

LEARN THE BASICS – *Carbon Budget*

It is all about simple math... additions and subtractions.

Humans are **adding** carbon dioxide (CO_2) gasses to the atmosphere ☹️

When ever we drive a car, make a product or use electricity, we **use energy**.

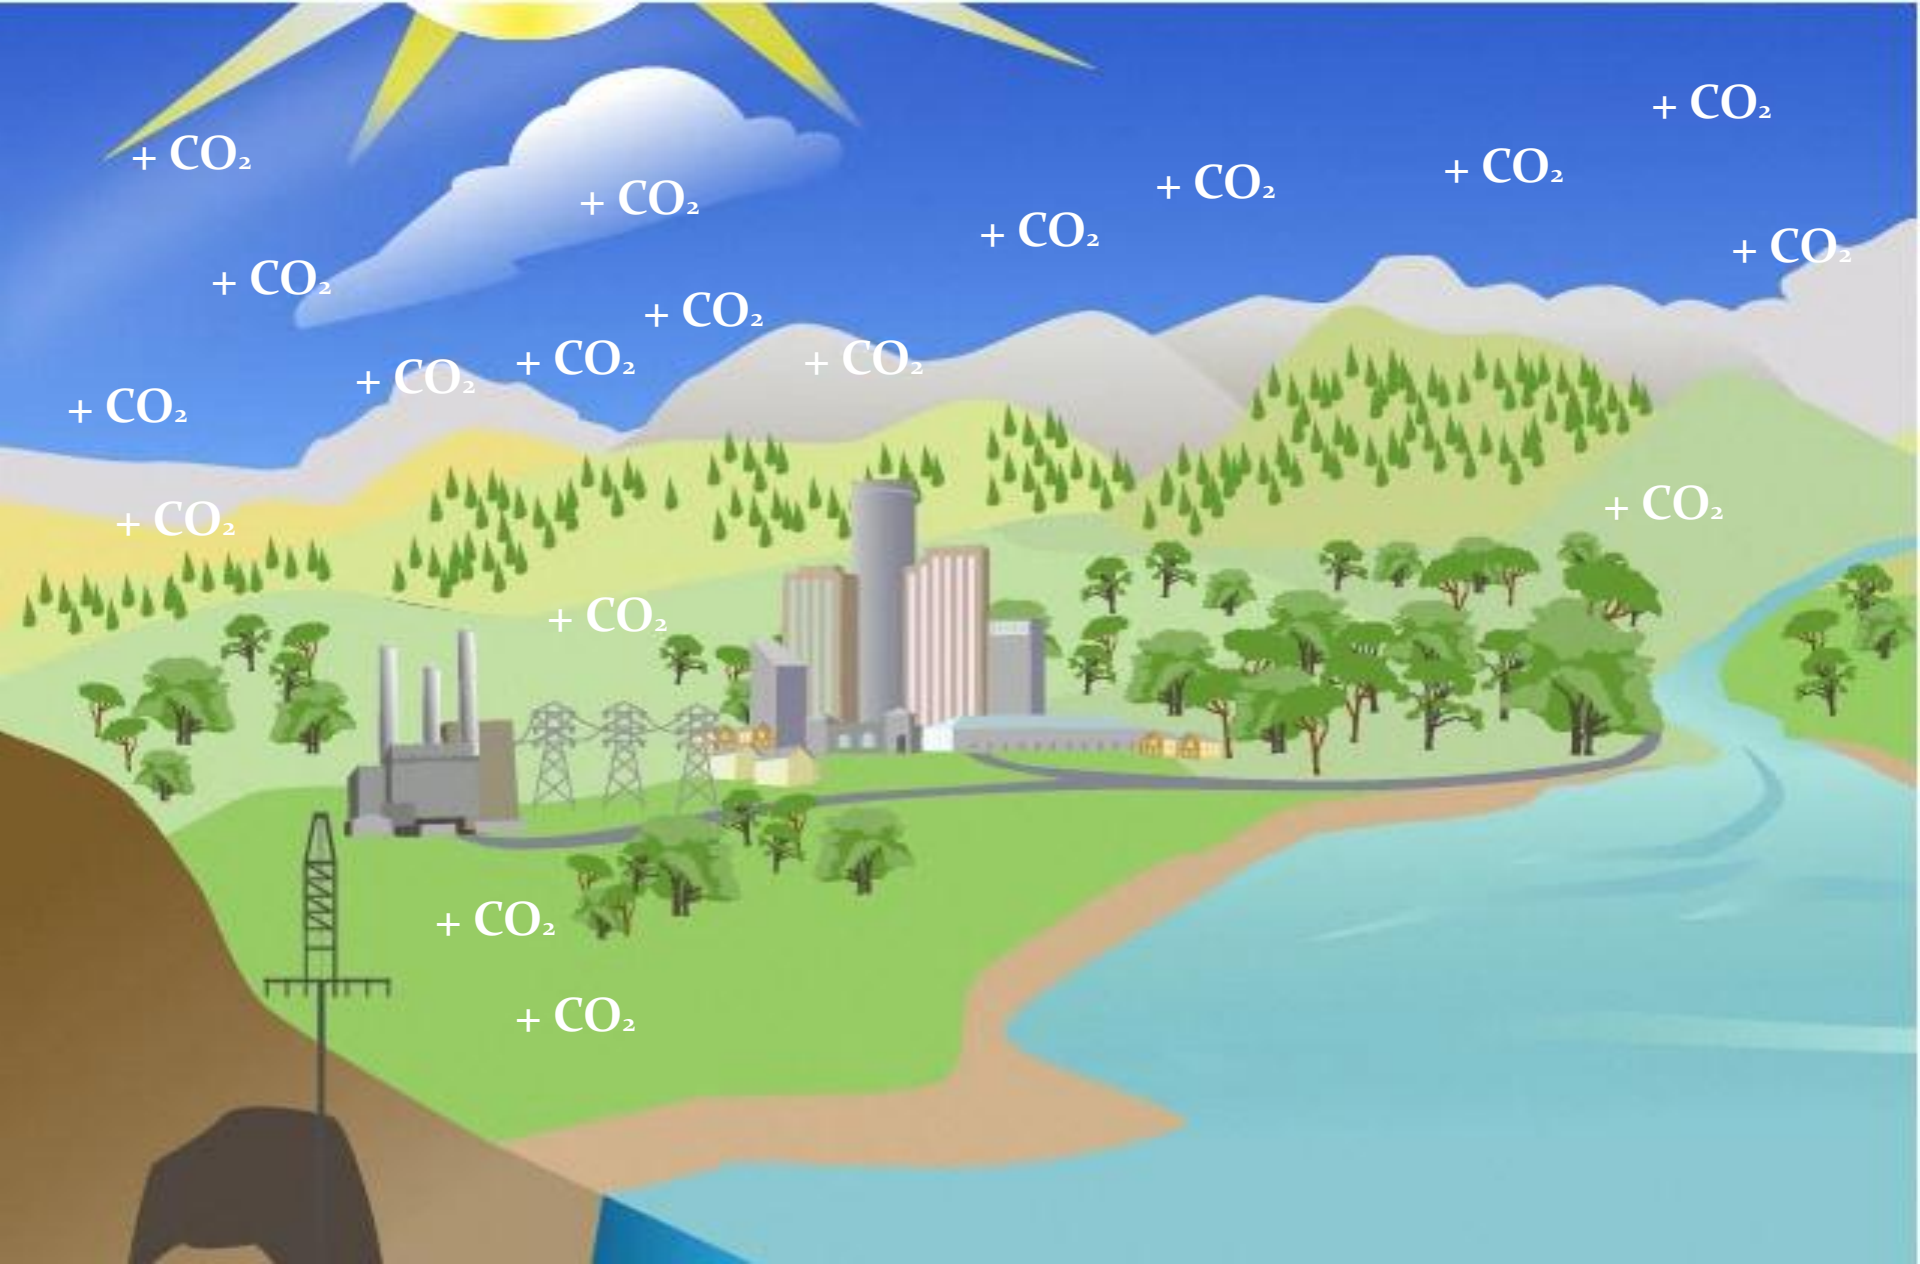

+ Carbon Dioxide

+ Carbon Dioxide

+ Carbon Dioxide

A lot of this energy comes from **burning fossil fuels** like oil and coal – these produce CO₂.

In 2008, human activities and deforestation **added 10 BILLION** tones of CO₂.
This is a greenhouse gas “source”.

Living vegetation, and natural processes like building skeletons **removes** carbon dioxide (CO₂) gas. ☺

Our planet has a natural way of **subtracting** carbon, this called a “carbon sink”. About **6 BILLION tons** are **removed** this way.

What is the 2008 carbon budget for the planet ?

Ten
billion

Six
billion

The math is simple – each year more CO₂ is added to the atmosphere, than is removed.

That remaining 4 BILLION tons of carbon dioxide a year builds up in the atmosphere.

Learn the Basics - Carbon Budget

- Produced by Greg Litten – Everglades National Park. July 2012
- Aim: Audience of 5th grade students.

- Most graphics derived from EPA “*Learn the Basics: Greenhouse Effect*” video
- <http://www.epa.gov/climatechange/kids/>
- 2008 Carbon budget information from IPCC report and Dr Patrick Gonzalez.
