170 Mile Creek Road Grand Portage, MN 55605

Zegibanaanishiinh (Cedar Waxwing)

This cedar waxwing is eating a gozigwaakomin (serviceberry, juneberry, saskatoon, wild currant). Waxwings get their name from waxy-looking red feather tips on their wings. In size they are between a sparrow and a robin. Cedar waxwings eat all kinds of fruit, including cedar berries in winter that give them the rest of their name. What kind of cedar grows at Grand Portage? (giizhik, northern white cedar, which is used in canoe building)

Cedar waxwings live all over North America except Alaska and the northern provinces of Canada. They are found at Grand Portage year round, and often form big flocks. You can see them where you live! If you live in the southern half of the United States, you will have to wait for winter.
