

GOGA TEAM DRAFT GMP – PART II - Aviles

NO.	INITIAL	SECT.	PAGE	LINE	COMMENT	RESPONSE/ NOTES
1.	BA	NR	355	6	Suggest re-ordering section to use traditional layer-cake model – begin with geology, which form soils,... end with air quality. I find it odd that carbon footprint is presented here rather than in operations, but I can live with it.	Done. Moved Air Quality and Carbon Footprint to end of section (June, only topic titles have text color changed, not entire sections). Same for Muir Woods.
2.	BA	NR	361	2	From a quick scan, there is very little description of the GEOLOGY of GGNRA. The single paragraph for Muir Woods (p. 405) is also thin. When we address park geological resources (a fundamental resource) I think we should describe how most of the park is part of the continental plate, and that the new areas in San Mateo Co. (Rancho) are on the Pacific plate; the two creating unique formations along the active San Andreas fault... Earthquakes and seismicity get almost no treatment in comparison to climate change.	Done for GOGA. Section added on geology and tectonics. Needs to be added for MUWO (resource?)
3.	BA	NR	365	NA	Sea-level Rise model: updated map and citations requested	Park to provide updates?
4.	BA	NR	397	?	What is the logic to organize special status species by county?	Retain. Consistent with more detailed sections like water resources.
5.	BA	NR	404	11	Statement about redwoods being saved due to their inaccessibility is wrong. Is it important to say why saved here? The answer is complicated.	Done. Reworded and deleted phrase about inaccessibility.
6.	BA	NR	404	20	Muir Woods is entirely surrounded by Mount Tamalpais State Park. MMWD and GGNRA lands are not contiguous.	Done. Intent is to convey that much of the general area around Muir Woods is protected lands.
7.	BA	NR	409	21	Verify with NR that Muir Woods is the ONLY forest.	Retain. Direct from Park Website http://www.nps.gov/muwo/naturescience/plants.htm
8.	BA	NR	411	3	Why do we say “Presumably”? What kind of information do we have about trends now? We’ve been managing the area for over 40 years.	Can Park provide supporting data?
