

## Species of Poplar Point (Section C) in Anacostia Park

Poplar Point is situated in section C of Anacostia Park in S.E. Washington, D.C., along the east side of the Anacostia River, just north of the South Capitol Street Bridge. Anacostia Park legislation from 1918 designated the area as part of Anacostia Park, and part of the Park system of the Nation's Capital. The site is attractive waterfront with potential uses for future memorials, ball fields, and various environmental enhancements.

Portions of the approximately 60-acre Poplar Point site were used by the Architect of the Capitol (AOC) and by the District of Columbia's Lanham Tree Nursery for many years. Even with the long history of nursery and greenhouse operations, and with more site clean-up work needed, Poplar Point serves as an important natural area. The wetlands, meadows, scrub-shrub areas and willow thickets of Poplar Point provide important habitat for a diversity of plants and animal life.
