

# 5 Steps On Our Path To Environmental Friendliness

We established recycling stations at convenient locations throughout the park and are working to minimize the amount of refuse we send to landfills.

We maximize the purchase of items made from recycled materials such as the plastic “wood” used in benches and boardwalks.

We installed automatic bathroom fixtures and dispensers to help conserve water.

We have a large universal waste program that ensures proper disposal of many materials that are hazardous to the environment.

We converted from two-stroke to four-stroke engines on the Matanzas ferry to reduce pollution, extend engine life, and save fuel.
