

WATER CONSERVATION ALERT | EVERY DROP COUNTS

HOW TO COLLECT WATER WHILE IT WARMS

Use your bucket to catch the cool water while the tap warms up. Reuse it for flushing or cleaning.

1

1. Set up before the tap goes on

Place a clean bucket under the shower spray or tub spout. At a sink, use a basin that sits securely.

2

2. Catch only the warm-up water

Stop collecting when the water is warm. Do not keep the tap running just to fill the bucket.

3

3. Move it out of the way

Keep the shower floor, walking path, and drain clear. Carry only what you can safely lift.

4

4. Reuse it for a necessary task

Use clear collected water for flushing or household cleaning. Keep these containers separate from drinking-water containers.

Keep saved water separate

Label the bucket "For flushing or cleaning only." Cover it, keep it inaccessible to children and pets, and use the water the same day.

For essential bathing, take a brief shower instead of filling a tub. Turn the water off while lathering.

Report leaks or plumbing problems to your housing office. Not sure who that is? Ask your supervisor.

Stage 4 remains in effect. Use only the water you need.
