**Presenter:**

**Anica Miller Rushing, MEd, Science Education Consultant**

#### **What is Project WET?**

Project WET stands for Water Education for Teachers. It is a worldwide program and curriculum that provides hands-on water education materials for K-12 teachers and students.

#### **Why Use Project WET?**

The mission of Project WET is to reach children, parents, educators and communities with water education. We invite you to join us in learning about the most precious resource on the planet — water.

#### **What will I learn at a Project WET workshop?**

At this six-hour workshop, you'll enjoy many of the fun, multi-disciplinary activities found in the *Project WET's Curriculum and Activity Guide* (provided). The workshop will offer useful strategies for bringing water education to your classroom and community. You will see an overview of Project WET's Discover Water online resource and you'll gain membership to the Project WET portal where you can personalize your own online water resources center. Finally, we'll share ideas with each other to incorporate Project WET into your teaching situation to meet standards, inspire stewardship, and enhance understanding of water in Maine and around the globe.
