

The Plant Professor's Day

Mr. George Washington Carver came to my school, he would come in the door of our classroom at the most unexpected time. We would go "George W. Carver? Oh, that you?" He would say, "It's me. Come with me to the kitchen and I'll teach you how to make a delicious lunch."

That was the moment that we became hungry. When we learned how to make refried beans, peanut butter sandwiches, mashed potatoes, and Mr. Carver's specialty, peanut butter fudge, he would watch us with a dreamy expression on his face. As we made the peanut milk, he said, "I'm pleased to see that you kids are making my favorite meal so well."

Lunch was so delicious. After lunch, Mr. Carver told us that we would have a 90-minute recess and he had a surprise for us! It was a huge peanut-shaped bunsen

house! There was also a movie theater and a zoo on the playground! It was so cool! When recess ended, we headed to the science room to do experiments.

In the science room, we did an experiment to see if different plants could be colored with food coloring. We also learned if different kinds of seeds could be dyed with dye to make awesome patterns. In art class, we learned how to make plant jewelry. In P.E., we played "peanut hockey."

After school, I ran into my mom's room shrieking, "Mom! Mom! Guess who came to my school!" Who, my mom asked. "George Washington Carver, my science hero!" Cool! she said. "He told us a bean joke that goes like this: Why did the bean yawn when the flower told him about her trip

to the lab? Because he had been
there!" We both laughed, it was
the best school day ever!
