

Let's plan a field trip

The Southern Campaign of the Revolutionary War composed some of the most savage fighting of the war. Your class wants to visit four important battles on a weeklong excursion. Your task is to research the importance of each locations (who/what/when/how). Then map your course of travel. Use the distance formula to estimate the total distanced traveled on your trip,

$\sqrt{(x_2-x_1)^2+(y_2-y_1)^2}$. Create a compelling plan of why your class should follow your field trip guide. Use the internet, travel brochures, and books to find the necessary information. Make sure to include as many details as you can.

What locations will you visit? Explain what happened in this location, who was involved, when it took place and how it played a role in the defeat of the British.

1. _____

2. _____

3. _____

4. _____

Answer the following questions to the best of your knowledge.

What is the total number of students going? (Is it just your class or others as well?)

If you need one chaperone for every five kids, how many chaperones will you need?

What type of transportation will you be taking? How many seats does each have? How many vehicles will you need to fit all students, teachers and chaperones?

Use the information you gained during your research to create a schedule of your days. Make sure to include what activities to you plan to explore at your four main locations.
