason. They deserve to live their whole lives, in peace, without fear or abuse. The animal agriculture business is a vile one, mainly for how it treats animals. Despicably. We must move towards a plant based approach to eating. If not, our world cannot be saved. I know that you know this. Please do the right thing and oppose Option B.

Thank you.

Correspondence: Oyster farmers were judged to be inconsistent with the National park and were removed. Precedent has been established. In the 60's the ranchers were judged inconsistent with the National Park and were paid to move. It is past time that they actually follow through on what they were paid to do. It is past time for the NPS to follow through on the directives to remove the cattle ranches.

#6155

Name: van der wal, susan & john

Correspondence: After careful consideration of all the alternatives, we support Alternative C.

There is a severe impact by the elk to the dairy cows/beef cattle grazing on the ranch lands competing for food and water (plus the added risk of Johne's disease). Fencing has been destroyed by the elk at great cost to the ranchers. Ranching is hard work, long hours, and does not make a lot of money. The arrival of the elk on the grazing lands has caused enormous stress and financial loss for the Pt. Reyes National Seashore ranches.

We support the 20-year leases and they should have been implemented shortly after Salazar's visits in 2012. This is crucial for the ranchers' planning financially.

You talk about the "Drakes Beach herd" of 120. I assume this includes the Estero bull herds seen from the trail in groups of 4, 9, & 12 in a wide area in the hills and by the old ranch road looking far south. We have seen as many as 36 bulls above the Estero. Also, there have been up to 10 bulls on the Mendoza ranch's west side. There are way too many bulls.

the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#6157

Name: Kramer, Matthew

Correspondence: Greetings, I ride bicycles on the roads and trails of Marin County, where I live with my wife and two elementary-school-aged children. My family also enjoys all sorts of bicycling, yet we seldom ride to or within Pt. Reyes National Seashore, because of poor connectivity of routes and because, especially with children involved, pedaling there alongside high-speed traffic does not feel safe.

I'm writing to voice my support for the improvements in bicycle and public access that are outlined under Alternatives B, C, D, E and F. Specifically, I am in favor of the following plan elements and trail connections:

- Collaboration with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands
- A connection between Devil's Gulch and Platform Bridge Road using existing ranch roads
- A connection between the Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail
- A connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads
- A connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads
- A connection between the Marshall Beach Trailhead and Pierce Point Road using existing ranch roads
- An Estero Trail loop using existing ranch roads

These improvements would make it much safer and more feasible for my family to travel by bicycle to and within Pt. Reyes National Seashore.

#6162

Name: jenkins, heide

Correspondence: Stop before California becomes an agricultural state like TEXAS with dead zones in our ocean waters, toxic algae blooms, and a major contributor to unbearable climate change.

#6163

Name: Kern, Casey

Correspondence: I strongly OPPOSE the National Park Service's proposal to continue livestock grazing within the Point Reyes National Seashore and North District Golden Gate National Recreation Area. I support Alternative F that would discontinue ranching operations and visitor opportunities would be expanded.

The Park Service confines the tule elk to under 3,000 acres of the 28,000-acre park, while allowing beef and dairy ranching to use more than one-third of the park. It's time our federal government stop propping up and using tax dollars to subsidize animal agriculture on PUBLIC lands.

Alternative F will serve the greatest number of Americans - - the vast majority of Americans want to visit a pristine Point Reyes National Seashore, not a park littered with animal agriculture. Animal agriculture or ranching is not a cultural resource - - rather it is an industry that has destroyed vast swaths of public and private lands, destroyed riparian areas and rangeland health, contributes to the climate crisis and causes immeasurable suffering to the animals exploited and killed.

Thank you! Casey Kern California Resident & National Park Enthusiast

#6164

Correspondence: Discuss how wildlife and natural scenery motivate you to visit Point Reyes and other national parks. Point Reyes National Seashore is supposed to be managed under the Point Reyes Act for "maximum protection, restoration, and preservation of the natural environment." There's no mandate for prioritizing commercial agricultural leases on these public lands. Natural values, native wildlife, public access and enjoyment should take priority over commercial activities at Point Reyes. Tule elk are an important part of the landscape at Point Reyes. Their recovery is a result of successful native ecosystem restoration, which is a key element of the Park Service's mission. It's taken a lot of time, money and effort to restore tule elk to Point Reyes, the only national park where they live. Tule elk should be allowed to roam free and forage in the park - not shot, removed, fenced or treated as problem animals. Right now the Point Reyes ranches enjoy not only subsidized grazing fees and housing, but also taxpayer-funded infrastructure and road improvements, and publicly funded projects. But commercial activities at Point Reyes should be required to accommodate native wildlife - not the other way around. The Park Service shouldn't allow any new agricultural activities at Point Reyes. Planting artichokes or other row crops will attract birds. And introducing sheep, goats, pigs or chickens will attract native predators such as coyotes, bobcats and foxes. Expanded ranching would only create new wildlife conflicts. Cattle ranching should only be allowed if it's consistent with preserving the natural environment. And agricultural activities such as mowing shouldn't be allowed in park areas where they harm endangered species or wildlife habitat, impair water quality, cause excessive erosion or spread invasive plants/diseases. Cattle are the seashore's primary source of greenhouse gases. So the Park Service's preferred alternative is inconsistent with its own "Climate Friendly Parks" plan

Correspondence: Discuss how wildlife and natural scenery motivate you to visit Point Reyes and other national parks. Point Reyes National Seashore is supposed to be managed under the Point Reyes Act for "maximum protection, restoration, and preservation of the natural environment." There's no mandate for prioritizing commercial agricultural leases on these public lands. Natural values, native wildlife, public access and enjoyment should take priority over commercial activities at Point Reyes. Tule elk are an important part of the landscape at Point Reyes. Their recovery is a result of successful native ecosystem restoration, which is a key element of the Park Service's mission. It's taken a lot of time, money and effort to restore tule elk to Point Reyes, the only national park where they live. Tule elk should be allowed to roam free and forage in the park - not shot, removed, fenced or treated as problem animals. Right now the Point Reyes ranches enjoy not only subsidized grazing fees and housing, but also taxpayer-funded infrastructure and road improvements, and publicly funded projects. But commercial activities at Point Reyes should be required to accommodate native wildlife - not the other way around. The Park Service shouldn't allow any new agricultural activities at Point Reyes. Planting artichokes or other row crops will attract birds. And introducing sheep, goats, pigs or chickens will attract native predators such

as coyotes, bobcats and foxes. Expanded ranching would only create new wildlife conflicts. Cattle ranching should only be allowed if it's consistent with preserving the natural environment. And agricultural activities such as mowing shouldn't be allowed in park areas where they harm endangered species or wildlife habitat, impair water quality, cause excessive erosion or spread invasive plants/diseases. Cattle are the seashore's primary source of greenhouse gases. So the Park Service's preferred alternative is inconsistent with its own "Climate Friendly Parks" plan.

Correspondence: Please protect the native wild life in Point Reyes National Seashore. The animal agriculture industry should not take precedence in the management of land at the cost of degrading natural habitats.

#6169

Name: Rawlings, Alex

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#6170

Name: N/A, N/A

Correspondence: I'm writing to support bicycling and public access improvements in the Point Reyes National Seashore to encourage healthy, safe and low-carbon methods of enjoying this amazing place.

I support the public access and bicycling improvements detailed under Alternatives B, C, D, E, and F under consideration and proposals that lead to planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to:

- 1) Connecting Devil's Gulch and Platform Bridge Road using existing ranch roads.
  - 2) Connecting Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail.
  - 3) Connecting Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads.
  - 4) Connecting Drakes Estero and Abbotts Lagoon Trail using existing ranch roads.
  - 5) Connecting Marshall Beach Trailhead and Pierce Point Road using existing ranch roads.
- and-
- 6) establishment of an Estero Trail loop using existing ranch roads.

I encourage NPS to collaborate with ranchers and other stakeholders including birders, nature lovers, hikers, bicyclists, and others to educate the public and address concerns related to public access on working ranch lands.

Also, I encourage the NPS to consider access bikes including Class A e-Bikes that can assist people who have some mobility limitations such as myself (mid-50s avid bicyclist) now purchasing a class A (<20mp, pedal assist) gravel eBike due to recent knee surgery. Such eBikes can coexist with regular bicycle and walking traffic since they have limited speed and require the bicyclist to pedal in order to engage the battery assist.

Since my injury, I have not been able to bike at or near the seashore, and I am no longer comfortable biking on paved roads with the increase in car traffic and incredible poor driving habits I see of people taking pictures with their smartphones while driving.

However, I do drive to the seashore to go birdwatching. Increased bicycling opportunities which currently are very limited and fragmented, would enable me to transfer my birdwatching to a more environmentally and physically sustainable form of transportation.

The improvements I support above would enable me and encourage my family to visit the Seashore more regularly-and by bike, eBike or both rather than by our electric car.

Thank you for considering my comments.

Correspondence:

I write in opposition to Option B and any other proposal that would be detrimental to Tule Elk or other wildlife and flora to the benefit of ranching operations. Expanded ranching operations will only serve to depress faunal and floral diversity, enhance runoff, and depress the quality of the Pt. Reyes ecosystems in general.

As this Seashore is a precious resource, and a fragile one, Option B does not serve the region or the broad user community of the Seashore at all.

Correspondence: Once again, I will state my opposition against this awful plan to kill the Tule Elk. These are public lands - - not private lands to be used for the gain of a few select individuals. We the taxpayers pay for these lands which means they are to be used by all. Native species should be protected on NPS land.

#6181

Name: miller, ray

Correspondence: Continuing to allow cattle ranching on any national park in 2019 is absurd. Doing this in Point Reyes National Park and the surrounding environs where Tule Elk live is even a worse idea. The world does not need another beef or dairy cow, probably ever, really. But there will probably always be enough cows to go around. Growing cattle is best done on private land. Public land should be just that, for the public and the flora and fauna that are native to that land. Why should we, or the elk be submitted to some domestic beast that eats all the native plants and fouls the water? I am so sick of the attitude of farming and farmers/ranchers, especially in the West, to claim that they need more land for their own benefit. What a selfish and self-serving and ignorant and greedy attitude. Please, for heaven's sake, have some back bone and do the right thing and cancel all the 'rights' and claims the 'farmers' have to this PUBLIC land and leave us a place to enjoy the natural beauty of the world, WITH THE NATIVE ELK ON IT. Jeepers, should we really have to keep campaigning for this stuff? Shouldn't it just be a little obvious now that this is the right thing to do?

#6184

Name: Votek, Joe

Correspondence: Dear Point Reyes National Seashore Superintendent, Please select the preferred alternative, "Alternative B" for the future of ranching in the Point Reyes National Seashore. I support agriculture in the Seashore and think it is a vital part of the region's history, culture, and current economy. I appreciate the time and effort that has gone into researching all options for the draft EIS. I support 20-year leases, the ability for farmers and ranchers to succession plan, and the opportunity for farms and ranches to diversify their operations to viability and sustainability adapt their operations for generations to come. I wish that the diversification was not so limited in scope or size, 2.5 acres around structures in ranch core with no irrigation and other restrictions is

cumbersome. In addition, the draft EIS would have been more complete if research was done on an option that includes an Elk Fence between the agriculture and wilderness area or Elk relocation to the wilderness area. Agriculture is a partner in natural resource conservation and preserving open spaces. Many of the beautiful natural landscapes in the US near large urban areas are preserved because agriculture was there first to curb development. Agriculture and nature do co-exist, we support the farmers and ranchers in the Seashore for their part in providing for the local foodshed in a sustainable way. Agriculture plays an important role in combating Climate Change by providing local food and carbon and greenhouse gas drawdown. Agriculture is important to me in the Point Reyes National Seashore, the preferred alternative B is the best option from the draft EIS.

Name: Lochtie, Byrd

Correspondence: It is my understanding that the National Park Service is dedicated to accommodating and protecting the natural environment of all our national parks. I am writing in favor of true protection for the Tule Elk at Point Reyes National Seashore Park, and I request that you consider the following points in your care and maintenance of Point Reyes and the Tule Elk there. The Tule Elk are found only at Point Reyes. The Tule Elk numbers have decreased dramatically over the last few years. The Park Service is allowing hunting of the elk when they stray into land that the Park Service has leased to ranchers. It appears that the commercial value of leasing has taken precedence over the health of the elk herd. I love visiting National Parks, but I do not want them given over to commercial pursuits or to grazing. The Park Service should not allow any more agricultural activities on park land. The Park Service should maintain all parks for maximum protection, restoration and preservation of the natural environment.

Please put the health of our National Parks before any commercial or financial gain.

Thank you, Byrd A. Lochtie

#6189

Name: Lord, Patrice

Correspondence: Please do not promote cattle grazing over the rights of the Tule Elk. I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

Correspondence: Please keep cattle out of our national Parks.

#6192

Name: BEARD, David

Correspondence: I have used the Point Reyes NP since the 1960's. I visit to enjoy open spaces, natural non-commercial areas with plentiful natural wildlife. Farms and ranches with domesticated commercialized animals do not meet these requirements. I am surprised these commercial agricultural leases on our public lands continue to be tolerated and haven't been eliminated by eminent domain. I don't see how allowing their operations in PRNP meets the stated "maximum protection, restoration, and preservation of the natural environment" requirements of your Point Reyes Act. Your planned actions seem to conflict with the Park Service's stated mission. Tule Elk are an integral part of the Park wildlife. With their range and numbers critically reduced your discussing commercial shooting, removal, and fencing clashes with their preservation and are an ecological outrage. Ranches and farms subsist on taxpayer-funded infrastructure and roads and subsidized grazing fees and housing. Pursuing such policy changes may result in revising public funding code eliminating these benefits. an angry taxpayer

#6193

Name: Shomer, Forest

Correspondence: Point Reyes is absolutely unique and deserves the greatest possible protection, including from non-native grazing animals. It's where I began to learn plant identification over 50 years ago. I hope to preserve that possibility for generations yet to come.

#6194

Name: Nichols, Beverly

Correspondence: As a member of the California-based international animal protection nonprofit organization In Defense of Animals with over 250,000 supporters, I oppose the National Park Service plan to kill native Tule elk, grow commercial crops, and permit ranchers to add chickens, turkeys, sheep, pigs, and goats to their exploitative operations. For this reason, I support Alternative F.

As national park land, this property was specifically set aside to protect, restore, and preserve the natural environment including the wild animals who live there. The original intention was to phase out dairy and cattle ranching, not add more crops or animals to increase ranching profits.

The proposed plan does not address the damage from grazing, including water-quality degradation and soil erosion. Also, adding new crops will create more conflicts with native wild animals.

Please abandon this inhumane and destructive plan by selecting Alternative F. I urge you to restore the Seashore's Pastoral Zone for wild animal habitat and repurpose historic ranch buildings for scientific research, interpretation, and public education.

#6195

Name: Elias, Jim

Correspondence: Pt. Reyes National Seashore is a public jewel. I visit frequently and especially enjoy the park from the seat of my bike. I am however concerned about my safety when riding the busy roadways, particularly on the weekends. My experience of these tremendous public lands would be greatly enhanced, and made safer, if there were more and better riding opportunities for cycling environmentalists like myself.

In particular, I want to voice my support for Alternatives B, C, D, E & F. I enthusiastically support trails, pathways and ranch roads that would enable me to get off crowded roadways and take in the park's natural beauty without fearing distracted motorists. Like other cyclists, I'd be especially thrilled to do loops rather than rides that terminate in dead-ends. Fortunately, multiple loops can be created by simply connecting existing routes and ranch roads, as outlined in Alternatives B-F.

Thank you for considering my comments. Please move toward making Pt. Reyes National Seashore a model of shared use that both protects and celebrates this public treasure by enabling and enhancing the visitor experience for people on bikes.

Jim Elias

#6209

Name: Von Dohre, Beverly

Correspondence: PLEASE do not harm the Tule Elk, either by killing or by giving birth control. They are such an important part of Pt. Reyes, and previously have been killed almost to extinction. Pt. Reyes National Seashore land already consists of ranches with cattle that damage and pollute the earth and water. Some times of year, the stench is horrific. I've heard that the ranchers trap and kill native animals, but there is so much secrecy. Most people, including docents, don't even know about the past pesticide spraying at Abbott's Lagoon to kill plants that are not even a problem, even though the poison endangers the Snowy Plovers and other birds and permanently contaminate the environment.

I'd thought there was a possible plan to eventually eliminate the ranches, but now they seem to have more power than ever. Why?

If the Elk truly are increasing beyond what the entirety of Pt. Reyes can take (and I mean instead of the cattle), why let some go to their old habitats on various park lands and open spaces like the EBRPD in the East Bay?

I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

Correspondence: I am writing to encourage the National Park Service to address the upcoming lease renewal for Point Reyes National Seashore with the focus on preserving this PARK for the public and future generations.

Surely you are aware of how grazing negatively affects ecosystems, causing water pollution and soil erosion, spreading invasive species and disease, and harming endangered species. Further, our national parks should NOT be used as cattle ranches for personal profit.

The preservation of native wild species, including elk, mountain lions, bobcats and other species are facing survival challenges like never before. Protecting wildlife and ecosystems must take precedence.

Correspondence:

Hello Suzanne,

The small, mostly isolated population of Tule elk are in danger due to the National Park Service's (NPS) commitment to cattle ranching at Point Reyes National Seashore. Point Reyes is currently the only national park in the country that hosts this subspecies of elk. Today, there are around 4,000 Tule elk in total, all residing in California; this is a stark contrast to the population of 500,000 that existed in California in 1880.

According to the NPS, in 2017 the number of Tule elk at Point Reyes was roughly 660, split between Tomales Point, Drakes Beach, and areas around Limantour Road.

The National Park Service's mission statement includes the claim that it "cooperates with partners to extend the benefits of natural and cultural resource conservation and outdoor recreation throughout this country and the world." However, the preferred plan of the NPS regarding the Tule elk in no way benefits natural and cultural resource conservation. The preferred plan of the NPS includes culling the already low population by encouraging shooting Tule elk that cross into areas specifically designated for ranching.

In this case, it appears the only partners to the NPS are those in the dairy or cattle grazing business. In 2017 the NPS settled a lawsuit whereby it became a requirement for the NPS to plan for any impacts as a result of cattle ranching, which includes over 26,000 acres of land at Point Reyes. It does not appear that the NPS is honoring this requirement.

In addition to the reduction of public access to recreation - another commitment claimed by the NPS in its mission statement - the impact from cattle ranching leads to soil erosion, water pollution, invasive plants, declines in fish and bird populations, conflicts with wildlife, and even more greenhouse gas emissions.

We are at a point where the climate crisis is a top priority and should be particularly so for a federal agency like the National Park Service that is widely relied upon to maintain healthy environments and natural resources. Disappointingly, the priority of this agency appears to be profit over the protection of the Tule elk, and therefore other wildlife populations as part of the cascading effect of using lethal means to decrease the already small number of Tule elk we have left.

**TAKE ACTION NOW:** [Click Here to Submit Comments Online](#) The Point Reyes National Seashore General Management Plan Amendment and Environmental Impact Statement is proposing to dedicate one third of Point Reyes National Seashore to cattle ranching and includes plans to kill off Tule elk that frequent the area. This plan only benefits twenty-four cattle ranchers who sold their land to the public 60 years ago, but still use Point Reyes National Seashore is supposed to be managed under the Point Reyes Act for "maximum protection, restoration, and preservation of the natural environment." There's no mandate for prioritizing commercial agricultural leases on these public lands. Natural values, native wildlife, public access and enjoyment should take priority over commercial activities at Point Reyes. Tule elk are an important part of the landscape at Point Reyes. Their recovery is a result of successful native ecosystem restoration, which is a key element of the Park Service's mission. It's taken a lot of time, money and effort to restore tule elk to Point Reyes, the only national park where they live. Tule elk should be allowed to roam free and forage in the park - not shot, removed, fenced or treated as problem animals. Right now the Point Reyes ranches enjoy not only subsidized grazing fees and housing, but also taxpayer-funded infrastructure and road improvements, and publicly funded projects. But commercial activities at Point Reyes should be required to accommodate native wildlife - not the other way around. The Park Service shouldn't allow any new agricultural activities at Point Reyes. Planting artichokes or other row crops will attract birds. And introducing sheep, goats, pigs or chickens will attract native predators such as coyotes, bobcats and foxes. Expanded ranching would only create new wildlife conflicts. Cattle ranching should only be allowed if it's consistent with preserving the natural environment. And agricultural activities such as mowing shouldn't be allowed in park areas where they harm endangered species or wildlife habitat, impair water quality, cause excessive erosion or spread invasive plants/diseases. Cattle are the seashore's primary source of greenhouse gases. So the Park Service's preferred alternative is inconsistent with its own "Climate Friendly Parks" plan.

"Point Reyes National Seashore remains the only National Park unit where tule elk can be found. The majestic animals you see as you travel through the park embody the restoration of the dominant native herbivore to the

California coastal ecosystem. They shape the landscape around them as they did for centuries before they were extirpated by humans. They symbolize the conservation of native species and ecosystem processes, one of the primary missions of the National Park Service." -National Park Service EPI

Name: Waters, Michelle

Correspondence: I am writing as a citizen who has been visiting Point Reyes for 35 years, to get a respite from city life, and to see and photograph wildlife. I urge the National Park Service to adopt Alternative F, ending ranching in Point Reyes.

I am quite disturbed to see the Park Service recommending an increase of ranching, and the recommendation that some of the Tule Elk be killed. This goes directly against the Park Service's stated mission of protecting natural resources. Cows are non-native and they are severely negatively impacting the land, native animals and ocean water quality in the Seashore. Tule Elk have always been native to this part of coastal California, and I'm one of thousands who come to hike the trails of Point Reyes every year hoping to see and photograph the elk. To this end my family and I have spent money taking interpretative classes, staying in local Point Reyes Station lodging and patronizing the shops and restaurants of Point Reyes Station and Inverness. We don't come to Point Reyes to see cows! We come to see and experience wildlife.

The National Park Service's obligation to preserve historic and cultural resources can be achieved through interpretative displays of historic ranching. The cows in the National Seashore are not historic; the ranch buildings and infrastructure are. Some of the ranches clearly don't want visitors, as evidenced by No Trespassing signs. I urge the Park Service to focus on preserving and interpreting historic ranching buildings to show how ranches operated, instead of perpetuating the environmental damage that the ranches are causing.

The NPS's mission doesn't include guaranteeing ranchers a living, and doesn't include allowing them to increase their operations on our public lands. There has been no discussion on how increasing ranching would impact the Seashore, and indeed no discussion of the serious negative impact to land and water from the livestock that are already at the Seashore. Further, the NPS has recommended increasing commercial ranching operations with no mind to impacts on the numerous native animals who inhabit the park. As someone who visits Point Reyes specifically to see wildlife, I'm very concerned about the negative impacts to native species from both existing ranching and the threat of increased ranching and other commercial operations.

I am against the proposed changes to succession which would permanently commit the National Seashore lands to ranching.

The Environmental Impact Statement discusses negative impacts of cattle grazing to native plants and animals, water pollution from cattle manure and greenhouse gasses from cattle ranching. Yet none of the proposed alternatives address mitigation efforts for the damage done over more than a century of cattle grazing. This is a gross oversight, and should be remedied. There should be discussion of costs and a timeline for mitigating the impacts of ranching to the Seashore.

In sum, I strongly urge the National Park Service to uphold the stated values of protecting natural resources by selecting Alternative F, to end ranching at Point Reyes National Seashore. This is the best and clearest way of

insuring that future generations of visitors will also be able to benefit from and enjoy a true wilderness experience with native wildlife.

Name: O'Brien, Vincent

Correspondence: I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly-and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

Name: Olrich, Krage

Correspondence: Access to trails for mountain biking are very limited in this area. I have only accessed Point Reyes National Park by foot because there is pretty much no access for mountain biking. The park is fairly big and allowing mountain bike access is the right thing to do. Mountain bikers in marin have been forced to all use the limited amount of bike legal trails in Marin County. Adding more access to mountain bike trails in other areas will help relieve the congestion on the few bike legal trails and the reduce the amount of trail conflicts with other users on those trails due to unproportional amount of trail users/mountain bike riders in one area. The park already allows horses at the park in Point Reyes and there is plenty of space within the park to allow mountain bikes access to existing trails and to allow mountain bikes to be part of the team in maintaining existing and possibly adding new trails in the area to create a workable solution. Thank you!

#6231

Name: Cunningham, Margot

Correspondence: I have been coming to Pt. Reyes National Seashore for over 4 decades because I want to see the native plants and animals in their native landscapes.

But hiking, birdwatching, wildlife photography, wildflower-viewing, and other recreational activities are limited by barbed-wire fences, gates, and what seem like private ranchlands that are actually fully owned by the public, inside Point Reyes National Seashore and Golden Gate National Recreation Area.

The management of the Seashore is overbalanced in favor of commercial ranching interests. Park management needs to be re-balanced towards the protection and restoration of natural resources, consideration of recreational opportunities, and the preservation of historic barns, as well as increasing the interpretation of the history and cultural landscapes of the region.

The NPS cites its obligation to preserve historic and cultural resources. Some of the ranch buildings and infrastructure are historic, but permitting 6,000 cattle in the park or allowing additional agriculture that never before existed at the Seashore are not historic resources and should not be allowed. The park can educate the public about historic and cultural resources with interpretive signs and trails and NPS-initiated programs, not by encouraging private enterprises through extended ranch leases and expanded forms of agriculture and commercial enterprises. The NPS mission does not include lining the pockets of private enterprises.

Congress established the Seashore in 1962, In order to save and preserve, for the purposes of public recreation, benefit, and inspiration, a portion of the diminishing seashore of the United States that remains undeveloped. (Sec. 459c. Point Reyes National Seashore enabling legislation)

And protection, restoration, and preservation of the Seashore was a priority: &the property acquired by the Secretary under such sections shall be administered by the Secretary without impairment of its natural values, in a manner which provides for such recreational, educational, historic preservation, interpretation, and scientific research opportunities as are consistent with, based upon, and supportive of the maximum protection, restoration, and preservation of the natural environment within the area,& (Sec. 459c-6.)

The mission of National Parks is to protect native plants and animals. The 1916 National Park Service Organic Act makes protection of natural resources the highest management priority in decision-making for all units of the national park system, including seashores and recreation areas:

100101. Promotion and regulation (a) In General.-The Secretary, acting through the Director of the National Park Service, shall promote and regulate the use of the National Park System by means and measures that conform to the fundamental purpose of the System units, which purpose is to conserve the scenery, natural and historic objects, and wild life in the System units and to provide for the enjoyment of the scenery, natural and historic objects, and wild life in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.

But if the National Park Service approves their Preferred Alternative (Alternative B), livestock will be protected and promoted at the cost of native plants and animals. Currently 24 ranchers hold lease/permits on 18,000 acres of Point Reyes and 10,000 acres of the north district of Golden Gate. Approximately 2,400 animal units of livestock for beef ranching and 3,315 dairy animals are currently permitted, and this would continue if the park approves Alternative B (with a slight increase in dairy cattle). This amount of cattle has impoverished the native coastal prairie habitat and threatened native wildlife, such as coho salmon, steelhead trout, California freshwater shrimp, and Western snowy plover.

The Environmental Impact Statement expresses that the land, water, and wildlife of the Seashore are being harmed by cattle grazing.

Livestock have degraded and destroyed native coastal prairies, meadows, riparian areas, and wetlands on the Seashore. They have impacted water quality. Fecal coliform bacterial pollution from the dairies on Point Reyes are

causing unacceptable water quality human health hazards on beaches on in Tomales Bay. Cattle pollution is also impacting Cordell Banks and Greater Farallones National Marine Sanctuaries in the Pacific Ocean off the coast of Point Reyes. The parks proposals for improving water quality and dealing with the large amounts of cow manure are inadequate and unspecific.

High potentially pathogenic bacteria counts have been measured in Kehoe Creek and Abbotts Lagoon, and many samples exceeded the potentially pathogenic bacteria standard. Stormwater runoff from dairy manure management pools and pastures has contributed to hazardous water and beach conditions for park visitors. One mitigation attempt was to construct a modern dairy loafing barn on I Ranch to try to contain the manure more effectively, but this does not meet with historic district standards. The impossibility of managing a safe park with historic and biological resources preserved for visitor enjoyment is apparent in the parks ranching proposal.

Sensitive springs in the ranching zone would be developed for livestock watering facilities with pipes and troughs, as many are today, which is unacceptable in a national park that was designated for natural resource conservation, not business operations.

Alternative B calls for culling free-roaming native elk in the Drakes Beach and Limantour herds. These elk, the true historic occupants of the Point Reyes peninsula, were released into the Phillip Burton Wilderness within Point Reyes National Seashore to be free-roaming, not behind fences, as the original legislation forming the park intended.

The native free-roaming tule elk herds are small compared to the cattle herds in the Seashore. And tule elk have an estimated AU equivalent of 0.26 to 0.47 at Point Reyes-they weigh much less than one cow animal unit. The Drakes Beach tule elk herd consists of 124 animals and the Limantour herd has 174, and these herds follow local seasonal migrations into different areas, concentrating and breaking up into smaller herds during and after the late summer rut. This leads to some elk often spending time in the cattle pastures within the park. Yet instead of reducing cattle numbers and geographic extent, the park service is proposing to shoot these elk if they cross over barbed-wired fences into ranches, and their meat donated to charities or tribal groups.

This proposal goes against the goals of the 1998 Tule Elk Management Plan to maintain viable populations of a free-range elk herd in Point Reyes and to manage with minimal intrusion to regulate population size, where possible, as part of natural ecosystem processes.

Tule elk on Point Reyes National Seashore suffer from Johnes disease contracted from cattle, and in places have nutrient deficiencies and low birth rates. The best management of elk on Point Reyes National Seashore would be to remove the 3-mile-long fence that contains the 432 tule elk kept in the Tomales Elk reserve, and allow them to roam freely into the rest of the park. Point Reyes elk are believed to be among the most inbred in California, having lost an estimated 80% of their retained genetic variability. Instead of confining and culling them, the National Park Service should be considering a program of selected translocation from other more genetically diverse tule elk herds in California, in order to diversify the genetics of the Point Reyes tule elk population.

Livestock operations on the Seashore have increased populations of non-native and invasive plants, which dominate the vegetation in grassland zones. Continuous heavy grazing and trampling with high cattle stocking rates keeps these grasslands at an early seral state, which favors non-native weeds and does not allow the formation of native coastal prairie and valley grassland within the planning area. The park is proposing to use herbicides to control invasive plants, but they will continue to spread because of disturbance from cow hooves and grazing.

Ranchers have to truck in tons of alfalfa hay and grow hundreds of acres of silage, which contains invasive weeds such as mustard and radish, on park land that should be habitat for native plants and animals. In fact, the native coastal prairies have been all but eliminated from most of the cattle-grazed lands, and the native plant communities converted to European weedy grasses and forbs.

The proposed Pasture subzones of Alternative B would allow seeding and mowing of vegetation for livestock production in over 9,000 acres of the Seashore. And the Ranch Core subzone would allow row crops, new buildings, and onsite farm processing plants.

These high-value and beautiful national park lands should not be converted into cattle feedlots and farm operations. Private interests should not be able to diversify their income at the expense of public lands, recreational opportunities, rare species, and native ecosystems. National Park lands are meant to preserve, restore and interpret nature and history for the public benefit, not cater to private modern industrial interest groups.

The parks proposal is too vague and limited concerning monitoring and mitigation to protect water quality, rare species, and habitats. Costs and timelines for mitigation are not given. Enforcement of rancher compliance will likely not be effective given the current poor quality of the pastoral zone. Internal Park Service memos indicate monitoring the ranches for lease compliance and environmental damages already places outsized demands on the Seashores staff and budget. The NPS has failed to enforce lease agreements when leases are violated.

The park proposes to use adaptive management in order to try to limit cattle damage to sensitive resources, but this strategy postpones figuring out the details of management until a future time and may never happen. Much more detail is needed now of how tule elk, other wildlife, and native habitats will be protected.

Alternative F would discontinue ranching operations and cattle grazing, and allow tule elk to establish new herds in the pastoral zone of Point Reyes National Seashore. I support this planning alternative.

#6232

Name: Weinstein, Joseph

Correspondence: I urge the National Park Service to discontinue cattle grazing at Point Reyes National Seashore. The terrain and local native wildlife have been and are adversely impacted by livestock grazing.

Yes, I know quite well from experience, notably my earliest visits in the 1950s (BEFORE establishment of the Seashore!) and into the 1970s, that some amount of ranching - primarily for dairy cattle - has long been in place at Point Reyes.

However, it is now high time - even past time - for phase-out, to provide more consistent protection and welcome for habitat and native wildlife and for us human visitors. Compared with half a century ago, this 'island in time' is now much more valuable as a unique natural space and merits enhanced and stricter protection as such.

#6234

Name: Baum, Bruce

Correspondence: I reject the NPS Alternative B as the "Preferred Plan".

I support Alternative Plan F for the following reasons:

NPS is proposing changing the founding legislation that was passed by congress. Founding legislation can only be changed by an act of Congress or a vote by the voters of the US.

Founding legislation does not allow the transfer of leases (succession) to third parties.

Continuing to allow cattle in the Point Reyes National Seashore will perpetuate Johne's Disease, a.k.a. MAP (Mycobacterium avium paratuberculosis). Johne's Disease has been passed on to the Tule Elk. This disease has been linked to Crohns disease in humans. <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4894645/>

Additionally, what are the long term effects of bovine herds on erosion within the park? Has it been studied?

Allowing the ranchers to conduct roadside produce stands is not consistent with U.S. National Parks.

Allowing the ranchers to operate Bed & Breakfast lodging creates energies and commerce that is not consistent with the founding legislation of PRNS.

PRNS is a National Park not an amusement park.

#6235

Name: Yordon, Alexis

Correspondence: Public land - aka the land I own as a taxpayer - is to be kept in a condition that allows the native fauna to flourish. Enough with the extermination of native species for the betterment of cattle!

#6236

Name: Fischer, Dennis

Correspondence: I express my position that the NPS should adopt alternative F to end ranching and dairy operations in Point Reyes National Seashore (PRNS). I do not support NPS's preferred alternative B-which continues use of public land to ranch and dairy operations that prioritizes these commercial activities over recreation, wildlife and protecting natural resources. The reason I visit PRNS is to see wildlife, not cows. As I understand the role of the National Park system, its role and mission of is to protect native plants and animals and not to be a home for commercial ranching and dairy operations. This is especially troubling to me as the commercial market for dairy milk in the U.S. has been steadily declining since 2010 per USDA data. More than a century of continued cattle grazing has upset the natural ecosystems of the park. It is upsetting to see the degraded land that has resulted from cattle grazing. From the above, here are my lists of questions: 1) In all the GMP alternatives presented except for (A) and (F), there are provisions for diversifying the existing ranching and dairy operations to allow production of pigs, sheep, goats, and chickens. I did not find any estimate in the EIP of how these expanded extractive operations would impact wildlife, natural resources, and pollution. Has this been studied and its impact assessed appropriately in formulating the NPS' recommendations? 2) In formulating its GMP recommendations, the NPS cites its obligation to "preserve the historic and cultural" resources of PRNS. Other than the non-working ranch at Pierce Point, there isn't any other interpretation facility at PRNS. The public is generally unwelcome at the operating ranch and dairy operations. Why would it not be possible to preserve the historic cultural aspects of PRNS without having 6,000 cows? In fact, if there were no operating ranches or dairy operations, would it not be possible to broaden public facilities that preserve and document these important elements? 3) In the U.S., extractive industries have a requirement to plan, budget and be held responsible for the costs and operations to properly abandon their extractive activities. The alternatives that call for continued ranching and grazing do not discuss the costs to restore the park from the impacts of ranching-water pollution from manure runoff, loss of natural habitat from grazing, greenhouse gases (cattle are the leading source in the park), and air pollution from cattle operations. Has this been studied by the NPS and what would be the restorative costs when ranching and dairy are stopped in PRNS? 4) What portion of the NPS budget goes to ranching while park improvements, maintenance and public programs and interpretation are unfunded? NPS funds should be going to improving the park for wildlife and the public. Over \$132 million was attributed to tourism at PRNS in 2017. Tourism is more profitable, economically viable and environmentally viable than dairy farming and ranching. 5) Finally this week has included much discussion on climate change and wide participation by youth in the Climate Strike. As the GMP purports to be a plan for the future, what is NPS' position and plan on climate change and why is there no discussion of climate change as it relates to the NPS' preferred alternative and the ongoing and expanded greenhouse gas emissions these operations would generate?

Re: Comments to Point Reyes National Seashore GMPA/EIS

I have lived in Marin County, California for more than 40 years and in that time have visited Point Reyes National Seashore regularly for birding, hiking, viewing wildflowers, and photographing wildlife.

I have worked in government and the nonprofit sector, including as Special Assistant to the Secretary of Environmental Affairs for the Commonwealth of Massachusetts; founder of the Massachusetts Environmental Trust; Acting Director of the Greenbelt Movement International; and Vice President for the Trust for Public Land. I currently consult with public agencies, foundations, and nonprofit organizations. Past clients include the Golden Gate National Recreation Area and Point Reyes National Seashore Association. I also served as a volunteer for the GGNRA.

I am saddened and discouraged by the degenerating conditions at Point Reyes National Seashore as a result of decades of year-round cattle grazing. Overgrazed land, barren feedlots, rutted hillsides, fetid manure ponds, polluted waterways, and fenced wildlife are not what one expects nor wants to see in a national park. The deterioration of the natural resources at Point Reyes Seashore reveals a lack of capacity and/or unwillingness on the part of park management to address obvious, ongoing and systemic problems that endanger the biological integrity of the national seashore.

The Draft General Management Plan Amendment and EIS, and the Park Service's "preferred" Alternative B-represent an abdication of the NPS's core mission: to conserve our national parks "by such means as will leave them unimpaired for the enjoyment of future generations. Under the influence of ranching and dairying interests, these fundamental precepts of the National Park Service have been left behind. Ongoing and irreversible impairment of the Seashore is guaranteed.

In Alternative B the NPS gives preference to 18 beef and 6 dairy ranchers over millions of park visitors and has consented to ongoing destructive impacts to the public's land, subsidized at public expense. The NPS's EIS presumes ranching will continue indefinitely, and fails to sufficiently analyze the benefits of retiring and repurposing ranch facilities for public uses.

In the GMPA/EIS the health and biodiversity of national seashore and its two-and-a-half million annual visitors are subjugated to the increasing demands of two-dozen tenant ranchers in these national parks. Neither the Organic Act of 1916 nor the legislation establishing the Point Reyes Seashore, (16 USC Sec 459c) includes language that commits the NPS to ensure the commercial success of private businesses operating in national parks. Leasing the land for ranching at Point Reyes National Seashore is discretionary. Nothing in the legislative record of the Seashore supports the myth of ranching in perpetuity. Specifically stated is that the land should be

"unimpaired for future generations" and that uses be "supportive of the maximum protection, restoration, and preservation of the natural environment within the area (16USC Sec. 459c (6)(a)). Ranching, as conducted at the Point Reyes National Seashore and GGNRA, undermines this mandate.

1. Not discussed in GMPA/EIS: How and when will the NPS set goals for the "maximum protection, restoration, and preservation" of the Seashore and how will progress be measured? What is the timeframe for meeting them? What new or additional management methods will NPS implement to ensure the "maximum protection, restoration, and preservation" of the Seashore, per its legislative mandate? What are the costs of attaining "maximum protection, restoration, and preservation" and what resources has NPS allocated for this purpose?

The GMPA/EIS discusses the many and various environmental impacts of ranching to the Seashore but fails to rate the intensity of these impacts. The public can only guess at the significance of these documented impacts but has no way to know if these impacts are low, moderate or high.

2. Not described in GMPA/EIS: In addition to describing the environmental impacts of ranching to park resources, how does NPS rate those impacts? How will these impacts be mitigated and at what cost?

The economic benefits described in the GMPA/EIS point to a relatively small economic return to the County from the Seashore ranches. It cites the potential loss of fewer than 100 jobs should ranching end.

3. There is no mention in the GMPA/EIS of the working conditions of ranch workers or the notoriously sub-standard housing conditions of workers in the Seashore. Under Alternative B, how will the NPS oversee and improve the working and living conditions for ranch workers? What standards currently exist and how are they maintained?

Ranching is one of many "resources" listed in the NPS's 2019 draft Foundation Document for the Seashore. More than other historic, cultural or natural resources, ranching has been enshrined in the park, and unquestionably consumes park funds and staff resources that could address the Seashore's many unmet needs.

4. The GMPA/EIS does not provide the costs of supporting the ranches, nor the proportion of the budget/staff dedicated to ranching relative to other park resources described in the Foundation Document, which include wilderness, coastal landscapes, marine, estuarine and freshwater environments, diverse habitats and native species, maritime cultural landscapes, continuum of human use (including ranching), opportunities for inspiration and recreation and science and learning. Such analyses are pertinent to the economic impact of increasing support for ranching at the expense of other unmet needs identified for funding.

The NPS has generously subsidized ranches for decades citing its mandate to preserve "historic and cultural resources." In fact, ranching as practiced at the Seashore today bears little resemblance to historical ranching. The NPS has never interpreted the working ranches in the park for park visitors. In fact, the public is unwelcome on ranchlands that we, the public, own. The National Register of Historic Places now includes Seashore ranches. Noteworthy is that the National Register does not require active ranching-let alone on any commercial or industrial scale- as a condition of historic designation. It does, however, convey the expectation that historic structures will be preserved. The addition of modern infrastructure-such as a massive "loafing barn"-raises the concern that the NPS willingly compromises the historic integrity of the ranch districts while claiming to preserve them.

5. By what historic measure is the NPS permitting more than 5,700 beef and dairy cows to graze in the national seashore? How does new infrastructure, such as a "loafing barn," impact the historic integrity of the ranching district? Under what circumstances will the public be afforded an opportunity to comment on impacts of such "improvements" to the ranches? How will the NPS ensure the preservation of historic structures/districts in the future? How will the preservation and interpretation of historic ranches be funded? How and when will the historic ranches be interpreted for the public? The GMPA provides no adaptive reuse plan for structures on

decommissioned ranches. Repurposing historic and cultural structures for public use, interpretation and other visitor benefits needs to be analyzed in under Alternative F.

Conflicts between ranchers and members of the public, and illegal "No Trespassing" signs are well known to the Seashore management. In addition are numerous documented violations of lease agreements and park regulations on the part of ranchers. Documents obtained under FOIA cite violations including overstocking cattle; chasing elk with ATVs and dogs; lack of adequate fences; failure to pay lease fees; refusal to cooperate with NPS's wildlife and rangeland staff; illegal dumping of cattle carcasses in the park; and overallotment of lands for hay and silage. The NPS continues to lease these public lands to these same ranchers and facilitates their entrenchment and expanded imprint on the Seashore.

6. Please explain in the GMPA/EIS whether and how ranching operations are evaluated before renewing or disallowing leases? Has the NPS ever denied a lease for violations or other failures to perform? In what way are ranchers held accountable for lease violations? How many ranches are historically and currently out of compliance? How does the NPS remedy repeat violations? With dwindling budgets and staff, how will the NPS monitor the ranches and enforce lease conditions that are becoming increasingly complex?

Some ranch residences appear unkempt, with cars and other unsightly junk visible to the public.

7. Not discussed in GMPA/EIS: How will the NPS perform its mandate of preserving the scenery of the national park on unkempt leased lands?

Dairy ranches are trampled to bare dirt with mountains of manure visible to park visitors. Dairy operations also raise concerns about animal welfare.

8. Not discussed in alternatives for continued ranching: How will the NPS perform its mandate of preserving the natural resources and scenery on dairy ranches? How does the NPS monitor the ranches to ensure animal welfare? What are the standards for the humane treatment of cattle herds and other proposed domestic livestock in the park? How are these regulations monitored and enforced?

The Seashore is suffering from Congressional budget cuts and insufficient staff.

9. How will the NPS perform the oversight and maintenance required of expanded and more complex ranching operations described in Alternative B? What impact will the demands of Alternative B have on general park maintenance, security, programs or visitor services, compared to the No Ranching, Alternative F?

Diversification of previously unauthorized livestock-pigs, sheep, goats, and up to 500 chickens on each ranch is an unprecedented change in policy. It will impact park wildlife, particularly birds and park predators. This but is insufficiently discussed in the GMPA. Ranch tours, homestays, processing facilities and farm stands for private gain have no place in a national park.

10. The GMPA/EIS fails to address the potential impacts of "diversification" to wildlife? How will these impacts be addressed, and at what cost? The GMPA/EIS is silent on this question, implying a "just trust us" approach. (When asked at the public open house, what the NPS will do should a coyote, bobcat, or fox "take" small livestock, the Seashore's wildlife biologist answered, "We'll see.") There appears to be nothing in the GMPA/EIS that addresses the loss of wildlife to guard dogs or the possible poaching of "nuisance" wildlife, (other than Tule elk). These impacts must be analyzed and considered prior to approving diversification, the benefits of which appears to accrue solely to ranchers by expanding their revenue streams. Further commercializing the park with retail outlets and overnight stay also benefits rancher' bottom line. The GMPA does not describe diversification's potential benefits to the public or to the park's natural resources and wildlife.

The land where confined Tule elk graze is visibly more diverse with native plant species than land grazed by domestic cattle. Yet, consistent in its preference for ranching over wildlife, the NPS bases its analysis on the

maximum number of cattle that can be grazed based on historic conditions (presumably 5,700). It bases the threshold number of native elk (120) on what forage is left after the maximum number of cattle have had their fill. The NPS provides no analysis of the number of elk that could be sustained in the park were there no competition from cattle. Because elk roam and graze more lightly than cattle, theoretically the park could support native Tule elk in numbers greater than the 5,700 cattle it allows in the park. Reportedly, 1,000 elk historically roamed the Point Reyes peninsula.

11. The GMPA/EIS does not provide this alternative analysis: How many elk the park can sustain were no cattle present, is necessary. It would include the number of elk sustainable using historic conditions; how many elk would be needed to control the presumed proliferation of invasive plants to allow the native plants recover over time; NPS recovery goals for native plants, and an accompanying management plan and timeline; and the economic impacts of redirecting funds currently used to subsidize cattle operations to restoring native plants and wildlife.

The Organic Act mandates that the NPS preserve wildlife in the national parks. Yet, native Tule elk at Drakes Beach will be "managed" to 120 solely to accommodate the special interest of private ranching. In addition, any elk foraging on leased lands will be shot because they affect ranchers' profits.

12. Only one alternative in the GMP/EIS is consistent with the Organic Act. That is Alternative F, which would allow elk to expand their range.

The NPS has long tolerated the loss of wildlife and habitats from silage and haying operations to support the cattle operations. According to a 2015 report by Point Blue Conservation Science, "Estimating Impact of Mowing in Silage Fields at Point Reyes N.S. on Breeding Birds," spring mowing macerates ground-nesting birds and small mammals, which attracts ravens and crows. Ravens and crows congregating at the ranches are the leading cause of predation on Snowy plovers, an endangered species that nests on Seashore beaches. The NPS dedicates significant resources to protecting the plovers, but efforts are hampered by predation. Ranching is at odds with the Snowy plover recovery efforts. Current mitigation is proving insufficient and continued failure risks the loss of the endangered species.

13. Though it acknowledges that impacts, including to endangered species, would be removed were ranching discontinued, the GMPA/EIS fails to provide any analysis for its position to perpetuate and expand private ranching. How will the NPS mitigate for impacts that jeopardize the survival of a listed species, including the Snowy plover? Will species recovery efforts include exterminating other native species-raven and crow?

Restoring endangered Coho salmon is the goal of a multi-million dollar, multi-year project on upstream parkland. The survival of the last remaining Coho salmon on California's Central Coast is at risk. Yet, bacterial counts from cow-manure runoff into salmon and steelhead streams threaten the recovery of these and other aquatic species. Currently, state-issued waivers allow ranchers to pollute park streams and estuaries with manure runoff that ultimately degrades bay and marine environments. State water pollution waivers do not absolve the NPS of responsibility to minimize the sources of pollution on federal parklands.

The most effective mitigation would be to discontinue private ranching in the park, which is undermining substantial public investment in the recovery of salmon, steelhead and other aquatic species discussed in the GMPA/EIS.

14. What is the NPS's plan to prevent manure runoff from the park, clean up polluted streams and improve conditions for Coho, steelhead and other threatened aquatic species?

Following the purchase of the ranches, the federal government allowed members of the immediate family of the original ranchers to continue ranching in the park after the life estate or the original rancher expired.

15. Should the immediate family members of original ranchers decline to continue ranching, park ranches must be permanently retired and actively restored for natural resource values and visitor enjoyment.

Under no circumstances should "succession" originally intended only for multi-generational ranching, be extended to other relatives, neighbors, existing, former or current permittees, or others seeking to lease land in the Seashore for livestock grazing.

The GMPA/EIS acknowledges that GHG emissions from cattle exceed those of visitors' vehicles and that methane produced by Seashore cattle has far more potent impacts than other GHGs.

There is no discussion of the NPS's plans for mitigating the climate impacts of the cattle in the park. Impacts of climate change weigh on the park's future-including the survival of rare, threatened and endangered plants and animals. Ignoring climate change mitigation in the GMPA/EIS is unacceptable. Yet, the NPS concludes that any mitigation by Seashore ranchers for their climate impacts is entirely voluntary.

Scientists recently estimated that humanity has twelve years in which to stave off irreversible global temperature rise. The NPS's preoccupation with catering to the demands a single special interest and its political allies ignores this reality.

16. The science is clear. Amidst the stark challenge of climate change and species extinctions, how will the NPS mitigate the GHG caused by Seashore ranches? What can the NPS do to defend our parks from the trend of privatization, exploitation, and degradation by special interests? Future generations will bear the brunt of climate disruption. How will the NPS explain its decision to prop up 24 ranchers rather than stand up for future generations?

Susan Ives

Correspondence: This has got to stop. National Parks are not meant for the livestock industry to use and abuse. This land is meant to be wildlife habitat. Period!

#6246

Name: Patterson, Carol

Correspondence: I support Option F. Phase out the ranches. Do not allow any commercial livestock in the park. Prioritize wildlife over domestic cattle. Biodiversity should not be sacrificed to private ranching. Restore wildlife habitat and native plant communities. Historic ranch buildings should be used for scientific research, interpretation and public education.

#6247

Name: galabert, sandra

Correspondence: The preservation of native wild species must take precedence over farming and ranching

activities. You have led this policy for more than 20 years to allow farmers and ranches to settle into the park detrimental to herds of wild animals like elks. Now, we can see that exploitation of resources have provoked natural disasters that have been stronger and more frequent, we should understand there is a risk of extinction for all species include human beings.

So I urge you to change your mind and act in the reversal sense. Show more consideration for nature and wild species as long as you have the time to do it !

Sincerely,

Correspondence: Natural values, native wildlife, public access and enjoyment should take priority over commercial activities at Point Reyes. Tule elk are an important part of the landscape at Point Reyes. Their recovery is a result of successful native ecosystem restoration, which is a key element of the Park Service's mission. It's taken a lot of time, money and effort to restore tule elk to Point Reyes, the only national park where they live. Tule elk should be allowed to roam free and forage in the park - not shot, removed, fenced or treated as problem animals.

#6257

Name: Smith, Doreen

Correspondence: I am very familiar with the very special native to Ca. vegetation of Pt Reyes National Seashore. I volunteered monitoring rare species of native plants there for 20 years. There is an impressive number of surviving plant taxa which of course are needed to support all the native animal life there.

Though some ranching practices are fairly harmless to the continuing presence of what remains of our endangered coastal prairie grasslands others are very detrimental resulting in an area becoming nothing but field of weeds. I refer to the spraying of dung-slurry over surrounding acres of field by the dairy ranches there.

I am in favor of phasing-out and eliminating the water-wasting filth-producing dairying. Replacing such ranches' activities with beef cattle (which must also be regulated to preserve native biodiversity) may be an option for them.

Adding to the mess by advocating for such as ploughing for row crops and even pig farming on PORE beggars belief.

Sort of respectfully yours.

Doreen I. Smith, botanist

Correspondence: I have been visiting Pt Reyes for 40 years, first as a young child and then all through my adult life. Pt Reyes has been a favorite place to hike, camp, visit, and enjoy the beauty of our spectacular California natural coast. Point Reyes National Seashore is supposed to be managed under the Point Reyes Act for "maximum protection, restoration, and preservation of the natural environment." There's no mandate for prioritizing commercial agricultural leases on these public lands.

We must prioritize native flora and fauna at Pt Reyes. Planting artichokes or other row crops will attract birds. And introducing sheep, goats, pigs or chickens will attract native predators such as coyotes, bobcats and foxes. Expanded ranching would only create new wildlife conflicts.

Cattle ranching should only be allowed if it's consistent with preserving the natural environment. And agricultural activities such as mowing shouldn't be allowed in park areas where they harm endangered species or wildlife habitat, impair water quality, cause excessive erosion or spread invasive plants/diseases.

Cattle are the seashore's primary source of greenhouse gases. The Park Service's preferred alternative is inconsistent with its own "Climate Friendly Parks" plan.

I hope you will act in ways that protect this natural treasure. Please protect, restore, and preserve Point Reyes!

Correspondence: Hello,

I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I've been an urban cyclist for 14 years, and better bicycling is a large part of the reason I relocated to the Bay Area from my former home in Chicago. I currently live in San Francisco but often head to Marin County to take advantage of the great recreational cycling opportunities there, and these improvements will allow even more cyclists to enjoy the area's natural beauty - particularly cyclists who aren't as comfortable cycling next to motor vehicle traffic as I am!

I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly - and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

Thank you for your time and consideration!

Correspondence: I urge The National Park Service to adopt alternative F to end ranching in Point Reyes National Seashore (PRNS). I do not support NPS's preferred alternative B- -a public land giveaway to ranchers that prioritizes ranching over recreation, wildlife and protecting natural resources. I visit PRNS to see wildlife, not cows. My understanding is that the mission of national parks is to protect native animals and plants, not ranching/dairy interests and cows. More than a century of continued cattle grazing has upset the natural ecosystems of the park. It is disturbing to see the degraded land that has been used for grazing. The alternatives that call for continued ranching and grazing do not discuss the costs to restore the park from the impacts of such practices- -water pollution from manure runoff, loss of natural habitats from grazing, greenhouse gases (cattle are the leading source in the park), air pollution from cattle operations, and wildlife endangered by cattle disease, fencing and habitat loss. What portion of the NPS budget goes to ranching while park improvements, maintenance and public programs and interpretation are unfunded? Dwindling NPS funds should go to improving the park for wildlife and the public. Over \$132 million was attributed to tourism at PRNS in 2017. Tourism is more profitable, economically viable and environmentally viable than dairy farming and ranching. Where in the NPS mission does it state the guarantee of commercial operators (ranching/dairy) a living? These business were well compensated for their land in the 1970s. Alternatives B,C,D and E allow for diversification (planting crops and introducing other farm animals), yet there is no discussion of diversification impacts on the park. I already see the negative impacts on the park areas when viewing destroyed natural habitats. I support an end to ranching and grazing in Point Reyes National Seashore with the adoption of Alternative F to the General Management Plan.

#6263

Correspondence: This is a travesty if there ever was one. I have had the distinct privilege of hiking Point Reyes several times and have transversed the areas where the Tule Elk roam free. They are magnificent creatures who neither harm nor bother anyone and this is as much their world as it is ours.

Ultimately, these animals are with us- -not for us- -and any kind of proposal that suggests "culling" the herd to make room for the business of cattlemen and ranchers is odious and repellent not to mention a contributor to global greenhouse gas emissions vis a vis cattle farming. It is the epitome of irresponsible management.

He who has ears, let him hear- -man will always reap what he sows...in this life or the next.

#6266

Name: N/A, N/A

Correspondence: Point Reyes is the only national park where tule elk live. They should be allowed to roam free and forage in the park - not shot, removed, or fenced. Commercial activities at Point Reyes should be required to accommodate wildlife, not take precedence over them. Agricultural activities such as mowing should not be allowed in park areas where they harm endangered species or wildlife habit. Cattle ranching leads to water pollution, declines in fish and bird populations, conflicts with wildlife, and even more greenhouse gas emissions. Please protect tule elk and other species.

#6267

Name: Q, M

Correspondence: I care about protecting California's wildlife. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

Name: Mueller, Joy

Correspondence: I have been visiting Pt Reyes since 1974 and love the wild spaces and beaches. I was excited about the addition of native Tule Elk. I believe the dairy ranchers hold a heritage place at the park, but only as dairy ranchers. They were supposed to gradually age out of their rights to ranch as originally written in the park plan. Their cattle have infected the elk with John's disease, making them unsuitable for moving to other areas. Now you are suggesting we allow other non-native plants and animals into this pristine parkland! What other diseases will they introduce? I don't want to see farmland and smell hog farms when I visit Pt. Reyes. This park is our land paid for with our tax dollars. As a veterinarian, I know how easily diseases spread, and non-native plants escape and become nuisances. You should not be allowed to grant additional farming rights to dairy ranchers who should not still be there in the first place! If they can't make a living with dairy, then they should close down their ranches. I am highly opposed to expanding farming at Pt. Reyes. We are being generous allowing the ranchers to stay beyond their allotted time and contracts. Sincerely, Joy Mueller, DVM, CVMMP

Correspondence: Option F

Too many cows cause erosion and excess manure that spoils the Park, and this will be worse with longer leases and expanded uses. Our Parks are paid for by the public, and should be available in an unadulterated form to us.

Name: Woods, Debbie

Correspondence: Dear national Park Service,

Please think before killing those beautiful Elk. I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations.

California is the best state because of the way it treats its natural environment and wildlife. Also please adopt Option F and end livestock grazing at Point Reyes National Park and allow this precious land to remain as wildlife habitat and to be used for the public good, not for the benefit of the livestock industry.

There are a lot of people who rely on this beautiful area to recoup from hard weeks at work. Opening the land up for farmers to graze cattle who will be killed for food or forced to breed for milk (I am a vegetarian and find this repulsive) is so wrong on so many levels. It also adds to the air pollution and climate change that we must stop before it is too late.

Thank you for considering what I have written. I am speaking out for the wildlife who are voiceless! I pray you do the right thing and adopt Option F,

Debbie Woods

Name: Hyland, Cordelia

Correspondence: Please move for Alternative F: No ranching on the National Seashore. Based on climate change that we know is happening, it doesn't seem reasonable to continue or expand ranching on NPS. Through the lens of climate change, wildlife impacts, the cost of ranching, all alternatives beyond F do not make sense.

The EIS shows that the National Seashore's land would benefit if we stop ranching on the seashore. For all of the proposals apart from F, there is no plan for protecting wildlife from ranching's impacts or mitigating habitat loss from cattle grazing or growing crops.

#6275

Name: Schulte, Whitney

Correspondence: Please protect the Tule Elk and end the environmental devastation caused by ranching.

#6276

Name: Nazzaro, Patricia

Correspondence: Why are you supporting cattle ranching over the protection of the Tule Elk? Cattle ranching does so much damage to all of the environment and should not take preference over the Tule Elk, they are in their natural home and should not be pushed out. Anything that is done in a National Park should be in balance with nature and the animals and wildlife should always come first and be treated with respect. My family and I would visit a National Park to see nature and the native wildlife, not things that don't belong there.

Thank you for your time.

Correspondence: I am absolutely opposed to all cattle grazing on public lands. Do not subsidize cows. As a USFS range manager for 35 years, the proposal to increase cow grazing is a very big mistake, not just an economic boondoggle, but stupid economics and scientific absurdity.

Leave it for the elk and proper watershed mgmt. NO COWS!!!!

#6283

Name: Kommerstad-Reiche, Carol

Correspondence: The animal agriculture industry has routinely taken advantage of preferential access to land, water, and other resources, and that is currently the case in Point Reyes National Seashore in Marin County, CA. Over 5,000 cattle who are being exploited for beef and dairy production are grazing in the public park, and pose a threat to the environment, wildlife, and the public good.\*

The ranchers' leases are set to expire, and the National Park Service (NPS) is, shockingly, considering several proposals include killing the native Tule Elk in order to continue grazing livestock. I respectfully urge the NPS to end livestock grazing at Point Reyes National Park, to allow this precious land to remain as wildlife habitat and to be used for the public good, not for the benefit of the livestock industry.

With Thanks,

Mrs. Carol M. Kommerstad-Reiche

#6284

Name: Wahl, Lynn

Correspondence: WHY I OPPOSE ALTERNATIVE B

I am strongly opposed to Alternative B, the NPS Preferred Alternative as outlined in the Proposed Amendments to the General Management Plan. Alternative B proposes granting 20-year leases for all existing ranching and dairy

operations, and moreover, expanding agricultural uses within the ranch core zone. This alternative does not give adequate consideration to the negative environmental impacts to soil, water, vegetation, and wildlife of dairy and cattle ranching identified in the NPS' own Environmental Impact Statement (see pp vi - ix). In my opinion, Alternative B gives far too much weight to the historic value of preserving the 24 ranching and dairy operations at the expense of the natural environment and the visitor experience.

Alternative B allows continued grazing on range land containing documented sensitive resource areas including rare plants, wetlands, riparian/stream and pond habitats; this does not seem to conform to the mission of the NPS. To protect the water quality of Drakes Estero the oyster farm's lease was not renewed. It seems inconsistent that the NPS Preferred Alternative is that ranching leases should be renewed in the same area which undoubtedly degrades the water quality in the Estero.

When Point Reyes National Seashore was established the NPS purchased the land from ranching families who in many cases have continued to ranch under time-limited reservations of use and occupancy, and agricultural use leases. These leases benefit the 24 ranching operations within the park, not only to the detriment of the environment as discussed above, but to the visitor experience.

I volunteer at the information desk at the Bear Valley Visitor Center. I have never once had a visitor ask me about observing or experiencing historic ranching or dairy operations. Every visitor I have spoken to has come to the Park to enjoy its splendid natural beauty either by hiking, biking, kayaking or simply driving through the varied landscapes. I understand that the NPS is charged with protecting natural AND historic resources, and I appreciate the historic nature of ranching in West Marin. However, there are many dairy and ranching operations in West Marin outside of parklands. Furthermore, much of this land is protected by the Marin Agricultural Land Trust which helps insure that ranching and dairy operations will continue in West Marin.

As pointed out in the EIS the visitor experience would be enhanced if ranching and dairying operations were phased out, by opening up opportunities to develop new connecting trails, including multi-use trails. I believe that the adaptive reuse of historic ranch structures is an excellent idea that could definitely expand and enhance the visitor experience, as well as potentially benefit non-profit and research organizations.

In my opinion it is past time for the NPS to begin phasing out (or at the very least severely curtail) ranching and dairy operations on parkland that was purchased long ago by the taxpayers. PRNS should be managed to conserve natural and historic resources for the enjoyment of current and future generations, and not for the benefit of a small number of ranching and dairy operations which clearly degrade the natural environment and limit the visitor experience.

#6294

Name: N/A, Andres

Correspondence: To National Park Service:

I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly-and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

Sincerely, Andres

Name: Adams, David

Correspondence: Natural values, native wildlife, public access and enjoyment should take priority over commercial activities at Point Reyes. These are the primary reasons I visit it. To me, tule elk are an important part of the landscape at Point Reyes. Their recovery seems to be a result of successful native environment restoration, a key component of the Park Service's mission that I appreciate. It's taken many years to restore tule elk to Point Reyes, the only national park where they live. The elk should be allowed to roam free and forage in the park - not removed, fenced, shot, or treated as nuisance animals in comparison with cattle ranching or agriculture, which must be considered secondary activities to the park's primary purpose. Right now the Point Reyes ranches enjoy not only subsidized grazing fees and housing, but also taxpayer-funded infrastructure and road improvements, and publicly funded projects. These commercial activities at Point Reyes should be required to accommodate native wildlife - not the other way around.

#6303

Name: Wakefield, Marie

Correspondence: The tule elk are down to about 1% of their natural population,The concentration really needs to be on preserving the natural resources. Cows are not natural. Tule elk are natural.

The free-roaming Drakes Beach herd has caused headaches for ranch operations in the past, eating pastureland needed by ranchers to meet organic standards, damaging fencing and injuring cattle. The impact from cattle

ranching leads to soil erosion, water pollution, invasive plants, declines in fish and bird populations, conflicts with wildlife, and contribute to greenhouse gas emissions.

The ranchers are NOT a cultural resource in the park which NPS is obligated to protect; Another argument against the ranch lands is that after the park was established in the 1960s by Congress, the ranch lands were meant to eventually be phased out.

Disappointingly, the priority of this agency appears to be profit over the protection of the Tule elk, and therefore other wildlife populations as part of the cascading effect of using lethal means to decrease the already small number of Tule elk we have left.

#6304

Name: N/A, N/A

Correspondence: I think it is outrageous to even consider killing off an endangered species like the Tule elk just to support cattle grazing. Even Burger King has a plant-based burger (the Impossible Whopper)- If a major fast food chain can offer a burger that is NOT made from beef, I am pretty sure that the majority of Americans would agree, that Tule elk should be protected, NOT cattle!

I enjoy both hiking the trails and horseback riding, and spending time along the beach. It is always a thrill to encounter native wildlife such as tule elk, and to know that they are safe and will thrive along our shores. I strongly oppose the grazing of beef and dairy cattle on our public lands, and am horrified to hear of a proposal that would actually harm them, for the benefit of private ranchers and cattle. I urge your support to return this magnificent area back to native wildlife and minimal recreational use.

Thank you.

#6320

Name: Fertig, Asano

Correspondence: Do not slaughter the Tule Elk at Pt.Reyes National Seashore. Wildlife should take precedence over cattle at this National Seashore.

#6321

Name: Muse, Jane

Correspondence: Regarding alternatives A-F, why is there no alternative to manage both the tule elk and the cattle? Option A - do nothing appears to have evolved to an unmanageable state and the reasons why are not because of the tule elk. Let us address the reasons for the problems the volume of cattle causes, and implement a solution based on those reasons. That would be reasonable and fair. The focus should be on restoring the damage done by the cattle to the soil, and to plant trees. In addition, the national park service should address the co2 in environment due to dairy and beef industries.

To solve the problems of soil erosion, toxic water and degradation of plants and trees, the park service's preference is to handle that with lethal removal of the elk, hence alternatives B, C, D. But again, the elk are not the cause of the problems.

Other than do nothing, alternative A, the 2 alternatives that allow the elk to flourish without limitation of population growth are E that proposes to eliminate the dairy ranches and F that proposes elimination of all ranching.

Why is there no alternative offered for modifying management of the dairy ranches that have outgrown their place in a national park? Some ideas I can think of include drastically reducing the population of cattle and cleaning up the land that the presence of the cattle has destroyed. This would include focusing efforts on restoring the land that has been damaged by populations of cattle that is too large to be sustained in a healthy environment in a

national park that also supports local native plants and animals including the elk. If this plan cannot be implemented successfully then it may be required to remove the cattle, via alternative E or F.

The 2 alternatives for the cattle are to do nothing or for ranching to cease to exist. Is there a reason managing of cattle population to more environmentally sustainable levels is not offered as a solution? The dairy cattle are popular with the community and so are the tule elk, so a goal for both to co-exist and thrive really needs to be offered to the public in order to be fair. I assume you are serving the public with equal importance, if not more, than the ranchers. Know that the growth, preservation and protection of the tule elk is very important to the public.

I am strongly opposed to lethally removing the elk so there is more grazing land for the cattle. I support reducing the cattle population and restoring the land destroyed by the presence of the cattle so that the 2 can coexist. Since there is not an alternative for this, I support options E and F to remove the dairy and beef cows. I urge you to create a new alternative G to reduce the cattle population. The population of the cattle must be held in check in any case or more land and soil will be destroyed. Your solution B does not have benefits that do anything to minimize the environmental impact that the cattle population causes.

Name: BOSTIC, MARTY

Correspondence: The Point Reyes National Seashore General Management Plan Amendment and Environmental Impact Statement is proposing to dedicate one third of Point Reyes National Seashore to cattle ranching and includes plans to kill off Tule elk that frequent the area. This plan only benefits twenty-four cattle ranchers who sold their land to the public 60 years ago, but still use the national park to graze their cattle.

Tule elk are an important part of the landscape at Point Reyes. Their recovery is a result of successful native ecosystem restoration, which is a key element of the Park Service's mission. It's taken a lot of time, money and effort to restore tule elk to Point Reyes, the only national park where they live. Tule elk should be allowed to roam free and forage in the park - not shot, removed, fenced or treated as problem animals.

Cattle ranching should only be allowed if it's consistent with preserving the natural environment. And agricultural activities such as mowing shouldn't be allowed in park areas where they harm endangered species or wildlife habitat, impair water quality, cause excessive erosion or spread invasive plants/diseases.

Point Reyes National Seashore is supposed to be managed under the Point Reyes Act for "maximum protection, restoration, and preservation of the natural environment." There's no mandate for prioritizing commercial agricultural leases on these public lands.

Sincerely,

M. Bostic.

Name: Huff, Laurie

Correspondence: The lethal removal of the Elk for the sole purpose of creating more land for the for profit raising of cattle speaks only to our own destruction of our joy in the environment. Raising cattle for human ingestion not only is massively toxic for the air and in direct opposition to climate protection but is not a needed human nutrient. Your plan is to take away something beautiful for all for the financial gain of a few. I am horrified at your intention and deeply saddened.

#6329

Name: Svetikova, Elena

Correspondence: Please, save Tule Elk in Point Reyes National Seashore!!! Point Reyes is a gem, a unique place, do not destroy it! Do not kill Tule Elk! We live in California in 21 century, the state should be an example of a responsible and humane attitude to nature.

#6330

Name: N/A, N/A

Correspondence: It's absolutely unreasonable and senseless to allow ranching or any other commercial endeavors to encroach on, endanger, or outright kill native wildlife that has already had its habitat irreparably damaged by humans. We know what we're doing and there is no financial excuse that justifies this pathetic action.

#6331

Name: Smith, Ray

Correspondence: Animal agriculture has no place in our society or our world. Please let the native animals live and don't let the money interests prevail Leave the elk alone and please don't let the animals for profit industries in

#6332

Name: Henderson , Liz

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#6333

Name: Ragsdale, Mary

Correspondence: Please adopt Alternative F.

Thank you

#6334

Name: Sheinin, Boris

Correspondence: Please, adopt Alternative F, which would discontinue farming and ranching opportunities in the park and expand visitor opportunities. The preservation of native wild species must take precedence over farming and ranching activities. Save Point Reyes, save Tule Elk!

#6335

Name: Dollinger, Mary

Correspondence: No more cattle. Leave the elk alone. STOP breeding and killing animals for human consumption.

#6336

Name: Harris, Holly

Correspondence: I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly-and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

#6337

Name: N/A, N/A

Correspondence: Do not remove the tule elk from this land. They bring valuable tourism dollars and are more beneficial for the area than cattle. Cattle raised in Pt Reyes is luxury food that serves only a few. The elk can be seen by all and they were here first!

#6338

Name: Ratcliff, Philip

Correspondence: I've seen how grazing cattle in wilderness areas degrades the environment. Hiking in the Sierra Nevada, to Scout Carson Lake, I saw streams muddied, streamside vegetation trampled, and manure widespread. I even worried about my safety, when passing a herd of cattle, and a big bull stared me down. It's disgusting that the National Park Service is bending over for the Point Reyes cattle ranchers, at the expense of the environment. It's even more disgusting that the Park Service plans to kill the tule elk, to accommodate the ranchers. This is not surprising, because every aspect of environmental administration under the Trump regime, has flipped to favor private industry and corporations. I hope that when a Democrat assumes presidential office in 2021, all of the anti-environmental Trump appointees are quickly fired.

Correspondence: Public lands are not a source of free grazing for domestic livestock. Graze your own land.

#6346

Name: N/A, Tony

Correspondence: I've become extremely saddened to learn of the impacts cattle ranching is having at Point Reyes National Seashore. The Seashore is such a beautiful place to visit, but the cows I've learned are causing a tremendous amount of environmental damage. The cattle-ranching at the seashore has resulted in tremendous soil erosion, loss of native plant and animal species, dead zones in local streams, rivers, lakes, bays and even in the ocean. The cows reduce the amount of grazing land the native Tule Elk have as well. I hear that ranchers are requesting that the National Park Service begin culling Tule Elk herds so they have more grazing land for their non-native and destructive cows.

It's beyond comprehension that the National Park Service would allow cattle ranching in the National Park in this day and age. The ranchers were paid generously for their land in 1962 and given a 25-year lease so they could transition away. The leases have been continued ever since. What in the world is going on? Where is the corruption in the NPS coming from? This goes against the very mandate of the NPS to protect the natural environment for the citizens of the United States.

I urge the National Park Service to live up to their mandate of protecting the natural environment and not caving to private industry and political lobby groups that are coercing the NPS to destroy the very land they are responsible for protecting.

Please, do not extend the leases of the ranchers. The dairy and cattle ranchers must leave as soon as possible so we can realize the Point Reyes National Seashore that was promised to the citizens of the United States of America.

Kind Regards, Tony

Name: Green, Clay

Correspondence: Dear Point Reyes National Seashore Superintendent, Please select the preferred alternative, "Alternative B" for the future of ranching in the Point Reyes National Seashore. I support agriculture in the Seashore and think it is a vital part of the region's history, culture, and current economy. I appreciate the time and effort that has gone into researching all options for the draft EIS. I support 20-year leases, the ability for farmers and ranchers to succession plan, and the opportunity for farms and ranches to diversify their operations to viability and sustainability adapt their operations for generations to come. I wish that the diversification was not so limited in scope or size, 2.5 acres around structures in ranch core with no irrigation and other restrictions is cumbersome. In addition, the draft EIS would have been more complete if research was done on an option that includes an Elk Fence between the agriculture and wilderness area or Elk relocation to the wilderness area. Agriculture is a partner in natural resource conservation and preserving open spaces. Many of the beautiful natural landscapes in the US near large urban areas are preserved because agriculture was there first to curb development. Agriculture and nature do co-exist, we support the farmers and ranchers in the Seashore for their part in providing for the local foodshed in a sustainable way. Agriculture plays an important role in combating Climate Change by providing local food and carbon and greenhouse gas drawdown. Agriculture is important to me in the Point Reyes National Seashore, the preferred alternative B is the best option from the draft EIS.

Name: Buyny, Jane

Correspondence: I am strongly opposed to any expansion of commercial grazing into Point Reyes National Seashore. I am also strongly exposed to lethal removal of Tule Elk. Why would a park service expand cattle at the expense of wildlife? Clearly the planet is already struggling with the effects of wildlife management which seems to want to eliminate wildlife and expand cattle, to the detriment of the environment.

#6379

Name: Marcianelli, Marla

Correspondence: Elk Culling:

6,000 cows compete with 125 tule elk for grass inside the National Park. This has caused the lease holders to push for the removal of the tule elk. In the proposed NPS plan, the elk population of the Drakes Beach herd would be capped at 120 and each year the National Park Service would kill as many elk necessary to reach their proposed limit.

Tule elk are native to the Point Reyes peninsula and Point Reyes National Seashore is the only National Park unit that is home to this species. The killing of elk to mitigate a conflict with cows is incomprehensible and against the NPS's very obligation to provide maximum protection to our natural resources.

Row Crops:

The NPS proposal would allow current park grasslands and wildlife habitat to be converted to commercial row crops.

Today row crops are not allowed in the park. Why is the NPS allowing this new land use? How does this provide maximum protection for our wildlife? This land is home to bobcats, coyotes, badgers, long tailed weasels, grey fox, tule elk and black tailed deer. It is home to mice, gophers, snakes, lizards and countless insects. It is home to ground nesting birds such as northern harriers, red winged blackbirds and sparrows. It is hunting grounds for red tailed hawks, white tailed kites, great horned owls, barn owls and dozens of other species. The conversion of this land will have a devastating impact on the park's native species, let alone the environmental impact of pesticide use, new fencing, rodent and rabbit conflicts, commercial vehicle traffic and all else that comes with commercial farming.

New Farm Animals:

Lease holders will be allowed to raise previously unauthorized domestic animals for commercial purposes including pigs, chickens, sheep and goats.

Look what has happened with the conflict between grass eating cows and tule elk. It ends with the killing of tule elk. What is going to happen when a bobcat takes a chicken or a coyote takes a pig? The introduction of new domestic animals will MOST CERTAINLY create conflict with native wildlife. Major habitat loss will also happen for native animals from this new land use. This must not be allowed.

The current proposal by the National Park Service will have a massive negative impact to the park's native wildlife. I am absolutely devastated by this news. Please do not make these changes.

#6380

Name: Kieckhefer, Karen

Correspondence: I care about protecting California's wildlife. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat.

We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers. These commercial cattle ranches have serious negative environmental impacts on the park - polluting waterways, causing soil erosion, and harming the many endangered and threatened animals who live on Point Reyes. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

#6381

Name: Shipley, Amy

Correspondence: I support Alternative F, phasing out cattle and dairy industry and returning the land to its natural state. The enabling legislation of the National Seashore supports wildlife protection and does not mention upholding private industry. The original leases to ranchers were to be 25 years. Ranchers have already been paid handsomely for their land, so it is long overdue to phase out the ranches. "Cultural Resource" and "Historic" does not mean industry needs to be currently in operation.

Private business has no place on public land. Allowing industry and ranches to diversify their business is a bad idea. Already these ranches have been negatively impacting the land, mismanaged to allow soil erosion, scarring in the landscape, e.coli contamination in waterways and more. If you allow EVEN MORE agricultural practices on the seashore, there is no way to know the impact and there is no historical evidence you will be able to manage any negative impacts on the environment.

Tule Elk should be protected for the survival of their species. They have already gone through a huge genetic bottle neck when they were almost completely wiped out except for 20 individuals. Every gene allele is important for the long term sustainability of the herd. The National Park should be protecting all Tule Elk, and allowing new herds to form and to TAKE DOWN THE FENCE at Pierce Point and allow all Tule Elk to roam free.

I do not support granting 20 year leases to cattle and dairy industry. Climate science has indicated we have less than 12 years to mitigate the worst of climate catastrophe. Allowing business that has been linked to water pollution, species extinction and in Point Reyes is the culprit of over 60% of the greenhouse gas emissions, it is not a good idea to give that same industry a 20-year lease to continue degrading our national park. Point Reyes is a refuge to thousands of plants and animals. Point Reyes can be a leader in the fight for climate justice, and it starts with phasing out Beef and Dairy operations and restoring the land to its natural state. The EIS has NO MENTION of the effects of climate change in it, and does not include any information of the cattle and dairy's impact on climate change within the park.

Thank you

Name: Tes, Sstoz

Correspondence: T.W.I.M.C.:

Please discontinue the grazing of all cattle at Point Reyes National Seashore. Livestock grazing has been allowed to do its damage to the P.R.N.S. already, including to watercourses, the water itself, endemic wildlife, as well as the substantial contribution to carbon dioxide and methane emissions inherent to cattle.

Option B is particularly offensive, as would be any proposal that allows the culling of Tule Elk and other native wildlife, primarily to benefit ranching operations. Please adopt Option F - - discontinue cattle grazing so that native species can reclaim the lands stolen from them by the misguided, mendacious, ignorant and destructive policies of the past.

Best regards

Sstoz Tes

Correspondence: My wife and I (both credentialed environmental scientists) have been visiting Point Reyes several weeks a year for about 30 years now. Every year, including this one, we have witnessed the continuing degradation of the park due to ranching activities. Soil compaction and erosion are quite evident, there is obvious evidence of eutrophication in the esteros and creeks, Bishop pines are declining, the air quality around the ranching operations is very poor, especially for fine particulate and odorous compounds (many of which may be toxic). The loss of abundance and diversity among plant, insect, bird, and small mammal communities is also quite obvious to an informed observer. In addition to these observations, the DEIS is replete with discussion of adverse impacts to the natural environment from ranching operations. Just from the standpoint of greenhouse gases alone, the impact of cattle is startling. In addition, these activities will continue to destroy soil, negatively impact water quality (nutrients, microbial pathogens) and continue to be a source of both conventional and toxic air pollutants that will add to the existing poor air quality burden of the Bay Area. The DEIS clearly points to alternative F as the only option to save Point Reyes for the future. Enhancement of the natural environment with an emphasis on ecotourism is probably the only way that Point Reyes can survive.

Its the ranchers that are destroying our world - restrict their activities or there wont be a seashore left to protect.

#6393

Name: Pham, Thoi

Correspondence: Leave the Tule Elk alone! It's ridiculous to expand dairy and cattle operations on national parkland. That's not the purpose of parkland was created. It's to protect and preserve natural habitat and biodiversity, Not for some businesses to gain unfair advantages, kill native wildlife and destroy the environment in unsustainable businesses, all funded by our taxpayer dollars?! NPS what are you trying to do??

#6394

Name: theden, tiffany

Correspondence: It is absolutely unacceptable that there are plans to kill Tule elk at Point Reyes. There are only 4,000 of these elk in existence - they should never be killed, for any reason, especially not because of cattle ranching. Point Reyes National Seashore is supposed to be managed under the Point Reyes Act for "maximum protection, restoration, and preservation of the natural environment." Killing endangered, endemic, native animals in no way upholds that sentiment.

If the elk are in conflict with cattle, then they could be moved to another area of the park, or another park in California, not killed because they interfere with the economics of ranching. Commercial activities at Point Reyes should be required to accommodate native wildlife - not the other way around.

Tule elk are an important part of the Point Reyes ecosystem and their recovery is a result of successful native ecosystem restoration, which is a key element of the Park Service's mission. It's taken a lot of time, money and effort to restore Tule elk to Point Reyes, the only national park where they live. They should be allowed to roam free and forage in the park - not shot, removed, fenced or treated as problem animals.

Please do not kill Tule elk at Point Reyes.

#6395

Name: Miller, Heidi

Correspondence: We need to protect the Earth and the animals who live here with us. We need to finally say no to greed.

#6396

Name: DeVenzio, Anne

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#6397

Name: Troup, Dave

Correspondence: I support the public access and bicycling improvements outlined under Alternatives B, C, D, E,

and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me and other riders to visit the Seashore more regularly - and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

Correspondence: When will we learn to preserve wildlife more than animal farming? The time is now. Climate strikes yesterday were about doing radical acts to save the planet and all life on it. We have to change our ways that caused this crisis to begin with. Green house gases such as all those caused by animal production for food need to stop now. Studies show that up to 51% of all greenhouse gases are caused by animals for human and pet food production. Wildlife are constantly sacrificed for animal food for humans production. It is time to stop this now. Preserving the habitat for The Tule Elk is one step towards decreasing climate change and protecting wildlife. Animal farmers are going to have to change their way of living and there are many people who want to help them with this change. In the meantime, Parks departments need to go back to protecting wildlife and not let special interests and the farming of animals get in their way of their original mandate: to protect wildlife and ecosystems.

Correspondence: The elk have priority and should not be managed to lower numbers to allow non-native species (cows) to have adequate grazing food. If ranchers, who are living on Federal land want more food for the numbers of livestock they want to support, they should buy it and transport it in. For that matter, why are livestock ranchers allowed to raise cattle (and veal, which is an inhumane practice on top of that) in a Federally protected National Seashore? If anything should be changed, the ranchers should be forced out, allow the land to return to its natural state, and protect the native species.

#6404

Name: Page, Garril

Correspondence: Adherence to the GMP's five key areas of Desired Conditions are an endorsement of Alternative F, and reason to reject Alternatives A,B,C,D, and E. For the following additional reasons, I support Alternative F, reject the selected Alternative B, and ask some questions about the DEIS:

1. Cows are a jarring addition, commonly seen on cattle ranch lands anywhere. I go to Pt Reyes to enjoy the seashore and the land: to see wild elk, whales and seals is an exhilarating and unique experience not found in any other National Park.
2. The landscape for cattle operations is obvious, and obtrusively unlike the natural coastal scrub. Where cattle graze, and where haying occurs, the land is groomed, and lacks plant diversity and visual interest. Plover-killing ravens are attracted by detritus of mowing operations.

3. Cattle are herd animals, large and sharp-hooved, tending to follow closely one upon another as they move around pastures. This adds to erosion and deep scarring of the landscape. In ranging freely, elk abuse the land less.
4. Cow manure is not an enjoyable aspect to encounter: stepping in pies is horrid, the odor is disagreeable and pervasive when manure spraying occurs. There is too much obvious sign of cow manure at Pt Reyes. I found the DEIS Appendices maps showing the extent of beef cattle and dairy operations both eye-opening and shocking. Except for Alt F, the amount of Resource Protection subZones is paltry by comparison. Pt Reyes has a tremendously rich variety of natural landscapes which are better enjoyed without signs of cattle and fences.
5. Ways that active ranching interferes with Visitor enjoyment: ·private property/No Trespassing, and wire fencing are inappropriate on public land; ·veal crates and bereft calves are distressing for most people, unfit for a National Park experience; ·encounters with manure are unwelcome; ·cattle can be enticing, but visitors should not interact with the animals.
6. Interpretive ranching versus active ranching in visitor education and experience: ·details of raising beef for food are best left to interpretive explanation; ·details of veal crates and calves' lives are better left to interpretive presentations; ·details of dairy cows lives are better left to interpretive presentations; ·whereas children might love to try milking, dairying is not safe for public participation.
7. The 24 remaining leases have been extended far beyond the intent of the original agreements. This contravenes the founding legislation.
8. That leases might be transferred to other than the original ranch families, possibly to outside interests, does not accord with the founding legislation or original intent of the parks, Pt Reyes or Golden Gate. That commercial uses and concessionaires might be able to use public lands in these parks is completely inconsistent with my idea of a National Park.

#### Questions re the NPS GMP and DEIS:

1. I see no accounting for male calves in the AUs. Are all liveborn included in assessing the number of cattle on a ranch? If not, why not?
2. ROAs indicate annual inspection. What backup data exist to prove diligence in completion of this task by both reporting rancher and inspecting NPS staff? If this is not public information, why not?
3. Observed erosion and excessive manure may be linked to exceeding allotted numbers of animals. Does publicly available data exist to prove correctly reported number of cattle per ranch, and to prove individual compliance with those reports?
4. Mowing fields might disturb less nesting and burrowing birds and animals if mowing patterns began in the center of fields and continued towards the edges. Could this be specified as a required best practice, BMP, within parklands?
5. Justifying 'removal' of elk herds, are claims the elk are sick and have infected the cattle. The DEIS lists prion-shedding Chronic Wasting Disease (CWD) in Acronyms and Abbreviations of Appendix B. Why is MAP, a.k.a. Johnes' Disease not included in this list? If elk were 'extirpated' then reintroduced, is it not more likely the cattle infected the returning elk? Can NPS data support statements that elk are responsible for transmitting Johnes' disease/MAP to parkland cattle rather than cattle transmitting the disease to the elk herds?
6. I am concerned by conflicting and incomplete references to diseases that may be shared by cows and elk. If appendices and links are searched, there are references to these diseases in the DEIS and separately on the NPS website; why is this information not included in a more cohesive, comprehensive discussion? For example, Appendix B, page B-8 lists CA Dept of Fish & Wildlife (CDFW) link that states CWD has not been detected in

California ["Chronic Wasting Disease." Accessed April 18, 2018.

<https://www.wildlife.ca.gov/Conservation/Laboratories/Wildlife-Investigations/Monitoring/CWD>]. That CWD, known in cervids, is in the transmissible spongiform encephalopathies (TSE) diseases with bovine spongiform encephalopathy (mad cow disease) and scrapie in sheep and goats is information not mentioned in the DEIS. Why? Subsequently, in Appendix B, page B-14, the 1981 "Paratuberculosis in Tule Elk in California" J.Am. Veterinary Md. Assoc. states "(not seen, as cited in NPS 1998a.)" Further, NPs website [https://www.nps.gov/pore/learn/nature/tule\\_elk.htm](https://www.nps.gov/pore/learn/nature/tule_elk.htm) contains the following information: "Of the forty-five elk transported to a holding pen for quarantine near Limantour Beach, twenty-eight animals were cleared for release following screening for Johne's disease. Johne's disease, or paratuberculosis, is a chronic diarrheal disease of domestic livestock and can affect wild ruminants." There is a subsequent Q&A re Johne's Disease on the NPS website; clearly, the NPS has researched and collected data. All these references indicate no CWD or MAP in the tule elk, yet CWD appears in the Acronyms and Abbreviations. Why? And why was mention of Johne's Disease/MAP (Mycobacterium avium paratuberculosis) common to ruminants and spread by feces, omitted from the DEIS except as a reference to reporting requirements of the ROAs?

7. ROAs require reporting of MAP/Johne's disease. Where is the data on prevalence within the park for cattle? For elk?

8. Because Johne's/MAP is spread through feces, and reportedly, can live up to 12 months in soil, the annual spraying of manure is a vector, ensuring the pathogen endures in park lands. Therefore, Alternative F is the most effective path to healing park land. Could ROA restrictions on the spraying halt or control the cycle of contamination of park lands by these pathogens?

9. Reportedly, MAP/Johne's has been found in other ruminants, also in pigs, and may be zoonotic. With some Alternatives in the DEIS proposing row crops and diverse livestock, has NPS considered the potential health risks associated with such introductions into park lands with established Johne's/MAP and potential CWD?

10. Except in areas immediately adjacent to streams, drainages or rivers, how would proposed row-crops and alternative farming be irrigated?

11. Proposals installing for-profit ventures which provide enrichment opportunities for biased and vested members of appointed advisory boards, are a threat that must be recognized and resisted. Given the current Administration's attempts to eradicate independent science, can we have confidence NPS is able to manage these parks for the public benefit?

Thank you for the opportunity to Comment and Question. I look forward to the NPS response to public participation in the DEIS.

Correspondence: Hello National Forest Service,

Regarding the California Tule Elk

Discuss how wildlife and natural scenery motivate you to visit Point Reyes and other national parks. Point Reyes National Seashore is supposed to be managed under the Point Reyes Act for "maximum protection, restoration, and preservation of the natural environment." There's no mandate for prioritizing commercial agricultural leases on these public lands. Natural values, native wildlife, public access and enjoyment should take priority over commercial activities at Point Reyes. Tule elk are an important part of the landscape at Point Reyes. Their recovery is a result of successful native ecosystem restoration, which is a key element of the Park Service's mission. It's taken a lot of time, money and effort to restore tule elk to Point Reyes, the only national park where they live. Tule elk should be allowed to roam free and forage in the park - not shot, removed, fenced or treated as problem

animals. Right now the Point Reyes ranches enjoy not only subsidized grazing fees and housing, but also taxpayer-funded infrastructure and road improvements, and publicly funded projects. But commercial activities at Point Reyes should be required to accommodate native wildlife - not the other way around. The Park Service shouldn't allow any new agricultural activities at Point Reyes. Planting artichokes or other row crops will attract birds. And introducing sheep, goats, pigs or chickens will attract native predators such as coyotes, bobcats and foxes. Expanded ranching would only create new wildlife conflicts. Cattle ranching should only be allowed if it's consistent with preserving the natural environment. And agricultural activities such as mowing shouldn't be allowed in park areas where they harm endangered species or wildlife habitat, impair water quality, cause excessive erosion or spread invasive plants/diseases. Cattle are the seashore's primary source of greenhouse gases. So the Park Service's preferred alternative is inconsistent with its own "Climate Friendly Parks" plan.

Correspondence: These comments supplement those I previously submitted.

I support Alternative F, phasing out cattle and dairy industry and returning the land to its natural state. The enabling legislation of the National Seashore supports wildlife protection and does not mention upholding private industry. The original leases to ranchers were to be 25 years. Ranchers have already been paid handsomely for their land, so it is long overdue to phase out the ranches. "Cultural Resource" and "Historic" does not mean industry needs to be currently in operation.

Ranching on this public land (particularly when sustained only through taxpayer subsidy) is poor public policy and unsustainable, both from an economic and environmental standpoint. The e ranches have been causing significant adverse impacts to the National Seashore lands and habitat.

Tule Elk should be protected for the survival of their species. The National Park should be protecting all Tule Elk, and allowing new herds to form and to TAKE DOWN THE FENCE at Pierce Point and allow all Tule Elk to roam free.

I strongly oppose granting 20 year leases to cattle and dairy industry. Climate science has indicated we have less than 12 years to mitigate the worst of climate catastrophe. Allowing business that has been linked to water pollution, species extinction and in Point Reyes is the culprit of over 60% of the greenhouse gas emissions, it is not a good idea to give that same industry a 20-year lease to continue degrading our national park. Point Reyes is a refuge to thousands of plants and animals. Point Reyes can be a leader in the fight for climate justice, and it starts with phasing out Beef and Dairy operations and restoring the land to its natural state.

The EIS does not satisfy NEPA's legal requirements. The EIS has NO MENTION of the effects of climate change , and does not include any information of the cattle and dairy's impact on climate change within the park or the larger environment. These impacts must be fully and fairly evaluated. This includes, without limitation, transportation, air and water quality, water supply, biological resources (including species and their habitat), hazardous materials and climate change impacts associated both with the use of the land for animal agriculture and the larger effects of food production and deliver based on these practices.

Name: Brittingham, Steve

Correspondence: Every biological inventory of plant and animal species in the US indicates a loss of specie numbers and diversity due to habitat loss. This is amplified world wide as we are moving, even abetting at every point, the destruction of the rich bounty of life we have inherited even with the destructive practices of the past taken into consideration. The continuation and expansion of the dairy farms and ranching further into Point Reyes is indefensible on every level other than political expediency. The National Park Service mission is not to maintain and enhance private profit at the expense of the lands it is supposed to, by law, maintain unimpaired for future generations.

However I realize I am wasting my time knowing the political pressures of local politicians and, nationally, we have political commissars running our federal agencies that are committed to rewarding the few at the expense of the public and the future.

I am writing to urge the NPS, in strongest terms, to begin fazing out activities that degrade and destroy our national parkland as was the original agreement when the federal government purchased that land with the intent of preserving the habitat and species found at Point Reyes.

Thank you.

Correspondence: There is only one acceptable solution: remove the Cows and do not harm the Elk. This is advised by policy, law, and science. I speak to the science since that is my area of expertise. All of the planet, no matter how "wild" and "untouched" it may appear, is suffering and being degraded. This is not only scientifically demonstrated by a vast literature, but plain common sense. U.S. land "management" has never followed ecological principles. There is no "pulse" of human activity which might fit in and emulate natural patterns, only relentless "press" which, as mass extinctions and climate change illustrate, have disastrous consequences. As all of science research shows, Animals have comparable brain, mind, and consciousness comparable to humans. This means Elk and other species are vulnerable to psychological and physiological trauma which transmits socially, neurobiologically and epigenetically. Elk and other wildlife may look intact on the outside but they too, like the ecosystems in which they live, are spirally to psychological if not physical extinction. This is documented by my own and other researchers in the most scientifically prestigious journals so it cannot be brushed off as "speculative." It is incumbent of government researchers and policymakers to be advised by the entirety of science, not selectively choose what suits them. The Elk must not be harmed- moved or killed- and the Cows must be given sanctuary as they are sentient beings as well. Further, the natural area must be expanded to bring Elk and other Wildlife habitat to its original health and size prior to colonial occupation. G.A. Bradshaw Ph.D Ph.D The Kerulos Center for Nonviolence

Correspondence: Please work hard to encourage environmental considerations when allowing ranching in West Marin. We need balance, which I thought we had now.

#6415

Name: Shoemaker, Donna

Correspondence: I attended the Public Comment meeting in Sausalito a couple of weeks ago, and heard explanations of all the Alternatives.

What disturbs me is that there is an alternative that was barely ... if at all ... mentioned, and the public was mostly not even informed of it. This involves moving the current Drakes Estero elk herd down in to the Limantour

Wilderness area, where there is much more room, and comparatively few elk already there. I can't imagine that this would be much more (if at all) expensive for the Part, than the current ongoing years-long expense of struggling with the elk-ranch problem. This would save the Drakes Estero area from elk impact, (and I believe ... save the Spaletta Ranch as well), and would be a win-win for both the Park and the ranches.

I urge the Park to consider moving the Drakes herd to the Limantour Wilderness, and providing elk-proof fencing (I believe this is what has been used at Tomales Point), to keep the herd from migrating back up to Drakes Estero.

Sincerely, - Donna Shoemaker

Correspondence: Point Reyes National Seashore is supposed to be managed under the Point Reyes Act for "maximum protection, restoration, and preservation of the natural environment." There's no mandate for prioritizing commercial agricultural leases on these public lands. Natural values, native wildlife, public access and enjoyment should take priority over commercial activities at Point Reyes. Tule elk are an important part of the landscape at Point Reyes. Their recovery is a result of successful native ecosystem restoration, which is a key element of the Park Service's mission. It's taken a lot of time, money and effort to restore tule elk to Point Reyes, the only national park where they live. Tule elk should be allowed to roam free and forage in the park - not shot, removed, fenced or treated as problem animals. Right now the Point Reyes ranches enjoy not only subsidized grazing fees and housing, but also taxpayer-funded infrastructure and road improvements, and publicly funded projects. But commercial activities at Point Reyes should be required to accommodate native wildlife - not the other way around. The Park Service shouldn't allow any new agricultural activities at Point Reyes. Planting artichokes or other row crops will attract birds. And introducing sheep, goats, pigs or chickens will attract native predators such as coyotes, bobcats and foxes. Expanded ranching would only create new wildlife conflicts. Cattle ranching should only be allowed if it's consistent with preserving the natural environment. And agricultural activities such as mowing shouldn't be allowed in park areas where they harm endangered species or wildlife habitat, impair water quality, cause excessive erosion or spread invasive plants/diseases. Cattle are the seashore's primary source of greenhouse gases. So the Park Service's preferred alternative is inconsistent with its own "Climate Friendly Parks" plan.

Correspondence: The most important consideration in managing any land right now, including Pt. Reyes and Golden Gate, should be how can we best use this opportunity to reduce greenhouse gases and sequester carbon. This lease renewal could be a wonderful opportunity to do that. Ranching and Dairying can be managed to sequester carbon by increasing soil carbon, or, alternatively, free-ranging elk with minimal management might also increase soil carbon. Please expand the EIS to consider these alternatives and give greenhouse gases, and the future of the planet, the importance they deserve in making this decision

#6422

Name: Mangone, Wendy

Correspondence: I'm truly shocked to hear that such a progressive and informed organization like yourselves would stoop to rancher pressure and actually turn against NATIVE wildlife in favor of the practice of cattle ranching that is not only cruel but one of the top two reasons for the environmental disaster that is climate change!! Please do the right thing and DO NOT kill the native elk.

Take a stand! Thanks so much.

Correspondence: COMMENTS GENERAL MANAGEMENT PLAN EIS September 21, 2019

INTRODUCTION Thank you for the opportunity to comment on the Draft Environmental Impact Statement (DEIS) for a General Management Plan Amendment (GMPA) for the management of areas of Point Reyes National Seashore (PRNS) and Golden Gate National Recreation Area (GGNRA) now managed for dairy farming

and beef cattle ranching and full-time residential use. My position is that all the ranching alternatives involve the impairment of natural resources and that three NPS laws prohibit actions that will impair natural resources. Consequently, the Park Service should prepare a supplemental DEIS with ranching alternatives that comply with applicable laws requiring the protection of natural resources and it should then circulate that supplemental DEIS for public comment. APPLICABLE LAWS PRNS and GGNRA are units of the national park system and, as such, must be managed primarily to protect the natural resources of the parks. The three applicable laws in this regard are as follows: The first is the 1916 NPS Organic Act which applies to all units of the national park system, including PRNS and GGNRA. The Organic Act provides as follows: § 100101 (a) In General-The Secretary . . . shall promote and regulate the use of the National Park System by means and measures that conform to the fundamental purpose of the System units, which purpose is to conserve the scenery, natural and historic objects, and wild life in the System units and to provide for the enjoyment of the scenery, natural and historic objects, and wild life in such manner and by such means as will leave them unimpaired for the enjoyment of future generations. 54 U.S.C. § 100101(a). (Emphasis added.) With respect to the Organic Act, the Ninth Circuit Court of Appeals has held that the language quoted above means that "resource protection [is] the overarching concern" in the management of national park system units. *Bicycle Trails Council of Marin v. Babbitt*, 82 F.3d 1445, 1453 (9th Cir. 1996). The other two laws are the PRNS and GGNRA statutes. The PRNS legislation provides, in pertinent part, as follows: § 459c-6. Administration of property(a) Protection, restoration, and preservation of natural environment Except as otherwise provided in sections 459c to 459c-7 . . . the property . . . shall be administered by the Secretary without impairment of its natural values, in a manner which provides for such recreational, educational, historic preservation, interpretation, and scientific research opportunities as are consistent with . . . the maximum protection, restoration, and preservation of the natural environment within the area . . . 16 U.S.C. § 459c-6. (Emphasis added.) The GGNRA legislation provides, in pertinent part, as follows: §460bb - EstablishmentIn order to preserve for public use and enjoyment certain areas of Marin and San Francisco Counties, California, possessing outstanding natural, historic, scenic, and recreational values, and in order to provide for the maintenance of needed recreational open space necessary to urban environment and planning, the Golden Gate National Recreation Area (hereinafter referred to as the "recreation area") is hereby established. In the management of the recreation area, the Secretary ... shall utilize the resources in a manner which will provide for recreation and educational opportunities consistent with sound principles of land use planning and management. In carrying out the provisions of this subchapter, the Secretary shall preserve the recreation area, as far as possible, in its natural setting, and protect it from development and uses which would destroy the scenic beauty and natural character of the area.16 U.S.C. § 460bb. RANCHING'S IMPACTS ON NATURAL RESOURCES REQUIRE A NEW SUPPLEMENTAL EIS The DEIS makes it clear that continued cattle ranching as proposed in the current ranching alternatives will have detrimental environmental consequences on all natural resources, including soils, water quality, air quality, vegetation and wildlife (especially elk). Consequently, all the ranching alternatives violate the Park Service's duties under the three statutes and are therefore unlawful. Under these circumstances it makes no sense for the Park Service to go forward with a Final EIS. In view of the above, the Park Service needs to develop new ranching alternatives that do not violate the three laws quoted above and recirculate a supplemental DEIS for public comment. It should provide that all ranching operations that are permitted to operate in the PRNS and GGNRA should be modified so that going forward there are no negative impacts on the water quality and that range condition improves to good or excellent condition throughout the entire pastoral zone.

In the new alternatives, I oppose any diversification in the pasture subzone. There is no reason to allow hay, haylage and silage, and chickens, sheep and goats outside the ranch core. Such activities will have detrimental environmental consequences and have no purpose other than to increase ranch revenue. I also oppose continued leasing of any ranches if the current lessee or family does not renew the lease. The new alternatives must identify the source of funds to fully implement the alternative and the effects of any reduction in funding on any other existing programs must be described. The FEIS should assume no increase in overall funding for PORE to pay for the implementation of the selected alternative, since PORE funding in real dollars has been declining for some years.

Name: McLaughlin, Brian

Correspondence: Lyrics there are too many cows that affect the soil the water quality the creeks and the wildlife. horses also need to be monitored and kept out of creeks and from making new trails along the Bear Valley trail where they adversely impact riparian vegetation and the management does nothing about. that is the horses have been making a legal trails to Creeks through the right. Vegetation trampling it and making new trails. several attempts over the last 10 years to management of the park have yielded no results and worsening conditions. cows need to be limited and Ray's lightly and kept out of all creeks and watersheds.

Name: Clark, Craig

Correspondence: No more war. Strike for peace. Topple the war economy.

#6433

Name: N/A, N/A

Correspondence: After reviewing the EIS document, it seems there is limited to no information on why capping the Elk population provides an environmental benefit. One of the main reasons I visit Point Reyes is in hopes of encountering/observing the herd, which is a tremendous privilege to those who are able to visit the park. My opinion is that Alternative F is the best option because it retains the space meant for visitors and allows both Elk herds to thrive unimpeded. It also presents an opportunity for Park Services to educate visitors on how to appropriately/safely deal with Elk encounters, while stressing the importance of keeping the area in its natural condition.

#6434

Name: Marriott, Pat

Correspondence: To the NPS:

I am strongly opposed to killing native elk to make room for cattle.

Point Reyes and all its wild land and wildlife is a PRESERVE. That word alone tells us to keep it free from private interests. It belongs to all of us.

Too many of our national lands and monuments are being sacrificed to businesses, e.g., for mining, oil and gas. Millions of species are becoming extinct. And, as you well know, cattle ranching contributes to climate change. Please don't add to these ecological disasters!

I urge you to please abandon this ill-considered idea and keep Point Reyes for the purpose it was intended: a unique and precious ocean-side preserve, open for public enjoyment where native plants and animals are protected for future generations.

Thank you for your consideration.

Name: Chilvers, Kim

Correspondence: I am very disturbed by the park systems plan to reduce or eliminate the Tule Elk in favor of cattle ranching. I understand that there are few natural predators for the elk but encouraging killing a rare species at this time of extinction is the wrong move. Please consider the larger eco-system contexts and the need to value all species in this decision. The park system is a designated place for nature not for farming and ranching. Thank you

#6438

Name: Stein, Jan

Correspondence: All the ranching alternatives in the Draft Environmental Impact Statement involve the impairment of natural resources. I urge the park service to consider adopting progressive approaches and modeling solutions to climate change. We don't need more cattle or beef. Please leave the Tule Elk alone and preserve land.

#6439

Name: Fetherolf, Sara

Correspondence: Private cattle and dairy industry has no place on public land. I would like to see efforts to support the native Tule Elk and to restore the land to a natural state.

#6440

Name: Boehm, Sigrid

Correspondence: The Park Service should prepare a supplemental DEIS with ranching alternative that comply with applicable laws requiring the protection of Natural Resources. The Park Service then circulate that supplement DEIS for public comment

#6441

Name: Potratz, Cameron

Correspondence: Please support a plan for Point Reyes that will help conserve and protect this beautiful rare stretch of California coastline so close to major US cities. Our public lands are for all to enjoy, not a select few to buy and commercialize, killing local animals. There is plenty of National Forest land available not far away for commercial enterprise, but Point Reyes is very special and ought to be treated as such. I will continue to vote and support those who protect this land and encourage my friends to do the same.

#6442

Name: Morrow, Peter

Correspondence: As a member of the California-based international animal protection nonprofit organization In Defense of Animals with over 250,000 supporters, I oppose the National Park Service plan to kill native Tule elk, grow commercial crops, and permit ranchers to add chickens, turkeys, sheep, pigs, and goats to their exploitative operations. For this reason, I support Alternative F.

As national park land, this property was specifically set aside to protect, restore, and preserve the natural environment including the wild animals who live there. The original intention was to phase out dairy and cattle ranching, not add more crops or animals to increase ranching profits.

The proposed plan does not address the damage from grazing, including water-quality degradation and soil erosion. Also, adding new crops will create more conflicts with native wild animals.

Please abandon this inhumane and destructive plan by selecting Alternative F. I urge you to restore the Seashore's Pastoral Zone for wild animal habitat and repurpose historic ranch buildings for scientific research, interpretation, and public education.

#6443

Name: Hodes, Adam

Correspondence: I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly-and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

#6444

Name: N/A, Celeste

Correspondence: I support Alternative F, phasing out cattle and dairy industry and returning the land to its natural state. The enabling legislation of the National Seashore supports wildlife protection and does not mention upholding private industry. The original leases to ranchers were to be 25 years. Ranchers have already been paid handsomely for their land, so it is long overdue to phase out the ranches. "Cultural Resource" and "Historic" does not mean industry needs to be currently in operation. Don't let YOUR political legacy be the extinction of the local Tule Elk.

#6445

Name: Hirvela , Marilyn

Correspondence: Please do not allow cattle grazing on this property. Your priority should be to protect the natural area and animals there. Please do not renew their permit.

#6446

Name: Barr, Anne

Correspondence: I share the Sierra Club's concerns with this draft plan amendment.

All the ranching alternatives in the Draft Environmental Impact Statement involve the impairment of natural resources. However, three National Park Service laws prohibit actions that will impair natural resources (the 1916 NPS Organic Act, Point Reyes National Seashore legislation Section 459c-6, and Golden Gate National Recreation Area legislation Section 460bb).

Accordingly, the Park Service should prepare a supplemental DEIS with ranching alternatives that comply with applicable laws requiring the protection of natural resources. The Park Service should then circulate that supplemental DEIS for public comment.

Thank you for your attention to this important matter.

#6447

Name: Wellin, Paul

Correspondence: I strongly oppose Option B and any other proposal that would be fatal to the 5,000 cattle who are being exploited for beef and dairy production in Pt. Reyes. Several NPS proposals include killing the native Tule Elk in order to continue grazing livestock. This is absurd!

I encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy beautiful Pt. Reyes park and to be enriched with opportunities to visit and appreciate this special place. Grazing poses a threat to the environment, wildlife, and the public good.

#6448

Name: Dreyfuss, Jeramie

Correspondence: Please protect the Point Reyes elk. I wish we could protect all of our wildlife. No, I do not eat meat and I love all animals. Please protect them.

#6449

Name: Burns, Amy

Correspondence: Please adopt Alternative F, (which will discontinue farming and ranching opportunities in the park and expand visitor opportunities). The preservation of native wild species must take precedence over farming and ranching activities. Grazing negatively affects ecosystems, causing water pollution and soil erosion, spreading invasive species and disease, and harming endangered species.

#6450

Name: N/A, N/A

Correspondence: I support Alternative F, phasing out cattle and dairy industry and returning the land to its natural state. For-profit businesses have no place on public land. These ranches have already negatively impacted the land, allowing soil erosion, scarring in the landscape, as well as e.coli contamination in waterways. Point Reyes National Seashore is a National Park and should be protecting the Tule Elk, not animal agriculture.

#6451

Name: N/A, N/A

Correspondence: From the EIS it seems clear the Alternative F is the preferred solution and I therefor strongly support it.

The study shows that Alternative F is best for the soil, water quality, vegetation, air quality, wildlife and of course the tule elk. Yes there would be some socioeconomic impact, but national parks are not the place where these factors should have a priority. In this time where the climate crisis is critical to our way of life it is unconscionable to continue a destructive practice that generates greenhouse gas in our key national park. It is very strange that the word 'climate change' does not even appear in the EIS, and that the greenhouse gas emissions caused by the ranching is relegated the air quality section.

Especially in our region where we see the impact of climate change all the time with deadly wildfires, we need to take action. The negative socioeconomic impact of the fires are much larger than the benefits due to the ranching. Yes, I know they are not equivalent, but we need to take action everywhere. What better place to start than in Point Reyes national seashore. I strongly recommend to go with Alternative F.

#6452

Name: Cummings , Tracy

Correspondence: All the ranching alternatives in the Draft Environmental Impact Statement involve the impairment of natural resources. Three National Park Service laws prohibit actions that will impair natural resources (the 1916 NPS Organic Act, Point Reyes National Seashore legislation Section 459c-6, and Golden Gate National Recreation Area legislation Section 460bb). Consequently, the Park Service should prepare a supplemental DEIS with ranching alternatives that comply with applicable laws requiring the protection of natural resources. The Park Service should then circulate that supplemental DEIS for public comment

#6453

Right now the Point Reyes ranches enjoy not only subsidized grazing fees and housing, but also taxpayer-funded infrastructure and road improvements, and publicly funded projects. But commercial activities at Point Reyes should be required to accommodate native wildlife - not the other way around.

This is unconscionable. Tax dollars should never be used to fund global heating. Millions are joining school strikes to fight the climate crisis. Dairy and meat corporations pollute more greenhouse gases than all the cars, planes, ships and trains around the world. Dietary change is essential if global warming is not to exceed 2°C. ([http://www.chathamhouse.org/sites/files/chathamhouse/field/field\\_document/20141203LivestockClimateChangeBaileyFroggattWellesley.pdf](http://www.chathamhouse.org/sites/files/chathamhouse/field/field_document/20141203LivestockClimateChangeBaileyFroggattWellesley.pdf))

Recent studies warn that every non-agricultural industry must achieve "impossible" zero-carbon emissions to avoid catastrophic global heating in excess of 2°C just to offset industrial agriculture - with "livestock" a major contributor. (<http://www.nature.com/nclimate/journal/v4/n10/full/nclimate2353.html> and <http://link.springer.com/article/10.1007/s10584-014-1104-5>)

A new study warns the global average temperature could rise by as much as 7°C. (<https://www.newsweek.com/climate-change-temperature-rise-seven-degrees-new-un-report-1459666>)

Correspondence: I vote for Alternative F, which phases out ranching over five years and allows the Tule elk to expand their range in the park.

A National Park should have the protection of the natural world, including wildlife, as its highest priority. But the preferred alternative in the Pt. Reyes draft management plan includes expanding dairy ranching in the seashore and killing Tule elk to do so. This is unconscionable. A national park should protect its wildlife, not the ag industry. Point Reyes is the only national park where we can see these animals, which are down to 1% of their original population. The park should protect them, not the ranches!

Its time to phase out an industry that pollutes and degrades our public land. The park should revoke permits for all cattle and dairy operations and restore the leased land to its original, pre-industry state. Ranching continued after Pt. Reyes became a National Seashore, but the understanding was that the continuance of ranching was to be temporary. When Point Reyes became a National Park in 1962, the federal government paid millions of dollars to the ranchers to purchase their land. They were given 25-year leases and were then to be phased out of the park. Their original leases have long expired.

Now the Parks Department is considering a 20-year extension and giving ranchers additional options for commercial activity, such as providing tours and homestays at ranches. Like most people, I go to the Seashore for the natural beauty, not to see dairy ranches. There are plenty of dairy ranches in Marin and nearby counties that could provide homestays and tours if there actually were a demand for that. There's no need to preserve working ranches within Pt. Reyes. To the extent that there is some interest in the history of ranching, the buildings at Pierce Point ranch provide for that. The ranch buildings and infrastructure are historic, not the cows. People don't really come to the Pierce Point area to see working dairy ranches; they come to see elk and other wildlife.

Allowing the ranchers to diversify, raise pigs, sheep, and chickens as well as cows, will only add feces to a park already saturated with livestock manure. Already, cattle ranching has done massive environmental damage: miles of barb wire fences, killed wildlife, poo-ponds, pee-creeks, and terrible erosion. The ranches have been documented to be the highest emitter of greenhouse gases. The manure runoff has contaminated some of the most precious waterways including where the coho salmon spawn and the elephant seals raise their pups. It has been documented that the ranches spread noxious weeds and limit the wildlife and biodiversity where they operate. Any diversification of ranching operations will only serve to attract more predators like coyotes, foxes, bobcats that will be in conflict with ranch operations and have to be managed as well.

Finally, there's no good economic rationale for maintaining the ranches. The money that the park brings to local businesses through tourism dwarfs money generated by the dairies.

Correspondence: The following comment is submitted on behalf of the Marin Chapter of the California Native Plant Society (Marin CNPS). The comment pertains to the Draft Environmental Impact Statement (DEIS) for the General Management Plan Amendment (GMPA) for the Point Reyes National Seashore (PRNS or Seashore).

The California Native Plant Society is an organization of nearly 10,000 members statewide dedicated to conserving native plants and their natural habitats and to increasing the understanding, appreciation, and horticultural use of native plants. Since its inception in 1968, CNPS's Rare Plant Program has been a trusted resource for scientific accuracy and integrity. CNPS rare plant data are widely accepted as the standard for information on the rarity and endangerment status of the California flora. These data are incorporated into CNPS's Rare Plant Inventory, another authoritative resource on California's rare and endangered plants. Now in its 8th edition online, the Inventory continues to play an important role in scientific research, conservation planning, and the effective enforcement of environmental laws.

The CNPS Vegetation Program, for its part, has established a vegetation classification system that has become the standard for interpreting statewide vegetation patterns and for initiating local and regional ecological assessments. The program continues to expand this knowledge and to inform conservation and land-use planning throughout the state.

The Marin chapter, with its 500 members, monitors land use issues affecting Marin's vegetation and rare species. We regularly comment on planning efforts undertaken by county, state and national agencies. Here, we limit our comments to those that are directly or indirectly related to native plants and plant communities in the planning area. A. Introduction & Legislative Intent The GMPA presents the Seashore with a unique opportunity to evaluate the impacts of ranching in the pastoral zone and to reach informed conclusions on the optimum management of these lands and how such uses can best carry out the purposes of PRNS and its ranchlands.

The continuation and management of ranching in the Seashore must conform to the overarching mission of the NPS, as stated in the 1916 Organic Act, as well as the Seashore's own enabling legislation. Indeed, we submit that the DEIS wrongly dismissed the notion that natural resource protection goals should shape the GMPA because the NPS is also required to conserve cultural resources and public use and enjoyment. DEIS at 59. To the contrary, a close review of the Seashore's legislative history demonstrates that although the ranches are a cultural or historic resource, their preservation and management must advance and not weaken the Seashore's overall purpose of natural resource protection and enhancement.

The Organic Act provides that the mission of the national parks is to conserve the scenery and the natural and historic objects and the wild life therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations. 16 USC 1. For its part, the 1962 enabling legislation declared that the PRNS was established to save and preserve for purposes of public recreation, benefit and inspiration, a portion of the diminishing seashore of the United States that remains

undeveloped& . 16 USC Sec. 459c. Congress later elaborated on this statement by requiring the Department of the Interior to administer its Point Reyes lands without impairment of its natural values, in a manner which provides for such recreational, educational, historic preservation, interpretation, and scientific research opportunities as are consistent with, based upon, and supportive of the maximum protection, restoration, and preservation of the natural environment within the area,& 16 USC Sec. 459c (6)(a) [emphasis added].

While Congress declined to terminate ranching at the time it created the PRNS, it is a common misconception that it intended ranching in the Seashore to be permanent. To the contrary, the original enabling legislation allowed the ranches to remain for a period of only fifty years after purchase by the National Park Service. Public Law 87-657(6); *Managing a Land in Motion: An Administrative History of the Point Reyes National Seashore* (Sadin, Historical Research Associates 2007) at 93. Many NPS officials and members of Congress assumed that once the government purchased the land in the pastoral zone, it would eventually be allowed to return to its natural state, as that term was then understood. Sadin at 177.

During the 1970s, after Congress increased the funding for acquisition of the parklands, most or all of the ranchers agreed to sell and the NPS granted reservations of use and occupancy or life estates to landholders who wanted to continue ranching. Sadin at 140-141,177.

In 1978, Congress again amended the enabling legislation both to shorten the term of years a ranch could remain after purchase and to authorize the leasing of agricultural lands: The legislation states: When appropriate in the discretion of the Secretary, he or she may lease federally owned land (or any interest therein) which has been acquired by the Secretary under sections 459 to 459-7 of this title and which was agricultural land prior to its acquisition. Such lease shall be subject to such restrictive covenants as may be necessary to carry out the purposes of 459c to 459-7& [emphasis added]. See discussion above.

The import of the latter action was that although the Secretary was now authorized to lease agricultural lands, he or she was required to exercise such authority in a way that would not impair the natural values of the land and would be supportive of the maximum protection, restoration, and preservation of the natural environment within the area,& 16 USC Sec. 459c (6)(a). Accordingly, ranching must be carried out in a way that supports rather than undermines natural resource protection.

When the earlier reservations of use began to expire in the 1990s, then-Superintendent John Sansing began to issue 5-year renewable leases with the understanding that such leases would be renewed indefinitely. Sadin at 177-78. Between 1990 and 2001, 21 ranch operators entered into such leases.

Recent pronouncements from the federal government have not changed the essential priorities for management of the Park or the pastoral zone. The 2012 order of then-Secretary of Interior Ken Salazar mandated the Seashore to pursue 20 year lease arrangements, but again, in a way that is consistent with applicable laws and planning processes. This latter phrase clearly refers back to the purposes of the Seashore as summarized above.

A July, 2019 Draft Foundation Document again restates the Seashores essential purposes: Established for public benefit and inspiration, the Point Reyes National Seashore protects a rugged and wild coastal peninsula and surrounding waters, connecting native ecosystems, enduring human history and recreations, scientific and educational opportunities. The document lists the fundamental resources and values of the Park as consisting of wilderness, coastal landscapes, marine, estuarine and freshwater environments, diverse habitats and native species, maritime cultural landscapes, continuum of human use (including ranching), opportunities for inspiration and recreation and science and learning. Here again, while ranching is acknowledged as a resource, it appears to play a subordinate role in relation to the conservation of natural, historic and archeological resources. Indeed, it is lumped together with the history of indigenous peoples under the rubric of Human Use. Foundation Document at 6. Furthermore, ranching is not even mentioned in the list of interpretative themes. Id. at 7. Accordingly, nothing in the Foundation Document accords ranching priority over natural resource conservation, particularly dairy ranching.

While the DEIS also cites a Joint Explanatory Statement that accompanied a February, 2019 omnibus spending bill (ending the government shutdown), this provision has no binding legal effect. See DEIS at 3. While the statement showed support for the continuation of ranching and dairying in the Seashore, the topic was nowhere addressed by the bill itself. Without a corresponding provision in the text of a bill approved by both chambers of Congress, a declaration in a joint explanatory statement or committee report has no force. *Puerto Rico Dept. of Consumer Affairs v. Isla Petroleum Corp.*, 485 U.S. 495, 501 (1988)(Unenacted approvals, beliefs and desires are not laws); *Secretary of the Interior vs. California*, 464 U.S. 312, 323 n.9 (1984).

Taken as a whole, the legislative history of PRNS requires management of the ranchlands in a way that advances the protection of its key resources and values. Indeed, the DEIS itself states that the purpose of maintaining agriculture in the Park is to preserve cultural history and structures. DEIS at 2. Decisions about the future of ranching should implement this vision, not fundamentally enlarge the role of ranching so as to promote alternative concepts such as sustainable agriculture, diversification or multi-generational ranching. Simply put, ranching in the Seashore is a means of preserving the cultural history of the area and managing its grasslands.

#### B. CNPS Opposes Preferred Alternative B and Supports Alternative E, Modified as Described Below

CNPS rejects Alternative B because it would (a) represent an unwarranted expansion of agricultural activities in the Seashore, (b) perpetuate practices that are counter-productive for natural resource stewardship and water quality, (c) fail to advance the preservation of cultural history and structures in an appropriate manner, and (d) miss a critical opportunity to improve native plant communities, water and air quality and habitat for rare plants and wildlife. Alternative E, in contrast, would maintain a level of grazing that is generally beneficial to native vegetation while dispersing the adverse impacts of cattle, such as congregations around barns and feeding areas, leading to manure accumulation, erosion and runoff.

Furthermore, of the alternatives presented, Alternative E would best achieve the desired conditions as outlined in the DEIS-that is, it would improve ecological function, connectivity and natural processes, reduce air and water pollution, protect threatened and endangered species, reduce invasive species, and preserve landscapes and structures in a manner that maintains their integrity. DEIS at 2-3.

1. Native vegetation and the benefits of grazing. Of the listed desired conditions, CNPS is naturally most concerned with native plants and vegetation. We support Alternative E because the elimination of dairying would address many of the serious impacts noted in the DEIS; see discussion below; while the continuation of beef ranching would preserve the natural process of grazing, which, on balance, is more beneficial to native vegetation than the lack thereof. As pointed out in the DEIS, cessation of grazing & may [] result in an increase in invasive annual and perennial species such as thistles and grasses; a likely decrease in native forb species abundance and richness; shrub encroachment into areas currently characterized as coastal prairie; and an increase in vegetative fuels. DEIS at vi.

The beneficial impact of grazing on native vegetation likely stems from the fact that California grasslands and prairies evolved under a regime of grazing by Pleistocene-era megafauna - mastodon, mammoth, camel, llama, bison, elk, pronghorn and horses. These herbivores grazed on grasses and forbs as well as trees and shrubs. *Grazing Handbook*, Sotoyome Resource Conservation District (2006). See <http://www.carangeland.org/images/GrazingHandbook.pdf> at 2. Thus a grazing regime is an essential ecological process that should be preserved at Point Reyes.

The presence of elk in the Seashore today is not only a positive reminder of our evolutionary past, it also has environmental benefits. A study from Arizona reported that while elk and cattle have similar diets, the stubble height in elk-foraged fields was about 2 centimeters higher than stubble left by cows, with positive ramifications for soil moisture retention, erosion, plant regrowth and wildlife habitat. Halstead, L.E. et al., *Elk and Cattle Foraging Under a Specialized Grazing System*, *J. Range Management* 55:360 (July 2002). Furthermore, being larger and heavier, cattle consume more forage than elk: a single adult dry cow consumes almost half again as much forage (727 lbs. per month) as one mature elk (474 lbs. per month). *Grazing Handbook* at 9. See also

<https://baynature.org/article/con-cattle-grazing-is-incompatible-with-conservation>. CNPS is thus content to see the elk herds enlarge in the pastoral zone although, in the absence of predators, it will likely be necessary to control their numbers eventually.

Still, the matter of grazing and native plant conservation is enormously complex and site-dependent. Some studies show that grazing is likely to benefit native annual forbs by reducing the height and biomass of competing grasses and non-native forbs and opening up micro-sites. DEIS at 144. On the other hand, native perennial forbs appear to be harmed by grazing, because the latter clips the plants reproductive structures, thereby preventing them from setting flowers and seeds. DEIS at 145. With respect to grasses, one study of grazing impacts on the California coastal prairie plant community showed that cattle grazing promoted exotic annual grasses and forbs, such as *Erodium*, and did not benefit native plants; cover and species richness of native perennial forbs, grasses, sedges and rushes were all higher in ungrazed sites. G.F. Hayes & K.D. Holl, *Cattle Grazing Impacts on Annual Forbs and Vegetation Composition of Mesic Grasslands in California*, 17 *Conservation Biology* 1694-1702 (2003). Similarly, a 2003 study conducted at Carrizo Plain concluded that cattle-grazing is counter-productive for native plant restoration, that it harms native species and promotes alien plant growth. *Differing Effects of Cattle Grazing on Native and Alien Plants*, *Conservation Biology*, Vol . 17, Issue 6.

A research project carried out at Pepperwood Preserve in Sonoma County reported that some but not all perennial native grasses benefitted in the absence of grazing, that exotic clovers and *Erodium* species increased under a grazing regime, and that although grazing is detrimental to native perennial forbs, it benefits native annuals. See also H.W. Elliott and J.E. Wehausen, *Vegetational Succession on Coastal Rangeland of Point Reyes Peninsula*, 22 *Madrono* No. 5 (1974)(after 6-year trial, more native plant species found on ungrazed plot compared to lightly or moderately grazed plots). While these studies suggest that grazing should be greatly reduced in the planning area, researchers have also identified environmental benefits when grazing is managed carefully. Grazing can prevent the invasion of shrubs into grasslands, thereby reducing fire hazard and preserving prairie or grassland habitat. By preventing the buildup of dense thatch on the ground, grazing can promote germination of many native wildflowers, including popcornflower (*Plagiobothrys* spp.), clovers (*Trifolium* spp.), owls-clovers (*Castilleja* spp.), cream cups (*Platystemon californicus*) and red maids (*Calandrinia ciliata*). *Grazing Handbook* at 4. Just as trampling is sometimes harmful, it can also improve the soil by breaking up dead grass and mixing it into the soil, along with nutrients such as manure and urine. *Grazing Handbook* at 8. Grazing can also be an effective weed management technique, especially when used for short periods using portable electric fencing. *Grazing Handbook* at 16.

Public lands managers striving for an appropriate balance between agriculture and conservation limit the number of cattle or elk, and/or modify the intensity, seasonality, duration and frequency of grazing on any particular site, depending on the specific resources to be encouraged. *Grazing Handbook* at 8. For example, a 3-year study of a planned grazing program at TomKat Ranch in San Mateo County found that by increasing cattle density, moving the herd through a series of smaller subdivided pastures, and giving each pasture a respite from grazing for 70 to 120 days led to a 72% increase in native perennial grasses. C. Henneman, N. Seavy & T. Gardali, *Restoring Native Perennial Grasses by Changing Grazing Practices in Central Coastal California*, 32:4 *Ecological Restoration* at 352 (Dec. 2014).

Additionally, grazing of varying intensity can be used to create habitat heterogeneity. Some native rodents and small mammals can benefit from more intense grazing whereas California meadow mouse and western meadowlark prefer lighter regimes. Grazing has been found to improve conditions for both dog violet (*Viola adunca*), thereby supporting the endangered Myrtles silverspot butterfly, and dwarf plantain (*Plantago erecta*), an important plant food for the Bay checkerspot. *Grazing Handbook* at 15, 18.

CNPS supports the concept of Resource Protection Zones (RPZs) as a means to regulate grazing for the purpose of enhancing rare plant populations. For example, RPZs on F and G Ranches will be established to exclude cows from dunes and other sites either year-round or seasonally, thereby improving conditions for beach layia (*Layia carnosa*), Tidestroms lupine (*Lupinus tidestromii*), Sonoma alepecurus (*Alepecurus aequalis* var. *Sonomensis*), San Francisco spineflower (*Chorizanthe cuspidata* var. *cuspidata*) and Sonoma spineflower (*Chorizanthe valida*).

Appendix K at 67, 69, 71. The Seashore can also implement prescribed grazing programs in the RPZs to coordinate grazing with the phenology of both rare plants and invasive weeds in coastal prairie and other plant communities. UCBGP at 11, 30.

Indeed, CNPS would like to see such nuanced grazing plans created for all the rangelands in the Seashore, not just in the small RPZs. We urge the Seashore to provide more detail on the ranch-by-ranch management of rare plants and plant communities in the Final EIS-tailored grazing plans that adjust the intensity and timing of grazing to suit the vegetative resources that exist on any given ranch. Such practices can and should also be incorporated into the Ranch Operating Agreements and we urge NPS planners to do so, whatever alternative is ultimately adopted.

2. Adverse impacts of dairying. As a general matter, the DEIS supports our view that Alternative E is superior to Alternative B: Under alternative E, noticeable beneficial impacts would occur compared to existing conditions from the conversion of the six dairy ranches to beef operations, elimination of manure management practices, seeding, forage production, and diversification activities. DEIS at vi. Specifically regarding vegetation, the DEIS states that the impact of dairy on vegetation is more adverse and severe than that of beef cattle. DEIS at 143.

A major reason for such adverse impact is the practice of planting and harvesting silage, hay and haylage. These activities disturb the soil, consume water and displace coastal prairie, in areas where coastal prairie historically existed, or other native plant habitat. See *Grazing Plan for the Point Reyes Seashore Managed Grazed Lands*, L. Aoyama, L. Waks, P. Hopkinson<sup>1</sup>, and J. Bartolome, Range Ecology Laboratory, Department of Environmental Science, Policy, and Management, University of California, Berkeley (2018)[UCBGP] at 54. Other impacts include seepage from silos and wildlife disturbance, particularly on grassland birds. Id.

Dairies also concentrate the impacts of cattle grazing, trampling and manure accumulation in small areas near the milking facilities and feeding areas, creating areas of unvegetated ground and leading to erosion and sedimentation of streams and estuaries. The DEIS itself recognizes that [d]airies are high intensity operations that require extensive milking, feeding, and waste management infrastructure to meet current production and water quality management standards. A typical dairy includes milking, loafing, and feed barns; structures for milk storage and processing; and often a hospital barn. DEIS at 10. Appendix K at 7-8.

Moreover, [o]rganic production standards require dairy cattle to remain on pasture for a minimum of 120 days per year, and animals older than 6 months of age must get at least 30% of their dry matter intake from pasture during the grazing season (US Census of Agriculture 2013). DEIS at 10; UCBGP at 50. This reduces managers flexibility to adjust grazing pressure to protect native vegetation and rare plants.

Dairying practices have also changed significantly since the mid-20th (let alone the mid-19th) centuries, in ways that reduce its compatibility with the goal of cultural or historical preservation. Specifically, herd size has almost doubled statewide since 1982. UCBGP at 41. Breeding has made milk cows more productive which in turn increases their nutritional needs and necessitates supplemental feed. Id at 41. Modern dairy cows require more range than other classes of livestock, whereas beef cattles protein needs are low, normally allowing them to get by on natural pasture. Id.

As noted above, dairies require greater investment in buildings and fences than cattle operations: milking parlor, loafing barn, waiting and feeding areas have become standard. While these modern features of dairying may make Point Reyes dairies more competitive in the larger market, they do not advance the preservation of 19th and early 20th Century cultural or historical heritage at Point Reyes and should not be reflexively approved.

In addition to facilitating better vegetation management in the Pastoral Zone, Alternative E better supports other desired conditions enumerated in the DEIS than Alternative B.

3. Soils. Movement patterns of dairy cows are concentrated in areas near milking and feeding leading to soil compaction and erosion. DEIS at vi. In contrast, except for water troughs, beef cattle are dispersed over large areas, causing little or no compaction, erosion and sedimentation. Id at 65. Moreover, compared to beef cattle

operations, dairies produce large quantities of concentrated manure waste, resulting in the need to spread manure and slurry over fields, with more compaction of soil by heavy trucks and other equipment; these practices would be eliminated under Alternative E.

4. Water Quality and Quantity. The DEIS also notes that Alternative E would improve water quality in streams and wetlands compared to Alternative B. Because dairies produce large quantities of concentrated manure waste; DEIS at 10; liquid manure must be sprayed or spread on pastures through a pump and irrigation system. Large trucks also spread slurry and solids by driving over pasture lands and distributing manure. Id at 11. See App K at 7-8. These practices increase nutrient-laden surface runoff and pollution of streams and wetlands. The removal of dairy operations under alternative E would thus eliminate adverse impacts on surface water quality associated with livestock congregation and concentrated manure storage near milking barns and would eliminate potential impacts from spreading manure in the Pasture subzone. Id. at vi.

Modern dairies also tend to over-supply cows with protein, which ends up being excreted as N (nitrogen). Leached to surroundings, waterborne N leads to eutrophication and changes in the composition of plant communities to favor nitrophilous graminoids. UCBGP at 43.

While the DEIS states that dairy cattle consume between 15 to 25 gallons of water per day; DEIS at 10; UCBGP at 42; this underestimates the water needs of dairy cows. According to a dairy industry publication, a milking dairy cow consumes between 30 and 50 gallons of water per day; <https://www.dairyherd.com/article/drinking-water-dairy-cattle-part-1>; compared to only 12-20 gallons per day for beef cattle. DEIS at 10; UCBGP at 42. See also <https://beef.unl.edu/amountwatercowsdrink> (beef cattle consume from 3 to 30 gallons per day depending on age, weight, stage of production, and the environment (mainly air temperature). Dairy operations have additional water needs for the management of the dairy complex, cleaning, and other tasks&. DEIS at 10.

Thus, elimination of the dairies would increase the supply of ground and surface waters in addition to reducing polluted runoff.

5. Air quality. Dairies produce more greenhouse gases, including methane and nitrous oxide, from manure and indirectly from fertilizer production, clearing of pastures, energy use associated with tractors, milking equipment, transport of hay and dairy products to and from the marketplace. UCBGP at 42. Elimination of dairies would thus improve the Seashores carbon footprint as well as local air quality.

#### 6. Preservation of Cultural Resources & Public Use and Enjoyment

Under Alternatives A, B, C and D, visitors to the Seashore would continue to bump and jostle along a seriously eroded and rutted Sir Francis Drake Boulevard. With the ranchers exempt from property taxes, the County must bear all the costs of repair. On the other hand, if dairies were phased out under Alternative E, it would end most trips currently made by heavy milk and hay trucks, thereby greatly reducing the wear and tear on the road and reducing public expense.

The end of dairying in the Seashore would also continue an historic trend of converting dairies to beef ranches that began before the Park was created. UCBGP at 1. Indeed, it is unnecessary to allow the adverse impacts of dairying to continue merely to preserve cultural history at Point Reyes. In the Bay Area alone, there are several examples of NPS preserving the historic and cultural resource of a park unit without the underlying activities continuing: the jailers and inmates are long gone from Alcatraz; no ammunition is loaded onto ships at Port Chicago; no Nike Missiles defend the Marin Headlands against Soviet bombers.

Similarly, the recent designation of the Seashores pastoral zone as a rural historic district does not require that actual dairying or beef ranching continue, according to a spokesman for the National Register of Historic Places. <https://www.ptreyeslight.com/article/park-service-recognizes-olema-and-point-reyes-dairy-ranches>. Indeed, another designation recognizing the Olema Valley Dairy Ranches Historic District was made despite the fact that

no dairies currently exist there. Appendix A at 3. It is thus not essential to maintain dairying for reasons of historic preservation.

It is also highly questionable that cultural resources and public use and enjoyment of the park would be advanced by the proposed diversification of ranch activities allowed in Alternative B. Goats, sheep, chickens and pigs-along with their attendant guard dogs, llamas and donkeys- - would clutter the pastoral scenery and confuse the messaging about past ranching at Point Reyes. Appendix K at 15-16. Likewise, the suggestion by one rancher to grow quinoa lacks any historic precedent. Scoping letters Received at 595.

Moreover, pigs and swine have a history of escaping into the wildlands of California with serious adverse consequences for native plants, habitats and water quality.

Ranch tours, home stays, processing facilities and farm stands would commercialize the pastoral zone for private gain and have no place in a national park.

Currently, park visitors are exposed to large areas of bare soil trampled by dairy cattle, mounds of manure and vast patches of radish, velvet grass and other weeds-not to mention derelict buildings and junk cars. These unsightly scenes detract from both the pastoral ambience and public enjoyment of the Seashore and do not comport with public expectations for a national park.

CNPS thus urges the Seashore, as part of this GMPA process, to closely scrutinize whether modern dairies, with their increased infrastructure, larger herds, higher nutritional needs, pasturing requirements, tendency to introduce and spread invasive plants and now diversified products would truly serve the purpose of preserving cultural history in a manner that maintains their integrity. DEIS at 2-3. In contrast, a landscape of widely-dispersed grazing beef cattle and elk would maintain the historic and prehistoric landscape while having significantly less severe adverse environmental impacts.

7. Socioeconomic impact. The DEIS states that under Alternatives A-E, agriculture in the Seashore would continue to contribute to the economies of Marin and Sonoma counties, through employment, taxes and spending by the ranchers and their employees. Nonetheless, Under alternative E, conversion from dairy to beef operations would result in the loss of \$14.4 million in annual revenue and 27 jobs at ranches in the planning area. DEIS at ix. Some of the job losses might be offset by vegetation management projects to be undertaken by NPS, such as weed management and habitat restoration. The DEIS goes on to conclude that When the incremental impacts of alternative E are combined with the impacts from past, present, and reasonably foreseeable actions, the overall cumulative socioeconomic impacts would remain beneficial.

## B. Ways to improve Alternative E and the GMPA

CNPS offers the following points to improve the ultimate GMPA.

1. Efforts to increase grassland. The DEIS calls for mowing and grazing to prevent coyote brush and other shrubs from invading grasslands. DEIS at 22. While we agree that diversity of plant communities is desirable, we question the need for these measures and urge the NPS to adopt an adaptive management approach. The conditions in the elk refuge on Pierce Point show that grasslands persist after several decades of native deer and elk grazing without cattle. Moreover, the elk are known to break off branches and otherwise limit coyote brush such that the stands are not as thick as on ungrazed areas.

An adaptive management approach should recognize the positive ecological role of coastal scrub brush in providing wildlife cover, enhancing overall biodiversity and a more natural vegetative cover. Mowing of brush in pasture and range subzones should thus be limited to areas previously occupied by native grassland, as shown by historical photographs prior to early 1970s and to soil types appropriate to support grassland, according to the USDA, NRCS, soil survey and associated ecological site descriptions. Table D-11 to D-37. Any mowing should be timed to avoid disrupting native plant reproduction and nesting birds.

2. Residual Dry Matter. The DEIS cites a 2015 UC Berkeley study as approving an RDM minimum of 1200 pounds per acre. DEIS at 11. However, the 2019 grazing plan calls for a range from 1200 to 2100 pounds per acre depending on soil type and slope to protect coastal prairie. UCBGP Table 6. Accordingly, the RDM limits should be tailored to the underlying plant communities and the subzones on each ranch. Higher levels should be required for coastal prairie, wetlands, the rangeland subzones and steep slopes whereas lower amounts are acceptable for non-native grassland and pasture and core subzones. UCBGP at 44.

3. Invasive plants. The FEIS should provide more detail on plans for managing invasive plants. It should specify projects and methods for dealing with the various invasive species and state how prescribed burning might be used in the program. Each Ranch Operating Agreement should set forth the ranchers specific responsibilities for weed management.

4. Soil Erosion. Heavily trafficked corridors with deeply incised paths and all eroded sites frequented by cattle should be fenced from their use as already practiced in some areas. Alternative routes to pastures and ranch core sub-zones should developed to disperse cattle as much as possible to forestall new soil erosion.

5. Restoration. A more systematic and deliberate effort should be made to restore native plant habitats and re-establish native plants and communities.

6. Dairying history. if deemed necessary, a small demonstration dairy might be established at one of the former dairies to represent this aspect of the areas agricultural history.

D. Deficiencies of the DEIS The following points should be corrected in the Final EIS:

1. The DEIS fails to provide a rationale for the choice of Alternative B as the preferred alternative. The FEIS should rectify this and analyze how each alternative would or would not achieve the desired conditions.

2. The FEIS should forthrightly identify the impacts associated with the various Alternatives and characterize each impact as significant, moderately severe or not significant. It is inadequate to simply declare in conclusory fashion that all impacts are not significant except where noted. DEIS at 99. Such findings need analysis and support.

3. Since no public project-level review will take place for vegetation management actions on the ranches; DEIS at 6; the FEIS must state what resources are at risk each ranch and specify what mitigation measures are to be required in each Ranch Operating Agreement. Such plans should include the timing and extent of grazing to be permitted in which sub-zones and what sensitive plant species will be affected. Table D-1 at D4-D5.

4. Alternatives A through E fail to include restoration plans for coastal prairie, wetlands and riparian and dune areas to benefit native plants, fish, invertebrates and wildlife as discussed under Alternative F. DEIS at 160-161. All Alternatives should include these plans. Coastal prairie and dune habitats at Point Reyes are of statewide conservation value and need stewardship and restoration. UCBGP at 4, 13.

5. The DEIS fails to address plans for active restoration of suitable habitat for rare plants other than the federally endangered species. Approximately 50 such special status plant species are listed in Appendix J, Table J-1 and J-2 and the UC Berkeley Grazing Plan. UCBGP at Table 4, page 21. The habitats for these plants include bluffs and headlands, coastal prairie, dunes and sandy flats, freshwater marsh or seasonal wetlands, salt marshes or brackish lagoon shores.

Additional rare or special status species that were omitted from the DEIS and the Berkeley Grazing Plan are listed below. These plants should also be included in habitat restoration plans.

Nuttalls milkvetch, *Astragalus nuttalli* var. *nuttalli* (CRPR 4.2) Field chickweed, *Cerastium viride* Coastal gumplant, *Grindelia hirsutula* var. *maritima* (CRPR 3.2) Hayfield tarweed, *Hemizonia congesta* ssp *congesta* (CRPR 1.B2) Pt. Reyes horkelia, *Horkelia marinense* (CRPR 1.B2) Harlequin lotus, *Hosackia gracilis* (CRPR 4.2)

Robust spineflower, *Chorizanthe cuspidata* Pedunculate forma robusta (federally endangered) Franciscan wallflower, *Erysimum franciscanum* (CRPR 4.2) Lyngbyes sedge, *Carex lyngbyei* (CRPR 2.B2) Round woolly marbles, *Psilocarpus chilensis* Humboldt Bay owls clover, *Castilleja ambigua* ssp *humboldtiensis* Marin knotweed, *Polygonum marinense* (CRPR 3.1) California bottle brush grass, *Elymus californicus* (CRPR 4.3) Nodding semaphore grass, *Pleuropogon refractus* (CRPR 4.2)

6. The DEIS failed to adequately address the scoping comments made by CNPS.

o The DEIS failed to include mapping of special status plant populations or coastal prairie (as distinguished from non-native grasslands). The US Fish and Wildlife Service advised the NPS to include this information in the Appendices but this was not done. Appendix K at 3.

o The DEIS fails to provide adequate detail on the RPZs: what resource(s) is to be protected by each and how?

E. Conclusion CNPS urges the Seashore planners to adopt Alternative E as the most effective option for achieving the desired conditions related to vegetation, soils, water and air quality, cultural preservation, public use and enjoyment and socioeconomics. Still, Alternative E would be improved by incorporating more protective approaches to mowing, RDM, invasive plants, and habitat restoration.

Finally, the FEIS should provide a rationale for the preferred alternative, characterize the severity of impacts, provide adequate detail regarding grazing plans on each ranch, include mapping and restoration plans for coastal prairie and other important plant communities within the pastoral zone and all special status plant populations, and identify the resources to be protected by each RPZ.

Thank you for the opportunity to comment. Carolyn Longstreth, Director, Marin CNPS, on behalf of the Board of Directors

Correspondence: All the ranching alternatives in the Draft Environmental Impact Statement involve the impairment of natural resources. Three National Park Service laws prohibit actions that will impair natural resources (the 1916 NPS Organic Act, Point Reyes National Seashore legislation Section 459c-6, and Golden Gate National Recreation Area legislation Section 460bb). Consequently, the Park Service should prepare a supplemental DEIS with ranching alternatives that comply with applicable laws requiring the protection of natural resources. The Park Service should then circulate that supplemental DEIS for public comment. No ranching should be allowed on National Park Service land!

#6458

Name: Stocker, Elizabeth

Correspondence: Our public lands were intended for all of us. Allowing ranchers to run their cattle on the public lands diminishes the land with no benefit to the rest of us. Please do not allow ANY expansion of this activity and find a solution to the original acceptance by prohibiting this in the future.

#6459

Name: Helgeson, Eric

Correspondence: The Agricultural lease and succession planning requirements should be revised to transition to reduced dairy farming at Point Reyes, in keeping with the original goals of the establishment of the National Seashore. There are significant stream and beach water quality issues generated by the dairy farm manure handling and spraying. The tule elk and other wild animals populations are negatively impacted by the farms, fencing and habitat degradation caused by dairy farming at Point Reyes.

#6460

Name: Barnes, Burton

Correspondence: I am a rancher raising cattle for beef in Sonoma County and for over 35 years doing so I know well the environmental resistance against us by persons well organized and having arm chair images of the way life should be lived on a ranch. I firmly believe the NPS should continue to follow previous plans and established practices in the planning area. Additionally, NPS should continue to apply the management zoning framework outlined in the 1980 GMP.

Continued resistance by those acting in the name of environmental matters without ever having to deal with the issues they want to pursue will eventually cause the cessation of agricultural operations to exist. That is their goal, however well-intention it may appear!

#6461

Name: N/A, Laurent

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#6462

Name: Nickum, Annaloy

Correspondence: I'm appalled that you would sacrifice the lives of the indigenous Elk on public lands for the lives of non native cows. These cows not only contribute to climate change, they destroy complex botanical systems. The last time I was there, I saw herds of cattle trampling vast complexes of native plants. The areas outside the fences that contained the cattle were a rich mixed carpet of native plants that feed multitudes of insects and birds that are a vital part of the earth's immune system. The public good and the protection of vital ecosystems should always be above private profit. These cattle will be slaughtered anyway.

#6463

Correspondence: COMMENTS REGARDING AGRICULTURAL AND WILDLIFE MANAGEMENT AT POINT REYES NATIONAL SEASHORE AND GOLDEN GATE NATIONAL RECREATION AREA

Judd A. Howell, B.S., M.S., Ph.D. (USGS, GS-15, Retired) Certified Wildlife Biologist

September 18, 2019

I have watched the Park Service's management of ranching on the park lands of Point Reyes National Seashore and the Golden Gate National Recreation Area for the past 39 years. I came to Golden Gate National Recreation Area in 1980 as that park's first Park Ranger GS-025 (Natural Resources Specialist) and wrote the park's first Natural Resources Management Plan, which was completed and approved in 1982. During my 20 year tenure, I became Golden Gate's Ecologist then Research Scientist. In the mid-to late 1990's my team and I conducted elk population, habitat and food habit studies of elk at Pierce Point. This work became part of the 1998 Tule Elk Management Plan for Point Reyes which resulted in a decision to relocate some of the Pierce Point elk to the Limantour area. Some of those elk traveled to the Drakes Beach area and their descendants have become what is now known as the Drakes Beach elk herd. That herd is comprised of 124 elk.

John Sansing was the Superintendent of Point Reyes National Seashore from 1970 to 1994. He showed little interest in natural resource conservation, and his decisions at the time seemed to me, to favor the ranching community. The ranching and dairying influence have persisted over the fundamental precepts of the National Park Service to protect and conserve the natural resources for public use and enjoyment for future generations. These precepts have been the backbone of National Park management. As I recall, Superintendent Neubacher worked diligently to support the natural resource values of Point Reyes, only to become crosswise with the local agricultural community. He was then "kicked upstairs" to Yosemite because he was trying to support National Park Service conservation policy and values.

I grew up on a small ranch in Montana. My stepdad raised cattle and had been a Brand Inspector for the State of Montana. We understood the marginal nature of beef production. Therefore, it was clear to me, even back in the mid-1980's and 1990's, that ultimately dairy and beef production would not be economically viable at Point Reyes and Golden Gate. Today we see that this reduced economic viability has come to pass. The proposal to broaden the "traditional" agricultural practices of beef and dairy ranching to a proposed "diversification" in Alternative B, is really a response to the economic pressures that face the few ranches and dairies in that part of West Marin. Some of the dairies in the Seashore have significantly cut their dairy cow numbers, likely as a result. Hence, the ranchers want to expand permitted livestock beyond cattle in the area of the ranch cores to include sheep, goats and chickens in the pastures (500 chickens per ranch, no less) and pigs and row crops. All of which would likely increase erosion in the Park. The Park Service has a statutory mandate to manage park lands in an "unimpaired" condition and with "maximum protection, restoration, and preservation of the natural environment." Given the legal mandate and the damage that has occurred, ranching should end. Unfortunately, that statutory mandate has not been embraced by upper National Park Service leadership or the current Superintendent, who I suspect faces intense pressure from the ranching industry and their political supporters Senator Feinstein and Congressman Huffman. That is a tough spot for anyone.

National Parks were created for natural resource conservation and to be learning centers. Perhaps, maintaining a small demonstration dairy operation at Point Reyes would be of value for the public as interpretive sites about historic preservation and land use practices. Tule elk occupied the Point Reyes area in the thousands, yet the current 124 elk in the Drakes Beach herd are causing the local ranching community "serious" problems. Currently, there are 5,715 cattle (beef and dairy) units per year, yet 124 elk cannot be tolerated. The notion that elk are a "problem" is obviously misguided, since elk coexist with cattle on BLM and Forest Service grazing lands throughout the western U.S. My recommendation is Alternative F: 1. Dairying and ranching, except for a small

dairy interpretive site perhaps more detail at Pierce Point, should be ended within the next 5 years. 2. The 8-foot fence at Pierce Point should be removed.

Sincerely,

Judd A. Howell, Ph.D.

#6467

Name: Bauer, Jennifer

Correspondence: The EIS makes it clear that under all the alternatives for continued cattle ranching, there will be detrimental environmental consequences on the Park's natural resources, including soils, water quality, vegetation, and wildlife, including tule elk.

Consequently, the Park Service should not adopt any ranching alternative and prepare a supplemental DEIS with ranching alternatives that comply with applicable laws prohibiting the impairment of natural resources.

#6468

Name: N/A, N/A

Correspondence: I support Alternative F, which prioritizes native species, which are important for the maintenance of biodiversity. The area has already been altered dramatically over the last 150 years at the expense of indigenous species of flora and fauna. I am against Alternative B.

Please take this into serious consideration.

#6469

Name: Brittain, Robert

Correspondence: Our family has been visiting Pt. Reyes area since we arrived in California in late 1979. We particularly love the north end where we can hike to the see native tule elk reserve there. While I appreciate the stewardship of the National Park Service of Pt. Reyes National Seashore, I question the environmental contribution of cattle ranches to the natural environment these. Whereas it is true that the ranches are historical in a short-term way (mid-19th century?), in the longer term they were not. The tule elk preserves, however, deal with a much larger challenge. Although the native range of the tule elk has been virtually destroyed by development of agriculture and urbanization, the tiny reserves created for their preservation do not have adequate resources to support their re-establishment and preservation. I remember reading about the terrible losses to the Pt. Reyes herd due to loss of water resources and calcium deficiency during the last few years. Expanding their range on current ranch lands would definitely provide more water resources and calcium deficiencies could be handles with placements of bone resources from harvested cattle on the remaining ranches.

Name: Schallenberger, Lisa

Correspondence: When GGNRA was first conceived of, it was never the intent to marginalize the farms or the rangers would not have bought into the idea of the GGNRA in the first plan. You have already removed the Oyster farms and now you are trying to restrict and remove the diary farms. I was closely involved in the behind the scenes in many of the early conversations as Dr Edgar Wayburn was my father best friend. I know what the original intent was and to hear what the NPS has done to disregard all of that is deplorable. The intent was to stop Marincello and other large development and to keep the idyllic farms and open space. These farmers now can not

even improve their homes and can not get loans because of the NPS. GGNRA should never have been give to NPS to manage.

#6471

Name: Milholland, Laura

Correspondence: Dear Sirs/Madams, In looking into this matter, all the ranching alternatives in the Draft Environmental Impact Statement involve the impairment of natural resources.

Three National Park Service laws prohibit actions that will impair natural resources (the 1916 NPS Organic Act, Point Reyes National Seashore legislation Section 459c-6, and Golden Gate National Recreation Area legislation Section 460bb).

It is my strong opinion that the Park Service should prepare a supplemental DEIS with ranching alternatives that comply with applicable laws requiring the protection of natural resources. And the Park Service should then circulate that supplemental DEIS for public comment.

Thank you for your consideration of my comments.

Correspondence: The Point Reyes Seashore and surrounding area is a national treasure. Not only is it spectacular as a visit for tourists, it is spectacular for locals who visit regularly. If we have the opportunity to protect it's pristine nature while also preserving a lifestyle that is diminishing by the minute to a few families who respect what they have, why wouldn't we do so? There is so much parkland and open spaces being turned over to development of various kinds under this current administration, we have to stop it if we can and seems we can here.

#6473

Name: Capron, Jean

Correspondence: As a Marin Country resident (since 1992) I treasure the open space we have, for recreational use as well as for ranching and farming. I love seeing the elk, the elephant seals, and knowing that we live in a place where there the creeks are protected for salmon spawning, and where there is an abundance of other wildlife, and wild flowers. I think it is very, very important that safeguards to protect the creeks be kept, monitored, updated, maintained, and enforced - - in residential neighborhoods as well as on and around the ranches and farms - - and include our gorgeous beaches as well. I support very strongly the historical ranches and dairies and farms that we have. I fear that, if the ranches were phased out and all the open space was then turned over to the NPS, that loss would affect the local economy (I buy local as much as possible), including jobs, and, inevitably, bit by bit, the NPS would be forced to start selling the open space for development - - housing developments, mini-malls, etc. I feel we have a TREASURE right here in Marin County and finding the right balance is the best solution, in my opinion. I have read the several proposed plans and Plan B coincides the closest with my belief of what is right for our wonderful county.

#6474

Name: Haskell, David

Correspondence: I support Option F - phase out all farming in Pt Reyes National Seashore.

Under the original terms of the National Seashore - the resident ranchers were all paid out and given a set time to transition out. I believe that original agreement should be honored. I have sympathy for the families who now reside in the park, however preservation of wild lands is a higher priority for the land now. Let the Elks run free. Remove the fences. Get the cows off the beaches and riparian strips.

Thank you for this opportunity David Haskell

#6475

Name: Wilkerson, Gillian

Correspondence: All the ranching alternatives in the Draft Environmental Impact Statement involve the impairment of natural resources.

Three National Park Service laws prohibit actions that will impair natural resources (the 1916 NPS Organic Act, Point Reyes National Seashore legislation Section 459c-6, and Golden Gate National Recreation Area legislation Section 460bb).

Consequently, the Park Service should prepare a supplemental DEIS with ranching alternatives that comply with applicable laws requiring the protection of natural resources.

#6476

Name: Ryan, Natalie

Correspondence: Please don't agree to the plan referred to as 'Alternative B,' which would allow the Limantour herd, which numbered 174 animals in 2018, to be "managed in consideration of ranch operations," meaning that there would be no limit to how many could be killed! Please don't allow agricultural "diversification," so the lessees couldn't bring in pigs and sheep and plant row crops! This is a time when over 60 percent of the earth's animals have been killed off and one million species are slotted for extinction.

#6477

Name: N/A, N/A

Correspondence: The Sierra Club has made valid points opposing this plan.

As pointed out by the Sierra Club, pertinent laws include the 1916 NPS Organic Act which applies to all units of the national park system, PRNS and GGNRA (54 U.S.C. § 100101(a)); The PRNS legislation 16 U.S.C. § 459c-6 to 459c-7; The GGNRA legislation 16 U.S.C. § 460bb.

Custodians of the Point Reyes National Seashore (PRNS) and Golden Gate National Recreation Area (GGNRA) must realize the proposed General Management Plan Amendment is in conflict with your duty to protect against impairment of natural resources, conserve the scenery, natural and historic objects, and wild life in the System units and to provide for the enjoyment of the scenery, natural and historic objects, and wild life in such manner and by such means as will leave them unimpaired for the enjoyment of future generations. Why would you do this despite awareness that it is wrong?

#6478

Name: Bertsch, Eric

Correspondence: Elk are natural occupants of this area. Cattle are hardly native, and are introduced by man. Protect the elk. Stave off the cattle.

#6479

Name: Miller, Bob

Correspondence: I "discovered" PRNS in May, 1988 when I came from FL to participate in a photographic workshop; I had just started a professional photography business. I was truly AMAZED! One of the things that attracted me to the park, besides its natural beauty, was the presence of cattle and the farms/ranches. After learning about the history of the ranches, and how they gave up ownership of their lands to create the National Seashore, and therefore prevent real estate development, I couldn't express enough gratitude for these far-sighted people. By way of full disclosure, my family has a 100 acre farm outside of Philly, going back to 1756! To me, it seemed like a perfect "balance" between agriculture and nature. It could accommodate both elk and cattle.

I was disturbed when I heard that there were efforts afoot to remove the ranches. One of the arguments was that the cattle were destroying the environment there. I recently attended a lecture at the Pepperwood Preserve in Santa Rosa titled "The Forest Under Our Feet;" it was about our grasslands here in coastal CA. They posit that grazing is the highest and best use for these lands. Cattle grazing actually SEQUESTERS carbon and helps keep invasive species at bay, as well as preventing the thatch from becoming a problem. As long as riparian areas are protected, grazing cattle makes absolute sense to keep the grasslands healthy.

Knowing the financial difficulties on the ranchers, it makes perfect sense to allow other agricultural activities to take place, like growing vegetables, to help them financially. Eco-tourism also goes hand in hand with this; to show how agriculture and the environment can coexist.

To me, much of life is about "balance." I believe that the current arrangement of allowing both tule elk and ranching to coexist creates that "balance." BOTH contribute to the attraction of PRNS.

After doing some research, I believe that the decision to eliminate the oyster farm was the correct decision, primarily in that the area of operation was designated a wilderness area. I photographed the Johnson'd Oyster Farm in '95 for the Sierra Club for an article on aquaculture. I went out to the beds and saw the disruption this activity was causing. For a number of reasons, I was sorry to see it go, but I knew it had to be done to stick to the "plan."

I have lived locally for a number of years and I am a member of the PRNS Association. I visit the park as often as I can. I've had photographs of the park published in magazines, and up until a few years ago, you sold 3 of my postcards there, so I have a STRONG CONNECTION to PRNS, and care deeply about its future. I feel so strongly that I wrote a letter to the editor of the Santa Rosa Press Democrat supporting the ranches; it appeared 9/11/2019.

To me, the bottom line comes down to the fact that if it wasn't for the foresight of the ranchers in the 60's, there would not be a PRNS. Unlike many parks, THEY were here FIRST. It is because of them there IS a PRNS. I consider myself an environmentalist and I find that PRNS is a UNIQUE place. I HOPE it stays that way.

Thank you for considering my comments. Bob Miller

#6480

Name: Budde, Sharon

Correspondence: There are more than enough grazing areas in the U.S. without destroying wildlands. There is less call for red meat today than there has ever been and the trend is continuing. We do not need anymore grazing area.

#6481

Name: MacGregor, Hamilton

Correspondence: Alternative F appears to be the only one that supports your vision: "Imagine what this windswept, fog-enshrouded landscape may have looked like almost two hundred years ago, before the first cattle

made their way here." The cattle did not make their way, they were brought there. They are part of the history and should remain, but vastly reduced in scope. A large-scale, industrial dairy operation seems not to be what President Kennedy had in mind.

#6482

Name: Likens, K

Correspondence: Dear National Park Service,

Please reconsider your plan to kill elk and/or open up Point Reyes Park for any purpose other than for citizens and visitors to enjoy its natural beauty.

Thank you.

K. Likens

#6483

Name: N/A, N/A

Correspondence: Please don't kill the Tule Elk so that the cattle can graze. Every single day more and more people are giving up meat and dairy. Get with it.

#6484

Name: N/A, Tauny

Correspondence: The Point Reyes National Seashore, like the Golden Gate National park are both unique National Parks within an urban area, and as such they should be managed differently then the other wilderness area National Parks. When the Point Reyes National Seashore was created the ranchers agreed to let their ranches be within the boundary of the park with the understanding that they could continue raising cattle on their lands into perpetuity and the ranchers were given long term leases. Those ranches supply a large amount of milk to Bay Area consumers. Growing and consuming foods locally deceases our carbon footprint. We are living in a climate emergency we need to do everything we can to reduce our carbon footprint. Ranching has been going on in the Point Reyes National Seashore area for at least 100 years, and should go on for 100 more.

#6485

Name: Courtsal , Lyle

Correspondence: I am unalterably opposed to grazing and ranching and anything else on a vulnerable seashore park. Cattle ranching is extremely destructive to naturally occurring vegetation in a park setting on a dynamic coastline that will be eroding a lot more as time goes on. SAVE THE POINT REYES PARK AND GIT RID OF THE DANGED CATTLE, PERIOD. AND DON'T PLANT COW FOOD EITHER YOU STUPID BASTARDS!!

#6486

Name: Pennino, Augie

Correspondence: All the ranching alternatives in the Draft Environmental Impact Statement involve the impairment of natural resources. Three National Park Service laws prohibit actions that will impair natural resources (the 1916 NPS Organic Act, Point Reyes National Seashore legislation Section 459c-6, and Golden Gate National Recreation Area legislation Section 460bb).

Consequently, the Park Service should prepare a supplemental DEIS with ranching alternatives that comply with applicable laws requiring the protection of natural resources. The Park Service should then circulate that supplemental DEIS for public comment.

#6487

Name: Heubach, Randolph

Correspondence: Aside from the legal violations the Sierra Club has identified, allowing expansion of livestock grazing in these protected public lands would send exactly the wrong message about America's attitude toward the grave threat posed by accelerating climate change. Methane is recognized, even by climate change discounters, as a major greenhouse gas contributing significantly to the global warming crisis.

The medical community has long recognized the human health dangers of consuming too much red meat.

We need to reduce, not expand, our commercial populations of methane producing animals. It's time to apply common sense to the management of our public lands.

#6488

Name: Wells, Penny

Correspondence: I was shocked to see Phyllis Faber and Sarah Rolph's thoughtful analysis of the D.E.I.S. that was published in this week's Point Reyes Light. You appear to be guilty of either sloppy work or of deliberately providing misleading information. In either case, shame on you. Many of us that live here support MALT's position on ranching in Point Reyes National Seashore. It's been here longer than the park and needs to be respected and preserved. Things like this make it difficult to continue (as I have in the past) supporting the Park. Respectfully, Penny Wells

#6490

Name: Janson, Darwin

Correspondence: I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I strongly encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly-and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and

ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

Thank you guys so much for your consideration!

#6491

Name: Hernandez, Cynthia

Correspondence: Please do not extend grazing licenses to cattle & anything else that threatens the environment & wild life.

#6492

Name: Dobson, R

Correspondence: Livestock have no business in Our Public Lands. They take away all of the Food necessary for our Natural Resources. Further they leave Cow Manure in the Public's Trails. Ranchers for far to long have had near free use of Public lands which ultimately cost the Taxpayer Millions of Dollars Each Year and public land Use needs to be Terminated for Ranchers be they sheep cows or any other livestock.

#6493

Name: Dosedal, Anke

Correspondence: Stop prioritizing cattle over native animals on park lands. Tule elk are an important part of the natural ecosystem, whereas cattle are not. Reduce the number of cattle if there is a conflict.

#6494

Name: Harrington , Robert

Correspondence: I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

#6495

Name: N/A, Todd

Correspondence: I'd vote for Alternative E which preserves the wildlife, improves soil and water conditions, while still allowing for a majority of the ranches to remain active on the National Park.

#6496

Name: Cooper, Ray

Correspondence: Hello, I am recommending option "F". Please consider the long term health of the fragile ecosystem and the value of the rainforest in Pt Reyes National Seashore. Please also take into account the external costs that dairy incurs on others. This is not paid for by the industry and will be felt for years to come. I'm talking about chronic illness health costs, carbon footprint of feed, refrigeration footprints, and tax subsidies.

The will of the people is not to ranch in the Pt Reyes National Park.

Thank you

Ray Cooper

#6497

Name: Parmelee, Sukey

Correspondence: I support Alternative "F":

Phase out all ranching, as originally intended

Manage the Seashore the natural values it was created to preserve - its land, water and wildlife

Protect wildlife over livestock

Restore pastoral zone for wildlife habitat, native plant communities, scientific research and education

Repurpose the historic ranch buildings for research, interpretation and education

#6498

Name: Rodman, Curtis

Correspondence: I was stationed in Pt. Reyes in the Coast Guard in 1980-1982 as a Radioman. This is a very beautiful area and I would really be appalled by if the Oligarchs in Washington keep supporting the destruction of this area. Please protect our environment. Thank you.

#6499

Name: Bezanson PhD, David

Correspondence: Please withhold my addresses from public view.

The use of public lands for ranching presents many risks to the natural resources and recreational uses of these lands. Many of these cannot be mitigated.

Cattle are not native species. They have been introduced. This alters the interdependent balance of the biodiversity. The indigenous grazers, Tule Elk, are partially displaced by the introduced cattle. It also changes the character of the land from scenic/recreational to commercial. Visitors are not interested in seeing cattle and ranching infrastructure. They are drawn by the indigenous wildlife.

Cattle ranching operations pollute our surface waters more than any other agricultural use. Erosion and siltation are inflicted by cattle: This damages vegetation as well as aquatic life. Cattle damage the cryptocrust of pastures, diminishing the formation of healthy topsoil. Ruminants, including cattle, belch methane, a Greenhouse Gas that traps 80 times more heat than CO2 during its first 20 years in the atmosphere. Maintaining the herds and ranches requires use of transportation, which emits additional GHGs.

Leasing land to ranchers should be halted. They receive subsidies for their products and can afford to buy or lease privately owned land. Restore the indigenous biodiversity of rangelands by planting indigenous vegetation that thrives in that terrain and climate. E.g., use afforestation. We need to protect forests and ensure net afforestation to sequester more carbon and solve climate change.

Name: Tereschak, Cassandra

Correspondence: It is intolerable that ranchers and farmers are allowed to use OUR Point Reyes National Seashore to use and abuse at will!

This is a National Park that belongs to the ALL the American people not just a select few. The wildlife on the land should be protected not butchered for the pleasure of greedy ranchers and farmers!

There is already enough destruction of our waterways with the nitrogen runoff from the fertilizers that turn the oceans and bays into slimy death traps and are also causing the annihilation of the coral reefs !

Drakes Beach elk herd's population, which numbered a mere 124 animals in 2018, would be limited to 120 animals maximum-and the Limantour herd, which numbered 174 animals in 2018, would be "managed in consideration of ranch operations," meaning that there would be no limit to how many could be killed! Further, Alternative B allows for agricultural "diversification," so the lessees could even bring in pigs and sheep and plant row crops.

I urge you to adopt Alternative F, which would discontinue farming and ranching opportunities in the park and expand visitor opportunities. The preservation of native wild species must take precedence over farming and ranching activities. We are all aware that grazing negatively affects ecosystems, causing water pollution and soil erosion, spreading invasive species and disease, and harming endangered species.

Thank you and please do the right thing!

#6501

Name: Barringer, Debra

Correspondence: Only Alternative F is acceptable to me. When I visited PRNS, I was surprised that private ranching was still allowed on my public lands. With coastal federal lands being rare and the known impacts to native flora & fauna that intensive grazing can cause, this use is incompatible with sustaining this sensitive ecosystem. Allowing other agricultural uses is also unacceptable and would require a full environmental analysis of impacts. Tule elk are a rare enough sight, should not be culled for private interests, and have a greater value to me being the dominant herbivore on this land.

#6502

Name: Polish, Bret

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#6503

Name: Cole, Wulff

Correspondence: I'm speaking in defense of the wilderness destroyed by the cattle allowed crap all over and trash river and creek beds while poisoning the water with feces and urine so strong that standing on the fringe of a clearing 30 yards from the pool of waste I couldn't smell anything else. I'm speaking for the wild animals whose lives are ruined by the noise and destruction of cattle grazing on lands meant for public use, not private gain. But most importantly I'm speaking for the wolves and the other apex predators murdered so a few wealthy, welfare queen ranchers can make more money while paying less for their feed. The wolves and cougars and bears belong in the wilderness, cows do not.

#6504

Name: Zimmer, Louise

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

Correspondence: Please Please keep COWS away from our National Parks..Thank you..

#6507

Name: Santillie, Charis

Correspondence: Any cattle ranching and other agricultural operations must be managed to accommodate elk and other native wildlife, and should not harm wildlife habitat. Commercial lease holders should not be allowed to dictate removal or exclusion policies of wildlife on our public lands.

I am opposed to the removal of any Tule Elk from PRNS and I urge NPS to reject any conversion of National Park lands to row crops or expansion of commercial livestock farming to introduce sheep, goats, turkeys, chickens or pigs which would only increase conflicts with wildlife, and degrade wildlife habitat and water quality.

#6508

Name: Cordes, John  
Correspondence: Dear National Park Service,

The EIS makes it clear that under all the alternatives for continued cattle ranching, there will be detrimental environmental consequences on the Park's natural resources, including soils, water quality, vegetation, and wildlife, including tule elk.

The National Park Service governing laws prohibit actions that will impair natural resources.

Consequently, the Park Service should not adopt any ranching alternative and prepare a supplemental DEIS with ranching alternatives that comply with applicable laws prohibiting the impairment of natural resources.

Just like the park service eventually stopped the oyster farming in Pt Reyes, it should also end the practice of cattle ranching. There is too little natural land left in our country is Pt Reyes is a great place to restore some of it.

I have hiked and camped at Pt Reyes numerous times over the decades and would like to see it returned to more natural habitat.

Sincerely, John

Correspondence: For our future and the health of this planet, it is not wise to destroy or remove animals from their natural habitat for more expansion to accommodate humans.

#6512

Name: Siva , Ariana  
Correspondence: Tule Elk have a right to live just as much as whoever is reading this. They require PROTECTION, not death. 24 ranchers making money hardly equals the lives of these beautiful creatures. It's unfair for California to lose these animals for 24 people.

#6513

Name: Bechler, A.

Correspondence: As a teenager concerned with the future of the natural world, I'm writing in support of the tule elk herds at Point Reyes National Seashore, and am strongly opposed to any plan to cull or otherwise remove this subspecies of elk. It is nothing short of appalling that these elk would be culled in order to support cattle grazing. Both a large contributor to climate change and environmentally destructive at a local scale, cattle ranching ought not take precedent over preservation of native species. Considering the worldwide threats to wildlife, we should be working to conserve as many species as possible, including tule elk. A whole subspecies should not be put at risk for the corporate gain of a few farmers. The natural heritage and history of Point Reyes National Seashore is made richer by these beautiful elk, and the so-called "heritage" of a few farms is incomparable to the value of this species. Prioritize nature over blind greed and destruction. Do not remove or alter the lives of the tule elk!

#6514

Name: Coburn, Della

Correspondence: Cattle are not native to North America, but bison are! Bison meat is much healthier than beef, and they should be allowed to roam freely on public lands!

#6515

Name: Boyd, Abby

Correspondence: I support Alternative F. You stopped the oyster farm but are going to let the dairy continue? What!! Please take it back to nature and for people not cows. The only way a dairy could be part is if it were like Wilder Ranch in Santa Cruz, which has very few animals and serves as an example of an old dairy farm. It is constantly booked for school field trips.

#6516

Name: Rothenberg, Rona

Correspondence: Dear Congressmen and Women and professional staff of the federal agencies, The great 20th century legacy of the public parks and lands for the benefit of Americans' enjoyment does not include subverting your mission to greed of individuals' personal wealth. The stunning news that public lands will be devoted to animal agriculture, particularly meat and dairy is thoughtless, short-sighted and unsustainable. To needlessly kill the natural animals that are still able to thrive there undisturbed and in beautiful harmony with the environment is unnecessary and belies an ignorance of the critical importance of our shrinking natural places

Please uphold the public trust of your mission and abandon your plan .

Rona G. Rothenberg, Architect

#6520

Name: McCann, Linda

Correspondence: I have watched the debate about ranching in Pt Reyes with growing concern. I support environmentally sustainable use of these lands to protect them for future generations including the following 1. requiring the ranchers to implement farming practices that protect the landscape, including soils and native grasses. 2. no expansion of the amount of land available for ranching. 3. No additional livestock such as sheep and chickens on an already fragile and degraded landscape 3. Protection of the tule elk herd and requiring ranchers to coexist with these native animals. Adding more domestic animals and expanding ranching will only exacerbate the problems. Much of what the Park has proposed goes against their mandate to protect these lands. There are options that would allow for both ranching and protection of Pt Reyes National Seashore, but what is proposed will not and should not be implemented.

#6521

Name: Sanchez, Ralph

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. #6522

Name: Taylor, Kelly

Correspondence: I am utterly disgusted by the plan to kill native wildlife in favor of cattle. Our wildlife is an asset and essential for biodiversity. These elk are a beautiful part of the nature Marin has to offer - cattle, however, are everywhere and are destructive. This is a sick and disturbing proposition. I run in Marin regularly and would hate to see more cattle and less wildlife. I go to Marin to escape the barren cattle covered hills where I live! The bay area has enough sad tree-less hills full of cattle and their waste. This is a horrendous and disgraceful plan that goes against common sense.

#6523

Name: Tri, Carey

Correspondence: Please return this rare ecosystem back to it's original state. Remove cattle ranching. Protect diversity not dollars. Thank you.

#6524

Name: Walker, Jennifer

Correspondence: I'm tired of public lands being used for private businesses. Ranchers need to use their own land for grazing. Why are we considering killing animals that are there naturally for someone's business. Stop using tax payer lands for private businesses.

#6525

Name: Vittor, Jamilah

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#6526

Name: Brown, Katie

Correspondence: Allowing ranchers to encroach further upon the Tule Elk habitat is irresponsible and negligent of future generations. Animal agriculture is one of the leading causes of climate change, and we need to divest from this industry and lifestyle entirely. We are on the brink of the sixth mass extinction, and we should be doing everything to prevent further loss of habitat for an endemic species.

On top of the environmental damage more ranching would result in, the unnecessary breeding, exploitation, and killing of cows and other animals is unjustifiable. We cannot continue to pretend that these creatures are not also sentient beings with their own interests- - both the cattle population that is destined to be killed, and the Tule Elk that are at risk of being killed if ranching expands further into their habitat.

#6527

Name: Huggins, Roxana

Correspondence: Considering that these ranch lands were purchased decades ago with taxpayer money, they do

not belong to the ranches that continue to operate On public land. Giving them the opportunity to not only continue to use public lands with an unsustainable amount of cattle that degrade the public lands and limiting public use, but also allowing them to kill native wildlife to sustain their cattle on public land is not only catering to special interests, but irresponsible management of our lands and wildlife. Its time to dissolve the ranches off our public lands and remove the cattle along with all agricultural management and allow the land to heal from mismanagement and the degradation of the public lands. Alternative F is the only alternative that should be considered by the national park service which is also supposed to advocate for the public and its lands and its native wildlife, especially the low numbers of tule elk which were almost extinct. The few ranchers have had their free time with our public lands, its time for them to leave, like an overstaying houseguest that decides the house belongs to him. It doesnt matter what they want, end the leases and give us our lands back, they took the money and kept it when the ranches were purchased, its time to kick the squatters out and take their cattle with them.

#6528

Name: Erwin, Deborah

Correspondence: Please preserve the Tule Elk at Pt Reyes National Seashore! They should not be hunted down they are part of the Eco System. Thank you!

#6529

Name: , Peter

Correspondence: Hello- I would like to see all of the cattle removed from the Park.It's past time to do so. The ranchers were already compensated for their land, they are supposed to leave when the original rancher has died. Many people would like a below market lease on some Federal land. I could open a motorcycle park if I got a lease. How about another Playland-at the beach? I'm tired of well connected business interests using our federal lands on the cheap. Please stop. Thanks, Peter

#6530

Name: Stromberg, Susan

Correspondence: I oppose culling the Tule Elk here in order to prioritize cattle over the native animals and environment. I believe it is the job of the National Park Service to protect areas such as Point Reyes from degradation. The dairy farms are old and serve the local community - that is good. But expanding them and treating the tiny herd of reintroduced Tule Elk as if they are restricting dairies ability to operate is backwards thinking. There are more native animals that are threatened by expanding the farms, too. Please protect the national park.

#6531

Name: N/A, N/A

Correspondence: I've visited Point Reyes many times over the years. I've been with friends and family and on school trips. The ranches out there are sitting in one of the most beautiful locations in the US. They are lucky to be there. I'm not opposed to them continuing to be there, but the native wildlife should be preferred over the ranches. The Tule Elk were nearly extinct and have made an incredible recovery. The cattle should not be prioritized over the native wildlife.

#6532

Name: N/A, N/A

Correspondence: National Seashores are not meant to support cattle grazing and other agricultural activities, especially when they are supported by the taxpayers and other subsidies from the government. The priority should be Tule elk, since they are found nowhere else on Earth. National Seashores should be managed as a native ecosystem for native plants and animals and the enjoyment by the public through hiking(for example).

Commercial interests should not be considered when determining management decisions and the future direction of the seashore. Please reconsider your plan to allow cattle in this area. Thank you.

#6533

Name: Forrest, Patricia

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#6534

Correspondence: Ridiculous idea. Tule elk are indigenous. Dairy cows are not. Get rid of the cows. They thrive anywhere.

#6536

Name: Evnochides, fawnee

Correspondence: Dear National Park Service,

I support Alternative F. The cattle and dairy industry should be phased out and the land should be returned to its natural state.

It is a terrible idea to give 20 year leases to the cattle and dairy industry. Climate science shows that there is less than 12 years to mitigate the worst of climate catastrophe. Allowing business that has been linked to water pollution, species extinction and in Point Reyes is the culprit of over 60% of the greenhouse gas emissions, it is not a good idea to give that same industry a 20-year lease to continue degrading our national park. Point Reyes is a refuge to thousands of plants and animals. Point Reyes can be a leader in the fight for climate justice, and it starts with phasing out Beef and Dairy operations and restoring the land to its natural state. The EIS has NO MENTION of the effects of climate change in it, and does not include any information of the cattle and dairy's impact on climate change within the park.

Thank you for your attention.

Fawnee Evnochides

#6540

Name: Baum, Sebastian

Correspondence: I support Alternative F, phasing out cattle and dairy industry and returning the land to its natural state. The enabling legislation of the National Seashore supports wildlife protection and does not mention upholding private industry. The original leases to ranchers were to be 25 years. Ranchers have already been paid handsomely for their land, so it is long overdue to phase out the ranches. "Cultural Resource" and "Historic" does not mean industry needs to be currently in operation. Private business has no place on public land. Allowing industry and ranches to diversify their business is a bad idea. Already these ranches have been negatively impacting the land, mismanaged to allow soil erosion, scarring in the landscape, e.coli contamination in waterways and more. If you allow EVEN MORE agricultural practices on the seashore, there is no way to know the impact and there is no historical evidence you will be able to manage any negative impacts on the environment. Tule Elk should be protected for the survival of their species. They have already gone through a huge genetic bottle neck when they were almost completely wiped out except for 20 individuals. Every gene allele is important for the long term sustainability of the herd. The National Park should be protecting all Tule Elk, and allowing new herds to form and to TAKE DOWN THE FENCE at Pierce Point and allow all Tule Elk to roam free. I do not support

granting 20 year leases to cattle and dairy industry. Climate science has indicated we have less than 12 years to mitigate the worst of climate catastrophe. Allowing business that has been linked to water pollution, species extinction and in Point Reyes is the culprit of over 60% of the greenhouse gas emissions, it is not a good idea to give that same industry a 20-year lease to continue degrading our national park. Point Reyes is a refuge to thousands of plants and animals. Correspondence: Good Day,

I urge the NPS to adopt Alternative F, which would discontinue farming and ranching opportunities in the Point Reyes National Seashore and expand visitor opportunities.

The Tule elk are native to California and should be allowed to graze there. The preservation of native wild species must take precedence over farming and ranching activities. Cattle grazing negatively affects ecosystems, causing water pollution and soil erosion, spreading invasive species and disease and harming endangered species.

I appreciate you considering my feedback.

Respectfully, Jennifer D'Angelo

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place. Thank you

Correspondence: I want to add my voice to those who oppose using this land for ranching cows. Specifically it is not appropriate to have cows on land that was never meant to sustain that kind of use. We know that raising animals for meat and dairy is going in the wrong direction for the health of the planet, our bodies and the animals. Please be on the right side of history and say no to the ranching/dairy and yes to the wild life, the land, our health and stop unethical breeding of cows.

Correspondence: Every sunday I hike the paths of Pt. Reyes. Last week it was Abbot Lagoon to Kehoe beach, returning on the road instead. At first I saw beautiful rolling prairie, a small wetland and a great horned owl! As I progressed towards the Abbots Lagoon parking lot, observing eroded hillsides, smelling the stench of cattle and then observing the numerous tiny white cages in the distance housing the young damned offspring, the good feelings were gone.

Are we not sick of commercial business considerations taking the front seat and driving the earth and its people into the ground. This is PARK LAND! Their leases are over! The dairy farms on the other side of Tomales bay are just as historical so nice try hiding behind that one. The answer is so clear. It is time for them to go. And quickly. Return the park to nature and the people.

Correspondence: You know, I've been going to Point Reyes since my teens. It is a deeply magical place. The elk are a big part of that. Seeing a white elk appear out of the mist when I was out with my living history group, using Point Reyes as a stand-in for Scotland was an indescribable experience. It was a Child ballad come to life. And you want to remove these elk for commercial purposes? This land is one of the last wild places in the Bay Area that's actually accessible by bus, where we who live in the city can go to experience a small bit of what this land was like before we harvested the timber and tamed it. To sacrifice the elk for dairy cows is obscene! Ranching was supposed to have been phased out long ago! I support Alternative F wholeheartedly. The mission of the Park Service is to preserve the resources protected by the parks unimpaired for future generations. Do your job and get the cattle off this land. Ranching is not a cultural resource.

#6562

Correspondence: The tule elk are a natural part of the Point Reyes ecosystem and play a key role in maintaining healthy biodiversity in the area. The elk were almost hunted to extinction and have been successfully reintroduced. Lethally removing the elk could permanently disrupt and destroy the ecosystem in Point Reyes and as someone who regularly uses the area and lives locally I want to see the area maintained for the future. Please leave the elk alone.

#6563

Correspondence: We do not want the ranchers to use land for wildlife to graze cattle. Animal agriculture is responsible for the worst environmental problems. More so than cars or polluting businesses like gas or coal. They are ruining rain forests and even have killed people who are trying to stop them from tearing down trees. PLEASE do not allow the Tule Elk to be killed or removed in any way. Animal agriculture is not only responsible for animal torture but for the worst pollution on the planet. Stop them, don't help them.

Thank you.

#6568

Name: Hoffer, Cindy

Correspondence: Farmers and ranchers who have been leasing thousands of acres of the park to graze cattle apparently don't want to share these grasslands with elk, so the National Park Service is considering a plan that

would permit elk to be killed while allowing the expansion of agricultural activities! STOP!!!! Our National Parks should not be used for the profiteering ranchers. American taxpayers should not be subsidizing this land for ranchers personal and/or corporate profit. If the National Park Service would like to use some of the land for ranching; THEN LEASE THE LAND FOR WHAT IT IS WORTH and don't sell our American Parks at bargain-basement prices!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

#6569

Correspondence: All the ranching alternatives in the Draft Environmental Impact Statement involve the impairment of natural resources. Three National Park Service laws prohibit actions that will impair natural resources (the 1916 NPS Organic Act, Point Reyes National Seashore legislation Section 459c-6, and Golden Gate National Recreation Area legislation Section 460bb). Consequently, the Park Service should prepare a supplemental DEIS with ranching alternatives that comply with applicable laws requiring the protection of natural resources. The Park Service should then circulate that supplemental DEIS for public comment.

#6570

Correspondence: It is past time to remove domestic livestock operations from Point Reyes and dedicate the Point Reyes National Seashore to it's original mission: the preservation of native plants and wildlife. Livestock operations were supposed to have been removed over a 25 year grace period. Why has this not been done and delayed time and time again?

The approximately 600 native subspecies of tule elk are much more important to me and many visitors to this park than the 5,000 head of cattle which cause erosion, invasive species and pollution of the water, not to mention exacerbating climate disruption. I do not visit Point Reyes to see cattle! The idea of killing some of the tule elk is beyond ridiculous when there are only about 4,000 elk remaining in California out of a historic population of half a million. The 24 ranches still at Point Reyes need to be phased out and the land restored for native species. I support the adoption of "Alternative F".

#6571

Name: Aguilar, Nate

Correspondence: I drive almost 2 hours from my home to come to the Seashore because I want to see and experience the native wildlife in this part of the country. The mission of national parks is to protect native plants and animals, so I vote for the Park Service to adopt Alternative F and phase out all ranching.

Correspondence: Limit the livestock. Public lands are for wildlife and people. We can make no decision as long as livestock lobbists are in charge.

#6573

Name: reZz, reZz

Correspondence: I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection

between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly-and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

Correspondence: I enjoy both the scenic and ranching aspects of Point Reyes and feel they can be managed in harmony with one another. We need both space set aside for enjoyment and space that can be used to raise food. I think extending the current ranching leases another 20 years is a good idea as well as preserving current areas that are protected.

I also think most people don't understand that in the absence of predators, animals like the Tule Elk will proliferate until they outgrow their food supply. It is necessary then to either institute some form of birth control, move excess elk to other areas, or as a last resort reduce their numbers through hunting.

#6576

Name: Langlois, Cheri

Correspondence: Please stop the grazing rights on public land. I am the public and I do NOT want cattle decimating Point Reyes National Sea shore. It should be protected, for the natural wildlife and flora that can exist there and for the public good. It should not be used for the profit of the livestock industry. I oppose option B, which is just an excuse to harm tule elk and other wildlife. Please go with option F, to totally discontinue grazing and allow the public to enjoy this precious piece of our natural heritage.

#6577

Name: N/A, N/A

Correspondence: We would sure appreciate it if you allowed the Point Reyes Nat'l Seashore return to its NATURAL STATE, not one overrun by ranchers and dairy farmers. It's so terribly sad to see no visible wildlife. Only acres and acres of land set aside for cattle. We do everything we can to leave a zero carbon footprint. Riding our bikes to Point Reyes, being vegetarian, etc and our natural spaces have become areas of commerce. So frustrating and inappropriate and WRONG.

#6578

Name: Grant , Steve

Correspondence: As a long time mountain biker and marin county resident I can only see that what's makes riding

trails so amazing is the access to some of the best single track on the bay area and California. Unfortunately there are more people than ever before and the popular trails at China Vamp and Tamarancho are too crowded to enjoy on the weekends. We should have regulated access to more than the 28,000 acres of the Or. Reyes NP to enjoy for everyone. They could designate certain weekdays to make it available to mountain bike riders and issue permits to help pay for upkeep and maintenance. It would encourage more people while regulating when folks could access the beauty and grandeur of this one of a kind place we call home.

Correspondence: Dear NPS Committee,

I am writing to express my support for Alternative B (preferred plan) for the Point Reyes EIS. This option preserves the multiple intended uses of the park, since the 70's, and gives NPS new tools to manage the park regions in better ways. It also provides for new activities that could bring new people and interest to the area and allow lessees to diversify activities, while keeping in character with the park. And while it unfortunately requires limiting the size of the elk herd, it is the most reasonable and measured solution to an unfortunate situation-lack of natural predators-that allows NPS to do so selectively in the interest of the health of the herd (as opposed to allowing trophy based hunting permits).

Plan F is certainly an interesting option and worth considering. It could result in benefits to conservation and the expansion of natural habitats. However it is unclear how these particular lands would be affected by such a decision and exactly what the scope and measure of those benefits would be to conservation. While, the detriment to the existing ranching activities would most certainly be significant, and historic ranches without ranchers does not seem like a very compelling attraction. Finally, it would not address the lack of natural predators for the elk herd.

Plan C is by far the least attractive option, with little or marginal benefit to anyone and disastrous consequences for the herd and park visitors, and is in stark contrast to the park's wildlife preservation principals.

Point Reyes National Park is an incredibly unique resource, with a remarkable and rare geography, a combination of many landscapes in a single space that supports interests of many-hikers, campers, bikers, horses, conservationists, historians, native populations, as well as historic ranchers. It is a point of pride for our state and this nation and NPS should be given the tools necessary to continue to manage this treasured resource for all to enjoy.

Correspondence: I am against allowing private businesses on public lands. The ranches are negatively impacting the land. The ranchers have been paid for the land and the original lease was for 25 years. It is time to phase the ranchers out.

#6581

Name: Santurio, Alicia

Correspondence: I do not support granting 20 year leases to cattle and dairy industry. Climate science has indicated we have less than 12 years to mitigate the worst of climate catastrophe. Allowing business that has been linked to water pollution, species extinction and in Point Reyes is the culprit of over 60% of the greenhouse gas emissions, it is not a good idea to give that same industry a 20-year lease to continue degrading our national park. Point Reyes is a refuge to thousands of plants and animals. Point Reyes can be a leader in the fight for climate justice, and it starts with phasing out Beef and Dairy operations and restoring the land to its natural state. The EIS

has NO MENTION of the effects of climate change in it, and does not include any information of the cattle and dairy's impact on climate change within the park.

Tule Elk should be protected for the survival of their species. They have already gone through a huge genetic bottle neck when they were almost completely wiped out except for 20 individuals. Every gene allele is important for the long term sustainability of the herd. The National Park should be protecting all Tule Elk, and allowing new herds to form and to TAKE DOWN THE FENCE at Pierce Point and allow all Tule Elk to roam free.

Superintendent Cicely Muldoon Point Reyes National Seashore 1 Bear Valley Road Point Reyes Station, California 94956

Dear Superintendent Muldoon:

The Point Reyes Seashore Ranchers Association (PRSRA), appreciates the opportunity to comment on the Point Reyes National Seashore (PRNS) and North District of Golden Gate National Recreation Area (GGRNA), (collectively the "Seashore"), draft Environmental Impact Statement (EIS) for the General Management Plan Amendment. This letter is the PRSRAs response to the draft EIS, acknowledging and supporting submission of separate comments by individual ranchers.

Last year, the Association commented on the Park Service's request for comments to the Notice of Intent for preparing the Environmental Impact Statement for a General Management Plan. The following comments build on our prior comments and pose questions requiring clarification to items addressed in the draft EIS.

We support the varied uses and environmental value of the PRNS and the GGNRA and believe the National Park Service (NPS) has developed a draft environmental impact statement (DEIS) for the General Management Plan Amendment (GMP Amendment) that raises many of the important issues related to dairy and ranch management. However, we believe the GMP Amendment and the preferred alternative have overlooked several key issues and must be better designed to recognize the historical, cultural, social, educational, scenic, and environmental values and opportunities of the working dairies and ranches in the limited area of the PRNS and GGNRA recognized as the Point Reyes Peninsula Dairy Ranches Historic District and the Olema Valley Dairy Ranches Historic District.

While we generally support Preferred Alternative B, the continued ranching alternative, presented in the draft EIS, there remain areas of concern that need to be addressed to achieve the goals for the GMP Amendment and the intent of the PRNS and GGNRA enabling legislation. These items include:

1. Establish an Advisory Committee to assist NPS on agricultural issues. To provide additional agriculture expertise, it should establish a PRNS Agricultural Advisory Committee, made up of such local agricultural and natural resource conservation experts as a representative from the local office of the USDA Natural Resource

Conservation Service, the Marin County Resource Conservation District, the Marin County Agricultural Commissioners Office, the University of California Cooperative Extension, and the Marin Agricultural Land Trust to advise PRNS decision makers on all agricultural planning and management decisions.

2. The Draft Foundation Document must be revised to recognize the existence and importance of ranching as part of PRNS. The draft Foundation Document will provide basic guidance for planning and management decisions. The draft Foundation Document is significantly deficient because it mostly fails to recognize historic and culturally important dairy and ranching. The Document contains several sections including Park Purpose, Park Significance, and Fundamental Resources and Values. All of these sections should be revised to recognize that the ranches can help to perpetuate the coastal grassland ecosystem, increase environmental awareness, promote the ethic of land stewardship and sustainable agriculture, support the local foodshed, and continue to favorably influence regional trends in the way food is produced, distributed, and consumed.

3. The DEIS seriously misleads the public and distorts the no-action alternative because it assumes no limit on the population level or geographic extent of tule elk at PRNS. The current applicable plan for tule elk at PRNS is the 1998 Tule Elk Management Plan and EA. The Elk Plan did not contemplate the expansion of elk into the ranchlands. DEIS p.5. However, the no action alternative which is used as a reference to describe the impacts and change that would occur in other DEIS alternatives, characterizes those alternatives as a reduction in the existing population level and the wide geographic spread of elk. In fact, given that the 1998 Elk Plan did not provide for elk on ranchland, the EIS must disclose that the alternatives that allow elk on ranchland amount to a huge and significant increase in elk. The failure to accurately characterize the current Elk Plan limitation that precludes elk on ranchland, distorts the effects of the alternatives in violation of the National Environmental Policy Act (NEPA). The NPS also violated NEPA and other management direction when it failed to exclude elk from ranchlands and follow the 1998 Elk Plan.

4. The preferred alternative must have a map that clearly establishes a limit on the geographic extent of tule elk. The only map regarding tule elk is Figure 2 which shows the current extent of elk in the planning area. DEIS A-2. The preferred alternative should include a map of the location where elk are permitted. Without a map of the permitted area, resource conflicts will arise.

5. The preferred alternative should exclude elk from the ranch land. Elk should be allowed on the PRNS but the Drakes Beach herd and the Limantour herd should not be present on the limited area of the PRNS which have ranches. This is because over the last 30 years NPS has not figured out how to effectively separate elk from cows; it would be better for elk if they are allowed to roam undisturbed in a much larger natural habitat in the Phillip Burton Wilderness instead of being subject to harassment, hazing, and lethal removal on ranch land; the elk consumption of forage will threaten the organic certification of ranches; elk damage ranch fences; elk consume forage that would otherwise be available to support cattle. If elk consume livestock pastures and supplemental forage for cattle is necessary, NPS should bear the cost of that forage. Also, elk were not part of the Dairy Ranches Historic Districts.

6. A fence should be constructed to effectively separate elk between the ranches and the Phillip Burton Wilderness area. The DEIS dismisses the possibility of an elk fence to keep elk in the larger Phillip Burton Wilderness. The elk fence could be designed and located to be only about 4 miles long, to terminate on the Inverness Ridge in dense vegetation, a wooded area, or at a significant drop off. A livestock fence already exists in this area, so it is readily accessible to build an elk fence. We believe the cost would be reasonable and, together with maintenance costs, would be much less costly than ongoing hazing, repair of ranch fences damaged by elk, and lethally removing elk.

7. The preferred alternative must establish a population level for the maximum number of elk in the areas where elk are permitted. In addition to providing a map that delineates the location where elk will be permitted, the EIS should set the maximum number of elk allowed in the area delineated. The number will guide management decisions and determine when the herd is beyond the permitted management capacity.

8. The analysis of diversification in the DEIS is incomplete and lacks historical and regional context. The DEIS gives the public the false impression that the diversification sought by ranchers is new and expansive. The final EIS should explain that farming and ranching outside the planning area is far more diverse. In addition, within the planning area farms and ranches historically included both irrigated and non-irrigated row crops including beans, peas, barley, artichokes and other vegetables and a wider variety of livestock species such as hogs and sheep.

9. The limitation of row crops to 2 ½ acres, permitted only in the ranch core, with irrigation and organic mulches prohibited, is unnecessarily restrictive and will not meet NPS goals. We appreciate the consideration of allowing ranches to diversify with some row crops. However, the limitations are so restrictive that they will not allow NPS to meet its goal for ranchers to respond to poor forage production years and fluctuations in economic markets. Only 2 ½ acres for the 24 ranching families amounts to less than 75 acres out of the 28,000 acres of ranch land. The core restriction is unreasonable because there may be more suitable soil for row crops outside the ranch core. Prohibiting irrigation severely limits crop varieties that can be grown. Non-pathogen, weed-free mulch from within the planning area should be allowed since weed-free straw is not available inside the planning area. The baseline restriction should be relaxed to allow up to 75 acres of row crops, on suitable soils within a mile of the ranch core, using mulch, and irrigation if excess water is available. We do not anticipate all ranches would elect to grow row crops.

10. The diversification that allows sheep and goats is too restrictive and will not achieve NPS goals of preserving open coastal grasslands. Diversification to allow sheep and goats could be helpful since these animals reduce the fuel load and graze on brush which encroach on grasslands threatening open vistas, wildlife habitat, and native plants. Unfortunately, sheep and goats are limited to the ranch core and pasture sub-zones. Management to limit brush encroachment in these subzones is already allowed such as planting, mowing, hay and silage production. These management practices are prohibited or more limited in the range subzone. NPS should provide more flexibility to allow sheep and goats to browse within the range subzone where there is a more significant threat to grassland by wildfire and brush encroachment and fewer tools available to control the brush.

11. The DEIS fails to recognize the environmental benefits of diversified farming and ranching. Diversified agriculture can provide important wildlife habitat and soil conservation benefits that should be considered in the DEIS. For example, vegetable waste from row crops can be fed to hogs and the hog manure can be composted with other organic materials to use on row crops or pastures.

12. NPS should consider educational benefits and enhanced visitor experience from diversification. We urge the Park Service to include other diversification such as minor on-farm processing, on-farm sales of products produced in the planning area, and farm tours. This will help enhance the visitor educational and recreational experience goals stated in the Purpose and Need.

13. The beneficial impacts to soils from carbon farming was not considered. The DEIS only considers adverse impacts to soils as a result of dairying and ranching. The NPS should consider carbon farming and the ecological benefits of implementing a carbon farm plan that would improve soils, increase soil carbon, and increase organic matter to benefit water quality and air quality. The NPS should consult with the Marin Carbon Project, Carbon Cycle Institute, and Marin Resource Conservation District who have expertise in this area. There is no excuse to ignore the beneficial effects of carbon farming.

14. The DEIS incorrectly equates fertilizer to compost and prohibits both. The use of organic compost should be allowed on all ranches. The DEIS fails to understand the benefits of soil amendments and inputs on soil health. Weed-free and pathogen-free compost can improve soil fertility enhancing water retention to minimize runoff and help sequester carbon. NPS should consult with the Natural Resource Conservation Service, the Marin Resource Conservation District, and University of California Cooperative Extension Service to analyze the best nutrient management practices that can be used on both dairies and ranches to improve soil health. 15. Nutrient management should be allowed on beef ranches and not be limited to dairies. Dairies have more productive soils than beef ranches because dairies feed their cows nutrient rich concentrated feeds, they have more cows per unit area than allowed on beef ranches, and dairies spread manure on pastures, all increasing the fertility of the soils.

The preferred alternative only allows soil fertility improvements on the pasture subzone, but soil fertility should also be allowed on the range subzone at least with compost on both dairies and beef ranches.

16. The DEIS fails to accurately assess air quality impacts from beef ranching relative to other uses of the PRNS. Since beef cattle spend most of their time on pastures and rangeland and not on bare ground, and are just occasionally gathered for removal from ranch land, the DEIS conclusion that beef cattle are the primary source of dust is unsupported. The DEIS also is misleading because it concludes that ranching represents 87% of the greenhouse gas emissions while vehicle emissions from the several million seashore visitors is less than 20%. However, this ignores the emissions from vehicles as visitors drive to and from the PRNS.

17. It is unclear how the reserve account(s) would operate and whether the reserve(s) account for NPS elected deferred maintenance. It is unclear whether one reserve account will be established that is available for maintenance on all the ranches or whether individual reserve accounts will be created for each ranch. It is equally unclear whether NPS would contribute to the reserve account given that NPS has not maintained the infrastructure on the ranches and should bear some financial responsibility to bring the infrastructure up to usable and safe condition.

18. Ranch Operating Agreements should not require new NEPA review and ESA consultation every year. The DEIS states that The ROA would be updated or reauthorized following the annual meeting, DEIS P.36. The DEIS does not define updated or reauthorize. Both these terms, especially reauthorize indicate a new decision each year that will require NEPA review and ESA consultation. This will grind implementation of the Plan to a halt and create annual opportunities for litigation. This is not in the interest of the NPS which has limited budgets and staff, and is not in the interest of accomplishing resource improvements, whose implementation will be repeatedly stalled. The annual meeting about the ROA and related documentation should be referred to as implementation of decisions previously made in the GMP Record of Decision and not an update or reauthorization. Otherwise, you are creating an annual opportunity to attack and stall the decisions which is not in the interest of good resource management.

19. We have concerns with your requirement in the lease addendum that states lease holders primary residence must be in the Park. This may not be feasible in many instances. The requirement of residency is not necessarily correlated to good stewardship of the leased property. We propose that the language states that the lease holder be directly involved in the day-to-day management of the operation of the leased agriculture property. The lease holder or his/her immediate family member should be the owner/operator of the agricultural operation. Subletting should not be allowed. The GMP Amendment is the foundation for providing the cultural resource, natural resource, and economic benefits envisioned by Congress when it established and preserved these magnificent areas and provided for continued ranching and dairying on the agricultural property. The Association is honored and grateful to be part of this longstanding history and we take great pride in continuing to ensure that ranching and dairying contribute to the agricultural heritage of Marin County and promote the environmental and scenic quality of the working landscapes of the Seashore. We also value our working ranches which provide an opportunity for the public to learn about where and how their food is produced and to learn more sensible ways of raising animals to provide our country with high quality agricultural products. The recent designation of historic ranches within the Park to the National Registry of Historic Places status supports the agricultural heritage of the ranches within the Park.

Please consider our comments stated in this letter and the previous scoping comments when preparing the final EIS. Thank you.

Sincerely,

Point Reyes Seashore Ranchers Association

Name: Ventrice, Monica

Correspondence: The Tule Elk should be protected, not culled. Farmers on Point Reyes National Seashore land should be gradually phased out so the area can be restored to its natural form, which includes a self-regulating Tule Elk population.

#6585

Name: Meyer, Amy

Correspondence: Point Reyes National Seashore is a complex, relatively small national park of 71,000 acres within a rural area and next to a suburban area. Because of its complexity, "neighborhood" context, lack of adequate government funding, and insufficient private funding compared to the GGNRA, staff struggles to keep abreast of its problems. I see this DEIS examination for a GMPA as an opportunity to help illuminate ways toward improved park care, more effective oversight and stimulation for increased funding. I support Alternative B of the GMPA DEIS.

I was a primary advocate for authorization of the Golden Gate National Recreation Area. I was vice-chair of the GGNRA/Point Reyes federal Advisory Commission for its whole existence, from 1974 until 2002. Thus I became very familiar with the outstanding landscapes and history that both of these parks protect for the national park system and that they offer to visitors.

Portions of both PORE and GGNRA, are the subject of this August, 2019 document. Legislation for both parks harks back to the 1916 Organic Act, but what is saved within national parks and how people visit them has evolved greatly since the time of that Act. The 1962 legislation authorizing Point Reyes came from the efforts of Congressman Clem Miller to save "a portion of the diminishing seashore of the United States that remains undeveloped." Author Hal Gilliam wrote a book about Point Reyes, "An Island in Time," whose title has been a quick way of characterizing the park.

Much of GGNRA's land is in and next to an urban area. When that park was authorized in 1972, the language of Congressman Phillip Burton reflected increasing NPS emphasis on cultural preservation and visitation: "to preserve for public use and enjoyment certain areas of Marin and San Francisco Counties, California possessing outstanding natural, historic, scenic, and recreational values...recreational and educational opportunities..." as well as protecting its scenery and natural features: "to preserve the recreation area, as far as possible, in its natural setting and protect it from development and uses which would destroy the scenic beauty and natural character of the area."

An important change came in 1976 to the PORE legislation that brings the legislation of the two parks close together. Congress said Point Reyes was to be administered without "impairment of its natural values, in a manner which provides for such recreational, educational, historic preservation, interpretation, and scientific research opportunities as are consistent with, and based upon and supportive of the maximum protection, restoration, and preservation of the natural environment within the area."

Since 1978, PORE has administered that portion of the GGNRA north of the Bolinas-Fairfax Road. While controversy over the future of ranching in the park and management of tule elk dominate discussion about this DEIS, the park and public can benefit from a new document for park management. The combined 1980 GMP for these parks was of necessity broad-brush. Much has been learned about the resources of PORE and northern GGNRA since then.

Earlier in our history, national parks had only wild animals. Populations of some species were balanced by Native Americans who hunted them and by animal predators. Today, some national parks include ungulates that have to be managed by the NPS. To get some perspective on the proposed removal of elk at PORE, I asked park staff for statistics. They cited Rocky Mountain, Wind Cave, and Theodore Roosevelt National Parks which have each developed elk plan EISs. These parks have used qualified volunteers in their control efforts. In 2016, for example, 262 elk were removed from Wind Cave. NPS is also part of an interagency effort to manage bison populations in

the Greater Yellowstone. In the winter of 2017/2018, 1171 bison were lethally removed. In April 2019, six NPS parks around Washington DC donated 19,200 pounds of venison from white-tailed deer reductions to charities that feed families in need.

At Point Reyes there are no natural predators who can limit the growth of the tule elk herds. They have grown from 10 elk introduced in 1978 to about 730 elk. Somewhat fewer than half are in the Drakes Beach and Limantour herds that are within the scope of this DEIS. The tule elk are not an endangered or threatened species. Their number cannot continue to grow without constraint so a modest program of removing 10-15 elk each year is rightly proposed.

The federal Advisory Commission that helped public understanding and management of park issues was terminated in 2002. For an issue such as this DEIS it has been a great loss to the parks and public. The staffs of GGNRA and Point Reyes presented policies, projects and programs in the parks to the commission which took field trips to sites and heard public testimony. We advised the Secretary of the DOI on these topics through the superintendents who almost always followed our advice.

If we had a commission or other "sounding board" today, the caring public could be better informed about what would happen, for instance, to the scenic values of the park landscape if grazing by cows were to cease entirely. Such issues as the training and use of guard dogs for livestock who must not attack park visitors would receive public scrutiny. Generalized public presentation of what goes into a ranch lease document (consistent with privacy considerations) would enhance public knowledge and lessen rumors. The complex issue of "succession" could be aided by information to the public and also public input. There could be much better understanding of what is appropriate and necessary for "diversification."

The public would also learn about the ranches dating from the 1860s now listed on the National Register as the Point Reyes Peninsula Historic Dairy District and the Olema Valley Historic Dairy District. The Olema Valley district has already converted to beef. The closure of the Point Reyes district would mean some buildings might become a museum of dairying and the rest of its history and educational opportunities would gradually deteriorate and require removal. Far better to have a living history!

The new designations of ranch core, pasture and range provide demarcations of what will be expected to take place on a Seashore ranch. Individual ranch operating agreements (ROA) should include priorities. The ranchers have already been doing well in most areas that are measured for residual dry matter (RMD) in the fall of each year. But the DEIS points out that the condition of many of the park's structures is mediocre. A former Secretary of the Interior, Senator Feinstein and Congressman Huffman have called for twenty year leases so ranchers can invest in their buildings and infrastructure.

NPS uses \$400K received from ranching leases to support NPS staff work on the ranching areas of the park. Park staff needs to provide enough oversight to make sure that all agricultural operations permitted under Alternative B will be managed in a way that prevents water pollution and does not allow degradation of the range condition. As we have seen with the financially successful Golden Gate National Parks Conservancy, it will take more generous funding, private as well as public, for these parks to reach their full potential. Alternative B of this DEIS is a timely, necessary step.

Postscript: It has been foolish to have a 45 day comment period for a complicated document of over 700 pages. In the middle of this review, an Order came from the Secretary of Interior that e-bikes should be allowed on the trails of our national parks-- with 30 days notice. This kind of management of our national parks keeps the public that loves them in constant turmoil.

Superintendent Cicely Muldoon Point Reyes National Seashore 1 Bear Valley Road Point Reyes Station, CA 94956

Dear Superintendent Muldoon:

The McClure Family appreciates the opportunity to comment on the Point Reyes National Seashore (PRNS) and North District of Golden Gate Recreation Area (GGNRA) draft Environmental Impact Statement (EIS) for the General Management Plan (GMP) Amendment. We offer the following comments for consideration in this public comment period and will continue to participate in the process.

Currently, we milk a herd of organic Holstein milk cows within the PRNS. We also raise dairy replacement heifers. The dairy was certified organic in 2006. We also manage pastures and raise silage for our livestock. We have 8 non-family employees which are provided housing on the ranch for them and their families.

While we generally support Preferred Alternative B, the continued ranching alternative, presented in the draft EIS, there remain areas of concern that need to be addressed to achieve the goals for the GMP Amendment and the intent of the PRNS and GGNRA enabling legislation. These items include:

" The draft EIS does not address the negative impact of the free range elk on working ranches in the pastoral zone that are authorized to operate there through enabling legislation.

" Appendix I is a statistical probability model predicting an annual amount of residual dry matter (RDM). It does not consider or provide management direction for daily and seasonal forage demands of grazing livestock and the proposed free-range elk herds. By not addressing this current and existing competition in the planning area, the Draft EIS has failed to address the impacts of elk on grazing livestock operations.

" The draft EIS does not address adequate solutions to keep the Limantour herd in the wilderness area. Ranching currently uses less than 30% of the parkland. The EIS does not address the viability of removing elk from the pastoral zone and having the elk utilize the 70% rangeland area of the Park, thereby allowing elk and livestock to co-exist.

" The draft EIS is inadequate as it fails to detail how the monitoring of the Limantour herd and the removal of the Drakes Beach herd will be accomplished and during what time period.

" The proposed number of the Drakes Beach herd of 120 is not acceptable because it was never authorized to be an established herd on the agriculture properties.

" The draft EIS does not define what a new herd is. It lacks the definition of what constitutes a herd size. What steps will be taken to avoid new herds being established? What steps will be taken if a new herd is established?

" Leases-What is required? How will the requirements be implemented? What is the financial responsibility of the ranchers and the NPS? The explanation of the building upkeep requirement is not clear and poses misunderstanding.

" We have concerns with your requirement in the lease addendum that states lease holders' primary residence must be in the Park. This may not be feasible in many instances. The requirement of residency is not necessarily correlated to good stewardship of the leased property. We propose that the language states that the lease holder be directly involved in the day-to-day management of the operation on the leased agriculture property. The lease holder or his/her immediate family member shall be the owner/operator of the agricultural operation. Subletting will not be allowed.

" The draft EIS lacks a clear understanding of what happens to the leases after the 20 year term is up. A succession policy needs to be determined that addresses what happens in 5, 10, 15 or 20 years if either the rancher or the Park wants to terminate the lease. This section is inadequate. For example, how would personal assets of a former lessee be transferred to a new lessee?

We support more details provided to you in the Point Reyes Seashore Ranchers Association response letter submitted as part of this public response period. Thank you for your consideration of our comments.

Sincerely,

Robert and Ruth McClure Historic I Ranch

Name: King, Mary

Correspondence: Dear Superintendent Muldoon,

Thank you for the opportunity to submit comments on the Draft Environmental Impact Statement (DEIS) for a General Management Plan Amendment (GMPA) for Point Reyes National Seashore and the North District of Golden Gate National Recreation Area.

I first became aware of the Pt. Reyes Seashore area in the late 1960's while living in Southern California. Subsequently I moved to Northern California and began a more intimate relationship and love of this National Seashore. I have hiked in it, birded in it, kayaked on Tomales Bay, participated in classes and for nine years helped in monitoring its resident harbor seal population. As a graduate of the first UC-ANR California Naturalist class at Pt. Reyes I fell more deeply in love with the Seashore and more committed to its health and well-being.

I have taken the time to familiarize myself with the Draft Environmental Impact Statement (DEIS) for a General Management Plan Amendment. I am very deeply concerned with what I have seen proposed. Just three of the elements that are of most concern include: a proposal to increase visitor use of Drake's Estero by allowing boat-in camping on the Estero's shores; diversification of agriculture; and the management of tule elk for the benefit commercial lease holders.

1. Drake's Estero - This beautiful resource has suffered decades of abuse by oystermen. To now allow boat-in campers before it has had a chance to recover is not mindful planning. The impacts of boat-in campsites that have occurred on Tomales Bay will most certainly occur in Drakes Estero. Boat-in camp sites on Schooner Bay foreseeably will have significant impacts on the wilderness area of Drakes Estero, due to trash, human waste, and substantially increased visitor usage. Migratory birds and marine mammals will also be negatively affected. The DEIS includes no quantitative or descriptive details of any kind regarding boat-in camping that would allow analysis of or mitigation for its impacts. Please do not allow boat-in camping.

2. Diversification of Agriculture - I am opposed to any proposal to allow retail sales, ranch home stays and cheesemaking or the raising of goats, sheep and chickens or other non native animals. Along with increased ranching activities will come increased traffic, increased pollution, increased wildlife/human conflict, and increased pressure upon rangers to police such concerns. There are already insufficient rangers to keep the tourists and ranchers in line.

Further, the adverse effects from those species include potential increase in predation; disease or parasites; loss or degradation of habitat; construction of additional infrastructure (e.g. watering facilities, feed storage facilities, and pens); or the need for the use of non-wildlife friendly fencing.

I would hope that National Park Service would develop and analyze a new alternative that mitigates impacts from current ranching activities, eliminates activities that impair park resources and wildlife, and does not expand the agricultural activities beyond the present multigenerational ranching and dairying.

I am particularly concerned about impacts on wildlife. So little remains for them. Please do not allow expansion of agricultural related activities. Don't kill the goose that has preserved the golden egg!

3. Tule Elk - These native animals are a park wildlife resource that should only be managed for the benefit and non-impairment of the resource, not for the economic benefit of ranchers. A potential shortage of forage would not be due to elk, but to a combination of weather and the number of cattle. If there is insufficient space for elk and cattle, reduce the number of cattle allowed. The proposed plan is not consistent with the Organic Act's mandate that National Park resources be preserved, unimpaired, for the use and enjoyment of future generations. Please manage tule elk for their benefit.

Thank you for reading this and considering the comments of an engaged citizen who cares about Pt. Reyes National Seashore. I would hope that the interests of citizens and the greater good would guide the management of our public resources take precedence over the exploitation of our resources by private interests.

Sincerely,

Mary Ellen King

Correspondence: The Tule Elk at Point Reyes National Seashore are a national asset, not a creature to be shot in favor of cattle. Cattle can be raised anywhere, and are raised practically everywhere. Please do NOT move forward with the plan to allow slaughter of the elk at Point Reyes National Seashore. We need to save and protect our remaining remnant populations of wildlife, not further their destruction.

#6590

Name: N/A, N/A

Correspondence: The government paid \$50 million to farming and ranching families for the Point Reyes National Seashore national park in California. This area is now a national park and farming/ranching families have no claim to the land.

Two herds of Tule elk are now in danger of being killed because ranchers now want to claim the land for grazing cattle, land that they do not own and was put aside as a national park.

Please adopt Alternative F, which would discontinue farming and ranching opportunities in the park and expand visitor opportunities. The preservation of native wild species must take precedence over farming and ranching activities. Grazing negatively affects ecosystems, causing water pollution and soil erosion, spreading invasive species and disease, and harming endangered species.

Please adopt Alternative F.

#6591

Name: Moritsch, Barbara

Correspondence: I am so disappointed in the National Park Service. Actions that would be taken under the NPS' Preferred Alternative B in the Draft Environmental Impact Statement (DEIS) for a General Management Plan Amendment would be a travesty, a disgrace, and a grave disservice to the American people. Below are some of the reasons why Alternative B is so wrong-minded.

**1 THE AMERICAN PEOPLE PAID FOR THAT RANCH LAND TO INCLUDE THE LAND IN THE PARK, NOT TO SUPPORT RANCHERS.** The federal government (using American taxpayers' money) paid ranch owners tens of millions of dollars to purchase the ranches. Ranch owners retained a right of use and occupancy of not more than 25 years, or for a term ending at the death of the owner or the death of his or her spouse, whichever came later. By all rights, ranch owners should pay that money back to the government if they want to remain on the land.

**2 PERPETUAL RANCHING IS NOT SUPPORTED BY PORE'S ENABLING LEGISLATION** Ranching in perpetuity was never the intent of Point Reyes' enabling legislation. Political pressure, coupled with the NPS' lack of courage to end ranching has resulted in a long series of legislative manipulations that have allowed 24 ranches with more than 5,500 cattle to remain on park lands. The cows continue to degrade both park resources and the visitor experience.

Congress established Point Reyes National Seashore in 1962 not to preserve ranches and ranchers, but to "to save and preserve, for the purposes of public recreation, benefit, and inspiration, a portion of the diminishing seashore of the United States that remains undeveloped." The purchase of the ranches clearly indicates that the intent was to remove the ranching operations in support of the enabling legislation.

**3 PERPETUATING RANCHING DOES NOT APPEAR IN THE "STATED PURPOSES" OF EITHER PORE OR GOGA.** The DEIS itself (pp 1-2) defines the "stated purposes" of the two park units:

"The purpose statement identifies the specific reason(s) why Point Reyes was established and lays the foundation for understanding what is most important about Point Reyes.

The purpose statement for Point Reyes is as follows: Established for public benefit and inspiration, the Point Reyes National Seashore protects a rugged and wild coastal peninsula and surrounding waters, connecting native ecosystems, enduring human history and recreational, scientific, and educational opportunities.

The purpose statement for Golden Gate is (NPS 2014a): The purpose of Golden Gate National Recreation Area is to offer national park experiences to all, including a large and diverse urban population, while preserving and interpreting the outstanding natural, historic, scenic, and recreational values of the park lands.

**4 TULE ELK SHOULD NOT BE KILLED TO FACILITATE RANCHERS AND COWS** Point Reyes is the only national park unit that supports tule elk, and the NPS seems to be proud of its tule elk herds. However, under Alt. B a herd of 120 tule elk would be "maintained" at Drakes Bay; any additional elk in this herd would be killed (the NPS estimates 10-15 elk would be killed per year). This is unacceptable and goes against everything the NPS stands for.

PORE's website says:

"The majestic animals you see as you travel through the park embody the restoration of the dominant native herbivore to the California coastal ecosystem. They shape the landscape around them as they did for centuries before they were extirpated by humans. They symbolize the conservation of native species and ecosystem processes, one of the primary missions of the National Park Service."

With this General Management Plan Amendment, the NPS has an unprecedented opportunity to phase out the ranches as was intended in the Seashore's enabling legislation. Yet, contrary to all logic, the NPS' Preferred

Alternative actually expands agricultural opportunities for the ranchers. 5 ALTERNATIVE B, THE NPS' PREFERRED ALTERNATIVE IS A BLATANT GIVEAWAY TO THE RANCHERS, AT THE EXPENSE OF THE HEALTH OF PARK RESOURCES AND THE ENJOYMENT OF THE VISITING PUBLIC. Issuing 20-year leases to the ranchers, and allowing ranchers to diversify their agricultural activities by raising pigs, goats, sheep, and chickens; growing row crops; and establishing B&B's and retail farm stands would result in additional adverse impacts to soils, water quality, air quality, wildlife, and the visitor experience.

6 THE RANCHES HAVE ALWAYS HAD, AND CONTINUE TO HAVE ADVERSE IMPACTS ON PARK RESOURCES. Even the DEIS makes it clear throughout that the ranches and their operations pose significant threats and cause damage to the parks' air and water quality, native vegetation, and wildlife. They adversely affect the experience of park visitors, and prevent visitors from accessing a full one-third of their park lands. More specific details are provided below.

The DEIS significantly down-plays the impacts of ranching on wildlife-fix that and be honest.

### Birds

The DEIS states: Point Reyes hosts the greatest avian diversity of any national park unit in the United States and nearly half of the bird species of North America, with around 490 species recorded from approximately 60 bird families. Many birds use the planning area for a portion, or all of their life history, particularly during spring migration and summer nesting.

Ground-nesting species, such as California horned lark, savannah sparrow, grasshopper sparrow, song sparrow, western meadowlark, California quail, and northern harrier could be susceptible to impacts from cattle grazing and vegetation management (e.g., plowing and harvesting). Agricultural activities that affect songbird populations could also affect the foraging of American peregrine falcons and merlins. Several other special-status raptors rely on grassland habitats, including the burrowing owl, white-tailed kite, and ferruginous hawk, and could be affected by habitat alteration from livestock grazing and vegetation management. Stop using the word "could." The truth is all of these species are adversely affected by ranching.

Agricultural activities in the planning area attract and concentrate birds that would not be there in such abundance otherwise, including common ravens, brown-headed cowbirds, European starlings. Nest parasitism by brown-headed cowbirds or competition with non-native European starlings for cavity nesting sites negatively affects native birds. Ravens are nest predators of the federally threatened western snowy plover, which nests on beaches adjacent to the planning area.

Add this to be clear: Thus, continued ranching will adversely affect native birds that are harmed by common ravens, brown-headed cowbirds, European starlings. Fish

From the DEIS: Three federally threatened anadromous fish that could occur include coho salmon, steelhead (an anadromous rainbow trout), and Chinook salmon. The Lagunitas Creek watershed supports one of the largest remaining spawning populations of the Central California Coast coho salmon evolutionarily significant unit. Steelhead from the Central California Coast distinct population segment occur in the planning area in the Lagunitas and Olema Creek watersheds and in tributaries to Drakes Estero. Chinook salmon from the California Coastal evolutionarily significant unit are sporadic visitors to the Lagunitas Creek watershed; only a few adults have been observed in 12 of 17 years.

Other special-status fish in the planning area could include the Pacific lamprey, western river lamprey, and the riffle sculpin. Historical logging, development, and grazing in the planning area have negatively affected fish habitat as a result of sedimentation, loss of habitat complexity, and diminished riparian ecosystem function. Major perennial streams that are habitat for federally listed fish in the Tomales Bay watershed (Lagunitas and Olema Creeks) either do not have adjacent grazing or have been fenced to exclude cattle.

There is no question agricultural activities contribute to habitat degradation and reduced water quality and quantity for fishes. You need to more directly state this in the DEIS.

Reptiles and Amphibians From the DEIS: A dozen species of reptiles could occur in the planning area. This implies more data are needed to understand the impacts of ranching on reptiles. State this fact.

The western pond turtle, a California species of special concern, uses freshwater ponds and backwater areas of large streams in the planning area. Four lizard species occur in almost every habitat, except the dampest, most interior forests and tidal salt marshes, and eight snake species could occur in the planning area. Amphibians in the planning area, found in and near streams and ponds, include six species of salamanders and four species of frogs and toads, including the non-native bullfrog. Although extirpated or greatly reduced throughout its range in California, the federally threatened California red-legged frog is still locally abundant in the planning area. Several populations inhabit the park, and the NPS has recorded 136 known occurrences in the park, primarily associated with stock ponds. Also, the coast range newt, a subspecies of the California newt, is a special-status species found in the planning area.

The Draft EIS states: Agricultural activities could affect habitat suitability and water quality for reptiles and amphibians. This is far too vague and the potential impacts on reptiles and amphibians should be described in much more detail.

According to the Center for Biological Diversity: "...today the world's herpetofauna are among the most imperiled species on Earth. Ubiquitous toxins, global warming, nonnative predators, overcollection, habitat destruction and disease are key factors leading to their demise. Globally, 989 species of reptiles, or almost 20 percent of evaluated species, are endangered or vulnerable to extinction, according to the International Union for Conservation of Nature's Red List. The situation is even worse for amphibians. More than 2063 species of frogs, toads and salamanders - more than 31 percent of the world's amphibians - are at risk of dying out. And scientists lack sufficient information to even assess the status of more than 20 percent of the world's herps. These species are slipping away faster than we can study them."

The above quote should be included in the DEIS.

According to the Draft EIS: Thousands of aquatic and terrestrial invertebrates inhabit the planning area. Limited information about the diversity and distribution of these species is available. Numerous flying insects are important pollinators of native plants, which could be affected by livestock grazing and vegetation management activities. Other aquatic invertebrates, including numerous insects, are important indicators of water quality and support aquatic food webs that could be affected by runoff from agricultural activities.

Two federally endangered invertebrates are known to occur in the planning area, the Myrtle's silverspot butterfly and California freshwater shrimp. Surveys done in 2004 for Myrtle's silverspot butterflies showed occurrences on 13 ranches, all of which support livestock operations. California freshwater shrimp are found in Lagunitas Creek and lower Olema Creek.

Survey data for the federally endangered Myrtle's silverspot butterflies are 15 years old-these data are inadequate for assessing impacts of ranching activities on this species.

Ranching does not enhance the visitor experience-it does the opposite.

According to the Draft EIS, ranching operations diminish the visitor experience. Visitors encounter cattle on trails and roadways in the park, and have noted concerns regarding electric fencing, interactions with cattle, and manure management.

**7 ALTERNATIVE F IS THE ONLY ALTERNATIVE THAT IS IN KEEPING WITH THE ENABLING LEGISLATION AND STATED PURPOSES OF THE PARKS.** Data presented in the DEIS all support the

adoption of Alternative F, not Alternative B. Alternative F would benefit soils, water quality, air quality, elk, and the experience of park visitors. Impacts of Alternative F on vegetation and soils cannot be easily summarized, but if the NPS would commit to habitat restoration after the cows are removed, both vegetation and wildlife would benefit overall from cessation of ranching. The same cannot be said about any of the other alternatives.

The NPS' plan to retain and expand ranching activities on park lands is purely political. A few very recent developments affecting the planning area illustrate this point. First, the Olema Valley Dairy Ranches Historic District was listed in the National Register on April 9, 2018, and the Point Reyes Peninsula Dairy Ranching Historic District was listed on October 29, 2018. Why didn't these listings happen earlier? Because the listings were done to try to more firmly anchor ranching into the parks.

Second, Congressman Jared Huffman sponsored a bill that directed the Secretary of the Interior "to manage agricultural properties consistent with Congress' longstanding intent that working ranches and dairies continue to be authorized to operate on agricultural property within the Point Reyes National Seashore and Golden Gate National Recreation Area" and authorized issuance of leases or special use permits of 20 years. The bill was passed by the United States House of Representatives, but fortunately the bill died in session. There are fears that even if the NPS decided to adopt Alternative F and phase out the ranches, that certain politicians would quickly try to end run the agency yet again.

8 IF THE NPS' PREFERRED ALTERNATIVE IS ADOPTED IT'S LIKELY THAT RANCHING ON THESE PARK LANDS WILL NEVER END, THE LAND WILL CONTINUE TO BE DEGRADED, AND THE MILLIONS OF DOLLARS THE AMERICAN PEOPLE PAID FOR THESE LANDS (MONEY THAT HAS BEEN KEPT BY THE RANCHERS) WILL BE FOR NAUGHT. It's time to phase out the ranches and manage the parks for the superlative natural beauty and diversity they offer-it's time to adopt Alternative F.

It is unconscionable to continue to kill innocent animals for existing in an environment that continues to be stripped of its nature. Who in their right mind would kill animals for the sake of creating space for MORE animals?! Saving our environment and the sustaining population of tule elk is the better solution than to continue to kill animals for their existence and a population that is slowly fading away. Extinction is FOREVER! Remember this when you look around at the population of humans who are destroying the earth and all that is within it!

#6593

Name: Lipscomb, Linda

Correspondence: Dear Sir or Madame: Please do not allow the extension of leasing of public lands to cattle grazing, or other commercial agricultural pursuit. I also have heard that you are considering expanding the type of commercial farming activity, i.e., diversification, to occur on public lands at Point Reyes seashore.

The public has already paid for this land to be kept wild. Currently, the Park Service is permitting this public land, and the native species which originally inhabited it, to be despoiled and destroyed. This is a travesty, a disgrace, and is certainly outside the bounds of the legislation which protects the land from exploitation. The Park Service is clearly in breach of the fiduciary duty it owes to the people of the US who paid for this wild land to be set apart from exploitation. And of course, it is an utter betrayal to allow the native species to suffer and die, or to be displaced, due to what may very well be illegal exploitation of this land by commercial agribusiness.

There is no saving grace to be had in falsely identifying these commercial "farms", which are despoiling both land and species, as historical and/or bucolic! You simply must stop this activity,, and allow the land to be returned to the public as was intended and authorized under the law. Please adhere to your responsibility on this matter, and

reverse current plans to expand these destructive practices! Do what you are charged to do under law! Very truly yours, Linda G. Lipscomb

#6594

#6596

Name: Tanner, Almira

Correspondence: Please do not kill or "cull" the Tule Elk! The real harm is coming from cattle farming and the dairy/meat industries which pose a great threat to the local and global environment.

I support Alternative F, phasing out cattle and dairy industry and returning the land to its natural state. The enabling legislation of the National Seashore supports wildlife protection and does not mention upholding private industry. The original leases to ranchers were to be 25 years. Ranchers have already been paid handsomely for their land, so it is long overdue to phase out the ranches. "Cultural Resource" and "Historic" does not mean industry needs to be currently in operation.

I do not support granting 20 year leases to cattle and dairy industry. Climate science has indicated we have less than 12 years to mitigate the worst of climate catastrophe. Allowing business that has been linked to water pollution, species extinction and in Point Reyes is the culprit of over 60% of the greenhouse gas emissions, it is not a good idea to give that same industry a 20-year lease to continue degrading our national park. Point Reyes is a refuge to thousands of plants and animals. Point Reyes can be a leader in the fight for climate justice, and it starts with phasing out Beef and Dairy operations and restoring the land to its natural state. The EIS has NO MENTION of the effects of climate change in it, and does not include any information of the cattle and dairy's impact on climate change within the park.

#6597

Name: McHugh, Heather

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

Sent electronically to: <https://parkplanning.nps.gov/document.cfm?documentID=97154>

These are my comments on the draft environmental impact statement (EIS) for a general management plan amendment (GMP Amendment) for Point Reyes National Seashore (PORE) and the north district of Golden Gate National Recreation Area (GGNRA) prepared for the National Park Service (NPS) to update management guidance for more than 28,000 acres of national park system lands, including all lands currently leased for beef and dairy ranching. As background, I am a Certified Wildlife Biologist (M.S., University of Michigan, 1976; Ph.D., University of California, Berkeley, 1988) with professional experience with a wide variety of wildlife species throughout California. I was Elk Program Coordinator at PORE in the late 1990s, during the establishment of the Limantour herd.

The Mission Statement of NPS, as stated on the NPS website, is: "The National Park Service preserves unimpaired the natural and cultural resources and values of the National Park System for the enjoyment, education, and inspiration of this and future generations." This mission is mandated through laws such as the 1916 Organic Act and the PORE and GGNRA statutes.

This legally mandated unimpaired preservation of resources for the enjoyment of this and future generations is directly at odds with the NPS' preferred alternative, Alternative B, which continues and intensifies the current commercial agricultural activities that have been degrading land, air, water, and wildlife on these NPS lands since the establishment of PORE. I will not catalog all the insults to land, water, air, and native wildlife at PORE caused by agricultural activities over the years; many of those are discussed in the EIS. How the NPS can continue to ignore the law and continue and intensify these insults to public land from a relatively few commercial agricultural operations has baffled me for decades. One can only conclude that the fix is in, and wonder which politicians and economic interests have leaned on PORE management to favor illegal, intensive, ecologically damaging commercial agricultural activities in a national park over resource preservation and ecological restoration for the enjoyment of future generations.

On a recent visit to PORE, I noticed, as I have for thirty years, vast acreage turned to cow-burnt wasteland, ground to dust by cattle in this dry season, with extensive trailing made by cattle, slumping and other types of erosion, and streams and other wetlands degraded by eutrophication and trampling. The blooms of yellow-green algae fouling several ponds and other waterways were particularly distressing. I watched cow manure being spread by truck on these public lands, some immediately adjacent to heavily traveled public roads, with apparently no thought to the potential of spreading the bacterium *Mycobacterium avium* subsp. *Paratuberculosis* (MAP) to humans or wildlife, or even to livestock that might not yet be infected. This organism, the cause of Johne's disease, infects livestock, and has infected the local elk, a native species reestablished at PORE after a long absence with much effort and substantial cost. It is known that Johne's disease can be transmitted to a variety of wildlife such as rabbits, foxes, mustelids, and primates, as well as ruminants. All those types of wildlife exist as natives at PORE, with the exception of non-human primates. There is also thought that Johne's disease may infect humans, and be involved with Crohn's disease. The manure trucks I recently saw trailed large quantities of manure and mud from the fields and deposited this material onto the adjacent paved, public roads in PORE. When driven over by visitor traffic, this manure is easily dispersed into the air, potentially exposing people driving past. Manure spraying could present another, aerial route of infection to humans and native wildlife. However, I saw no discussion of this potential disease transmission, to humans or wildlife, in the EIS. Manure management is treated offhandedly as just another dairy management operation, as if it were not occurring on National Park System lands but rather on a private farm.

Livestock other than cattle, including pigs, goats, sheep, and horses, as well as domestic dogs, can also be infected with MAP. These domestic species currently exist at PORE or are to be included in the "diversification" of

agricultural activities in the Preferred Alternative. None of the disease issues regarding other livestock species, nor potential of disease transmission to wildlife, is discussed in the EIS. (For information supporting this MAP discussion, see Manning et al., *Journal of Wildlife Diseases* 39(2), 2003, pp. 323-328 (a paper, of which I am second author, reporting on research performed at POE), and the Johnes's Information Center, University of Wisconsin - Madison School of Veterinary Medicine <https://johnes.org/>.)

Other types of ecological degradation caused by the intensive agricultural operations at PORE contribute to the inability of PORE to fulfill its NPS mission and obey the law. The list of ecological insults from intensive, commercial agriculture on NPS land is a lengthy one, and I only mention a few here. Cutting silage in spring directly kills native wildlife such as ground-nesting birds and newly born black-tailed deer fawns, which hide in vegetation for several weeks after birth until they can better follow the dam. A new study published in one of the world's leading science journals ("Decline of the North American avifauna." [science.sciencemag.org/cgi/content/full/science.aaw1313/DC1](https://science.sciencemag.org/cgi/content/full/science.aaw1313/DC1)) documents a dramatic reduction in North American birds, attributable to "habitat loss, agricultural intensification, coastal disturbance, and direct anthropogenic mortality." These factors are inherent in the silage cutting, and indeed, all proposed agricultural activities at PORE, and are in direct conflict with PORE's NPS mission. The EIS minimizes silage cutting as just a "routine activity" although, in addition to killing native wildlife, silage production includes discing the soil and seeding non-native plants. Further, killing native elk because they eat vegetation on NPS lands that agricultural interests think belongs to their livestock is the height of insanity, and gives the lie to the NPS mission to "preserve unimpaired the natural and cultural resources and values of the National Park System." Importing alfalfa or other supplemental feed for cattle introduces and spreads the seeds of non-native, weedy, vegetation. Proponents of agriculture at PORE claim their agricultural activities are "sustainable"; how can sustainability require the import of hundreds of tons of hay and the weed seeds therein?

It is clear that there is only one alternative that will allow PORE to obey the law and meet its NPS mission: Alternative F would remove all commercial agricultural activity, allow PORE soils, water, and wildlife to recover, and preserve a much more wild and natural ecosystem to preserve and for generations of park visitors to enjoy. There is no shortage of agricultural land adjacent to the park; what is increasingly rare are large areas of wild lands. As human populations in the Bay Area, California, and the US increase, and as the climate implications of livestock operations are better understood, such wild lands will only increase in importance over time.

Alternative F needs to include a program of ecological restoration to facilitate healing of the many ecological wounds caused by agriculture at PORE. A smaller-scale ecological restoration program is currently ongoing in the nearby Presidio in San Francisco, so such an idea is current, local, and successful. No doubt it will take decades to ameliorate a half century of agricultural damage to these public lands that occurred under NPS management; such time is relatively short in the perspective of nature, and every year under this alternative, conditions would be improving. Only with Alternative F could NPS could finally approach fulfilling its mission.

Thus, agricultural activities at PORE are inherently in conflict with the NPS mission to "preserve unimpaired the natural and cultural resources and values of the National Park System for the enjoyment, education, and inspiration of this and future generations." Congress in 1978 explicitly allowed ranching at the discretion of the Secretary, and is thus explicitly not mandatory, and may occur only "without the impairment of its natural values." (16 U.S.C. § 456c-5)

Thank you for your attention. I look forward to a PORE that fulfills its NPS mission and follows its founding legislation that mandates "the maximum protection, restoration, and preservation of the natural environment" (16 U.S.C. § 456c-6) on all its lands.

Thomas E. Kucera

Name: Dowling, Gary

Correspondence: I am writing to express my disappointment that ranching and dairy operations are allowed to continue in the National Park. This is inconsistent with the stated aims of the Park. Untreated manure entering the waterways is never a good situation especially in Tomales Bay with its shellfish related importance. All the ranching alternatives in the Draft Environmental Impact Statement involve the impairment of natural resources. Three National Park Service laws prohibit actions that will impair natural resources (the 1916 NPS Organic Act, Point Reyes National Seashore legislation Section 459c-6, and Golden Gate National Recreation Area legislation Section 460bb). Consequently, the Park Service should prepare a supplemental DEIS with ranching alternatives that comply with applicable laws requiring the protection of natural resources. The Park Service should then circulate that supplemental DEIS for public comment. Many Thanks, Gary Dowling

Correspondence: Please support the elk and do not open up any areas for cattle ranchers.

#6601

Name: Lipscomb, Linda

Correspondence: Please do not allow the extension of leasing of public lands to cattle grazing, or other commercial agricultural pursuit. I also have heard that you are considering expanding the type of commercial farming activity, i.e., diversification of farming species, to occur on public lands at Point Reyes seashore. Instead, I urge you to adopt Alternative F of the proposals, phasing out ranching, and managing the land, water and wildlife.

The public has already paid for this land to be kept wild. Currently, the Park Service is permitting this public land, and the native species which originally inhabited it, to be despoiled and destroyed. This is a travesty, a disgrace, and is certainly outside the bounds of the legislation which is supposed to protect the land from exploitation. The Park Service is clearly in breach of the fiduciary duty it owes to the people of the US who paid for this wild land to be set apart from exploitation. And of course, it is an utter betrayal to allow the native species to suffer and die, or to be displaced, due to what may very well be illegal exploitation of this land by commercial agribusiness.

There is no saving grace to be had in falsely identifying these commercial "farms", which are despoiling both land and species, as historical and/or bucolic! You simply must stop this activity, and allow the land to be returned to the public as was intended and authorized under the law. Please adhere to your responsibility on this matter, and reverse current plans to expand these destructive practices! Do what you are charged to do under law! Very truly yours, Linda G. Lipscomb"

#6602

Name: Bailey, Kathy

Correspondence: Hi - Thank you trying to create an up to date management plan for Pt. Reyes National Seashore. However, you need to keep trying as the current plan in relation to livestock management will create negative impacts that cannot be mitigated, including significant water pollution and conflicts with native wildlife. The Amendment favors the cattle over the wildlife, which is not permissible under the terms of Pt. Reyes founding documents. There are other places the cows can be but Pt. Reyes is irreplaceable. Please go back to the drawing board and honor the founding documents of this national treasure. Best regards, Kathy Bailey

#6603

Name: N/A, N/A

Correspondence: I support Alternative F. My comment below.

-Under no circumstance shall the park kill any Tule Elk. -The park should prioritize Tule Elk habitat. -The park should refuse to grant 20-year permits and leases to cattle and dairy ranchers. Ranchers have overstayed their

original permit limits already. Long-term leases will set a terrible precedent in favor of private, commercial industry and jeopardize the future of our parks and the health of the ecosystem. -Absolutely no diversification of ranch operations. Any diversification (such as chicken coops, pigs, sheep, row crops, etc) will only serve to attract more predators like coyotes, foxes, bobcats that will be in conflict with ranch operations and have to be "managed" as well. -The park should revoke permits for all cattle and dairy operations and restore the leased land to its original, pre-industry state. The park should prioritize wildlife NOT commercial interests!

Name: Lorber , Jessica

Correspondence: Please protect the native wildlife in Point Reyes, including the Tule Elk, from being killed to promote cattle grazing.

#6609

Name: Reynolds, Jinesse

Correspondence: Thank you for the opportunity to make comments on DEIS (Draft Environmental Impact Statement) for a GMPA (General Management Plan Amendment) for the management of areas of PRNS (Pt Reyes NATIONAL Seashore) and the GGNRA (Golden Gate National RECREATION Area). There are three NPS laws that stand out that need to be recognized and enacted to prohibit actions that will impair the natural resources:

1. 1916 NPS Organic Act- Applies to all units of the NPS (National Park System), including PRNS and GGNRA. § 100101 The Secretary...shall promote and regulate the use of the NPS by means and measures that conform to the fundamental purpose of the System units, which purpose is to conserve the scenery, natural and historic objects, and wild life in the System units and to provide enjoyment of the scenery, natural and historic objects, and wild life in such a manner and by such means as will leave them UNIMPAIRED for the enjoyment of future generations. § 100101 (a). (Emphasis added.) With the respect to the Organic Act, the Ninth Circuit Court of Appeals has held that the language quoted above means that "resource protection [is] the overarching concern" in the management of National Park System units. Bicycle Trails Council of Marin v. Babbitt, 82 F.3d 1445, 1453 (9th Cir. 1996).

2. §459c-6 Administration of property (a) Protection, restoration, and preservation of natural environment except as otherwise provided in sections 459c to 459c-7...the property...shall be administered by the Secretary without impairment of its natural values, in a manner which provides for such recreational, educational, historic preservation, interpretation, and scientific research opportunities as are consistent with ...the maximum protection, restoration, and preservation of the natural environment within the area...16 U.S.C. §459c-6 (Emphasis added.)

3. §460bb Establishment In order to preserve for public use and enjoyment certain areas of Marin and San Francisco Counties, California, possessing outstanding natural, historic, scenic, and recreational values, and in order to provide for the maintenance of needed recreational open space necessary to urban environment and planning, the Golden Gate National Recreation Area (hereinafter referred to as the "recreation area") is hereby established. In the management of the recreation area, the Secretary...shall utilize the resources in a manner which will provide for recreation and educational opportunities consistent with sound principles of land use planning and management. In carrying out the provisions of this subchapter, the Secretary shall preserve the recreation area, as far as possible, in its natural setting, and protect it from development and uses which would destroy the scenic beauty and natural character of the area. 16 U.S.C. § 460bb.

I urge the NPS to prepare a supplemental DEIS with ranching alternatives that comply with the applicable laws for public comment. The modifications must include practices that will regenerate and protect the water, soil, lands, and all wild life that the PRNS needs to be a healthy, resilient and vibrant National Park for all citizens and visitors to enjoy now and into the future.

Correspondence: Oops! Did I hit send before I was ready? The Shame of Point Reyes. Too many cows. Too few elk. Remove the cows. Do not kill the elk. Disgusting to see how the cattle ranchers/farmers are treating their cows and the calves. And the cows are destroying the habitat. Shame on you, Point Reyes National Seashore directors.

#6621

Name: Carolan, Kate

Correspondence: I guess I would "vote" for B, with these reservations: No diversification: we don't want the park to be overrun with farm stands, wineries ,tasting rooms for anything, stores or any commercial-open-to-the-public retail businesses. Especially pigs and chickens. There are enough chickens already and that is not what the park is for. I understand that there are already established chicken operations and I would not want them expanded onPark land. Farm produced products can be sold outside the park. (The Inverness store) Also farmers get government subsidies. Bad years should be compensated with that. Once diversification starts it will be very difficult to manage with the already understaffed staff. Elk Management: I suggest managing to the threshold impact of 120 elk rather than the number of 120 elk. Cull as last resort. Mitigation's: mandatory not aspirational within reasonable time frame, then enforced by the park, Public should be able to track the progress of mitigation process by transparency from the park. Succession: The 6 historic ranches leases extending only to immediate family until the family either dies off or loses interest in ranching. Ranch workers can take over the ranch until their death and then no more. Closed ranches should remain closed, and if possible be brought back to natural habitat or educational resources. Do not offer abandoned ranches to other ranchers for ranching, Let said

properties go back to nature. This will prevent the park from becoming Pt Reyes National Chicken farms. I understand the park must be true to the original leases and congressional intentions but I do not think extending leases to non historic ranch operators is a good idea as it will encourage more ranching in the park. The 6 historic ranches should be enough to honor the historic ranching. Current ranchers on non historic ranches should be granted lifetime occupancy unless they don't live on the ranch. Let the ranch lessors naturally die off and give the land back to the park/nature for other uses. This will avoid another "oyster" war. the community has had enough! Lease Template: Park should be transparent to the public and enforce leases and continually make sure of lease compliance. Public use and enjoyment: Please don't allow e bikes and take bikes off trails as much as possible ,ok for existing ranch roads, but no additions. Make bells mandatory! Thank you for your time and consideration of my proposals. And good luck!

Name: Vieira, Alfred

Correspondence: The notions that Tule Elk are significantly impinging on ranching operations, and that ranchers need expanded access to grazing land in Point Reyes National Seashore would be laughable if they weren't infuriating to those of us who value the preservation of this uniquely beautiful and critical habitat and watershed. My wife and I have been visiting this area for many years, and and have travelled all its byways. I know the Inveness Ridge and its surrounding lands like the backs of my hands - ridge and rock, root and bough, stream and slough. And I can tell you that if anybody's grazing (and watering!) rights are being impinged, it's the Tule Elk's, not the ranchers. Granted there are many miles of fencing to maintain. But we see evidence everywhere of cattle getting off their owners' properties, knocking down fences, and fouling natural ponds - in some cases all the way down to the shoreline beaches. Wherever we go, we see cattle, and their effects on the land. What we almost \*never\* see, despite years of wandering on foot throughout the area, are Tule Elk. They're such a rare and welcome sight that when we come across them it truly makes our day and gives us some confidence that all is well with the world. Please, \*please\*, !!PLEASE!! don't prioritize ranching at the expense of these magnificent animals. Efforts would be far better spent instead on making sure ranchers keep their herds on their own lands, maintain adequate fencing, and keep their cattle outside of sensitive areas. There is precious little land left for the Tule Elk to survive on.

#6640

Name: Lofroos, Catharine J. Kit

Correspondence: I'm writing to support public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly- and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic and/or hesitant tourists who may be unfamiliar with roadways and turn-offs.

Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

Name: Savage, Charles

Correspondence: I have been visiting the Point Reyes National Seashore (Seashore) since 1970 when I was a student at the University of California, Berkeley and am quite familiar with the park lands commonly referred to as the Pastoral Zone. Currently, the Ranch Lands and Dairy Farms in the Planning Area have been severely degraded after years of excessive grazing and trampling by cattle. In addition, the National Park Service (NPS) has allowed infrastructure to significantly deteriorate so that visitors today are confronted with severely degraded road ways including a section of Sir Francis Drake Blvd that is submerged under water near the former Oyster Farm, and road closures for Mt Vision and the McClure's Beach parking area. The road to the Chimney Rock parking area has deteriorated to the point of being one lane only for a steady stream of visitors. The Park Service notes that repairs to Sir Francis Drake Blvd and the road to Pierce Point Ranch are scheduled for 2020 without recognizing that heavy farming equipment and semi tractor trailers supporting the ranches and dairy farms played a significant role in degrading the roadways. No provision has been made in the EIS under the preferred Alternate B for ranchers and dairy farms to maintain the roads that their equipment degrade. Visitors to the Seashore are still met with miles of barbed wire fencing that effectively prevent access to some of the most scenic areas of the Park. Little has been done to provide additional parking areas, expand hiking and biking trails and to replace foul smelling latrines for the nearly 2.5 million annual visitors. Parking remains severely limited for access to the Lighthouse, Chimney Rock, Kehoe Beach, McClure's Beach and Pierce Point Ranch.

Roadways through Historic Ranches A, B and J have been severely degraded by heavy farm equipment and are fouled with manure. Those historic ranches are in a state of chronic disrepair and their occupants demonstrate a total lack of regard for maintaining their properties under the privileged status as Historic Ranches.

It has been quite obvious over the past 50 years that the NPS has given preference to the the Ranches and Dairy Farms with minimal attention to improving the Visitor Use, Experience and Access for the taxpaying public who fund the Seashore as well as for the international visitors. In choosing Alternative B in the draft EIS, the NPS

perpetuates the false assumption that visitors will continue to enjoy the Park in spite of potential conflicts with Ranches and Dairy Farms in the limited space of the Planning Area.

Deficiencies in the Assumptions made by the NPS in the draft EIS.

1. A survey conducted in 2005 indicated that 100% of the visitors to the Park were satisfied overall with appropriate facilities, services and recreational opportunities. (University of Idaho Cooperative Parks Studies Unit 2005.) It is uncertain if this survey was conducted only of visitors at the Bear Valley Visitor Center and what if any questions were asked regarding the current Planning Area. It is unknown for example if visitors were asked in 2005 if they preferred the presence of cows or Tule Elk, miles of barbed wire fences blocking access, damaged road ways, limited parking, foul smelling latrines, concentrated manure storage and the spreading of liquid manure on the Pasture subzone. One would have a very different impression of the Seashore if they only visited areas south of Limantour Road and outside of the Planning Area. Undercutting the rosy 2005 assessment the NPS did note that "Ranching operations can also diminish the visitor experience. For instance, visitors have encountered cattle on trails and roadways in the Park, and visitors have noted concerns regarding electric fencing, interactions with cattle and manure management (NPS 2014a)." In the fall, the Dairy Farms will spread foul smelling liquid manure in the pasture subzone further diminishing the visitors' experience. A general survey conducted in 2005 should not take the place of a more detailed survey that should have been conducted in 2018 of visitors to the Planning Area. The NPS simply assumes that visitors to the Seashore will still enjoy the scenic quality of the Planning Area landscape while traveling along roadways lined with barbed wire and limited access to park lands without any supporting documentation. Like cattle, visitors to Abbotts Lagoon leave a fenced parking area and are herded along a barbed wire fenced trail to the coast. The fencing leaves no doubt that visitors are not welcome on ranch lands in the Pastoral Zone. The NPS assumes that the visitors' experience will be diminished if they are unable to "experience the role of coastal prairie ranching in California" without any documentation that visitors would like to walk through concentrated manure into foul smelling milking barns or to take a close look at calves crammed into white plastic pens. Fencing and cattle operations currently crowd the roadway at Historic Ranches A,B and J and there is no room for visitor parking. Rather than creating additional parking at Ranch A for access to the Lighthouse for whale watching, visitors are required to take shuttle buses for a long uncomfortable ride from Beach parking lots. If 70 parking spaces are removed as planned from the Drakes Beach parking area, it will further aggravate limited parking access. Ranchers have shown no interest in creating parking or access to their expansive holdings and Ranch J has even posted a warning against "Unauthorized Visitors."

Significantly, the NPS has not even conducted a survey asking visitors if they would prefer viewing a larger herd of Tule Elk than the proposed 120 Tule Elk in the Drakes Bay herd. Given the large numbers of visitors who go to the Historic Pierce Ranch to view Elk, it should be obvious that visitors to the park would prefer viewing Elk rather than large concentrations of livestock.

## 2. Assumptions Regarding Tourism and Travel

The National Park Service Visitor Spending Effects Report shows that almost 2.5 million people visited Point Reyes for recreation in 2017. These visitors spent \$108.5 million in gateway communities. This spending supported 1,244 jobs with an aggregate benefit to the local economy of \$132.4 million. The NPS notes that the number of visitors to Point Reyes in 2017 increased by 1%. (NPS 2016h)

In spite of this finding and in spite of a promise under Alternative B to enhance public use and enjoyment, the Park Service concludes without any supporting documentation that "annual visitation is not expected to change and approximately 2 to 2.5 million visitors are expected to continue to visit the Park each year." It is unreasonable to conclude that even after taking steps to enhance public use and enjoyment, the number of visitors would remain constant over the next 20 years given that the Seashore is located within 40 miles of the San Francisco metropolitan area. Population in the San Francisco area and tourism are expected to increase in the coming decades. Interest in outdoor recreation and visiting National Parks are also expected to increase. If the Park

Service as planned opens up roadway and trail across ranch lands for cyclists, hikers and horseback riders as well as overnight camping areas, visitor use would be expected to grow.

The Park Service concludes after an analysis of Environmental Consequences that Alternative B would "contribute noticeable beneficial impacts by providing a wider range of recreational and educational opportunities in the planning area...Overall visitor use and experience would improve compared to existing conditions." However, later under an analysis of Socioeconomics, the Park Service concludes that "While alternative B could create new recreational opportunities over the long term, the overall visitation to the park is expected to remain similar to the last decade" This assumption is clearly inconsistent with the previous conclusion that visitor use and experience would improve.

Instead, the Park Service should anticipate that increased visitor use will require freeing up more land currently occupied by ranches and dairy farms in the Planning Area. The assumption that no growth in visitation would thereby allow the Ranches and Farms to continue operations with 2,400 units of beef cattle and 3,130 dairy animals plus additional "diversification activities" is unrealistic and is not supported by any current studies.

### 3. Assumption that funding will be available to implement Alternative B

Unfortunately, if past performance is an indication of future actions, the Park Service is unlikely to accomplish many of its stated goals with one major exception: The NPS will issue lease/permits with up to 20 year terms to the existing 24 ranch families to continue beef and dairy operations on approximately 26,100 acres. These authorizations would be similar to existing lease/permits with approximately 2,400 beef cattle and 3,130 dairy animals. Additional diversification activities would be authorized in specific subzones. The NPS would require no additional funding from the Ranches and Dairy Farms to maintain this status quo of business as usual. The Ranches and Dairy Farms would continue to pay an adjusted fair market value rent to the NPS that takes into account the regulations required to operate within the Planning area with no requirement that they pay for damage to park lands and roads. Modest amounts required to be set aside to maintain historic structures will be insufficient. Ranchers have not even been able to give their buildings a fresh coat of paint and will undoubtedly look to NPS to maintain the structural integrity of the Historic Buildings.

Significantly, the NPS provides no financial projections for the cost of implementing actions "to enhance public use and enjoyment." Currently, it has taken nearly a year to repair the Lighthouse which remains closed to the public. The McClures Beach trailhead access road and parking lot and the access road to Mt Vision remain closed "until further notice" and repairs to Sir Francis Drake Blvd and the road to the Pierce Ranch will not commence until 2020. Visitor access to the Seashore will be restricted during these repairs while ranches will continue to have road access to maintain their operations.

No dates have been projected by the NPS as to when any actions will be taken to enhance visitor use, experience and access. As noted earlier, little has been done in the past 50 years to improve conditions for visitors and without an adequate source of funding, it is unlikely that any significant changes will take place. In the meantime however, demand for public access and use of the Point Reyes National Seashore will only increase and the NPS cannot simply assume that it will not. Protecting Ranchers and Dairy Farms with 20 year leases and fencing out the taxpaying public who will continue to fund the Seashore is not an acceptable option.

### Conclusion

The NPS assumption in the EIS that an improvement of visitor use and experience in the Seashore will not result in an increase of the number of visitors is unrealistic and unsupported by any current study. The NPS needs to address this deficiency and conduct the necessary studies to accurately project an increase in the number of visitors. Further, financial projections should be included in the EIS and the likelihood of obtaining funding should be ascertained. Simply assuming that the necessary funding will be available will not cure existing limitations in funding for National Parks. Promises made by the NPS to the tax paying public in the EIS are pointless if they cannot be carried out.

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#6646

Name: Markwr, Tiffany

Correspondence: Please do not extend the rancher leases at Point Reyes National Seashore in Marin County, CA. Cattle should not be allowed to graze in the public park, because it poses a threat to the environment, wildlife, and the public good.

The National Park Service proposals that include killing the native Tule elk in order to continue grazing livestock are detrimental to the natural environment. The elk should be allowed to live in their natural habitat without fear of being killed to support a for profit industry.

#6647

Name: Gomes, Julie

Correspondence: The meat industry is one of the biggest threats to our environment. The natural Tule Elk should be allowed to live and graze in this area.

#6648

Name: Metcalf, Lenice

Correspondence: I want the park service to adopt Alternative F and phase out all ranching, as it was originally intended. The seashore should be managed for the natural values it was created to preserve- its land, water and wildlife like the beautiful Tule Elk. Please protect wildlife over livestock. The Tule Elk only eat 9 lbs grass per animal as opposed to 50 lbs per cow. The impact of the tons of manure from the cattle ranching is polluting the creeks, bays, and the ocean. The ranchers are also very cruel to the female cows especially, who have their calves taken from them and the calves are brought to a place where they are kept imprisoned alone in 1 tent and not allowed to roam or have contact with their mother again, before they are sold and slaughtered. The park service should restore the pastoral zone for wildlife habitat, native plant communities, scientific research and education. The park should not be used for raising cows, hogs, chickens, turkeys, sheep and goats or building Air b and bs on it. The historic ranch building should be repurposed for historic research, interpretation and education, and the park service should not have a plan to kill the Tule Elk. The Tule Elk must be allowed to roam free, not be kept fenced in from the places where they can have water to drink. So many of the Tule Elk have slowly died of thirst already or had their antlers entangled in the ranchers horrible wire fences. These magnificent creatures are what people from all over the world come to see. The Park service should let Point Reyes be wild and beautiful and clean again and please adopt Alternative F.

Correspondence: I support Alternative F, phasing out cattle and dairy industry and returning the land to its natural state. The enabling legislation of the National Seashore supports wildlife protection and does not mention upholding private industry. The original leases to ranchers were to be 25 years. Ranchers have already been paid handsomely for their land, so it is long overdue to phase out the ranches. "Cultural Resource" and "Historic" does not mean industry needs to be currently in operation. Private business has no place on public land. Allowing industry and ranches to diversify their business is a bad idea. Already these ranches have been negatively impacting the land, mismanaged to allow soil erosion, scarring in the landscape, e.coli contamination in waterways and more. If you allow EVEN MORE agricultural practices on the seashore, there is no way to know the impact and there is no historical evidence you will be able to manage any negative impacts on the environment. Tule Elk should be protected for the survival of their species. They have already gone through a huge genetic bottle neck when they were almost completely wiped out except for 20 individuals. Every gene allele is important for the long term sustainability of the herd. The National Park should be protecting all Tule Elk, and allowing new herds to form and to TAKE DOWN THE FENCE at Pierce Point and allow all Tule Elk to roam free. I do not support granting 20 year leases to cattle and dairy industry. Climate science has indicated we have less than 12 years to mitigate the worst of climate catastrophe. Allowing business that has been linked to water pollution, species extinction and in Point Reyes is the culprit of over 60% of the greenhouse gas emissions, it is not a good idea to give that same industry a 20-year lease to continue degrading our national park. Point Reyes is a refuge to thousands of plants and animals. Point Reyes can be a leader in the fight for climate justice, and it starts with phasing out Beef and Dairy operations and restoring the land to its natural state. The EIS has NO MENTION of the effects of climate change in it, and does not include any information of the cattle and dairy's impact on climate change within the park.

#6658

Name: Counts, Bryan

Correspondence: I come to the Seashore because I want see the wildlife, and a healthy ecosystem. I would like for future generations of people to be able do the same.

There should be Prioritizing of biodiversity by phasing out of cattle and the removal of domestic livestock in the park. Wildlife should NOT BE KILLED to accommodate commercial interests. So called "historic" ranch buildings should be purposed for scientific research which have a positive impact for the planet and humanity. Lets think of the future and making the word a better place for humans and the native landscapes (of which are being destroyed with little regard) and of the endangered species which lack the a voice to stand up for themselves.

The idea that Tule Elk are even considered for lethal removal on public land is absolutely pathetic and a shameful. This is a bullhead response that prioritize environmental degradation for profit seeking over protecting the native animals and landscapes. The Park's decision to hand over our public land to the ranchers with complete disregard for wildlife protection is completely irresponsible.

Ranching is unsustainable. Ranching should be phased out. There should be no livestock in the park, especially at the expense of Tule Elk. Alternative F is the only right this to do. In 2016, the NPS disclosed that 250 confined elk had perished during the drought. These elk were fenced off from pasture and water the NPS leases for cattle grazing. The majority of the elk remain confined at Tomales Point. Shameful.

Cattle are the leading source of greenhouse gases at the Seashore. Methane, produced by cattle, is a greenhouse gas 25x-100x worse than carbon dioxide. There is no discussion of mitigation for cattles impacts to the climate in any of the NPSs ranching alternatives.

There is well-documented damage to grasslands, birds, native plants and wildlife; the pollution affecting freshwater and and marine habitats; and methane and other greenhouse gas emissions that contribute to the climate crisis. Manure runoff polluting the only marine wilderness south of Alaska is not sustainable. Illegally disposing of cattle carcasses around the national seashore is not sustainable. Allowing cattle to give elk and other wildlife life-threatening diseases is not sustainable. Subsidizing and endorsing methane-producing confined animal feeding operations (CAFOs) in an era of climate change is not sustainable. Trucking hay for hundreds of miles as a supplemental feed, because pastures are overstocked and overgrazed, is not sustainable. And yet these practices continue...

From the Point Reyes park service home page (<https://www.nps.gov/pore/index.htm>) "A Natural Sanctuary, A Human Haven" - This should currently be rewrote to say "Cattle Haven - Where we propose KILLING THE NATIVE TURLE ELK NAD ENCOURAGING ENVEROMENTAL DEGRADIATION TO PROTECT THE PROFITS OF RANCHERS".

From the Point Reyes park service page (<https://www.nps.gov/pore/learn/nature/index.htm>) I quote: "As wildland habitat is lost elsewhere in California, the relevance of the Point Reyes Peninsula increases as a protected area with a notable rich biological diversity. Over 45% of North American avian species and nearly 18% of California's plant species are found in the park due to the variety of habitat and uniqueness of the geology. Thirty-eight threatened and endangered species exist within the Seashore."

After reading this, then reading the NPS Preferred Alternative which would allow 20 more years of ranching and permitting 3,130 dairy animals under alt B, the preferred alternative... and ONLY protecting 120 adult elk is

absolutely ridiculous, insane, and several other choice words. Please re-read the quoted paragraph above taken from the Point Reyes park service page. That is a 24 cattle to every 1 native elk, and the Park service has the gall to put forth a proposal such as this. "Thirty-eight threatened and endangered species exist within the Seashore." but but NPS proposes extending cattle ranching operations for 20 years. Alternative B: NPSs preferred alternative is shockingly an anti-wildlife plan.

I reject the notion and assertion that ranching here is historic and the current operations should be protected. I propose that the native landscape and species hold a higher historic value, these SHOULD be protected. So called "historic" ranch buildings should be purposed for scientific research which have a positive impact for the planet.

To Summarize: -Yes on Alternative F - NO on NPSs preferred alternative, Alternative B -I come to the Seashore because I want see the wildlife. -Under NO circumstance the killing any Tule Elk. -NO 20-year permits and/or leases to cattle and dairy ranchers. -NO diversification for ranches which will only serve to attract more predators like coyotes, foxes, bobcats that will be in conflict with ranch operations and have to be "managed" as well. - Revoke permits for all cattle and dairy operations and restore the leased land to its original, pre-industry state. - The park should update their education and visuals throughout the park to reflect their mission- wildlife preservation. -Removal of fence at the Pierce Point Elk Reserve to be so a migration corridor can be created for that Tule Elk herd. - "Historic" ranch buildings should be purposed for scientific research.

Correspondence: Diversification: The impacts of diversification have not been addresses or analyzed, such as increased commercial traffic and affects on local infrastructure and park roads, conflicts with depredation of ranch animals by native species, and damage to the historic value of the Seashore as pastures are changed to new uses. The impacts on native plant species of diversification are insufficiently addressed in the management plan. Diversification should not be considered in order to make the ranches more commercially profitable. Profitability of the ranching is not an appropriate goal for the Seashore.

Boat in camping in Drake's Estero: this concept should not be considered in the Estero, which is a rare and undisturbed marine wilderness. The park should remove all consideration of camping by boat and otherwise in the Estero.

Elk: Destroying native Tule Elk or removing significant populations of elk in the Seashore is unacceptable and incompatible with the goals of the Seashore and with the public interest and should not be considered. Management of the elk populations should be for the purpose of managing natural resources within the Seashore and not for the benefit of commercial lease holders.

Cicely Muldoon, Superintendent Point Reyes National Seashore 1 Bear Valley Road Point Reyes, CA 94956

RE:

Dear Superintendent Muldoon,

Thank you for the opportunity to submit comments on the Draft Environmental Impact Statement (DEIS) for a General Management Plan Amendment (GMPA) for Point Reyes National Seashore and the North District of Golden Gate National Recreation Area.

River Otter Ecology Project, based in Marin County, CA, engages the public in supporting conservation and restoration by linking river otter recovery to the health of our watersheds through research, education, and community science. River otters, although not a protected species, are sentinel apex predators that use every part of watersheds, from headwaters to ocean. Their presence and success are important indicators of ecosystem function and environmental health.

For eight years, we have conducted intensive research on river otter populations within Point Reyes National Seashore (PRNS). Consistent with NPS Management Policy 4.2, our "studies support the NPS mission by providing the Service, the scientific community, and the public with an understanding of park resources, processes, values, and uses that will be cumulative and constantly refined."

Our research entails field study in PRNS at least once a week at up to 10 different sites, and we've had abundant opportunity to observe and document changes and conditions that affect the natural resources and visitor experience in the Seashore. The following comments reflect our organizational mission; our understanding of laws and policies relevant to management of NPS lands generally and PRNS in particular; and our dual role as scientists working to understand the ecosystem function of the park's natural resources, and as members of the public on whose behalf these lands and waters have been entrusted to the care of the National Park Service.

We oppose the NPS Preferred Alternative, Alternative B, because it proposes management actions that are not permissible under NPS Management Policies; that would impair park resources; that would have significant environmental consequences and impacts; and which are incompletely or inadequately analyzed in the DEIS. In addition, some of the proposed mitigation measures would themselves impair park resources, or have foreseeable consequences which are not adequately analyzed.

Many of the impacts on, and impairment of, park resources stem from the proposed action of allowing diversification of ranching activities. The stated purpose of the proposed action is to allow "ranchers to react to poor forage production years and fluctuations in the economic market." (DEIS, page 20). Management actions whose purpose is to promote or protect the economic interests of leaseholders are not legitimate because they are fundamentally at odds with the mandates of the Organic Act of 1916, the PRNS enabling legislation, and current NPS Management Policies.

The DEIS does not specify any Need for Action or Desired Condition that would be met by diversification. On the contrary, the DEIS, in Alternatives Considered but Dismissed from Further Analysis, specifies that diversification of livestock to species other than beef and dairy cattle "...would have too great of an environmental impact" if the diversified species were ducks, geese, turkeys, or rabbits. (DEIS, page 60). The adverse effects from those species include "...potential increase in predation; disease or parasites; loss or degradation of habitat; construction of additional infrastructure (e.g. watering facilities, feed storage facilities, and pens); or the need for the use of non-wildlife friendly fencing." (DEIS, page 60). Those same adverse effects can also be associated with diversification to chickens, sheep, pigs, goats, and even row crops, all of which would be allowed. The DEIS fails to explain how the very same adverse environmental impacts are "too great" on the one hand while on the other they would have no impacts, or impacts that can be adequately mitigated.

Specific significant impacts and foreseeable consequences of diversification not adequately analyzed in the DEIS include:

1. Impairment of Wildlife Resources. The DEIS states that "[m]anagement of any predators associated with new livestock species would not be allowed," a demonstrably false statement given that the very next sentence says that

"[g]uard animals (i.e. dogs, llamas, donkeys) would be allowed..." [DEIS, page 38]. The use of guard animals is a form of predator management. Similarly, the DEIS states that "[m]anagement of any wildlife associated with protection of row crops would not be allowed in the planning area: however, ranchers would be allowed to fence row crops to exclude wildlife." [DEIS, page 38]. Exclusionary fencing is a form of wildlife management.

Appendix D includes a number of other wildlife and predator management strategies, techniques, and equipment that would be allowed in connection with diversification. These include: parking a vehicle in an area of loss by predation [page D-39] and repellents and frightening devices [page D-39] in addition to exclusionary fencing and guard animals.

Statements that wildlife and predator management will not be allowed in connection with diversification are plainly untrue, and the DEIS does not analyze the significant impacts that the proposed actions will have on park wildlife resources. Predators such as coyotes, bobcats, foxes, and badgers, for example, will have reduced hunting areas and opportunities, and will come into conflict with guard animals. Their movement patterns will be disrupted. The DEIS should analyze these foreseeable significant impacts, and determine if they collectively constitute impairment of park resources. The DEIS should also analyze the cumulative impacts on wildlife of all diversification proposals that are likely to be approved, in addition to the impacts from individual proposals.

2. Impacts on Visitor Use and Enjoyment and Scenic Values. The DEIS notes that diversification activities, including new types of livestock, row crops, new fencing, and other new infrastructure would result in adverse impacts to visitors use and enjoyment opportunities, and to scenic values [DEIS, page 168]. The DEIS does not analyze or mitigate for these impacts, either individually from the various ranches, or cumulatively from all diversification activities that could be approved.

Other impacts not fully analyzed or adequately mitigated for in the Preferred Alternative include:

1. Livestock that escape from ranch boundaries can have significant impacts on sensitive park resources. On numerous occasions over an extended period of years, we have observed, documented, and reported to park management the impacts of cattle in and around Abbotts Lagoon, for example. Cattle that had escaped from ranchlands blocked trails, defecated in and around the lagoon, trampled vegetation, and impeded the movement of wildlife. The Ranch Operating Agreements should contain an explicit provision requiring the ranch operator to retrieve escaped livestock as soon as possible (within 24 hours). Failure to do so should result in the cattle being treated as trespass or feral livestock in accordance with NPS Management Policy 8.6.8.3.

2. The impacts of Development to Support Day Use and Overnight Accommodations are not analyzed or adequately mitigated and may cause impairment of park resources. For example, boat-in camp sites on Schooner Bay [DEIS, page 32] foreseeably will have significant impacts on the wilderness area of Drakes Estero, due to trash, human waste, and substantially increased visitor usage, as has happened at boat-in campsites on the west shore of Tomales Bay. Migratory birds and marine mammals will also be negatively affected. The DEIS includes no quantitative or descriptive details of any kind regarding boat-in camping that would allow analysis of, or mitigation for, its impacts. The DEIS also does not explain why within the planning area, the entire shoreline of Drakes Estero, a Congressionally-designated Wilderness, should not be included in the Resource Protection subzone.

3. Impacts to Water Resources are not adequately analyzed because the DEIS contains no meaningful quantitative data on water quality. The DEIS states that "...existing conditions serve as baseline against which the impacts of each action alternative are compared." [DEIS, page 112]. However, the existing conditions are not described in quantitative or detailed manner. Pursuant to NPS Management Policy 4.6.3, NPS must "take all necessary actions to maintain or restore the quality of surface waters and groundwaters within the parks..." Under that standard, if the existing condition of any surface or groundwater in the planning area is impaired, a proposed action alternative should restore water quality, not maintain a baseline impairment. The DEIS is deficient in not identifying existing impairments to water resources.

4. The native tule elk are a park wildlife resource that should only be managed for the benefit and non-impairment of the resource, not for the economic benefit of commercial leaseholders.

The Draft Foundation Document rightly places the current ranching activities within the context of a 5,000-year continuum of human use of the Point Reyes landscape. In contrast, the NPS Preferred Alternative, Alternative B, attempts to put all of the Park's Fundamental Resources and Values squarely in the context of ranching. As a result, the DEIS ignores or glosses over significant impacts that will foreseeably result, individually and cumulatively, from the proposed actions. We recommend that NPS develop and analyze a new alternative that mitigates impacts from current ranching activities, eliminates activities that impair park resources, and does not expand the agricultural activities beyond the present multigenerational ranching and dairying.

Thank you for the opportunity to comment on the Draft Environmental Impact Statement for the GMPA. We look forward to continuing to actively participate in the GMPA process.

Sincerely,

Megan Isadore, Co-Founder and Executive Director River Otter Ecology Project

NPS Pt. Reyes General Management DEIS Comments

I have been a resident of Marin for over forty years of my life; both as a child growing up in San Rafael and as an adult returning to Terra Linda to raise my own family. Family outings to the beach, drives along the coast, and hikes on wildflower-strewn trails are treasured memories. As a child I was also amused by seeing signs for the Historic A, B, C, etc. ranches as we drove along. They were part of the landscape.

Imagine then how shocked and horrified I was when on a recent trip to Pt. Reyes, I drove by hundreds of CAFO-style veal cages on one piece of "historic" ranch property. Lands around the barn and on the hillsides on the other side were trampled, muddied and deeply rutted.

This is not historic ranching. This is not an "educational" usage. This is not humane. This is not suitable in a National Park or National Seashore. This is not what the public paid for when they bought the lands from private owners with the proviso that "family ranchers" could continue to ranch there, as had been done elsewhere when private lands have been purchased for public lands. This should not be allowed.

Industrial ranchers are extractive, exploitative, and only concerned with maximizing profits. They leave when the land is played out, or when they can no longer make a profit, or when they can't expand to continue exploiting the area. This is what we are seeing in Pt. Reyes.

The NPS should be ashamed of sacrificing the health and wild values of this land that is under their stewardship due to political pressure from industrialized ranching, which is what Alternative B is proposing. The NPS is putting industrial cattle ranching and dairy farming ahead of the plants and animals that are native to the park, including the Tule Elk.

Real family ranchers steward the land for generations, intending to pass along their property to their children to enjoy and maintain for their children. Real family ranchers do what is best for their animals and the land because they want it to be useful, valuable and worthwhile to give to their children. Real family ranchers incorporate BMPs, not because they are imposed from above, but because they see the benefit to their land and their finances and their continued way of life.

Leases were developed in order to continue real, traditional, family ranching, at historical levels. The Founding legislation was not designed to allow ranching or private commercial enterprises to remain in the park indefinitely. It allowed private owners to continue their way of ranching, and pass it along to their children to continue, and for the Park to retire those leases when the family no longer had an interest in continuing to ranch.

This situation is no different from allowing uranium mining in the Grand Canyon or oil and gas exploration and drilling in the Arctic. Extractive, resource exploitative and wilderness value destroying human activity is expressly forbidden from our National Parks. This is completely understood by the general public and it is an abrogation of public trust for the NPS to do otherwise.

Local ranches outside the park-that operate on their own land, not the public's land-are using more sustainable ranching practices in order to minimize their impacts to the environment. Ranchers at the Seashore do not. Under the NPS plan, methods to counter climate change, such as cutting methane and sequestering carbon, are voluntary. This is absurd and contrary to resource protection.

This DEIS as written is completely inadequate and fails to do the job required. None of the alternatives explain how the wild values of this Park will be protected, enhanced, or preserved for the future. Instead, and most especially in the so-called "preferred" alternative B, the land will be further degraded, eroded, contaminated and mismanaged for the benefit of a few commercial operations at the expense of the Park, visitors, other wildlife, streams, ponds and receiving waters, and the plants that are expected by the public to be protected, preserved and enhanced. None of the other alternatives fare any better.

The NPS clearly lacks the funding currently to do their job effectively, and to maintain facilities. This is the fault of higher-level policies that seek to destroy the public commons and our National Parks and other public lands by passing them into private hands. Therefore, it is also clear that the NPS does not have the funding now or in the future to manage bad actors in the National Seashore. Relying on environmental groups to be the "watchdogs" as reported in a recent newspaper article has never been effective, as the NPS also lacks the will and funding to enforce rules and regulations against powerful industrial ranchers with their equally powerful political ties.

Pt. Reyes is the only National Park/Seashore that has NO funding source from visitors. Every other National Park has funding from visitors. Pt. Reyes has to rely upon Federal funding, which has been cut and slashed every year, putting Park rangers in an untenable position when it comes to doing their job. It is estimated that there is deferred maintenance budget of over \$100 Million dollars due to inadequate funding.

For the DEIS to be complete, the NPS has to go back and prepare additional information on: • How will true historical and educational values be restored, enhanced, and protected? • How will the wilderness values of the Park be preserved, protected and enhanced? • How will the NPS manage this Park under any of the alternatives if, as they say, they expect no additional funding and they are not able to manage the Park well with current levels of funding? • How will the NPS reach out to secure additional funding for the deferred maintenance as well as daily operations needed to perform its mission of stewardship? • For any alternative that presents itself as an alternative, how will it be accomplished with what funding? • How will the Tule Elk be protected as a keystone species?

We also need answers to the following questions: • Is it legal for the Park service to allow transfer of old leases to new owners who are not related? • Is it legal for the Park service to allow expansion of ranching/farming operations when this is not in the founding legislation? • How will CAFO-industrial ranching practices be removed from the park as being out of compliance under the language of the founding legislation?

Climate change and massive species extinction have changed what we need to do going forward. The NPS needs to scrap this old paradigm and offer one that promotes carbon sequestration, species diversity, and resource protection and enhancement. Specifically this new plan would: • Phase out the ranches that are not family operated or following Marin Carbon Project BMPs for rotational grazing and appropriate numbers of cows/acre • Disallow all commercial livestock operation within the park. • Prioritize wildlife over domestic cattle. • Support and enhance biodiversity of native species of plants and animals • Repurpose historic ranch buildings for scientific research, interpretation and public education.

I refer to and support the letters from the Natural Heritage Institute, Susan Ives, James Coda, Audubon Society, Sierra Club, Watershed Alliance of Marin, Center for Biological Diversity and Restore Pt. Reyes National Seashore, to name a few.

Sincerely yours,

Judy Schriebman

“Think about all the beautiful redwood parks scattered up and down California's coast. Nearly all of these parklands were created by purchasing the land from private property owners, just like we the public bought the ranches that remain in Point Reyes National Seashore. Now imagine that the previous landowners not only refused to leave our redwood parks but continue to cut down redwoods even after we bought the land and the trees for preservation. That is precisely what is going on in Point Reyes National Seashore...” - ecologist George Wuerthner

#6689

Name: Pratt, Joe

Correspondence: I urge the national Park service to not kill the tule elk at point Reyes national seashore in order to protect the profits of the beef and dairy industry. Tule elk which are native to point Reyes were exterminated and then re-introduced by the national Park service. Now the beef and dairy ranchers who know longer own the land they occupy want to extend their land leases and call the Drakes Bay tule elk herd. We asked the Park service to protect wildlife over industry profits and select alternative F for no ranching and for protection of the tule elk herd and other wildlife. Point Reyes national seashore is a biologically diverse park that attracts visitors from all over the world who want to see the tule elk. Our national parks are for nature not agribusiness. Alternative F is the only viable solution to preserve and restore the natural values of the park.

It is time to follow the 1962 law which specifies that the point Reyes national seashore should preserve and restore the natural ecology of this beautiful area. Cattle ranching has destroyed much of the beautiful area are on which the elk live and it would be great if all this ranching on this preserved area were ended. Surveys of frequent visitors to this area show that a large percentage come to see the elk. A very small percentage have nothing to do with the ranchers. It's also been proven that the financial benefits of the Parke fall out far outweigh the financial benefits of the dairy farming.

Thank you for your consideration of this comment.

Thank you. Sincerely, Alana Lagerhausen

#6692

Name: Irani, Faria

Correspondence: There is absolutely no excuse for killing the elk. That is THEIR home. The ranchers need to find another place to graze their cattle!

#6693

Name: Norrell, Donna

Correspondence: Hello, I am a 65yr old avid cyclist and know the dangers of road cycling all too well. Even in Pt Reyes, with the RV's, horse trailers, etc., it is a big risk. I am getting older, and mountain biking, though off the roads, takes a lot of strength and balance. I take my granddaughters out on bike trails, safe from traffic, but it is limited and in cities. Offering easy ranch roads, possibly 15-25mile loops or so, for family groups to cycle in the great Pt Reyes outdoors would be a great way to introduce the next generation to Pt Reyes....your future supporters!

I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly-and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

Name: Oster, Sherry

Correspondence: I care about protecting California's wildlife. I oppose the National Park Service's plan to kill native tule elk and expand commercial agriculture in Point Reyes National Seashore and Golden Gate National Recreation Area. I urge the National Park Service to instead restore the lands for wild animal habitat. The Park Service is required under its enabling legislation to manage the seashore "without impairment of its natural values" and for "maximum protection, restoration, and preservation of the natural environment." Restoring native wildlife and ecosystem processes is supposed to be one of the primary missions of the Park Service. The Tule Elk are a flagship species for California (the California Floristic Province, one of the world's 25 biodiversity hotspots or most endangered ecoregions) and North America. As a flagship species, Tule Elk are a symbol for conservation efforts in California over the last century. Tule Elk are also considered an important Focal or Umbrella Species as Tule Elk range and ecological niche covers such a large area of California's landscape. Protecting the landscape for large, free roaming species (like Tule Elk) enhances the conservation and protection efforts of so many other species of California. Elk graze on grasses and flowering plants and also browse shrubs and trees. Unlike cattle, elk move around to take advantage of seasonal food sources. Elk can reduce fire danger by browsing brush that is unpalatable to cattle, without impacts to water quality. We should prioritize the preservation of our public lands and wildlife, not the economic interests of private ranchers or any private/commercial interests. National parks exist to protect our natural resources and native wildlife. This park should be managed accordingly.

#6698

Name: Douglas, Nadra

Correspondence: I believe protection of the Tule Elk is critical to the survival of the species and believe the fence at Pierce Point should be removed to allow the elk to roam free. These are public lands and protection of the native species should be the prime consideration. I see no reason to allow private business the use of public resources.

Thank you for your consideration of my comments.

#6699

Name: martens, linda

Correspondence: The animal agriculture industry has routinely taken advantage of preferential access to land, water, and other resources, and that is currently the case in Point Reyes National Seashore in Marin County, CA. Over 5,000 cattle who are being exploited for beef and dairy production are grazing in the public park, and pose a threat to the environment, wildlife, and the public good.

The ranchers' leases are set to expire, and the National Park Service (NPS) is asking for public comments to help them determine whether or not to extend the leases or to take another approach. Shockingly, several NPS proposals include killing the native Tule Elk in order to continue grazing livestock. Please write and urge the NPS to end livestock grazing at Point Reyes National Park and to allow this precious land to remain as wildlife habitat and to be used for the public good, not for the benefit of the livestock industry. THIS IS NOT ACCEPTABLE. To support a few for the many?

I STRONGLY OPPOSE Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#6706

Name: Chandler, Polly

Correspondence: Point Reyes is a unique national seashore that is multi-use in it's nature: recreation, preservation, ranching. It is my understanding that the partnership between ranching and the NPS was allowed this amazing landscape to be preserved.

It has resulted in a national seashore treasure.

My concern is that this once remote, relatively undiscovered park has had exponential growth in attendance. Trails are heavily used, there are areas of congestion, and now some areas of the park are being overused. The Pierce Ranch trail for example, once one of my favorite trails, is now so busy on weekends that I avoid coming to the park.

The NPS has an opportunity to evaluate the best opportunity to preserve this landscape, make it accessible, and ensure that diverse populations can access, utilize, and enjoy the park without causing overuse.

The recent closure of Drakes Beach was a classic example of preservation and park visitation. To the parks credit, they closed the beach to protect the elephant seals. This closure pushed more visitors to other areas of the park. Again, causing crowding, overuse of trails, etc... Since elephant seals are getting more and more established at the park, I could see a time where the entire beach has to be closed.

My sense is that this is the NPS opportunity to evaluate their partnerships and cast a bold, strategic vision that will ensure long term preservation of the park for diverse users. At this point, I don't think due diligence has been done on the strategic vision.

I can see an approach where less ranching could be balanced with preservation, visitor services, and history. Right now, I don't think there has been enough innovation. This is not a black and white issue, of no ranching vs. all ranching. Let's push the pause button and get clearer on what matters most.

I for one want to enjoy Point Reyes for the rest of my life. It is one of the reasons I moved to California. And, for years, I have enjoyed it without crowds. Now it's getting more and more crowded, I find myself not going to the park as much, never on weekends, and I therefore ask for a more strategic conversation that is not Us vs Them but serves the collective vision of the NPS: to serve all people from broad walks of life so they can enjoy nature of the seashore, observe protected species, engage with preserved fragile landscapes. Right now, unless more of the landscape is preserved and made accessible the fragile seashore resources are at risk.

Correspondence: I support alternative F

Point Reyes National Seashore is a treasure with unusual and beautiful ecosystems. The pollution and fences of the ranches on park land is unfortunate. It is time to restore the park to a more natural state. We need our future generations to have an appreciation of nature. I think a restored Point Reyes National Seashore would inspire more of our youth to make a difference.

#6708

Name: Wright, Lorraine

Correspondence: Please adopt Alternative F, which would discontinue farming and ranching opportunities in the park and expand visitor opportunities. The preservation of native wild species must take precedence over farming and ranching activities. Grazing negatively affects ecosystems, causing water pollution and soil erosion, spreading invasive species and disease, and harming endangered species.

#6709

Name: N/A, Catherine

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

Name: Dodge, Elizabeth

Correspondence: Comments Park: Point Reyes National Seashore Project: Point Reyes National Seashore and North District Golden Gate National Recreation Area General Management Plan Amendment and Environmental Impact Statement Document: General management Plan Amendment Draft Environmental Impact Statement

Comment: This document should have a list of acronyms. Although it generally does a good job of avoiding the need for them, there are still numerous acronyms not in common use, such as RDM, RUO, ROA, ASBS, BA, and many others that impair the public's ability to read the document in a timely way. I've requested an extension to the

comment period but have not received a reply from the National Park Service. Many of the appendices include a list of acronyms and it is extremely helpful. Comment: This document should also include a References Cited section listing the full information for references cited, of which there are many throughout this document.

Executive Summary Page iii - Alternative B mentions ranch subzones (Resource Protection, Range, Pasture, and Ranch Core subzones) but does not define what specific activities would be allowed under each of these subzones. Since this appears to be a key feature of the preferred alternative and this is the first reference of these subzones, they should be defined here as well as later in the document for better clarity for readers.

Page vii - Under alternative C, the document states NPS would lethally remove the Drakes Beach herd, totaling approximately 124 individual elk... overall viability of the Tule elk population in Point Reyes or in California would not be affected& Given the lack of genetic diversity in the Tule Elk at Point Reyes, this should address how killing so many elk would not reduce the viability of this already small herd.

General Comment: the legislation that created the Point Reyes National Seashore (16 U.S. Code §459c.Point Reyes National Seashore); purposes; authorization for establishment In order to save and preserve, for purposes of public recreation, benefit, and inspiration, a portion of the diminishing seashore of the United States that remains undeveloped, the Secretary of the Interior (hereinafter referred to as the Secretary) is authorized to take appropriate action in the public interest toward the establishment of the national seashore set forth in section 459c-1 of this title. Point Reyes is a beautiful National Park, but ranches occupy the most scenic land in Point Reyes. Particularly Ranches A, B, C, E, F, G, and H which front the Pacific Ocean. There a few roads to the ocean, but these ranches dont have hiking trails on them. In order to fulfill the US Governments intention of public recreation, benefit, and inspiration, the NPS must create hiking trails on these ranches that allow the public to hike along the beautiful bluffs near the ocean.

Chapter 1, page 3 - Enabling Legislation. To provide a full context of the park creation, the discussion of the 1978 legislation (16 USC 459c-5(a) and (b)) should include the legislative language that the owner of improved property or of agricultural property on the date of its acquisition by the Secretary under sections 459c to 459c-7 of this title may, as a condition of such acquisition, retain for himself and his or her heirs and assigns a right of use and occupancy for a definite term of not more than twenty-five years, or, in lieu thereof, for a term ending at the death of the owner or the death of his or her spouse, whichever is later.

Chapter 2 - Succession. Page 13 and throughout the document (e.g. page 37). Offering relinquished leases to other ranchers is inconsistent with the Parks founding legislation to to save and preserve, for purposes of public recreation, benefit, and inspiration, a portion of the diminishing seashore of the United States that remains undeveloped. If a lease/permit is relinquished, it provides an excellent opportunity for the National Park Service retire the lease and return that land to native habitat, which is what most Park visitors come to see. Alternatively, such lands could be offered to the Coast Miwok tribe who lived on these lands long before the ranchers.

Chapter 2, Table 1 - Permitted Acreage and Use on Ranches, pages 14 - 19. The sixth column Actual Number of Cattle is blank for 26 ranches. This table should be completed in the final EIS.

Chapter 2, Diversification page 20 and throughout the document (pages 37 - 38). New uses like chicken farms, goats, sheep, and row crops do not conform to the purported goal of the NPS for ranches to preserve and portray historic Point Reyes activities. The NPS says it seeks to maintain the historic character of the park; this diversification, while it may financially benefit dairy ranchers, does nothing to enrich the experience of visitors to the park. Adding these types of livestock will also attract natural predators such as coyotes. How will the NPS address predation on these proposed newly introduced livestock?

Chapter 2, Range Management and Monitoring page 20 and throughout the document. If the Ranches at Point Reyes are being preserved for historic value, this document should explain how historic range management practices will be conducted in a manner as they were prior to the creation of the park. The historic value of many

ranches have already been degraded by the construction of very modern-looking facilities and modern operations.

Chapter 2, Livestock Water Supply page 21. It is documented that many (some report several hundred) Tule Elk behind the Tule Elk reserve fence died during the drought in 2014. It is unconscionable that the NPS concerns itself with water supplies for non-native cattle while allowing the iconic Tule elk to die.

Chapter 2, prescribed grazing page 22 and throughout the document. Most readers are unfamiliar with this term - it would be helpful if a definition could be included in this section. It would also be helpful if a description of the specific prescribed grazing the NPS has developed with each ranch could be provided and where these plans can be accessed by the public.

Chapter 2, Manure and Nutrient Management - page 23, Paragraph 1, last sentence notes that the parks dairies are required to comply with a monitoring and reporting program and develop and implement site-specific management plans. This DEIS should include more details about the contents of these plans, results of implementation and monitoring, and how the public can access and review these plans. Please indicate whether the ranchers or the NPS pays to develop and implement these plans. Although California requires manure management plans for dairies, they do not need to be limited only to dairies. Given the proximity of all Point Reyes ranches to coastal waters which drain into Abbots Lagoon, Tomales Bay, Drakes Estero, Estero de Limantour, or directly to Kehoe beach and other parts of the Pacific Ocean, it would be beneficial to visitor health and recreation if these monitoring and management plans were applied to beef ranches as well.

Chapter 2, New Development, Infrastructure Improvements, and Alterations page 24. Second paragraph suggests that ranchers make improvements to historic structures at their own cost. Is this correct? Please clarify in the document.

Chapter 2, Alternative B - NPS Preferred Alternative page 25 paragraph 2. Because the ranchland subzones appear to be a key component of this proposed general plan amendment, they should be described and defined here as well as later on page 35. This paragraph states that the Ranchland Zone would replace the existing Pastoral Lands and Pastoral Management zones, but comparing Figures 4 and 6 it appears the Ranchland Zone would also replace the Natural Environment/Natural Landscape Management zone, Special Use Zone, and lands acquired after 1980. If true, this should be stated. Is this the 7,600 acres referred to that were not included in the Pastoral Lands and Pastoral Landscape areas in to 1980 GMP? This document needs an explanation as to why these areas, especially the Natural Environment/Natural Landscape Management zone and Special Use Zone are now being opened to grazing as pasture and range zones. Most visitors to Point Reyes National Seashore prefer to see natural habitats and wildlife rather than grazing cattle, of which there is already an abundance.

Chapter 2 Table 2, Strategies for the preservation of Area Resources pages 27 - 30: Column 1, Row 1 - Ecological Function: under the bullet Locate and design visitor use improvements to minimize impacts to ecological function please add another bullet Locate and design ranch use improvements to minimize cattle impacts to ecological function Column 2, Row 2 - Air, Water, Noise and light Pollution - the first bullet states Regulations include total maximum daily loads and associated grazing waivers in the Tomales Bay watershed, as well as waivers of discharge requirements for confined animal facilities. Most of the ranches in the Point Reyes National Seashore are not in the Tomales Bay Watershed and therefore are not covered in the Regional Water Quality Control Board Waiver of Waste Discharge Requirements. Please see comment under Chapter 3, page 67 below. Column 2, Row 3 - Desired Condition: Habitats and populations of threatened and endangered species, special-status, and rare species persist and are improved, first bullet Identify authorized ranching activities and monitor and enforce rancher compliance with permit requirements. Please describe what specific permits ranchers have that regulate protection of listed species and how these are monitored and enforced. Column 2, Row 4 - Desired Condition: Native plant and animal communities persist and thrive. First bullet Identify authorized ranching activities and monitor and enforce rancher compliance with permit requirements. Please describe what permits ranchers have that regulate protection of native plant and animal communities and how these are monitored and enforced. These should incorporate the findings of Estimating Impact of Mowing in the Silage Fields of Point Reyes National Seashore on

Nesting Birds (Ryan T. DiGaudio, Diana L. Humple, Thomas Gardali, August 2015) Which include: 1. Find alternatives to ranchers forage needs. 2. Defer mowing with a silage buy-out program - a strategy used for Tricolored Blackbird nest colony conservation (Meese 2009). 3. Delay mowing until after most breeding is complete (Jones and Vickery 1997, Hyde and Cambell 2012, Perkins et al. 2013). 4. Plant silage later in season to avoid mowing at the peak of breeding season. 5. Mow very early (before mid-March) before nesting is underway for most species. This would also allow enough time for birds to re-nest within the same breeding season should they lose their nest to early mowing (Perlut et al. 2006). 6. Consider impacts of the second mowing cycle that is conducted in some years. 7. Mow from inside the middle of the field toward the outside in a circular manner- this increases the likelihood for wildlife to escape (Ochterski 2006, NRCS 2009 Hyde and Cambell 2012). 8. Use flushing bars attached to the mower, a mechanism that helps to flush incubating birds and mammals (especially deer and rabbit) before the mower reaches them (Jones and Vickery 1997, Hyde and Cambell 2012). 9. Avoid mowing at night. Mowing at night results in higher wildlife mortality, including adult birds that do not flush from their nests as readily then (Jones and Vickery 1997, NRCS 2009, Hyde and Cambell 2012). 10. Implement avian surveys to identify high-priority or high-density breeding areas within the silage and avoid mowing there (Jones and Vickery 1997). High priority areas could be those identified as having nests of species with special conservation status, or areas with particularly high concentrations of nesting birds, such as Red-winged Blackbird colonies (however, in 2015, the Red-winged Blackbird colonies found in silage were fairly evenly distributed and not clumped) 11. Employ wildlife hazing and/or deterrents to discourage birds from establishing territories and nesting until after mowing. Hazing methods may include pyrotechnics (e.g. propane canons), audio devices emitting distress or predator calls, electronic noises. Deterrents may include visual devices such as mylar ribbons, predator decoys, lasers, or mechanical devices such as rotating rods. The use of hazing techniques to prevent breeding of Tricolored Blackbirds suggest that the practice must be consistently and intensively applied (CDFW 2015). 12. Use rotational mowing - rotate which silage fields are mowed early, late, or rested entirely for a year or two. Rotational mowing can maintain grassland communities in various stages of growth and vegetative diversity, thus potentially providing more nesting habitat for grassland birds (Hyde and Cambell 2012; NRCS 2009; Ochterski 2006). 13. Raising mower blades to six inches or more may avoid crushing some nests and young (Jones and Vickery 1997) 14. During drought years when the silage may be less productive, discuss whether the option of not mowing may be more cost effective or have other management considerations associated with it. 15. Explore ways to reduce the amount of wild radish (*Raphanus raphanistrum*) and mustards (*Brassica* sp.) in silage fields that may attract certain nesting birds. These plants provide nesting habitat for species like Song Sparrow and White-crowned Sparrow that prefer more rigid nesting substrates, and may also contribute to attracting other nesting species such as Northern Harrier and Red-winged Blackbird. Column 2, Row 6, - Desired Condition: National Register historic districts, including contributing landscapes and structures, are preserved in a manner that maintains their integrity. Third bullet NPS staff would collaborate with ranchers to interpret traditional land use and current agricultural practices. If these are truly historic districts current practices should be the same as traditional and reflect practices in place prior to the establishment of the park. The Pierce Point Ranch beautifully showcases historic practices such as milking by hand.

Chapter 2, page 31 - 33 Public Use and Enjoyment this section is full of vague promises that the NPS would strive to improve hiking, biking and equestrian access, look for opportunities to expand day use, explore new opportunities&to help interpret, explore expanded shuttle use. These ring hollow, as there is no good reason the NPS service couldnt have undertaken these things years ago. With the current budget tightening at the NPS it seems even less likely these would happen now. This looks like an attempt to make the preferred alternative more appealing to visitors most of whom, according to the NPSs own research Regional Residents Opinions on Management Issues at Point Reyes National Seashore (Responsive Management, 2003), do not come to Point Reyes to look at ranches, which can be seen all over Marin County.

Chapter 2, page 35 Subzoning Framework, Resource Protection Subzone. The DEIS states that the Resource Protection subzone includes lands where no grazing would be authorized to protect park resources, including surface waters & Figures 6 - 31 show that Resource Protection Subzones in many ranch areas do not extend to the edge of the ranches which are near the ocean, Tomales Bay, or Drakes Bay, particularly on Point Reyes National Seashore. Given the high levels of coliform bacteria and nutrients that have been measured in these areas, the NPS should, at a minimum, add a resource protection buffer zone along the entire boundaries of ranches that are close

to surface waters. This will prevent cattle from grazing and defecating near areas where park visitors hike and engage in water sports and where salmon and other fish of importance occur. Also, dairy manure management ponds should be located far away from drainages so that overflow during the rainy season will not discharge to the ocean, as appears to be the case presently. It is unclear from the figures in Appendix 1 if the location of manure ponds are sufficiently far enough away from surface water drainages.

If no grazing is allowed in the Resource Protection subzone, how will this be accomplished? The maps in Appendix 1 show areas that would require many thousands of feet of fencing to prevent cattle from entering these areas. Who would install and pay for all those fences?

Chapter 2, page 35 Subzoning Framework, Range Subzone. This document defines the Range subzone as lands where grazing would be authorized, but more intensive activities would not be allowed because of the documented presence of sensitive resources, including rare plants, wetlands, riparian/stream/pond habitats, forested areas, and critical habitat for threatened and endangered species. Additionally, this subzone includes nearly all areas with slopes greater than 20%. This indicates that under Alternatives B - E, cattle would be allowed to graze, trample on, and defecate in streams, ponds, and endangered species habitats. For the type of lands described here, even grazing should be prohibited. The Range subzone designation should be eliminated and these areas added to the Resource Protection Subzone areas, especially on dairies.

Chapter 3 - Affected Environment, Water Resources, Surface Water Quality Page 67, third paragraph, Surface Water Quality. This section states All dairies operating in the planning area fall under the conditional waiver, which was renewed in 2015 and expires in 2020. A General Waste Discharge Requirements Waiver was adopted in 2016 and dairies will be required to enroll under this general waiver after the current conditional waiver expires. A citation is needed for this statement or possibly a correction, as the San Francisco Regional Water Quality Control Boards website states that conditional waivers were renewed in 2018 and expire October 11, 2023 ([https://www.waterboards.ca.gov/sanfranciscobay/water\\_issues/programs/agriculture/grazing/tomalesgrazing/TomalesBayGrazingWaiver.pdf](https://www.waterboards.ca.gov/sanfranciscobay/water_issues/programs/agriculture/grazing/tomalesgrazing/TomalesBayGrazingWaiver.pdf)): On October 10, 2018 the San Francisco Bay Water Board renewed the Conditional Waiver of Waste Discharge Requirements for Grazing Operations in the Tomales Bay Watershed (2018 Conditional Waiver) for a third, five-year term. The 2018 Conditional Waiver implements the Tomales Bay Pathogens TMDL (Total Maximum Daily Load), the Walker Creek Mercury TMDL, the Tomales Bay Mercury TMDL, the Lagunitas Creek Sediment TMDL, and the Implementation and Enforcement of the Nonpoint Source Pollution Control Program, which requires that all sources of nonpoint source pollution be regulated through Waste Discharge Requirements (WDRs), through waivers of WDRs, or through prohibitions. The Conditional Waiver requires that landowners or operators of grazing operations encompassing 50 acres or more submit a Notice of Intent to comply with the requirements of the Conditional Waiver. Landowners in the Tomales Bay watershed who have not previously enrolled under the 2013 Conditional Waiver and who operate eligible grazing operations as defined in the 2018 Conditional Waiver must meet the following standards (1 and 2 or solely 3): 1. Submit to the Regional Water Board a Notice of Intent to comply with the requirements of the 2018 Conditional Waiver, and 2. Complete a Ranch Water Quality Plan (to be kept onsite); or 3. Submit to the Regional Water Board a Notice of Non-Applicability.

This Waste Discharge Waiver addresses ranches in specific watersheds such as the Tomales Bay Watershed, but most ranches on the Point Reyes National Seashore are not within any watershed included in this regulation. Clarification or correction is needed for the assertion that the Waste Discharge Waivers apply to all dairies in the planning area as only three dairies in the Point Reyes National Seashore (I, L, and J) appear to be at least partially in the area included in the Tomales Bay watershed waiver. Portions of these as well as all other ranches in Point Reyes National Seashore drain to the Pacific Ocean and Drakes Bay, which is not regulated by the Regional Water Quality Control Board. The DEIS states that the NPS regulates discharges from the shoreline to 0.25 miles offshore (Chapter 3, page 66 Water Resources). This document should clarify 1) what the NPS is doing to regulate ranch discharges not included in the Waste Discharge Requirement Waiver which drain to the Pacific Ocean and 2) whether those ranches are complying with equivalent requirements. The Regional Water Quality Control Board Waiver of Waste Discharge Requirements stipulates that a copy of each ranch's Water Quality Plan be kept onsite. Please indicate where onsite these plans are kept and how they may be accessed by the public. The

public should have access to these records since, as discussed on pages 67 - 70 of this DEIS, monitoring data show exceedances of potentially pathogenic bacteria and nutrients all along the coast of Point Reyes National Seashore where visitors like to swim, kayak, and walk the beaches. For Kehoe Drainage, Abbotts Lagoon, and Coastal drainages, the DEIS states that improvements were made to a loafing barn in 2004 and other facilities (no dates given) but high concentrations of pollutants were measured in these areas by Pawley and Lay in 2013, indicating that those actions were not effective. Clearly a more rigorous water quality monitoring program is needed at Point Reyes.

Chapter 2 page 59 - Alternatives considered but Dismissed from Further Analysis Ranch Management - Management of All Park Lands for the Protection, Restoration, and Preservation of Natural Resources: The DEIS states: Commenters suggested NPS should manage all park lands solely for the protection, restoration, and preservation of natural resources. In addition to managing park lands for the protection of natural resources, NPS also must manage cultural resources and provide for visitor use and enjoyment in a manner consistent with applicable legal requirements. Please cite what specific legal requirements this refers to. Preservation of sites of indigenous people certainly must be included along with historic buildings. While ranching at Point Reyes has an historical context, the Pierce Point Ranch provides full access to historic structures and descriptions and photographs of historical ranching. The currently active ranches provide no such opportunities, as most of the historic structures are essentially private property. Visitors cannot walk up to an historic ranch house and ask for a tour and description of the families ancestors and how they lived. All park visitors can see are the beef and dairy operations some of which have modern structures and reflect modern operations and look like the other beef and dairy ranches found throughout Marin County.

This approach was dismissed from further analysis because it would not address impacts on other NPS resources and values that NPS is mandated to consider. This is very vague, please elaborate on what other NPS resources and values this is referring to. Historic structures are included in national register legislation and even historic districts, but operations are not considered historic, especially when they are clearly modern operations.

"Moreover, the action alternatives in this EIS that include ranching would implement activities and mitigation measures to minimize impacts on natural and cultural resources while also protecting them." The proposed zoning does not do enough to protect natural resources and especially surface water from fecal coliform bacteria and nutrients from cattle excrement. It endangers the health of visitors who engage in water activities to allow ranching so close to the ocean. Areas in the proposed Range subzone, which would allow cattle grazing in areas where there are waterways, threatened and endangered species, and slopes greater than 20% should be reclassified as Resource Protection Subzones. This would allow ranching to continue while more effectively mitigating their impacts on visitor safety and enjoyment. Additionally, the no ranching alternative would be similar in nature to an alternative focused on the protection, restoration, and preservation of natural resources on all NPS lands. This sounds like its in line with the purpose of Point Reyes National Seashore when it was created: (16 U.S. Code §/459c.) Point Reyes National Seashore; purposes; authorization for establishment: In order to save and preserve, for purposes of public recreation, benefit, and inspiration, a portion of the diminishing seashore of the United States that remains undeveloped, the Secretary of the Interior (hereinafter referred to as the Secretary) is authorized to take appropriate action in the public interest toward the establishment of the national seashore set forth in section 459c-1 of this title.

Chapter 3, Wildlife, Including Federally Listed Species Federally listed wildlife, Page 77 states that Federally listed marine animals including elephant seals use beaches in the planning area but are not included in the analysis because ranch activities would not affect them. Given the description of pollution in coastal areas of the park pages 66 and 67) scholarly citations are needed to substantiate this statement.

Appendix L - Biological Assessment - National Marine Fisheries Service Section 8.1.4 concludes that adverse effects from ranching would generally be minimized or avoided but would not be insignificant or discountable. Therefore, the proposed action may affect, is likely to adversely affect the CCC coho salmon ESU. This needs to be included in Chapter 3 of the main body of the DEIS and not buried in an appendix. The text does not match

the tables it refers to. The fifth sentence refers to Table J-3 in Appendix J as listing special status wildlife but this table does not include Federally listed wildlife, which are in table J-4. This needs to be corrected.

Fish Coho Salmon are variously referred to as endangered or threatened throughout this document. The National Marine Fisheries Service defines California Central Coast Coho Salmon as Endangered. This DEIS should refer to them in a consistent way.

([https://www.westcoast.fisheries.noaa.gov/protected\\_species/salmon\\_steelhead/salmon\\_and\\_steelhead\\_listings/coho/central\\_california\\_coast\\_coho.html](https://www.westcoast.fisheries.noaa.gov/protected_species/salmon_steelhead/salmon_and_steelhead_listings/coho/central_california_coast_coho.html)).

Page 80 Tule Elk Current Status and Distribution in the Park Reintroduction of this beautiful and iconic animal back to Point Reyes is the jewel in the crown of the Point Reyes Seashore National Park Service. Seeing them is the reason many visitors come to Point Reyes. This section refers to many areas that are not shown any maps, such as Coast Camp, Glenbrook and Muddy Hollow drainages, Glen Camp and several others. For readers of this DEIS, these locations should be shown on Figure 2.

Page 84, Visitor Use, Experience, and Access In addition to the responses about visitor satisfaction in general, this section should also provide the results of specific visitor preferences documented in Regional Residents Opinions of Management Issues at Point Reyes National Seashore Conducted for the Point Reyes National Seashore Association by Responsive Management, 2003) which found that most visitors favor preservation of wildlife habitat and native ecosystems over preserving dairy and beef ranches.

Page 92, Tourism and Travel Point Reyes is a wonderful asset for the National Park Service and the surrounding communities. The \$108.5 million spent in gateway communities as a result of tourism underlines the importance of enhancing visitor experiences. More hiking trails along the pacific coast would greatly enhance the appeal of Point Reyes National Seashore.

Chapter 4: Environmental Consequences Page 102 Corvid Management at Point Reyes National Seashore What is the significance of (Lukenbach) in this subsection title. If a reference, please treat it as such and include a publication date and include in a References Cited section of this DEIS.

Soils Alternative B, Ranch Management, Page 107 - Diversification Ranches at Point Reyes have been designated as Historic. This term is commonly associated with buildings and lands, not operations. The addition of chickens, goats, sheep, and row crops does conform to traditional historic ranching at Point Reyes and should not be allowed. And predation of native wildlife on these new types of wildlife is likely to occur. The National Park Service is already looking bad in the eyes of the public for proposing to shoot Tule Elk. If you start killing other native wildlife there will likely be even more public opposition. Water Resources

Alternative B - Ranch Management page 117 The DEIS states Water quality monitoring would continue as described in chapter 3, and ranch operations in the Tomales Bay watershed and dairies would remain subject to meeting the Conditional Waiver of Waste Discharge Requirements. Chapter 3 of this DEIS provides results of sporadic past water quality monitoring but does not describe a systematic ongoing monitoring program. Also, as described above, most of the ranches are not in the Tomales Bay Watershed and therefore are not covered by the Conditional Waiver of Waste Discharge Requirements - an oversight that needs to be corrected in this DEIS and in practice.

Vegetation, Including Federally Listed Species - Alternative F Page 139, 3rd paragraph - Wouldnt Tule elk grazing partially offset increases in biomass resulting from removing cattle?

Cultural Landscapes, Historic Districts, and Historic Structures page 173 This DEIS says the NPS would explore creating a maintenance account using rental payments from each ranch. This requires more discussion for readers to understand. Who currently pays for maintenance of ranch structures? If the ranchers pay to maintain their buildings, isnt this the equivalent of reducing their already favorable rents? If the NPS already pays for the

maintenance, why are special accounts needed? This looks like an attempt to divert funds away from the Department of Interior and give them to private ranchers.

Alternative B - Public Use and Enjoyment page 167. This section describes strategies and projects to expand the range of visitor opportunities such as adding overnight accommodations and additional hiking and equestrian access using existing roads. These are excellent ways to improve visitor enjoyment of the park but these are things that could have been done years ago without the need for an EIS. An explanation is needed as to why the NPS has not done this already.

Alternative C - Elk Management page 169. This alternative involves eliminating the entire Drakes Bay herd of Tule Elk, which are the elk most visitors look at because they are more accessible and don't involve a long hike like the Tomales Point herd. The assertion that Overall, visitor use and experience would improve compared to existing conditions beggars comprehension. This requires revision or more explanation. Whoever wrote this doesn't understand visitor motivation for visiting Point Reyes National Seashore and has not read the NPS's own research on the subject (Responsive Management, 2003). Alternative F - Public use and enjoyment, page 171. In contrast to Alternative C, this discussion acknowledges the importance of Tule Elk viewing to park visitors. As discussed in Regional Residents Opinions of Management Issues at Point Reyes National Seashore Conducted for the Point Reyes National Seashore Association by Responsive Management, 2003), park visitors ranked wildlife habitat and natural ecosystems as far more desirable than dairy and beef ranches. The text also says visitors would not have opportunities to see historical ranching, but current ranching does not conform to historical practices and the Pierce Point Ranch beautifully documents and allows access to historical ranch structures and history.

Socioeconomics, page 175. This section only addresses Population, Employment, Income and Sales as they apply to dairy and beef operations and does not account for socioeconomic benefits from visitors to Point Reyes, estimated at \$108 million for gateway communities. Its apparent assumption that visitors to Point Reyes National Seashore will remain the same under all alternatives is unproven and potentially false. If more trails, campsites, wilderness and Tule elk viewing, and overnight accommodations are made available, visitors could increase.

Air Quality, page 185. Alternative F - the summary of air quality impacts from Alternative F says beneficial compared to existing conditions, which is a huge understatement given that it would yield a 100% reduction in emissions from ranches at Point Reyes. This statement needs to be corrected in this DEIS.

Chapter 4 Summary This DEIS does not provide a summary of findings but as I look over this Chapter on Environmental Consequences the general sense for the areas discussed are that most would benefit from cessation of ranching:

Soils: Alternative F would be most beneficial due to the cessation of ranching

Water Resources Alternative F would be an improvement over current conditions and presumably other alternatives due to removal of ranching and associated manure production and associated surface water pollution.

Vegetation, Including Federally Listed Species - all alternatives have positive and adverse impacts

Wildlife, Including Federally Listed Species - all alternatives have positive and adverse impacts

Visitor Use, Experience, and Access Alternative F - the DEIS says this alternative is an improvement over existing conditions due to expanded opportunities, location and type of visitor experiences, but less opportunities to see ranching (text says historical ranching, but current ranching does not conform to historical practices). Most visitors don't come to see the ranches. This section needs to be revised to reflect the results of NPS's own research.

Cultural Landscapes, Historic Districts, and Historic Structures - page 171 the DEIS states that diversification could result in long term beneficial impacts because the Secretary's standards would be followed but changing the

land use is not consistent with preservation of historical land use. This erroneous statement should be stricken from this document.

Socioeconomics (Page 175) - the DEIS only evaluates the effects of ranching and assumes visitor spending (which is much greater) will not change. This is an incorrect assumption and a complete assessment of all socioeconomic drivers needs to be conducted.

Air Quality (Page 185) Alternative F - (no ranching) 100% elimination of emissions from ranches is most beneficial. The incomplete analysis of socioeconomics makes it hard to fully assess all alternatives, but the existing analysis indicates that alternative F benefits most of the categories assessed.

Appendix D - Management Activity Standards and Mitigation Measures, Table D-1 The management activities described in Table D-1 are generic as are the associated NRCS practices. It is not clear where and how these measures will be applied, please include additional detail in this appendix.

Appendix L - Biological Assessment - National Marine Fisheries Service. This biological assessment was prepared by the National Park Service for the National Marine Fisheries Service but it is not clear whether the NMFS has read and reviewed this document. Section 2.0 says There have been no recent consultations with NMFS regarding the proposed action. The NMFS needs to review this document before it is submitted for consideration in this DEIS. Section 3.27 Dairy operations, page 7 This section states The six organic dairies manage their beef grazing operations differently from the ranches. This suggests that dairies have beef and dairy cattle. Please correct this or explain how dairies are different from ranches and whether they also have beef cattle. Table 3-1 pages 8-12 has the same deficiencies as Table 1 in Chapter 2. Table 7-1 page 35. The creeks listed in this table are not shown on any figures. They should be shown on at least one figure for a complete reader understanding of this table and accompanying text. Please add this to the Figures. Table 7-2 page 36 and Table 9-1 page 49. The California Coastal Coho salmon are considered threatened by the NMFS. Section 7.5 Water Quality in the Action Area page 39. The water quality data presented here are all over 10 years old. More recent water quality data are needed in order to fully assess the impacts of the ranches on surface water. More current data should be collected and analyzed before impacts of ranches can be fully assessed and these studies should be completed before this DEIS is finalized. Section 8.1.1.1 Page 44 - second paragraph states In spite of the above described potential adverse effects of livestock on coho salmon, the actual effects are likely far reduced from those noted for the following reasons& followed by reference to Grazing Plan Recommendations (Aoyama, 2018) which are not included in the description of alternatives in Chapter 2.

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

Correspondence: To our National Park Service, There is clear scientific consensus that livestock agriculture heavily impacts our environment, ergo climate change. How in California, Marin, West Marin no less, can cattle still be allowed to graze on our National Parks? You are going backwards, as if you're not in touch with the real

world. Proposing the killing of Tule Elk is insane. Let natural predators do that. The predators who can't thrive with cattle present. Heck, the ranchers will shoot the mountain lions if they go after a cow. Or the bobcats and foxes who come after chickens. There's nothing historical about the ranchers which became supersized after 1962. The ranchers were paid, now they graze cattle at half the going price. The reality is the Park Service has failed to do their job. The death of 250 Tule Elk a few years ago from dehydration, horrible deaths, shows that. Jarred Huffman is also failing by supporting the plan to allow this travesty of livestock on the Parklands.. Phase out the cattle. No, do not allow additional livestock to be raised there. No do not 'cull' the rare Tule Elk. You KNOW what the results environmentally are of cattle and livestock, just say NO. Vennie Yancy

Correspondence: Please do NOT allow cattle to graze on public land.

#6714

Name: Lind, Patricia

Correspondence: I do not believe we should kill native wildlife for the benefit of non native livestock. I oppose open range for livestock. Our public lands have been given away to cattle and livestock farmers and much damage has been done to native flora and fauna. Our watersheds have suffered due to cattle and non native specie grazing, riverbeds are trampled, siltation of creeks and small tributaries as well as manor in our headwaters. Elk need to be left alone they are native and have a right to be there. If you believe their numbers are too high please use natural predation and reintroduce the wolves. I expect the planners and managers of our natural parks to adhere to natures way of managing the forests and grasslands and stop use of unnatural means. We have caused extinction of so many species due to use of unnatural management and now have taken the most diverse conifer forests system that is well adapted to fire ecology and turned it into a tree farm with one specie of same age densely planted trees that erupt into tree fire once natural ground fire goes through. These stands are never thinned. We need to use natural rejuvenation and increase rotation age to over 120 yrs to have fire resistant forests again.

Name: Lifton, Sherry

Correspondence: Regarding the EIS, I support Alternative Elk for the following reasons:

1. The Tule Elk need to be protected. These beautiful creatures live in very few places and thrive at Point Reyes National Seashore, where tourists travel from all over the globe to see the Tule Elk. Their grazing patterns are in sync with the habitat and ecosystems of Point Reyes National Seashore. Wildlife belong in a National Park and it is the joint responsibility of the public and the park service to protect the wildlife who live there, especially the Tule Elk. Cows who live on dairy and cattle ranches can be viewed all over the state and country. Tourists come for the Tule Elk, not the cows.

2. Animal agriculture has been inextricably linked as a leading cause of climate change. For a national park to encourage and support an industry responsible for so much environmental damage would be in direct contradiction to the national park service mission. The animal agriculture ranches at Point Reyes national seashore have been shown in environmental studies to produce a whopping 60% of greenhouse gas emissions at Point Reyes seashore. Additionally, the runoff from the cattle and dairy ranches have been a significant cause of water pollution at Point Reyes National Seashore. Alternative F would promote conservation, clean water, and environmental restoration as opposed to the continued damage of the land and water.

3. The ranches have directly caused soil erosion, e. coli contamination, destruction of native plant species, the obliteration of green grass in some areas, and complete alteration of sensitive ecosystems that need protection. The introduction of invasive plant species and other wildlife animals has further altered a very special and beautiful place that needs to be protected.

4. Placing for-profit business at the expense of the natural environment and wildlife seems to be the opposite path for a national park. The ranchers have already been compensated for the land with the explicit understanding that the government can utilize the land and water for a national park.

I support Alternative F because the ecosystems, plants, water, and wildlife should take priority over private industry in our national parks.

Thank you, Sherry Lifton

Correspondence: Talking points:

\*I support Alternative F, phasing out cattle and dairy industry and returning the land to its natural state. The enabling legislation of the National Seashore supports wildlife protection and does not mention upholding private industry. The original leases to ranchers were to be 25 years. Ranchers have already been paid handsomely for their land, so it is long overdue to phase out the ranches. "Cultural Resource" and "Historic" does not mean industry needs to be currently in operation.

\*Private business has no place on public land. Allowing industry and ranches to diversify their business is a bad idea. Already these ranches have been negatively impacting the land, mismanaged to allow soil erosion, scarring in the landscape, e.coli contamination in waterways and more. If you allow EVEN MORE agricultural practices on the seashore, there is no way to know the impact and there is no historical evidence you will be able to manage any negative impacts on the environment.

\*Tule Elk should be protected for the survival of their species. They have already gone through a huge genetic bottle neck when they were almost completely wiped out except for 20 individuals. Every gene allele is important for the long term sustainability of the herd. The National Park should be protecting all Tule Elk, and allowing new herds to form and to TAKE DOWN THE FENCE at Pierce Point and allow all Tule Elk to roam free.

\*I do not support granting 20 year leases to cattle and dairy industry. Climate science has indicated we have less than 12 years to mitigate the worst of climate catastrophe. Allowing business that has been linked to water pollution, species extinction and in Point Reyes is the culprit of over 60% of the greenhouse gas emissions, it is not a good idea to give that same industry a 20-year lease to continue degrading our national park. Point Reyes is a refuge to thousands of plants and animals. Point Reyes can be a leader in the fight for climate justice, and it starts with phasing out Beef and Dairy operations and restoring the land to its natural state. The EIS has NO MENTION of the effects of climate change in it, and does not include any information of the cattle and dairy's impact on climate change within the park.

Correspondence: It is unconscionable that public lands, which belong to the public of the United States, let private corporations and private citizens pay to use our lands. They abuse the land, making it unfit for its real use which is to grow and allow creatures of the world to gain sustenance and nourishment from it. And to make people aware of the real possession we have in stewarding the land, not abusing it. It is a shame in this country that money speaks louder than good deeds and caring for all creatures and living things on this earth.

Name: Gibson, Kenneth

Correspondence: Point Reyes National Seashore and surrounding public lands are one of the features of the San Francisco Bay Area that I, and my family and friends, have enjoyed since I came to live in the area in 1973. What is most stirring in such places is what is unusual to most of us - the view of undisturbed nature. There is nothing more stirring than seeing an animal rarely seen - tule elk, a wolf, a mountain lion. Cattle we see plenty of.

Cattle grazing along a ridge framing a California view of the Pacific Ocean is a disruption. The natural tule elk, in such view are a vision of the new world.

According to the EIS (and common sense) continued cattle ranching in the Seashore area, is detrimental to the natural life of the area and the tule elk in particular. These are the natural resources that the National Parks Service governing law requires it to protect. The National Parks Service must reject any expansion or continuation of any cattle ranching in the Seashore or nearby areas governed by the Park Service.

Correspondence: you assume that there is substantial public support for this option to remove the elk. there is not. you need to quantify the public will on this issue. you also assume that cattle will not harm the environment. you could not be more wrong. elk are adapted to the ecology cattle are not. western watersheds has proven without a doubt that cattle damage native vegetation and natural watersheds. so why would you even consider giving this land over to cattle . it is irresponsible.

there also needs to be an analysis of who will benefit monetarily from this. that fact is hidden now from the public. and are there any links between park service staff and ranchers? if so there is collusion that needs to be addressed

there is also a question of what the public will be paying for the desecration of public land.where is that analysis?

Correspondence: In the Impact Amendment, there are several mentions of 'lethal removal' of a certain number of Tule Elk. The term lethal removal was not defined. Years ago, when Axis and Fallow deer were removed from the park, I understand that the animals were shot from a helicopter and left where they were shot. I would like to think that there are more humane methods now.

One option that comes to mind is to allow hunters to be allowed to harvest the elk for a fee. Guided hunts would allow the guide to control where they hunt and what animals are taken. Hunters pay large sums of money per animal for a guided hunt. That money could certainly be a benefit to the park. For example, a quick search online revealed that there are businesses providing guided tule elk hunts in California. One business, Oak Stone Outfitters ([www.oakstoneoutfitters.com/california-tule-elk-hunting/](http://www.oakstoneoutfitters.com/california-tule-elk-hunting/)) manages private ranches for tule elk hunting. Their hunting packages (including room and board for the length of the hunt) range from \$5000 to \$38,000 per hunt.

Another option to consider is to eliminate lethal removal and relocate the unwanted elk to areas where they could join an elk herd in another part of the state. Also, since this herd started from two bulls and eight cows from an Wildlife Refuge, perhaps there are Wildlife Refuges that would happily accept groups of elk to start or add to their own herds.

Thank you.

#6735

Correspondence: Please use Alternative F, which would discontinue farming and ranching opportunities in the park and expand visitor opportunities.

The preservation of native wild species must take precedence over farming and ranching activities.

Grazing negatively affects ecosystems, causing water pollution and soil erosion, spreading invasive species and disease, and harming endangered species.

#6736

Name: Kline, Matthew

Correspondence: We must recognize that local decisions are not limited to localized or isolated regional reactions, but in fact have the potential for tremendous impacts on a global scale. If we cannot restore Point Reyes National Seashore into the park it was once promised to be and fulfill its potential, then I fear we have little hope in turning the tide against the numerous environmental issues confronting us now and those issues surely to emerge going forward.

It is true that we face an overwhelming amount of environmental problems unlike ever before, from the Climate Crisis and mass biodiversity loss, to ocean acidification and coral reef bleaching - habitat fragmentation, melting glaciers, toxic algal blooms, soil infertility, animal agriculture, over-antibiotic use in animal agriculture, superbugs, invasive species, shifting weather patterns, fish stock depletion, aquifer reduction, unprecedented fire seasons and hurricane strength, freshwater resource diminishment, bird migration routes changing, insect populations disappearing - the list goes on and on and is extremely long to say the least. Make no mistake, these environmental problems are often complex and interconnected, and they are deeply rooted in an Anthropocentric mindset that sees the human not as part of nature, but separate from it. Unless we take immediate substantive steps to prioritize our environment instead of devalue and diminish it, current and future generations will suffer the negative consequences of a far reaching ignorance and neglect. Perhaps one the greatest threats facing all of us today is Shifting Baseline Syndrome. This concept, when applied to the natural world, was first considered by scientist Daniel Pauly regarding his work on fisheries management. Pauly described how fisheries scientists sometimes failed to identify the correct baseline population size (for example how abundant the population of a fish species was before human exploitation) and thus were working with a shifted baseline. Pauly went on describing how radically depleted fisheries were evaluated by experts who used the state of the fishery at the start of their careers as the baseline, rather than the fishery in its untouched state. Areas that swarmed with a particular species hundreds of years ago, may have experienced long term decline, but it is the level of decades previously that is considered the appropriate reference point for current populations. In this way large declines in ecosystems or species over long periods of time were, and are, masked. This would in turn result in the loss of perception of change that occurs when each generation redefines what is natural. What is actually natural out in Point Reyes National Seashore (or PRNS for short) has nothing to do with ranching or animal agriculture. Some would even have you believe that Tule Elk never existed in PRNS. Believe me, Ive heard it with my own ears, the Tule Elk arent native, they were introduced. Shifting Baseline Syndrome has found a foothold in far too many minds and this in turn has had and continues to have a devastating impact on our interconnected natural world. Upon attending yet another general management plan meeting (if you can call it that) I actually heard one rancher say to his friends, What do they want to do with our land now? This way of thinking is as ignorant as it is shortsighted.

The ranchers have been paid. They have been subsidized (and continue to be). They have been given passes on environmental reviews for decades. They have harmed fragile ecosystems and prevented healthy wildlife populations. They have pressured politicians to shoot native wildlife, like the Tule Elk, and prevented recreational opportunities and access. Time and time again, multiple generations of ranch families in the PRNS have benefited while our environmental health and biodiversity have been neglected. For decades now we have waited. The majority of public input has anxiously called for relief. Believe it or not, this issue is far bigger than the ranches though, this is about our public land and the promise of a better tomorrow for our seashore. While humans continue our overpopulation, constant consumption and unsustainable processes, it is past time, that we do

everything we can to prioritize environmental health and the biodiversity that still remains throughout the entire National Park System. Let us earnestly begin this process right here at home in our National Seashore.

The Point Reyes National Seashore's own website actually states as wild land habitat is lost elsewhere in California, the relevance of the Point Reyes Peninsula increases as a protected area with notable rich biological diversity. There are over 50 threatened, rare, or endangered species located in PRNS, nevertheless these species and the unique habitats in which they are found are not prioritized over cattle. Why? I believe the answer is rather straightforward, flora and fauna do not vote nor do they donate money. Meanwhile, agricultural interests are powerful and have way more influence on our elected politicians and appointed officials. That being said, nature does indeed bring in the most money by far and is indeed the #1 reason tourists visit the park, not animal agriculture. In fact over \$132 million dollars was attributed to tourism at PRNS in 2017. Tourism is far more profitable and economically viable, as well as environmentally sustainable and safe compared to agriculture in our National Seashore. When we set up a table outside the Bear Valley Visitor Center back on one particular Saturday in early September for just a few hours, visitors overwhelmingly told us that they came to their National Seashore to see wildlife, not cows. Many visitors admitted that before they even arrived in PRNS, the hillsides they passed and roadsides they traveled on were already full of cattle. Nearby Marin Agricultural Land Trust properties already cover thousands and thousands of acres - over 50,000 acres to be exact. Over half of all land in Marin County, 167,000 acres, is farm and ranch land already. The absolute last thing we need is ranching and farming inside our critically important seashore. During the few hours we were set up at the visitor center we also asked another question - do you favor the Park Services proposed plan to kill our native Tule Elk? Visitors and locals alike responded by a count of 145 to 0 against this proposed plan. It was clear to us and those we talked to - prioritize biodiversity and environmental health in our publicly owned seashore!

A National Park should not be the place we experiment with and look into ways to create a new model for how ranches and dairies should operate (as one biologist put it to me at a meeting). Let private agricultural interests outside of our fragile and important National Seashore learn to create a new model. This drastically needed to already happen (yesterday). To reiterate, do not prioritize the creation of a new ranching model in some of the very last sanctuaries set aside in critically important and strategic locations. PRNS should be discussing and prioritizing the restoration of severely diminished coastal prairies, dunes, wetlands, and riparian areas, and improving the overall health and well being of native populations of flora and fauna. PRNS should be a model for environmental conservation not private taxpayer subsidized environmental degradation. A new ranchland zone will only further exacerbate the problem, allowing destructive forms of land use to prevail in a biodiversity hotspot, that is indeed actually still waiting to live up to its full potential.

This past year the United Nations released a deeply distressing report compiled by nearly 150 authors from 50 nations. Together they worked for 3 years as part of the Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services - a panel with 132 member nations, including the United States. Representatives of each member nation signed off on the reports findings and the authors of the report urged dramatic action, for Nature is declining globally at rates unprecedented in human history - and the rate of species extinctions is accelerating, with grave impacts on people around the world. The report also tells us that it is not too late to make a difference, but only if we start now [yesterday] at every level from local to global. Through transformative change nature can still be conserved, restored, and used sustainably - this is also key to meeting most other global goals. By transformative change, we mean fundamental, system-wide reorganization across technological, economic, and social factors, including paradigms, goals and values the report stated.

Two days ago, many prominent newspapers and media outlets reported on a new extensive study published in Science. The study revealed a 27% drop in the North American bird population in just the last 49 years. A majority of the 529 bird species studied experienced population loss, even species we tend to think of as abundant, such as warblers and blackbirds. We were stunned by the result - it's just staggering, said Kenneth V. Rosenberg, a conservation scientist at Cornell University and the lead author of the study. Rosenberg goes on to say the magnitude of the decline could significantly affect the continent's food webs and ecosystems. We're talking about pest control, we're talking about pollination [and] seed dispersal [and] we can be pretty sure that other parts of the ecosystem are also in decline and degradation.

I cannot help but think of the Western Snowy Plover and the enormous negative impacts ranching has on this bird. I cannot forget the Swainsons hawk nor the Willow flycatcher and Tricolored Blackbird.

The PRNSs website features another quote that I think is quite prudent, especially given the current proposal by the Park Service. In 1995 (almost 25 years ago) the National Academy of Sciences reported that: In recent years, it has become apparent that human activities are causing the loss of biological diversity at an increasing rate: the current rate of extinctions appears to be among the highest in the fossil record. Although non-human organisms can cause extinctions of other species to a small degree, no other organisms produce such large effects over such wide areas as humans do and have done-at least locally-for thousands of years. Habitat alteration and degradation are probably the most severe effects humans have on other species today. How can one not consider the enormous negative impacts ranching continues to have on the well being of our National Seashore? Recently fires have raged across Brazil once again, and fortunately mainstream media delved deeper into the issue. The current strong anti-environmentalists controlled government of Brazil would have you believe that these fires are natural, when in reality, they are not. According to the Science Director of the Brazilian Institute of Environmental Research in Amazonia these were not wildfires, but rather fires set by people seeking to create cattle ranches, intentionally ignited during the dry season each year. A Senior Geographer at the Rainforest Foundation said, because cattle require open spaces to feed and grow, ranchers clear vast lands by burning forests& Although logging (both legal and illegal) and other activities also drive deforestation in the Amazon, animal agriculture is the leading cause by far. The World Bank reported that cattle ranching occupies 80% of all converted lands in the Amazon rainforest. I listened to the American politicians espouse their environmental records and call for more regulation, oversight and an end to the fires in the Amazon. Nevertheless some of these same politicians continue to ignore the very corrupt policies that diminish our environment and biodiversity right here at home. We need to connect the dots& the Amazon rainforest is burning because of animal agriculture. The same forces at work down in Brazil are at actually at work here in the United States. This is not just unsustainable, it is a leading cause of species endangerment and ecosystem collapse. The health of our public lands are being sacrificed for private profit at the expense of our environment, our water, our air, our soil and so much more. While biodiversity continues to decline at a rapid pace, many of the species we could help in PRNS are being neglected and conveniently ignored. Another perspective to consider: There are 94 million 400 thousand cattle spread out across the United States of America! There are 5 million 125 thousand cattle scattered across California! These statistics are directly from the United States Department of Agriculture. Yet, there are only an estimated 5,200 native Tule Elk left in the world. This endemic umbrella species has already faced the grips of extinction once before. They are not the problem! There are less Tule Elk in our PRNS than there are cattle, simply put, this is wrong. Is there no room left for our iconic wildlife in our last critically important sanctuaries? The majestic animals you see as you travel through the park embody the restoration of the dominant native herbivore to the California coastal ecosystem. They shape the landscape around them as they did for centuries before they were extirpated by humans. They symbolize the conservation of native species and ecosystem processes, one of the primary missions of the National Park Service. These words are directly taken from the Point Reyes National Seashore website.

Personally, I have a very deep connection with the Tule Elk of Point Reyes National Seashore. There are likely few people that have spent as much time with these animals as I have over the last decade. I mention this not for attention but rather so you know that this issue is indeed very personal for me. I believe the Tule Elk are a conservation emblem. Their close call with extinction is a story full of tragedy, resilience and hope. Their story has become part of my story and I want nothing more than to see them thrive and return to what is left of our wild areas in California so that they can make these places more whole again. I along with many others believe they can help restore our California Coastal Prairie - the most species rich grassland in North America. Cattle do not, I repeat do not, have the same impact as Tule Elk on our native grasslands - it is critical that science is utilized when forming policy in our National Seashore, not paid for made up myths.

As a photographer and cameraman who has worked in-depth on a wide variety of natural history and conservation projects throughout North America and Northern Europe, I have had quite the eye opening opportunity to witness and observe our planets spectacular wildlife while immersed in our changing natural world. Throughout the course of my work, I have seen firsthand the diminishment of our natural world. My colleagues and I have travelled far and wide and worked alongside some of the brightest and most active

individuals and institutions working to save our natural world. We have seen firsthand the reality of this Climate Crisis, the massive biodiversity loss, the ocean pollution and so much more. We have been privileged to work in an incredible and challenging field that is full of surprises, but when it comes to our responsibilities to share what we have learned along the way, we do not take this lightly.

I think it is clear that I am deeply discouraged by the Park Services preferred Alternative B plan. Those who visit the seashore cannot stand the continued deterioration of the natural resources of this park and the ongoing diminishment of the biological integrity that is still left waiting in the wings. Alternative B is a disastrous choice that gives preference to 18 beef and 6 dairy ranches. This is unacceptable.

Unfortunately some archaic thinking still persists in our wonderful seashore and at this moment in time, it is quite prevalent in the decision making process. If these wise words from ecologist George Wuerthner do not put things in perspective then I am not sure what will: Think about all the beautiful redwood parks scattered up and down California's coast. Nearly all of these parklands were created by purchasing the land from private property owners, just like we the public bought the ranches that remain in Point Reyes National Seashore. Now imagine that the previous landowners not only refused to leave our redwood parks but continue to cut down redwoods even after we bought the land and the trees for preservation. That is precisely what is going on in Point Reyes National Seashore... Would [our Congressman] Huffman be outraged if loggers were cutting trees in Muir Woods National Monument or Humboldt Redwood State Park, or Redwoods National and State Parks? I would hope so.

Two days ago my wife and I marched alongside 40,000 people in San Francisco as part of the youth led Global Climate Strike. Together, millions of other concerned and informed citizens of the world, people from all walks of life, stood in solidarity and spoke up for prioritizing environmental health and biodiversity around our planet. While we were sacrificing our own time to speak up for the native Tule Elk and the restoration of PRNS, I could not help but think of the millions of young people who were there trying to bring more awareness to these profound environmental issues. What does it say to our youth&let alone anyone out there, including my wife and I, who have individually made sacrifices to our everyday lives, when our National Park Service fails to do the right thing? What does it say to the individuals out there trying to make their own contributions to a better world (through diet, consumption, sustainable living, etc.) when the National Park Service has the opportunity to make a much greater more positive impact than any single one of us, and chooses to go the other way? We must protect our last wild spaces at all cost and this must be the highest mission of our National Parks.

After spending years trying to move to Marin County, my wife and I finally made our dreams come true. Although we were both born and raised elsewhere in the San Francisco Bay Area, it is West Marin that we hope to never leave. We love the small town feel and we value our proximity to open parks and wilder spaces. We love the environmental awareness of many of the people here and their progressive attitudes towards social and cultural issues. We love the natural world that still lingers, like the wildlife that visit us in our backyard and the others we see out on our regular ventures. We do not take for granted our home, far from it, we desire nothing but the best for it and set our expectations very high. This is why I am unwilling to accept the status quo. Enough is enough with the environmental degradation and diminishment of our natural resources. We must unite behind the science and take pride in learning to take care of our environment. We cannot tackle the many environmental issues that face us if we cannot first take care of the enormous ones at home. Point Reyes National Seashore should prioritize environmental health and biodiversity first and foremost. It is our National Seashore. Why would anyone prefer a sad representation of our home instead of a reflection of our best and most promising values! I cannot in good conscience recommend any Alternative other than Alternative F. I strongly implore the National Park Service to adopt Alternative F for the Update to the National Seashores General Management Plan.

Now for further substance:

Neither the Organic Act of 1916 nor the legislation establishing the Point Reyes Seashore, (16 USC Sec 459c) includes language that commits the NPS to ensure the commercial success of private businesses operating in national parks. Leasing the land for ranching at Point Reyes National Seashore is discretionary. Nothing in the legislative record of the Seashore supports the myth of ranching in perpetuity. Specifically stated is that the land

should be unimpaired for future generations and that uses be supportive of the maximum protection, restoration, and preservation of the natural environment within the area (16USC Sec. 459c (6)(a)). Ranching, as conducted at the Point Reyes National Seashore and GGNRA, undermines this mandate.

1. Not discussed in GMPA/EIS: How and when will the NPS set goals for the maximum protection, restoration, and preservation of the Seashore and how will progress be measured? What is the timeframe for meeting them? What new or additional management methods will NPS implement to ensure the maximum protection, restoration, and preservation of the Seashore, per its legislative mandate? What are the costs of attaining maximum protection, restoration, and preservation and what resources has NPS allocated for this purpose?

The GMPA/EIS discusses the many and various environmental impacts of ranching to the Seashore but fails to rate the intensity of these impacts. The public can only guess at the significance of these documented impacts but has no way to know if these impacts are low, moderate or high.

2. Not described in GMPA/EIS: In addition to describing the environmental impacts of ranching to park resources, how does NPS rate those impacts? How will these impacts be mitigated and at what cost?

The economic benefits described in the GMPA/EIS point to a relatively small economic return to the County from the Seashore ranches. It cites the potential loss of fewer than 100 jobs should ranching end.

3. There is no mention in the GMPA/EIS of the working conditions of ranch workers or the notoriously sub-standard housing conditions of workers in the Seashore. Under Alternative B, how will the NPS oversee and improve the working and living conditions for ranch workers? What standards currently exist and how are they maintained?

Ranching is one of many resources listed in the NPSs 2019 draft Foundation Document for the Seashore. More than other historic, cultural or natural resources, ranching has been enshrined in the park, and unquestionably consumes park funds and staff resources that could address the Seashores many unmet needs.

4. The GMPA/EIS does not provide the costs of supporting the ranches, nor the proportion of the budget/staff dedicated to ranching relative to other park resources described in the Foundation Document, which include wilderness, coastal landscapes, marine, estuarine and freshwater environments, diverse habitats and native species, maritime cultural landscapes, continuum of human use (including ranching), opportunities for inspiration and recreation and science and learning. Such analyses are pertinent to the economic impact of increasing support for ranching at the expense of other unmet needs identified for funding.

The NPS has generously subsidized ranches for decades citing its mandate to preserve historic and cultural resources. In fact, ranching as practiced at the Seashore today bears little resemblance to historical ranching. The NPS has never interpreted the working ranches in the park for park visitors. In fact, the public is unwelcome on ranchlands that we, the public, own. The National Register of Historic Places now includes Seashore ranches. Noteworthy is that the National Register does not require active ranching-let alone on any commercial or industrial scale- as a condition of historic designation. It does, however, convey the expectation that historic structures will be preserved. The addition of modern infrastructure-such as a massive loafing barn-raises the concern that the NPS willingly compromises the historic integrity of the ranch districts while claiming to preserve them.

5. By what historic measure is the NPS permitting more than 5,700 beef and dairy cows to graze in the national seashore? How does new infrastructure, such as a loafing barn, impact the historic integrity of the ranching district? Under what circumstances will the public be afforded an opportunity to comment on impacts of such improvements to the ranches? How will the NPS ensure the preservation of historic structures/districts in the future? How will the preservation and interpretation of historic ranches be funded? How and when will the historic ranches be interpreted for the public? The GMPA provides no adaptive reuse plan for structures on

decommissioned ranches. Repurposing historic and cultural structures for public use, interpretation and other visitor benefits needs to be analyzed in under Alternative F.

Conflicts between ranchers and members of the public, and illegal No Trespassing signs are well known to the Seashore management. In addition are numerous documented violations of lease agreements and park regulations on the part of ranchers. Documents obtained under FOIA cite violations including overstocking cattle; chasing elk with ATVs and dogs; lack of adequate fences; failure to pay lease fees; refusal to cooperate with NPSs wildlife and rangeland staff; illegal dumping of cattle carcasses in the park; and overallotment of lands for hay and silage. The NPS continues to lease these public lands to these same ranchers and facilitates their entrenchment and expanded imprint on the Seashore.

6. Please explain in the GMPA/EIS whether and how ranching operations are evaluated before renewing or disallowing leases? Has the NPS ever denied a lease for violations or other failures to perform? In what way are ranchers held accountable for lease violations? How many ranches are historically and currently out of compliance? How does the NPS remedy repeat violations? With dwindling budgets and staff, how will the NPS monitor the ranches and enforce lease conditions that are becoming increasingly complex?

Some ranch residences appear unkempt, with cars and other unsightly junk visible to the public.

7. Not discussed in GMPA/EIS: How will the NPS perform its mandate of preserving the scenery of the national park on unkempt leased lands?

Dairy ranches are trampled to bare dirt with mountains of manure visible to park visitors. Dairy operations also raise concerns about animal welfare.

8. Not discussed in alternatives for continued ranching: How will the NPS perform its mandate of preserving the natural resources and scenery on dairy ranches? How does the NPS monitor the ranches to ensure animal welfare? What are the standards for the humane treatment of cattle herds and other proposed domestic livestock in the park? How are these regulations monitored and enforced?

The Seashore is suffering from Congressional budget cuts and insufficient staff.

9. How will the NPS perform the oversight and maintenance required of expanded and more complex ranching operations described in Alternative B? What impact will the demands of Alternative B have on general park maintenance, security, programs or visitor services, compared to the No Ranching, Alternative F?

Diversification of previously unauthorized livestock-pigs, sheep, goats, and up to 500 chickens on each ranch is an unprecedented change in policy. It will impact park wildlife, particularly birds and park predators. This but is insufficiently discussed in the GMPA. Ranch tours, homestays, processing facilities and farm stands for private gain have no place in a national park.

10. The GMPA/EIS fails to address the potential impacts of diversification to wildlife? How will these impacts be addressed, and at what cost? The GMPA/EIS is silent on this question, implying a just trust us approach. (When asked at the public open house, what the NPS will do should a coyote, bobcat, or fox take small livestock, the Seashores wildlife biologist answered, Well see.) There appears to be nothing in the GMPA/EIS that addresses the loss of wildlife to guard dogs or the possible poaching of nuisance wildlife, (other than Tule elk). These impacts must be analyzed and considered prior to approving diversification, the benefits of which appears to accrue solely to ranchers by expanding their revenue streams. Further commercializing the park with retail outlets and overnight stay also benefits rancher bottom line. The GMPA does not describe diversifications potential benefits to the public or to the parks natural resources and wildlife.

The land where confined Tule elk graze is visibly more diverse with native plant species than land grazed by domestic cattle. Yet, consistent in its preference for ranching over wildlife, the NPS bases its analysis on the

maximum number of cattle that can be grazed based on historic conditions (presumably 5,700). It bases the threshold number of native elk (120) on what forage is left after the maximum number of cattle have had their fill. The NPS provides no analysis of the number of elk that could be sustained in the park were there no competition from cattle. Because elk roam and graze more lightly than cattle, theoretically the park could support native Tule elk in numbers greater than the 5,700 cattle it allows in the park. Reportedly, 1,000 elk historically roamed the Point Reyes peninsula.

11. The GMPA/EIS does not provide this alternative analysis: How many elk the park can sustain were no cattle present, is necessary. It would include the number of elk sustainable using historic conditions; how many elk would be needed to control the presumed proliferation of invasive plants to allow the native plants recover over time; NPS recovery goals for native plants, and an accompanying management plan and timeline; and the economic impacts of redirecting funds currently used to subsidize cattle operations to restoring native plants and wildlife.

The Organic Act mandates that the NPS preserve wildlife in the national parks. Yet, native Tule elk at Drakes Beach will be managed to 120 solely to accommodate the special interest of private ranching. In addition, any elk foraging on leased lands will be shot because they affect ranchers profits.

12. Only one alternative in the GMP/EIS is consistent with the Organic Act. That is Alternative F, which would allow elk to expand their range.

The NPS has long tolerated the loss of wildlife and habitats from silage and haying operations to support the cattle operations. According to a 2015 report by Point Blue Conservation Science, Estimating Impact of Mowing in Silage Fields at Point Reyes N.S. on Breeding Birds, spring mowing macerates ground-nesting birds and small mammals, which attracts ravens and crows. Ravens and crows congregating at the ranches are the leading cause of predation on Snowy plovers, an endangered species that nests on Seashore beaches. The NPS dedicates significant resources to protecting the plovers, but efforts are hampered by predation. Ranching is at odds with the Snowy plover recovery efforts. Current mitigation is proving insufficient and continued failure risks the loss of the endangered species.

13. Though it acknowledges that impacts, including to endangered species, would be removed were ranching discontinued, the GMPA/EIS fails to provide any analysis for its position to perpetuate and expand private ranching. How will the NPS mitigate for impacts that jeopardize the survival of a listed species, including the Snowy plover? Will species recovery efforts include exterminating other native species-raven and crow?

Restoring endangered Coho salmon is the goal of a multi-million dollar, multi-year project on upstream parkland. The survival of the last remaining Coho salmon on Californias Central Coast is at risk. Yet, bacterial counts from cow-manure runoff into salmon and steelhead streams threaten the recovery of these and other aquatic species. Currently, state-issued waivers allow ranchers to pollute park streams and estuaries with manure runoff that ultimately degrades bay and marine environments. State water pollution waivers do not absolve the NPS of responsibility to minimize the sources of pollution on federal parklands.

The most effective mitigation would be to discontinue private ranching in the park, which is undermining substantial public investment in the recovery of salmon, steelhead and other aquatic species discussed in the GMPA/EIS.

14. What is the NPSs plan to prevent manure runoff from the park, clean up polluted streams and improve conditions for Coho, steelhead and other threatened aquatic species?

Following the purchase of the ranches, the federal government allowed members of the immediate family of the original ranchers to continue ranching in the park after the life estate or the original rancher expired.

15. Should the immediate family members of original ranchers decline to continue ranching, park ranches must be permanently retired and actively restored for natural resource values and visitor enjoyment.

Under no circumstances should succession originally intended only for multi-generational ranching, be extended to other relatives, neighbors, existing, former or current permittees, or others seeking to lease land in the Seashore for livestock grazing.

The GMPA/EIS acknowledges that GHG emissions from cattle exceed those of visitors vehicles and that methane produced by Seashore cattle has far more potent impacts than other GHGs.

There is no discussion of the NPSs plans for mitigating the climate impacts of the cattle in the park. Impacts of climate change weigh on the parks future-including the survival of rare, threatened and endangered plants and animals. Ignoring climate change mitigation in the GMPA/EIS is unacceptable. Yet, the NPS concludes that any mitigation by Seashore ranchers for their climate impacts is entirely voluntary.

Scientists recently estimated that humanity has twelve years in which to stave off irreversible global temperature rise. The NPSs preoccupation with catering to the demands a single special interest and its political allies ignores this reality.

16. The science is clear. Amidst the stark challenge of climate change and species extinctions, how will the NPS mitigate the GHG caused by Seashore ranches? What can the NPS do to defend our parks from the trend of privatization, exploitation, and degradation by special interests? Future generations will bear the brunt of climate disruption. How will the NPS explain its decision to prop up 24 ranchers rather than stand up for future generations?

Again, I cannot in good conscience recommend any Alternative other than Alternative F. I strongly implore the National Park Service to adopt Alternative F for the Update to the National Seashores General Management Plan.

Thank you very much for you time and consideration.

Correspondence: No ranching or dairy ranching or farm production belongs in the Point Reyes National Seashore which is supposed to be a wilderness preserve. Please GET THE FARMING OPERATIONS AND ANIMAL RANCHING AND DAIRY PRODUCTION OUT OF MY PARK. This park/preserve/wilderness is unique. It belongs to ALL OF US. It is our precious and much-beloved PATRIMONY, to be enjoyed in its WILD state.

GET the AGRICULTURE OUT OF THE PARK.

I LOVE POINT REYES. AND ALL I can smell is shit when I go there now.

I am not kidding. There is no smell except the overwhelming STENCH of 353,000,000 MILLION POUNDS of cow EXCREMENT produced and dumped on the ground, each and every single year. It cannot be absorbed. It is polluting everything, the water and the land and the air. It is a nightmare, a man-made nightmare of private profit, Private MONEY production, over our park, that belongs to everyone. There is NO place in our Point Reyes National Seashore wilderness reserve for Animal agriculture. I oppose it going on for another 20 days, let alone another 20 YEARS. PROTECT our wilderness. DO your job. Obey the law as it was drawn up in the first place. The Congressional plan was to have a wilderness SET ASIDE for us all to enjoy. AS far as money generated, the income enjoyed by this park area and its people and their hotels and stores who sell to the tourists, etc, from all the visitors who come to see the Native WILDLIFE, is \$150,000,000 million dollars a year. These visitors have, moreover, SAID in hundreds of surveys, that they "come to see the wildlife!" NOT the dairy cows and their millions of pounds of shit piled everywhere. Moreover, these visitors include ME, and all my friends and family and co-workers and club member friends and church and community groups who LIVE RIGHT HERE:

We want a PARK, a wilderness kept in its wild state, NOT A HUGE PILE OF ANIMAL SHIT from industrial factory farming/ranching production.

The PRIVATE profit of the dairy animal owners and other factory farm owners in the park, is about \$7 million dollars a year.

Just on the basis of what's best for ALL the people, it's clearly that we maintain a pristine virgin wilderness with wildlife only, free to roam and to fly.

Please do your jobs. Protect what we the people have already said to protect, already passed legislation to protect. So Protect it. Get the farming OUT of the park. Now, it needs to go now. I don't want it there another 20 days, let alone another 20 years!!!!

Thank you.

Correspondence: Fact: I love Point Reyes National Seashore and the National Park Service deeply.

My preferred alternative is F and my rationale is elucidated below:

I have observed over the years an extensive amount of damage to Point Reyes NS land related to overgrazing, spreading of manure, erosion, and the spread of invasive species. Extensive ranching is something that seems incompatible to the mission of the National Park Service - particularly when the practice is so destructive to the landscape.

My understanding: Point Reyes National Seashore's enabling legislation did not explicitly say that cattle ranching was to be continued in perpetuity. As such, this is a perfect opportunity to reevaluate and remove ranching altogether. The quote below is from National Park's Traveler editorial (by a prior Point Reyes National Seashore Vegetation Branch Chief) - and it confirmed this understanding that the enabling legislation did not state that ranching would be integral to the park management. This leaves the leeway to remove it altogether.:

"Ranching was not one of the intended purposes of the parks. In the enabling legislation, Congress established Point Reyes National Seashore in 1962 "to save and preserve, for the purposes of public recreation, benefit, and inspiration, a portion of the diminishing seashore of the United States that remains undeveloped." The purchase of the ranches clearly indicates that the intent was to remove the ranching operations in support of the enabling legislation. The DEIS itself (pp 1-2) clearly defines the "stated purposes" of the two park units: The purpose statement identifies the specific reason(s) why Point Reyes was established and lays the foundation for understanding what is most important about Point Reyes. The purpose statement for Point Reyes is as follows: Established for public benefit and inspiration, the Point Reyes National Seashore protects a rugged and wild coastal peninsula and surrounding waters, connecting native ecosystems, enduring human history and recreational, scientific, and educational opportunities. The purpose statement for Golden Gate is (NPS 2014a): The purpose of Golden Gate National Recreation Area is to offer national park experiences to all, including a large and diverse urban population, while preserving and interpreting the outstanding natural, historic, scenic, and recreational values of the park lands."

Cattle ranching is abundant in California and is not something I consider so rare that it should be protected by the National Park Service. A subset of ranch structures could be set aside to interpret, but cattle ranching is not working well.

There are many issues related to managing lands when commerce or financial profit becomes a motivator of leasees. I find the goal of protecting the lands that NPS is so entrusted to manage becomes viewed as an obstacle to ranchers attempting to make a profit from the land. I understand the desire to make a profit as a concept, but not when it comes to the detriment of park lands. When the chickens, pigs and other animals become threatened by coyotes - and ranchers demand that they too be removed, fenced, or killed what will be the NPS response? This will add even more of a burden on the existing staff and will deter the park from being able to focus on management of the resources in an effective manner. The focus on ranching or running reservations of use at this park has taken it's toll on managing the plethora of landscape issues.. the focus of the park on critical issues like climate change, invasive species, rare, threatened and endangered species, archives and other areas that need additional attention would be even further diminished. For instance the park's current workload that related to invasive plants alone would require a large base increase to the park budget to address introduced species related to cattle and diversified operations (e.g. fertile capeweed).

I think that an extension of leases to 20 years to tenants that in a large number of cases are currently overgrazing lands does not make sense. It seems like if the park ends up moving forward with grazing, that the performance should be spotless for 5 years before the privilege of an extended lease were made.

Thank you for the opportunity to comment, and I appreciate the complexity of this issue from a political and an environmental perspective.

Sincerely,

Bobbi Simpson

Name: Gallagher, Emily

Correspondence: Allowing ranching operations to expand or continue in any form on Point Reyes Seashore (Seashore) is contrary to Congress' stated purpose in establishing the Seashore "to save and preserve, for the purposes of public recreation, benefit, and inspiration, a portion of the diminishing seashore of the United States that remains undeveloped."

The NPS should adopt alternative F instead of its preferred alternative B. F phases out ranching which would finally achieve the original purpose of the establishment of the Seashore. Alternative F should be adopted over alternative B because:

1. Ranching is antithetical to the plain meaning and general public understanding of a national seashore. Visitors like myself want wild land, not ranches. In fact, I resisted visiting the Seashore for many years because I did not want to have to look at veal crates, grazing cattle, and ranch buildings. Too much of the Seashore's vistas are already obstructed by these eyesores, it cannot be allowed to expand or continue. When I visit the Seashore, my experience is negatively effected by the ranches.
2. Ranching is extremely detrimental to the native and other wild species that live at the Seashore, which is what Congress sought to protect by establishing the Seashore. This is plainly evident from the EIS. Ignoring the extreme damage animal agriculture continues to do the Seashore would be highly irresponsible.
3. Animal agriculture is a leading cause of climate change, a fact that has become public knowledge. The ranches are the leading cause of greenhouse gas emissions on the Seashore. As people work to reduce their consumption of animal products in light of this reality, they look to their government to lead in this regard. Expanding or preserving current ranching operations on the Seashore is a step backward in the fight against climate change.
4. Killing Tule elk for the sake of ranching is contrary to the purpose and public expectation of the Seashore. Many people worked tirelessly to bring the Tule elk back from the edge of extinction. Killing them, even a few, for the sake of animal foods is short sighted and disrespectful of the scientific community that worked to restore the Tule elk.
5. The Tule elk should have access to the grazing lands and water currently used by ranching operations so that they can flourish. To suggest that the Seashore can only support 120 is disingenuous. The ranches must be phased out so that a large, vibrant herd of Tule elk can live in safety on the Seashore. The Drakes Bay herd should not be

eliminated or reduced, and the Tomales Point herd should be permitted access to the land and water currently occupied by ranchers.

6. Ranches have had decades to wind-up operations and leave. They were paid at the time for the land. In choosing to gamble that the NPS would continue to let them stay as tenants, the ranchers took a risk that the public would one day demand that the NPS finally make them leave. The NPS has a responsibility to act in the public's interest as expressed in Congress's original intent for the Seashore, not to continue to ensure that the ranchers' gamble pays off.

7. The historical designation of the ranching buildings at Pierce Point should be reassessed. To the extent they remain under historical designation, the NPS should allow the buildings to remain unoccupied and unused. No cattle or other domesticated animals need to occupy any part of the Seashore in order for the historical designation or "character" to be respected. Historical designation is not an excuse to continue to allow ranching operations or kill Tule elk.

8. Alternatives B-E fail to consider the environmental impact of diversification. The EIS demonstrates that the fragile ecosystem of the Seashore cannot risk a "wait and see" approach. It is common knowledge that animal agricultural is dangerous for natural apex predators and other species. For the NPS to pretend otherwise is willfull blindness.

9. The Seashore cannot afford to enforce lease compliance, yet failing to do so has catastrophic consequences for the natural environment of the park and by extension, visitors. Ranching operations are an unnecessary drain on Seashore financial resources.

The NPS should revise alternative F, or create another alternative, which would be identical to alternative F but also include a plan to study the mitigation needs for the land that has been ranched. The EIS identified major environmental degradation due to ranching. The GMPA should include at the very least a pledge to further study the mitigation and recovery needs of this land.

Correspondence: A couple of days ago, I commented in a very vague way, merely expressing my concern for preserving the Tule Elk's habitat. Having read the executive summary and some opinions pro and con, I'm now leaning toward Alternative D, as it will give back 7,500 acres to the Tule elk, while respecting the rights of the ranching families who were there before the land became a national park. It also takes into consideration the historic character of these ranches. I would be interested in Alternative E if I could better understand why eliminating dairy farming in favor of beef only would be a positive move. Alternative C, which calls for killing entire 124 member Drakes Beach herd is terrible, and should not even be considered.

The NPS' preferred alternative, Alternative B, is not bad, in my opinion, although it doesn't address the problem of the Drakes Beach elk becoming too inbred as its gene pool is deliberately restricted.

Correspondence: Thank you for this opportunity to comment on the proposed General Management Plan Amendments and the Draft EIS. Our comments are as follows:

If the allowable uses of ag lands within the park are diversified, conflicts between ranch animals and wildlife should be considered as well as impacts on roads and park infrastructure with increases in commercial traffic. For example row crops will require more frequent truck trips in addition to the milk and hay trucks presently using the existing narrow roads. The trucks could adversely affect the visitor experience and the park will need to budget for ongoing road repair.

With diversification there may be a tendency for families to sublease some of their land to outside commercial companies, such as for growing and harvesting row crops. This should be addressed including how it could be handled in their lease with the park. Also, if an historic ranch family decides to vacate its lease the lease should be dissolved rather than leasing it to another family.

The draft EIS needs to fully examine the environmental impacts of the proposed increased visitor use in Drakes Estero such as human waste, garbage, and potential for destruction of park and cultural resources in the sensitive Marine Wilderness. Furthermore the EIS needs to recognize that canoeing or kayaking near the mouth of Drake's Estero is dangerous. My daughter and a friend were swept out the mouth of the Estero on an outgoing tide and their canoe capsized. Fortunately after some time in the water they were rescued. If there is more use of the Estero by watercraft there will need to be more ranger presence (on a motorized craft in a wilderness area?) for public safety and to reduce the impacts on the environment.

Lethal management of wildlife, and in particular, the tule elk to benefit commercial interests of a lessee should not be prioritized over other management strategies. The elk herds should be protected. Do the elk eat as much forage as the Axis and Fallow deer which were removed?

The Draft EIS does not have a budget or any financial overview of how the alternatives and actions will be implemented and paid for. This information is essential to properly evaluate the impacts on natural resources management, visitor services, and other vital existing park programs.

Name: Obendorfer, Meredith

Correspondence: I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads.

Bicycling opportunities are currently very limited and fragmented; connectivity improvements and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike - rather than by car - attributing to Marin's tourist economy and being environmentally more friendly in my recreational habits. Importantly, I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic.

Thanks in advance for your time and consideration. Meredith Obendorfer Marin homeowner and cyclist

Name: Britt, Joyce

Correspondence: All of the alternatives in the DEIS condemn agriculture as an abuse of the land, which the public already knows. Existing practices we know are bad for surface waters and for the bay and ocean waters. Any intensification of such use and more human intrusion violates not only the environmental standards of NEPA and CEQA, the Clean Water Act and ESAct, but also the legislation which created PRNS and also the Organic Act. The Peninsula should be a marine sanctuary for wildlife. The "historical site" is a myth.....we can all see that these sites are modern day agribusiness. Moreover the business model used for Alt B is seriously flawed and cannot be reconciled with the facts when scrutinized. Alternative F is the only way to save our Seashore.

Name: Richards, Elaine

Correspondence: Much as I love beef and dairy, it always baffled me that a national park was covered in ranches. As a visitor to the park, I have to wonder if this benefits me, a taxpayer, at all. I think not. I don't know whose pockets are being lined, but it certainly isn't mine.

According to an activist friend of mine, the ranchers regularly prevent elk from getting to water and forage, thus threatening their very existence. I am dismayed, but not surprised.

In the past couple of years, I've studied and become a county master gardener in Alameda and appreciate native plants. I have, on many occasions, gone hiking up in Pt. Reyes at the right time of year and am never disappointed... until I see cattle fences.

Of the plans described, I will say that I support "F", which phases out all cattle/dairy farming on national land. Again, whose pockets are being lined? Not mine. We need nature. We need pockets, at least, that are not tampered with and trampled on by human interests. This is so important, especially now, with the Trump administration attempting to treat national lands like some kind of yard sale for billionaires.

Go for "F". Let California be California. Let the visitors come and breathe clean air, not cow excrement. Let the elk be elk, bugling away. There will be mountain lions, of course. Bobcats, deer, birds, interesting and endangered plants. The cow farms can happen elsewhere. The people who crow about their jobs will miraculously find new ones. Life will go on and the park will be better.

Correspondence: I would like to echo some of the ideas, suggestions, substance, concerns and questions that my husband has included in his official comment.

The Point Reyes National Seashores own website actually states as wild land habitat is lost elsewhere in California, the relevance of the Point Reyes Peninsula increases as a protected area with notable rich biological diversity. There are over 50 threatened, rare, or endangered species located in PRNS, nevertheless these species and the unique habitats in which they are found are not prioritized over cattle. Why? I believe the answer is rather straightforward, flora and fauna do not vote nor do they donate money. Meanwhile, agricultural interests are powerful and have way more influence on our elected politicians and appointed officials. That being said, nature does indeed bring in the most money by far and is in indeed the #1 reason tourists visit the park, not animal agriculture. In fact over \$132 million dollars was attributed to tourism at PRNS in 2017. Tourism is far more profitable and economically viable, as well as environmentally sustainable and safe compared to agriculture in our National Seashore. When we set up a table outside the Bear Valley Visitor Center back on one particular Saturday in early September for just a few hours, visitors overwhelmingly told us that they came to their National Seashore to see wildlife, not cows. Many visitors admitted that before they even arrived in PRNS, the hillsides they passed and roadsides they traveled on were already full of cattle. Nearby Marin Agricultural Land Trust properties already cover thousands and thousands of acres - over 50,000 acres to be exact. Over half of all land in Marin County, 167,000 acres, is farm and ranch land already. The absolute last thing we need is ranching and farming inside our critically important seashore. During the few hours we were set up at the visitor center we also asked another question - do you favor the Park Services proposed plan to kill our native Tule Elk? Visitors and locals alike responded by a count of 145 to 0 against this proposed plan. It was clear to us and those we talked to - prioritize biodiversity and environmental health in our publicly owned seashore!

A National Park should not be the place we experiment with and look into ways to create a new model for how ranches and dairies should operate. Let private agricultural interests outside of our fragile and important National Seashore learn to create a new model. This drastically needed to already happen (yesterday). To reiterate, do not prioritize the creation of a new ranching model in some of the very last sanctuaries set aside in critically important and strategic locations. PRNS should be discussing and prioritizing the restoration of severely diminished coastal prairies, dunes, wetlands, and riparian areas, and improving the overall health and well being of native populations of flora and fauna. PRNS should be a model for environmental conservation not private taxpayer subsidized environmental degradation.

Instead of looking for ways to better implement wildlife corridors, improve water quality, increase plant life and bird populations, the park service is proposing a new ranchland zone. This will only further exacerbate the problem, allowing destructive forms of land use to prevail in a biodiversity hotspot, that is indeed actually still waiting to live up to its full potential.

This past year the United Nations released a deeply distressing report compiled by nearly 150 authors from 50 nations. Together they worked for 3 years as part of the Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services - a panel with 132 member nations, including the United States. Representatives of each member nation signed off on the reports findings and the authors of the report urged dramatic action, for Nature is declining globally at rates unprecedented in human history - and the rate of species extinctions is accelerating, with grave impacts on people around the world. The report also tells us that it is not too late to make a difference, but only if we start now [yesterday] at every level from local to global& Through transformative change nature can still be conserved, restored, and used sustainably - this is also key to meeting most other global goals. By transformative change, we mean fundamental, system-wide reorganization across technological, economic, and social factors, including paradigms, goals and values the report stated.

Two days ago, many prominent newspapers and media outlets reported on a new extensive study published in Science. The study revealed a 27% drop in the North American bird population in just the last 49 years. A majority of the 529 bird species studied experienced population loss, even species we tend to think of as abundant, such as warblers and blackbirds& We were stunned by the result-its just staggering, said Kenneth V. Rosenberg, a conservation scientist at Cornell University and the lead author of the study. Rosenberg goes on to say the magnitude of the decline could significantly affect the continents food webs and ecosystems, Were talking about pest control, were talking about pollination [and] seed dispersal [&] we can be pretty sure that other parts of the ecosystem are also in decline and degradation.

When will the Western Snowy Plover get the honest prioritization it deserves? When will the Swainsons hawk or the Willow flycatcher and Tricolored Blackbird get protections and park resources devoted to them, instead of cows and ranching operations?

The PRNSs website features another quote that is quite prudent, especially given the current proposal by the Park Service. In 1995 (almost 25 years ago) the National Academy of Sciences reported that: In recent years, it has become apparent that human activities are causing the loss of biological diversity at an increasing rate: the current rate of extinctions appears to be among the highest in the fossil record. Although non-human organisms can cause extinctions of other species to a small degree, no other organisms produce such large effects over such wide areas as humans do and have done-at least locally-for thousands of years. Habitat alteration and degradation are probably the most severe effects humans have on other species today. How can one not consider the enormous negative impacts ranching continues to have on the well being of our National Seashore?

We need to connect the dots& the Amazon rainforest is burning because of animal agriculture. The same forces at work down in Brazil are at actually at work here in the United States. This is not just unsustainable, it is a leading cause of species endangerment and ecosystem collapse. The health of our public lands are being sacrificed for private profit at the expense of our environment, our water, our air, our soil and so much more. While biodiversity continues to decline at a rapid pace, many of the species we could help in PRNS are being neglected and conveniently ignored. Another perspective to consider: There are 94 million 400 thousand cattle spread out across the United States of America! There are 5 million 125 thousand cattle scattered across California! These statistics are directly from the United States Department of Agriculture. Yet, there are only an estimated 5,200 native Tule Elk left in the world. This endemic umbrella species has already faced the grips of extinction once before. They are not the problem! There are less Tule Elk in our PRNS than there are cattle, simply put, this is wrong. Is there no room left for our iconic wildlife in our last critically important sanctuaries?

The majestic animals you see as you travel through the park embody the restoration of the dominant native herbivore to the California coastal ecosystem. They shape the landscape around them as they did for centuries before they were extirpated by humans. They symbolize the conservation of native species and ecosystem

processes, one of the primary missions of the National Park Service. These words are directly taken from the Point Reyes National Seashore website.

Make our California Coast whole again. Let the Tule Elk thrive so that they can provide the ecosystem services that they have provided for thousands of years before ranchers showed up. I along with many others believe they can help restore our California Coastal Prairie - the most species rich grassland in North America. Cattle do not, I repeat do not, have the same impact as Tule Elk on our native grasslands - it is critical that science is utilized when forming policy in our National Seashore, not paid for made up myths.

It is the responsibility of all of us who live off the land to take care of the land. I am privileged to live and work in Marin County, and want nothing but the best for the people, wildlife, and environment of our dear home.

I think it is clear that I am against the Park Services preferred Alternative B plan. Those who visit the seashore cannot stand the continued deterioration of the natural resources of this park and the ongoing diminishment of the biological integrity. Alternative B is a disastrous choice that gives preference to 18 beef and 6 dairy ranches. This is not acceptable.

I think these wise words from ecologist George Wuerthner put things in perspective: Think about all the beautiful redwood parks scattered up and down California's coast. Nearly all of these parklands were created by purchasing the land from private property owners, just like we the public bought the ranches that remain in Point Reyes National Seashore. Now imagine that the previous landowners not only refused to leave our redwood parks but continue to cut down redwoods even after we bought the land and the trees for preservation. That is precisely what is going on in Point Reyes National Seashore... Would [our Congressman] Huffman be outraged if loggers were cutting trees in Muir Woods National Monument or Humboldt Redwood State Park, or Redwoods National and State Parks? I would hope so.

Two days ago my husband and I marched alongside 40,000 people in San Francisco as part of the youth led Global Climate Strike. Together, millions of other concerned and informed citizens of the world, people from all walks of life, stood in solidarity and spoke up for prioritizing environmental health and biodiversity around our planet. While we were sacrificing our own time to speak up for the native Tule Elk and the restoration of PRNS, I could not help but think of the millions of young people who were there trying to bring more awareness to these profound environmental issues. What does it say to our youth&let alone anyone out there, including my husband and I, who have individually made sacrifices to our everyday lives, when our National Park Service fails to do the right thing? What does it say to the individuals out there trying to make their own contributions to a better world (through diet, consumption, sustainable living, etc.) when the National Park Service has the opportunity to make a much greater more positive impact than any single one of us, and chooses to go the other way? We must protect our last wild spaces at all cost and this must be the highest mission of our National Parks.

After spending years trying to move to Marin County, my husband and I finally made our dreams come true. Although we were both born and raised elsewhere in the San Francisco Bay Area, it is West Marin that we hope to never leave. We love the small town feel and we value our proximity to open parks and wilder spaces. We love the environmental awareness of many of the people here and their progressive attitudes towards social and cultural issues. We love the natural world that still lingers, like the wildlife that visit us in our backyard and the others we see out on our regular ventures. We do not take for granted our home, far from it, we desire nothing but the best for it and set our expectations very high. This is why I am unwilling to accept the status quo. Enough is enough with the environmental degradation and diminishment of our natural resources. It is not like we do not have ranches elsewhere in our county, state, country. It is not like we do not have enough cattle. We must unite behind the science and take pride in learning to take care of our environment. We cannot tackle the many environmental issues that face us if we cannot first take care of the enormous ones at home. Point Reyes National Seashore should prioritize environmental health and biodiversity first and foremost. It is our National Seashore. Why would anyone prefer a sad picture of their home instead of a beautiful one that reflects their most promising values. I cannot in good conscience recommend any Alternative other than Alternative F. I strongly implore the National Park Service to adopt Alternative F for the Update to the National Seashores General Management Plan.

Now for further substance:

Neither the Organic Act of 1916 nor the legislation establishing the Point Reyes Seashore, (16 USC Sec 459c) includes language that commits the NPS to ensure the commercial success of private businesses operating in national parks. Leasing the land for ranching at Point Reyes National Seashore is discretionary. Nothing in the legislative record of the Seashore supports the myth of ranching in perpetuity. Specifically stated is that the land should be unimpaired for future generations and that uses be supportive of the maximum protection, restoration, and preservation of the natural environment within the area (16USC Sec. 459c (6)(a). Ranching, as conducted at the Point Reyes National Seashore and GGNRA, undermines this mandate.

1. Not discussed in GMPA/EIS: How and when will the NPS set goals for the maximum protection, restoration, and preservation of the Seashore and how will progress be measured? What is the timeframe for meeting them? What new or additional management methods will NPS implement to ensure the maximum protection, restoration, and preservation of the Seashore, per its legislative mandate? What are the costs of attaining maximum protection, restoration, and preservation and what resources has NPS allocated for this purpose?

The GMPA/EIS discusses the many and various environmental impacts of ranching to the Seashore but fails to rate the intensity of these impacts. The public can only guess at the significance of these documented impacts but has no way to know if these impacts are low, moderate or high.

2. Not described in GMPA/EIS: In addition to describing the environmental impacts of ranching to park resources, how does NPS rate those impacts? How will these impacts be mitigated and at what cost?

The economic benefits described in the GMPA/EIS point to a relatively small economic return to the County from the Seashore ranches. It cites the potential loss of fewer than 100 jobs should ranching end.

3. There is no mention in the GMPA/EIS of the working conditions of ranch workers or the notoriously sub-standard housing conditions of workers in the Seashore. Under Alternative B, how will the NPS oversee and improve the working and living conditions for ranch workers? What standards currently exist and how are they maintained?

Ranching is one of many resources listed in the NPSs 2019 draft Foundation Document for the Seashore. More than other historic, cultural or natural resources, ranching has been enshrined in the park, and unquestionably consumes park funds and staff resources that could address the Seashores many unmet needs.

4. The GMPA/EIS does not provide the costs of supporting the ranches, nor the proportion of the budget/staff dedicated to ranching relative to other park resources described in the Foundation Document, which include wilderness, coastal landscapes, marine, estuarine and freshwater environments, diverse habitats and native species, maritime cultural landscapes, continuum of human use (including ranching), opportunities for inspiration and recreation and science and learning. Such analyses are pertinent to the economic impact of increasing support for ranching at the expense of other unmet needs identified for funding.

The NPS has generously subsidized ranches for decades citing its mandate to preserve historic and cultural resources. In fact, ranching as practiced at the Seashore today bears little resemblance to historical ranching. The NPS has never interpreted the working ranches in the park for park visitors. In fact, the public is unwelcome on ranchlands that we, the public, own. The National Register of Historic Places now includes Seashore ranches. Noteworthy is that the National Register does not require active ranching-let alone on any commercial or industrial scale- as a condition of historic designation. It does, however, convey the expectation that historic structures will be preserved. The addition of modern infrastructure-such as a massive loafing barn-raises the concern that the NPS willingly compromises the historic integrity of the ranch districts while claiming to preserve them.

5. By what historic measure is the NPS permitting more than 5,700 beef and dairy cows to graze in the national seashore? How does new infrastructure, such as a loafing barn, impact the historic integrity of the ranching district? Under what circumstances will the public be afforded an opportunity to comment on impacts of such improvements to the ranches? How will the NPS ensure the preservation of historic structures/districts in the future? How will the preservation and interpretation of historic ranches be funded? How and when will the historic ranches be interpreted for the public? The GMPA provides no adaptive reuse plan for structures on decommissioned ranches. Repurposing historic and cultural structures for public use, interpretation and other visitor benefits needs to be analyzed in under Alternative F.

Conflicts between ranchers and members of the public, and illegal No Trespassing signs are well known to the Seashore management. In addition are numerous documented violations of lease agreements and park regulations on the part of ranchers. Documents obtained under FOIA cite violations including overstocking cattle; chasing elk with ATVs and dogs; lack of adequate fences; failure to pay lease fees; refusal to cooperate with NPSs wildlife and rangeland staff; illegal dumping of cattle carcasses in the park; and overallotment of lands for hay and silage. The NPS continues to lease these public lands to these same ranchers and facilitates their entrenchment and expanded imprint on the Seashore.

6. Please explain in the GMPA/EIS whether and how ranching operations are evaluated before renewing or disallowing leases? Has the NPS ever denied a lease for violations or other failures to perform? In what way are ranchers held accountable for lease violations? How many ranches are historically and currently out of compliance? How does the NPS remedy repeat violations? With dwindling budgets and staff, how will the NPS monitor the ranches and enforce lease conditions that are becoming increasingly complex?

Some ranch residences appear unkempt, with cars and other unsightly junk visible to the public.

7. Not discussed in GMPA/EIS: How will the NPS perform its mandate of preserving the scenery of the national park on unkempt leased lands?

Dairy ranches are trampled to bare dirt with mountains of manure visible to park visitors. Dairy operations also raise concerns about animal welfare.

8. Not discussed in alternatives for continued ranching: How will the NPS perform its mandate of preserving the natural resources and scenery on dairy ranches? How does the NPS monitor the ranches to ensure animal welfare? What are the standards for the humane treatment of cattle herds and other proposed domestic livestock in the park? How are these regulations monitored and enforced?

The Seashore is suffering from Congressional budget cuts and insufficient staff.

9. How will the NPS perform the oversight and maintenance required of expanded and more complex ranching operations described in Alternative B? What impact will the demands of Alternative B have on general park maintenance, security, programs or visitor services, compared to the No Ranching, Alternative F?

Diversification of previously unauthorized livestock-pigs, sheep, goats, and up to 500 chickens on each ranch is an unprecedented change in policy. It will impact park wildlife, particularly birds and park predators. This but is insufficiently discussed in the GMPA. Ranch tours, homestays, processing facilities and farm stands for private gain have no place in a national park.

10. The GMPA/EIS fails to address the potential impacts of diversification to wildlife? How will these impacts be addressed, and at what cost? The GMPA/EIS is silent on this question, implying a just trust us approach. (When asked at the public open house, what the NPS will do should a coyote, bobcat, or fox take small livestock, the Seashores wildlife biologist answered, Well see.) There appears to be nothing in the GMPA/EIS that addresses the loss of wildlife to guard dogs or the possible poaching of nuisance wildlife, (other than Tule elk). These impacts must be analyzed and considered prior to approving diversification, the benefits of which appears to accrue solely

to ranchers by expanding their revenue streams. Further commercializing the park with retail outlets and overnight stay also benefits rancher bottom line. The GMPA does not describe diversifications potential benefits to the public or to the parks natural resources and wildlife.

The land where confined Tule elk graze is visibly more diverse with native plant species than land grazed by domestic cattle. Yet, consistent in its preference for ranching over wildlife, the NPS bases its analysis on the maximum number of cattle that can be grazed based on historic conditions (presumably 5,700). It bases the threshold number of native elk (120) on what forage is left after the maximum number of cattle have had their fill. The NPS provides no analysis of the number of elk that could be sustained in the park were there no competition from cattle. Because elk roam and graze more lightly than cattle, theoretically the park could support native Tule elk in numbers greater than the 5,700 cattle it allows in the park. Reportedly, 1,000 elk historically roamed the Point Reyes peninsula.

11. The GMPA/EIS does not provide this alternative analysis: How many elk the park can sustain were no cattle present, is necessary. It would include the number of elk sustainable using historic conditions; how many elk would be needed to control the presumed proliferation of invasive plants to allow the native plants recover over time; NPS recovery goals for native plants, and an accompanying management plan and timeline; and the economic impacts of redirecting funds currently used to subsidize cattle operations to restoring native plants and wildlife.

The Organic Act mandates that the NPS preserve wildlife in the national parks. Yet, native Tule elk at Drakes Beach will be managed to 120 solely to accommodate the special interest of private ranching. In addition, any elk foraging on leased lands will be shot because they affect ranchers profits.

12. Only one alternative in the GMP/EIS is consistent with the Organic Act. That is Alternative F, which would allow elk to expand their range.

The NPS has long tolerated the loss of wildlife and habitats from silage and haying operations to support the cattle operations. According to a 2015 report by Point Blue Conservation Science, Estimating Impact of Mowing in Silage Fields at Point Reyes N.S. on Breeding Birds, spring mowing macerates ground-nesting birds and small mammals, which attracts ravens and crows. Ravens and crows congregating at the ranches are the leading cause of predation on Snowy plovers, an endangered species that nests on Seashore beaches. The NPS dedicates significant resources to protecting the plovers, but efforts are hampered by predation. Ranching is at odds with the Snowy plover recovery efforts. Current mitigation is proving insufficient and continued failure risks the loss of the endangered species.

13. Though it acknowledges that impacts, including to endangered species, would be removed were ranching discontinued, the GMPA/EIS fails to provide any analysis for its position to perpetuate and expand private ranching. How will the NPS mitigate for impacts that jeopardize the survival of a listed species, including the Snowy plover? Will species recovery efforts include exterminating other native species-raven and crow?

Restoring endangered Coho salmon is the goal of a multi-million dollar, multi-year project on upstream parkland. The survival of the last remaining Coho salmon on Californias Central Coast is at risk. Yet, bacterial counts from cow-manure runoff into salmon and steelhead streams threaten the recovery of these and other aquatic species. Currently, state-issued waivers allow ranchers to pollute park streams and estuaries with manure runoff that ultimately degrades bay and marine environments. State water pollution waivers do not absolve the NPS of responsibility to minimize the sources of pollution on federal parklands.

The most effective mitigation would be to discontinue private ranching in the park, which is undermining substantial public investment in the recovery of salmon, steelhead and other aquatic species discussed in the GMPA/EIS.

14. What is the NPSs plan to prevent manure runoff from the park, clean up polluted streams and improve conditions for Coho, steelhead and other threatened aquatic species?

Following the purchase of the ranches, the federal government allowed members of the immediate family of the original ranchers to continue ranching in the park after the life estate or the original rancher expired.

15. Should the immediate family members of original ranchers decline to continue ranching, park ranches must be permanently retired and actively restored for natural resource values and visitor enjoyment.

Under no circumstances should succession originally intended only for multi-generational ranching, be extended to other relatives, neighbors, existing, former or current permittees, or others seeking to lease land in the Seashore for livestock grazing.

The GMPA/EIS acknowledges that GHG emissions from cattle exceed those of visitors vehicles and that methane produced by Seashore cattle has far more potent impacts than other GHGs.

There is no discussion of the NPSs plans for mitigating the climate impacts of the cattle in the park. Impacts of climate change weigh on the parks future-including the survival of rare, threatened and endangered plants and animals. Ignoring climate change mitigation in the GMPA/EIS is unacceptable. Yet, the NPS concludes that any mitigation by Seashore ranchers for their climate impacts is entirely voluntary.

Scientists recently estimated that humanity has twelve years in which to stave off irreversible global temperature rise. The NPSs preoccupation with catering to the demands a single special interest and its political allies ignores this reality.

16. The science is clear. Amidst the stark challenge of climate change and species extinctions, how will the NPS mitigate the GHG caused by Seashore ranches? What can the NPS do to defend our parks from the trend of privatization, exploitation, and degradation by special interests? Future generations will bear the brunt of climate disruption. How will the NPS explain its decision to prop up 24 ranchers rather than stand up for future generations?

Again, I cannot in good conscience recommend any Alternative other than Alternative F. I strongly implore the National Park Service to adopt Alternative F for the Update to the National Seashores General Management Plan.

Thank you

Correspondence: No ranching or dairy ranching or farm production belongs in the Point Reyes National Seashore which is supposed to be a wilderness preserve. Please GET THE FARMING OPERATIONS AND ANIMAL RANCHING ND DAIRY PRODUCTION OUT OF MY PARK. This park/preserve/wilderness. It is priceless and unique. It belongs to ALL OF US. It is our precious and much-beloved PATRIMONY, to be enjoyed in its WILD state.

GET the AGRICULTURE OUT OF THE PARK.

I LOVE POINT REYES. AND ALL I can smell is shit when I go there now.

I am not kidding. There is no smell except the overwhelming STENCH of 353,000,000 MILLION POUNDS of cow EXCREMENT produced and dumped on the ground, each and every single year. It cannot be absorbed. It is polluting everything. the water and the land and the air. It is a nightmare, a man-made nightmare of private profit, Private MONEY production, over our park, that belongs to everyone. There is NO place in our Point Reyes

National Seashore wilderness reserve for Animal agriculture. I oppose it going on for another 20 days, let alone another 20 YEARS. PROTECT our wilderness. DO your job. Obey the law as it was drawn up in the first place. The Congressional plan was to have a wilderness SET ASIDE for us all to enjoy. AS far as money generated, the income enjoyed by this park area and its people and their hotels and stores who sell to the tourists, etc,from all the visitors who come to see the Native WILDLIFE, is \$150,000,000 million dollars a year. These visitors have, moreover,SAID in hundreds of surveys, that they "come to see the wildlife!" NOT the dairy cows and their millions of pounds of shit piled everywhere. Moreover, these visitors include ME, and all my friends and family and co-workers and club member friends and church and community groups who LIVE RGHT HERE:

We want a PARK, a wilderness kept in its wild state, NOT A HUGE PILE OF ANIMAL SHIT from industrial factory farming/ranching production.

The PRIVATE profit of the dairy animal owners and other factory farm owners in the park, is about \$7 million dollars a year.

Just on the basis of what's best for ALL the people, it's clearly that we maintain a pristine virgin wilderness with wildlife only, free to roam and to fly.

Please do your jobs. Protect what we the people have already said to protect, already passed legislation to protect. So Protect it. Get the farming OUT of the park. Now, it needs to go now. I don't want it there another 20 days, let alone another 20 years!!!!

Thank you.

Correspondence: No ranching or dairy ranching or farm production belongs in the Point Reyes National Seashore which is supposed to be a wilderness preserve. Please GET THE FARMING OPERATIONS AND ANIMAL RANCHING DAIRY PRODUCTION OUT OF MY PARK. This park/preserve/wilderness. It is priceless and unique. It belongs to ALL OF US. It is our precious and much-beloved PATRIMONY, to be enjoyed in its WILD state.

GET the AGRICULTURE OUT OF THE PARK.

I LOVE POINT REYES. AND ALL I can smell is shit when I go there now.

I am not kidding. There is no smell except the overwhelming STENCH of 353,000,000 MILLION POUNDS of cow EXCREMENT produced and dumped on the ground, each and every single year. It cannot be absorbed. It is polluting everything. the water and the land and the air. It is a nightmare, a man-made nightmare of private profit, Private MONEY production, over our park, that belongs to everyone. There is NO place in our Point Reyes National Seashore wilderness reserve for Animal agriculture. I oppose it going on for another 20 days, let alone another 20 YEARS. PROTECT our wilderness. DO your job. Obey the law as it was drawn up in the first place. The Congressional plan was to have a wilderness SET ASIDE for us all to enjoy. AS far as money generated, the income enjoyed by this park area and its people and their hotels and stores who sell to the tourists, etc, from all the visitors who come to see the Native WILDLIFE, is \$150,000,000 million dollars a year. These visitors have, moreover, SAID in hundreds of surveys, that they "come to see the wildlife!" NOT the dairy cows and their millions of pounds of shit piled everywhere. Moreover, these visitors include ME, and all my friends and family and co-workers and club member friends and church and community groups who LIVE RIGHT HERE:

We want a PARK, a wilderness kept in its wild state, NOT A HUGE PILE OF ANIMAL SHIT from industrial factory farming/ranching production.

The PRIVATE profit of the dairy animal owners and other factory farm owners in the park, is about \$7 million dollars a year.

Just on the basis of what's best for ALL the people, it's clearly that we maintain a pristine virgin wilderness with wildlife only, free to roam and to fly.

Please do your jobs. Protect what we the people have already said to protect, already passed legislation to protect. So Protect it. Get the farming OUT of the park. Now, it needs to go now. I don't want it there another 20 days, let alone another 20 years!!!!

Thank you.

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

Thank you for listening, Deborah

Correspondence: I strongly urge the NPS to NOT allow continued grazing of beef/cattle at the Point Reyes National Seashore. I am aghast anyone would consider Option B or any plan that would kill and/or eliminate the elk. Keep the area open to the public and maintain/preserve the park's pristine beauty.

#6761

Name: Lakhani, Nikita

Correspondence: It would be wrong to kill the elk.

#6762

Name: Wiley, Jana

Correspondence: As a native Californian who was born in the Bay Area, Point Reyes was always a highlight.

The park was intended for people to enjoy, not cattle and dairy cows to over graze and decimate. We have all tried to look beyond the cows and the bleak landscapes, but it is now time to recognize the validity of option F.

Please make your considerations carefully. There are consequences to choosing cattle over natural systems.

Correspondence: I have enjoyed Point Reyes Park for 35 yrs and did not know the ranches had been paid for their houses and land long ago and allowed to continue ranching there. Our parks should remain open to the public and return as was intended to their natural state. There is massive ranching thru out California and for us to allow it here then poison our ocean with runoff while killing native species so we can supply meat is atrocious. Make the ranchers go elsewhere as they promised years ago. California needs to keep the parks for the people!!!! Our future generations deserve beautiful open space!!!!

The elk are native to the area, killing THEM shouldn't EVEN BE CONSIDERED in dealing with this issue. Please rethink the best way to do this without killing any precious native wildlife. The cattle need to be moved elsewhere. (I personally am against animals used for meat and any product they provide by being killed, also.)

PLEASE protect these elk that belong in this area. This should not be about human greed. Thank you.

Respectfully, Jacki Wilson

Correspondence: "Dear Sir or Madame: Please do not allow the extension of leasing of public lands to cattle grazing, or other commercial agricultural pursuit. I also have heard that you are considering expanding the type of commercial farming activity, i.e., diversification of farming species, to occur on public lands at Point Reyes seashore. Instead, I urge you to adopt Alternative F of the proposals, phasing out ranching, and managing the land, water and wildlife.

The public has already paid for this land to be kept wild. Currently, the Park Service is permitting this public land, and the native species which originally inhabited it, to be despoiled and destroyed. This is a travesty, a disgrace, and is certainly outside the bounds of the legislation which is supposed to protect the land from exploitation. The Park Service is clearly in breach of the fiduciary duty it owes to the people of the US who paid for this wild land to be set apart from exploitation. And of course, it is an utter betrayal to allow the native species to suffer and die, or to be displaced, due to what may very well be illegal exploitation of this land by commercial agribusiness.

There is no saving grace to be had in falsely identifying these commercial "farms", which are despoiling both land and species, as historical and/or bucolic! You simply must stop this activity, and allow the land to be returned to the public as was intended and authorized under the law. Please adhere to your responsibility on this matter, and reverse current plans to expand these destructive practices! Do what you are charged to do under law! Very truly yours Margo Sanger

Name: Hagen, Bob

Correspondence: I enjoy the peaceful tranquility of Pt. Reyes National Seashore. It is beautiful with the terrain and wildlife. However I am troubled with the cattle and all that is involved with raising them in a National Park. The fences, gates, excrement, and trampled ground are impediments that make hiking unpleasant in such a beautiful environment. I do appreciate the Tule Elk being brought back to this area. They are a natural species that belong in Pt. Reyes. I would hope that the long term management of the Park would support the Tule Elk population and eventually eliminate the cattle.

Neither the Organic Act of 1916 nor the legislation establishing the Point Reyes Seashore, (16 USC Sec 459c) includes language that commits the NPS to ensure the commercial success of private businesses operating in

national parks. Leasing the land for ranching at Point Reyes National Seashore is discretionary. Nothing in the legislative record of the Seashore supports the myth of ranching in perpetuity. Specifically stated is that the land should be "unimpaired for future generations" and that uses be "supportive of the maximum protection, restoration, and preservation of the natural environment within the area (16USC Sec. 459c (6)(a)). Ranching, as conducted at the Point Reyes National Seashore and GGNRA, undermines this mandate.

1. Not discussed in GMPA/EIS: How and when will the NPS set goals for the "maximum protection, restoration, and preservation" of the Seashore and how will progress be measured? What is the timeframe for meeting them? What new or additional management methods will NPS implement to ensure the "maximum protection, restoration, and preservation" of the Seashore, per its legislative mandate? What are the costs of attaining "maximum protection, restoration, and preservation" and what resources has NPS allocated for this purpose?

The GMPA/EIS discusses the many and various environmental impacts of ranching to the Seashore but fails to rate the intensity of these impacts. The public can only guess at the significance of these documented impacts but has no way to know if these impacts are low, moderate or high.

2. Not described in GMPA/EIS: In addition to describing the environmental impacts of ranching to park resources, how does NPS rate those impacts? How will these impacts be mitigated and at what cost?

The economic benefits described in the GMPA/EIS point to a relatively small economic return to the County from the Seashore ranches. It cites the potential loss of fewer than 100 jobs should ranching end.

3. There is no mention in the GMPA/EIS of the working conditions of ranch workers or the notoriously sub-standard housing conditions of workers in the Seashore. Under Alternative B, how will the NPS oversee and improve the working and living conditions for ranch workers? What standards currently exist and how are they maintained?

Ranching is one of many "resources" listed in the NPS's 2019 draft Foundation Document for the Seashore. More than other historic, cultural or natural resources, ranching has been enshrined in the park, and unquestionably consumes park funds and staff resources that could address the Seashore's many unmet needs.

4. The GMPA/EIS does not provide the costs of supporting the ranches, nor the proportion of the budget/staff dedicated to ranching relative to other park resources described in the Foundation Document, which include wilderness, coastal landscapes, marine, estuarine and freshwater environments, diverse habitats and native species, maritime cultural landscapes, continuum of human use (including ranching), opportunities for inspiration and recreation and science and learning. Such analyses are pertinent to the economic impact of increasing support for ranching at the expense of other unmet needs identified for funding.

The NPS has generously subsidized ranches for decades citing its mandate to preserve "historic and cultural resources." In fact, ranching as practiced at the Seashore today bears little resemblance to historical ranching. The NPS has never interpreted the working ranches in the park for park visitors. In fact, the public is unwelcome on ranchlands that we, the public, own. The National Register of Historic Places now includes Seashore ranches. Noteworthy is that the National Register does not require active ranching-let alone on any commercial or industrial scale- as a condition of historic designation. It does, however, convey the expectation that historic structures will be preserved. The addition of modern infrastructure-such as a massive "loafing barn"-raises the concern that the NPS willingly compromises the historic integrity of the ranch districts while claiming to preserve them.

5. By what historic measure is the NPS permitting more than 5,700 beef and dairy cows to graze in the national seashore? How does new infrastructure, such as a "loafing barn," impact the historic integrity of the ranching district? Under what circumstances will the public be afforded an opportunity to comment on impacts of such "improvements" to the ranches? How will the NPS ensure the preservation of historic structures/districts in the future? How will the preservation and interpretation of historic ranches be funded? How and when will the

historic ranches be interpreted for the public? The GMPA provides no adaptive reuse plan for structures on decommissioned ranches. Repurposing historic and cultural structures for public use, interpretation and other visitor benefits needs to be analyzed in under Alternative F.

Conflicts between ranchers and members of the public, and illegal "No Trespassing" signs are well known to the Seashore management. In addition are numerous documented violations of lease agreements and park regulations on the part of ranchers. Documents obtained under FOIA cite violations including overstocking cattle; chasing elk with ATVs and dogs; lack of adequate fences; failure to pay lease fees; refusal to cooperate with NPS's wildlife and rangeland staff; illegal dumping of cattle carcasses in the park; and overall allotment of lands for hay and silage. The NPS continues to lease these public lands to these same ranchers and facilitates their entrenchment and expanded imprint on the Seashore.

6. Please explain in the GMPA/EIS whether and how ranching operations are evaluated before renewing or disallowing leases? Has the NPS ever denied a lease for violations or other failures to perform? In what way are ranchers held accountable for lease violations? How many ranches are historically and currently out of compliance? How does the NPS remedy repeat violations? With dwindling budgets and staff, how will the NPS monitor the ranches and enforce lease conditions that are becoming increasingly complex?

Some ranch residences appear unkempt, with cars and other unsightly junk visible to the public.

7. Not discussed in GMPA/EIS: How will the NPS perform its mandate of preserving the scenery of the national park on unkempt leased lands?

Dairy ranches are trampled to bare dirt with mountains of manure visible to park visitors. Dairy operations also raise concerns about animal welfare.

8. Not discussed in alternatives for continued ranching: How will the NPS perform its mandate of preserving the natural resources and scenery on dairy ranches? How does the NPS monitor the ranches to ensure animal welfare? What are the standards for the humane treatment of cattle herds and other proposed domestic livestock in the park? How are these regulations monitored and enforced?

The Seashore is suffering from Congressional budget cuts and insufficient staff.

9. How will the NPS perform the oversight and maintenance required of expanded and more complex ranching operations described in Alternative B? What impact will the demands of Alternative B have on general park maintenance, security, programs or visitor services, compared to the No Ranching, Alternative F?

Diversification of previously unauthorized livestock-pigs, sheep, goats, and up to 500 chickens on each ranch is an unprecedented change in policy. It will impact park wildlife, particularly birds and park predators. This but is insufficiently discussed in the GMPA. Ranch tours, homestays, processing facilities and farm stands for private gain have no place in a national park.

10. The GMPA/EIS fails to address the potential impacts of "diversification" to wildlife? How will these impacts be addressed, and at what cost? The GMPA/EIS is silent on this question, implying a "just trust us" approach. (When asked at the public open house, what the NPS will do should a coyote, bobcat, or fox "take" small livestock, the Seashore's wildlife biologist answered, "We'll see.") There appears to be nothing in the GMPA/EIS that addresses the loss of wildlife to guard dogs or the possible poaching of "nuisance" wildlife, (other than Tule elk). These impacts must be analyzed and considered prior to approving diversification, the benefits of which appears to accrue solely to ranchers by expanding their revenue streams. Further commercializing the park with retail outlets and overnight stay also benefits rancher' bottom line. The GMPA does not describe diversification's potential benefits to the public or to the park's natural resources and wildlife.

The land where confined Tule elk graze is visibly more diverse with native plant species than land grazed by domestic cattle. Yet, consistent in its preference for ranching over wildlife, the NPS bases its analysis on the maximum number of cattle that can be grazed based on historic conditions (presumably 5,700). It bases the threshold number of native elk (120) on what forage is left after the maximum number of cattle have had their fill. The NPS provides no analysis of the number of elk that could be sustained in the park were there no competition from cattle. Because elk roam and graze more lightly than cattle, theoretically the park could support native Tule elk in numbers greater than the 5,700 cattle it allows in the park. Reportedly, 1,000 elk historically roamed the Point Reyes peninsula.

11. The GMPA/EIS does not provide this alternative analysis: How many elk the park can sustain were no cattle present, is necessary. It would include the number of elk sustainable using historic conditions; how many elk would be needed to control the presumed proliferation of invasive plants to allow the native plants recover over time; NPS recovery goals for native plants, and an accompanying management plan and timeline; and the economic impacts of redirecting funds currently used to subsidize cattle operations to restoring native plants and wildlife.

The Organic Act mandates that the NPS preserve wildlife in the national parks. Yet, native Tule elk at Drakes Beach will be "managed" to 120 solely to accommodate the special interest of private ranching. In addition, any elk foraging on leased lands will be shot because they affect ranchers' profits.

12. Only one alternative in the GMP/EIS is consistent with the Organic Act. That is Alternative F, which would allow elk to expand their range.

The NPS has long tolerated the loss of wildlife and habitats from silage and haying operations to support the cattle operations. According to a 2015 report by Point Blue Conservation Science, "Estimating Impact of Mowing in Silage Fields at Point Reyes N.S. on Breeding Birds," spring mowing macerates ground-nesting birds and small mammals, which attracts ravens and crows. Ravens and crows congregating at the ranches are the leading cause of predation on Snowy plovers, an endangered species that nests on Seashore beaches. The NPS dedicates significant resources to protecting the plovers, but efforts are hampered by predation. Ranching is at odds with the Snowy plover recovery efforts. Current mitigation is proving insufficient and continued failure risks the loss of the endangered species.

13. Though it acknowledges that impacts, including to endangered species, would be removed were ranching discontinued, the GMPA/EIS fails to provide any analysis for its position to perpetuate and expand private ranching. How will the NPS mitigate for impacts that jeopardize the survival of a listed species, including the Snowy plover? Will species recovery efforts include exterminating other native species-raven and crow?

Restoring endangered Coho salmon is the goal of a multi-million dollar, multi-year project on upstream parkland. The survival of the last remaining Coho salmon on California's Central Coast is at risk. Yet, bacterial counts from cow-manure runoff into salmon and steelhead streams threaten the recovery of these and other aquatic species. Currently, state-issued waivers allow ranchers to pollute park streams and estuaries with manure runoff that ultimately degrades bay and marine environments. State water pollution waivers do not absolve the NPS of responsibility to minimize the sources of pollution on federal parklands.

The most effective mitigation would be to discontinue private ranching in the park, which is undermining substantial public investment in the recovery of salmon, steelhead and other aquatic species discussed in the GMPA/EIS.

14. What is the NPS's plan to prevent manure runoff from the park, clean up polluted streams and improve conditions for Coho, steelhead and other threatened aquatic species?

Following the purchase of the ranches, the federal government allowed members of the immediate family of the original ranchers to continue ranching in the park after the life estate or the original rancher expired.

15. Should the immediate family members of original ranchers decline to continue ranching, park ranches must be permanently retired and actively restored for natural resource values and visitor enjoyment.

Under no circumstances should "succession" originally intended only for multi-generational ranching, be extended to other relatives, neighbors, existing, former or current permittees, or others seeking to lease land in the Seashore for livestock grazing.

The GMPA/EIS acknowledges that GHG emissions from cattle exceed those of visitors' vehicles and that methane produced by Seashore cattle has far more potent impacts than other GHGs.

There is no discussion of the NPS's plans for mitigating the climate impacts of the cattle in the park. Impacts of climate change weigh on the park's future-including the survival of rare, threatened and endangered plants and animals. Ignoring climate change mitigation in the GMPA/EIS is unacceptable. Yet, the NPS concludes that any mitigation by Seashore ranchers for their climate impacts is entirely voluntary.

Scientists recently estimated that humanity has twelve years in which to stave off irreversible global temperature rise. The NPS's preoccupation with catering to the demands a single special interest and its political allies ignores this reality.

16. The science is clear. Amidst the stark challenge of climate change and species extinctions, how will the NPS mitigate the GHG caused by Seashore ranches? What can the NPS do to defend our parks from the trend of privatization, exploitation, and degradation by special interests? Future generations will bear the brunt of climate disruption. How will the NPS explain its decision to prop up 24 ranchers rather than stand up for future generations?

I recommend that the National Park Service implement Alternative F to the National Seashore's General Management Plan.

#6769

Name: Reese, Patricia

Correspondence: It is unacceptable that the National Park Service and the Point Reyes National Seashore management are not in compliance with the park's mission, scientific studies, or public sentiment as it seeks to perpetuate industrial dairy ranching within the park.

As both park and independent studies show, dairy farming is incompatible with preserving park native flora and fauna, promoting biodiversity, protecting surrounding marine environments, enhancing public use, and, on a broader level, addressing climate change.

That the Park is culling the native elk so as to enhance dairy farming is unconscionable. Dairy farming on Point Reyes is responsible for the poisoning of the water and land with their waste, the decimation of native plants due to grazing, the killing of native birds and mammals to maintain pastures and farm silage and hay, the propagation of the predatory crow population, and widespread erosion. All these factors ultimately impact shorebirds and marine life, including elephant seals, sea lions, sharks, plovers, and pelicans. That the park would think that the elk are problematic is an indication of how out of touch they are.

It is insulting to one's intelligence that Park management would attempt to extend dairy leases under the guise that the ranches have historical significance. Marin and Sonoma counties are full of coastal dairy farms. The primary difference between the Point Reyes ranches and those elsewhere is their adverse impact on the truly historic value of the park, namely that it is one of the last vestiges of native coastal prairie and our connection to the landscape through native populations -who lived in the area for thousands of years.

The ranches have had 50 years to comply with the park's founding legislation. Closing the Point Reyes ranches is long overdue. I will be supporting every effort to make it so.

Sincerely,

#6770

Name: Travis, Cherie

Correspondence: PLEASE DO NOT RENEW THE LEASE FOR GRAZING OF CATTLE at Point Reyes National Seashore. The National Park Service lands should be to preserve and protect wildlife and plant life and NOT to graze cows for private ranchers.

I am opposed to any proposal that would harm Tule Elk or other wildlife. I ask that the NPS discontinue any arrangement for grazing of cows and restore national park lands to be used by the public and the natural wildlife and plant life.

#6771

Name: Harden, Ronald

Correspondence: I wish to express my support for Alternative F for management of Point Reyes National Seashore, and my opposition to the National Park Service's "preferred Alternative B". Our national public lands, especially those under the National Park Service, should be kept for the benefit of all our nation's citizens, not given over to narrow interests. It is important that the Seashore be kept as habitat for the Tule Elk and all the wildlife there, for the enjoyment of our citizens as well as for the protection of the wildlife. Disruption of the natural presence of the Seashore's wildlife by barriers built for cattle is unacceptable. NPS should not sacrifice our nation's wildlife and wildlife habitat heritage.

#6772

Correspondence: It's been almost 50 years since the park was formed. Now would be a good time to steer it toward living up to its potential as the national treasure it could be. I favor Alternative F because it provides the best public use and enjoyment. Nobody comes to Pt. Reyes to see the commercial cattle operations. They come for the natural beauty of the landscape and the wildlife. Cows can be seen on the private lands on the other side of

Tomales Bay. The public lands inside the National Seashore should be reserved for the elk and other native wildlife.

#6775

Name: Gaman, Thomas

Correspondence: 23 September 2019 Dear NPS Re: Comments on Point Reyes Ranch General Management Plan Amendment DEIS

The DEIS describes and to some extent quantifies the considerable environmental effects of dairies at Point Reyes. Oddly, the preferred alternative is that with the greatest impact. There is also major destruction of the road from the many and frequent heavy vehicles that service the dairies. Public investments in these roads obviously subsidize ranching operations. The major access roads do not seem to be addressed in the DEIS because they are apparently outside of the planning area, but they nonetheless are impacted. The park portion of Sir Francis Drake Blvd was obviously not built for these heavy vehicles, and the transportation impacts and public safety issues, including park access communities, should be addressed.

Row cropping, sheep and goats graze impacts should be fully evaluated. This and other new uses appear to be expanded private commercial uses of public park lands and I do not understand why these types of uses are proposed.

Transit by foot through in the vicinity of the Home Ranch has been restricted for many years and results in lack of connectivity in the area of the Estero Trail. A circular route should provide public access and could be arranged on existing roads and trails. Similarly barbed-wire fencing seems ubiquitous in the park. While the DEIS notes that visitors often use these ranchlands for walking, there is no provision, such as stiles, that will enable walkers to get over fences barring their way on these public footpaths.

In spite of the DEISs claim that many of the historic buildings are in fair condition, externally most appear to be in very poor condition, lacking all but the most basic maintenance. The DEIS should inform decisionmakers on the necessary specific improvements and the shared public/private ranch maintenance responsibilities. Air and water quality and climate change are issues. Other than acknowledging the many impacts of dairy on air and water quality, the DEIS does not seem to make much effort to limit the extent of those impacts. Manure management systems, digesters, and other facilities can reduce emissions and provide fuels that provide energy for ranching. The effects of climate change are not discussed at all. The bishop pine forests within the pastoral area are dying. Also oak woodlands are disappearing in the Olema Valley. The park should provide for protection and restoration of forests, woodlands and heritage trees.

There seems to be no detailed discussion of the economics of ranching. The DEIS does state that PRNS leases contribute up to 0.03% to the local economy. The DEIS should include a section on agricultural economics. Ranches at Point Reyes obviously have a difficult time competing with the large agribusiness operations in other parts of California. The DEIS seems to indicate that when ranch families abandon or otherwise terminate, leases can subsequently be issued to new non-related lessees. Individual new ranch leases seem to be counter to the intent of Point Reyes National Seashore, a suburban coastal park receiving heavy recreational use. My understanding was the original intent of the enabling legislation was to assure the families who then owned these lands that they would be able to remain ranching on these properties, not that ranching was to become a permanent feature of the national park.

Alt B, the new Ranchland Zone 28,700 acres seems to be the enhanced business as usual alternative. Some form of Alternative E could gradually eliminate dairying here while preserving beef cattle and it seems to make most sense in the short to near term. Thank you for considering my comments.

Tom Gaman

#6776

Name: N/A, N/A

Correspondence: Please protect all of the native wildlife in point Reyes like Tule Elk from being killed to promote cattle grazing.

#6777

Name: Bouley, Kenneth

Correspondence: Since I am genuinely concerned about the future and health of Point Reyes National Seashore, and the environment more generally, I read the General Management Plan Amendment Draft Environmental Impact Statement very carefully and took seriously the instructions regarding what constitutes a substantive comment. I own a home in Inverness and my small lot borders park land. My wife and I visit the Park regularly, to hike and take pictures. We enjoy the trails and beaches, and especially the birds and other wildlife. I am not in a position to question the accuracy of the EIS, or its assumptions or methodology. I have no new information and don't expect my comments to result in revisions to the existing alternatives.

However, I do question the adequacy of the document on the grounds that it has inexplicably expressed a plainly irresponsible preference among the alternatives included. I also have three additional alternatives which I hope will be considered. Whereas the Environmental Consequences section says:

- Soils - "Under alternative F, cessation of ranching would eliminate all impacts on soils associated with ranching activities."
- Water Quality - "Under alternative F, impacts on water quality would be noticeable, long term, and beneficial because ranching activities would be phased out across the entire planning area."
- Vegetation – "Under alternatives D and F, vegetation composition would likely change in areas where ranching is removed. In these areas, while the cessation of grazing would eliminate adverse impacts such as high-intensity-use areas...impacts on other federally listed plants that occur in certain habitat, such as dune or serpentine habitat, may be beneficial because the potential for cattle to trample individual plants would be reduced... Elk management actions under alternatives B, C, and D could result in highly localized impacts because of trampling." And although this section indicates that "Eliminating livestock grazing could also adversely affect several federally listed plants that occur in coastal grassland because grazing is the most effective tool for promoting their persistence with respect to competition with other non-native grassland species," it does so without recognizing the role grazing plays in spreading the invasive species in the first place.
- Wildlife – "Where cessation of grazing occurs on lands under alternatives D and F, impacts on wildlife related to dairy and beef ranching would cease, including disturbance, trampling, erosion, and nutrient inputs...Alternatives E and F would eliminate impacts of forage production, manure spreading, and diversification and would reduce high-intensity-use areas compared to existing conditions."
- Tule Elk – "Alternative F would eliminate impacts on elk related to hazing and fencing and would allow for the free-range population to expand across the planning area." [And would not call for the lethal removal of any elk.]
- Air Quality – "Alternative F would phase out ranching, ending ranching-related emissions of criteria pollutants."

The document nonetheless identifies option B (having none of the benefits or alleviations listed above) as the preferred alternative. But why?? It is a non-sequitur, a blatant, political path-of-least-resistance, a conscienceless abdication of leadership responsibility, and an abject breach of public trust.

Even setting aside the morally indefensible "removal" and "management" of the tule elk (which I believe much of the public is unwilling to do), the perpetuation and in fact enshrining of the public sponsorship of private-for-

profit degradation of the environment, is shortsighted, negligent, and mortgages the future of generations who might otherwise be inspired by a braver, more principled recommendation.

For example, what does it do to the resolve of a young person to forego convenience for a greener choice (in job commuting, in diet, in consumer choice, etc.) to see a federal agency squander an opportunity to make a difference exponentially greater than one's individual choices could ever accrue? In other words, why should I reduce, reuse, recycle, or bicycle to work, etc., if the National Park Service cannot even decrease methane emissions on its own lands (our own lands)?

The Park Service proposes to kill native tule elk and haze them off 18,000 acres of the park to allow private ranchers' cattle sole access to these public lands. Under this plan, enough tule elk would be killed to establish an arbitrary 120-member population threshold for the Drakes Beach herd. This free-roaming herd currently has 124 elk and has been slowly expanding. This is the only National Park where tule elk occur, and the reintroduction of tule elk to the Point Reyes peninsula has so far been a success story for the conservation of native species and restoring ecosystems. This proposed alternative is not in keeping with the mission of the National Park Service and blatantly undermines the success of the tule elk reintroduction – a program that has possibly prevented the extinction of the species. Why would the NPS do anything to undermine this success?

Twenty-four families and 63 jobs do not justify yet more degradation of everyone's air, soil, and water quality and the sacrifice via opportunity cost of potential healthy open space, with its benefits to people and non-human nature alike. Hopefully no arguments around "balance" – say between tourism and agriculture, or between nature and people, dampen any of the foregoing. Surely anyone associated with the National Park system realizes that, especially in the face of the intractable and increasingly insurmountable climate crisis, any regard for "balance" – real balance long since in our rear view mirror – mandates aggressive advocacy of wilderness and curtailment of industries like ranching, forestry, mining, trapping, et al, which are only anachronistically covered by the veneer of tradition and romanticism. The baseline has shifted, and plan B would shift it again.

Here is a story from August 8, 2019, the opening day of the public comment period for this EIS. "Plant-based diet can fight climate change – UN" (<https://www.bbc.com/news/science-environment-49238749>). It is very, very easy to discover similar studies and observations comprising the emerged (not emerging) scientific consensus that climate change is grave and livestock agriculture is heavily implicated.

So, the urgency of the degradation of the environment, and especially the climate crisis, is not in question (since I started drafting these comments, the Amazon has caught fire.) The best alternative for the health of the environment is not in question, per the EIS itself. Why would the Park Service recommend any other option? Presumably it is bending to local and congressional pressure, the latter expressed baldly in the cited Joint Explanatory Statement from last February, which states "The Conferees . . . expect the Service to make every effort to finalize a General Management Plan Amendment that continues these historic activities."

But the Joint Explanatory Statement also describes ranching and dairying as ecologically "important." This of course is in direct contradiction to the findings of the EIS itself (unless "important" is understood as endorsement-neutral, the way coal mines are "important" to air quality and slavery was "important" to the economy.)

Given this contradiction, and given the cited Enabling Legislations which in 1962 required the NPS to "preserve the recreation area, as far as possible, in its natural setting, and protect it from development and uses which would destroy the scenic beauty and natural character of the area" and in 1976 to "administer Point Reyes without impairment of its natural values, in a manner which provides for such recreational, educational, historic preservation, interpretation, and scientific research opportunities as are consistent with, and based upon, and supportive of the maximum protection, restoration, and preservation of the natural environment within the area," the Park's preferred option clearly should be F, not B.

The 1962 and 1972 verbiage represent legal mandates. The 1978 amendments merely allow the Park to reissue leases (they don't require or even recommend it). The 2019 Joint Explanatory Statement is not a legally binding directive and whereas it is supposed to clarify earlier intent, it does so by contradicting it.

Furthermore, whereas the plan includes vague aspirational management guidelines to protect natural resources from damage from cattle grazing and ranching, the Park Service has been unable and/or unwilling to enforce many of the current grazing lease conditions. The preferred alternative would authorize excessive levels of cattle stocking that have already led to overgrazing, resulting in significant soil erosion, degradation of water quality, damage to endangered species habitat and the spread of invasive plants in the park. This is clearly not "supportive of the maximum protection, restoration, and preservation of the natural environment." It's just not.

Contrast the damaging extension and expansion of ranching with other actions taken by the Park that are in keeping with its charter. For example, when elephant seal numbers rose such that larger areas of beaches are occasionally occupied by them, the Park closes those beaches to tourists. Where endangered Snowy Plovers are known to nest, the park ropes off those areas to tourists and their dogs. But where native tule elk transgress on a ranch operation, the park's preferred approach is lethal removal.

Besides alternative B not having the many significant benefits anticipated under alternative F, there is a certain major worry it brings. As far as I am aware, resident predators like coyotes and bobcats do not threaten the livestock in the ranches and dairies. However, they certainly will be tempted by chickens and pigs that B would allow. Weasels, badgers, and long-tailed weasels may threaten chickens. Coyotes may be attracted to sheep and goats, and the few mountain lions that are known to range into the park may be attracted to all these proposed new livestock. As far as I know, there are no baseline studies or surveys on predator numbers and distributions in the Park. These should be pre-requisites to even consider diversifying livestock. And although alternative B is explicit that "no predator management would be allowed," it is gullible to think that'll do, that there won't be conflict between these livestock and the wild predators in the park. The history of livestock in California and the West in general is that of devastation of coyotes, wolves and mountain lions via depredation permits (not to mention the toll of poisons and traps and non-agency, vigilante predator removal.) If it is expected that depredation permits will never be issued, that enclosures and guard animals will absolutely prevent depredation, or that ranchers will passively accept financial losses to whatever depredation does occur, this is naive. After all, even though the current leases explicitly mention that occasional damage from wildlife should be expected (e.g. Section 17, Wildlife Protection, Rossi lease, AGR 8530-1000-3019), this hasn't thwarted momentum towards plans that will involve killing large numbers of animals. While the science regarding the disruptive consequences of predator removal to ecosystems' health is clear, the park is already sliding down the slippery slope of killing wildlife to protect private profit. And if you can kill scores of native tule elk to protect cattle, surely you can kill a few coyotes and long-tailed weasels to protect chickens and pigs. If the ranches can convince the Park to expand the damaging commercial use of the park lands in direct contradiction to its charter, how long before they convince it to "remove" a few "nuisance" bobcats?

Those are my comments on the EIS as it stands, including its preferred alternative. Here are additional alternatives that I hope may be considered:

G – offer renewed leases to existing beef and dairy ranching in PRNS at market rates per acre and valuated associated services, and use the additional revenues to mitigate impacts of the same and enhance wilderness quality in the park and nearby; these activities to include increased oversight of existing ranching operations to ensure compliance to existing and additional environmental rules. If the carrying capacity of the land is not to be exceeded, additional rules should prohibit the import of water, food or other operational materials ongoing to sustain the livestock. Ranches in PRNS pay less than half of fair market cost to ranch there. (Link)

H - offer renewed leases to existing beef and dairy ranching in PRNS at real costs per acre and valuated associated services and use the additional revenues to mitigate impacts of the same and enhance wilderness quality in the park and nearby. Real costs would include opportunity costs (i.e. market rates for the lease of public lands) as well as public costs (what industry calls "externalized" costs) associated with soil, water, and air quality impacts. This is

alternative G with per acre rate adjusted higher according to requisite analysis of fully loaded cost to the public for the ill effects caused by beef/dairy ranching. It may be difficult to quantify those costs, but appraisals and compromises could be made, and anyway the ranches are not going to agree to this if option G, which is cheaper by definition, is on offer – they could always throw their lot into the free market.

I – buy out the ranches to clear the way for alternative F. Anticipating that the opposition to alternative F (or really, C on up, including my G and H) will be from the ranches themselves and their promoters, the approach here is to ask the commercial stakeholders to simply name their price. This may be their subsurface plan anyway, although in a hypothetical negotiation, the Park's stated preference for alternative B certainly hinders the park and the public (and the elk, and the environment on the whole).

Opposition to this alternative would likely come from environmental groups and/or, who may awkwardly point out that the ranches were already bought out, some time ago. The 1962 Enabling Legislation after all states, "Except for property which the Secretary specifically determines is needed for interpretive or resources management purposes of the seashore, the owner of improved property or of agricultural property . . . may, as a condition of such acquisition, retain for himself and his or her heirs and assigns a right of use and occupancy for a definite term of not more than twenty-five years, or, in lieu thereof, for a term ending at the death of the owner or the death of his or her spouse, whichever is later."

But the difference between a lucrative (second) buyout and a transition cost mitigation is a quantitative one, a gray question, where views will differ. In the end, to get things done, if the guiding principle is "everyone has their price," then so be it. Also, it should be noted that removing ranching from the Park may cause financial difficulties for current ranch and dairy employees. Money should be allocated to mitigate these difficulties, and transition the and employees to other jobs with requisite services like job placement, training, etc. Funds to buy out the ranches could initially be raised through entrance fees to PRNS. As a local who enters the park frequently, I can say that although I enjoy the absence of a gate at the park's entrance, I would gladly stop, wait, and pay if once I entered, I enjoyed a landscape free of blights, eyesores, and stench perpetrated by the ranches and dairies. Of course, there may be a monetary shortfall here, and it may take creative financial structuring to achieve. But if it is an accounting problem, let us treat it as such.

In Summary, • I believe preferred alternative B is an indefensible choice even accepting prima facie all data and conclusions in the EIS. • Alternative B is clearly not "supportive of the maximum protection, restoration, and preservation of the natural environment," meaning the Park intends to violate its legally binding charter. • The GMP EIS should include a Justification section, explaining to the public why the Park is expressing the preference it is. • Option F is the environmentally responsible option and something very much like it should be preferred (and then enacted) for the sake of wildlife and future human generations.

Sincerely, Kenneth Bouley

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#6779

Name: Robertson , Linda

Correspondence: Dear NPS -

Please discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This area has been damaged because of it, posing a threat to the environment and local wildlife and it should be protected and used to serve the public good, not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife. Stop supporting the ranching industry. Please adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and the wildlife that belongs there.

Correspondence: Please do not renew leases for cattle grazing. Let native species live naturally in the environment.

#6781

Name: Fleming, Tony

Correspondence: The proposed plan for expanding ranching at Pt Reyes Natl Seashore should be trashed! The ranches should be completely eliminated by the NPS as was intended. Cattle ranching is one of the main causes of Climate Change. The ranching fences should all be torn out and the Tule Elk and wildlife set free on the peninsula. The NPS should protect all wild species and land from human greed. I've been going to Pt Reyes since the 1960's and am still waiting for the change as President Kennedy and Congress wanted. Thank You-

Correspondence: As a member of the California-based international animal protection nonprofit organization In Defense of Animals with over 250,000 supporters, I oppose the National Park Service plan to kill native Tule elk, grow commercial crops, and permit ranchers to add chickens, turkeys, sheep, pigs, and goats to their exploitative operations. For this reason, I support Alternative F.

As national park land, this property was specifically set aside to protect, restore, and preserve the natural environment including the wild animals who live there. The original intention was to phase out dairy and cattle ranching, not add more crops or animals to increase ranching profits.

The proposed plan does not address the damage from grazing, including water-quality degradation and soil erosion. Also, adding new crops will create more conflicts with native wild animals.

Please abandon this inhumane and destructive plan by selecting Alternative F. I urge you to restore the Seashore's Pastoral Zone for wild animal habitat and repurpose historic ranch buildings for scientific research, interpretation, and public education.

#6783

Correspondence: I find the use of private lands by private ranching to be a total misuse of the Federal Government's mandate to manage public lands in the best interest of the citizens of the United States. It is imperative that proposition F is implemented as soon as possible. The time limit for grazing cattle at Point Reyes ran out decades ago and the land should be managed in order to introduce indigenous species such as Tule Elk and

not spoiled through industrial farming. If grazing leases are extended it will be against the wishes of the majority of people. It is time the many are put ahead of the wealthy few.

Correspondence: I think the NPS-preferred option overlooks the exceptionalism of the Drakes Beach area. It's a place for so many animals that almost became extinct, and I get to see some of them on almost every visit - elephant seals, whales, murrelets, and tule elk - and sometimes peregrines, river otters, mt lions, and others. Not to mention the outstanding vistas, flora, and other fauna. Cows completely do not belong in that wild place. It's like having cows instead of bison in core Yellowstone. Plus all the damage they do to the ecosystem. (BTW, after all these years, I still see dark brown cow poop run-off blatantly flowing right across Drakes Beach into the Bay just a few hundred feet from the Visitor Center, and into the pond by its parking lot.) The ranchers have long known they were phasing out - until the rules got changed by - people who have never or only rarely been to Pt Reyes? Actually, there could be a small number of bovines in the Drakes Beach area - but, in a nod to the Pleistocene grasslands - make them long-horned cattle, yaks, or bison. Ranching history has been adequately preserved at Pierce Point Ranch, please make that your ranching focus. Also, regarding diseases - as the elk most likely contracted them from the cattle, that should weigh in favor of the elk.

Correspondence: Point Reyes National Seashore is supposed to be managed under the Point Reyes Act for "maximum protection, restoration, and preservation of the natural environment." There's no mandate for prioritizing commercial agricultural leases on these public lands. • Natural values, native wildlife, public access and enjoyment should take priority over commercial activities at Point Reyes. • Tule elk are an important part of the landscape at Point Reyes. Their recovery is a result of successful native ecosystem restoration, which is a key element of the Park Service's mission. It's taken a lot of time, money and effort to restore tule elk to Point Reyes, the only national park where they live. Tule elk should be allowed to roam free and forage in the park - not shot, removed, fenced or treated as problem animals. • Right now the Point Reyes ranches enjoy not only subsidized grazing fees and housing, but also taxpayer-funded infrastructure and road improvements, and publicly funded projects. But commercial activities at Point Reyes should be required to accommodate native wildlife - not the other way around. • The Park Service shouldn't allow any new agricultural activities at Point Reyes. Planting artichokes or other row crops will attract birds. And introducing sheep, goats, pigs or chickens will attract native predators such as coyotes, bobcats and foxes. Expanded ranching would only create new wildlife conflicts. • Cattle ranching should only be allowed if it's consistent with preserving the natural environment. And agricultural activities such as mowing shouldn't be allowed in park areas where they harm endangered species or wildlife habitat, impair water quality, cause excessive erosion or spread invasive plants/diseases. • Cattle are the seashore's primary source of greenhouse gases. So the Park Service's preferred alternative is inconsistent with its own "Climate Friendly Parks

Correspondence: Pt. Reyes is a precious preserve in Northern California. Please do not allow the extension of leasing of public lands to cattle grazing, or other commercial agricultural pursuit. I also have heard that you are considering expanding the type of commercial farming activity, i.e., diversification of farming species, to occur on public lands at Point Reyes seashore. Instead, I urge you to adopt Alternative F of the proposals, phasing out ranching, and managing the land, water and wildlife.

#6794

Name: Pratt, Ruth

Correspondence: Specific Comments:

The proposed General Management Plan Amendment (GMPA) and Draft EIS (DEIS) are inadequate because they do not include a least environmentally damaging and fair alternative and, therefore, should be revised. When Point Reyes National Seashore (PRNS) was established, the ranchers were compensated for their land with the agreement they could remain in the park for their lifetime or 25 years. At that time, ranchers acknowledged that future ranching was not compatible with public land ownership. Since then, leases have been extended to ranchers' offspring until they chose to discontinue ranching. Therefore, I recommend Alternative F (Discontinue Ranching), the only alternative which honors the history of these agreements and protects the natural resource values that PRNS was created to preserve, including Tule Elk. However, a 5-year phase-out of these agreements may not be feasible. To address this issue, the revised GMPA and DEIS should include a preferred alternative that discontinues ranching and explains whether certain landowners may need more than 5 years to phase out their operations. This would allow the gradual phase-out of historic ranches as intended and give existing leaseholders time to plan relocation, as was done with the Drakes Bay Oyster Company. The revised Alternative F should also clearly explain what "visitor opportunities" would be allowed and associated impacts to natural resources.

The DEIS acknowledges that the Seashore's land, water and wildlife would benefit if ranching were to cease but does not include measures to protect fish and wildlife resources from ranching's impacts or mitigation for habitat loss from cattle grazing or crop production. The revised GMPA and DEIS should include a discussion of the management costs and restoration needs at PRNS, including waterways, its historical coastal prairie grasslands, and other habitats.

To acknowledge the historical and cultural heritage of ranching at PRNS, the revised documents should focus on preservation of (and interpretive panels at) historic buildings.

General Comments:

Alternative B (NPS preferred alternative) would cause unacceptable adverse impacts to habitat for fish and wildlife resources of the PRNS. Today, ranches and grazing land take up about one-third of the Park's 75,000 acres. These activities cause loss of native plants, polluted runoff to streams which support endangered coho salmon and threatened steelhead trout, and fencing of migratory corridors for local wildlife species. It would continue lease terms up to 20 years, allow more intensive agriculture and commercial livestock with "diversification" (pigs, goats, sheep and row crops), and allow killing of the Tule Elk herd beyond a population of 120. Impacts to natural resources from these diversification activities should be clearly explained in the revised GMPA and DEIS.

Alternative C (removal of elk) is outrageous and would violate the 1962 enabling legislation of the PRNS to save and preserve this iconic and legally-protected species for future generations.

Alternatives D and E (reduced ranching) would allow diversification and 20-year leases; Alternative E would also allow the six active dairy ranches to convert to beef which is unacceptable. As you know, the existential threat of our time is climate change. Methane from both dairy and cattle ranches are huge contributors to global warming. And it is imperative that we convert to a plant-based diet, as recommended by the 2019 International Climate Change report. The Trump administration has lodged egregious assaults on our environment, including the EPA, our national parks, and most recently the Endangered Species Act. And I believe it is hypocritical for Congressman Huffman (Vice Ranking Member of the House of Representatives Natural Resources Committee) to say he supports the "Green New Deal" legislation currently being considered by the U.S. House of Representatives while also sponsoring H.R. 6687 to extend the PRNS ranching leases to 20 years. Please do not let politics get in the way of the NPS enabling legislation (Organic Act of 1916) to leave our parklands unimpaired for the enjoyment of future generations.

Correspondence: Dear Park Service Members,

Please do not allow profit and exploitation take over life. Nature cannot survive without the native wildlife that make it possible. And human beings cannot survive without mother nature. Today, eating other animals and their secretions are unnecessary and harmful. Tourism would generate more funds while being sustainable and respectful by maintaining natural relationships. As livestock is the leading cause of green house emissions- --far outnumbering all the world's transportation sector.

With 7.5 billion human beings and only continuing to rise, what we consume must be ecologically sustainable and ethically justifiable.

Kindness toward fellow non- human animals will only increase kindness toward fellow humans. One does not have to love another animal but to respect that their life matters to them.

Take much care of each other.

M

Correspondence: Animal agriculture is out of control and destroying the habitats of wild animals around the globe. Farmers and consumers do not pay the external environmental costs-please stop them from ruining more public lands.

I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#6797

Name: N/A, Prachi

Correspondence: I urge you to select Alternative F for the following reasons:

**Diversification:** This is included in all the alternatives except No Action (A) and No Ranching (F). It allows each rancher to add crops and small livestock-pigs, sheep, goats, and up to 500 chickens-to their operations. There is no discussion of the impacts of this expanded agriculture on the park's wildlife or natural resources, such as what happens should park predators take chickens, lambs or other small livestock. The plan takes a "wait and see" approach.

**Historic and cultural resources:** The NPS cites its obligation to preserve historic and cultural resources. The ranch buildings and infrastructure are historic, not the cows. It's neither required nor necessary to permit 6,000 cattle in the park or allow additional agriculture that never before existed at the Seashore in order to preserve the Seashore's history. This can be done through interpretation. Interpretation of ranching has never been conducted at the Seashore-historic, cultural or otherwise, other than at Pierce Point, a non-working ranch at Tomales Point. The public has historically been unwelcome at the ranches, some of which have posted No Trespassing signs on land that belongs to the public. Preserving and interpreting historic buildings and perhaps a cow to demonstrate how ranches historically operated, would be sufficient, thereby ending the environmental damage, climate impacts, and other public costs that commercial ranching in the Seashore exacts today.

**Succession:** The plan proposes changes regarding "succession" that would, in effect, permanently commit this national park to ranching. Allowing for "multi-generational ranching" was an early accommodation to the ranchers who sold their land for the park. In addition to generous compensation (the equivalent of \$340 million in today's dollars), ranchers were allowed to lease back their land for 25 years or their lifetime. The NPS later agreed to allow ranchers' offspring to stay on in the park as long as they continued ranching. After that, the ranches would be retired. In its "preferred alternative" (B) the NPS will not retire the ranches when the offspring of the ranchers retire. Instead, it will offer those leases to other relatives; and if they decline, to neighbors; and if they decline, to anyone who wants to lease land in the park-no prior connection to the Seashore would be required.

**Mitigation and Restoration:** More than a century of ceaseless cattle grazing has altered and diminished the natural ecosystems of the park. The EIS notes impacts to plant and animal species and their habitat from cattle grazing; water pollution from cattle manure runoff; and greenhouse gases and air pollution from cattle operations. None of the alternatives discusses the costs or timeline for mitigating these impacts. None of the alternatives considers the Seashore's restoration-what it might cost; where the NPS might focus attention; what the benefits would be to wildlife, water, climate change mitigation, or public visitation and use.

**Organic vs Sustainable:** "Organic" certifies that ranchers don't use synthetic fertilizers, pesticides, antibiotics, or hormones. Sustainable agriculture is not a certification. It is a way of life that sustains the productivity of the land for future generations and minimizes damage to the environment. Manure runoff polluting the only marine wilderness south of Alaska is not sustainable. Illegally disposing of cattle carcasses around the national seashore is not sustainable. Allowing cattle to give elk and other wildlife life-threatening diseases is not sustainable. Subsidizing and endorsing methane-producing confined animal feeding operations (CAFOs) in an era of climate change is not sustainable. Trucking hay for hundreds of miles as a supplemental feed, because pastures are overstocked and overgrazed, is not sustainable. And yet these practices continue. The cost of ranching to our park. The National Park Service has not provided any information on the dollar amount or portion of its budget that goes to ranching-related expenses. Ranching places increasing demands on dwindling park budgets, while park improvements and a backlog of maintenance, along with public programs and interpretation, go unfunded. Meanwhile, scarce resources go to support 24 ranchers operating in the Seashore, including killing wildlife to benefit their operations. Ranching's environmental impacts have an untallied economic impact on the Seashore. Internal Park Service memos indicate monitoring the ranches for lease compliance and environmental damages already places outsized demands on the Seashore's staff and budget. The NPS has failed to enforce lease

agreements when leases are violated. Can we expect that expanded agricultural practices will be met with responsible oversight with no expansion of budget to enforce these more complex leases?

Subsidizing Seashore ranchers: The NPS mission does not include guaranteeing commercial operators a living. Yet, every alternative except No Action (A) and No Ranching (F) allows “diversification” for the purpose of shoring up the ranchers’ bottom line. There is no discussion of diversification impacts to the park. Ranchers in the Seashore already have a competitive advantage over ranches outside the park. Seashore ranchers benefit from discounted grazing fees, below-market-rate housing, and maintenance and improvements to roads, homes, and farm buildings covered at public expense. Seashore ranches pay no property taxes.

Climate change: Cattle are the leading source of greenhouse gases at the Seashore. Methane, produced by cattle, is a greenhouse gas 25x-100x worse than carbon dioxide. There is no discussion of mitigation for cattle’s impacts to the climate in any of the NPS’s ranching alternatives.

Wildlife impacts: Removing native Tule elk from the park to benefit the ranchers is built into four of the NPS alternatives, including the NPS’s “preferred alternative.” The EIS says that the Seashore’s land, water and wildlife would benefit were ranching to “cease.” But there is no plan for protecting wildlife from ranching’s impacts or mitigating habitat loss from cattle grazing or growing crops. Other than killing Tule elk, there is no discussion of avoiding wildlife conflicts.

Kind Regards, Tony

Name: Stipetic, Jennifer

Correspondence: To Whom It May Concern,

I am writing to you in opposition to the proposed plan of Government Funded killing of Point Reyes National Seashore Tule Elk. I am deeply disturbed by the Park Service even considering the proposal to kill 15 Elk each year at the request of private industry in order for these ranchers to profit from public lands. These parks are for wildlife to roam freely in a natural ecosystem, it is reckless to destroy these ecosystems with cows, sheep and other farm animals. Currently, the Point Reyes ranches enjoy subsidized grazing and housing as well as tax-payer funded infrastructure and road improvements, it should be the ranchers that accommodate the wildlife, not the other way around. The public should not be asked to fund the destruction of the park. Natural values, wildlife and public access to enjoy nature should take priority over any agricultural activities and I hope that this request by the ranches to kill the elk and expand their agricultural businesses at tax-payer expense be enthusiastically rejected.

Thank you, Jennifer Stipetic

Correspondence: I hope that the dairy farms on Point Reyes National Seashore will be phased out as soon as possible. The leases should have been terminated 10 years after the park was formed. Instead, the dairy farms have continued to pollute nearby waters and and the cattle have continued to spread disease.

There are plenty of dairy farms in California. The National Seashore belongs to the citizens, not to individual dairy farmers. The park should be just that... a park....not a for-profit dairy farm. We have the right to clean, natural environment at Point Reyes, with adequate space for wild animals. Why should Point Reyes be the only national park that has ranches within it?

#6812

Name: Smith, Douglas

Correspondence: Thank you for the opportunity to comment unpark planning with regards to point Reyes national seashore ranching and wildlands.

My family and I strongly support plan f. and we strongly oppose all other plans. It is unconscionable to us that our national seashore would even consider diversifying agricultural interest and killing our elk in support of agricultural interest. This is not the spirit of this place. we purchased these ranches for tens of millions of dollars in the 1960s. The intention was to return the land to wild status after the families who are currently ranching ended there interest. What you are trying to do goes against the spirit of the law, the spirit of the people and their greater good. And the spirit of nature herself.

Absolutely opposed the killing of any elk. Absolutely opposed the diversification of animals and crops on ranches. Absolutely opposed allowing family ranch has to be purchased by outside interest. Absolutely opposed the anything that would further degrade our nature park. It is suffering as it is now with runoff from cows, over grazing and the stench of livestock.

Also my family and I are appalled that the preferred plan would allow camping in the very delicate drakes estero. I have spent many hours cleaning up after the oyster company thinking that it was returning to a wild land as it should be. And now we are putting tourists into this sensitive area?! And killing our beautiful elk?

Plan F. Plan F for wildlife!

Name: Huaco , Valerie

Correspondence: Dear Sir or Madame: Please do not allow the extension of leasing of public lands to cattle grazing, or other commercial agricultural pursuit. I also have heard that you are considering expanding the type of commercial farming activity, i.e., diversification of farming species, to occur on public lands at Point Reyes seashore. Instead, I urge you to adopt Alternative F of the proposals, phasing out ranching, and managing the land, water and wildlife.

The public has already paid for this land to be kept wild. Currently, the Park Service is permitting this public land, and the native species which originally inhabited it, to be despoiled and destroyed. This is a travesty, a disgrace, and is certainly outside the bounds of the legislation which is supposed to protect the land from exploitation. The Park Service is clearly in breach of the fiduciary duty it owes to the people of the US who paid for this wild land to be set apart from exploitation. And of course, it is an utter betrayal to allow the native species to suffer and die, or to be displaced, due to what may very well be illegal exploitation of this land by commercial agribusiness.

There is no saving grace to be had in falsely identifying these commercial "farms", which are despoiling both land and species, as historical and/or bucolic! You simply must stop this activity, and allow the land to be returned to the public as was intended and authorized under the law. Please adhere to your responsibility on this matter, and reverse current plans to expand these destructive practices! Do what you are charged to do under law! Very truly yours, Valerie Huaco

Name: Rodriguez, Kristin

Correspondence: Please stop the cattle grazing on public lands. They pose a threat to the environment and cattle ranching often impacts local wildlife by displacing wild animals and ranchers killing predators. Manure from cows can be an environment hazard and cause issues with water safety and pollution. Meat production is a major contributor to global warming and I do not want public lands or funds continuing to support these practices.

I took a trip to the ocean earlier this year and I was so thrilled to see the Tule Elk grazing in fields. They were magnificent. Not so thrilled to see cattle everywhere and funky fencing to keep them contained. It disrupted the view and made it seem less wild and free.

Please protect wildlife, the environment, and the scenic views by stopping cattle ranching on public lands.

#6821

Name: Hoffman, Jeff

Correspondence: I have visited Point Reyes National Seashore (Seashore) on multiple occasions. While the natural portions of the Seashore are beautiful and wonderful, the portions that contain cattle are like a wasteland, devoid of most native life with the vegetation almost completely removed.

Your Environmental Impact Statement (EIS) failed to adequately many of the substantial negative environmental impacts of allowing cattle to graze and otherwise be present in the Point Reyes National Seashore. The following are some of those impacts. These impacts apply specifically to the Seashore, in addition to applying to the entire western U.S.

Cattle are non-native animals and displace the native ungulates by their mere presence. This loss of native ungulates is per se a significant negative environmental impact.

Cattle destroy native grasses in the western U.S. because they overgraze the land. Western grasses have horizontal root systems and did not evolve with heavy grazing. Cattle pull western grasses out by the roots, killing them and not allowing them to grow back. Moreover, while native predators keep native ungulates moving, cattle remain in the same places for long periods of time and return to them repeatedly. Again, the land did not evolve with this kind of ungulate behavior and forcing it upon the land causes substantial harm. These direct harms to the soil and the plants that depend on it are substantial negative environmental impacts.

The ranchers want to kill native elk in order to maintain or increase their cattle. This direct killing of native elk, who exist in very small numbers compared to their historical pre-Colombian numbers, is substantial negative environmental impact per se and by definition.

Ranchers kill native plants and grasses and replace them with non-native ones for their cattle to graze. Killing and replacing native plants is a substantial negative environmental impact harm to the plants and their ecosystems per se and by definition, and also one to the native animals who depend on those plants.

Cattle are much heavier than the native animals that evolved in the Seashore and compact the land unnaturally. This substantial negative environmental impact harms the soil and the plants that grow on it.

The manure from the cattle in the Seashore is also polluting the water in the area with toxic microorganisms. This pollution harms the fish and marine mammals in the area and is thus a substantial negative environmental impact.

I visit Point Reyes Seashore to enjoy the land, water, and native plants and animals. The cattle and the substantial environmental harms that they have caused and are still causing is a very negative experience when I visit.

I therefore urge you to choose Alternative F, which would remove all of the cattle from the Seashore. The ranchers still leasing OUR land in the Seashore have been very well paid for our land, and they have no right to continue to destroy it. Their cattle should be removed completely and as soon as possible.

Correspondence: By Forrest Galt

The dairy ranches out at Point Reyes were started in the 1850s, a time when California was a new land for settlers to take whatever they wanted at whatever the environmental cost, without thought of preservation.

Clear cutting of forests, horrific environmentally damaging mining tactics, hunting of animals to near extinction were commonplace. Now the Central Valley, East Bay, and Santa Clara valleys are completely overdeveloped with little preservation of nature and home to 10 million people and thousands of businesses. It is a tragic mess that will only get worse. The population needs and must have a sacred place in nature, a vast expanse to enjoy and give hope to the future. That place is Point Reyes National Seashore.

The Press Democrat article on August 9, 2019 Elk Plan Revives Debate indicates that 5,400 beef and dairy cattle enjoy 26,000 federally owned acres complete with barbed wire fencing. This is prime California coastal real estate, so unique to the entire California coast and still accessible to millions of people within a 1 - 3-hour drive. The article indicated that 2.5 million people visited Point Reyes National Seashore last year. Park Superintendent Cicely Muldoon stated in the article that ranches are a cultural resource that merits preservation. No, it does not merit preservation. No more than open-pit mining merits preservation.

What merits preservation is Point Reyes National Seashore back to its original pristine condition. It is enormously discouraging to look at miles of barbed wire fencing along the roadway while trying to enjoy the park. Plus, the additional eyesore of the poor condition of the dairy ranch houses and barns. Especially on the way out the lighthouse.

Because of climate change, smog, overcrowding of cities and the state, people need and must have a nearby National Park dedicated solely to the purpose of conservation and the natural environment. Where else can you go? Point Reyes is a national treasure. Lets fix this now for future generations. Dairy and ranching have enjoyed 170 years in Point Reyes. But now it is time for it to leave. This land belongs to everyone, not just 24 families. So please, free 26,000 acres and return it to the natural environment. Thank you.

Correspondence: As someone who has been visiting Point Reyes since childhood, it is my hope that the dairy farms on Point Reyes National Seashore can be phased out in the near future. Point Reyes is a treasure of Northern California and a true sanctuary for the elk and other animals who inhabit its land and water. The dairy farms pollute the waters, mar the landscape, and take land away from the park and its beautiful wilderness. Please let the National Seashore belong to the citizens and the wild animals and not to individuals who farm for profit.

#6826

Name: Corn, Mike

Correspondence: Thank you for the opportunity to comment on this proposed management change. Unfortunately, it is a harebrained idea.

First and foremost, these are public lands, which are dedicated to public resources. Private grazing ventures are not in the public's interest. So, as you might guess, I think it is sheer folly to lethally eliminate a single tule elk to make room for a single cow. There is plenty of grazing land out there, and this is simply an opportunity for private ranchers to make more money at the public trough.

So, rather than take steps to open grazing, it should be limited so even more tule elk may be supported.

As I said, I'm opposed to your foolish proposal.

Thank you.

#6827

Name: Osajima, Amy

Correspondence: I don't understand why cattle ranching is even allowed on public lands. Right now the Point Reyes ranches enjoy not only subsidized grazing fees and housing, but also taxpayer-funded infrastructure and road improvements. Commercial activities at Point Reyes should be required to accommodate native wildlife - not the other way around.

Agricultural activities such as mowing shouldn't be allowed in park areas where they harm endangered species or wildlife habitat, impair water quality, cause excessive erosion or spread invasive plants/diseases. Planting artichokes or other row crops will attract birds. And introducing sheep, goats, pigs or chickens will attract native predators such as coyotes, bobcats and foxes. Expanded ranching would only create new wildlife conflicts. This is so obvious that we can only conclude that the National Park Service really has no interest in preserving wildlife and wild lands. Show us that you aren't in the pockets of ranchers. Show us that your "Climate Friendly Parks" plan isn't a ruse.

Correspondence: I like the farms. Someday they will gp out if business. Some already have, and the land is reclaimed by the park.

If buildings as old as the ranches and farms were in a city, I believe they would be declared historical. Anyway, I know the land's history is older than the ranches and farms, but they are a good history lesson for now. Also, its ok to manage the elk, I think. But thats just me.

#6833

Name: N/A, N/A

Correspondence: Dear Park Service,

I support version "B" of the proposal. I believe that whenever possible Agricultural activities should be allowed to work hand in hand with the park system. I believe that farmers and ranchers are the original environmentalist because there very survival depends on the proper stewardship of the land. Particularly, in this case most of the farms are certified organic. Many of the recent fires that Northern California experienced could have been moderated if there had been an integrated grazing and harvesting plan. The reintroduction of the Elk has been problematic because they have no natural enemies and will reproduce without bound unless a discipline control system is adopted. It appears that the current control method is starvation. This is brutal and inhumane method of

control. It should not be the responsibility of the lease holders to protect their herds, their property, or themselves from the Elk. Please adopt proposal B and allow farms to coexist with the Park.

#6834

#6836

Name: Eachus, Samantha

Correspondence: I support Alternative F, phasing out cattle and dairy industry and returning the land to its natural state. The enabling legislation of the National Seashore supports wildlife protection and does not mention upholding private industry. The original leases to ranchers were to be 25 years. Ranchers have already been paid handsomely for their land, so it is long overdue to phase out the ranches. "Cultural Resource" and "Historic" does not mean industry needs to be currently in operation. Private business has no place on public land. Allowing industry and ranches to diversify their business is a bad idea. Already these ranches have been negatively impacting the land, mismanaged to allow soil erosion, scarring in the landscape, e.coli contamination in waterways and more. If you allow EVEN MORE agricultural practices on the seashore, there is no way to know the impact and there is no historical evidence you will be able to manage any negative impacts on the environment. Tule Elk should be protected for the survival of their species. They have already gone through a huge genetic bottle neck when they were almost completely wiped out except for 20 individuals. Every gene allele is important for the long term sustainability of the herd. The National Park should be protecting all Tule Elk, and allowing new herds to form and to TAKE DOWN THE FENCE at Pierce Point and allow all Tule Elk to roam free. I do not support granting 20 year leases to cattle and dairy industry. Climate science has indicated we have less than 12 years to mitigate the worst of climate catastrophe. Allowing business that has been linked to water pollution, species extinction and in Point Reyes is the culprit of over 60% of the greenhouse gas emissions, it is not a good idea to give that same industry a 20-year lease to continue degrading our national park. Point Reyes is a refuge to thousands of plants and animals. Point Reyes can be a leader in the fight for climate justice, and it starts with phasing out Beef and Dairy operations and restoring the land to its natural state. The EIS has NO MENTION of the effects of climate change in it, and does not include any information of the cattle and dairy's impact on climate change within the park.

#6841

Name: Culligan, Kieran

Correspondence: I live in Marin County, largely because of the incredible access to the outdoors. I am a frequent cyclists both as a commuter and recreational rider. I would like to ride more in the Point Reyes National Seashore, but the lack of loop routes makes it less than ideal.

I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail

at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly-and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

These comments are concerning the DEIS for the PRNS. To avoid repetition and save space by reference we also incorporate the comment letter submitted by the Point Reyes Seashore Ranchers Association and fully support and incorporate the letter submitted by PRNS and GGNRA Family Ranchers. There are a few additional sections that are important to point out. The first is succession. Our family purchased this ranch from Leonard David August 2, 1939. It was a working dairy at the time. The six generations that have and are currently living on this ranch have made a lot of improvements to the infrastructure, soil health, and water development to make this the historical and cultural resource that it is today. Our family fully intends to continue ranching in the future. Without a lease that insures our ability to care for this land a lot of historical value will be lost. Family values help make the land a beautiful cultural and historical resource. Allowing a lease takeover through an open request for capital proposals would destroy the agricultural heritage. In the case a leaseholder relinquishes his lease, the lease

should be offered, to current lessees within the seashore. The leases are intended for multi generational beef and dairy ranches to continue to operate in the seashore. When the 20 year leases to the existing ranching families have expired will they be able to renew the lease to continue ranching within the seashore for generations to come or will they be regulated out of existence? There must be a NEPA study done on the effects of non ranching within the seashore. Many of the details need to be corrected and further explained to the current leaseholders as identified in the DEIS. As currently written we will get a one year lease and the ROA will be reviewed every year before another lease will be issued. So we have a one year lease with a 20 year possessory tax bill.

This DEIS is incomplete in the mitigation measures that were compiled by intelligent people with multiple degrees but without any agricultural background or actual experience. Some of the measures in the ROA make no sense at all. The NPS must include the expertise of an advisory board compiled of UC extension, RCD, NRCS and MALT to fully analyze BMP's to make accurate recommendations. This draft DEIS was reviewed by NPS staff with no advice from the agricultural community. Pasture management is one of the most important aspects of beef ranching. Pasture improvement is a necessity for all aspects of agriculture.

Congress in 1962 through legislation designated PRNS to become an "Agricultural" seashore. In 2012 then Secretary of Interior, Ken Salazar, recommended NPS issue ranches 20 year leases. February 13, 2018 Congressman Jared Huffman introduced legislation (Bill HR 6687) to keep elk "separate" from the pastoral zone. The 1998 GMP stated that any elk that left the Limantour Wilderness area would be returned to the original herd in the wilderness. Superintendent Don Neubacher is on record stating "any elk that caused problems to ranchers would be promptly dealt with". The elk have definitely moved off the wilderness area and are in more than two separate groups in the pastoral zone. NPS has sufficient information submitted by the most affected ranchers on the ongoing damages to infrastructure, grazing habits, and adverse effects on the ranching operations. An article in the Capital Press newspaper dated June 13, 2019 page 1 written by Don Jenkins concerning elk damages and hazards relates to the concerns we are having within the agriculture lands. Perhaps NPS should contact some of the agencies involved to join forces in controlling elk and the damages they create. NPS calls for a "free roaming" herd. With daily interaction with park personnel and eating forage and hay intended for ranch animals these elk have become "domesticated" misleading the general public to believe that elk management is working - IT IS NOT! Immediate action must be taken to allow these ranches to survive. Two ranchers are on the brink of bankruptcy. Waiting for this DEIS to become an EIS will only allow time for more damages to occur. No where within the DEIS or ROA is there a complete elk management plan written. This must be rectified! All elk must be returned to the designated wilderness area immediately.

Diversification is completely taken out of context from the ranchers perspective. Its leads the public to believe there was never any animals except for the dairy and beef cows. In fact, there were crops such as artichokes, hay, and peas that were historically harvested on the ranches. Also there were free roaming pigs throughout the pastoral zones. When Domingo Grossi, Sr. purchased the M Ranch hay and artichokes were grown on this ranch and there were free roaming pigs. In the fall of the year the sows would bring their litter back to their home ranch. That years crop of pigs was either sold or processed for food. When food and hay became relatively easy to purchase and were able to be delivered because of increased road infrastructure, these crops were phased out. The misleading idea that 2.5 acres will help increase ranch income especially if a crop cannot be irrigated is insane!! Putting a crop near the core zone when the ground may not be suitable (due to rocks, hard ground, not crop compatible, etc.) is not a very good farming practice. So you are telling me that if a rancher currently has a garden not near their core zone, watering system already in place and slightly larger than the 2.5 acres that they have to abandon it and move the garden closer to the core? Dewey Livingston's book on historical ranches would show that there were, indeed, many types of diversification. The section on diversification in the DEIS is inaccurate and must be reevaluated, before the DEIS/EIS becomes final. The NPS acknowledges different types of livestock diversification and the need for guardian animals (llamas, donkeys, dogs) for livestock protection from predators. Because NPS lists guidelines from training manuals for livestock protection animals shows a complete lack of knowledge on this subject. Giving instructions to someone who is better qualified to train guardian animals seems completely wrong (mitigation measure page 399/ table 3-2 page 25). It makes no sense why anyone would think you are trying to "help" farmers/ranchers increase their income by allowing diversification. When we

increase our income, NPS is going to increase the rent. That is not helping with the problem of increased market fluctuations and sustainability. The point of diversification is to offset the rent cost.

Number 14 of the ROA states that there will be a "reserve account" for each ranch to cover maintenance cost. Does this imply it will cover the cost of both cyclic and capital improvement repairs? Where is the revenue coming from to fund these accounts? What is the total dollar amount to be held in this account? Who is going to hold this account? How is the money going to be disbursed? How complicated is the process for using these funds going to be? By the time the funds are disbursed the need for the repair will have escalated into a big problem! Who is going to decide what category the repair will fall into? Are the funds going to be separate for each ranch or are they going to be put into one big pot? This section is very vague and incomplete and must be more fully examined before this DEIS is complete. Forcing ranchers to fund an account that the NPS will have control over is not acceptable, because they cannot tell us what we have to spend OUR money on! The NPS is holding the ranchers to fair market values, but restricting fair market income by, using excessive regulations and restrictions, making it impossible to meet fair market value. This does not include the upkeep and repair costs of infrastructure. This section of the ROA must be removed because it makes no sense.

Number 15 of the ROA Ranch worker housing is completely out of NPS's jurisdiction. NPS does not pay the ranch workers wages or know the benefits of the ranch employees. Therefore NPS should not be involved in the rental rate for worker housing. This is only between the employer and employee. This section is completely irrelevant to this DEIS and should be removed from the ROA!

If the NPS understood the storage and feeding of silage they would know that plastic silage wraps are a one time use material. It is an inaccurate assumption that the plastic wrap is reusable.

In the ROA 4.17, NPS has the right to establish trails, roads, and other improvements through the ranch/farm premises for further use by visitors. Visitors will be authorized to walk or hike on various pastures and fields. In 13.3 of the ROA it says lessee must remove refuse, litter, trash, and miscellaneous debris. Who is responsible for removing human waste, refuse litter, and trash and miscellaneous debris? Especially in areas where there are no established trails? If visitors have the ability or right to access any of the premises such as hay barns (hay stacks) as well as fields with cattle in them, this is an accident waiting to happen. **THIS IS DANGEROUS!** They do not know proper safety protocol. People may enter the barns filled with flammable hay with cigarettes and start a fire. There are too many ways for visitors to injure themselves inadvertently. Our houses are off limits. I know that you wouldn't want people in your house without your permission. So why is it o.k. for them to go in ours? Visitors have wandered into seashore ranchers residences to look around.

In the ROA. 4.3 Livestock Species 4.3.2 this excerpt makes no sense. It is incomplete and totally incomprehensible.

In section 3.6 under authorized livestock you have to submit monthly stocking rate written report and any excess livestock numbers must be removed within 5 days. Some years there are as many as 20 sets of TWINS in beef herds - that would exceed the stocking rate. Does this mean excess baby calves must be sold to comply with stocking rates?

With all of these concerns you can see why we would be reluctant to agree to alternative B. We do not fully agree with any of the other alternatives either. Please read the letter submitted by the Point Reyes Seashore Ranchers Association and PRNS and GGNRA Family Ranchers for further information. Richard Grossi and Family

Name: Finch, Shannon

Correspondence: I am writing to ask that the National Park Service continue to honor its mandate to protect, restore and preserve the natural environment at Point Reyes National Seashore. Taxpayers have spent a lot of money to restore the Tule elk to its natural habitat. Allowing ranchers, who are already heavily subsidized, to shoot elk is a waste of taxpayer money and flies in the face of the Park Service's mandate. No where is it stated that commercial enterprises should take priority on these public lands.

Thank you.

Shannon Finch

Name: Gerl, Carol

Correspondence: California's Point Reyes National Seashore was land designated for eventual removal of cattle and their grazing through attrition over a 25 year time period. Since then the Service has failed to enforce its agreement and now seeks continued and expanded alternative uses of the area for ranching and farming. Cattle ranching is not the purpose of a park. New plans to eradicate native wildlife such as the resident Tule elk is not part of a park enhancement or herd-management program but in support of non-park uses such as increased cattle growing, grazing, and farming.

If I recall correctly, the permits and licenses were non-transferable nor were they inheritable. Subsidy recipients were made aware of the 25 year limit on the Use.

Please enforce the original agreements in the creation of the Point Reyes National Seashore vision and Plan. It's the duty of the Park Services to protect and maintain the parks system.

#6847

Name: N/A, N/A

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

Name: Thomas, Terri

Correspondence: Dear NPS planning staff,

I support a Merged Alternative, identified below, that has less environmental impacts than the Preferred Alternative for the Point Reyes (PORE) and North District of Golden Gate National Recreation Area (GOGA) General Management Plan Amendment Draft EIS (EIS). The Merged Alternative is justified based on the many continuing environmental impacts in the Preferred Alternative identified in the EIS, and the laws and policies of NPS articulated in this letter. A Merged Alternative with D, E and F will produce less impacts, provide for continues ranching, expand visitor opportunities and point the parks in a direction of leadership in reclaiming natural resources, preserving historic structures, continuing with cultural landscape ranching use and increasing visitor use and enjoyment.

My qualifications for commenting include a 34-year career in national park resources management including work at Everglades NP, Crater Lake NP, Yosemite NP and culminating as Chief of Natural Resources and Science at GGNRA and Director of Conservation, Stewardship and Research and the Presidio Trust. This experience gave me a national perspective, knowledge of and balance between local natural and cultural resources and experience with the economics and sensitivities of public/private partnerships and adaptive reuse of historic structures.

The goal of the Merged Alternative is to continue ranching with the least possible environmental impact. The Merged Alternative will: 1) Focus on Alternative D and will reduce grazing by the approximately 7500 acres identified, which retains the listing in the national register; 2) Apply Alternative E to the remaining acreage and convert the approximately 19,000 acres to beef cattle, which will decrease environmental impacts; 3) Apply Alternative F regarding public use and enjoyment and work toward the future condition identified as, "Visitors have opportunities to enjoy expanded connections and greater access to diverse recreation including, but not limited to, hiking and wildlife viewing". Keeping the approach with Alternative F would allow for increasing visitor use and decreasing grazing if ranchers decide not to use acreage in the future. 4) Continue one interpretive dairy ranch for public interpretation of the cultural history and landscape. This will continue one of the original families that worked PORE land. 5) Implement Recovery Plans for listed species whether requiring grazing for recovery or not. 6) Implement all mitigations noted for environmental impacts. 7) Research and monitor the land to reevaluate the condition after 15 years of the 20-year permit to evaluate the best next steps in land management of PORE and GOGA for the American people and future generations.

PREFERRED ALTERNATIVE CONCERNS: The reasons for not supporting the Preferred Alternative are based on 1) Neither the Point Reyes Act nor GGNRA Act established ranching as a purpose of PORE or GOGA, (16 U.S.C. § 459c.and Pub.L. 92-589, § 1, Oct. 27, 1972, 86 Stat. 1299); 2) NPS authorization of ranching is subject to the agency's overarching mandate to keep the scenery, natural and historic resources and wildlife unimpaired for the enjoyment of future generations. 54 U.S.C. § 100101(a) (formerly codified as part of the Organic Act at 16 U.S.C. § 1). The following explains these reasons:

A. The National Park Service Policies (2006), identify that the impairment of park resources and values may not be allowed by the Service unless directly and specifically provided for by legislation or by the proclamation establishing the park. The relevant legislation or proclamation must provide explicitly (not by implication or inference) for the activity, in terms that keep the Service from having the authority to manage the activity so as to avoid the impairment. The impacts identified for the Proposed Alternative in the draft EIS can be interpreted as impairment as identified in NPS Management Policies (2006) pages 10-12. Below are aspects identified in that definition of impairment and also sections of the PORE legislation. Adjacent to them is language from the EIS that can be interpreted as impairment, or inconsistent with legislation:

1. "...unacceptable impacts are impacts that individually or cumulatively" (NPS Policies (2006):

a. "Be inconsistent with a parks purposes or values" (NPS Policies 2006). The preferred alternative could be considered as inconsistent with the enabling legislations purpose to be "supportive of the maximum protection, restoration, and preservation of the natural environment within the area" (Pt. Reyes Act, 1978). This is based on

the continued impacts of the preferred alternative to water quality and soils (EIS page vi and vii), and the likelihood to adversely affect 9 endangered and 1 threatened species (Biological Assessments in EIS). In addition, the enabling legislation (1978) identifies the following item that relates to both the natural resources impacts and cultural landscapes: "Except for property which the Secretary specifically determines is needed for interpretive or resources management purposes of the seashore, the owner of improved property or of agricultural property on the date of its acquisition by the Secretary under sections 459c to 459c- 7 of this title may, as a condition of such acquisition, retain for himself and his or her heirs and assigns a right of use and occupancy for a definite term of not more than twenty-five years, or, in lieu thereof, for a term ending at the death of the owner or the death of his or her spouse, whichever is later." This means that the continuation of ranching indefinitely was not the goal of the legislation.

b. "Impede the attainment of a parks desired future conditions for natural and cultural resources as identified through the parks planning process" (NPS Policies,2006), The Preferred Alternative impedes several identified desired future conditions of park resources identified on page 2 of the EIS: 1) "Ecological function, connectivity, and processes persist and thrive in communities, including wetland, grassland, forest, scrub, and dunes. 2) Sources of air, water, noise, and light pollution are limited. 3) Habitats and populations of threatened and endangered species, special-status, and rare species persist and are improved 4). Native plant and animal communities persist and thrive. 5) Visitors have opportunities to enjoy expanded connections and greater access to diverse recreation including, but not limited to, hiking and wildlife viewing. This is based on the Biological Assessments and impacts identified in the EIS and appendices.

c. "Diminish opportunities for future generations to enjoy" (National Park Policies 2006). EIS page 48 identifies that there could be additional visitor facilities under alternative F that would not exist if ranching is continue, and therefore, opportunities for future generations to enjoy are diminished in the preferred alternative: destinations along Sir Francis Drake Boulevard from Pierce Point Road through the end of the planning area could be considered in the analysis. NPS would apply an adaptive management approach to evaluating visitor capacity levels once all ranching operations were discontinued and new visitor opportunities were established. Additional visitor capacity likely would be allowed under alternative F Therefore, not selecting Alternative F diminishes opportunities.

B. The Enabling Legislation (16 USC Sec. 459c) identifies the following overall intent, which does not include the continuation of ranching: 1) "In order to save and preserve, for purposes of public recreation, benefit, and inspiration, a portion of the diminishing seashore of the United States that remains undeveloped."

2) "Except as otherwise provided in sections 459c to 459c-7 of this title, the property acquired by the Secretary under such sections shall be administered by the Secretary without impairment of its natural values, in a manner which provides for such recreational, educational, historic preservation, interpretation, and scientific research opportunities as are consistent with, based upon, and supportive of the maximum protection, restoration, and preservation of the natural environment within the area."

C. Section 1.4.3 of the NPS Policies (2006) identifies the key principles that the policies must include. Four of these are not met by the Preferred Alternative: 1). " Prevent impairment of park resources and values"; ( 2). "Ensure that conservation will be predominant when there is a conflict between the protection of resources and their use"; 3). "Employ a tone that leaves no room for misunderstanding the National Park Services commitment to the publics appropriate use and enjoyment, including education and interpretation of park resources, while preventing unacceptable impacts"; ( 4). "Pass on to future generations natural, cultural, and physical resources that meet desired conditions better than they do today, along with improved opportunities for enjoyment".

JUSTIFICATION FOR THE MERGED ALTERNATIVE The EIS and Appendices justify the Merged Alternative, as identified on page 1 of this letter, through specific statements in the EIS noting which alternatives cause the least possible impact and still allow for ranching on a 20-year lease. These include the following:

" The soil impacts will be less than the Preferred Alternative because the aspects of Alternative E reduce the impacts by the removal of dairy operations. Aspects adopted from alternative E will also eliminate adverse impacts on surface water and alternatives D, E, and F would have beneficial impacts on water quantity from the reduction or elimination of authorized livestock numbers.

" Under alternatives D, vegetation composition would likely change in areas where ranching is removed. In these areas, while the cessation of grazing would eliminate adverse impacts such as high-intensity-use areas, it may also result in an increase in invasive annual and perennial species. The 7500 acres removed from grazing. Please add that this 7500 acres will be monitored and adaptively managed to assess the impact of removing additional grazing in the future.

" Federally Listed Species will each have their own USFWS recovery plan and strategically identified grazing be prescribed if needed as a treatment.

" Under Alternatives D impacts on wildlife related to dairy and beef ranching on the 7500 acres would cease, including disturbance, trampling, erosion, and nutrient inputs.

" Aspects implemented from Alternative E will eliminate impacts of forage production, manure spreading, and diversification and would reduce high-intensity-use areas compared to existing conditions.

" Cessation of ranching on 7,500 acres, will have beneficial impacts on elk by removing existing fencing, reducing hazing, and providing additional grazing opportunities compared to existing conditions.

" Alternatives D and E would have some beneficial impacts related to experiencing natural sights and sounds by reducing ranching and closing dairy operations, respectively, and there could be additional recreational trail linkages and public opportunities through the adaptive reuse of ranch.

" Cultural Landscapes, Historic Districts, and Historic Structures would continue to contribute beneficial impacts through ongoing grazing and to the ranch structures that remained occupied.

" Adaptive reuse is proposed for as many historic structures as feasible.

" Air Quality will be improved with the part of alternative E that eliminates dairy cattle.

The 2019 Draft PORE Foundation Document articulates well the park purpose and values. The land dedicated to ranching appears to be 33% of the 86,000 combined acreage of {PORE and the GOGA land they administer}. Having 1/3 of the acreage for one use that creates such high environmental impacts does not seem justified considering legislation and policy insights. Since the enabling legislation for PORE and GOGA were enacted, the Marin Agricultural Land Trust (MALT) was formed. Since its founding in 1980, 56,000 acres of agricultural land is now preserved forever. This wonderful achievement also allows the National Park Service to accomplish identified purpose in the legislation for PORE and GOGA with minimal environmental degradation.

Thank you for your consideration of this Merged Alternative,

Terri Thomas

Correspondence: Hi, please protect the elk at Port Reyes National Seashore in California by making the land they use a conservation park thank you Angela Swan

#6851

Name: Juricek, Kay

Correspondence: I ask that the ranchers simply be removed from the National Seashore. That they are there to this day is simply wrong and a drain on our shrinking national parks budget. No hunting of elk, no special sweetheart arrangements for ranchers. Since the Bundy debacle I've had it with ranchers and their discount deals on our threatened and endangered public lands. No more!

#6852

Name: N/A, Heather

Correspondence: Please ensure the rights of Tule elk herds in Point Reyes nature preserve. Cattle are an invasive species and they do not deserve more rights than nature. Allowing cattle ranchers to kill elk is abhorrent and cruel. When those creatures run out of elk to kill they will turn their bloodlust on pets and people. Those Tule elk are the pets of the people.

#6853

Name: N/A, N/A

Correspondence: The plan to eliminate the Tule elk is ridiculous. Here are just some of the reasons this is a terrible Proposal:

Discuss how wildlife and natural scenery motivate you to visit Point Reyes and other national parks. Point Reyes National Seashore is supposed to be managed under the Point Reyes Act for "maximum protection, restoration, and preservation of the natural environment." There's no mandate for prioritizing commercial agricultural leases on these public lands. Natural values, native wildlife, public access and enjoyment should take priority over commercial activities at Point Reyes. Tule elk are an important part of the landscape at Point Reyes. Their recovery is a result of successful native ecosystem restoration, which is a key element of the Park Service's mission. It's taken a lot of time, money and effort to restore tule elk to Point Reyes, the only national park where they live. Tule elk should be allowed to roam free and forage in the park - not shot, removed, fenced or treated as problem animals. Right now the Point Reyes ranches enjoy not only subsidized grazing fees and housing, but also taxpayer-funded infrastructure and road improvements, and publicly funded projects. But commercial activities at Point Reyes should be required to accommodate native wildlife - not the other way around. The Park Service shouldn't allow any new agricultural activities at Point Reyes. Planting artichokes or other row crops will attract birds. And introducing sheep, goats, pigs or chickens will attract native predators such as coyotes, bobcats and foxes. Expanded ranching would only create new wildlife conflicts. Cattle ranching should only be allowed if it's consistent with preserving the natural environment. And agricultural activities such as mowing shouldn't be allowed in park areas where they harm endangered species or wildlife habitat, impair water quality, cause excessive erosion or spread invasive plants/diseases. Cattle are the seashore's primary source of greenhouse gases. So the Park Service's preferred alternative is inconsistent with its own "Climate Friendly Parks" plan.

Thank you very much, John Oda

Correspondence: I am a native San Franciscan and lifelong cyclist. While I admit that I don't make it out to Pt. Reyes as often as I'd like, when I have, I haven't been clear on where I can go with my bike. Pt Reyes and west Marin is such a beautiful area and I'd love to be able to ride safely and legally on trails out there!

I'm writing to support the public access and bicycling improvements outlined under Alternatives B, C, D, E, and F. I strongly support proposals that would lead to the planning and implementation of bicycling routes on trails, ranch roads, and pathways throughout the planning area, including but not limited to: 1) a connection between Devil's Gulch and Platform Bridge Road using existing ranch roads, 2) a connection between Bolinas Ridge Trail at Olema Hill and Point Reyes Station to serve as an interim connection for the Cross Marin Trail, 3) a connection between Bolinas Ridge Trail and Five Brooks Stables using existing ranch roads 4) a connection between Drakes Estero and Abbotts Lagoon Trail using existing ranch roads, 5) a connection between Marshall Beach Trailhead and Pierce Point Road using existing ranch roads, and 6) an Estero Trail loop using existing ranch roads. I encourage NPS to collaborate with ranchers and other stakeholders to educate the public and address concerns related to public access on working ranch lands.

The improvements outlined above would enable and encourage me to visit the Seashore more regularly-and by bike, rather than car. I would feel much safer riding in the Seashore and surrounding areas on trails, pathways, and ranch roads, rather than on roads shared with fast-moving vehicular traffic. Bicycling opportunities are currently very limited and fragmented, so any improvements in connectivity and the creation of new loop options would enable me to enjoy more of the Seashore and surrounding areas by bike.

Thank you

Correspondence: I do not support granting 20 year leases to cattle and dairy industry. Climate science has indicated we have less than 12 years to mitigate the worst of climate catastrophe. Allowing business that has been linked to water pollution, species extinction and in Point Reyes is the culprit of over 60% of the greenhouse gas emissions, it is not a good idea to give that same industry a 20-year lease to continue degrading our national park. Point Reyes is a refuge to thousands of plants and animals. Point Reyes can be a leader in the fight for climate justice, and it starts with phasing out Beef and Dairy operations and restoring the land to its natural state. The EIS has NO MENTION of the effects of climate change in it, and does not include any information of the cattle and dairy's impact on climate change within the park.

Correspondence:

I appreciate the opportunity to comment on the Draft Point Reyes General Management Plan Amendment (DGMPA). The PRNS and GGNRA are vitally important resources, both for their beauty and recreational opportunities and as examples of best practice for conservation and park management. Therefore I am deeply troubled by the DGMPA preferred Alternative B, because it emphasizes commercial interests over protecting other values such as water, air and soil quality, wildlife (especially elk), vegetation, traditional recreation activities and visitor experience.

The DEIS shows that Alternative B will have detrimental environmental consequences on all natural resources within the park, in spite of the fact that there are three NPS laws which prohibit actions that will impair natural resources: the 1916 NPS Organic Act; Point Reyes National Seashore legislation Section 459c-6, and Golden Gate National Recreation Area legislation Section 460bb.

The Preferred Alternative also inaccurately executes out the directive from the former Secretary of the Interior to extend leases for cattle and dairy ranches "consistent with the applicable laws and planning processes". It also ignores the direction of former NPS director Jonathan Jarvis to extend leases for the purpose of "grazing cattle and operating beef and dairy ranches..." In neither directive was there the intent to expand the agricultural footprint in the Park, as is the case with Alternative B.

Thus the preferred Alternative B fails to address or conform to the overall intent of the NPS and the park enabling legislation for PRNS, as well as current NPS Policy. Nor is there any evidence that the PRNS has the funding/capacity to administer the oversight program developed in Alternative B.

In addition there are specific areas of concern pertaining to Alternative B: Impact of Diversification:

Predation on ranch animals (goats, sheep, chickens) will inevitably lead to conflicts with wildlife. Damage to the scenic and historic values of the Seashore as the ranch cores and historic pastures will be changed to support new uses. The application of adaptive reuse plans within the historic district to buildings, structures, objects, and landscapes (outside of priorities for interpretation, visitor use, or administrative use) is likely inconsistent with NPS management guidance for historic preservation.

Succession Impacts:

The open Request for Proposals changes the context and values of the Ranchland zone being limited to multi-generational beef and dairy operations, and these impacts are not sufficiently addressed. Under the original rule, ranching in the park may well have reached a natural expiration point as ranchers retired and subsequent generations waived their right to renew the lease. (Many would argue this was the intent of the enabling legislation.) The open Request for Proposals all but guarantees indefinite ranching in the park, subjecting PRNS to greater and greater commercial pressure. Failure to analyze the interest of outside commercial operations in facilitating ongoing ranching activities and/or subletting activities that could occur with the proposed diversified uses.

#### Increased Visitor Use in Drakes Estero:

Environmental impacts such as human waste, garbage, and potential for destruction of park and cultural resources have not been fully examined as part of the draft EIS. In light of NPS requirements to close down boat-in camps in other areas of the Seashore due to these problems new boat in sites near sensitive Marine Wilderness should not be considered.

#### Funding Considerations:

The Draft EIS is missing a budget or financial overview that outlines how any of the alternatives and actions will be implemented and paid for. Without this information made available to the public there may be negative impacts to natural resources management, visitor services, and other vital existing park programs to protect the environment that have been overlooked.

#### Tule Elk:

Lethal management of wildlife to benefit the commercial interests of a lessee are prioritized over adaptive management strategies.

In summary, Alternative B is incompatible with the Park Service's duties under three statutes and raises multiple other areas of concern. Instead of proceeding with a Final EIS, the park should prepare a supplemental DEIS for a ranching alternative that complies with applicable laws requiring the protection of natural resources and release that supplemental DEIS for public comment.

Sincerely, Catherine Lucas

Correspondence: For years Point Reyes and the surrounding area have managed to keep their natural beauty and rural charm that has been stripped of most of the Bay Area. The NPS preferred option would open up the area to commercial exploitation, not immediately but slowly in the long run. Option F is ideal; it preserves the natural aspect of the park to the fullest extent possible and also generates revenue due to it being easier for tourists to access and enjoy.

#6862

Name: Tilden, Shelby

Correspondence: Killing wild animals so that animals who have been bred to be killed can destroy park land? Surely you're joking, right? Please protect the elk.

I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#6863

Name: N/A, N/A

Correspondence: We need to take back our environment from meat eaters!

Please keep the park as a place for the natural flora and fauna rather than for commercial exploitation. Climate crisis! It's here, it's real, vote for our earth's health if you value your lives and your kids' lives.

#6864

Name: Kwock, M

Correspondence: Please withhold my personal information from public review.

I support Option F to remove ranching from the Pt. Reyes National Seashore to allow the land to revert by natural processes and to allow the tule elk unrestricted access to open lands within the park area. Overall ranching is just not compatible with a national park, no matter that someone had cows there 150 yrs. ago. If cattle made the seashore into its current state then let it evolve to what it should have been.

I strongly object to the current management practice of killing tule elk in favor of cows, as included in Options B-D, which allow only a token herd of elk that can never expand, in what used to be their natural range.

What we have now is a commercial dairy operation using public land.

Re: Draft Environmental Impact Statement (DEIS) for the Amendment of the General Management Plan (GMP) at Point Reyes National Seashore (PRNS; Seashore) and the Northern District of the Golden Gate National Recreation Area (GGNRA).

Thank you for the opportunity to comment on the Draft Environmental Impact Statement (DEIS) for the Amendment of the General Management Plan (GMP) at Point Reyes National Seashore (PRNS; Seashore) and the Northern District of the Golden Gate National Recreation Area (GGNRA). The document considers six alternatives (A-F), five of which propose continued ranching. Alternative F proposes phasing out ranching over five years. Alternative B is the preferred alternative of the National Park Service (NPS).

As a botanist, my comments are limited to those pertaining to vegetation. I find the document comprehensive and well researched; however, it is inadequate in the description/analysis in several areas, the most notable the lack of mapping of the location of sensitive resources, including native plant communities and special-status species. It is challenging to comment on the adequacy of an EIS, when the sensitive environmental resources to be protected are not mapped.

#### Mapping

The map labeled Vegetation in the Planning Area (App. A, Fig. 44) does not show enough detail to differentiate between grassland/pasture and sensitive plant communities - coastal scrub, coastal prairie, coastal dune scrub, and serpentine grassland. There are no maps of special-status species occurrences. Appendix J mentions the location of federally listed species on the various ranches and other areas, but as the DEIS is both a programmatic and site-specific document (p. ii), detailed maps at a legible scale of the distribution of all sensitive resources (not only federally listed species) on each ranch zoning map needs to be presented in the Final EIS. The DEIS states (3.2.1)

that the maps will continue to be refined in collaboration with the ranchers, but there is no mention of when such maps will be finished.

### Subzones

Four subzones on each ranch will be created to be used for different purposes. I support the creation of a Resource Protection subzone, where no grazing will be authorized, except for more closely monitored prescribed grazing, which could potentially enhance habitats and native plant populations. (It is noticeable that the resource protection subzones are very limited in areal extent on most ranches.) These newly created subzones are marked on the ranch zoning maps. It is, however, unclear how the zones are delimited and bounded on each ranch.

The DEIS states that grazing can occur in the Range subzone, but more intense activities are not allowed, because there is documented presence of sensitive resources, including rare plants, wetlands, etc. These resources need to be mapped and an explanation made why such resources do not fall within a Resource Protection subzone. Fig. 41 illustrates where erosion hazards are present. Due to the lack of mapped locations of sensitive resources, it is not clear, if some of the Resource Protection subzones are mapped as such, because the zones exceed a 20% gradient, or if there are actual sensitive resources present.

Activities such as mowing, seeding, nutrient management (dairies), animal diversification, and forage production can be allowed in the Pasture subzone adjacent to the Range subzone. All these activities constitute impacts on more natural (not necessarily native) grasslands. It is unclear, if each subzone will be defined by fencing. It is essential that fencing of sensitive habitats occurs and - whether temporary, movable or permanent - the fences are constructed in such a way that the cattle (or elk) cannot breach them, as apparently happened, enabling cattle to trample beach layia (*Layia carnosa*) and Tidestroms lupine (*Lupinus tidestromii*), both federally listed as endangered, in coastal dune areas (pp. 131, 137).

### Grazing

The grazing pressure by the prehistoric megafauna (ex. mastodon, mammoth) and presently occurring grazers (ex. elk, deer) (Grazing Handbook) is minimal compared to the intense pressure exerted by thousands of beef and dairy cattle within fenced areas such as is the case at PRNS and GGNRA today.

Grazing as a management tool is extremely complex. It can be argued that grazing an area that has been grazed for over a century, thus supporting mostly non-native species, is an essential ecological process that should be preserved. However, the benefits to native plants depend on the type of plants present: annual vs. perennial; palatable to cattle or not; how many AUs are left for how long in a particular location; what time of the year grazing occurs; when grazing occurs in relation to flowering and seedset of the plants, etc. It is not clear who will do the time-sensitive monitoring - the NPS or the ranchers. The DEIS states (3.2.5): Annually, NPS and ranchers would review performance measures, including RDM, to identify grazing levels that would ensure site conditions are maintained to meet the minimum RDM standard. A predetermined RDM height or pounds of animals per acre at the end of the grazing season (p. 21) are highly unlikely to protect native flowering or fruiting plants. Monitoring grazing to enhance habitat or protect (save!) special-status species needs to be done, for the latter, preferably on a daily basis. A cow can devour a population of rare plants in a day [as was done to Brewers milkvetch (*Astragalus breweri*) in a vernal pool in Solano County (pers. obs.)].

### Rare Plants/Sensitive Plant Communities

As NEPA requires mitigation for federally listed species only (Table J-2), two State-listed species, Pt. Reyes blennosperma (*Blennosperma nanum* ssp. *robustum*) and Pt. Reyes meadowfoam (*Limnanthes douglasii* ssp. *sulphurea*) as well as approximately 27 Rank 1B species (rare and endangered throughout their ranges) (Table J-1) (California Native Plant Society's California Rare Plant Rank (CRPR) list) receive no protection. I am aware that surveys have been done over many years for all these species, including GIS mapping (NPS 2019, App. B, Refs.)

and that results are available. It is, therefore, difficult to comprehend why they are not mapped to make the DEIS informative with respect to the location, thus potential preservation of sensitive plant resources.

Appendix K discusses the possibility of excluding cattle from coastal dunes, which support beach layia and Tidestroms lupine; coastal prairie, which supports Sonoma spineflower (*Chorizanthe valida*); freshwater marshes with moist soils, which support Sonoma alopecurus (*Alopecurus aequalis* var. *sonomensis*); and serpentine grassland on GGNRA land, which supports Marin dwarf flax (*Hesperolinon congestum*) and Tiburon paintbrush (*Castilleja affinis* ssp. *neglecta*). Will cattle be excluded from these communities? The DEIS (p. 45) states that Most occurrences of Tidestroms lupine are in areas largely excluded from cattle grazing. This statement is vague and begs the question: Why is a federally listed endangered species not completely excluded? Because of unceasing impacts on native plants for over a century, areas where these species are known to occur, as well as the above-mentioned State-listed and Rank 1B plants should be protected and managed, even if it is at the expense of commercial interests.

Areas at Bull Point (abandoned F ranch) supporting some of the Rank 1B species, for ex., swamp harebell (*Campanula californica*), coast lily (*Lilium maritimum*), and Pt. Reyes checkerbloom (*Sidalcea calycosa* ssp. *rhizomata* (pers. obs.) should be protected and managed. Furthermore, in a national park like the Seashore that has been impacted by grazing for many decades - resulting in few native species with little absolute cover - grassland areas, especially moist areas, supporting relatively common plants, including camas lily (*Camassia quamash*), marsh rein-orchid (*Platanthera dilatata* var. *leucostachys*), cow clover (*Trifolium wormskioldii*), and yellow-eyed grass (*Sisyrinchium californicum*) should be protected (pers. obs. on the G Ranch). It is not possible to determine if this particular (moist) area is what is shown as a Resource Protection subzone (dark green) on Fig. 14, and how, and if, it would be shielded from impacts from year-round grazing.

It is well-known that some special-status species experience more adverse effects from grazing than others. It was determined by USFWS (2002; DEIS p. 129) that ranching in the park is not likely to jeopardize the growth of several rare plants in the Seashore. The expression not likely is likely used, because there are many science-based reports with varying views, and survival or no survival of plants depends on the species. Grazing in habitats supporting Marin dwarf flax (FT/CT) is supported by the NPS, because it would prevent the build-up of thatch and added nitrogen, which promotes the growth of non-native grasses. As I have worked extensively with that species on the Tiburon peninsula, I suggest that cattle grazing - especially cattle-trampling in a fragile habitat with erodible serpentine soils - is extremely detrimental to the survival of a delicate, annual plant like the dwarf flax. Depending on the size of the populations in the planning area (GGNRA), hand-weeding or other manual/mechanical labor should be an option. There is no reference to such methods in the DEIS. The NPS did not list trampling as a threat to the dwarf flax in 2019 (p. 129). There is no literature on grazing impacts on Tiburon, a perennial plant, in the same habitat. [The number of paintbrush individuals has diminished in the last decade on the Tiburon peninsula (pers. obs.)]. The USFWS (2002) suggests that grazing is not detrimental to beach layia, yet the layia declined by 84% in abundance from 2004 to 2018 (NPS 2019; p. 129) in areas where grazing took place. Conversely, Sonoma spineflower appears to survive and thrive in grazed areas, as does sand spineflower (*C. cuspidata* var. *villosa*) (Rank1B) in the Bull Point area.

### Filter Strips

Filter strips consisting of vegetation will be used between environmentally sensitive areas and high-use agricultural lands. It is suggested that the plants will remove sediments and pollutants from runoff and wastewater (p. D-9). There is no mention of what species will perform these functions or how wide the strips need to be to function properly. It would seem that high-use agricultural lands, including dairies and pig farms with manure waste, should not be located next to environmentally sensitive areas! Have filter strips been used in the past in the Seashore and, if so, how did they perform? A list of potential species to be used needs to be provided in the Final EIS).

### Alternative B

The NPS expresses support for Alternative B, which provides for the continuation of ranching and dairying at PRNS. The Parks legislative history clearly shows that although the ranches are cultural and historic resources, preserving them must further not weaken the Seashores overall purpose of protecting and enhancing its natural resources. Instead of reducing or lessening the impacts on natural resources, Alternative B enables increases in the disturbance to natural resources and processes by allowing:

agricultural row-crops

diversification to small animals such as pigs\*, sheep, goats, chickens

increased horse boarding

new facilities for ex. for cheese-making

new dwellings for family members

increase in grassland acreage by mowing and grazing to prevent coyote brush and other shrubs from invading grasslands

forage production - silage, haylage and hay

extension of ranch leases from five to twenty years, et al..

\*It is especially disconcerting that pig farming will be authorized. Pig farms, like dairies, cause severe environmental impacts as a result of manure, which affects surface and groundwater quality as well as air quality, and removal of vegetative cover. It is also worth considering that escaped domestic pigs, reproducing quickly, can become feral in one generation. Feral pigs damage vegetation and may become aggressive.

Mitigation measures (App. D) in an already disturbed landscape become similar to, or are those of Best Management Practices (BMPs). Some impacts cannot be mitigated.

#### Alternative E

I support Alternative E, which would eliminate some of the ongoing damage to native and non-native vegetation by removing the six dairies on PRNS land, eliminate seeding, forage production and diversification. Dairy-cow herds, which are larger than those of beef-cattle, do great damage to vegetation by congregating around barns and feeding areas. This results in the removal of vegetation, accumulation of manure, erosion and polluted run-off. Spraying and spreading of manure on pastureland would cease under this alternative. Manure as a fertilizer changes plant species composition in favor of non-native grasses - an obvious desired effect for ranchers but a negative effect for native vegetation.

Alternative E would allow grazing by beef cattle only, which, if managed correctly, may be beneficial - in many cases essential - to preserving and/or restoring native vegetation, including special-status species, while reducing invasive species in areas already damaged by decades of grazing and other disturbances. It will also reduce air and water pollution. This alternative would be more in line with the primary purpose of national parks, i.e., to conserve the scenery and the natural and historic objects and the wildlife therein and to provide for the enjoyment of the same in such a manner and by such means as will leave them unimpaired for the enjoyment of future generations (Organic Act 1916). As the environment is already impaired from a century or more of grazing, it should be NPSs mission to preserve and restore as much as possible of what is left of natural resources.

#### Concluding Remarks

I urge the NPS to reconsider its preference for Alternative B. As the DEIS (p. vi) states, Under Alternative E, noticeable beneficial impacts would occur compared to existing conditions from the conversion of six dairy ranches to beef operations, elimination of manure management practices, seeding, forage production and diversification activities, Alternative E ought to be the preferred alternative of the NPS.

Maps of sensitive plant resources need to be provided in the Final EIS, as well as descriptions of how these resources will be managed on each ranch. The resource management practices should be incorporated in the Ranch Operating Agreements (ROA), required between the NPS and each rancher.

Correspondence: To whom it may concern:

This E-mail is sent to your attention regarding the Point Reyes National Seashore and the tule elk who live there.

As a CA resident and USA taxpayer, I love our national and state parks. I object to the Point Reyes National Seashore being used by cattlemen and ranchers in order to feed their cattle.

Point Reyes National Seashore is just that, a NATIONAL PARK! It is NOT private graze land for cattlemen and ranchers. I want to see the Point Reyes National Seashore restored to the tule elk, other wildlife, and indigenous plants promptly. The Point Reyes National Seashore has been abused too long. It is past due to terminate the relationship that exists between the NPS and the cattlement and ranchers.

The publics' and the environments' best interest are NOT being served when you appease to the cattlemen and ranchers. I urge that the Point Reyes National Seashore be returned to its previous state of wildlife and plants. As the NPS, that is your true obligation.

Name: Jones, Patricia

Correspondence: Hello: Pt. Reyes is one of our natural wonders and is the only federally designated wilderness area in the SF Bay area. We should protect it in its natural state.

• The EIS makes it clear that under all the alternatives for continued cattle ranching, there will be detrimental environmental consequences on the Park's natural resources, including soils, water quality, vegetation, and wildlife (including tule elk). • The National Park Service governing laws prohibit actions that will impair natural resources.

Consequently, the Park Service should not adopt any ranching alternative and should prepare a supplemental DEIS with ranching alternatives that comply with applicable laws prohibiting the impairment of natural resources.

thank you

Name: Donahue, Mary

Correspondence: Growing up in West Marin has greatly influenced my relationship with the natural world.

My husband and I love hiking and observing the amazing animals and beautiful plants that grow in the park. It is a place of great beauty and should be preserved.

Reading the different options to best preserve the Natural beauty of Point Reyes and the Historic Ranch Lands I feel strongly that diversifying the farm animals and allowing for the short term rentals of historic buildings will only lead to destructive commercialism of the Seashore. This is National Park Land and is not meant to be exploited by a few but to be appreciated by many. Introducing more farm animals to the park will only make delicate ecosystems more complex and difficult to manage. Bobcats, coyote, and mountain lions will go after chickens, sheep and goats. How will the introduction of these domestic animals affect the current population of rodents and rabbits?

My favorite trail in Point Reyes is the Estero Trail. A beautiful trail going through a variety of different habitats. I love seeing the downy woodpecker's, great horned owls, bewick's wrens, tiger sharks, snowy plovers, coyotes and the many other wild animals that live there. Two years ago my husband and I were walking out to Sunset Beach, when we arrived we saw 12 cows standing in the mudflats on the shore. I cannot imagine this is good for the habitat of the park or what the founders of the park intended. .

Planting crops for commercial use will create more fencing and less access to the wildlife and less access for the people that want to enjoy the beauty of Point Reyes. National Parks were created to give people access to the outdoors, this plan only limits access.

This is first and foremost a National Park and is owned and paid for by United States citizens and its future should not be dictated by a small group of people. My opinion is that all the ranch lands should be phased out and should be returned to their natural habitat. At the very least I think the park should only lease to historic ranch families and should not allow diversifying of farm animals, crops, or rental of any historic buildings.

Thanks, Molly Donahue

Correspondence: Please save the Tule elk of Point Reyes National Seashore from being culled. Culling fifteen per year is fifteen too many. Their genetic biodiversity is small because it appears all 40,000 alive are from one breeding pair. That means a single disease could wipe out all of them. We need every Tule elk alive, well, and living on healthy land. National Parks and public lands are to be protected for the future generations, not agribusinessed to decline and ultimate death. Do your job, protect the park and the genetic diversity within.

#6870

Name: Petersen, Tyler

Correspondence: Hello, my name is Tyler Petersen a Watershed Science student at College of Marin. I am writing today on behalf of the preservation of my favorite national park, Pt. Reyes Seashore. I stand against the parks proposal to expand agricultural practices. My education only puts me an amateur in the natural spaces, so I admire that the national park service is trained professionals who understand preserving biological diversity benefits society and nature both. Not only do I believe in biodiversity I appreciate the evolution and I value the results of it. Earth and the organisms that inhabit it have evolved for million's of years to efficiently recycle its limited chemicals. Each organism that constitutes the trophic levels of the environment are crucial to maintaining the cycling of chemicals, however, agricultural does the exact opposite; It accumulates nutrients and overloads natural systems leading to eutrophic waters and unfertile soils from the agricultural runoff. Not only are abiotic features being disrupted, but also the biotic factors are at risk. Cows and other agricultural inputs introduce an

abundance of non-native species to the park's biodiversity, which the environment of Pt. Reyes has not evolved to properly manage. The Elk and wildlife that the public enjoys are removed and barred from Pt. Reyes to produce meat and dairy for the economy. Expanding farming practices will only increase the number of organisms being eliminated. I am not opposed to farming and agricultural practices, or the success of businesses that California's economy is based on. Though there are a time and a place for ranching and inside a national park is no place for ranching to be done. Thank you for your time.

-Tyler Petersen

#6878

Name: Kuelper, Carol

Correspondence: The Point Reyes National Seashore is supposed to be managed under the Point Reyes Act for maximum protection, restoration and preservation of the natural environment. There is no mandate for prioritizing commercial agricultural leases on these public lands.

Natural values, native wildlife, public access and enjoyment should take priority over commercial activities at Pt Reyes.

The tule elk are an important part of the landscape at Pt. Reyes. It has taken a lot of time and money to restore tule elk to Pt Reyes, the only national park where they live. They should be allowed to roam free and forage in the park - not shot, removed, fenced or treated as problem animals.

At this moment, Pt Reyes ranches enjoy subsidized grazing fees and housings well as taxpayer-funded infrastructure and road improvements and publicly funded projects. Commercial activities at Pt Reyes should be required to accommodate native wildlife - not the other way around.

The park service should not allow any new agricultural activities at Pt Reyes. Expanded ranching of sheep, goats, pigs, and chickens will attract native predators such as coyotes, foxes, and bobcats creating new wildlife conflicts.

Cattle ranching should be only allowed if it's consistent with preserving the natural environment. Mowing should not be allowed in park areas where they harm endangered species or wildlife habitat, impartiality water quality, cause excessive erosion or spread invasive plants/ diseases.

Cattle are the seashore's primary source of greenhouse gases. Therefore the Park Service's preferred plan is inconsistent with its own "Climate Friendly Parks" plan.

Killing tule elk to accommodate ranchers in a National Seashore is not an alternative. I choose alternative F.  
Thank you for your consideration!

Name: Holland, Richard

Correspondence: The Marin Horse Council, supporting the equine community in Marin since 1981 and partners with Point Reyes National Seashore since its founding, agrees with the park superintendent and staff that the preferred alternative in the Draft Environmental Impact Statement for the General Management Plan Amendment for Point Reyes National Seashore and the North District of Golden Gate National Recreation Area best supports the NPS's ability to maintain historic resources and cultural landscapes that are integral to the park's historic districts.

Not only do the ranches continue to uphold the original intent for the creation of this national park, they are a living demonstration of our historical and cultural heritage. Marin's dairy ranches were the first commercial dairy operations to support the development of the Bay Area, and as they were of economic importance 150 years ago, they continue to be of economic importance to our county and region. Together with cattle, horses and other equines represent both the past and future of the cultural and historic landscape of West Marin.

The two main arguments to oppose continued ranching in the seashore are "to restore wilderness" and "the climate impact of the ranches." For 3000 years the region has been farmed by the local population, so a "restoration of wilderness" is a biological proposition without clear meaning, as well as one that runs contrary to the Park's mission of preserving the culture heritage of West Marin. Marin County is an international leader in an agricultural practice known as Carbon Farming-we are demonstrating the benefits of soil carbon sequestration and are working with our local ranches to be "carbon sinks" rather than "carbon emitters." Our agricultural production can be a sustainable model for agricultural practices nationwide-and we have some of the best organic dairy products to show for it!

We have recently supported the reopening of the park's Horse Camp and bolstering of the Mounted Patrol, and look forward to supporting the sustainable historic ranching at Point Reyes National Seashore-as well as the tremendous natural resources that "our park" offers. We look forward to passing on this natural beauty for generations to come. Thank you for protecting our National Seashore!

Correspondence: I strongly support the historic ranches and working dairies in the Point Reyes National Seashore and granting them 20 year or longer leases.

The ranches and working dairies make the park special. I value the rich history of non-corporate, family agriculture, the vistas of open fields with livestock and the longtime stewardship the ranchers provide. Too many people only know cities and recreational areas. Point Reyes is a mixed use park and better for that.

Please don't change the park with an elitist experiment to recreate "wilderness" which gets filled with recreational users ignorantly/innocently (or callously) causing harm and wear. There is an ecosystem there now based upon decades with agriculture. Let's support best practices and keep you it with the mixed use we have now.

Another key point- with the vagaries of government funding for parks can we count on providing stewardship comparable to that of the ranchers? Deferred maintenance and shutdowns have disastrous impacts.

For the Elk the baseline should be the 1998 EA, and we should not be taken in by romanticized views and allow unmanaged populations.

Please grant long leases (20 year or longer) are critical. Shorter leases undermine the viability of the dairies and ranches and limit the resources they can obtain or rationally invest in operations. Short leases are a sneaky way of setting them up to fail. They do not honor the spirit of cooperation and partnership that established the park.

Thank you. I hope to see working agriculture continuing.

Correspondence: The NPS is engaging in a specious and backhanded review process here and any recommended option that does not call for the gradual (5 year option F is sufficient) phase out and COMPLETE AND PERMANENT REMOVAL AND TERMINATION of all private ranching operations and leases within the established boundaries of the National Seashore is utterly unacceptable. Those within the park management structure who have drafted this utterly biased Pro-Ranching oriented set of recommendations that fly in the face of the NPS own assessment of the degradation that ranching inherently inflicts on the fragile ecosystems of the Point Reyes Peninsula clearly fail to understand or acknowledge that the NPS and the Federal Government has violated federal statutes repeatedly at Point Reyes and failed to honor the public trust to protect the ecosystem and its native flora and fauna for the benefit and enjoyment of future generations. This is a legal matter of honoring the articles and ideals under which the Park was created and wherein the ranchers were paid in full at existing market valuation for their land, and then given a TEMPORARY GRACE period "sweetheart" deal to remain for 25 years on the public dime and at the critical and continued imperilment of native plants, birds, fish, and terrestrial wildlife. We are many decades past the point that ranching should have already been long eliminated at PRNS, and it is high time to rescue one small corner of Marin County from the ongoing degradation

of livestock operations. Pretty simple stuff. People do not come from all over the world and object millions and millions of dollars into the local economies of Marin County businesses in order to see cattle in our national park. Enough is enough. . , There are plenty of cows, dairy and beef production operations beyond the boundaries of the National Seashore. Our majestic coastal National Seashore is an imperiled treasure and the endemic plants and wildlife deserve to be safeguarded once and for all against the continued depredations of the human extraction paradigm. No more ranching in our National Park.

Correspondence: Preserve our wild species. Adopt Alternative F!

#6895

Name: N/A, Diane

Correspondence: The following are my comments to the DEIS proposal of the Point Reyes National Seashore September 2019

I DO NOT DO SUPPORT THE PREFERRED ALTERNATIVE B.

NOR do I support any of the remaining alternatives.

I'm a 4th generation Marin County Rancher born and raised in 1966 and currently living on the M Ranch with generations 5 and 6 also directly involved in this Historical and Cultural Resource located in the Point Reyes National Seashore. For over a century my family has been surviving and providing nutritional necessities, milk, beef and multiple products used daily by the people of this county and far beyond. In that time my family has developed first hand knowledge of what this land is capable of. All the Ranchers in the PRNS are the experts of these lands. Growing, raising and Providing local products not only provide the best possible nutritional value, but contribute to the local county and state financial stability. Then the NPS took it away. Never was it the intention of anyone including the NPS for any of us to "Quit" ranching. I now am repeatedly hearing; Just go purchase another ranch! That is not possible with the pennies, yes pennies that were given for our land. I know you all think we got rich off this, but that is not accurate! First hand from My grandfather who said he was threatened to have his ranch taken from him or he must just take what they gave him. I can't speak for every ranch, but we didn't receive enough to purchase any other land or ranch. It was a bitter subject of which I remember well and unfortunately has only gotten much worse and more stressful.

First off,

Alternative B plans on zoning areas on the ranches that have been in existence long before the NPS took possession. All the zoning, time, money and effort on this will create the need for more time, money and effort, including permits, paperwork etc. causing much unrest and waste of millions even billions of dollars. However its being done.

Zoning-

There are inaccuracies in the provided zoning maps need which need to be situation specific, and looked at in person with flexibility and consulting the knowledgeable people of the land. There have not been any experts in the Farming and Ranching Industry who were consulted nor who have viewed this area! That in itself is really scary! No one has completed extensive enough research to be able to dictate the future of PRNS and Ranching. The maintenance jobs and land care that has been provided by the ranchers with intention to thrive, protect and create homes for many varieties of animals, despite what is flying through some groups who intend to remove

ranching from this area, is done from the heart and with love. As crazy as it may seem to some, we love the land that we've devoted our complete life to. The NPS needs to look at each ranch independently as the lands vary geologically.

Preparers-

These people are in a position to decide our fate! Everything multiple generations have spent their/our whole life creating is in jeopardy. **THIS IS NOT A GAME! ITS OUR LIFE, HEART SOLE AND FUTURE that's AT RISK!** Entire lives spent here providing multiple sources of nutrition and many, many products for your comfort and daily life ease!

The belittling of this occupation and the drive to rid the area of necessities, is pretty easy when your bellies are full and your conveniences are plenty. In the past few years the US has put over 20,000 family farms and ranchlands out of business. What is your plan for replacing the necessities they've provided?? Creating more manufacturers who make fake chemical reproductions?? That will not help the world from destroying itself!

Its common knowledge that children who follow in their parents footsteps become professional experts and most knowledgeable in their field or industry. This isn't a game, its our life! We've spent over a century devoted to!

Diversification-

The proposed action to allow ranchers to utilize 2.5 acres for diversification and the purpose of supplemental income, is supposed to be in the ranch core area only. But geological constraints could exist in those areas which will be defined in the ROA. Another can of worms.... Identifying each of the ranches location of the 2.5 acres to be used for diversification. What if its not geologically possible to use this area near the core? Are we able find an alternative suitable location? Its a crazy idea to create any situation possibility that will not allow the use of water??

Is this a joke? How do you see this happening? I'd really love to hear how this is supposed to work, from what is here in the alternative, nothing is possible.

As you know two and a half acres of land is not large enough to create any real profit. However if one does, It also states in the DEIS that if there is profit of any kind from this 2.5 acres, the rent will increase??

Who's getting paid to sit in their little offices to create plans that leave no real opportunity!

The top few on the preparers list make more than our gross ranch income for a year, and we have multiple family members living from this income. The 2.5 acre, option is completely misleading to think you're creating a great opportunity! It's nothing more than the NPS trying to look good with a new option that is set up to fail.

Elk-

The inclusion of the Drakes Bay Elk herd at this point after the failure of implementing the original management plan, has a significant impact on the future of our ranches and families. What about the Limintour Herd which has spread to several other sub-herds? 1998 GMP there was an elk management plan which appears to be forgotten....??

There is no other current written or plan otherwise for managing the Elk in these herds. Its misleading and incorrect to say that the Drakes bay herd is doing fine and not disrupting or destroying the ability for the ranch family's survival! The Elk are depleting food sources designated and maintained for the purpose of cattle and the survival of ranches. They are consuming much of the supplemental cattle feed, as well as the grazing areas. The cattle in all areas, on all ranches, are fenced in! The Elk are not! Due to the failure and lack of management, we now have this situation! Not only are the Elk depleting food sources from their ability to roam freely over areas that they were never intended to , they are injuring cattle and other animals! This is NOT okay!! The NPS has

introduced the coyotes several years ago, of which there were none. Now I watch as these animals who don't eat only their rodent food sources, but the tiny newborn calf before he's able to stand, they rip out the guts and begin eating the little one while still alive!! There are no management plans for them either? They run in multiple large packs; First hand I've sadly observed baby calves being eaten alive while staring at me wondering what they did to deserve this horrible pain! It's sickening to think they were put here for the controlling of deer?? Unknowledgeable people promoting the placement of these is sickening.

What are the proposed New Management Strategies for the Elk and Wildlife? From what I've seen, this was prepared by many who have varying degrees in formal education, but no agriculture experience at all. Please explain how this makes the preparers knowledgeable enough to create multiple working plans in an area they have little to no practical knowledge? We are the experts of this land which we've devoted our life to. What "New opportunities and infrastructure for facilitating public use and enjoyment in the planning area would be implemented" The proposed public use of a newly created trail and road through the ranchlands are completely, impossible and crazy dangerous. This is counterproductive in many levels. Safety i.e.. animals vs people vs dogs, fences being cut left open, gates left open, feces, and other unnecessary items left and rely on others to pick up after them!

Remember when the government was closed and people visited was when the park was shut down? People, caring, kind people who lazily piled garbage, feces, and other unnecessary items in vital areas because there were no housekeepers to follow them around and pick up after them! Leaving much of this proposal open ended without specific ideals or plan details and is extremely inadequate and counterproductive for the amount of money it took for this DEIS to be drafted. There are no reasonable resolution plans here! Just potential ideas in multiple directions.

This DEIS involves multiple families and generations devoted to spending our whole life for the survival of the people of this country! People sadly have no real clue. Just many wild, inaccurate guesses! Zones, subzones.....

The environmental impacts of Micromanaging ranchers and our professional knowledge of it, is crazy!

Public use and new infrastructure. .... what? Why is it not completely presented? What happens when (and it will happen) that a tourist or many, will become injured from walking or hiking through the working areas. What happens when a person becomes injured from an Elk? Since the NPS owns the land, I believe it is their responsibility as owners for any repercussions from ANY injury that is sustained from the Elk. What if a cow gets, and a visitor hit/hurt/killed on the road because the visitors have damaged the fences by cutting the wires, as they do, and pull them open so the cattle can walk out of the fence onto the roads?

Then there is the problem of maintenance. If the NPS owns the land and buildings then why isn't it their responsibility to maintain it? The law states that any land or property owner who rents, has to maintain, repair and make the place safe for the occupants renting. The ranchers do keep up their places, but uncertainty in how long we will be living here, creates quite an unsettled feeling as well as how much we can afford to invest in our futures is at stake here.

There is mention of a fund for maintaining infrastructure with but there is grossly incomplete information on implementing, managing and maintaining this fund.

What if we get a 20 year lease and its time ends? Are they going to renew for another 20 years without hassle? We don't own it remember, are but we do have businesses that require planning and are the sole means of our survival.

The whole park is comprised of near 80,000 acres and of that 27,000 are occupied with ranches. Why is the other near 60,000 acres can't be made palatable for Elk? Why are you not making use of that 60,000 acres for the Elk? It's there and available?? It's the original families and their next generations have kept the ranches viable by religiously improving and maintaining our land. Why can't the NPS and the Elk conservatives make it inhabitable for them?

The tension created with all these crazy proposals and threats has caused stress on all our families both individually and collaboratively. Its extremely sad to see and deeply feel the one time very close families, distancing from each other..... Tension, Stress, Health Issues, Losses..

THIS IS NOT A GAME! ITS OUR LIFE!

Correspondence: I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#6898

Name: Sullivan, Mary

Correspondence: I am changing my position regarding the extension of cattle grazing in the Point Reyes National Seashore area from my comments I submitted earlier which was to stop grazing cattle. I know that Point Reyes National Seashore would not exist without the agreement between the National Park Service and the cattle ranchers. Because of their involvement in creating Point Reyes National Seashore, I approve that the ranchers can continue to graze their cattle. However, I DO NOT WANT THEIR RANGE EXPANDED OR FOR THEIR CATTLE HERDS TO INCREASE IN SIZE. The environment must be protected from degradation and loss of native plants and trees as well as protecting the wildlife including the Tule elk herd. I OPPOSE THE KILLING OF THE TULE ELK HERD!!!! Any proposal by the National Park Service to allow for killing the herd will negate my approval of allowing the ranchers to continue to graze for the next 20 years!!!! Killing the herd or most of the herd to make more profit for the ranchers is outrageous!!!! I can understand culling a FEW sickly ones, but not healthy ones!

Another point - with Climate Change rapidly occurring, we need to do a lot to curb greenhouse gases before it is too late. The raising of beef cattle and dairy cattle contributes greatly to the development of greenhouse gases. The loss of trees amplifies the rate of Climate Change. How wise is it to allow for more cattle raising?

Although, I now live in Southern California, my roots are from Sacramento, Napa, Marin, and Sonoma counties. I have spent a lot of time in Point Reyes National Seashore, and love it dearly. It is a treasure. I have also loved watching the elk herd. Cattle are so common, but the majestic Tule Elk herd is a rare and unique sight to be seen!. Don't deprive the public the joy of seeing such a wonderful sight! The Tule Elk deserve to live on the land as well!

#6900

Name: N/A, N/A

Correspondence: Tule Elk should be protected for the survival of their species. They have already gone through a huge genetic bottle neck when they were almost completely wiped out except for 20 individuals. Every gene allele is important for the long term sustainability of the herd. The National Park should be protecting all Tule Elk, and allowing new herds to form and to TAKE DOWN THE FENCE at Pierce Point and allow all Tule Elk to roam free. I do not support granting 20 year leases to cattle and dairy industry. Climate science has indicated we have less than 12 years to mitigate the worst of climate catastrophe. Allowing business that has been linked to water pollution, species extinction and in Point Reyes is the culprit of over 60% of the greenhouse gas emissions, it is not a good idea to give that same industry a 20-year lease to continue degrading our national park. Point Reyes is a refuge to thousands of plants and animals. Point Reyes can be a leader in the fight for climate justice, and it starts with phasing out Beef and Dairy operations and restoring the land to its natural state. The EIS has NO MENTION of the effects of climate change in it, and does not include any information of the cattle and dairy's impact on climate change within the park.

#6901

Name: Fukumoto , Barbara

Correspondence: Much private land is devoted to farming and grazing. National Parks and Seashores, on the other hand, are special places set aside to preserve \*natural\* places and wildlife for the enjoyment of the American people, including future generations. This high purpose must be clearly prioritized above exploiting public land for the subsidized profit of the few.

According to the Pt. Reyes Act, itself, this Seashore is to be managed for "maximum protection, restoration, and preservation of the natural environment." This language makes clear that nature, including wildlife and native grassland, is the priority-not commercial activities like ranching and farming.

This painstaking restoration of the native ecosystem, part of the core Point Reyes mission, has resulted in the recovery of the native Tule Elk population at Point Reyes. The Tule Elk should not be shot, fenced or removed, but allowed to forage freely. Commercial activities at Point Reyes should be required to accommodate native wildlife - not the other way around. Cattle ranching should only be allowed if it's consistent with preserving the native ecosystem. And likely it is time to rethink the subsidies that the ranches receive for grazing fees and housing and the taxpayer-funded infrastructure, road improvements, and other projects.

Finally, the Park Service shouldn't allow any new agricultural activities at Point Reyes or expand the land allotted to agriculture (or ranching). Planting artichokes or other row crops would encroach on natural grasslands. And introducing sheep, goats, pigs or chickens will attract native predators such as coyotes, bobcats and foxes. Expanded farming would only create new wildlife conflicts.

Do not expand agriculture or ranching. Do not kill, fence or remove the native Tule Elk that have been recovered through great effort and expense. Do rethink ranching subsidies, especially in view of the greenhouse gas emissions of cattle. And do uphold the Point Reyes National Seashore Act and prioritize protecting, restoring, and preserving this special corner of Creation in its natural state for this and future generations to enjoy.

Thank you for your consideration.

Correspondence: I came to the Bay Area 52 years ago, just out of college, to teach in an elementary school. I first lived in San Francisco and subsequently moved to Marin County. Right from the beginning Point Reyes was my favorite place to go to on the weekends. I have always felt unbelievably lucky to have such a spectacular and peaceful place so close by. As much as I like ranching and farming, I do not feel that the Point Reyes National Seashore is the appropriate place for it. I am in favor of Option F to remove all ranching and return the land to its natural, native state.

#6904

Name: Bertano, Silvia

Correspondence: Stop Elk Hunting!

#6905

Name: WEIBEL, ANNEMARIE

Correspondence: I am so very grateful that Marin County had so many activists that were able to convince congress to create all these protected areas so people can be surrounded by fresh air, wildlife, and take their families to the ocean, the beaches, hiking, biking, canoeing and kayaking. It is so nurturing and healing to drive through farmland and see no industry, just cattle, chickens, horses and acres of open land knowing that Caltrans was wanting to build a 4 lane highway from Berkeley to Point Reyes and ruin this area forever. There's no mandate for prioritizing commercial agricultural leases on these public lands. Natural values, native wildlife, public access and enjoyment should take priority over commercial activities at Point Reyes. That was the concept.

The Tule elk are an important part of the landscape at Point Reyes. Their recovery is a result of successful native ecosystem restoration, which is a key element of the Park Service's mission. It's taken a lot of time, money and effort to restore Tule elk to Point Reyes, the only national park where they live. Tule elk should be allowed to roam free and forage in the park - not shot, removed, fenced or treated as problem animals.

The Park Service shouldn't allow any new agricultural activities at Point Reyes, nor introduce different wildlife in the area that would only create new problems.

Right now the Point Reyes ranchers enjoy not only subsidized grazing fees and housing, but also taxpayer-funded infrastructure and road improvements, and publicly funded projects.

Cattle ranching should only be allowed if it's consistent with preserving the natural environment. Cattle are the seashore's primary source of greenhouse gases. The Park Service's preferred alternative is inconsistent with its own "Climate Friendly Parks" plan. I know that when the plan was created it was crucial to have the buy in from the ranchers.

Mowing shouldn't be allowed in park areas where it will harm endangered species or wildlife habitat, impair water quality, cause excessive erosion or spread invasive plants/diseases. The Point Reyes National Seashore and other national parks nearby were created with the goal to be managed under the Point Reyes Act for "maximum protection, restoration, and preservation of the natural environment."

The Point Reyes National Seashore General Management Plan Amendment and Environmental Impact Statement is proposing to dedicate one third of Point Reyes National Seashore to cattle ranching and includes plans to kill off Tule elk that frequent the area. This is the opposite of what so many futuristic thinking activists fought so hard for.

This plan would only benefits twenty-four cattle ranchers who sold their land to the public 60 years ago, but still use the national park to graze their cattle.

Please do not cave in to the pressures by these cattle ranchers!

It seems to me that the Environmental Impact Statement can not in any way attest that dedicating one third of the Point Reyes National Seashore to cattle ranching and killing off Tule elk that frequent the area can in any way benefit the environment.

If their parents and grandparents of the ranchers knew about this they would turn over in their graves.

Quote by Rachel Carson: "The more clearly we can focus our attention on the wonders and realities of the universe about us, the less taste we shall have for destruction."

To: Cicely Muldoon - Point Reyes National Seashore Superintendent RE: Point Reyes National Seashore GMPA/EIS comments

I am a homeowner and full time resident of Inverness, CA. My full time work is guiding tourists within Point Reyes National Seashore for the purposes of viewing and photographing the scenic beauty and the wildlife within the National Seashore. I have held a permit for Commercial Use Authorization from the NPS for this business for the past 5 years.

Over these past 5 years, I have guided well over 1000 tourists who have desired to visit this incredible National Park. These tourists have come from as far as India, Scotland, Ireland, South Africa, Russia and many other countries. They have come from Massachusetts, New York, Florida, Texas, Alabama, Michigan and many other states. A reasonable portion of my guests have come from within driving distance including Berkeley, Alameda, Richmond, San Francisco and Oakland. My guests have also included locals who live right here in Point Reyes and Inverness who wanted to experience the park in a new manner joining me. I am within the borders of Point Reyes National Seashore nearly every single day that I am not traveling, either as a guide or for my own personal enjoyment.

I am deeply saddened and concerned by the preferred alternative choice of the National Park Service for the future management of Point Reyes National Seashore. Alternative B gives preferential treatment to a dozen lease holders within the park over the rest of the public and will have a devastating impact on wildlife and the environment. The NPS must comply with the Organic Act which states it must manage the park "by all such means and measures...to conserve the scenery and the natural and historic object and the wildlife therein. . .as will leave them unimpaired for the enjoyment of future generations."

The National Park Service founding statute states nothing "shall be leased, rented or granted to anyone on such terms as to interfere with free access to them by the public." And the NPS is required to manage the park with "the maximum protection, restoration and preservation of the natural environment within the area."

Option B does not do this. Per the EIS, option B has a negative effect on soil, water quality, vegetation, wildlife, tule elk and air quality. Option F improves soil, improves water quality, improves native vegetation, improves wildlife health, protects tule elk and improves air quality. How can the National Park Service justify choosing option B over option F based on the finding of the EIS and its mandate of the maximum protection of the natural environment?

Please see the list below of the following items that the EIS does not properly address and that the park must provide further details to the public about its choices and plans:

1) The killing of native tule elk

The number one animal that my guests request to view and photograph is the Tule elk. What is the purpose of killing the tule elk? Please state why cattle take priority over the native tule elk. If there is a conflict for resources (grass) why aren't cow numbers reduced? Why must native animals be killed to provide more grass for cows? How does killing the tule elk fit in the park's mandate to provide maximum protection to the natural resources? The park has an obligation to restore the park. Elk roamed this land in the thousands in the 1800s. The park should allow free roaming elk within its entire borders.

2) The conversion of park land to row crops and silage fields

Why is the National Park Service allowing public land to be converted to row crops? This goes against the mandate the NPS has for providing maximum protection to the natural resources and to provide the public with access to its land.

Row crops will remove public access. Row crops will remove habitat for wildlife. Row crops will introduce conflict with native animals. Row crop operations will kill native animals who live on these current grasslands. Row crops will remove hunting grounds for native animals. Row crops will destroy native plants. How is it even possible that this is being considered?

The EIS did not properly address the impact that allowing row crops will have on native wildlife. How many snakes, gophers, mice, lizards, weasels, badgers and other wildlife will be displaced or by row crop operations? What native plants will be destroyed by such action? Please provide a detailed analysis on what impact the row crops will have on these individual species. Please describe the additional costs to the tax payers for fencing, enforcement, management and other requirements surrounding row crops.

It is stated that no tilling will be allowed in the allowance of row crop planting. How can this statement be true if tilling is already allowed in the National Park? Today disc harrows are used to till the soil in preparation for silage planting. According to Wikipedia a disc harrow is:

“...an agricultural implement that is used to till the soil where crops are to be planted.”

If tilling is not permitted for agricultural use, then disc harrowing should not be allowed. Please provide an analysis of how native wildlife and plants are affected by disc harrowing.

Silage fields are known homes for many species. A report by Point Blue noted several species of birds nesting in the silage fields. How does the park ensure no birds or wildlife are disturbed or killed during silage mowing? The park sends a biologist down trails prior to mowing to make sure there are no nests disturbed. Why is this not done prior to silage mowing? Please provide details on how maximum protection of nesting birds and other native wildlife is ensured in silage fields prior to mowing.

Silage mowing is an attractant for ravens and crows. These birds follow the silage mowing equipment closely and can be seen gathering the remains of animals displaced or killed by the mowing. The park has an obligation to protect these animals and not allow them to be mowed over. The attraction of ravens has likely had a major impact on the snowy plover population. The majority of snowy plover nests in 2019 were destroyed by ravens. If the population of ravens is increased by silage mowing, how can the NPS even consider adding new silage fields elsewhere in the park? Please provide a detailed analysis on the effects that silage mowing and the disproportionate number of ravens and crows due to this mowing has on snowy plovers and other species.

3) The introduction of domestic animals such as sheep, goats, chickens and pigs

This is deeply disturbing. Today the ranchers are demanding the removal of a grass eating elk. What is going to happen when a coyote takes one of these new domestic animals? What happens when a bobcat or fox or weasel or badger takes one of these animals? No adequate plan is discussed in the EIS that addresses the conflict that will arise from the introduction of these domestic animals. The NPS must disclose its plan for these conflicts and what the cost will be to the tax payers and to the wildlife. An enforcement plan must be made available. What resources and how they will be paid for must be made available before any new animals are introduced to the park.

The EIS does not address the impact of the new waste from the domestic animals. A common practice today with pig urine is for it to be misted into the air to remove it from the farm. Will this be allowed in the National Park? How will the pig urine be removed? If the NPS is going to allow pigs in the national seashore it must disclose how all waste will be removed, how this will be enforced, and at what cost to the public.

What effect will chicken waste have on our soil and waterways?

With the introduction of new grass eating animals such as sheep and goats, there is no mention of any reduction of cows within the seashore. If there is not enough grass for both cow and elk, and elk are being killed to provide more grass for cows, then surely an increase in sheep or goats should result in the lowering of cattle numbers. Why must elk be shot because there isn't enough grass but we then allow the introduction of goats and sheep? No new domestic animals should be allowed into the seashore. If new domestic animals enter the seashore, the NPS must provide a detailed report of the anticipated grass consumption of any new domestic animals and an equivalent number of cattle must be removed.

No new domestic animals should be allowed in the National Park.

#### 4) NPS ensuring ranching profits

The NPS has stated the proposed diversification changes would allow ranchers to "react to fluctuations in the economic market." It is not the responsibility nor should it be the goal of the National Park Service to ensure the profitability of operations within the park. This being the main reason for NPS to allow diversification opportunities, no diversification should be allowed in the National Seashore.

#### 5) Road conditions

Nowhere in the EIS is there an analysis on the impact to roads with the allowance of new diversification opportunities. Today, all day long, dozens of semi-trailers pulling tons of hay, industrial trucks hauling in feed, 18 wheelers with gas, milk trucks, silage mowing vehicles, mowers and other industrial traffic fills the roads within Point Reyes National Seashore. The road conditions in the park are atrocious. How will the park maintain the roads with the new commercial traffic for the vegetable trucks, for the increased traffic for processing, hauling, digging, planting, harvesting and other operations? What are the industrial traffic increases to support the coming and going of sheep, goats, pigs and chickens? What are the costs to the public for this road maintenance? How will the roads be maintained with the heavy increased traffic due to the diversification allowance when we can't even upkeep the road today? No new allowances should be given that will increase the industrial traffic within the National Seashore.

#### 6) Cost of ranching in the seashore

The EIS does not discuss the cost of supporting ranching in the National Seashore. The public should be informed how much it costs the US tax payers to manage ranching in the National Seashore. It should be informed on how much additional cost there will be to support the proposed plan B. Please provide all the costs associated with the implementation of plan B.

#### 7) Historic buildings

The park is proposing repurposing historic buildings to allow ranchers to set up vegetable processing facilities, cheese production, tourist accommodations and visitor store fronts. Why aren't these buildings being repurposed for public visitation, education or interpretation? How is converting these buildings to new uses keeping in step with the protection and restoration of our historic structures? Why are they being used for private profits over public access? The NPS must justify this new historic building use and provide the costs to the public for any changes in the use of these structures. Who receives the money for any visitor accommodations that may be allowed? Will this go to the public as it will be their tax dollars that will support this activity?

#### 8) Succession

What was once an effort to protect "Multi-generation beef and dairy ranching" has turned into an effort to permanently enshrine ranching within the national seashore. The NPS is now proposing that if any rancher should retire from ranching within the seashore that a Request for Proposal from outside the immediate family would determine who would succeed the lease. This could be another rancher within the seashore, or any individual or perhaps company outside the seashore. No matter which, as proposed, multi-generation family ranching would end yet ranching within the seashore would continue indefinitely. This is not protecting multigenerational family ranching. The proposed succession plan should not be allowed.

#### 9) Funding

The draft EIS fails to provide a financial overview of how any of the actions it is proposing will be enforced and paid for. Without understanding this information, the allowed proposals should not be implemented. Resource protection is the priority over all else. Budgets must reflect how resources will be prioritized and protected before any elk culling, row crops, new domestic animals are introduced or succession plans are implemented.

#### 10) Increased Public Services

The EIS provides very little discussions of new benefits to the public. Here are a few of ideas:

a) At an appropriate time in the future, retire the A ranch. Traffic at the lighthouse and chimney rock are extremely high. This location can be considered for an extension of the lighthouse visitor center, an interpretation center and can be a hub for visitation to the lighthouse and chimney rock. It can provide more housing for park employees. It can house scientific work and classrooms for students. It can provide overnight housing for workshops, classes and other visitor services. It can also be used as a parking facility for high visitor times. Instead of closing the park to all visitors on weekends during Jan-Mar from Drakes Beach to the lighthouse, the road can be left open so visitors can enjoy all the areas between Drakes Beach and A Ranch. Parking areas can be created at A ranch and smaller shuttles can be used to shuttle visitors from A Ranch to the lighthouse and chimney rock. Additional parking areas can be created at chimney rock where more people can park and walk to this location. A 1 mile hiking trail can be created from the new visitor center to the lighthouse parking lot where people can walk instead of drive, alleviating some traffic and providing a new visitor experience.

b) Expand the Elk Preserve. At an appropriate time in the future retire the J ranch. Today the tule elk have no permanent water source in the elk preserve. Approximately 1/2 of all elk died during the recent drought due to lack of water/food. This could have been prevented and is an embarrassment to our management of these native animals. Expanding the elk preserve to include the land on J ranch would give them adequate year round water. The creek that runs through J ranch was recently named one of California's most polluted streams. This would also assist in the recovery of this important watershed.

c) One heavy conflict area between elk and cattle is at the D Ranch. Elk spend a significant amount of time on the east side of Drakes Beach Road. The NPS should consider removing cattle on the east side of Drakes Beach Road to provide greater grazing habitat for tule elk. This will reduce elk and cattle conflict on this portion of the D Ranch property and provide visitors with a greater viewing experience of this native animals species.

## 11) Manure spreading

Johne's Disease has been documented in the Tule elk in the park. This disease is transferred from cows to elk through the cow manure. The NPS allows the manure from cow operations to be collected and spread on the very grass the elk consume. How does this practice provide maximum protection for this native species? What impact does the manure spreading have on the water quality? Visitor experience is significantly lessened when the manure spreading operations are in process. The smell is repulsive and the sight of manure trucks spilling liquid cow waste all over the public roadways is simply disgusting. What native animals are impacted from this practice? Are gophers, mice, snakes, lizards or other native animals displaced or killed during this practice? Please provide an analysis on the manure spreading and its effect on native plants and animals.

### Conclusion:

I am deeply disturbed and disappointed in the NPS decision to recommend the killing of tule elk, the expansion of ranching operations to include row crops, new domestic animals, and the conversion of historic buildings to vegetable processing, cheese processing, store fronts and private accommodations. During the most tumultuous time of climate change in our history and during a time of continued loss of public land, the NPS should reconsider its proposed plan of option B and choose alternative actions that prioritize the protection of our natural resources for all citizens.

#6907

Name: Weiss, Brandon

Correspondence: DO NOT ALLOW CATTLE RANCHING IN POINT REYES. Tule Elk are already incredibly threatened and this could lead to their extinction!

#6908

Name: Cornwell, William

Correspondence: I am Associate Professor and an ecologist who has done scientific research on the future of the vegetation at Point Reyes. I have published peer-review papers on the vegetation dynamics of the SF Bay Area including Point Reyes National Seashore. I am very familiar with fire ecology, climate change forecasts, and many other issues facing land managers at PRNS.

I was quite excited to read this extended and substantial work on a long-standing issue that is of great importance to the national seashore. However, after 216 pages, I was left deeply disappointed and distressed. The key questions are diffuse and poorly addressed throughout the EIS. And from a scientific perspective, this was one of the lowest quality examples of a draft EIS that I have come across in my career. The discussion of vegetation ecology is highly speculative and rarely scientific.

At the heart of the draft EIS are statements like this:

> Eliminating livestock grazing could also adversely affect several federally listed plants that occur in coastal grassland because grazing is the most effective tool for promoting their persistence with respect to competition with other non-native grassland species.

What is the evidence for this statement? Which plant species? This has references and no scientific basis, and would be a shocking statement for most SF Bay Area land managers with decades of experience in coastal grassland management. For example, the GGNRA employs many ecologists who would deeply disagree with this assertion.

I am not writing to advocate a position but rather to argue that the methodology in this draft EIS is deeply flawed and relies on baseless speculation rather than scientific evidence.

I would strongly urge the Superintendent that there needs to be higher quality methodology going into the EIS and better controls to make sure the writers of the EIS are completely isolated from political pressures. The Superintendent and other decision makers need much better science to make an informed decision on this important issue.

Sincerely, Will Cornwell

#6909

Name: Lucido, Caryn

Correspondence: I vehemently oppose the potential plan to lethally remove (kill) the Tule Elk at Point Reyes National Seashore.

Any cattle ranching and other agricultural operations must be managed to accommodate elk and other native wildlife, and should not harm wildlife habitat. Commercial lease holders should not be allowed to dictate removal or exclusion policies of wildlife on our PUBLIC LANDS.

I'm opposed to the removal of any Tule Elk from PRNS. Please reject any conversion of National Park lands to row crops or expansion of commercial livestock farming to introduce sheep, goats, turkeys, chickens or pigs which would only increase conflicts with wildlife, and degrade wildlife habitat and water quality.

This is designated national seashore, a local, regional and national treasure whose wildlife should be PROTECTED, NOT KILLED.

Thank you, Caryn

#6910

Name: Rose, Tedford

Correspondence: This is the time to let the rancher's leases end. This is PUBLIC LAND. Not land set aside for the profit of cattle and dairy production. I oppose killing native Tule Elk in order to not let the Elk feed. Have the ranchers buy some land. They certainly have been saving the money to do so. NO MORE free rides for cattle and dairy. Public land is ours. NOT THEIRS!

I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place.

#6911

Name: Menard, Joseph

Correspondence: 1. Under no circumstance shall the park kill any Tule Elk. 2. The park should prioritize Tule Elk habitat. 3. The park should refuse to grant 20-year permits and leases to cattle and dairy ranchers. Ranchers have overstayed their original permit limits already. Long-term leases will set a terrible precedent in favor of private, commercial industry and jeopardize the future of our parks and the health of the ecosystem. 4. Absolutely no

diversification of ranch operations. Any diversification (such as chicken coops, pigs, sheep, row crops, etc) will only serve to attract more predators like coyotes, foxes, bobcats that will be in conflict with ranch operations and have to be "managed" as well. 5. The park should revoke permits for all cattle and dairy operations and restore the leased land to its original, pre-industry state. The park should prioritize wildlife NOT commercial interests!

#6912

Name: Sterling, Jennifer

Correspondence: As a 12-year resident of Marin County and frequent visitor to Point Reyes, I am writing to urge the National Park Service to discontinue the grazing of beef and dairy cattle at Point Reyes National Seashore. This precious area has been damaged by livestock grazing which poses a threat to the environment and local wildlife and it should be protected and used to serve the public good, and not for the benefit of the livestock industry.

I strongly oppose Option B and any other proposal that would be fatal to Tule Elk or other wildlife to the benefit of ranching operations, and encourage the agency to adopt Option F to discontinue grazing and allow members of the public to enjoy this beautiful park and to be enriched with opportunities to visit and appreciate this special place

#6913

Name: N/A, Nick

Correspondence: Point Reyes truly is a natural gem to Marin, the Bay Area, California, and beyond. It belongs to all of us. I lead volunteer hikes throughout the bay area and often recommend Point Reyes because of its amazing biodiversity and scenery, but it troubles me to see our local Amazon being threatened by the financial desires of a small group of ranchers that have already been fairly compensated. Are we really ready to let Point Reyes burn for short term financial gains?

It is unfortunately clear that the historical value is not important to the NPS, since the preferred alternative B would result in ranching operations that: don't raise the same animals, are not run by the same people, and don't welcome the public.

Pierce Point Ranch seems sufficient to satisfy the historical ranching needs. Twenty-four private ranches are not needed and not effective in conveying their historical value. I question the methodology being used to maintain historic value, determine the scope of this historic value, and balance this value against other needs. One third of the park should not be dedicated to historic preservation, when a small recreated Miwok village seems to suffice for historical purposes for the displaced Native Americans. These policies are being applied inconsistently and offensively.

You already have all the details in your own EIS about the negative impacts that agriculture is having on this special place. The negative effects are almost too numerous to list. It is not just your job to conserve Point Reyes, it is all of our responsibilities.

The bounty and the history of this land is truly in the biodiversity. From the nps.gov website: "As wildland habitat is lost elsewhere in California, the relevance of the Point Reyes Peninsula increases as a protected area with a notable rich biological diversity. Over 45% of North American avian species and nearly 18% of California's plant species are found in the park due to the variety of habitat and uniqueness of the geology. Thirty-eight threatened and endangered species exist within the Seashore."

I couldn't agree more, the need to protect this habitat grows. As the steward of our land, I request that the NPS please prioritize biodiversity and environmental restoration over commercial use, and modernize the historical preservation practices to be holistic and balanced.

The NPS is not a welfare program for ranchers that have already been fairly compensated, the historical needs have been met already by Pierce Point, and with the minimal contribution of this ranching to the regional economy, I must urge the NPS to pursue Alternative F. It is the only option that prioritizes the long term value to future generations and improves the protection of biodiversity by removing one of the biggest threats, ranching.

I love the NPS and Point Reyes. Thank you for taking my concerns into review.

#6914

Name: Hamilton, Chia

Correspondence: Frankly, I'm appalled by the fact that you're thinking of destroying the Tule Elk, even one of them. The National Parks are for all the people to experience nature and your duty is to preserve that nature for everyone.

The fact that you have continued to lease land to dairy farmers consistently, in direct opposition to the intended original plan when Pt Reyes was formed, tells me you have no respect for anything but greed and power. SHAME ON YOU

And how much publicity was generated by you about this issue? Betting as little as possible. Cause if the people don't know, they must rely on you to protect their rights.

WHAT A DUMB IDEA THAT WOULD BE.

You have no intention in looking out for the rights of the people who believe they pay you to look out for all of us. Your concern is with the very few who will profit from your not enforcing those agreements

#6915

Name: Zorn, Lisa

Correspondence: I am a transportation planner and I live and work in San Francisco, and I volunteer weekly in Marin County. As a transportation planner at a public agency, part of my job is to help Bay Area residents reduce our per capita greenhouse gas emissions from mobile sources. However, it is becoming clear that animal agriculture is a major contributor to greenhouse gas emissions and it is a completely unnecessary industry. We can thrive without consuming animals or animal products, and as such, government subsidy and support of these industries is entirely inappropriate and counter to our goals as a region and as a state.

I am writing to ask you to choose Alternative F. Our public lands should not be used to subsidize violent and environmentally destructive practices. We should be supporting a transition to plant-based agriculture, and supporting the transition of animal farming to these more sustainable (and less violent) industries.

#6916

Name: Garrett, Benjamin

Correspondence: Please support Alternative F. Tule Elk are beautiful and we do not need to subsidize animal agriculture, which is a violent and unnecessary industry which is destroying our environment. Also, when you think about it when we always choose capitalism over conservation we end up with a planet that's destroyed. Do we really need another extinction when we've already paid these ranchers for this land 50 years ago. I thought we were in California!?!?

#6917

Name: Jacobson, Tom

Correspondence: Regarding The General Management Amendment Environmental Impact Statement (EIS) for Point Reyes National Seashore and the North District of the Golden Gate National Recreation Area

I am in favor of Alternative B: NPS would cap the Drakes Beach Tule Elk population at 120 (there are currently 124). "NPS would manage to the population threshold using lethal removal methods." No other Elk herds will be allowed to be "established" - live, procreate, or feed there.

Thank you

#6918

Name: Difar, Amy

Correspondence: I am writing to urge you to reconsider this ill-advised plan. The balance of Nature is too fragile to allow private citizens to kill wildlife for their own gain. The damage done has far-reaching detrimental effects on the natural world.

Every creature on the planet has a purpose. We should not attempt to change the order that Nature has so perfectly created - the very order upon which our lives depend.

Additionally, it is extremely important to me that we leave public lands intact for future generations. The point being that these are public lands - they do not belong to private livestock owners nor do they exist for the benefit of those private citizens.

Name: Nagel, Sarah

Correspondence: Animals should be protected!

#6929

Name: Glander, Bethani

Correspondence: I would like to write in favor of options A and E. If D allowed for a larger population of elk, option D would be my first choice. The elk at Point Reyes is one of its best features. Limiting or removing the herd would be very upsetting. I find it disappointing that option B is listed as the "preferred" option. The public visitors and wildlife should have priority over businesses. I would like to see a reduction of ranching to reduce environmental impacts and increase recreational opportunities. I would prefer removing ranching all together over expanding it, new visitor opportunities and nature in the park would be nice but the entire removal of ranching in option F would impact a lot more jobs and the authentic feel of the historical ranches which are also a nice feature of the area.

I hope you will decide against expanding ranching at Point Reyes to best maintain the beautiful habitat it has to offer.

Thank you

#6930

Name: Perry, Steven

Correspondence: As visitors to Point Reyes for over forty years, my wife and I are totally opposed to the killing of the tule elk at Point Reyes. First, Point Reyes National Seashore is supposed to be managed under the Point Reyes Act for "maximum protection, restoration, and preservation of the natural environment." There's no mandate for prioritizing commercial agricultural leases on these public lands. Simply put, the cows should have been removed decades ago. Next, natural values, native wildlife, public access and enjoyment should take priority over commercial activities at Point Reyes. It's a "national park" after all.

Tule elk are an important part of the landscape at Point Reyes. Their recovery is a result of successful native ecosystem restoration, which is a key element of the Park Service's mission. It's taken a lot of time, money and effort to restore tule elk to Point Reyes, the only national park where they live. Tule elk should be allowed to roam free and forage in the park - not shot, removed, fenced or treated as problem animals.

As you know, the Point Reyes ranches enjoy not only subsidized grazing fees and housing, but also taxpayer-funded infrastructure and road improvements, and publicly funded projects. But commercial activities at Point Reyes should be required to accommodate native wildlife - not the other way around. It's not supposed to be a bunch of cattle ranches with a few hiking trails here and there. Also, the Park Service shouldn't allow any new agricultural activities at Point Reyes. Planting artichokes or other row crops will attract birds. And introducing sheep, goats, pigs or chickens will attract native predators such as coyotes, bobcats and foxes. Expanded ranching would only create new wildlife conflicts.

If it has to stay, cattle ranching should only be allowed if it's consistent with preserving the natural environment. And agricultural activities such as mowing shouldn't be allowed in park areas where they harm endangered species or wildlife habitat, impair water quality, cause excessive erosion or spread invasive plants/diseases.

Lastly, cattle are the seashore's primary source of greenhouse gases. So the Park Service's preferred alternative is inconsistent with its own "Climate Friendly Parks" plan. The best solution is to close the ranches and leave the tule elk and other native animals and plants alone. Thanks for your time.

Correspondence: NO bikes at PT Reyes Seashore. Unlike cars, they carry no insurance. I was hit by a speeding bicycle on a walking trail, who simply kept going. I am sure he saw me, and he saw that he hit me. I broke my shoulder. I am seventy. Walking trails need to be safe for walkers, and not allow speeding bicycles. They don't follow the rules, and they don't care about pedestrians, who bicyclists feel are in THEIR way. MY incident isn't isolated. Bikers feel it is their right to own walking paths. What about walkers?

#6939

Name: Rozanski , Ashley

Correspondence: PLEASE WAKE UP!! The preservation of native wild species must take precedence over farming and ranching activities. Remind it that grazing negatively affects ecosystems, causing water pollution and soil erosion, spreading invasive species and disease, and harming endangered species.

#6940

Name: Huang, Karissa

Correspondence: Please do NOT allow tule elk to be killed for the sake of dairy cows.

It is possibly understandable that a few privileged livestock owners are allowed permits for cattle-grazing, even though cattle-grazing can cause damage to wetlands, streams and wildlife habitats. Beyond that, it baffles the

mind as to why we would allow tule elk, an endangered species, to be shot in order so that a few livestock owners can graze their cows on public land.

Let's use some common sense here. Point Reyes National Seashore is public land with a diverse ecosystem. We should be protecting this natural ecosystem, NOT protecting the interests of ranchers who enjoy heavily subsidized cattle grazing and dairy leases.

#6941

Name: Wood, Christine

Correspondence: I respectfully ask that you consider the words of the Act written in 1962 to "save and preserve....a portion of the diminishing seashore..." Please do not allow ranchers to kill tule elk they believe 'interfere' with their ranchlands (ranchers were compensated for their lands 44 years ago). We have lost too many elk due to ranchers fencing during drought. Current proposals are 'anti environment' and ignore the Park's ecology. We do not need or want an additional 10,000 acres of grazing lands or row crops or permission to kill tule elk.

Please....our national parks should be a refuge for people and wildlife.

Thank you.

Correspondence: I write as a life-long park enthusiast, visitor to Pt. Reyes and user of many other public lands nation-wide, donor to the NP Foundation, and holder of many National Park annual passes. I strongly oppose the NPS General Management Plan Amendment (GMPA) proposed for Pt. Reyes National Seashore. I remain disappointed with the vision and stewardship of our National Parks and other public lands, and this is yet another example of succumbing to lobbyists, private interests and financial pressures.

In 1962, Congress established Point Reyes National Seashore in 1962 "to save and preserve, for the purposes of public recreation, benefit, and inspiration, a portion of the diminishing seashore of the United States that remains undeveloped." At the time and ever since, ranchers on that land were compensated fairly for their land under the clear agreement that they could remain in the park for their lifetime or 25 years. BUT they never left. How does this satisfy the clearly articulated mission statement for the Seashore? This is wrong, and disingenuous to public land stakeholders: the public. 25 years is clear - time to move private interests off of public lands per the NPS agreement.

Let's be honest: seashore management has consistently favored the ranches over wildlife. That remains unchanged in the NPS-proposed GMPA alternatives. Let's look at the GMPA language: continued ranching is proposed in five of these GMPA proposed alternatives (Alternatives A through E). Only one alternative, Alternative F, proposes to phase out ranching over five years as was intended under all original agreements in 1962. Alternative F it shall be.

And the NPS "preferred alternative" Alternative B provides ranchers exactly what they have long demanded - more 20-year leases to remain in their private enclave protected by public tax money. Moreover, NPS-claimed "diversification" clauses now allow previously unauthorized commercial livestock and crops that Seashore ranchers say they need for income. But, this is no longer their land to provide their own income any longer - it's public land, deeded back to the public and to the native species for the public's use per the NPS Seashore mission statements. Get the ranchers off. They are not the public. Since 1962 they were supposed to have 25 years. That is clearly over. Move them on.

Lastly, the proposed lethal removal of native elk that impede ranchers' ability to further their elite privileges on public lands is criminal.

Native Tule elk are in fact the true historic occupants of the Point Reyes peninsula. For 10's of thousands of years before cattle were imported from Europe to destroy their habitat. Thousands of elk were extirpated by the late 1800s as the coastal prairie was overtaken by imported cattle. The native elk's reintroduction to the Seashore in 1978, after a 100-year absence, is a rare success story of species' recovery.

In the NPS environmental impact statement, the NPS analyzes the Seashore's carrying capacity based on the maximum number of cattle the land can support based on historical conditions. It determines how many elk the park can support based on what forage is left over: only 120 elk. Wow. What a tragedy. And NPS endorses managing this tragedy again to the elk's demise? How is this justified?

Ranches and cattle grazing comprise one-third of the Seashore's 71,000 acres. Domestic cattle in the Seashore now outnumber Tule elk 10-1. And this will fall further under all Alternatives except Alternative F. In 2016, the NPS disclosed that 250 confined native elk had perished during the CA shoreline drought. These elk were unethically fenced off from pasture and water the NPS leases for cattle grazing. The majority of the elk remain confined at Tomales Point. It is a small "free-roaming" herd near Drakes Bay that the ranchers want removed. Get the ranchers off of Seashore public lands per the 1962 original understanding. They have received their subsidy -

compensating tax money on the dole - for decades beyond the original exit deadline. No more. Seashore is seashore public area - let's move to re-establish the intent from 1962 as undeveloped public lands.

Only Alternative F is the NPS choice that retains this public lands value and vision.

Dave Grainger Concerned tax payor, outdoors person and NPS enthusiast

Point Reyes GMP Amendment EIS  
Superintendent  
Point Reyes National Seashore  
1 Bear Valley Road  
Point Reyes Station, CA 94956

Re: Comments on DEIS for a General Management Plan Amendment

Dear Superintendent Muldoon:

The Center for Biological Diversity submits these comments on the National Park Service (NPS) Draft Environmental Impact Statement (DEIS) for development of a General Management Plan Amendment (GMPA), for the areas of Point Reyes National Seashore (PRNS) and Golden Gate National Recreation Area (GGNRA) currently managed for beef and dairy cattle ranching.

Introduction

The Center is a nonprofit conservation organization with more than 1.6 million members and supporters, dedicated to the protection of native species and their habitats through science, policy, and environmental law. The Center has expertise on protection of endangered species, cattle ranching impacts on the environment, management of federal public lands, and implementation of federal environmental protection laws. The Center has been working to protect native wildlife and other environmental resources of the Bay Area for more than two decades. We have more than 3,800 members and supporters who reside in Marin County.

Many Center members, supporters, and staff have a long standing interest in preserving endangered species, tule elk and other native wildlife, and natural ecosystems of Point Reyes National Seashore and the GGNRA. Center staff in the Bay Area have been visiting PRNS for up to 50 years, and have been involved in tule elk reintroduction, salmon restoration, and endangered species protection efforts in PRNS and the GGNRA over the past two decades. Center staff and members have spent hundreds of hours in the PRNS and the GGNRA ranching areas observing wildlife and documenting the conditions of ranchlands.

The Center submitted formal comments during the NPS Comprehensive Ranch Management Plan process in 2014. We are one of the conservation organizations which filed suit against the NPS in 2016 for failing to update

the GMP or conduct a NEPA process before attempting to extend cattle grazing leases, which led to the current planning process and the current GMPA and DEIS. The Center submitted formal scoping comments on this GMPA on 11/14/17 and 11/19/18.

We have read the draft Foundation Statement, DEIS, 2019 Natural Resources Condition Assessment, 2018 Grazing Plan, 2013 Coastal Watershed Assessment, 2006 NPS Management Policies, 2004 NMFS Biological Opinion, 2002 USFWS Biological Opinion, 1998 Elk Plan, 1990 Range Management Guidelines, and numerous other documents and data applicable to the DEIS, the GMPA and the current ranching area, many of which we obtained from the NPS under a Freedom of Information Act Request.

### Summary of Major Comments

It is appalling that the Park Service, whose charge is to preserve unimpaired the natural resources of the national park system, is proposing to adopt a GMP alternative which would treat native tule elk at Point Reyes National Seashore, the only national park where they occur, as problem animals to be killed or hazed. It is equally disturbing that the Park Service would authorize additional agricultural uses to be introduced into PRNS and GGNRA, which are sure to cause further conflicts between ranching operations and native wildlife. The NPS preferred alternative would enshrine long-term private cattle ranching as the primary use of a huge swath of PRNS and GGNRA, to the detriment of native wildlife and natural habitats. The preferred alternative would do very little to prevent harm to endangered species and other native wildlife, degradation of water quality, soil erosion, and spread of invasive species from cattle grazing and ranching activities.

The DEIS makes it clear that significant impairment of natural resources from cattle grazing and ranching activities would continue over a significant portion of PRNS and GGNRA under alternatives A-E. Damage and harm to soils, water resources, vegetation, wildlife, tule elk, and endangered and sensitive species would continue. The mitigation measures proposed under alternative B are inadequate to offset the negative impacts from livestock grazing and ranching activities.

NPS preferred alternative B does not comply with the Organic Act, the Point Reyes Act, or the GGNRA enabling legislation, as it authorizes and promotes significant impairment of natural resources and killing of native wildlife. Alternative B is not consistent with the maximum protection, restoration, and preservation of the natural environment, the charge of the NPS in managing PRNS and GGNRA. The preferred alternative - expanded cattle ranching, introducing other agricultural and economic activities, and shooting elk - is inconsistent with the PRNS purpose, significance, fundamental resources and values, as outlined in the parks draft foundational document. Alternative B is an illegal giveaway of access and use of public land to private commercial interests and inappropriately allows commercial leaseholders to dictate persecution of native wildlife on our public parklands.

Alternatives A, C, D, and E would also continue to prioritize ranching over other park purposes, such as preserving wildlife and the parks natural values. None of alternatives A-E would restore natural resources that have been degraded by decades of continuous cattle grazing.

Only alternative F would conserve the natural history of PRNS and GGNRA and provide the maximum protection, restoration, and preservation of the natural environment. F is the only alternative that complies with the Organic Act, Point Reyes Act, and GGNRA enabling legislation. Only alternative F would manage PRNS and GGNRA in the public interest.

### Public Comment Process

The NPS has stated that they will not accept public comments by fax, email, or in any way other than through the NPS comment portal website or by hard copy of comments which are mailed or hand delivered. So-called bulk comments in any format submitted on behalf of others will not be accepted. These rules seem explicitly designed to prevent public interest conservation groups from generating thousands of comments from their members through action alerts, as happened during scoping comments on the GMPA. These rules limit public participation. More public participation should be a goal of the NEPA process for this controversial management plan on public lands.

#### Applicable NPS Resource Protection Laws and Policies

PRNS and GGNRA are units of the national park system and, as such, must be managed primarily to protect the natural resources of the parks. Three federal natural resource protection laws apply - the NPS Organic Act, the Point Reyes Act, and the GGNRA enabling legislation.

#### The NPS Organic Act

The 1916 Organic Act applies to all units of the national park system, including PRNS and GGNRA, and requires:

The Secretary shall promote and regulate the use of the National Park System by means and measures that conform to the fundamental purpose of the System units, which purpose is to conserve the scenery, natural and historic objects, and wild life in the System units and to provide for the enjoyment of the scenery, natural and historic objects, and wild life in such manner and by such means as will leave them unimpaired for the enjoyment of future generations (54 U.S.C. 100101(a), emphasis added).

The NPS has a narrow mandate to conserve the scenery and the natural and historic objects and the wildlife therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations. The 9th Circuit Court of Appeals has held that this language means that resource protection [is] the overarching concern in the management of national park system units (*Bicycle Trails Council of Marin v. Babbitt*, 82 F.3d 1445, 1453, 9th Cir. 1996).

While Congress has given NPS management discretion to allow impacts within parks, that discretion is limited by the statutory requirement (generally enforceable by the federal courts) that NPS must leave park resources and natural values unimpaired - unless a particular law directly and specifically provides otherwise. The Organic Act provides that the Secretary of the Interior may, under such rules and regulations and on such terms as he may prescribe, grant the privilege to graze livestock within any national park, monument, or reservation herein referred to when in his judgment such use is not detrimental to the primary purpose for which such park, monument, or reservation was created (emphasis added).

#### The Point Reyes Act (1962)

The Point Reyes Act requires, in pertinent part:

459c-6. Administration of property (a) Protection, restoration, and preservation of natural environment: Except as otherwise provided in sections 459c to 459c-7 the property shall be administered by the Secretary without impairment of its natural values, in a manner which provides for such recreational, educational, historic preservation, interpretation, and scientific research opportunities as are consistent with the maximum protection, restoration, and preservation of the natural environment within the area (16 U.S.C. 459c-6, emphasis added).

The Point Reyes Act plainly states that NPS is required to manage PRNS in such a way as to not cause impairment of natural values. Other uses of national parks, such as recreational, educational, historic preservation, interpretation, and scientific research opportunities are allowable only to the extent that they are consistent with the maximum protection, restoration, and preservation of the natural environment within the area. Thus livestock grazing can be authorized in PRNS only if it can be shown that it is consistent with the maximum protection,

restoration, and preservation of the natural environment. The DEIS makes it clear that the NPS preferred alternative would significantly impair natural values and would not be consistent with the purposes of these park units.

### GGNRA Enabling Legislation

The GGNRA enabling legislation (1972, 1988) provides, in pertinent part:

460bb - Establishment: In the management of the recreation area, the Secretary shall utilize the resources in a manner which will provide for recreation and educational opportunities consistent with sound principles of land use planning and management. In carrying out the provisions of this subchapter, the Secretary shall preserve the recreation area, as far as possible, in its natural setting, and protect it from development and uses which would destroy the scenic beauty and natural character of the area (16 U.S.C. 460bb, emphasis added).

The DEIS (p. 3) misrepresents the 1978 Congressional amendments for PRNS and GGNRA providing standardized language for the leasing of land for agricultural purposes (16 United States Code [U.S.C.] 459c-5(a) and (b) and 460bb-2(j)), stating:

These amendments allow NPS to lease agricultural lands subject to any restrictive covenants deemed necessary and directed NPS to first offer such leases to the person who owned or leased the land prior to its acquisition by the United States. NPS uses these statutory authorities to issue agricultural lease/special use permits (lease/permits) for ongoing traditional ranching and dairying operations when a ranchers reserved right expires.

What the 1978 legislation actually says:

SEC 318: Act is amended to read as follows: SEC. 5. (a) The owner of improved property or of agricultural property on the date of its acquisition by the Secretary under this Act may, as a condition of such acquisition, retain for himself and his or her heirs and assigns a right of use and occupancy for a definite term of not more than twenty-five years, or, in lieu thereof, for a term ending at the death of the owner or the death of his or her spouse, whichever is later.

Ranchers resisted the creation of PRNS but ultimately accepted more than \$57 million (more than \$380 million in 2019 dollars) for their land, and were permitted to continue to ranch at PRNS for 25 years or the death of the previous landowner, whichever came first. As these agreements began to expire, NPS gave ranchers the option to continue to lease park lands at the discretion of the Secretary of the Interior. Neither the Point Reyes Act nor the GGNRA enabling legislation states or implies permanence for the ranches, yet ranchers maintain and NPS and the DEIS suggest that Congress meant ranching to continue at PRNS in perpetuity.

### NPS Management Policies

NPS Management Policies (2006) require the planning process to begin with the development of a foundation statement that is based on the parks enabling legislation or presidential proclamation and that documents the parks purpose, significance, fundamental resources and values, and primary interpretive themes. The foundation statement also includes any relevant laws and executive orders that apply to the national park system or to the individual park unit. However, the Organic Act and the Point Reyes Act are not even mentioned in the NPS 2019 draft Foundation Statement.

NPS Management Policies (2006, p. 2) summarizes the underlying management principles for park units, including: preventing impairment of park resources and values; and passing on to future generations natural, cultural, and physical resources that meet desired conditions better than they do today, along with improved opportunities for enjoyment. This mandate to manage human activities so as to not impair natural resource values was restated in the "Redwood Amendment" to the Organic Act in 1978, and actually requires a GMP for the parks that improve these resources.

## NPS Limited Authority to Permit Livestock Ranching

Under the Organic Act, NPS is allowed to grant the privilege to graze livestock within a park unit, such as PRNS and GGNRA, but only when such use is not detrimental to the primary purpose for which that park was created. 54 U.S.C. 102101(a)(2) (previous version at 16 U.S.C. 3). Utilizing this authority, NPS issued regulations in 1983 that actually prohibit livestock grazing for agricultural purposes within park units, unless: a) specifically authorized by federal statute; b) required under a reservation of rights; or c) designated as a necessary and integral part of a recreational activity or as required to maintain a historic scene. 36 C.F.R. 2.60(a). Grazing allowed under one of those three exceptions must be authorized pursuant to the terms and conditions of a license, permit or lease. *Id.* at 2.60(b). In 1978, Congress provided the Secretary with the discretion to lease land at PRNS that was agricultural prior to acquisition by NPS. 16 U.S.C. 459c-5(a). However, such leases were to be subject to such restrictive covenants as may be necessary to carry out the purposes of the Act.

NPS Management Policies declare that the agency will phase out the commercial grazing of livestock whenever possible. 2006 NPS Management Policies 4.4.4.1. These policies explain that the agency will only allow commercial livestock grazing where it does not cause unacceptable impacts on park resources and values. *Id.* at 8.6.8.2. Further, each park unit must address this use in an appropriate planning document, must use best management practices to protect resources and regulate livestock so that ecosystems and animals are not significantly altered or threatened, and must implement a comprehensive monitoring program and adaptive management practices. *Id.* at 8.6.8.2. NPS is not allowed to expend funds to construct or maintain livestock structures unless there is a direct benefit to the protection of park resources. *Id.* at 8.6.8.2.2. NPS has issued regulations that govern when the superintendent of a park unit may issue a permit to authorize an otherwise prohibited or restricted activity or impose a public use limit, such as livestock grazing. 36 C.F.R. 1.6(a) (1983). An activity authorized by such a permit shall be based upon a determination that public health and safety, environmental or scenic values, natural or cultural resources, scientific research, implementation of management responsibilities, proper allocation and use of facilities, or the avoidance of conflict among visitor use activities will not be adversely impacted. *Id.* at (b).

The sum of all these regulations is that the NPS mandate for PRNS and GGNRA is to phase out the commercial grazing of livestock wherever possible, and that livestock grazing may only be authorized (through a lease, permit, or license) if grazing will allow for the conservation of, and not impair, the parks resources or values and the public's opportunities to use and enjoy them.

The current DEIS utterly fails to apply these laws, NPS policies and the NPS mandate for management to the proposed actions and alternatives in the GMPA. In fact, the DEIS dismisses the concept of management of all park lands for the protection, restoration, and preservation of natural resources as an infeasible alternative, one considered but dismissed from further analysis. Maximum protection of natural resources is not an alternative - it is the required legal and policy framework for the entire GMPA. The DEIS also sets up a false conflict between protecting, restoring and preserving natural resources with managing cultural resources and providing for visitor use and enjoyment. These are not in conflict - they are all required and mandated under the above federal laws and NPS policies.

## NEPA Requirements

NEPA requires the NPS to identify the environmentally superior alternative, which NPS should have done in the DEIS. NPS must identify the alternative that causes the least damage to the biological and physical environment, and that best protects, preserves and enhances historic, cultural and natural resources.

NEPA requires that the NPS make a finding of significance regarding environmental impacts if a project or action has potential for controversy on environmental grounds, has potential adverse effects on an endangered or threatened species or its habitat or on a critical habitat, or has potential for violation of a federal, state, or local law or requirement imposed for the protection of the environment. The DEIS makes it clear that the preferred alternative meets all these thresholds and that the preferred alternative will require mitigations to reduce these impacts to less than significant levels.

Any mitigations which NPS relies on to reduce significant impacts must be explicitly identified in the EIS. The NPS must demonstrate that it will have sufficient resources and funding to implement or ensure performance of mitigations, and sufficient monitoring to ensure mitigations are actually implemented and are effective.

#### Failure to Address Issues Raised During Scoping

The Center submitted formal scoping comments on this GMPA on 11/14/17 and 11/19/18. The DEIS fails to address or evaluate numerous issues that we identified in scoping as potentially significant impacts from authorizing cattle ranching, allowing expanded agricultural activities, and killing and persecuting elk.

Our scoping comments asked NPS to evaluate the potential for conflicts with native wildlife due to agricultural diversification, and explain how the NPS and ranchers would address those conflicts. The DEIS fails to address this issue.

Our scoping comments asked NPS to fully evaluate the impacts of manure management (spreading liquid sewage from dairies on pasture areas), including the potential for transmission of livestock diseases to native wildlife. The DEIS fails to address this issue.

Our scoping comments asked NPS to evaluate the potential for rebuilding large tule elk herds at PRNS and the benefits such herds could provide for the genetic diversity and long term persistence of tule elk as a species. The DEIS fails to address this issue.

Our scoping comments asked NPS to evaluate the impacts of fencing on elk herd health, including: why the fenced elk herd in the Tomales Point Elk Preserve declined 47% during the drought years from 2012-2014, while the free-roaming elk herds at Limantour and Drakes Beach increased by 28% and 39%, respectively, during the same period; and the consequences of fencing elk rather than allowing them to move freely to find water and food during drought years. The DEIS fails to address these issues.

Our scoping comments asked NPS to assess ranch leaseholder claims about elk impacts to ranches that are the basis for lethally managing and hazing elk, including: specious claims of damage to equipment and infrastructure; unsubstantiated economic impacts from elk; to what extent elk actually compete with livestock for forage; and unverified claims of elk killing cattle. The DEIS fails to address these issues.

Our scoping comments asked NPS to disclose the past annual expenditure of taxpayer dollars from NPS employees moving and hazing elk from the ranch lease areas; and to predict annual costs for each elk management strategy in each DEIS alternative. The DEIS fails to address these issues.

Our scoping comments asked NPS to inform the public about management actions NPS has implemented in ranching areas to address damage to salmonid habitat in PRNS and GGNRA from livestock grazing and ranching activities, and compliance with the 2004 NMFS Biological Opinion for salmonids. These issues included riparian buffers, habitat and riparian monitoring, sediment and water pollution and temperature thresholds, impacts to stream channels and riparian vegetation, and erosion. The DEIS fails to fully address these issues.

Our scoping comments asked NPS to inform the public about management actions NPS has implemented in ranching areas to address water quality impairment from livestock grazing and ranching activities. Among other issues, we asked that the EIS address San Francisco Bay Regional Water Quality Control Board concerns about whether PRNS and GGNRA ranching operations are in compliance with federal and state regulations, including waste discharge requirements issued by the Water Board. The DEIS fails to fully address these issues.

Our scoping comments asked NPS to answer questions about the adequacy of forage availability, allocation, and RDM standards which result in overgrazing. We specifically requested that the EIS rely on accurate and updated information to calculate soil surveys, grassland productivity, AUMs, and forage availability. NPS and the DEIS overestimate available forage at PRNS, based on overly optimistic and outdated soil productivity data, animal unit calculations based on inaccurate average cattle weight, and an assumption that 100% of the forage above the

required minimum RDM is allocated to cattle. The DEIS fails to address these issues or to use best available science.

Our scoping comments asked NPS to disclose to the public ongoing monitoring and enforcement problems with PRNS grazing leases, specifically instances of grazing lease violations, how the NPS ensures compliance with lease conditions, and whether the NPS has ever taken any enforcement action for grazing lease violations. The DEIS fails to disclose or discuss these issues.

Our scoping comments asked NPS to compare the economics of private grazing leases in the park with the economy generated by recreation, per the 2006 NPS Economic Impacts Study. We asked the NPS to disclose the full economic costs of grazing leases, including subsidies, below-market lease rates, ranch improvements, maintenance, mitigations, and monitoring, compliance and enforcement. The DEIS fails to disclose this information.

### Purpose and Need for Action

The DEIS states that the purpose of the EIS is to establish guidance for the preservation of natural and cultural resources and the management of infrastructure and visitor use in the planning area. It further states that the GMP articulates desired conditions for natural and cultural resource conditions and visitor experiences.

The purpose of the GMP and EIS is not to provide financial assistance or economic benefits to private ranch leaseholders. Profitability or commercial sustainability of ranching activities is neither a legitimate nor legal NPS management goal. Yet the DEIS makes it clear that the NPS is considering conferring economic benefits to ranchers as part of the basis for its management decisions and GMPA plans in the DEIS, including allowing new agricultural uses in the ranchland zone based on economic considerations for private businesses. The DEIS promotes agricultural diversification because it "allows ranchers to react to poor forage production years and fluctuations in the economic market" (DEIS, p. 20), permits ranchers to continue viable agricultural operations" (DEIS, p. 11), could provide a possible economic buffer for ranchers (DEIS, p. 181), accrue additional economic benefits for ranchers (DEIS, p. 181), and provide for ranchers financial security (DEIS, p. 181). None of these are valid or appropriate goals for NPS to consider as part of the GMPA.

### Planning History

The DEIS omits some of the planning history for these parks. The DEIS fails to mention an aborted attempt to update the 1980 GMP for PRNS and GGNRA during the 1990s through 2009. The NPS has long acknowledged that an updated GMP and full environmental study were needed to address ranching issues, among other changing conditions and issues, since the 1980 GMP for PRNS and GGNRA. Three times in the late 1990s, NPS published notices that a new GMP and EIS were required for PRNS and GGNRA, to provide strategies for addressing major issues and guide management of park lands over the subsequent 10-15 years (65 Fed. Reg. 5365-66, Feb. 3, 2000). During the next 8 years, NPS accepted public comments, held numerous public workshops, and prepared or commissioned 14 reports and assessments for the new GMP/EIS. In a 2003 newsletter, NPS announced five alternative management concepts for the long-term management of PRNS, three of which contemplated phasing-out or reducing commercial cattle ranching to protect natural resources. The NPS quietly abandoned the GMP/EIS in 2008-09, without any public explanation. In 2008, NPS announced it would release the draft GMP/EIS in fall/winter 2008, to be finalized in 2009. But then, without any further word or explanation, the new GMP/EIS was discontinued. The reasons why are unclear - but it is likely that political pressure by ranchers was the cause, concerned that a full analysis of ranching impacts would expose the fact that ranching is not compatible with the NPS non-impairment and maximum protection duties. The EIS must disclose why this GMP planning process was abandoned.

### Alternatives

With regards to cattle grazing and ranching activities, alternatives A, B, C, D, and E would continue extensive cattle grazing and ranching on significant portions of PRNS and GGNRA (19,000- 28,700 acres). Only alternative

F would remove all significant negative environmental impacts from livestock grazing and ranching, by ending commercial grazing leases and only employing a minimal amount of prescribed seasonal cattle grazing (100 to 200 AUM or less) to meet resource management goals.

With regards to treatment of tule elk, alternative C would kill the entire Drakes Beach elk herd and prevent new elk herds from establishing in the planning area; alternatives B and D would continue to persecute elk and allow for some lethal removal and continued hazing; alternatives A and E would take no action to limit the population growth or geographic extent of free-range elk in PRNS, but would allow hazing and limited take of elk. Only alternative F would allow free-range elk populations to expand across the planning area at PRNS without hazing or lethal removal, and remove the elk fence at Tomales Point; NPS management of elk would occur only to support other resource protection needs and management goals.

Only alternative F would comply with the Organic Act, Point Reyes Act, and GGNRA enabling legislation.

#### Alternative A - No Action

Under alternative A, 21,200 acres in PORE and GGNRA would continue to be used for dairy and beef cattle ranching. This alternative would also allow ranching on 7,600 additional acres not currently authorized for grazing. It would issue new 5-10 year leases on 27,000 acres. It would provide new appraisals to pay fair market value for grazing leases and leases would include "updated provisions to reflect current operations and regulatory requirements."

NPS would not alter or limit the population level or geographic extent of elk in PRNS, but would continue hazing elk off of ranch areas, as well as using habitat enhancements and fence repairs to attempt to keep elk off of ranches. NPS could haze, capture and relocate, or kill individual elk that become overly habituated to cattle feed, are repeatedly aggressive toward cattle, or pose a safety risk to ranchers or the public. NPS would continue testing elk for Johnes disease and chronic wasting disease - it is not clear whether this would include lethal testing of elk.

#### Alternative B - NPS Preferred Alternative

Under alternative B, 28,700 acres in PORE and GGNRA would continue to be used for dairy and beef cattle ranching, including 7,600 acres not currently authorized for grazing. Ranchers would get 20 year grazing leases. Stocking levels of beef and dairy cattle would be similar to current levels that cause overgrazed conditions - Animal Units would be authorized to meet 1,200 pounds per acre RDM standard. NPS would create a new management zone, the Ranchland Zone, and attempt to protect resources through sub-zoning on each ranch. The sub-zones would include: a Resource Protection Zone where no grazing would be allowed due to presence of sensitive resources, including rare plants, wetlands, riparian/stream/pond habitats, forested areas, critical habitat for threatened and endangered species, or slopes >20% slopes; a Range Zone where cattle and other livestock grazing would allowed, and intensive activities, vegetation management, or diversification would not be allowed; a Pasture Zone, where there are identified no sensitive resources, and vegetation management, forage production (including seeding and mowing), and some diversification activities would be allowed; and a Ranch Core Zone near the developed ranch complexes, which would allow diversification (small-scale, on-site processing of ranch products, row crops and other uses) and building new infrastructure.

Each ranch lease/permit would include a Ranch Operating Agreement to identify types of ranching and diversification activities allowed, maintenance requirements, and mitigation measures. NPS would adopt new management strategies to achieve desired conditions related to the preservation of resources. The NPS claims it would "identify authorized ranching activities and monitor and enforce rancher compliance with permit requirements," something that has never been done by NPS.

Alternative B would allow upland and riparian vegetation management such as mowing, brush removal, and use of IPM. Spreading of waste manure on pasturelands would continue to be allowed.

Alternative B would allow agricultural diversification in the Ranch Core subzone (raising livestock species such as

pigs, chickens, sheep, and goats; horse boarding; planting up to 2.5 acres of row crops; commercial enterprises such as farm stays and ranch tours; and small scale processing of dairy products. Livestock species such as sheep, goats, and chickens could also be raised in the Pasture subzone. The DEIS lists required mitigation measures specific to each diversification activity in appendix D.

Alternative B would set new rules for succession of ranching leases/permits, which appear to violate the Point Reyes Act: in the event an existing rancher decides to discontinue ranching, NPS would implement succession planning that is consistent with maintaining multi-generational ranching in the planning area.

Under alternative B, rather than individual grazing lease appraisals, NPS anticipates development of a master appraisal process managed by the US Department of the Interior to determine fair market value for park ranch operations.

With regards to treatment of tule elk, under alternative B both the Drakes and Limantour elk herds would be managed primarily in consideration of commercial ranch operations, and no new elk herds would be allowed to establish in the planning area. It would set an arbitrary maximum elk population threshold for the Drakes Beach herd of 120 animals. This threshold is not based on ecology or carrying capacity or managing for natural values. The DEIS claims it is "based on estimated forage consumption by elk, forage productivity on ranches, and time that elk spend on ranches, as well as NPSs capacity to manage elk. It is actually based on accommodating private ranchers, not forage consumption or carrying capacity. NPS would limit the Drakes Beach elk herd through lethal removal of an anticipated 10 to 15 elk annually, and would also use relocation, if feasible. Elk from the Limantour herd would be allowed to wander outside a core area if they did not establish new herds, and they would be monitored closely and managed in consideration of ranch operations. This is a euphemism for hazing and lethal removal of Limantour elk to manage their geographic extent if individual elk established outside the ecologically arbitrary core use areas. Population reduction efforts could target male elk outside the core area if conflicts with ranching operations arise.

#### Alternative C - Eradicate the Drakes Beach Elk Herd

This alternative would be substantially the same as alternative B for ranching operations, except the entire Drakes Beach elk herd would be removed by killing them. The Limantour elk herd would be managed in consideration of ranch operations. No new elk herds would be allowed to establish in the planning area.

#### Alternative D - Reduced Ranching

Alternative D would be substantially the same as alternative B, except that ranching would be slightly reduced by phasing out grazing-only leases and ranches that have minimal infrastructure over a one-year period. Grazing operations in areas that are outside the two historic districts would also be removed. This would leave 19,000 acres in active ranching, to be managed as described in alternative B. Elk management would be similar to alternative B.

#### Alternative E - No Dairy Ranching

Under Alternative E, the six active dairy ranches in the planning area would cease operations, but could convert to beef ranching. 26,100 acres in the planning area would be available for beef ranching. There would be no new agricultural diversification activities allowed. Beef cattle operations would be managed as described in alternative B. NPS would take no action to limit the population growth or geographic extent of free-range elk in PRNS. NPS management of elk would occur only to support other resource protection needs and management goals.

#### Alternative F - No Ranching

Under alternative F all commercial ranching operations would be discontinued. Ranch leases would be phased out over a five-year period, except for the two life estates which would be discontinued after they end. NPS could use limited prescribed seasonal grazing of cattle on lands in the planning area to meet resource management goals

and objectives, such as maintenance of disturbance regimes in grasslands and maintenance of habitats for some special status species. Such grazing would be on the order of 100 to 200 AUM or less in the planning area and limited to spring through fall, to avoid the wet season.

Visitor opportunities and access would be dramatically expanded. A Historic Ranch Preservation subzone would be created and managed for the adaptive reuse of ranch complexes, such as car-camping campground, larger trailhead, and other visitor facilities.

NPS management of elk would occur only to support other resource protection needs and management goals. Until cessation of ranching operations, NPS would consider limited, non-lethal management measures for elk. Once ranching operations ceased, development of new elk herds would be allowed to establish in Point Reyes. Following the cessation of ranching operations, the elk fence at Tomales Point would be removed. Free-range elk populations could expand across the planning area. Elk would not be allowed to expand into GGNRA or beyond PORE boundaries. The free-range elk herds at Drakes Beach and Limantour could potentially expand to 2,000 individuals over a 20-year period. The herd size would not be expected to grow to a level that would necessitate population management related to adequate forage in Point Reyes.

#### Alternatives Not Considered

Other conservation organizations proposed alternatives during scoping, including: a coastal prairie restoration alternative, which would maximize restoration of coastal prairie and other native plant and animal communities across the park unit; and a recreation alternative, which would maximize public access for wildlife viewing, photography, birdwatching, educational programs and hiking. The DEIS improperly omits any analysis of these alternatives. Feasible elements of these restoration and public access alternatives should be included in the chosen alternative.

#### Affected Environment and Environmental Consequences

The Affected Environment section of the DEIS lacks adequate baseline data to be able to adequately review and evaluate the impacts of cattle grazing and ranching activities under of all the alternatives. Under Public Law 113-287, enacted in 2014, the NPS is required to inventory and monitor park unit resources to establish baseline conditions - in order to assist in just such management decisions as the current GMPA:

#### Subchapter I-System Resource Inventory and Management

100701. Protection, interpretation, and research in System: Recognizing the ever increasing societal pressures being placed upon Americas unique natural and cultural resources contained in the System, the Secretary shall continually improve the ability of the Service to provide state-of-the-art management, protection, and interpretation of, and research on, the resources of the System.

100702. Research mandate: The Secretary shall ensure that management of System units is enhanced by the availability and utilization of a broad program of the highest quality science and information.

100703. Cooperative study units: The Secretary shall enter into cooperative agreements with colleges and universities, including land grant schools, in partnership with other Federal and State agencies, to establish cooperative study units to conduct multi-disciplinary research and develop integrated information products on the resources of the System, or the larger region of which System units are a part.

100704. Inventory and monitoring program: The Secretary shall undertake a program of inventory and monitoring of System resources to establish baseline information and to provide information on the long-term trends in condition of System resources. The monitoring program shall be developed in cooperation with other Federal monitoring and information collection efforts to ensure a cost-effective approach.

100705. Availability of System units for scientific study: (a) IN GENERAL.-The Secretary may solicit, receive, and consider requests from Federal or non-Federal public or private agencies, organizations, individuals, or other entities for the use of any System unit for purposes of scientific study.

(b) CRITERIA.-A request for use of a System unit under subsection (a) may be approved only if the Secretary determines that the proposed study-

(1) is consistent with applicable laws and Service management policies; and

(2) will be conducted in a manner that poses no threat to the System unit resources or public enjoyment derived from System unit resources.

(c) FEE WAIVER.-The Secretary may waive any System unit admission or recreational use fee in order to facilitate the conduct of scientific study under this section.

(d) BENEFIT-SHARING ARRANGEMENTS.-The Secretary may negotiate for and enter into equitable, efficient benefit-sharing arrangements with the research community and private industry.

100706. Integration of study results into management decisions: The Secretary shall take such measures as are necessary to ensure the full and proper utilization of the results of scientific study for System unit management decisions. In each case in which an action undertaken by the Service may cause a significant adverse effect on a System unit resource, the administrative record shall reflect the manner in which System unit resource studies have been considered. The trend in the condition of resources of the System shall be a significant factor in the annual performance evaluation of each superintendent of a System unit.

54 U.S.C. 100701 - 100706. (Emphasis added.)

Despite years of significant public comments and requests by multiple public interest organizations that research and monitoring be conducted on the environmental impacts of livestock grazing and ranching activities in these parks, NPS has failed to provide adequate baseline information and information on trends in the conditions of natural resources.

## Soils

The DEIS does not discuss the extensive soil erosion and soil compaction problems that currently exist in the planning area due to cattle grazing. It does mention grazing impacts on stream incision, but does not discuss the full extent of stream incision problems in PORE and GGNRA.

The DEIS acknowledges that Alternative B would have long-term, adverse impacts on soils from livestock trailing, trampling, erosion, and compaction; and also from ranching activities such as diversification, vegetation management, forage production, and manure spreading. Alternatives A, C, D, and E would have similar significant negative impacts to soils.

The Resource Protection sub-zoning would only protect an additional 5% of soils with high erosion potential and 3% of soils with high compaction potential from grazing impacts. The DEIS claims that management activity standards and mitigation measures are "expected" to reduce overall impacts on soils, but does not clarify whether they would reduce impacts to less than significant levels.

Only Alternative F would have noticeable, long-term benefits on soil resources: decrease in erosion rates and runoff, soil stabilization, and decreased soil compaction. Soil erosion, runoff, nutrient levels and compaction would return to natural conditions, and it would be more conducive to establishment of native vegetation communities.

## Water Resources

The DEIS acknowledges the severe impacts to surface water quality in the planning area from livestock grazing and dairy operations in the planning area, and that the main sources of water quality degradation in the planning

area are potentially pathogenic bacteria and nutrient loading from nonpoint sources associated with ranches and dairies. The DEIS discusses impairment of the Tomales Bay watershed, Lagunitas Creek and Olema Creek for nutrients, pathogens, and sediment/silt, exceedances of TMDL for potentially pathogenic bacteria, and elevated nutrient, suspended solids, and turbidity levels; and acknowledges these pollutants are in part due to grazing. The DEIS discusses the high concentrations of total suspended solids and nutrients flowing into Drakes Bay and Drakes Estero from ranches. The DEIS notes that in Abbotts Lagoon and the Kehoe drainage that tributaries draining dairy operations or dairy grazing land have the highest nutrient levels or loading rates, and significant problems with excessive nutrients, sediment, and potentially pathogenic bacteria. The DEIS discusses impacts on water quantity due to the huge volumes of water used for livestock, conservatively estimated at 50 to 124 million gallons per year.

The DEIS acknowledges that Alternative B would have significant adverse impacts on water resources due to continued pollutant loading (manure, bacteria, pathogens, nutrients, sediment/turbidity), changes in nutrient levels, disturbance to surface waters, releases of other agricultural and mechanical pollutants, increased soil erosion, and excessive use of water. Alternatives A, C, D, and E would have similar significant impacts to water resources. Alternative E, with the phase-out of dairy ranches, would reduce water usage and have more improvement to water quality and quantity.

Exclusion areas which could somewhat improve water quality would only increase by 1,200 acres. The DEIS claims that the Resource Protection sub-zoning, exclusion fencing, management activity standards and mitigation measures would "minimize" ranching impacts on water quality or quantity.

Only Alternative F would have long-term, beneficial impacts on water quality and quantity; it would reduce water use by 50-124 million gallons per year.

## Vegetation

The DEIS acknowledges extensive damage to wetlands in the planning area from cattle grazing, but focuses on protection of some wetlands in grazed areas by using fencing to control the timing and duration of grazing to reduce impacts to water quality and ecological function. The DEIS does not discuss grazing impacts on unfenced and unprotected wetlands, and documented instances of failure of ranchers and the NPS to monitor and repair fences near wetlands.

The DEIS fails to discuss grazing impacts and extensive damage to riparian areas in the planning area from cattle grazing, instead focusing on the dramatic recovery of some park riparian areas following fencing out of cattle. The DEIS does not discuss documented instances of failure of ranchers and the NPS to monitor and repair fences near riparian areas. The DEIS discussion of grasslands notes that nonnative plants dominate California Annual Grassland and Agricultural Pastureland in the planning area, but does not fully evaluate the role of cattle grazing and ranching in promoting, maintaining and spreading these nonnative plants. The DEIS discussion of invasions of non-native plant species notes that the NRCA found that the total number of invasive plant species and the number of new introductions are high enough to warrant significant concern in the planning area. The DEIS discusses the role of livestock in spreading invasive weeds, as well as via seed mixes, supplemental feed, imported soils, and equipment used in ranch operations. The DEIS notes that concentrated livestock use can also increase exposed soil, providing favorable germination sites for weeds.

The DEIS notes that coastal native prairie is a rare and diminishing ecotype, and that grazing has noticeably reduced and altered the coastal prairie. Coastal native prairie is in fact the most endangered natural ecosystem at PRNS. There is no discussion in the DEIS of how to restore native prairie in the planning area.

The DEIS acknowledges that Alternative B would have significant adverse impacts on native vegetation, including defoliation, trampling, nutrient redistribution, perpetuation of altered vegetation structure, changes in species composition and biomass production, introduction and spread of invasive species, adverse effects from nutrients on native grassland plant species, trampling of wetlands and riparian areas, reduction in native perennial forbs, and mechanical treatment of shrubs. Cattle grazing under alternative B could have some beneficial or neutral

impacts to some vegetation types and species, though this would be highly dependent on carefully managed cattle grazing regimes in which timing, duration, and intensity of grazing were monitored and controlled. NPS currently does not carefully manage, monitor or control cattle grazing in the planning area. Alternatives A, C, D, and E would have similar significant impacts to vegetation and listed plants.

Proposed mitigations for vegetation impacts under alternative B include a new zoning framework intended to keep higher intensity activities in areas without sensitive resources. An additional 1,200 acres of resource protection exclusion areas would be created. Management activities such as using sufficient fencing and/or water troughs to improve cattle distribution, "could be implemented" to minimize adverse impacts on vegetation "to the extent possible."

Other mitigations include range management guidelines, minimum RDM levels, and maintenance of exclusionary fencing.

Only Alternative F would eliminate the ongoing adverse impacts of ranching on vegetation in the planning area. The DEIS notes that riparian areas and wetlands would benefit from the removal of livestock grazing. There would be an initial increase in abundance of native perennial forbs.

Ranching operations would no longer be a pathway for the introduction and spread of invasive species. There would be a cessation of other ranching activities such as harvest mowing for forage production. Cattle grazing or trampling would no longer affect listed and rare plant species.

Removal of cattle could have some negative impacts for some native vegetation types. The DEIS cites studies showing that removal of cattle grazing did not increase native species abundance or richness in grasslands, but these studies did not consider or include the positive impact of elk, as would be the case at PRNS. NPS has available a test case for removal of cattle grazing and reintroduction of elk at Tomales Point, where native plant species diversity and richness has become greater after removal of cattle and reintroduction of elk than in adjacent areas with continued cattle grazing. Also, alternative F would use limited prescribed cattle grazing and mowing to maintain some grasslands and control weeds, which could mitigate some of the adverse impacts of changes in grazing regimes. The DEIS states that while overall, alternative F would likely have both beneficial and adverse impacts on vegetation in the planning area, the limited use of prescribed grazing could mitigate some adverse impacts of removing the livestock operations."

Impacts on listed and sensitive plants are discussed below.

## Wildlife

The DEIS notes significant impacts on native wildlife in the planning area from livestock and ranching operations: mammals are subject to disturbance, competition for resources, habitat alteration, fences, and domestic cats; ground nesting birds are susceptible to impacts from cattle grazing and vegetation management such as plowing, harvesting and mowing; agricultural operations attract and unnaturally elevate populations of corvids, starlings and cowbirds, with significant predation and dislocation impacts on native birds; agricultural activities contribute to habitat degradation and reduced water quality and quantity for fishes; and agricultural activities could affect habitat suitability and water quality for reptiles and amphibians.

Other than killing and hazing tule elk, there is no discussion in the DEIS of measures to avoid ranching conflicts with wildlife. Alternatives B, C, and D include new agricultural diversification activities which will increase ranching conflicts with wildlife.

Alternative B would result in trampling and soil compaction by cattle that could impact habitat for the American badger and Point Reyes jumping mouse, but the DEIS claims there would not be population-level impacts. Small mammals would continue to be injured or killed by silage harvest mowing. Vegetation control would reduce coast scrub habitat for the rare Point Reyes mountain beaver. Alternative B would result in impacts to native mammals from habitat modification, food web alterations, changes in nutrient cycling, and disturbance. Forage production would impact mammals through mowing on 1,000 acres. Manure spreading would continue on 2,500 acres.

Alternative B would result in impacts to birds from spread of invasive species and livestock trampling of ground nests. Mowing, harvesting silage, or occasional tillage during the nesting season could also destroy bird nests and eggs, kill fledglings, or cause adult birds to abandon their nests. 1,000 acres of the planning area would still be subject to harvest mowing under alternative B. Alternative B would continue to promote an unnatural abundance of corvids, starlings, and cowbirds that compete with, prey upon, and parasitize nests of native birds, resulting in continued impacts to birds over the long term. Alternative B could have some positive impacts and maintain habitat for grassland birds that prefer short grass or bare ground.

Wildlife-friendly fencing would be required under alternative B to reduce mammal entanglements and bird strikes, and to allow wildlife movement. Ranchers would be required to remove and dispose of abandoned fences and barbed wire, something which has not been adequately enforced in the past.

Alternative F, the elimination of livestock grazing, would have the most positive benefits for native mammals and birds, due to cessation of cattle impacts, silage mowing, manure spreading, vegetation control, and subsidizing of predators. It could have some negative ecological impacts for some native wildlife because the primary disturbance regime to which mammals and birds have adapted for more than 150 years would be removed.

### Tule Elk

The DEIS notes that the tule elk at Point Reyes are believed to be among the most inbred in California, but does not discuss any methods, solutions or efforts to counteract this or improve the genetic variability of the Point Reyes herds.

The DEIS discusses Johnes disease, but does not acknowledge that cattle, particularly in confined dairy conditions, are a known vector of this disease, nor does it discuss the primary route of transmission, which is from cattle to elk, rather than from elk to cattle. The NPS 1998 Tule Elk Management Plan discloses that in 1979 half of the dairy herds in PRNS tested positive for Johnes. NPS has done nothing in the 40 years since then to deal with Johnes disease in the dairy herds, yet it lethally tests elk. The spread of Johnes to wildlife, including elk and potentially other wildlife, could be impairing the natural resources of PRNS. NPS has an obligation under the Organic Act and Point Reyes Act to remediate the problem. If any livestock are allowed to remain at PRNS, the GMPA should require regular testing of livestock for Johnes and other diseases transmissible to wildlife, and all dairy herds should be made disease free by culling or removal.

Some of the methodology and assumptions in the DEIS regarding tule elk are flawed. The DEIS evaluates impacts of the alternatives on elk based on their overall effect on elk population size and herd viability. The DEIS concludes that any actions that would reduce the population of an individual elk herd in the planning area below a minimum threshold for a viable herd of 100 elk (purported to be based on CDFW 2017 and 2018) would have adverse effects on elk over the long term.

Alternative B proposes arbitrary minimum and maximum population sizes for the Drakes Beach elk herd of 100-120 elk. The NPS falsely claims this is based on guidance from the California Department of Fish and Wildlife (2017, 2018) Elk Conservation and Management Plan. Yet this CDFW elk plan contains no such guidance on maximum or minimum population size. In fact, the states elk plan explicitly acknowledges that CDFW has no idea what constitutes minimum population viability (MPV) for elk herds and states it is beyond the scope of this management plan to validate a specific PVA approach or independently estimate MVP size for tule elk (see discussion pages 27-31 of the elk plan). The CDFW elk plan does reference minimum population viability size estimates for elk by the U.S. Forest Service, which range from 1,500 elk on the Salmon National Forest to 3,000 elk on the Gallatin National Forest, way more than the 120 elk proposed in alternative B.

We raised these exact issues during scoping for the GMPA, but NPS has ignored our comments and continued this misinformation in the DEIS. The DEIS fails to explain the science or ecological rationale behind the arbitrary 100-120 Drakes Beach elk goal, and explain why a maximum population threshold is needed for the Drakes Beach elk herd. There is no ecological justification for limiting the size of this elk herd. The DEIS acknowledges that under no scenario are elk expected to exceed the parks carrying capacity in the near future

Alternative B would allow lethal removal of 10 to 15 adult elk from the Drakes Beach herd annually. Removals would target suspected diseased animals, older reproductive females, and prime bulls. There is no discussion in the EIS what the population demographic and genetic fitness implications would be from continuously removing older reproductive females and prime bulls from this herd.

Alternative B would artificially limit the geographic extent of the Drakes beach herd using hazing techniques. There is no discussion in the EIS what the impacts of this would be during years of extended drought and reduced forage availability for elk. The DEIS acknowledges that hazing elk is not a very effective method to keep male bachelor groups off of ranchlands.

Alternative B would also allow hazing and lethal removal for the Limantour elk herd, to manage the herds geographic extent if individuals establish outside the core use areas or to address "localized impacts." The DEIS does not explain what these localized impacts are, but they are presumably impacts to private ranching operations, not park resources.

Wildlife-friendly fencing would be required under alternative B, and more lowered elk crossings could be installed in the areas frequented by the Drakes Beach and Limantour herds, which could reduce the risk of injury to elk compared to existing fencing conditions, which are documented to injure and kill elk.

Alternative B would continue Johnes disease monitoring and testing for elk, but not for cattle at PRNS, a primary vector of this disease. The DEIS does not disclose whether lethal testing of elk for this disease will continue under alternative B, nor the numbers of elk that would be killed annually under the guise of testing for a disease which NPS has no intention of managing in the PRNS dairy cattle herds.

Alternative C would kill the entire Drakes Beach herd, an unprecedented slaughter of native wildlife in a national park to appease private commercial leaseholders.

Only under alternative F would Point Reyes elk be free of persecution and killing. Both the population and geographic extent of elk would increase in Point Reyes. The fence at Tomales Point would be removed. Ranching activities would not disturb elk and cattle would not compete with elk for forage because ranching would be discontinued. Without population control, the free-range elk population could grow to as many as 2,000 individuals over a 20-year period. This would be a desirable condition in the only national park where these elk occur.

#### Listed and Sensitive Species

The DEIS contains a misleading discussion of the 2002 and 2004 Biological Opinions with regard to impact thresholds for species listed under the Endangered Species Act (ESA). The DEIS implies that previous no jeopardy determinations by the federal resource agencies U.S. Fish and Wildlife Service (USFWS) and National Marine Fisheries Service (NMFS) means that there was not a finding of harm to listed species. Jeopardy is a term under the ESA with a specific meaning: whether an evaluated action or project in and of itself would jeopardize the continued existence of an entire species or listed population. A no jeopardy determination by USFWS or NMFS does not mean no harm would occur to a listed species. The more relevant metric for NEPA purposes of determining significant impacts is whether the regulatory agencies made a Likely to Adversely Affect (LAA) determination for any listed species. A Not Likely to Adversely Affect (NLAA) determination could indicate that the threshold of significance may not have been met for NEPA purposes. A LAA determination means there are significant impacts to a listed species, which would require avoidance or sufficient mitigation under NEPA.

The 2002 and 2004 Biological Opinions from USFWS and NMFS are proof that NPS routinely underestimates the impacts of livestock grazing and ranching activities on listed species. In 2001 NPS made NLAA determinations in a Biological Assessment for the effects of grazing on 8 terrestrial listed species. The DEIS discloses (Appendix K, pp. 54-55) that the USFWS disagreed with 75% (6 of 8) of those NPS determinations and changed them to LAA for those species (Beach layia, Sonoma alopecurus, Sonoma spineflower, Tiburon paintbrush, Tidestroms lupine, and

Myrtle's silverspot butterfly). The USFWS (2002) agreed with two NLAA determinations made by NPS for California freshwater shrimp and Marin dwarf flax; and concurred on two LAA determinations made by NPS, for California red-legged frog and western snowy plover. NMFS (2004) disagreed with 100% (2 of 2) of the NLAA determinations made by NPS in a 2001 Biological Assessment for Central California Coast coho salmon and steelhead trout, and changed them to LAA.

In the terrestrial Biological Assessment NPS has recently prepared for the current GMPA (DEIS, Appendix K), NPS has concluded that livestock grazing and other ranching activities are Likely to Adversely Affect, that is have significant negative impacts, on 7 listed species: Beach layia, Sonoma alopecurus, Sonoma spineflower, Tiburon paintbrush, California red-legged frog, Western snowy plover, and Myrtles silverspot butterfly. NPS has concluded NLAA for Marin dwarf flax, Showy Indian clover, Tidestroms lupine, and California freshwater shrimp. USFWS may disagree with some of these NLAA determinations. In the marine Biological Assessment NPS has recently prepared for the GMPA (DEIS, Appendix J), NPS has concluded that livestock grazing and other ranching activities are Likely to Adversely Affect, that is have significant negative impacts, on Central California Coast steelhead trout and California coastal Chinook salmon. NPS has concluded NLAA for Central California Coast coho salmon, but NMFS may disagree with this determination. There are enough negative impacts from cattle grazing and ranching, as well as controversy on environmental grounds for all of the listed species, to consider alternatives A-E to have significant impacts which need to be avoided or adequately mitigated under NEPA.

#### Beach Layia

The DEIS notes that cattle directly affect Beach layia through trampling, as well as indirectly via increased weeds associated with grazing disturbance. Livestock trampling was indicated as a threat when beach layia listed. The DEIS acknowledges that since 2004, the beach layia population in PRNS has declined 84% - from an estimated 35,893 plants in 2004 to 5,689 plants in 2018 - and that beach layia occurrences subject to grazing have declined in abundance an unspecified amount since 2004. Beach layia populations in dunes in the planning area are subject to trampling by cattle loafing in the dunes.

Alternative B proposes avoidance and mitigation measures to protect beach layia which rely on exclusions and effective and maintained fencing. The DEIS acknowledges current adverse impacts from grazing on approximately 20% of known beach layia occurrences, but presumes that zoning would reduce that because 12% of the layia population would be protected by new resource protection exclusion areas on the E and F ranches. This would eliminate the potential effects of cattle trampling on all but 8% of known beach layia occurrences in the Range subzone. The DEIS acknowledges that although cattle would be excluded from areas supporting nearly 90% of all known beach layia occurrences in the park, they could occasionally breach pasture fences and trample beach layia in protected coastal dunes. This could occur as a result of broken fences, gates being left open, or the poor siting of pasture fences in sandy areas. The DEIS notes that ranchers are responsible for maintenance of fences, but that NPS will work with ranchers to ensure the continued exclusion of cattle from coastal dune habitats.

#### Marin Dwarf Flax

The DEIS acknowledges that limited information is available about the tolerance of Marin dwarf flax to cattle grazing or soil disturbance, and the effects of livestock grazing on Marin dwarf flax were unknown at the time of its listing. The DEIS notes that trampling by livestock is a potential threat. However, livestock grazing could have some beneficial impacts through reduction of taller competing vegetation, reducing annual grasses, preventing thatch accumulation, mechanically breaking down the litter and opening canopy, and limiting the enrichment of low-nutrient serpentine soils with nitrogen thus limiting annual grass invasions. Marin dwarf flax is present in all known patches in the planning area and numbers appear stable in comparison to previous years.

Alternative B proposes mitigation measures to avoid or minimize potential adverse effects of overutilization or trampling of individual Marin dwarf flax plants. These include grazing lease adherence to the parks RDM standards and general measures to avoid or minimize the potential for spread of non-native plants. NPS claims it

would monitor for adverse effects from cattle grazing and work with ranchers to adjust the timing and/or intensity of cattle grazing on Nicasio Ridge for the continued protection of Marin dwarf flax.

### Showy Indian Clover
