

The California Sea Lion needs our help!

By: Awesome Student and Super Student

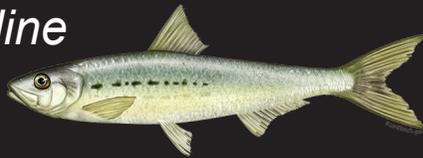

California Sea Lion

Zalophus californianus

The California Sea Lion, or *Zalophus californianus*, lives in California and relies on these types of fish for food:

Pacific Sardine

Northern Anchovy

Climate Change

From ocean temperatures rising, Pacific Sardines and Northern Anchovies move farther away from the coasts.

When the sea lions follow, their children are stranded and end up dying.

This is a problem.

Solution

We can help the sea lions by stopping climate change by:

Carpooling

Green transportation

Green energy
