

# TractsNet: An Internet Service for Accessing LRD Data

Internet Mapping Service that allows users to visualize and query LRD's geospatial tract and boundary data.

<http://landsnet.nps.gov/tractsnet>

MIS/MDL data is used to hatch individual tracts based on status (ownership) and estate (interest).

Tract attributes are updated nightly using the latest MIS/MDL database information.

Links to the LandsNet online document archives exist for both an entire unit and individual parcels.

Can Include Background Images

Currently contains complete data for 124 NPS units.

The data is contained in one geographically contiguous shape file for all tracts and one shape file for all boundaries.

North American Datum 1983

Latitude/Longitude (LL83)

Tools:

- Zoom, Pan, Select
- Print, Bookmark, Copy URL
- Make Redline Notes
- Query MIS/MDL Database
- Measure Distance, Buffer
- MIS/MDL Reports on Selected Tracts
- Encumbrance Reports on Selected Tracts
