Honolulu, Wednesday, August 20, 1913.

Soldiers Home From Hawaii Warm in Their Praise of the Big Island

Company D, First U. S. Infantry, on Hawaii, and Miss Maile Vicars, Their Official Volcano Guide.

Week's Outing Is Filled With Pleasure.

More territory on the island of Hawaii was explored by Company D, First United States Infantry, of Schofield Barracks, than ever before by regular troops of the Army. Commanded by First Lieut. Kingland S. Snow and Lieutenant Hatie, the company returned yesterday morning on the Mauna Kea, having spent just a week away from Schofield Barracks, and every member was satisfied and glad that he had been among the first to "See Hawaii First."

When the Mauna Kea was ready to leave Hilo wharf Monday afternoon the entire company, eighty-four strong, gave three cheers for L. A. Thurston, general manager of the Hilo Railroad company, who personally conducted the company on all its railroad tours to Paauilo, Pahoa and Glenwood. Cheers were also given for Hi were given with enthusiasm, day had been full of surprise ery and hospitality.

As the vessel swung awa Honolulu, Past Dictator Wi

Loyal Order of Moose, ventured near the space reserved for the soldiers, and gave the familiar Moose call. It was responded to by many men in khaki and soon the Moose had herded together. The Ad Club looked across the ropes and decided that as the soldiers and the Ad Club excursionists were the first organizations to respond to Hilo's new slogan, "See Hawaii First," it would be well to fraternize. To cement the friendship the Ad Club opened up a few boxes of cigars and passed them over to their soldier friends. They were distributed among the men in khaki by "Dad" Carey, the first sergeant.

Praise for Big Island.

Lieutenant Snow, through whom the company had its opportunity to make the trip and who has alway been enthusiastic over the trip, said yesterday that he and his men were shown uniform courtesy in every part of the island visited. Lieutenant Snow was a bit chary at first over the reports of the beautiful scenery, given him by J. M. Giles, the Hilo tourist booster, and thought it was overdrawn, but when he saw the actual scenery he found it had been too little praised, he said.

"We were treated well on the steamer and ashore," said Lieutenant Snow. "The national guard armory was thrown open to us and the men camped out there. The trip to Paauilo was grand and was made more enjoyable because Mr. Thurston and Dick Young did everything possible to make that and succeeding railroad trips pleasant. Mr. Young, who was given to us as a special representative of the railroad company, did himself proud and he has our very best aloha. Every man in the company had a good word to say for him."

In Charge of a Pretty Guide.

The company made a record hike from Glenwood, the end of the Hilo-Volcano line, to the Volcano House, making the nine miles in two hours and twenty minutes. There were two halts of ten minutes each. The men pitched their camp near the Volcano House and remained there all day Sunday and Sunday night. On Monday they visited the crater and all the caves, as well as the koa and fern forests.

Their guide was pretty Maile Vicars, a thirteen-year-old lassie, who, attired in knickerbockers, proved to be an able leader. She knew every part of the country and described it well. While the men were a bit disappointed at not seeing the volcano in action, they were not displeased about the trip, for it took them into a land of wonders not to be seen anywhere else in the Islands.

The company hiked back to Glenwood Monday and were brought back to Hilo by train from the Glenwood station.

"Dad" Carey said he voiced the sentiments of the men when he stated that the trip was one of the best any of them had ever had, and he hoped other companies would make the same trip.

Lieutenant Snow and Lieutenant Hatie handled their men well and gave them plenty of leeway, but the discipline of the company is always excellent and few restraints were needed.

Sept 20 W. F. Babb San Francisco

A Trip to "The Point" across to "Perrets Cone" by trail from

Sept. 22 Four ladies and one man accompanied by the housekeeper's Collie dog, Lassie, started out on a tramp at 4.15 P.M. They went out the garden gate to the Kau road, to the "Scenic Driveway" of the Chauffeurs to "Observation Point" (Uwekahuna) From there the descent to the floor of the crater was made scrambling hand over hand to the first ledge where there was a few rods of fairly good walking upon a thin crusty surface similar to thin cement with large pebbles hardened in it which cracked somewhat under foot pressure. The second ledge about 100 feet lower was reached by climbing over and around large boulders in places widely separated. The dog found the the distance between the boulders terrifying and cried for assistance. The people could not return and after seeing them below she made short work of finding a door. a walk

of several hundred yards over the same crusty surface brought the party to the final slide to the floor of the crater. This was the more difficult one being sandy and many loose stones.
Eventually the floor of the crater was reached and the objective point of the trip, "Perrets Cone" headed for. The floor of the crater in this section was filled with cares, fissures and cavities. Over a large area fine black ashes filled up the fissures making an nearly level surface. "Perrets Cone" was a cylindrical cone pushed up in this section and had several openings on the northwest side from which steam escapes continuously like an engine.
Darkness was coming on rapidly and haste to meet the regular trail was necessary, it being very dangerous to be on the lava after dark. Distance over the lava is increased twofold, many of the cracks must be skirted rather than crossed.
The trail was reached just at dark and all sighed with relief.
Queen of Night dropped her mantle so quickly that the man was sent ahead to the Hotel for lanterns which he found on the way down. "Jack" being thoughtful of his charges, had already realized the need of light on the trail and started Mori and Kanemori on the way, accompanied by Mr. Green. (Mr Lycurgus was absent in Honolulu) A halt was made at the lava bridge and amusement was furnished by the echoes there being three distinct ones several seconds apart. Lanterns appeared on the trail, and a scolding awaited the party at the Volcano House. A trip worth taking & [illegible] here in the day. J.M.H.

" " "

Sept 27, 13 Glad to come, glad to go, and sure happy to return again.

Mrs Alice J. Keogh

Sept 28/13 Auch mir bot das „Volcano House" nach schwerer Krankheit 9 Tage der Ruhe und Erholung und darf ich ohne Zendern sagen dass ich, der ich fuer 6 Jahre in fast allen Teilen der Welt herumgereist bin, nirgends einen interessanteren und mehr Genuss bietenden Flecken Erde gefunden habe. Allerdings ist es sehr bedauerlich, dass „Pele", bei schlechter Laune war und fuer Besucher nur ein Kochnen und Fauchen hatte, was allerdings gegen die Regeln der Gesellschaft verstoesst aber doch von dem Vorhandensein „Madam Pele's" zeugt. Auch der aus dem Krater aufsteigende Qualm sagte mir, dass die gute alte Dame an alten hawaiischen Sitten festhaelt und maechtig ihre getreue Pfeife raucht.

Ehe ich schliesse, moechte ich nicht versäumen zu erwaehnen mit welcher Aufmerksamkeit die Wirtschaft des „Volcano House" nicht nur mich, sondern alle ihre Gaeste behandelte und werde ich nicht verfehlen, sollte ich jemals wieder den Vulkan besuchen, die Gastfreundschaft des „Volcano House's" in Anspruch zu nehmen.

Siegfried Moeller.

Sept. 29/9/13 Durante a minha longa viagem de 3 annos, tanto pelos sertões da Africa — como por outros pontos onde a natureza nos apresenta quadros ora bellos ou desoladores selvagens, foi a primeira vez que, proximo da cratera do vulcão de Kilauea, senti a impressão do quadro mais magestoso ou que é possivel ao homem vêr. Nesse dia não estava o vulcão em erupção mas a grandeza do quadro absorvia-se.

I HAVE MADE SEVERAL TRIPS TO THE CRATER OF KILAUEA WHICH IN MY OPINION IS THE CHIMNEY OF HIS SATANIC MAJESTIES SUMMER PALLACE. I HAVE TOASTED POSTAL CARDS AT THE CRACKS IN THE ROOF OF THE PALLACE AND SENT THEM TO MY FRIENDS AS AN EVIDENCE AND WARNING. MY OWN OBSERVATIONS HAVE FULLY CONVINCED ME THAT THE DOMINIONS OF HIS MAJESTY ARE "UNDESIREABLE" AS PERMINENT PLACE OF RESIDENCE, I AM SURE THE PALLACE IS OVER-HEATED AND VERY POORY VENTILATED, IT MAY BE THAT SOME OF THE ODERS SO NOTISABLE ON THE ROOF COME FROM THE KITCHEN, IN WHICH CASE I AM INCLINED TO THINK THAT HIS MAJESTY HAS A VERY UNUSUAL TASTE FOR HIGHLY SEASONED DISHES, I AM RATHER SURPRISED AT THIS AS MY PREVEOUS GENERAL INFORMATION WAS TO THE EFFECT THAT HIS MAJESTY WAS A VERY GOOD COOK.

FROM INQUIRY FROM HIS MAJESTIES NEIGHBOURS IN THIS VACINITY, I LEARN THAT HE HAS THE REPUTATION OF BEING A GENIEL WARM-HEARTED HOST AND THAT HE GENERALY KEEPS AN OPEN HOUSE AND HAS A WARM WELCOME FOR ALL HIS GUESTS; I HAVE NOT AS YET HAD THE OPPERTUNITY OF CONVERSING WITH A RETURNED GUEST, NOR HAVE I MET ANY ONE WHO HAS SPOKEN WITH ONE OF THEM, IN THIS CONNECTION I WOULD LIKE TO MENTION THAT I HAVE NOTICED THAT THE CRACKS IN THE ROOF OF THE PALLACE ARE GENERALLY NARROWER AT THE BOTTOM THAN THE TOP, FROM WHICH I INFER THAT IT MAY BE MORE DIFICULT TO LEAVE THAN TO ENTER THE PALLACE, I HAVE ALSO NOTICED THAT ALL ENTRANCES TO HIS MAJESTIES DOMINIONS ARE FROM ABOVE DOWNWARD AND THERE IS A GENERAL TRADITION THAT HIS MAJESTY HOLDS SOME STRIKE-INGLY PERSONAL OPINIONS REGARDING RIGHT AND WRONG AND IT MAY BE THAT HE REGARDS IT AS RIGHT TO GO DOWN AND WRONG TO GO UP, IN WHICH CASE I FEAL SURE WE COULD NEVER AGREE. AS TO DISAGREE WITH ONES HOST IS THE UNPARDONABLE SIN, I AM FORSED TO DEPART WITHOUT HAVING ACTUALLY ENTERED THE PALLACE, ENTIRELY SATISFIED HOWEVER AFTER PEAKING IN THROUGH THE CRACKS IN THE ROOF AND LOOCKING DOWN THE CHIMNEY.

William T. Donnelly.
Consulting Engr.
N.Y.
Brooklyn N.Y.
Nov. 19th 1913

P.S. AFTER MY EXAMINATION OF HIS MAJESTIES SUMMER PALLACE (FROM THE OUTSIDE) I FIND IT IMPOSSIBLE TO OFFER ANY VALUABLE SUGGESTION AS TO THE PROBABLE TEMPRATURE OR LOCATION OF HIS WINTER PALLACE.

Hawaii Volcanoes National Park Service

TO BORE INTO KILAUEA'S DEPTHS

Scientists, Amazed at Results of Tests to Date, Will Carry On Series of Striking Experiments at the Volcano—Plan Is to Pierce Lava Crust to Sound for Fiery Lake Below.

L. A. Thurston, while in Washington, visited the Carnegie Institution of Physical Research and interviewed Dr. A. L. Day, director of the geo-physical research laboratories. Doctor Day is analyzing the samples of gas that he collected through a pipe sunk ten feet beneath the surface of the molten lava in Halemaumau when he was at the Volcano last summer. The analyses thus far completed suggest revolutionary hypotheses.

Whole libraries on vulcanography have been written, and many theories have been developed on the basis of assumption that the earth consists of a molten plastic core surrounded by a comparatively thin crust. By some scientists in the solid outer skin volcanoes have been supposed to be simply vent holes through which the molten central mass of the globe is forced by the physical contraction of the molten earth in the cooling process. Other scientists have attributed lava formation to chemical combination of sea water with the mineral elements of the earth core, the heat to melt the rocks being produced by chemical reactions of the water acting on the minerals, under pressure. The advocates of this theory have assumed that free water is not present within the molten core of the earth, or in molten lavas.

Gas Water-laden.

Doctor Day's first discovery was that the gases collected from the very heart of the fire-pit were heavily charged with pure water. His second discovery was that neither the water nor the gas had ever been at the surface of the earth before! All surface waters and all atmospheric gases contain the element Argon. Argon is not a constituent of the Kilauea lava-gases. Therefore, says Doctor Day, these gases and the water which accompanies them, must have been formed within the earth without infiltration of sea water or any other surface-waters.

Further analyses developed the fact that there are three separate gases present in the Kilauea samples that produce terrific heat when they combine—temperatures high enough to melt any known mineral compound.

Will Tap the Depths.

It is now the plan of the Carnegie Institution scientists to sink bores deep into the Kilauea lavas in a circle around the fire pit at varying distances from Halemaumau to determine whether there is a general body of molten lava underneath the solid floor of the crater and to record temperatures and make further scientific observations on the causes of volcanic phenomena.

Mr. Thurston states that a number of scientists connected with the Carnegie Geo-Physical Laboratory will be employed in these investigations.

1913.
Dec 29, taking reading. after reading was taken the condensed steam had disappeared. This stake was in a very wet locality. No steam around stake the other stake. Considerable steam between stakes. Reading 77 ohms. white slime around stakes. When the stake, having the large quanity of condensed steam, was pulled it was so hot that it could not be held even with gloves on.

Location 3.

Station #6. In red clay. Distance between stakes 5 ft. 2 ft deep. Difference in elevation of stakes 2 ft. slight trace of steam entire distance between stakes. Reading 59 ohms. Stakes were in brown clay.

Location 4

Station #7. numerous steam cracks between stakes which were 350 ft apart and 2 ft deep. One stake in sulphur deposit, the other one in small rift or steam crack. Reading 39 ohms.

Station #8 same as station #7 with exception that the stake that was in sulphur deposit was moved 10 ft further back, which was in ordinary ground Reading 36 ohms. These stakes were not drawn until another reading was taken, which was at the end of 20 hrs. This was done to not what the effect might be. Reading 37 ohms. When stakes were drawn it was noted that there was a thin oxide around stake (only one), thereby increasing the resistance.

Lava, Pelishair and stalactites, were tried using a length of 1/4 inch. the resistance of all were found to be greater than 30,000 ohms. Sulphur was also tried with the same effect. Since such high resistances were found, it was impossible to make an electrical survey of the crater which we hoped to make. This would have been of interest, particularly in regard to the magnetic stations.

Conclusions — Lava, Pelishair, stalactites, and sulphur are good insulators, notwithstanding the fact the first three contain iron and are magnetic. Often a greater distance is a better conductor than a shorter distance.

Estelle C. Nacy

July 15. 1914 A suddenly increased brilliance in the fume cloud over the crater at eight o'clock last night attracted the attention of everyone in the hotel and the big auto bus took a large party down. At first the whole crater was obscured by fumes and there was disappointment in the party, especially as Dr Jaggar stated that there had been a splendid flow from the north east cone at 8 p. m. But at 10 p m. from the South East Station our party had a fine view of the whole floor, and a new flow started from the west end which spread in a few moments over nearly half the floor. Old Faithful meanwhile was very active, and a new pool nearly as large as Old Faithful was continuously and furiously active, so that all the heavens were lighted with the glow. It was the finest display for some weeks.

Aug 25th Visited ~~Kilauea~~ The Volcano.

Hawaii Volcanoes National Park Service

Aug. 2. 1914. The condition of Makaopuhi was very different from that in 1864 when I first visited and sketched it. Then there was the same gravelly plain but this has subsided for nearly half its surface. Fifty years ago there was a deep pit at the western end of oval form, giving its name "the eel's eye". There is also much less steam in this neighborhood. The condition of the sulphur banks near the Volcano House has greatly deteriorated within the last few years, while the sulphur fumes seem transferred to Halemaumau where they were formerly absent during active periods.

Wm T. Brigham

GREAT LAKE OF FIRE IN CRATER

Kilauea More Spectacular and Brilliant Than For Some Time Past

TECHNOLOGY STATION, Kilauea, October 8.—During the week ending with October 7, following the stationary stage described in the previous report, there has been a marked and apparently "permanent" increase in the action in Halemaumau. About the "Old Faithful" orifice as a center an open pool of magma has formed, which has enlarged rapidly—without symptoms of down-sinking or of marked rise—until at the date of writing it has become a lake of the kind so well known in Kilauea, a semi- molten surface, upon which thin black crusts form continually, only to be torn up and engulfed every minute or so by the uprush and fountain-coming of large magma lumps, or so-called bubbles. Also there are many small fountains in it, and a conspicuous action of surging against and up onto the banks of the spatter ramparts which confine the pool. No clear streaming in definite directions has been observed as yet.

Unquenchable Glow

Needless to say the opening of this "permanent" lake has made the scene much more spectacular and brilliant. In bright moonlight the fumes are illuminated by an unquenchable ruddy glow, more fiery than in any previous displays since March, 1913. A continued fluctuating increase is expectable.

On October 1 conditions were very much as described previously. Early in the afternoon small amounts of magma were being flung as spray out of the "Old Faithful" cone. Blue flames were flaring conspicuously in broad daylight from the cones under the east and northeast stations and from an orifice close by about twenty-five feet above the floor. Later on, in the evening, molten spray was being flung from nearly all the cones on the floor. The action had definitely increased over that of the previous day.

Score of Glowing Cones

On October 2 there was little change in behavior, but more orifices were seen than at any previous time in recent weeks. Twenty-two brilliantly glowing cones were counted. Blue flames were flaring from nearly all and many were spouting molten spray vigorously—particularly the cones under the northwest station.

On October 3 the "Old Faithful" cone structure had collapsed, resulting in the formation of a pool about fifty feet long by forty feet wide, of triangular shape, with its sharpest apex to the west. In this the magma was boiling violently and splashing over the margin in considerable amount. Molten spray was being flung from the east cone. In all respects increase of action was noted.

Eating Away Edges

On October 4 the "Old Faithful" pool had enlarged, despite the active building of spatter ramparts, until its dimensions were at least one hundred by seventy feet. It was still triangular, with the sharp apex to the west. At intervals of no great length portions of the spatter banks collapsed into the pool, thus continually enlarging it. Furious boiling and surging followed such collapses. The more or less regular fountain action of "Old Faithful" was going on as formerly. All the orifices, together with some newly formed ones, were glowing brightly, but no molten spray was seen. A high orifice showing a bright, but deep, red glow was seen in the talus under the southwest station.

A Surging Fire Lake

On October 5 the dimensions of the pool were estimated to be two hundred by one hundred feet. It had become egg-shaped, with irregular boundaries. The action in it was very vigorous, but the spatter walls had grown so high that only occasionally were small amounts of the melted rock flung out beyond these onto the floor. The surflike rushing roar had become very loud. In other parts of the pit the action was as usual.

On October 6 the roaring sound was still louder, and despite the spatter walls a considerable amount of the molten lava was being flung out onto the floor. The lake area was still larger than on the previous day, but the increase in size was not so great as during the first two or three days after its formation. At the smaller orifices all was as usual, except that no lava jets were seen.

On October 7 a very high wind accompanied by rain made seeing impracticable. In the early morning hours of October 8 the glow on the fumes indicated that the activity was undiminished.

The seismic spasm of last week was quickly over. Nothing unusual has occurred during the past week. Several small shocks have been registered. All these shocks will be reported upon in systematic form as soon as the necessary time and instrumental corrections can be worked out.

H. O. WOOD, Director.

Nov 13, 1914 Again here. My sixth visit. My former experiences were as follows: June 23, 1880, August 26, 1884, October 11, 1890, August 5, 1908, and July 23, 1914. This time my brother-in-law and his wife, Mr and Mrs Albert H. Kennedy, of Rockport, Indiana were with me. We took in the "Tree Molds", "The Fern Forest", "The Sulphur Banks", "The Observatory" (under the intensely interesting and instructive guidance of Professor Jaggar) "Thurston Lave", "Kilauea Iki", and "Halemaumau" Everything proved most enjoyable. All conditions were favorable. The crater was very active. It was in constant action. Gases were bothersome, but we all felt well repaid. It was well worth while.

" " Saul G. Hall "

Nov 14 1914

We left Honolulu in the evening of the 12th on the very fine steamer Matsonia - The sea was without any rough wrath - only the low easy ground swells that "rocked one in the cradle of the deep" and lulled us to peaceful sleep. Arrived at Hilo and took auto - under the guidance of our esteemed and loved Brother in Law W. A. Bown - who knew all the best routes to see. We were introduced to some of our old Berlin friends - and to Miss O'Riley - teacher at the High school. Saw the Rainbow Falls - the Library - the beginnings of the New Building. The plantations skirted us beautifully along the shore - We reached the Lyons' dairy farm - stopped and had buttermilk cake and a rest - came on to the Volcano House - saw the sulphur beds the tree moulds - Fern Forests - and the U. S. Observatory - under the very efficient care of Prof. Professor Jaggard - Left for the Pit - stayed until 4 P.M. and saw it in fine active boiling and roaring and seething like a great cauldron - came back to the Hotel at 8 P.m. had a fine lunch - slept all night O.K. and are ready for the trip to see the Island along the R.R. Thanks to Brother Will R. Bown and his Sister and Present. A. D. Kennedy and wife.
Rockford Ill

Dec. 7, 14. Was sick coming over - may be going back but I would repeat the sickness if necessary, only to see that grand sight - Kilauea in action.

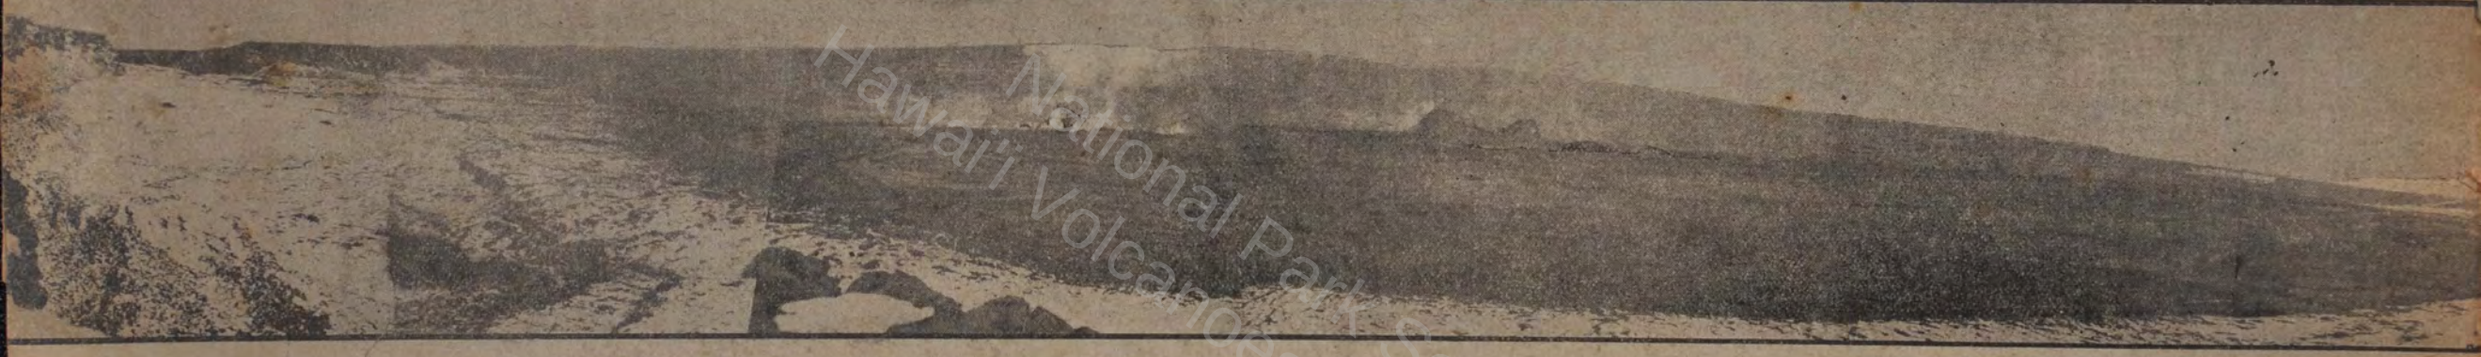
HONOLULU, HAWAII TERRITORY, WEDNESDAY, DECEMBER 30, 1914.

First Photographs of 1914 Activity In Mokuaweoweo Sent To Honolulu, Taken December 15



THE PANORAMA of the active crater of Mokuaweoweo, shown in the upper reproduction, is the first photograph of the recent activity to be taken. The various plates from which this panorama is made up, were exposed by Professor Jaggar for The Advertiser on December 15, and show the south lunate platform on the left; next, the fire fountains as they appeared that day; next, to the right, the cone of 1903-7 in the middle and the new mound, formed in the present activity. On the right is Maunakea and the north bay of the crater. The group photograph reproduced is that of the Observatory party at the summit, with the exception of Professor Jaggar, who took the picture. The photograph gives a splendid idea of the bleak surroundings of the crater and the severe cold with which the scientists had to contend.

Hawaii Volcanoes National Park Service

ADVERTISER, HONOLULU, MONDAY, JANUARY 18, 1915.

NOW IS THE TIME TO VISIT KILAUEA AND SEE WONDERS

At Present Great Lake of Turbulent Lava Is Magnificent and Spectacular.

FEBRUARY AND MARCH INDICATE POOR VIEWS

Local Earthquakes Renew Seismic Activity; Other Phenomena Are Noted At Observatory

By Director T. A. Jaggar

TECHNOLOGY STATION, January 14.—The week has fulfilled every expectation based on the hypothesis that Hawaiian volcanoes respond to the solstice and subside thereafter for the lava of Halemaumau has been rapidly sinking and on January 11 the fume column and glow of the Mokuaweoweo fountain ceased.

The time of the solstice, or maximum declination of the sun south, was from December 20 to 24 inclusive, the turning point being reached December 22; calling the eruptive period of Mokuaweoweo forty-eight days, from November 25 to January 11 inclusive, the middle day of the period, twenty-five days after the outbreak, was December 18-19. January 4, 1915, appears to have been the date of highest tide in Halemaumau, when the last overflows of the lake took place at an elevation 363 feet below the southeast rim of the pit; on January 13 the lake had fallen about thirty-five feet below this, or 393 feet below the rim.

An Active Month

Kilauea was intensely active and in general rising all through December, and in accordance with the measurements of preceding years it was fully expected at the Observatory that it would sink in January. The movements of the lava column, though as a whole lower, have been remarkably parallel to those of 1911-12, when also there was a maximum on January 4.

For those who intend to visit the volcano, the time to come is now. Positive predictions are not possible, but there is great likelihood of increase of fumes and poor seeing in February or March, with a very low level of the lava on the equinox. At present the lake is magnificent and spectacular.

There was glow over Mokuaweoweo January 6, 1915, and a tuft of fume like white cotton appeared on the morning of January 7, apparently blowing away to the west. For the previous fortnight there had been no marked changes, except that a diffuse glow had appeared at night distinct from the light reflected from the obvious fume cloud, and frequently in the air around the fume column. This was attributed to atmospheric conditions. At and around two p. m. January 6, streamers of white cloud rose in tufts from the high or cone region on the northeast slope of Mauna Loa, quickly disappearing and having no resemblance in color to the fume. On January 7 between one and two p. m. the same thing happened again, mostly above the snow line, along the northeast cone line, and at one time over Mokuaweoweo itself, the color of the white tufts being quite distinct from the blue fume against which it showed. At three-thirty p. m. these white jets were still at work near the two upper cones where similar jets have been seen from time to time during the past three years. January 9 there was a strong column of fume rising high and bending southward, and in the evening bright glow with some visible fume, blowing to the southwest.

No Further Signs

On January 10 at the Observatory the weather was brilliant with strong northeast wind. The fume was seen in Kona, but day and night there was no trace of fume or glow seen from the observatory at Kilauea. No fume or glow has been seen since, nor is any reported from other points. Today, January 14 at eight a. m. the weather was calm with the Kilauea fume rising high and spreading into a mushroom. There is no evidence of a high wind current which might blow the fume on Mauna Loa away. With clear seeing and powerful field glasses not the slightest trace of fume can be detected over Mokuaweoweo.

Halemaumau Subsiding

Halemaumau on January 7 and 8, 1915, showed slight subsidence of the lava column and a cracking of the floor. January 9 at three-thirty p. m. from the southeast station the wall around the inner pit made by the subsiding lake appeared about fifteen feet high. Cracks in the floor had developed parallel to the south side of the southeast cove, the northeast side of the east arm, and along the base of the northeast wall of Halemaumau. An immense crack had opened ten feet back from the whole southwest shore of the lake, extending westward toward the west pond into smoking fissure fumaroles in the floor. Other large cracks extended from the west margin of the southwest pond westward. All of this means that the floor is breaking up over a strongly subsiding lava column.

The lake also showed the characters of subsidence. The coves and east arm were free from skin, a few bubble fountains were playing in the west part, streaming was slow from east to west, and the lava within the east pot, really a fissure extension of the southeast cove, was seething and streaming southeastward.

Northwest Pond Active

The southwest pond was a pit with a crusted bottom, apparently a crust of collapse, with very slight splashes of lava into the southwest part of its bottom. The northwest pond was active and a dim glow could be seen in the region of the west pond, which during a glimpse exhibited a wall on its west side and frozen overflows east. In the evening about nine o'clock the surface of this pond broke up and the lava welled out a little eastward.

The chimney in talus south glowed and displayed a blue flame at night, as did also the east pot. The southwest cone was smoking. The crag appeared very high above the east arm of the lake and a few new-fallen stones could be seen on the east and southeast floor.

January 10 from eleven to twelve a. m. everything appeared the same except that a new short straight flow had poured from the overflow side of the west pond to the southwest pond. The fumes appeared thin. January 11 was rainy, and though the glow was bright at night the fumes appeared denser.

January 12 marks of subsidence were numerous, the pool larger by tumbles from the banks, the banks higher, the end of the east arm extended northward, slides falling in the high talus west of the south station, blowing noises in the southwest pond, the cracked blocks on the southwest border of the lake lower, and the activity of fountaining higher and the streaming more rapid.

Seeing Was Poor

By survey the lake was 495 feet long, and the east arm 250 feet long from its entrance. The depth to the lake at the bend was 391 feet below the southeast station, and to the floor south of the southeast cove 363 feet, making the height of inner wall over lake 28 feet.

Many stalactites hung over the splashing and pounding lava at the west end of the lake. The fume sources had greatly increased in number and the seeing was poor. The glow-hole in the south talus was fuming more, a new line of cracks and smoke extended from the southeast cove to the east pot, a smoking crack extended westward from the southwest cone, and there was increase of smoke from the cracks around the lake and extending westward therefrom, and from the crag. There was very rapid streaming under the west end of the lake. The lava seen through the circular opening in the east pot was streaming rapidly southeastward. The southwest pond had become a black pit. The noises were of fountaining, blowing and rumbling.

Some Local Earthquakes

January 13 from six to seven p. m. the lake was well displayed from the southeast and appeared still lower, thirty-five or forty feet below the floor. It now occupies a pit or well in the floor. Travelling fountains were moving from the Old Faithful regions westward. Heavy curtains and mobile stalactites of newly splashed up lava hung along the bombarded overhang at the west end. An active surface stream poured from the inner end of the east arm to the lake, then westward with branches into the southeast and south coves. The east pot had collapsed to an irregular opening, and was larger, with the lava of the southeast cove streaming beneath it southeastward. Under the northeast crag and beyond the head of the east arm, a flaming pot revealed lava streaming westward. The west and northwest ponds had become deep pits like the lake. The west pond was smoking with dim glow, and from the Old Resthouse the northwest pond was seen to be active, the glowing lava surface in its bottom pouring through an orifice westward, and otherwise streaming out radially from a patch of skin on its surface. Lava was spattering occasionally into the bottom of the southwest pond on two sides. The crack at the southwest cone showed a flame. The noises were of splashing and rumbling.

There have been a few local earthquakes renewing seismic activiy of late. One of these was felt in Hilo on the evening of January 13.

Jan 16/17 H. J. Eddo Oakland Cal

Hawai'i Volcanoes National Park Service

No feeble words of mine could possibly do
Justice to this most impressive natural
spectacle, none so Grand & Awful; none so Glorious
Glacier & Alaska. Oh very truly in all the World
Even is no other place like this. All human expression
& Grand is the least has nothing Compare with it
For this is of the nature of things eternal; Thus it
was from the beginning & thus it will be to the end
of time. How profoundly grateful all there of
us who have seen the Volcano or Caldera in action
should be to the Power or Fate that guides our
feeble destiny as well as the tremendous forces mine
in Volcanic activity; How delicious we should be
to take away with us for this wonderful place a Light
sense of Gods order & the human as of mans
place in Nature. I am very, very glad I came to
I shall never forget my experience but gratefully preserve the
memory of the Volcano — the tropic island of Hawaii
& its kindly people & last not least the glorious midnight
sky of the South Seas.

Frank C Hoffman 6 30 am Jan 15/1915

Mch 19-1915 This is my third visit. The wonder never grows less. Have seen Vesuvius & Stromboli, but Kilauea beats them both.

Blanche B. Cox. Honolulu.

Mar. 20-1915 To those who enjoy riding trail horseback I recommend the trip to the Six Craters & Seven Craters, - a 25 mile ride, most of the way over good trail. I drove 5 miles from the hotel, met the horses at the beginning of Coolett's Trail, left there at 9 a. m., arrived at Makaopuhi, the furthermost crater at 12:30, stopped an hour for lunch & returned to the hotel at 3 p. m. The excursion can be shortened to a half day by returning from Pauhulehule. That crater is on an eminence which affords a commanding view of the surrounding country. A guide is advisable because of the many divergent trails.

Irving M. Clark
Secy. Mountaineers Club of Washington

Pele

O builder of the mountains fair
Whence new created suns run;
O Goddess of the streaming hair
Thy giant task is surely done.
Thy finished islands flick the sea
And lift their heads to peaceful skies;
From broad savannas on their lea
Fair human habitations rise.
The wordland murmurs to the shore;
The surf beat answers to the hills;
The sea-birds chant their mystic lore;
The forest bird his music trills.
O strong armed goddess of the fire,
Thy anvil chorus shakes the land;
Why cease to build thy mountains higher
Or add new areas to the strand!

Hawaii Nei.

May 1915 Madame Pele our future reservations are cancelled

Jos. Moniz
Hilo

Hawaii Volcanoes National Park Service

Congressional Party

May 8, - 10th Sunday, ~~April~~ 8, 9, & 10/ 9 15.

The "Congressional Party", guests of the Hawaiian Government visited here today. The party is composed of some forty members of the House of Representatives, eight Senators and about seventy ladies. The guests are accompanied by a committee whose efforts to provide with comfort and pleasure are tireless and continuous. The entire programme embraces seventeen days of excursions through the islands. We have formed nothing more agreeably surprising and entertaining than our visits from the "Old Guard" in automobiles to the crater.

Yesterday a call was returned on the ladies here and Mr. Burnett of Ala and Mr. Conry, wife of Congressman Conry of New York, were both slightly injured. Mr. Conry's presence of mind is credited to have prevented serious injury to his wife by promptly extinguishing and shielding her as the car fell.

At Waiakamo where we enjoyed a pleasant rest and tea a wireless was announced stating that the President has called an extra session of Congress to consider the incident of the sinking of the Lusitania. This message was not authentic. However, before this became known many of us were contemplating returning to the States and embarking as soon as possible for home.

We leave at nine A.M. tomorrow for Hilo the prime town of "Jack Dalton".

The Volcano is regarded by many as the most interesting spectacle we have witnessed.

Lol. T. R. Morrison (Canada from Hilo)

May 9th 1915—

As one of the Congressional party to Hawaii—I desire to express my appreciation of the splendid courtesy and hospitality to the party by the people of the Islands.

I am much impressed with the beautiful climate, the glorious bloom and foliage on every side. The enterprise of the people, as evidenced in road constructions is to me a wonder. On my return to Washington, I shall urge such action on the part of Congress, as may establish this in a National Park.

James E Martine

U-S-Senator of New Jersey

Hawai'i Volcanoes National Park Service

May 10 / 1915.

After following the flag from the American mainland to the Hawaiian Islands, in 1898, no other country under the Stars and Stripes has seemed like home, now and until Father Time turns his hour glass for the last time. as Bob Burdett said: "The Climate of Hawaii: Soft & fragrant, just mothered me" & In my 17 years residence I have visited the Volcano of Kilauea faithfully every year, except two. Aloha & Pele.

A. P. Jaeger
Director Hawaiian Promotion Committee
Honolulu. H. T.

May- 10 - 1915 -

The hospitality of the Hawaiian people to us has been as great as Could have been provided by any people on Earth - The scenery of these Islands is as charming as can be seen in the World. The Volcano is beyond description — to a glimpse into the Infinite, it is a look beyond the River Jordon — as no man can Control its workings so no one Can properly tell of it — I hope for the people of these Islands, Liberty, happiness & prosperity —

Allen M James

K. F. Brown.
May 10th. 1915.

Here is to Miss Pele
A. J. Cameron. Honolulu. H.I

May-
22-24. Edw M. Ehrhorn Honolulu. having
a good time with friends.

May 24 It has been a most fascinating trip – that from
Hilo to the Volcano – as much for the varied
botanical regions as for the characteristic geolog-
ical formations. Altogether I have enjoyed the
sights with as keen interest as those at Niagara
Falls, N. Y. and those from Cairo to the granite
rocks and sands at Assuan in Egypt. Pele's
grandeur is that of the Hindu Jwalá'mukhi or
the "Deity with the mouth of fire."

1915

May 27th We leave for Hilo this morning, after a very pleasant visit of four days at the Volcano House. Have visited "Kilauea-mau" every evening during our stay and found the "Lake of Fire" very active and beautiful the level of the lake being about 500 feet below the floor of the main crater. Also made the trip to the Six Craters including "Pauhulehulu" and enjoyed it immensely. This is a trip that no "tourist" should miss. On our return we descended into "Thurston" Lava Tube" & found this to be a most wonderful freak of nature. This "Tube" is about 1100 feet long, varies in height from 6 to 30 or 40 feet and is about 15 or 20 ft wide. It is one of the sights which should be seen by all who visit the Volcano. Our only regret is, that our time of departure has arrived & we will have to say good-bye to Madame "Pele" & the Volcano House where we have received the best of care & attention. During our stay here we visited the "Observatory" and through the kindness of Prof. H.O. Wood were shown the Seismographs and some very interesting maps & photographs of Earthquakes which have taken place in different localities from time to time. Our whole visit here has been very enjoyable and it is with regret that we say "Aloha"

June 3rd

On the way to Hilo,
Halls of water & verdure green.
Exquisite sight for eyes to see,
When down it pours and rain came free.

The auto hurries on like mad,
At last a sight, it was not bad
Upon our vision flashed the sight,
Of volcano house and Volcano Bright.

Sulphur fumes and steam galore,
Volcano Bright ah dead of night.
Could fain have had more =
Surely thy rotten tips are pierced by this sight

H. C. Cole

June 3 1915

It was on the third day of June
When the foliage was in bloom,
Rainbow falls was not so small
And the sugar cane was tall.

We had just left Hilo
And things began to feel, O!
So hot! at boiling pote
It was a beautiful spot

On the left and on the right
The scenery was a delight
But the sun was awfully bright
Until the volcano house was in sight

We took a little walk =
And had a little talk
After a short time
We were feeling fine

Then to the Pit
Which had to spit
We thought we'd take a spit
just for a little bit.

June 3 My poetry Rocks not Merely to
Inscribe

Hawai'i Volcanoes National Park Service

1915

June 3rd By the writings and hieroglyphics within the volumns in which our preceeding visitors of June 3rd 1915 have expressed their impressions of the wonders of Kilauea, I feel that I can add no new sentiment in one of nature's phenomena - but it has inspired within me more than song, picture, rhyme and mystery — The power of the unknown that lies even in the depths of mother earth that seems still so close to me.

The sentiments of one with an unfortunate artistic temperament.

Charles. E. Perez San Francisco.

June 3rd Describe it, not.

Six years since last I saw thee
Heard thy thrilling crackling roar
Saw old Faithful Crashing fountains
Dash hot waves upon the shore
Mar the angle these years the wonder
Of thy huge fires still grows.
God's might and God's full warning
In thy great cauldron shows.

Chas Dana Wright

July 4th 1915

The sight in the fiery pit is gorgeous
It gets more beautiful the longer
we look at it from the brink, of course.
It is worth treble the money we paid to see it.

Party of Six.

Harry C. Chang.

July 4/15

This is my first visit to Kilauea volcano having traveled many miles to witness this most magnificent sight I have ever seen. I consider the trip a most worthy one and will boast Kilauea on my returns.

Harold Godfrey. New York.

Harold, you are nothing, if not original.
a trip to the Kilauea volcano is worth
while seeing.

July 4th. 1915.

Sights have I seen and places have I visited
But of all the wonders I have ever seen
This crater here beats them all.

Hawai'i Volcanoes National Park Service

July 26. 1915

A party consisting of A. L. Castle, J. W. Waldron, 2d O.K. Saddth, and 2d W. H. Robertson made the ascent of Mauna Loa on foot. Through a miscarriage of plans the party walked to the dairy, about 2½ miles above the corrals, for the first night. Elevation 3500 feet. Leaving the morning of July 24 at 4:30 the regular camp was reached at 8. Here tents were pitched and the pack horses left, the party starting again at 9:30. The crater was reached at 3 p.m. It was clear and cold all day, the thermometer not going above 58 at any time. There was a little volcanic smoke in the pit near the south end of the crater but no fire could be seen. The smoke however was unquestioned and on a clear day can be seen from the Volcano House. There were six distinct vents emitting steam. Apparently, from accounts, the crater has not materially changed since last December, except that it is less active. Leaving the crater at 4:30 camp at 7500 feet was reached at 7 in the evening. The next morning the party walked down to the "half way house" reaching the Volcano House at noon. The trip can hardly be recommended for walking and no one should think of walking any from the road or dairy to the top and back to camp in one day. That means a distance of from 37-40 miles, a climb of 10,000 feet and a descent of 6000. The regular camp is excellent and the night before the ascent should be spent there. From there up the trail can not be missed, but the trail from the road to the camp can not be found without a guide.

Aug 12-15 Mr and Mrs L. Budde,
Honolulu.

Hawaii Volcanoes National Park Service

Aug. 19/15.

Arrived with H. L. Copeland on July 8/15 to spend a few weeks in the delightful climate and neighborhood of the Volcano. The weeks only passed too quickly after a pleasant trip to Kealakekua and later a trip around the Island of Hawaii with Mr. Haworth. It is now time to return to Honolulu. after a 6 weeks stay (back again) Joseph F. Rock report Nov 5th 1921.

August 20/15. A personal record. This is the thirtieth anniversary of our wedding. — My seventh visit. Former visits were June 22/80, August 26/84, October 11/90, August 5/08, July 23/14, November 13/14 My Cousins Mr & Mrs Henry N. Castle of Norfolk, Virginia were with me. The volcano was much more active than usual today. — Am greatly pleased.

William A Bowen
Honolulu. Hawaii

Aug 20. 15. The first visit of Mr & Mrs H N Castle of Norfolk, Va. to the volcano. The reported greater activity since 1910 was fully appreciated. The increased area of molten surface from 700' x 200' to 700' x 400' was further appreciated. To behold the process of volcanic world formation in barren lava beds then covered by fern foliage was a sight never to be forgotten. The sight was worth 10,000 miles of travel to see and to feel the inspiration of the sight.

Henry Northrop Castle
Norfolk Virginia.

Aug 20, 1915. Kilauea has an eloquence unsurpassed. Red hot in its expressions it will always command respect.

Mr & Mrs Lee Goodale.

Dec 11-1915 This is our first visit. Most beautiful sight have ever seen. Hope to come again.
Mr. & Mrs. George White
Bucyrus, Ohio.

December 10, 1915.

A seething churning restless mass of rock,
Heaving and writhing in a constant tide;
Flame-rough rivers flowing ever black.
Flames of light transmuted into waves;
Innumerable glowing pools of heat
Where glowing fountains rise but to return
Into illimitable depths; the whole
Surmounted by a rosy cloud of mist
That now reveals and now conceals pure light;
A crescent moon gleaming through vaporous night:
There and a sense of awe that passes words
Make up my Kilauea-memory.

- Muriel Tildsley. Brooklyn, N.Y.

May 17, 1916 W. S. O'Brien and W. F. O'Brien of Marysville, California, and J. B. Shipley, Pittsburg, Pa, spent the day in viewing the wonderfully interesting sights in the crater. Having long had their suspicions as to any such place as the Hell spoken of in the Good Book, they peered into the depths of the hottest hole in the big pit and thereafter resolved to be more particular in their religious duties. While there may be no such place as Dante's Inferno, nevertheless if one cannot be very good he should at least be very careful and not step into the abysmal depths.

I have seen sights and wonders but never have I witnessed such a phenomena as this — Yes! Madame Pele's charms—

Orpha Finney
Hilo

May 29 - 1914

Ki-laau-a - "fire-crater" was the name of the god of the crater of Kilauea before Pele came to the Hawn Islands. He was frightened when Pele landed at Kapoho Puna and fled - "He was lost - entirely lost" according to the Hawn tradition.

Ki-lau-ea - is of obscure meaning. "Ki" refers to the "ti" plant. "Lau" means "leaf". "Ea" in the old Hawaiian meant "life," "living" "the motion showing life" etc.

Hale-mau-mau - "house of ferns" was the name given long ago to a place back of the Volcano House. Hale mau mau - "continuing house" is a modern name given to the "Pit of Fire".

"Ka-lua-Pele" (Ka-lua-Pele) "the pit of Pele" was the name used in almost all the old traditions as the name of the place of active fire. Pele however was used as a name for all pits of fire and eruptions in action i.e. flowing lava.

Many of the names of places surrounding the crater Kilauea were names of chiefs coming either with Lohiau or Kahawali. Both of these were Kauai chiefs whose friends followed their disastrous adventures with the fire goddess.

This is a hastily written note and has much legendary interest back of it.

W D Westervelt

Quite true that many Hawaiian names - of places particularly - are of obscure and doubtful origin. Rev T. Coan said that "Hale-mau-mau" meant "house of everlasting fire" - doubtless quite in accord with some systems of theology: but also - it is not "Hale mau mau" but "Hale mau mau" or the fern (mau mau) house. Sis Pele's fern house. The name may have arisen from the various twisted forms assumed frequently by cooling pahoehoe, of which there are endless samples on the floor of Kilauea. Hence "mau mau".

So too "Moku-aweoweo." "Moku" means a place - cut off (moku) as an island. The country is full of "mokus" or places separate - cut off from surrounding parts: generally rather of a small but frequently of a few acres only. Sometimes of several miles in extent. "Aweoweo" is the name of a mountain grass. Some of the twisted and curling lavas up there may have resembled that grass - as "Mokuaweoweo" may have been so named because it is a place

May 29 16 of the "inverno," so called by the ancient Hawaiians. It is also true that "Moku a reowo" may refer to the place of crawling flames" It is possible to make this meaning of the word.

I must not claim any originality for these ideas. I got them wholly from discussions with old Hawaiians many years ago & conversations with such men as the three Hitchcock brothers, Prof W.D. Alexander Rev L. Lyons, C.J. Lyons &c &c.

Mauna Loa's Great Lava Flow Caught in Fir

Molten Stream and Burning Forest, With Visitors Safely Gathering Specime

—Photos Above by Dr. Y. E. Colville of Hilo.

The great lava flow down Mauna Loa is pictured above. Top photo shows lower end of flow as it swept slowly but resistlessly down the slope, about 1½ miles above Honomalina ranch-house. Lower photos show lava coming down from three miles to a mile and a half above the ranch house, and the forest set on fire by the molten rock. As proved above, it is perfectly easy and safe for visitors to walk up to the flow and secure specimens of the rock. The photos give a good idea of the depth of rock at the lower end of the flow. These photographs were taken early this week, beween 8 and 9:30 in the morning, by Dr. Y. E. Colville of Hilo, who went to the flow, climbed all around and in many places over it, and obtained the splendid pictures which the Star-Bulletin is enabled to present herewith.

Though thousands of visitors have gone to the flows, only three minor accidents have occurred.

Hawaii Volcanoes National Park Service

1916

MADAME PELE AS A BALLET DANCER—This extraordinary picture of the eruption of Mauna Loa was taken when the activity of the smoke blast was at its height, at half-past eight on Friday morning, by H. O. Wood, observer for the Whitney Seismology Laboratory. Examination of the picture will show the ballet dancer effect, with skirts outflown above shapely knees and with streaming hair wrapping the upper portion of the figure about.

FIFTH FLOW BURNS ITS WAY DOWN KAU SLOPE OF MAUNA LOA---MOST ACTIVE OF ALL

Plenty Yet For Sightseers To Wonder Over, Although Four First Flows Are At Standstill Again

(By Mutual Wireless).

HILO, Hawaii, May 27. — Prof. Thomas A. Jaggar, Jr., of the Kilauea Volcano Observatory, who has been watching closely the Mauna Loa eruption and the flows down its slopes the past week, reports this morning from West Hawaii that evcrything there is quieting down.

Several new flows are moving slowly down the mountain slopes, he says, particularly those in the Kahuku section of Kau district. The source of the eruption has moved further down the hillside and much activity is developing there.

Andrew Farrell of The Advertiser, who has been spending the past few days in Kau and around the country assailed by the eruption and its many flows, telephoned from Papa, South Kona, today.

"The Honomalino flow stopped entirely on Monday, after destroying perhaps a thousand acres of the best pasture lands on the McWayne Ranch. It is feared that many cattle were caught by the flow and destroyed. The Kahuku flow stopped on Thursday.

"There is still some slight action evidenced on the mountain side. Magnificent and century-old koa trees, fringing the shores of the Kahuku river of fire and molten rock are still burning. On the East side on Friday the flow was fast.

"The Kahuku Ranch water system as well as that of the Waiohinu homesteads, both of which were believed to have been in danger, are undamaged.

"The crater on Mauna Loa is active and great fountains are playing continuously, the sight, particularly at night, being a magnificent one. The crater is forming minor cones, from which lava is pouring. A resumption of the outpouring of lava into streams down the mountain side is expected hourly."

LITTLE ACTIVITY HIGH UP

Another wireless message received in Honolulu from Hilo yesterday said:

"Lewis S. Augnst, superintendent of the Hawaii Telephone Company, who has just returned here from the scene of the lava flows down the slopes of Mauna Loa, says that these have absolutely stopped. There is little activity higher up on the mountain, but the sight continues a beautiful one.

"Professor Jaggar was at the Honomalino flow yesterday and reports that he will not go higher up on the mountain until all is quiet again, when he will make an accurate survey of the situation. Since the outbreak at least twenty persons have been to the actual source of activity, while thousands have visited the various flows in Kau and Kona."

(Mail Special to The Advertiser.)

HILO, May 25.—The intense interest which has been created by reason of the outbreak of lava from the slopes of Mauna Loa, presumably at Puu o Keokeo, though this report is unsubstantiated as yet, was added to today by the confirmed statement that another (the fifth) flow had broken out on the extreme east of Puu o Keokeo and that this stream of molten lava was showing far greater activity than any of the others and bids fair to reach the road somewhere in the vicinity of Kahuku Ranch gate within the next twenty-four hours. This assumption is based on the speed so far maintained by this flow and enunciated from R. T. Moses, who emphatically stated to the representative of The Advertiser that it was his belief that the flow would continue long enough to reach the road.

At Puu o Keokeo there is great activity. Robert McWayne reached sufficiently close to the head of the eruption to see the actual pit of fire. He states there are a dozen or more small craters adjacent to the central one and that tremendous activity is shown in each, fountains of lava playing continuously and throwing huge boulders upward incessantly.

Plenty Yet To See

Latest reports state that all streams except the one headed towards Kahuku have quieted down, but still there is plenty for the sight seer to witness. The active stream is between the flows of 1887 and 1868 and at last reports was about four and a half to five miles from the road, slowly making its way down the mountainside.

The wireless messages already published in The Advertiser cover the situation fully. Some of the early reports which were received in Hilo with all credence were later refuted, however, but on the whole the news as reported have been borne out by facts.

Scientists and Reporter

Many parties left Hilo today, intent upon reaching the source of the outbreak, one in particular being that composed of Professor Wm. Ahmsin Bryan, of the College of Hawaii; Chas. Noyes Forbes, Bishop Museum; Doctor Barnes, of Honolulu, and Andrew Farrell, of The Advertiser. This party is fully equipped and determined to make its way to the erupting crater. As Professor Bryan remarked just before leaving Hilo, he had "his cane knife and disposition" with him, which was sufficient to carry him through.

R. T. Moses and Lieut. Bonesteel returned this afternoon from visiting the latest flow, that coming down the mountain side between the flows of 1887 and 1868, and Mr. Moses reports that this stream is far greater in intensity than either of the others. That he is competent to express an opinion may be gauged from the fact that he was on his way back from the western flow (that previously referred to as the Papa flow) when he heard the news which induced him to turn off at the Kahuku Ranch gate and make the attempt to reach this particular flow.

The two set out on horseback, accompanied by Charlie Meinecke, a native guide, and they were able to reach the glowing torrent after traveling a matter of six and a half miles. At that time they were approximately five and a half miles from the road in a direct line. On the way they met Professor Jaggar and Mr. Bredenburg, who were just returning from this flow, being apparently the first to reach it.

On approaching this stream of lava Moses and Bonesteel attempted to get close enough to poke a stick into the flowing mass, but the heat was too intense and they were not able to get closer than ten feet. The stream was at that point about two hundred feet wide and was flowing at the rate of about twenty feet a minute. It was traversing along the route of an old flow and to get a better view Moses and Bonesteel climbed a ridge of lava nearby and were able to look well up the stream, which widened out to about six or seven hundred feet higher up. Some little distance lower down from the point on which these two men stood was a narrow forest, about three hundred yards wide. The lava approached this forest slowly but finally it reached the wooded dell.

"Talk about your crashing noise," said Mr. Moses, in depicting this scene. "It was terrible! What with the trees falling so close to us, the lava bubbling and the stones rolling. It was frightful. We had our horses with us, but the lava was so close and it seemed as though it might cut round from the forest and hem us in, so we beat it below, as we thought it might cut off the trail. After we got to a pretty safe distance we tied the horses up and came back again. The trees were still falling and just below was a steep place, down which the lava rushed carrying everything away in its path.

"We watched it for about two hours, during which time it covered about a mile; sometimes going very fast, at others slowing down, according to the nature of the country over which it passed.

"When we left, the lava was between four and a half or five miles from the road, and if the stream continues to travel at the same average rate it has already shown, it should reach the road by tomorrow afternoon."

Apparently this is the outbreak which was reported in the first place on Monday but was too far up the mountain side to be visible by the hosts of people who made the trip from Hilo on Monday evening.

First Were Too Early

The first news of the eruption was received in Hilo early on the morning of the twenty-second and several parties set out at once, anxious to be on the scene before the lava had ceased to flow. But in this case it was not the early bird which caught the worm. Rather the reverse. The reports of the lava having crossed the government road were quickly refuted. Nothing of the kind had happened and the disproving of this rumor, coupled with the fact that from the glow in the heavens it seemed that the outbreak was miles away in very rough country, was sufficient to stay the early ones before they had crossed Kau and had reached Kona.

There was no denial of the report that there were three flows, but the lava seemed to be so far off the road as to be inaccessible to the ordinary visitor. In consequence of this, the hundreds of people who had left Hilo during the afternoon, in the early evening and late in the night (for some left town close on to ten o'clock) were met by returning machines, the occupants of which all reported the same story. "No signs of lava; outbreak way up on the mountain side, too far off to reach."

The road was lined with machines and the occupants were well repaid for their trip by the beautiful scenes presented by the reflection in the sky. Long before the Volcano House was reached the glow could be seen, directly in line and behind Kilauea crater. Then the whole of the sky for a large area was lit up by the flare, just as is presented by a tropical summer sunset.

Kilauea Spectacular

Kilauea was active, far more so than usual, but in the face of this more interesting event, few people had time or inclination to visit the crater of Kilauea. But in this they erred, for the side trip to Kilauea Crater was one well worth taking in, especially in view of the fact that the time thus spent was very little, indeed. Kilauea's pool of fire was partially covered with black lava, here and there streaked with veins of red, intersected at intervals with boiling fountains, of which no less than thirteen were counted at the same time by the writer. On the walls at the north-eastern side the volumes of lava slowly surged, in two places dashing with greater force and sending up showers of brilliant globules of fiery lava. From the pit a roll of smoke slowly ascended, dimming the reflection from this cauldron of fire, and reducing its effect as compared with the greater reflection from the outbreak on the other side of Mauna Loa.

Women Reach the Flow

From the Volcano House onwards the glare increased until Kahuku Ranch house was reached, from which point about the best view of the reflection could be seen, according to many different parties, some of which had pressed on for ten and fifteen miles further, without additional reward. However, several parties did push right through, one of them being composed of Geo. A. Cool, and Mr. and Mrs. A. L. Mackaye, who pluckily made a night of it in the woods and then went on in the early morning, finally reaching the flow above Honomalino about six on Tuesday morning. At that time a particularly brilliant scene was presented to the party. The lava stream was moving fast and the entire vicinity was lighted up by the intense glare which rose from the fiery mass. The members of the party were able to approach right up to the edge of the stream without danger and were rewarded for their efforts by the extreme fascination which the picture exercised on them, and by photographs taken.

Among others who visited this flow early were Demosthenes Lycurgus, of the Volcano House, Mrs. Carlsmith and family, Rev. W. D. Westervelt, Doctor and Mrs. Colville, Mrs. E. S. Goodhue and family, from Kona; Robert McWayne, Eddie Fernandez, Sam K. Kauhane, J. W. Hardy, Thornton Hardy and Supervisor Cabrinha.

Hilo Was Excited

Naturally the greatest excitement prevailed throughout Hilo and the surrounding districts when the reports of actual lava flowing were received as numerous parties were at once formed to visit the flows. All kinds and conditions of machines were pressed into service, from the spacious seven seaters privately owned to the jitneybuses plying for hire in Hilo streets. Many owners of machines preferred to hire autos rather than use their own vehicles, though the roads were generally in such good condition that it was somewhat surprising to find this to be the case.

Of the many machines which made the trip very few met with serious mishaps. Of course, there were innumerable minor breakdowns; many autos were stalled through the lack of foresight on the part of drivers who had left town without a sufficient supply of gasoline or oil, or with faulty inner tubes or tires, which gave out in the most out-of-the-way places, necessitating the borrowing of extra parts, oil and such from the more thoughtful of drivers or owners. And let it be here said that a more courteous crowd of drivers and owners one could not expect to meet in any community. As an instance it may be mentioned that in one case, the owner of a machine who had left Hilo with a full equipment of extras and tools, returned to town sans everything except the oil in his tank, the tires on his wheels and the machine as it stood. He had taken all chances in lending parts but came through without mishap.

Some Narrow Escapes

One or two machines capsized, but fortunately there were no serious injuries sustained by passengers or drivers. Others met with a series of trifling but annoying delays.

There were several miraculous escapes, however. In one case a Buick car, driven by Honda, a Japanese who has the reputation of being one of the most careful of Hilo drivers, ran into a stump and precipitated one of the passengers on to the road, fortunately without serious injuries being sustained. In the car were Mr. and Mrs. J. T. Lewis, Mr. Branchilde and Miss Eleonore Thrum. The party had gone round on Monday evening as far as Papa, but were too early to see anything except the glow. On the way back, just as they were approaching Waiohinu, the driver apparently dozed for a second and turned the car at right angles almost, but was immediately awakened by Mr. Lewis who grasped his arm. The driver swung the car back again towards the opposite side of the road, where there was a small stump into which the car crashed. Mrs. Lewis was sitting on the right hand side of the back seat and was thrown against the door which flew open and precipitated her on to the stony road. She was badly shaken and considerably bruised, but fortunately she escaped with no other injuries.

Two Machines Overturned

In another case, E. W. Terry was chaperoning two young ladies, Miss Potter and Miss Ewaliko, and when about 15-miles, Olaa, the driver ran over the bank. The machine turned over on to its side and remained quivering on the very edge of a large hole. Fortunately, the passengers were able to crawl out and not one of the three received any injury except the shock coincident to such an experience.

Another very narrow escape was that of Mr. and Mrs. G. W. Tobler, of the John Bollman Co., San Francisco. This accident happened a few miles on the Kona side of Waiohinu, the machine turning completely over in going off the road and pinning both occupants beneath. On the back of the machine was a large sample box, which prevented the weight of the automobile from pressing upon them, otherwise it is almost certain both would have been killed. However, beyond a few bruises and severe shock both escaped, practically unhurt and were able to make their way to Waiohinu on foot.

Volcano Host's Hike

When Demosthenes Lycurgus returned to the Vocano House on Wednesday morning, he reported that to get to the Papa flow he had been obliged to walk for fifty minutes through guava bushes and over Kona rocks. The going was rough but his party felt well repaid by gaining the side of the flowing stream of fire. The members of the Beckley family, who were also there at the time, made coin specimens from the red hot lava, while others of his party brought back clinkers as tokens of the occasion. The flow at that time was about one and a half miles above Robert McWayne's house. The lava at that time was moving very slowly; according to Professor Wood it was not exceeding five to ten feet per day.

Several hundred people assembled on Tuesday in close proximity to the flow at Papa, nearly all the Kona residents, but also quite a number from Hilo who had continued on, despite the conflicting reports which had been circulated overnight. The three flows were as

previously reported, one towards Waiohinu, one towards Kau, that is believed to have stopped, and the third towards Papa, passing between the school house and Robert McWayne's house.

"The lava is moving slowly through the woods," reported Dr. E. S. Goodhue, "seemingly to have checked up slightly, but is gradually approaching the road. As far as is known the flow has kept clear of all houses, though Robert McWayne's place is threatened. The Honomalino Cattle Ranch has been devastated in places, some of the best of the pasture lands being destroyed. Fortunately, no cattle have been caught in the flow, though the whereabouts of a considerable number is still in doubt."

While at the present time there is no apparent danger of the flows heading towards Waiohinu and Kau reaching the road, there is a possibility that they will do so, in which case visitors from Honolulu to Hilo would be blocked from the larger flow into Kona, as well as being exposed to the danger of being cut off if they attempted to get through.

It is expected that the flow will last several days, if not longer, and it is certainly worth anyone's while to visit the island to witness this spectacle.

BIG ISLAND WOMEN FIRST OF FAIR SEX TO SEE LAVA FONTS

They Climb Majestic Mauna Loa To Craters From Which Molten Rock Pours

PORTION OF JOURNEY IS MADE HORSEBACK

Members of Party Are Rewarded By Magnificent View of Volcanic Activity

(Mail Special to the Advertiser)

HILO, May 29.—After witnessing one of the "finest sights imaginable" and claiming the distinction of having escorted the first women to the actual fount of the Mauna Loa eruption, which has sent five streams of lava coursing down the mountainside, R. T. Moses returned to town this morning. In the party which accompanied Mr. Moses were Mrs. Moses, Mr. and Mrs. Spaulding of Honomu, Mrs. Ruddle, Miss Tulloch and Miss Catherine O'Reilly of Hilo, all of whom were under the guidance of Manager Vredenburg of Kahuku Ranch, after their arrival at Kahuku early on Saturday morning.

Party Goes Well Equipped

"It was nine o'clock on Friday evening," said Mr. Moses, this afternoon, "when I received word from Mr. Vredenburg that another flow had broken out and was headed towards Kahuku, and, as the women folk were very anxious to see something of the actual flow, having been left behind when I made the previous trip with Lieutenant Bonesteel, we made our arrangements without loss of time, turned in for a few hours' sleep and by shortly after three a. m. on Saturday we were in the machine headed for Kahuku. We took the precaution to take sufficient food with us and were, therefore able to make the trip in comparative comfort. When I say 'comfort,' I do not mean we had an easy time throughout, but we were not shy of anything in the way of provisions and equipment.

Cover First Lap of Journey

"By nine-thirty we were ready for the ascent, having secured saddle horses and having been met by Mr. Vredenburg, who had just returned the previous day from visiting the source of the outbreak. We had a ride for about fifteen miles before us, and that did not take us to the end of our journey. When we tied up the horses after the long ride it was about three o'clock in the afternoon and we were still several miles short of our destination. We could have continued on then and seen the craters but it would have been a matter of impossibility for us to have made the trip back over the a-a that night and none of us fancied the prospect of remaining all night so close to the craters. We were then at the end of the second Kahuku flow, which had only run down the hill about three miles. It was then quiet, but there was any amount of activity a little distance from the end of the flow, though there were no signs of it breaking out again and continuing down. As far as that particular flow was concerned it seemed quite dead; that is, comparatively speaking.

Spend Night In Koa Forest

"Having decided that it was too late to continue the ascent further that night we looked about for a place to spend the night and found, about six hundred yards lower down, a very cosy nook in the koa forest where we were sheltered from the wind. It was not at all cold, but we made a large bonfire more for light and general cheerfulness than for anything else. As far as warmth was concerned there was any amount close to the flow, but the sulphur fumes were too strong for comfort, even though the flow was not active. Where we camped we were but a short distance from the first Kahuku flow, I should say about one hundred and fifty yards away.

"None of our party felt inclined to slumber after day had broken; in fact, the first signs of day-breaking found us all astir ready to press on. Even though we were so close to the craters it took us a matter of three hours to reach the Puu o Keokeo knoll, which is only a couple of hundred feet high from where we finally halted.

Look Down Into Crater

"From this point we could look right down into the fountaining crater. The main pit is only about sixty to seventy feet wide; certainly not more than one hundred feet. It was a spectacular sight. Huge fountains of molten lava, shooting hundreds of feet into the air, great boulders tossed about and splashing back into the swirling mass of fire. It was magnificent; you wouldn't believe it could be so fine.

"There are three or four active cones there; we saw three of them. They are on a ridge which does not seem to be more than fifty yards wide and this ridge runs right up the mountain. It seemed to me that it was simply a toss-up when the lava overflowed whether the course of the streams would be towards Kona or Kau; the ridge is so narrow. The second Kahuku flow went right along this ridge for quite a way.

(Continued on Page 10)

(Concluded From Page 7)

"The fountaining of the large pit, with the resultant splashing of the lava against its sides, is building up a great cone, which is growing higher all the time. From what I saw in my two trips however, I would say that it looks very much like as though the outbreak had got over the worst; it seemed to have shot its bolt.

"There is one thing we were glad to know and that is that our party was the first containing women to reach the actual source of the eruption. Of course, plenty of other parties have reached there by this time, but no women had been it before we got there. Just as we were about to leave, George Willfong, Inspector Cohen of the Hilo federal building, and Quinn and Marshall of the breakwater came up. But they were a tired-looking bunch. They had left their horses further down the hill than we did and had had a very rough walk up. It is surely through a God-forsaken country and they had to walk at least five miles over a-a. You have to walk over a-a to appreciate just what it is like."

Many Other Parties Return

A great many other parties returned to town late last night and early this morning, having spent the week end in the vicinity of the various flows or up at the source.

Matters are quiet to-day. Reports from Kahuku and elsewhere in the vicinity of the craters state that the reflection is dying down and that generally everything is quiescent. However, that the end is not yet in sight is the report which emanates from Professor Jaggar.

Hawai'i Volcanoes National Park Service
Hawai'i Volcanoes National Park

REMARKABLE DAY AT PIT

A. N. Campbell, vice-president and director of the Hawaii Consolidated Railroad Company, who is on the Big Island looking into the affairs of the concern, wirelessed to Robert W. Shingle yesterday as follows:

"Spent remarkable day at Halemaumau. The lake fell 300 feet. Tremendous fall of all the benches. Large lake 600 feet down still boiling. Avalanches continue. Jaggar says lake will probably rise again. This is the most wonderful day at Kilauea since 1894. The spectacular show still continues."

Other wirelesses received in the city yesterday were as follows:

"'Old Faithful' is now 600 feet down and still trying to do something.

"The ledges have fallen into the Kilauea crater but the outside rim has stood the almost incessant shakings. The pit walls are now sloping and thousands of tons of old lava are being slowly boiled up again.

"This is declared to be the most spectacular day in the history of the volcano of Kilauea since 1894.

"Late yesterday the 'bottom fell out of Kilauea' as enthralled spectators expressed it and the lava sank 300 feet in four hours.

"The earthquakes are continuing, the sides of the crater crushing down to the bottom of the pit, falling in great masses into the seething sea below the rim. There is much excitement on the Big Island."

Advertiser June 7

Bulletin June 6

CRATER FIRES ARE GIVING GREATEST SHOW SINCE '94

(Star-Bulletin by Mutual Wireless.)

HILO, Hawaii, June 6.—"Old Faithful" is now 600 feet down and still trying to do something.

The ledges have fallen into the Kilauea crater but the outside rim has stood the almost incessant shakings. The pit walls are now sloping and thousands of tons of old lava are being slowly boiled up again.

(Star-Bulletin by Mutual Wireless)

HILO, Hawaii, June 6.—This is declared to be the most spectacular day in the history of the volcano of Kilauea since 1894.

Late yesterday the "bottom fell out of Kilauea" as enthralled spectators expressed it and the lava sank 300 feet in four hours.

The earthquakes are continuing, the sides of the crater crushing down to the bottom of the pit, falling in great masses into the seething sea below the rim. There is much excitement on the Big Island.

Wireless advices from A. N. Campbell, vice-president and a director of the Hilo Railroad, who is on Hawaii looking after Hilo Railroad affairs, tell of a magnificent display at Kilauea.

"Spent remarkable day at Halemaumau," he wirelessed to R. W. Shingle. "Lake fell 300 feet. Tremendous fall of all the benches. Large lake 600 feet down still boiling. Avalanches continue. Jaggar says lake will probably rise again. This is the most wonderful day since 1894. The spectacular show still continues."

June 25-16

Sherman Said War Was Hell.
And so did those who fell.
It is evident Sherman never saw Kilauea Pit.
If he had he would have forgotten war and had a fit.

Earth's Living Word — Richard Realff.

O Earth! Thou hast not any wind that blows
Which is not music,
Every weed of thine, pressed nightly, flows
In aromatic wine;
And every brown bird that doth sing
And every humble hedgerow flower that grows,
Hath something greater than itself, and holds
A living word to every living thing,
Albeit it holds the message unawares
All sights and sounds have something
Which is not of them.
A spirit broods amid the grass,
Vague outlines of the Everlasting Thought
Lie in the melting shadows as they pass,
And touch of an Eternal Presence thrills
The fringes of the sunsets and the hills.

July 3, 1916 Pele at day and at night,
Here to stay and display her might.
I must hele, so good bye Pele!

July 8, 1916 Arrived at the volcano about 3 PM and saw the sight of a lifetime. Heavy smoke and plenty of fire during the afternoon. Stayed until 8 PM and enjoyed every minute gazing at the flow of molten lava which increased in volume after sunset. As the darkness surrounded the walls of the volcano were brought into full view and the sight of people gazing down at the fire below, some of them with a look of fear showing in their faces, demonstrated the impression they received - It can recall many a sunset over the Golden Gate but the coloring, even tonight over the sea of molten lava and spouting cones surpassed anything I have ever seen before and nature's furnace leaves an impression never to be forgotten. It's something everyone must see for themselves to appreciate to the fullest extent.

Oct. 20, 1916.

Measurements on the 19th October reveal the extraordinary fact that during the preceding six days the lake rose 30 feet without overflowing at all, the great ledges rising with it. The present depression of the lake surface is 243 feet below the south rim of the pit. The large northern crag mass in the lake is sixty feet above the lava, and the ledges northeast and southwest are forty feet above the lava. The lake is 775 feet long in a direction NNW–SSE and 625 feet wide at the widest part. The floor of the pit is 1125 feet across. The inner bench immediately over the lake is 14 feet high.

This rising of the ledges does not mean that they floated up, but that lava wedged in below them and solidified, intruding among them, breaking and lifting them

November Twenty-Third
Nineteen Sixteen.

It is with extreme reluctance and regret that I leave the old Volcano House, with its historic associations and cordial, healthy atmosphere; but mostly do I regret that last evening I had to take my last view of Halemaumau. And magnificent does that spectacle make the little boils and squibbles of mankind appear! Here we see Nature in her never ceasing task of creation, exposing to man, in this small "Fire-Pit" something of the tasks she has been steadily accomplishing, in the up-building of the earth, since the beginning of Time.

Of my impressions of the Fire-Pit, I found many with the time and conditions under which it is viewed it. Though intensely interesting in the day-time, at night it grips, entices, threatens, lures, fascinates one until time slips by unnoticed.

Never shall I forget that surging, swirling, bubbling, tossing, boiling, hurling, roaring, flashing lake of liquid fire!!! (glass I'm told).

Though this lake is the paramount attraction of this region, by no means should the visitor miss seeing the Sulphur Banks, close by; the Tree Moulds; the Lava Tubes; nor fail to take the Twelve Crater Trip, riding through Ito the very last one, which, I found, the most dramatic of the chain; nor should one miss a tramp in the bracing morning air of this place, from the Volcano House to Halemaumau.

A great teacher once said: "Go and prepare men for the great messages which I will bring," so this morning, which resembles a Riley-June-Day, I leave in company with a party of friends, and hope by my visit here to be able to prepare others for the great messages which even one brief look at Halemaumau's dramatic, awe-inspiring pictures will record indelibly on their minds as it has on mine.

Mildred Le Clemens.

Berkeley, California.

Hawai'i Volcanoes National Park Service

1916
Dec. 3
Sunday.

My impressions of "Halemaumau"
as it appeared on the evening of
Dec. 3, 1916. Philip L. McEuen, of Honolulu.

In company with a large company of tourist from the "Great Northern", I reached the burning lake of "Halemaumau" at sunset.

The present spectacular grandeur of "Halemaumau" (House of Everlasting Fire) deserves more publicity than it has received. After viewing the pit four times at various intervals of years from 1897, the present spectacle is incomparably grander than anything before enjoyed. It has been an awe inspiring phenomenon, even when nothing was to be seen, except clouds of steam issuing from a bottomless pit in the black flow of Kilauea, but today it is an awful spectacle in the true sense of the word.

The pit is now about twelve hundred feet in diameter though apparently not quite so regular a circle as heretofore when six hundred feet was its diameter.

The molten lake boils about one hundred and fifty feet below the observer, who is guided to the stone shelter on the north edge of the perpendicular walls. This is nearest to the automobile road and the best point to view the present lake, because Nature has set the scene with a view to this point of view. observation.

Inside the perpendicular walls of this terrible chasm a great headland juts out from the bottom of the opposite bank halfway across the pit into the lake of pink and seal brown molten rock. This point divides the lake into two parts, connected at the point of the cape by a narrow straight of slowly flowing lava, thus dividing the once circular lake into a figure 8. These lakes extend East and West. The observer stands about opposite the middle of the figure. A jagged steep buttress of lava on his left cuts off from view the extreme East edge of the East lake.

Immediately beneath the observer, perhaps one hundred feet below, and about fifty feet above the boiling surface, extends a black shelf of seamed and cracked lava, rising as it approaches

the edge of the lake; and breaking into a jagged outline against the surface of the lake. The broken edge of this shore line curves away to the right and West, forming the near shore of the West lake. It is connected to the shore for some distance, and then continues, as a narrow knife-edge ridge around to the West end of that lake. It looks as if the ridges of a submerged range of hills appeared above the lake. Between this ridge and the great walls, a quiet bayou of lava has formed, with no sign of motion. Thus in addition to the two lakes, hour-glass in shape, this quiet bay appears, quiet and peaceful in its grand way, in comparison with the fierce activity of the two lakes.

On the south edge of the East lake are more rock bound coasts, to the left of the great headland opposite. Even while the awe-struck party watches the many pink fountains of lava, a cliff opposite breaks off from the South bank of the great wall and with frightful booming forms another rocky island in the East lake. The lake heaves, seethes, and dashes great breakers of pink waves against the irregular walls. Soon, all cools and blackens over with a seal brown coating of rock-ice in comparative quiet. We have been looking at the East lake only.

The West lake seems jealous of the stint exhibited by the East lake of the two ring show. It starts seven spouting fountains at one time and cracks in many directions with pink lines of cleavage in its brown shining surface. Then, as if to make a more decided hit, it dashes great breakers of lava over the submerged ridge into the quiet back bay. Pink cascades of lava fall both ways from this dark ridge, as the breaker recedes to dash again with less fury. The action is the same as that of the sea or any similar coast.

Now, the East lake bids for attention. The brown surface with a satin sheen is moving in a marked current away from the isthmus; three or four great swells surge slowly toward the East wall pit, like ocean swells on a calm sea. Suddenly great lines of pink cracks appear in so many directions, and great fountain begins to play

in the middle, moving slowly with the current Eastward and out of sight behind a great buttress on the side of the pit to the ~~deeft~~.

There is a great hissing of steam, and pillars and clouds of steam, like those of steam fire works of the P.P.I. Exposition, issue from the submerged ridge in the West lake, draw a curtain over the scene. The whole act will be repeated in a few moments, for the benefit of the new arrivals. Soon the late afternoon changes to a brief twilight and then darkness changes the whole scene, to one more frightful, than the daylight show.

Night scenes. The brown lava of the surface changes into inky blackness, broken by irregular cracks of white light. The jagged foreground of the near shore is silhouetted against the white glow of the swirling rosy vapors which half reveal the lava cracks and spouting fountains backed by the black headland looming up across the lakes. There is light sufficient to give the scene a mysterious stagey effect, as of some painted back scene executed by a master hand.

The mists clear away. Five or seven fountains begin to boil and spout in the West lake and one in the East lake in dazzling white lights, incandescent headlands loom against the headland opposite, and cascades of brilliant lights dash back over its rugged sides into the smooth inky blackness of the lake crust, which a moment since was incandescent.

Thus is sketched the sight only, which has its marked effect on the silent company of wanderers from many lands, who come laughing to the crater's brink and straightway speak in subdued tones with awestruck faces. The senses of sight, hearing and smell all assist in overawing the hundred spectators.

Sulphur fumes are in the air, hot steam is borne on the chilly air by the trade winds from the many cracks in the old lava behind the kilauea ~~thing~~. No sounds are heard but the staccato coughing, caused by the fumes, the rumble of the playing fountains, the roar of

Hawaii Volcanoes National Park Service

the breakers, mingled with the hiss of steam.
One hears the rumble of a sugar mill in full operation and the exhaust steam of an impatient passenger engine, waiting at the depot, mingled with the boom of breakers on a rocky coast after a storm.

These are only suggestions of what to expect. No mortal has sufficient experience to imagine the scene. It must be experienced.

I am prepared to go where many prophets say we are going. Hell was never like this.

THE VOLCANO OF KILAUUEA

I'm not averse to rhyming verse: beats prosy prose, as anyone knows; and when one has a story to tell, let him tell it in rhyme, whether ill or well.

Last month I went to Kilauea,
The lake of boiling lava—Puritan's Hell,
And if I told the truth I'd say a
Lot about "Old Satan" and the sulphur smell,
Fire and brimstone, death and damnation—
Fate of the wicked since the creation.
I'd tell how I pondered, as lava thundered,
If old Cotton Mather, in my place, would see
A Salem witch down there shov'ling pitch;
And also wondered what would happen to me.
Would the Puritan preacher have seen confirmation
Of his preaching and teaching "hell-fire-damnation?
Would he fancy the roaring the howls of the "damned,"
As Satan with pitchfork their guilty souls rammed?
Fountains of fire shot up toward the sky,
The smell of the sulphur brought tears to my eye,
And the roar of the lava, as it beat 'gainst the shore,
Was like that of Old Ocean, when torn to the core,
And where 'twas not boiling, fiery cracks spread
In fantastic shapes o'er the top of the bed.
As imagination can frequently see,
In the clouds, shapes of men and fish of the sea,
So I could see, pictured in lines of red,
Images of living things—and once a head
Like that of well-known king appeared, but soon had flown,
When I recalled he'd made a hell peculiarly his own.
Stalactites of fire hung from projecting shelf;
Making an ideal parlor for some satanic elf.
And then after dark, when the cracks spread apart,
And you knew bubbling fountain would disclose Pele's heart,
The "skin" near the cracks looked like streaks of molasses
When pulled, after boiling, by laddies and lassies.
You know what I mean, if you've made 'lasses candy,
And can guess that this part, at least, looked quite "dandy."
But the rest of it? It was great—and all that.
"The world in the making" describes it quite pat.
A glimpse into the workshop of Nature, I thought;
The insignificance of man the lesson it taught.
Go, mend thy ways. Prepare to meet thy God,
Lest thy soul perish with the burning sod.
For years I lived in —— (you know it well),
And needed not this sight to prove there was a hell;
But still 'tis well to have the proof repeated,
Lest when you die your soul get "over-heated."
"Nature's Workshop," "Madame Pele," call it what you will;
But as for me—and you—'twill be Hell, still.

What have war
and the Volcano in common ?
Both are like h...ll

J. B. Flatow
San Francisco
Dec 15 1916

Dec 17. 1916.

Arrived here after a pleasant week's tour around the Island, with good weather and good luck most of the way. Found Halemaumau greatly changed since our last visit, July 1915, and immensely more interesting. Then the lake was 500 feet down; now it is but 140; while the area of liquid lava must be ten times greater. Each visit here seems more interesting than the last.

Wade Warren Thayer. (11th visit)

THE PACIFIC COMMERCIAL ADVERTISER, HONOLULU, THURSDAY, DECEMBER 21, 1916.

WONDERFUL SIGHT AT VOLCANO NOW

"Greatest Spectacle of the Age" Is Description of Observer, Who Is Most Enthusiastic

KILAUEA, December 18—During the past seven days the lava lake of Halemaumau has been exceedingly active, and spectators have been treated to one of the greatest displays in its recorded history. The rapid upward movement of the lake and surrounding benches may be said to have ceased for the present, for, although the usual phases of alternate rising and sinking have been regularly passed through, the net rise of the lake surface has amounted to only two feet for the week.

It must not be imagined, however, that this is any indication of a falling off in the general activity. On the contrary, it means that the molten lava has been spreading out round the various crags and masses, and that by the welling of the lava into cracks and depressions a leveling tendency has developed which is gradually compensating the recent tilting of the shore benches caused by subterranean pressure. The reader who has visited the Volcano during the present period of rising of the lava column will at once understand the significance of this leveling motion and the difference the filling in of the hollows and cracks to a common level will make in the general appearance of the inside of the great pit.

Crashing Rock Slides

The outstanding features of the period now under review are the many fresh overflows during the rising spells, the building of driblet cones, and immense spatter domes upon the edge of the lake, and the many indications of enormous quantities of gas confined under high pressure in many places under the surface area. One heavy slide has taken place from the great central crag mass, which rears its crest seventy-eight feet above the lake. This broken section fell into the lake with a tremendous roar on the afternoon of the eleventh, causing a great outburst of fountaining and general ebullition in various parts of the lake. These great rockfalls are always spectacular, occasionally sending a high wave across the lake to burst in a vast shower of fiery spray over the surrounding banks, and almost invariably causing an outbreak of many fountains in every direction.

Sheet Of Flame

On the twelfth the lake was fairly quiet, but a most conspicuous feature was noted in the amount of flame visible. There were many flaming grottoes, and an extremely beautiful sight was a glowing cave hung with magnificent stalactites and crowned by a waving banner of blue flame at least eight feet in height. The skins covering the lake were thin and were continually riven by sheets of flame—a wonderful spectacle. At each side of the west arm there were tall chimneys which spurted flames at frequent intervals, and the constant noise of puffing indicated much confined gas pressure.

Upon the following day this puffing noise had increased to a thunderous roar, and a high spatter rampart had built itself at the end of the southwest cove. Several cones and chimneys were spurting violently and throwing up masses of Pele's hair, which were hurled upwards by the rising air current and swept over the west rim of the pit in tangled skeins.

Swift streaming of the surface lava and the number of fountains in action characterized the activities on the fourteenth. The northwest pond had become elongated and a spatter cone near its rim was throwing quantities of Pele's hair. The confined gas pressure was also exceedingly strong on this date, and the sight afforded to visitors one of rare beauty and wonder.

Great Lava Bubbles

On the fifteenth three very high cones were spurting upon the edge of the north cove. An extremely interesting feature was the appearance of three swollen crustal domes similar in appearance to those great cracked domes which are dotted about on the floor of the main crater. These domes were undoubtedly caused by the flows underneath them having become revived after the domes had crusted over and solidified to a considerable thickness. These flows, being unable to escape, were forcing the surface upwards at the end of their course, thus making what would appear to be very large bubbles. Small festooned flows were to be seen around these domes, the lava having evidently emerged through cracks and small fissures in the sides.

The report of the seismologist records no earthquakes during the week and very little change in microseismic motion and volcanic vibration. The extreme "tilt" of previous weeks has been restored by a sharp return to east and south, but this was followed by a slow recovery, leaving the median lines only a little further to east and south than their positions as given last week.

As a spectacle the Volcano is now at its finest and best. In the ordinary course of events the lava lake should commence to fall towards the middle of January, and it would therefore be only right strongly to advise all who intend to visit Kilauea to make the journey as soon as possible. The marvellous occurrences now in progress may not occur again for many years to come, and one cannot be deemed guilty of exaggeration when referring to the present condition of Halemaumau as the greatest spectacle of this entire generation.

Hawaii Volcanoes National Park Service

Dec. 27th 1916. "Billy" Bains, aged 15 days: arrived. Youngest individual to visit Volcano House to-date.

"Boys will be boys," an old adage remarks
I'm but a boy and not yet up to larks
Let me alone, a year or two will tell
Like other lads I hope to do it well
Year after year, I'll visit Pele's Hell!

His
mark.

By some slight chance, I started bright & early,
And broke a record, tho' I can't be yclept burly.
I came here young, surprising maids & mothers
None thought 'twas right that I should leave the others
Since but two weeks 'twas since I met my brothers!

Pretty good & true

The search for words to describe Kilauea would be as vain as a search for another such volcanic wonder.
I'm dumb!
Dec 31. 1916. Richard A. D. Beaty

January 5th 1917. Height of lake - about 100 feet from rim. About 2 P.M. in company with Messrs T. A. Jaggar jr. & Twigg Smith descended from the east side from rim to the floor of the crater, walking over slightly warm floor evidently of night before to a rampart north and east of center of lake, where lava was splashing over rampart. Retracing steps we climbed a ledge appearing on the left as we passed over floor, upturned from the floor at a steep angle to a height of about 40 feet. From this vantage point an excellent view of an active portion of the lake was obtained. After an hour and a half on the floor ascended out over old 1894 ledge to rim at a point near two splatter cones in vicinity of north station.

At 4.15 P.M. a large double artesian well of flowing lava was noticed near the west station. For one hour and a quarter the floor continued from the artesian well marking the time of general rapid rise of lava through out the entire lake surface. When action decreased to a slight occasional splash in the artesian well, the lava fell through out the lake surface.

The artesian well seemed to serve as a marker and for action in the pit of Halemaumau.

EPISODE Nº 1. The JAGGAR EXPEDITION across HALEMAUMAU - JANUARY 1917.

On or about January 1917 Proff TA Jaggar Jr and his able henchman Alex. made a successful trip across Halemaumau. The Boat was made of Asbestos re-inforced by armor plate, and had many lava proof compartments. The Hero is seen standing confidently in the middle of the Boat, attired in a fire resisting suit of his own design - with one arm resting lightly on his Lava Pick, while with the other hand he gracefully indicates the passages to his henchman in the rear.

Mar 2/17 After an all-night's vigil alone watching the ever-changing phenomena of Pele's Boiling Cauldron, I find that no poor words of mine can describe the mingled feelings of reverence and admiration with which Kilauea inspires me. It is my first visit, but I hope by no means my last. If I ever came near disobeying the scriptural injunction against envy it is now: I am filled with envy of Professors Jaggar & Wood when I think of their five years of daily and nightly intimacy. Surely the writer of Holy Writ was profoundly inspired when he wrote that the "Earth showeth His handiwork and the heavens declare the glory of God." (exactness of quotation not guaranteed — look it up). As a cold-climate white man imprisoned in the heat of Honolulu for nearly three years, I am most grateful for this all too brief enjoyment of clear, cold, exhilarating atmosphere. Also, and very very important, it is a tremendous relief to find an escape from the ever vigilant mosquito

Many [illegible] people have a like [illegible]

March 2/17 2d spasm (after several long tramps exploring the environs): words still fail me, and all that I could say has been better said here many times over, and I depart in a poetic mood, singing:

My first trip to the Crater.

MAUI SAILS THREE DAYS LATE IS NEWS

Maui People Want Vessel To Call At Kahului To Receive Silver Service

The new Matson liner Maui, which will commence her maiden trip to the Islands next week, will leave San Francisco on Saturday, April 7. This news was contained in a wireless message to Castle & Cooke, local agents of the Matson Navigation Company, sent by E. D. Tenney, vice-president and manager of the company, who is in San Francisco at present to make the voyage with the vessel.

According to the wireless, Captain Matson, head of the company, is recovering his health following a late stroke, and will spend a longer time in the Islands than usual in order to recuperate. Mr. Tenney's message was as follows:

"Captain Matson making favorable progress, still quite ill. Will make trip on Maui and spend four weeks in Islands. Maui sails Saturday, April 7, and arrives Honolulu on April 12. Unable to tell about passengers at present time. Many withdrawing on account of war situation.

If the desires of the Maui people are considered, the new Matson liner, which is named after their island, the Maui, will call at Kahului during her first voyage to the Territory, says Captain Parker, harbormaster of Kahului, who is in Honolulu.

The chamber of commerce of Maui has cabled to Wallace Alexander in San Francisco to represent it in an endeavor to have the Maui stop at the Valley Island port either going or coming between Honolulu and Hilo. The Maui's schedule places her on the Hilo run only, but it is considered extremely probable that she will be permitted to spend one night at Kahului by the company.

The Maui folk have a silver service for presentation to the liner which represents them in the transpacific service, and apparently they want to make the presentation on the "home grounds." There is a loving cup waiting in Kahului for Capt. Peter Johnson also, according to rumor, and the Maui's master will have to use his influence to have the deviation from schedule ordered, if he wants to get it.

No reply has yet been received from San Francisco. The local agents, on the strength of the message received from Mr. Tenney yesterday, consider it very doubtful if many on the previous booking list will come on the vessel. Preparations for receiving the boat in Honolulu harbor with the hospitable ceremonies usual in the port, go apace.

I saw the "Lake of fire". I forgave
Malcolm Stood Hagehan

June 18-20, 1917 Ascent of Mauna Loa - Was camping with Mr. B. Knudsen of Honolulu I made the ascent of Mauna Loa, by the new trail to Camp Bates, Pua Ulaula etc. The object of the trip was to identify the 1899 cone, the so called "Sleepy Crater". This was easily done. The entire basin, seen at the eruption 18 years ago. The crater is at approximately 11000 feet elevation, is high, stark, and one of the most inspiring cones on the entire trip. The trail passes within 200 yards of the cone, the entire basin to the right of the trail on the ascent. Back of the cone is a slight depression going up the mountain 1/4 mile, containing as now - in the time of the large cones - of some eight or nine little cones, very small, which were probably preliminary outbursts, before the culmination in the Sleepy Crater. After passing this depression the trail swings to the right and climbs on up the mountain. The 1899 cone is probably 4 miles by trail above Pua Ulaula, say 2-2½ hrs walk. The new trail to Camp Bates passes through wonderful forests, particularly Koa, and is worth a days ride to the Camp & back. As the roof has fallen down at Camp Bates, the only water is that which falls into the tank, so drinking water for the day should be taken. The trail is excellent and so well marked that a novice can follow it. The signs reading "Mauna Loa Trail". To Pua Ulaula monuments mark the way, and to the summit triangular stone monuments & now & then poles. We also placed a pole at the lower end of the '99 cone. Above Pua Ulaula the trail is winding, as far as the last cone (Pohaku Hanalei Trail) and is quite rough. Horses should not be taken above Pua Ulaula. Above the last cone the trail goes straight to the summit crater, follows the rift, and the walking is excellent. We took our time, leaving Pua Ulaula at 6:50 a.m. reached summit crater at 12:20 left at 2 p.m. arriving at Pua Ulaula at 6:10. Knudsen made the descent into the crater. A good deal of snow was encountered, the crater itself being, an unusual amount for this time of the year. A fair amount of smoke was rising from the pit, and there was the normal amount of steam about the crater. We found ice cones at various points all the way to the summit. We had very cold weather all the time, the water freezing at the rest house at Pua Ulaula. If one does not care to take the entire trip, a journey to the rest house - a most convenient & well constructed one - is well worth while. The view towards Mauna Kea, looking across the interesting cones, great plains, and to Haleakala is one of the most astonishing in our mountains. The one first sunset Mauna Kea was a strange color, Haleakala being bathed in a bright rose. Below the clouds banks were rolling in towards Pua Ulaula.

The new trail is absolutely different from the one at Kilauea. The trail through the koa forests is somewhat similar, as also this trail passes around the beautiful Bird Park. Above the tanks on the Kapapala route however, there are nearly open the right, horses can be taken to the summit easily, but the new trail above Pua Ulaula is entirely not feasible for animals. The interesting cones on the new trail more than compensate for any hardship. (Pictures follow)

Sept. 17, 1917. Kilauea of you I've heard in song and word,
However, you must not be heard.
We all do long to see you more,
Just as others did in the days of yore.
Back to Lycurgus we have come safe & well
Unlike it would have been if we had gone to hell.

Oh you Ford

Lycurgus says you will not erupt,
But just remember that he's a queer pup,
To Madame Pele & to God he tilts his hat,
For she has taught him how to dance with all his fat.
Gracefully he now struts the floor,
Like a cabaret kid he is asked to do it more.

So now we all should patronize the lady.
That made him forget how to be lazy.
Dear we all do now extend our hands
And think of her and not of Sousa's bands.

A. F. Lound Honolulu.

Concerning Madame Lester

Please do not read if you are not exceedingly good-looking.

Hawai'i Volcanoes National Park Service

Kakaako Korrèspondence.

Dear Edditter—Since on that times when I take little vacashun for go look my relashun Pele my brane get all fix up good agen, and when I cum back Honolulu las week errybudy tell becos I don't look like if I get the 80 plus ears old—ony 70.

And I think so thas a truth Mister Edditter becos Im filling pritty strong for do my working-on-the-rodes job agen—thas if the stupidwisers allowed us to have sum rode what we don't have very much that thing now. And befor I rite agen about our Honolulu frens and sum other problem what do we had in Hawaii nei, I like tolding to you about sum more good times what I bin had in the Pele Hotel.

One days its pritty cold and Im sitting by the fire in the hotel for make warm my poor old leg, and one leddy is name Mrs. "Frantic Horse" (No relashun for the Mare Joe Fern. She's married-wife for one man is named Alexander Gilchrist Horse) cum talk me and tell she always get a interested in sum curiosities.

(Fonny kine! I never kno befor I am that kine of thing.)

When we talking, one long leddy what get a black eye and hare and big ring inside her ear cum by the fire too. When I see her I ask to Missus Horse if shes the Egypt leddy is name Kleopatra what my school cheecher grandotter school to me about.

And Missus Horse look strate my eye and tell like this, "Say Kahuna Nui! Whas 'matter you grandotter don't cheecher good to you becos Kleopartra is a leddy fren for Mark Antony, she get a red hare on her head, and she get died more then 2 tousand ears ago.

And Mister Edditter! When Mrs. Horse tell to me that things I feel awful shame becos I never kno that befor, and I hope so Henrys Kinney wont find out my grandotter becos she don't cheecher good to me the Egypt history.

Then Frantic Horse told to me becos that leddy name is Mar Dam Lister, and shes a cheecher for the haole dance, and she never kno that Mark Antony fuller.

Afterward, when we all pau eat the dinner, Mar Dam Lister waring on a brite red holoku and make a fancy dance with one haole boy what get a long, high nose, and when I see her dance so fine I think so to myself maybe shes relashun of the leddy what dance for Kleopartra and her fren Mark in the Egypt country long times ago.

When pau the dance all us take Mar Dam Lister down Kilauea for dance for Mar Dam Pele. Menny wahines and fullers take ukulele and gitars for sing and make musicks in Pele House, and "Lister" make what the haole call is ecstactic dance on the lava floor, and she make her red holoku fly all round her jus like Pele make the fire fountain fly in Halemaumau. And all the peeples look away from the volcano to look her.

Then one old fuller is name Aleck (Hes guide what stay that volcano for more then 30 ears and is the boss for Pele) tell becos Mar Dam Lister is a little volcano her own self.

Bime by Lister cum ask to me for if I cheecher to her the hula hula riggles she show to me how to make this haole ecstactic dance. But I think so I get to old and stiff in my 2 leg. Beside that, whas use, becos nobuddy down Kakaako dance that kine.

When "Lister" get tired and pau dance, then Pele get her chance and give fine shows. But Mister Edditter! Thas awful fonny things becos the fire in Halemaumau dont look so brite and red like befor (its very pail) and I heer one haole lawyer tell becos Mar Dam Lister red holoku bin put sister Pele lurid fire on the blink.

Then errybuddy ask to her pleese if she take off her red holoku so Pele don't look so pail. But Mister Edditter! When I heer the peeples talking that thing to her I go back quick the hotel, so I don't kno if she done it yet or not.

Nex days I see Missus Horse and she tell to me she's going rite one poi trays about Kleopartra Lister making the dance for Mar Dam Pele, and maybe the "Friend" printed it for her in they pepper.

You think so, Dear Edditter?

Your truely fren, KAHUNA NUI.

Jos. Harrington
Los Angeles, Oct 10, 17.

When one writes his impressions in a public document such as this he is conscious that he is supposed to be original, witty or recondite - and this naturally edits what he really thinks. The most original impression I can record is that the ~~volcano~~ crater in no way suggested hell to me. I cannot conceive of any such tropic beauty in hell. On the other hand the tropical jungle of the nun coned trees & huge ferns - ~~that~~ suggested the inferno of Dante - as enacted by Doré. ~~The abomination of the Christian Sabbath seems to exude from it~~ Creeping fire is the hell of fanatics, and was invented by them: hell to a Christian person would be the mockery and tragedy of senseless contrasts. A beautiful woman without a soul is more infernal than an ugly old hag. Thus it is that the gray death that hangs over the tropical beauty of the jungle growth of the volcano - the ~~fact~~ ghastly ghost, the absence of all life in the midst of such a setting - is most dreadfully suggestive of hell - whereas there is a splendor, ~~& fact~~ a magnificent glory to the terrific convulsions within the crater that are pretty nearly the antithesis to my definition of hell.

A description, like an attempted painting or a photograph, is a hopeless impertinence.

Ina Wagner

everything — If there is the beginning there must be the ending. I believe this earth was nothing but fire like Sun. and the Primitives of the beings made and formed chemically after the surface of earth cooled off, and now human beings made as we are — And thank God everything on earth grows and lives with two heats Negative and active. The former is from Sun and the latter is from earth itself — the earth's heat more I see it my eyes that partly shown and called "Volcano" — The "Energy" of Volcano —!! Look at this present war! If there is any beings like that is higher civilized than human beings. it may laughed at — alas these human beings are foolish and savage and selfish after all!.

Sessue Hayakawa
Nippon

THURSDAY, NOVEMBER 22, 1917.

VOLCANO IS MORE ACTIVE THAN EVER

Entire Lake Has Risen Upwards of Ten Feet Within Last Seven Days

The Volcano has once more entered upon a most spectacular phase, for so rapid a rise has set in that the crags and islands have again risen above the rim of the inner pit, and may be plainly seen from the Volcano House. Visitors who returned from the scene yesterday are amazed at the magnificent activity of the crater, and many kamaainas state that the tremendous overflows taking place every few hours have never been excelled in their knowledge of the Volcano.

Professor Jaggar's latest report speaks of the attenuated nature of the fumes from the pit, a sure sign of rapid rise, and computes from measurements taken from fixed points that the entire lake has risen upwards of ten feet within the last seven days. This brings the level to within a comparatively short distance below the rim of the fire-pit and it is probable that those who visit the Volcano at this time will witness one of the greatest displays seen for very many years past.

There is a considerable amount of avalanching in progress from the island masses in the lake, probably due to tilting during the rising movement. A strong, though distant earthquake took place on the evening of November 15, its origin being apparently about 4100 miles away and either to the north or south of these Islands. Several slight local shocks have taken place but no movement of moment has been recorded.

Many men and many women,
Many boys and many girls.
Many miles they have traveled
Just to see old Kilauea.
Lots of rain and lots of mist
Lots of smoke and lots of heat
Lots of fire and red hot Lava
In the pit of Kilauea.
Lots of molten lava streaming
Lots of fountains bubbling
Lots of people have been watching
Red hot molten lava lake in Kilauea.
Hours and hours I could watch you
Work your changes very minute
To discribe you would be hard
Kilauea you are the most beautiful sight to see.

Arrived here Dec. 2nd depart Dec. 30th and am sorry to go. but will come again. First visit Feb. 16th 1904. Second 1917.

M E Miller
Honolulu Oahu.

Dec 29, 1917.

We all went to the Volano of Kilauea this morning. It was a great sight
We all enjoyed the drive down to the pit. It was very active. at night it is very active & pretty to behold

January 3d, 1918.

I have watched the Crater of Kilauea by day and by night, with its fountains, its streams, its lakes of fire; now crusted over in places so that a thrown stone bounds from its surface, and in a moment bursting forth as a flame shot through a fissure from Hell's Kitchen — never just as before. Its wonder is beyond anything I had imagined, and I am powerless to describe it.

I arrived here for the first time Jan 9th with my son Ernest and Miss McCabe, we started for Kilauea about 3. P.M. and took in the Land Lube on our way. That was very wonderful, but the greatest surprise was yet in store for us. When we first saw that lake of fire we were almost speechless. we could not find words to express our selves. and could only exclaim Oh! Oh! — we stayed until 7.30 and what we saw then was indescribable. I shall never forget it as long as I live. It is the grandest sight I ever saw or ever hope to see.

Hawai'i Volcanoes National Park

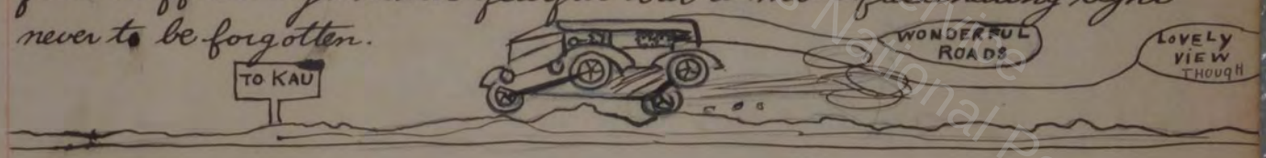
Feb. 23, 1918.

Our party of five, left Kona about ten o'clock and reached the Volcano House about four o'clock. We went immediately down to the Crater. Kilauea was wonderfully active and overflowing the top. Fountains of fire were shooting many feet in the air, at intervals a new stream of lava started on a new trail down from the edge. At times the sulphur fumes were quite suffocating. It was fearful but a most fascinating sight never to be forgotten.



Sat. Feb. 23. 1918.

My second visit to Kilauea. The volcano was very active and a truly wonderful sight.

Eva M. Farley.

Feb. 28th 1918. — We have returned for our second visit After thirteen years, from Feb. 11th 1905. we have decided there is no better scenery to be had than at Kilauea and no more hospitible hotel or a more genial landlord than the Volcano House as an Hotel, and Mr. Demosthenes Lycurgus as our host.

KILAUEA GOES "OVER THE TOP;" FIRST PUBLISHED PHOTOS

2

3

4

5

These pictures showing the sensational rise and overflow of the pit of Halemaumau into the main crater at Kilauea were taken on Feb. 22 and 23 by Mayor Donald S. Bowman of Hilo, one of the most expert amateur photographers in the islands. Through his courtesy they are reproduced by the Star-Bulletin. Persons familiar with the crater will find it difficult to recognize old landmarks around the edge, now that the lava lake has risen to the very brim, and overflowed.

The photos above are as follows:

1. Eight a. m. on Feb. 23, "Over the top" at 20 miles an hour goes the flow.
2. Within the pit, Feb. 22, fresh flow.
3. Feb. 22, within the pit, group of lava only 12 hours old.
4. The flow from a distance, showing the crater lake level with the outer plateau.
5. A "specimen fiend" at the edge of the flow, Feb. 22, poking into the fresh lava.

NEW FLOW AT KILAUEA

(Special Star-Bulletin Wireless.)

HILO, Hawaii, Feb. 26. — Another lava flow is on this morning at Kilauea and there are indications of more activity.

HAWAII TERRITORY, WEDNESDAY, FEBRUARY 27, 1918.

HALEMAUMAU PIT IS OBLITERATED

Blazing Mountain Range Now Stands On Its Site Lifting Lava Out of Its Bed Altogether and Pouring It Over Main Crater

The fiery pit of Halemaumau has become a blazing mountain range, threatening and formidable, literally lifting the fire lake out of its bed altogether and emptying it in all directions over the crater, says L. De Vis Norton in a letter written to The Advertiser from the Valcano House last Sunday night.

The automobile road has been destroyed as far back as where it enters the crater and the old terminal where machines used to be parked is ten feet below the floods of black lava.

The letter in full follows:

"Many hundreds of people visited the Volcano today, and I doubt whether there was a single automobile left in Hilo. From every part of the Big Island well-known people had traveled to Kilauea, and there was hardly standing room on the good ship Manna Kea when she arrived at Kuhio wharf this morning.

"The crater is a marvellous sight and the firepit—well—there isn't any firepit left at all. Where it used to be there is simply a mass of tumbled lava—very hot under foot—and glowing ominously through its multitudinous cracks and crevasses. One may walk out upon it, but it is practically impossible to say where the original rim of the pit is situated, for it has entirely vanished.

"Beyond the shining black lava there is a narrow channel of molten lava, not more than a few yards across, with a line of white-hot caverns at the base of a towering cliff on the further side. This cliff soars up to a row of jagged pinnacles fully eighty feet above the lake, and is pierced here and there with glowing caverns from which jets and spurts of lava are gushing at intervals.

"The narrow streaming channel, leading to a small bay, at the head of which stands a great cone emitting splendid banners of vivid blue flame, represents the lava lake of Kilauea today. There may be other sections of lake, but all are masked by the towering cliffs which have arisen the whole way round the Halemaumau pit.

Auto Road Destroyed

"The automobile road has been utterly destroyed as far back as its point of entry to the crater; the old terminal, where machines were parked, is buried ten feet deep below the floods of black lava, and far out towards the east and north these torrents have spread, and are extending at time of writing, altering the whole contour of the crater and obliterating all the well known land marks to such an extent that a walk across the crater floor in the darkness is an adventure full of thrills, necessitating wide detours in order to avoid the insidious streams of lava which are constantly creeping through the hollows.

"The old roofless rest-house now stands facing a terrific cliff which towers threateningly above it. The trail to it has been wiped out, and one approaches it with the utmost caution. The South Station has utterly gone, and in its place there is a glowing filagree cone—fifteen feet high—from which, at a late hour tonight, fountains are spurting high and floods of lava are gushing like rivers.

"The glowing lava 'toes' writhe and twist, and every few seconds the streams take a sudden spurt and roar into a depression, cutting off yet another section of the old floor.

Pit Becomes a Mountain

"And still the vast central crags continue to rise, and rise—and Halemaumau is Halemaumau no more—but has become a jagged, inimical mountain range, threatening and formidable, literally lifting the fire lake out of its bed altogether and emptying it in all directions over the crater.

"The gas pressure is simply incredible; the whole place trembles with it, and round the entire circumference of the pit, hissing and spurting cones are building; little individual lava flows are creeping and masses of rock are falling.

"Even the familiar sounds of Halemauman are gone, and in their place are other sounds, hostile and ugly rumblings and groanings, so that one's nerves are on edge and all one's senses on the alert with a feeling of coming danger.

Sharp Earthquake

"There was a sharp earthquake in Hilo yesterday; probably others will follow in the next few days. Whether there will be a great lava flow from the flank of the mountain only time can show, but Pele seems to me to be gathering her strength and marshalling her forces in a manner she has never before exhibited. The changes of the past two weeks are amazing, and when one looks at them one cannot help speculating upon what may be the outcome.

As a spectacle it is appalling in its grandeur; it makes one realize one's own littleness as nothing else in all the world could do, for the forces displayed are beyond all human understanding.

Hawai'i Volcanoes National Park Service

March 1 1918

Jan. 21. 1891 I made my first visit to the "Lua Pele" or "Pit of Pele" as the old Hawaiians called the fire pit of Kilauea.

At that time there were three lakes of fire separated from each other by "crags" as the fire fountains are separated to day only the lakes were far more accessible. Three rivers of lava were flowing out over the floor of the main crater. One formed a line of fire about a mile long toward the southeastern wall. All night from time to time gases forced their way through the hard crust - exploding like cannon - clearly heard in the sleeping rooms of the hotel.

All the rivers flowed past the Drivers Kitchens - but sent a branch, which formed the third river, down to the "Little Beggar" and "Picture Gallery" where were made at that time.

According to the reports of later visitors the lava above sank out of sight - The crags fell into the pit - and the crater floor assumed the apparently level shape it has had from that time to the present day.

During 1917 the floors and sides of Hale-maumau - (House of Ferns) have been lifted by the lava until they have piled up in great crags and ledges.

At this date (March 1) they surround the lake of fire cutting the lake floor off from the view of visitors. The spectacular element is not so great as it has been up to two weeks ago. The fact that an actual volcanic eruption in which the living lava can be dipped into by the tourists and specimens taken out with sticks - is one of the world's marvels. The actual method adopted by flowing lava is to studied at close range - The cooling surface as realized - and the visitor tramps over it watching the red streaks of fire under his feet with a feeling of dread as to the living fire pushes its way out under the

March 1 1918 passes under the hard surface and runs up or down hill according to the pressure behind it. If the visitor had time the walks over the main crater finds disintegrating lava making soil on which ferns are growing. The more ancient lava around the crater has already disintegrated so fully that forests are growing in the meantime dirt. Miles away. The soil has become so perfect that plantations of sugar cane are planted and multitudes of men have homes.

The volcano and the island on which it lives are the world in miniature - and its creators This is the way the picture has come before me for years.

W. D. Westervelt.

We arrived Feb 23 - and remain until March 22
Mr. & Mrs. Westervelt and Andrew C. Westervelt

March 2. The lava boiled over the side toward the "kitchen" with renewed force. A lake seems to be forming near the "cone" on the south side of Halemaumau. Permit me to name this or the first permanent lake "Jaggar Lake" and the next "Lake Lycurgus"

mar. 3/18 Here again after 6 years. very inactive then. most exciting now - good to be here again

There is a chain of golden links
Across the sea so deep.
Where fancy and its charms
Had called to me in sleep.
I hastened to obey
Its fancy charms for me.
And to you one and all
List to what I say.
I've seen Kilauea in all her flames
with smothering smoke and dust.
I've seen some natures work.
But in my fancy. God is just.
For we once all "came from dust."

The curfew tolls the knell of parting day
But somehow I don't mind to go away.
Far from the madding crowds ignoble strife
I'd rather pass the remnant of my life.

Although to-day the Teuton with his wiles
Capitulated - and the whole world smiles
Still haunts my heart one sweetly solemn strain.
'Tis this:- "When Chance affords I'll Come Again"

Robert Navarre Coolidge.

Nov 11 1918

Hundreds of writers have attempted to describe the wonders of Kilauea, but I believe that none have succeeded. There is but one thing to do - see it - and spend the rest of your life thinking about it, for Kilauea "has a message of beauty and wonder for the soul that cannot be delivered by proxy."

M Leola Crawford
Los Angeles

THE ANSWER

By M. LEOLA CRAWFORD
(Authoress "Seven Weeks in Hawaii)

You ask, when you write, a question trite:
"Are you lonely, there, over the sea?"
Let me make reply, while my heart beats high
As I sit 'neath a broad hau tree.

From God's dear hand came this fairy land
With its softskies all aglow—
And the crooning sea brings a message to me
Of things that I long to know.

For this soul can rejoice in this land of my choice;
I love every mountain and tree;
Her glorious past; her future forecast
As the Mecca of peoples free.
Where else can one find a realm so kind,
So restful of color and sky;
Whose tropical calm—like soothing balm,
Makes music of every sigh?

There is death in the choke of the city's smoke,
Where only the strong endure;
But here lies health, in a climate whose wealth
Makes heart's contentment sure.
Where trade-winds blow, and strange plants grow,
And rare fruits and flowers abound;
Where one may roam, yet be ever at home
In a glory of color and sound.

Where the palm trees thrive, and all is alive
From the shore to the mountain high—
Where the waters leap, and the shadows creep
As the moonbeams silver the sky.

Come away from the strife of your city life;
Come out to these islands dear:
Come away,—my friend,—for you'll find in the end
That God is surely here.

Placed here by S. Lyons

Thanksgiving

HILO, HAWAII, WEDNESDAY, NOVEMBER 27, 1918

Proclamation

THIS year we have special and moving cause to be grateful and rejoice. God in his good pleasure has given us peace. It has not come as a mere cessation of arms, as a mere relief from the strain and tragedy of war; it has come as a great triumph of right, a complete victory, which has brought us, not peace alone, but confidence in the promise of a new day as well, in which justice shall replace force and jealous intrigue among the nations.

Our gallant armies have participated in a triumph unmarred by any purpose of selfish aggression. In a righteous cause they have won immortal glory. They have nobly served their Nation in serving mankind. God has indeed been gracious and we have cause for such rejoicing as revives and strengthens the best traditions of our national history.

A new day shines about us in which our hearts take courage to look forward to new and greater duties. While we render thanks for these things let us not forget to seek divine guidance in the performance of those duties, and divine mercy and forgiveness for all errors of act or purpose, and to pray that we shall so strengthen the ties of friendship and mutual respect upon which we must rely to assist to build the new structure of peace and good will among nations.

Wherefore I, Woodrow Wilson, President of the United States of America, do hereby designate Thursday, November 28, as a day of thanksgiving and prayer, and do invite the people throughout the land to cease upon that day from their ordinary occupations and in their homes and places of worship to render thanks unto God the Ruler of Nations.

THANKSGIVING DAY TO BE REAL HOLIDAY ON THE BIG ISLAND

Thanksgiving Day will be celebrated in glorious fashion this year and tomorrow the whole of Hilo and the surrounding districts will have a real holiday. The stores of the city have all signified their intention of closing for the day and the banks and other financial institutions are doing the same. The plantations are shutting down on work for the day and the occasion is to be made one of remarkable joy, as desired by President Wilson.

A careful canvass of the city yesterday afternoon revealed the fact that the stores owned by all the different nationalities are to close tight for the day. There was an unanimous desire expressed by everybody to celebrate not only the ordinary Thanksgiving Day but also the success of the Entente Allies and the United States in the great world's war.

In the churches of the city there will be special Thanksgiving Services and extra efforts are being made to mark the great occasion and the coming of peace.

There is a very evident determination shown by everybody to celebrate Thanksgiving this year as it never has been celebrated in the past. The city proper will be dead tomorrow, for everybody will be either at home celebrating, or else out in the country having a good time.

Services in Churches.

The special church services which have been arranged for tomorrow will be as follows:

Haili Church—Service at 11 o'clock a. m. Special music by the Haili Choir, and Police Quartette. Sermon "Food Conservation" by Rev. S. L. Desha. Collection in aid of French Orphan Fund.

Re-organized Church of Jesus Christ Latter Day Saints—Service at 10 a. m. Elder C. E. Miller presiding.

Portuguese Evangelical Church—Service at 10:30 a. m. Sermon on Thanksgiving.

Church of Jesus Christ Latter Day Saints—Service at 11 a. m. Elder G. B. Nelson presiding.

Church of the Holy Apostles—Service at 10:30 a. m. Sermon "The Cornucopia of Thanksgiving" by the Rev. Lamb Doty, priest in charge.

First Foreign Church—Special services at 11 a. m.; possibly the new pastor may take charge.

St. Joseph's Church—Mass at 6-7 a. m., and services at the usual morning time by Rev. Father James assisted by Rev. Father Paul.

POST-HERALD WILL NOT PUBLISH TOMORROW, AS OBSERVANCE OF HOLIDAY

The Daily Post-Herald will not be issued tomorrow, Thanksgiving Day. This is in line with President Wilson's special appeal to everybody to observe the day in connection with the end of the great war.

FOCH IN LUXEMBURG

LUXEMBURG, Nov. 27.—General Foch has established his headquarters in this city and is directing the movements of the army of occupation from here.

Hawai'i Volcanoes National Park Service

June 7-
1866 "Like others who came before me, I arrived here. I traveled the same way I came - most of the way. But I knew there was a protecting Providence over us all, and I felt no fear. We have had a good deal of weather; some of it was only so-so (and to be candid the remainder was similar). But, however, details of one's trifling experiences during his journey hither may not always be in good taste in a book designed as a record of volcanic phenomena; therefore let us change to the proper subject. We visited the crater, intending to stay all night, but the bottle containing the provisions got broke, and we were obliged to return. But while we were standing near the south lake, say 250 yards distant, we saw a lump of dirt about the size of a piece of chalk. I said: In a moment there is something unusual going to happen. We stood by for a surge and waited, but nothing happened - not at that time. But soon afterward we observed another clod of dirt about the same size. It hesitated, shook, and then fell into the lake. Oh, God! It was awful! We then took a drink. Few visitors will ever achieve the happiness of having two such experiences as the above in succession. While we lay there a puff of gas came along and we jumped up and galloped over the rough lava in the most ridiculous manner, leaving our blankets behind. We did it because it was fashionable, and because it makes one appear to have had a thrilling adventure. We then took another drink, after which we returned and camped a little closer to the lake. I mused and said: How the stupendous grandeur of this magnificent, terrible and sublime manifestation of celestial power doth fill the poetic soul with grand thoughts and grander images, and how the overpowering solemnity ********** Here the gin gave out. In the careless hands of Brown the bottle broke."

This is the third time that I have been to see the Volcano and each time it seems more wonderfull,
On. 1917 I was here as a tourist and had white "PANTS" and nice white shoes. the same in. 1916. But this time I am a common "Soldier" ready for anything hard or tough, the other day some boys and I, hiked "30" miles and what wonders we have seen, have certainly opened our eyes.
The Volcano at night is a sight we all agree, well worth while, and many of us go each night during our stay.
Here's to the Volcano and the Volcano Home
May I come again, you bet.

Feb. 2nd 1919.
My first look into Kilauea was in Feb. 16th 1909. left for Kona in the afternoon.
Second visit Dec. 1st to 31st 1917. Visit the crater nearly every day and she was certainly grand very active.
Third visit May 12th to June 10th 1918. Saw Kilauea nearly every day and she was very active.
Fourth visit Jan. 18th to Feb. 4th. This time saw her over flow the rim on the Kau side. Saw some grand sights.
Every time I have been up to see Kilauea she has been different. and seem more grand than ever. Kilauea is certainly a sight.
Sorry to go but will come again.

Living in Honolulu and a regular Kamaina I never thought the old Faithful Kilauea was such a wonderful sight.

It is something so great, that words could not express your thoughts on the subject.

The only way a person can enjoy the sights is to see it himself. I can say it is the most wonderful sight I have ever saw.

Before me see it yourself & you will agree & say it is something wonderful.

On a night of misty moistness moon lit, I saw a giant imp stirring the devil's candy. His hand was on one hip and as the smoke wreaths rose, I saw his face as he leaned over the steaming cauldron — And some had, o'er flowed the sides — It looked good enough to eat, but like all things devilish. Clothed in attractive garb, 'twas but a snare, and one was moved to cry "Dust and ashes, woe is me." In a larger earth vessel I saw a hellish sauce prepared for the poor geese and ganders of the world. And in still another Satan himself was brewing forth the lost ideals of his victims. Thus I saw Kilauea of which I have dreamed these many years.

April 24/19

It is a pleasure to record here one's appreciation of the diverse objects of scenic interest accessible to those who visit the Volcano House, as well as the excellent service rendered by the genial managers and their efficient corps of assistants in an earnest endeavor to promote the enjoyment and comfort of their guests.

The invigorating freshness and buoyancy of the mountain air gives a zest to exercise. It greatly enhances the pleasure of rides or walks along the trails through the jungles of tree ferns and ohia, and adds to the delight of drives over the forest roads bordered by wild roses and fuchsias in profuse bloom.

Such unique results of Nature's handiwork as the lava tubes, tree moulds, sulphur banks, extinct crater pits and earthquake fissures must be seen to be appreciated and are well worth the exertion it may require to reach them.

As for the terrifying, awe-compelling crater of Halemaumau in its fiery, brilliant restlessness, it is as idle to attempt to depict it in adequate language as it is to try express the feelings it calls forth. Perhaps no such wonderful sight exists in the world today as that of the volcano in its present state of activity. Could Dante have seen it in a mood similar to those of recent days, he would have been inspired to add another canto to his Inferno.

F. M. Bostwick
Commodore, U. S. Navy.

PELE PERFORMS AS MATHER GAZES IN SILENT AMAZEMENT

National Park Director and Party Have Busy Day, Visiting Kalapana, Olaa Mills and Other Scenic Spots

TRAMPS OVER HARDENED CRUST OF HOUR-OLD FLOW

Goddess of Fire Poured Out Lava Three Times Sunday, Once From Postcard Crack; First There Since 1894

Special to The Tribune

VOLCANO HOUSE, April 21.—Stephen T. Mather and his party capped a day crowded with scenic wonders by walking tonight over the hardened crust of a lava flow that had burst from Halemaumau but a few hours before. It was Mr. Mather's first visit to Kilauea but he showed no hesitancy in following a guide across the glowing mass, despite the fact that the pasty lava beneath the crust was still creeping along the pahoehoe.

Pele outdid herself, both Sunday and yesterday, to impress upon the National Park Director her immeasurable prowess; and, if the looks of amazement that crossed the faces of the visitors as they gazed for the first time upon the distorted pit should be taken as a sign, the Goddess of Fire succeeded.

Sunday night a tremendous flow burst from the old crack, on the northwest side, where thousands of tourists have burned postcards for souvenirs. It was one of the most voluminous seen this year and the first to appear from that vicinity of the crater since 1894. In the meantime another flow, which had started at 11 o'clock in the morning, was still in progress, and a third outpouring had its source in the southeast lake, moving toward the Volcano Observatory.

Toe Was Still Red Hot

The Mather party arrived at the Volcano House in time for dinner last night and while the meal was still unfinished—about 8 o'clock—a fresh flow began to spout from the northeast cone. Immediately after dinner the party proceeded to the fiery pit, arriving at about 9 o'clock.

When the visitors reached the flow its toe was still red and moving slightly, so the guide led the way around to the lakes. Only casual glances were given to the recent outpouring because it was the desire of the leaders to take Mr. Mather out to the lakes and explain details before allowing time for a full examination.

White Rock Did Work

The main lake was comparatively inactive, but it was made to produce a wonderful fountain and pyrotechnic display when a bottle filled with White Rock was hurled into it. The fountain leaped directly from the center of the lake and scattered its terrifying red spray around for 15 minutes.

Then the start back was begun. Instead of walking around the flow, this time the guides led the way directly over it, followed immediately by Mr. Mather and other members of the party who only drew a smile from him when they remarked that there was "no danger."

The party went to the cone where the flow had originated and looked into the puka from which the molten lava had gushed only about three hours earlier. No one could immediately notice that beneath the hardened crust the pasty material was still moving, but a closer inspection showed this to be a fact.

Bugs Performed, Too

Leaving Hilo early in the morning the party proceeded first to Olaa, where the paper and sugar mills were inspected. One object that proved most interesting to everyone was an incubator in which the parasites that feed on the leaf hopper, the bug that is most feared by a sugar planter, are raised. Kalapana beach, via Pahoa, was the next place of interest and the visitors were entertained at lunch on the turf.

An accommodating Hawaiian boy showed the party how a cocoanut tree should be climbed. Seizing the rough trunk of the tree by both hands the lad "walked" to the top, gathered a dozen or more nuts and then "walked" down again. The nuts provided milk and tropical refreshments for the lunch.

Kapoho was next visited, where the famous green lake and hot springs were viewed, and from there the automobiles hurried to the Volcano House. Before visiting Halemaumau Mr. Mather and the other members of the party accompanied General Hodges to the Volcano Military Camp, where coast artillerymen were giving a minstrel show and dance.

Mr. Mather has had but little time to himself since he landed in Hilo Sunday morning. He was the guest of honor at a luncheon in the Yacht Club, attended by 80 or more prominent Hilo people, and later went to Laupahoehoe on a special train as the guest of the Hawaii Consolidated Railroad.

July 15, 1919.

As I stood on the fiery brink.
~~It~~ just occurred to ~~me~~ to think
That if we had Bill Hohenzollern
~~He~~'d turn pale and stop his hollerin' —
We'd build a ~~boat~~ (now just take ~~note~~
~~It~~ would surely get ~~his goat~~!)
With soap we'd grease it mighty slick
Not a splinter would even stick
Bells would ring and loud alarms
As he slid into Mme. Pele's arms
'Twould be like nothing in his past
But he'd be getting ~~his~~ at last!

Jeane W. Malott
Abilene, Kansas.

July 16, 1919

Volcano House, July 17th 1919.

My Dear Madam Pele:

~~You are the grandest old thing in all the Universe~~
~~And for all your stunts and antics, you are mine the less the worse~~
~~Some find fault with you, others give you praise~~
~~Little that you care what any of them says~~
~~I came here for health, your grandeur to admire~~
~~Have been greatly rejuvenated. But I must confess~~
~~Your sulphur baths at half past five, many fail to take~~
~~Not knowing of their excellence, they simply do not wake~~
~~I came up here for rest, others come here for show~~
~~Having been greatly benefitted, I am ready now to go~~

Very respectfully

Breath of Earth's fiery nostrils
Froth at the crater's mouth,
What urge of inward passion
Parches thy throat with drouth?

Tell me the hidden secret
Searing thy heart of fire,
A rage at incompleteness,
A torment of desire?

Is it thy last sharp birth pang,
A mother's men and nurse
Of nations that rage and ravent them
At the sign of their primal curse?

Rather perhaps a promise
Oh, Mother Earth, from thee,
An ardent restless longing
For a glory yet to be.

Hawai'i Volcanoes National Park Service

Sunday July 20th 1919.

Spoke at Summer Camp last night to Teachers & Tutors, New Zealand, delighted with the whole scheme, it makes for a better generation. Was mostly struck with hearty enjoyment of the campers, their mode of co-operation to fit in with Mr de Vis Norton's management so ably carried out. The reformed Dress (Khaki & Tweed Suits) of the girls & otherwise, is a splendid idea, may the inspiration come to the Sex to make the reformed Dress permanent. It would revolutionise the whole Universe. Look at the question from four different view points:

No one "Hygiaenic & health" ask any Doctor!
No two "Artistic" it is beautiful & woman looks Charming
No three "Economic" ask any Father or Husband, fat Banking accounts.
No four "Policy" not a single girl in the Land.

Kale Kauikeau it tends to make man good, the lesson the furnace inculcates of what is in store for anybody who is otherwise. I viewed it in company with my wife. We there and then formed new resolutions for the conduct of our lives.

J Norton

[illegible] 1. 1919. Six delightful weeks of sunshine with just enough rain to make a contrast. The sights we've seen, Jagger Lake overflowi[ng] seen from the hotel veranda, a lava column flowing over the side of Thurston Lake like a golden cataract 30 ft high. rushing off Kau side in a fierce flood 20 ft wide — Another night [an] outburst of lava, north of Jagger Lake, that flowed i[nterrmit]tently for nearly two weeks — at one time dashing [in] fierce waves at the foot of Uwekahuna — And nearly [every] night so many breaks in the lava floor below Uwekahuna that it looked like the lights of a suburb. We al[l] go away with regret!

Kilauea

What seething mass of liquid fire! what awe
Creeps over me as waves burst flame, roll on
And fume, dasho angril, in fiery foam!
Such vision Dante dreamed.
And see Inferno mirrored as he saw!
Ah me! on earth what hell is pavid, within
Its precinct scorched, what wicked feet, what sin
Of anguished fires, our very vitals gnaw!

Margaret S. Morgan Honolulu

Sept 1 19

6 P.M. just arrived from the Crater drenched to the skin after standing a half hour in the pouring rain hats all awry ah that we had the power to see ourselves as others see us

Sept. 2/19

This was my first visit to the volcano. If hell is like Madame Pele, so help me devil, please don't lead me into temptation

Edward S. Rose Honolulu

Mrs

We came here for the invigorating freshness, but also made many trips to the three pits, which were a wonderful sight both at day and night. Different again and just as awe inspiring and wonderful as ever. We shall come again, but hope by that time that the wonders of the pits may be reached easier by distinct trails made, as it is now, a new comer cannot possibly get there without a guide (who is also lacking) and at night even a "Malahini" can only find his way with difficulties. The Crater will be visited by thousands of people from all over the world some old and invalided, and they will go away with disgust, if it is not made easier for them.

Get busy and get a good trail made (and kept up) to the pits, get a guide, and extend the road along the Waikahuna Bluffs.

Sept 7-1919 John A. Carlson Chicago Ill

Sep 9th 1919. We arrived at Volcano House June 26th. For eight days and nights we were filled with wonder and admiration of the Kilauea Volcano. The marvel of it grows upon me. I hate to leave it at night. Even after going to bed I look from my window for one more glimpse of the fiery cloud. Waking I look again and again to be sure it is not a dream. When standing by the pit I am conscious of God's power and also of His loving kindness. It is indeed "Hell" but "God so loved the world that He gave His only begotten Son that whosoever believeth in Him might not perish, but have eternal life." For those who do not care to take the Bible litterally still the open pit speaks of the pain and sorrow of eternal separation from God.
The road leading to the pit fills me with joy. The multitude of ferns and flowers, the lure of each turn in the way, and the certain knowledge that a wonder of wonders lies beyond, all call me again and again. Again my early training reminds me that, Broad is the way that leadeth to destruction. But the last lap of the way is rough for the feet and full of dangers. Is not all this true if one chooses the "broad way"?
July 4th we returned to Honolulu but Sep. finds us here once more. This climate, the friendly feeling on the Hotel and the charm of scenery delight us as before.

Alice Cummings

Sept. 26/19
The two large lakes of the "Pit-of Fire" have been called Thurston Lake and Jaggar Lake to mark the difference between the lake across which scientific observations have been made so frequently this past summer - and the lake of perhaps more scenic interest to the ordinary beholder. These lakes are only temporary in their character.
There is a remarkable cliff or bluff of volcanic ash formation on the southern side of the volcano. A auto road into the crater.
May I in behalf of the Volcano Research Association propose that the name "Jaggar Cliff." be given to this more permanent part of the objects of scientific interest in Kilauea at present.
W. O. Westervelt
Vice Pres. Volcano Research Assn.

Oct 2 '19

I have been entirely too busy enjoying the wonders surrounding Kilauea and visiting the famous new flow pond into the sea near "Halamolino Ranch," during our five days stay here, for any outbursts of poetry, for which every one should be thankful. My only regrets now are that we must leave this very interesting place tomorrow morning without another view of the famous flow which started Monday Sept. 29 '19 from about 8500 ft up the side of Mauna Loa, reached the Govt. road on Tuesday the 30 and has not yet shown any signs of ceasing. Am coming back at the first opportunity for a longer stay.

Capt. W. A. Cyderman, U.S. Army

Hawai'i Volcanoes National Park Service

The Sept- Oct. 1919 Mauna Loa Flow first manifested itself at about the 11,500 foot elevation along the Rift Line. At 6 p.m. Sept 26, 1919 the sky was illuminated by a brilliant glow which was due to explosive gases.

On Sept 29/19 at 7 a.m. the lava eruption commenced some 2 miles below the explosive vent and at about 6,000 feet elevation.

Quirk Watson The Map-

At 9.30 p.m. of the same day the flow crossed the road in the Alika Papa section, near the lumber camp. About midnight the flow reached the sea about 2 miles West of Hoopuloa.

We had the good fortune to be members of Prof. Jaggar's party which went to the source of the flow. (Oct 8-11th) We camped at the water-hole on the Kahuku trail and on Oct 9 after a 3 hrs ride and 5 hours hard tramp across the lava flow reached the fountain cones. We spent the night there enjoying the wonderful and awe-inspiring spectacle. The fountains played from 200-500 feet in the air. At 2 a.m. midnight the makai cone went out of action and a new flow started from the upper cone which manifested great activity.

The Lava flowed across the government road for 11 days (Sept 29 to Oct 9) at a speed of about 20 miles an hour and made a beautiful and interesting sight witnessed by hundreds of visitors. Where the Lava stream entered the sea there was a cloud of steam a mile high, geysers of boiling water 15-20 feet in the air and hundreds of dead fish floating on the ocean.

We bid good-by with regret to the Volcano and our genial host Peter.

Nov. 5/1919 The Volcano presents to my mind an excelent demonstration of Dantes Inferno. = Mrs. L.L. Woods, St Louis

Nov. 9, 1919 It is said that a lady once visiting the Alps and impressed with its grandeur could only express from the highest ascent, the words Oh-oh-oh.
If the above can describe ones feelings of the fixed things of nature what can describe fickle, impetuous Kilauea.
We are told that years ago Agrippa said to Paul, "Almost thou persuadest me to be a Christian."
At Kilauea a lady said "This will make me a christian"
Christ has said fear not that which can kill the body but one can not but feel with the Prophets

of old "What is man, that Thou art mindful of him.
I am thankful for the faith of my good New England parents who taught me that the promises of the Creator are as constant as the evidences of His physical laws are changing.

A. Sprague

Dear Pele - you painted my portrait on your glowing mirror last night while you threw your burning kisses to me from one flaming cascade after another.

This is not a last good-by, dear girl, and I shall not throw myself from the seething ha-hoe-hoe into your warm and waiting arms; but I shall be very willing to do so - if you will come to the land where Jack Frost frays comet to his plump Lady Pumpkin, from time to time. any way - here's mine autograph for a photograph - a fair exchange, dear girl,

Jan 19 1920

I have never seen a more wonderful sight than the volcano. It is well worth a trip from Europe.

(Autograph) Arendt Murray

I've been to the crater and stood on the brink
When every last guy in the crowd had a drink
'Twas booze, & so they said, kept the sun in the sky.
The world would go flooey if e'er we went dry.
But now we are dry, the Sun's shining still
And I've seen no one yet that the drought seemed to kill
Old Pele is fuller than ever I'm told
So cheer up, my friends, and don't let it grow cold

Of course you wonder who wrote it!

January 23 1920 Marie Edmondson

Feb 8. 20 W. H. Steward Bundaberg Queensland.

Feby 8/20. Louis J. Gibson Bundaberg Q'land Australia
Visited here 3 Feby 1895. Interesting to look up the 1895 Record & renew recollections of guests at that time. Pele in 1895 was barely smoking. I hope today to see her at her Best.

Hawai'i Volcanoes National Park Service

Feb 8-1920. Perfectly satisfied beyond my Expectations.
Mr & Mrs F K Sullivan
Minneapolis - Minnesota

Feb. 10" 1920

The one thing here most indescribable beyond all I've seen, yea even the flow of lava, is this everlasting flow of beautiful, flowery, and lurid, sulphurous language! "He is little glad who can say how much" I'm glad my bit with. "It beats HELL," and I know because I'm from Pittsburgh.

Dear Pele

I doho's desert and Lava I've seen and "Yellowstone" with the Kitchen an Paint pots Cold and Hot Streams.
But you dear Pele
I must crown the Queen.

Feb 12 1920

Pocatello Idaho

Feb 12-1920

I must admit it is all more wonderful than Pocatello.
H. H. Richards
Capitola Cal.

It would be easy to Cremate Sam McG if he had only died near old Pele

Feb. 15/20

Madam Pele: - den eneste Kvinde jeg har været forelsket i! (Jeg kan tilstaa det her, da det sikkert ikke vil være mange der kan læse dette.) - Det mest ødelæggende og alligevel det mest dragende Skue jeg har set. Aften efter Aften har jeg siddet og beundret Dig - med Sorg tager jeg Afskeld med Dig - kommer jeg en Gang tilbage for atter at besøge Dig, er Du maaske kun en udslukt Vulkan!
17. Februar 1920.

Benni Golf
Copenhagen, Denmark

8/5 1920. Jeg kan læse det og säger det samme. Asta Möller Copenhagen

Feb. 27-1920.

The following story to the end of the first line of the fourth stanza was copied by the writer hereof from the journal of the "Volcano Hotel" at Kilauea in March of 1917. The author's name was not given. It would appear that he had visited the Crater the previous evening and that his emotions were so moved by the wonderful power and beauty of "Madam Pele" that he could but give expression in verse to the joy that was within him.

We will assume that the construction of the verse kept him up till "the wee sma' hours", and that he arose correspondingly late, that when he had hastily eaten his breakfast he sat down before the journal to to enter his production therein, and that he had not yet completed his labor of love when his driver called through the open door, "All aboard For Hilo!" the sailing time being at 10.00 o'clock a.m.

Under such a combination of circumstances he could only drop his pen, rush to the office and settle his account, seize his hat, coat, and hand bag and leave unfinished and unsigned his testimony of appreciation. The article is given here with a few lines added which would seem to be one way of bringing it to a contemplated close.

It is quite probable this is a long ways from what he had in mind; but should this come to his attention it would give me great pleasure to learn from just how he had intended to finish his story.

An Ode To Mistress Pele.

Oh, its soaked to the skin, both without and within,
An' batin' an' poundin' until I'm a jelly.
I've rode all the way up from Hilo this day
To make my obejiance to you, Mistress Pele.

And now I'm here, Mistress Pele, my dear,
I'll swear to you, ma'm, by the keys of St. Peter,
That I've never before since I left Erin's shore
Encountered the half of so lovely a Crater.

-and-

Hawaii Volcanoes National Park Service

Take you on the whole, and you open my soul
Most completely, the equal of Biddy McShayne
Who, plase God, is livin' wid Biddy Me livin
This night in my own native town of Killayne.

Shure, if Biddy were here, she'd be jealous, I fear,
Of the many fine thots I am having of you;
You're so grand and uproarous you make me full glorious.
I'll never forget you! Be hanged if I do!

So, good bye, Mistress Pelé. I'd stay here, but r'ally,
T'would be foolish of me to be held by your charm
When I've my sweet Biddy, at home wid the kiddy,
Who's promised to come to me out on me farm.

Sincerely - F. F. Lewis
Janesville Wisconsin.

April 7, 1920

The Devils Bathtub

Those having come before me covering everything from the sublime to the ridiculous I will endeavor to express my thrill of crossing a live lava flow to the island peak in the crater from which the Bird of Paradise leaped to a fiery death in the seething lava below. Leaping fiery fissures the soles of my shoes fairly melting was thrilling in the extreme. Having arrived at the island a small crater belching molten rock and sulfurous flames added to the excitement to say nothing of the asphyxiating quality of the atmosphere. The climb to the peak was phase of earthly hell long to be remembered. I have seen four of us who made the climbe and left a note under a rock mentioning the same. The descent was even more perilous due to slipping. I took some pictures while there and hope they convey something of the marvelous wonder of the place. We of course went to the lava flow later and took part of the island back with us.

Walter C Miller
Lt gy USN.

April 7, 1920.

We hereby certify that this foot-hardy stunt was actually performed by Comdr Throop and Lieut Miller USN

2 sensible ones who did not crave over.

It isn't every man can go through Hell and only get his "pole" scorched

If you and Dave are in a class by yourselves

Tempting Providence and getting away with it is what I did when I crossed the live lava flow at the Halemaumau lake, to the island from which the Bird of Paradise was supposed to have jumped. A small crater on the side of the island belched forth a cloud of sulphurous fumes besides me and I decided to leave the fiery furnace & Fill. Once back on the other side I decided Never Again!

James H Strong

The Island of Hawaii.
by

If you could see Hawaii as it first appeared to me
to me
Great Big Lazy Islands sprouting from a tropic sea
Dotted with big plantations, each with village & with mills
And the town of Hilo nestling just below its sloping hills
To two great snow capped mountains stand as sentinels to guard
A lake of red hot lava which is spread in their front yard
No brush can paint its beauties, no pen tell its glories tell
It's just a glimpse of heaven with a little dash of Hell

"Daddy"

Rambling Thru Paradise---Hawaii

(Showing not only exquisite hand-colored, dissolving views, but some of the most remarkable moving pictures ever taken of the largest active volcano in the world—Kilauea)

IN 1866, Mark Twain spent "half a year's luxurious vagrancy in the Sandwich Islands" (Hawaii), and in "Roughing It" told to the world something of his experiences during his six-months' happy wanderings in that Island Kingdom, which he described as "the loveliest fleet of islands that lies anchored in any ocean," and of which years later he said: "No alien land in all the world has any deep, strong charm for me but that one; no other land could so longingly and beseechingly haunt me sleeping and waking through half a lifetime, as that one has done."

Just fifty years after Mark Twain's visit, Miss Clemens made the trip to Hawaii, and, as stated in Leslie's Weekly, followed her cousin's trail through the tropical islands, up mountain sides, around volcanoes and on the beach, armed with a kodak. While in Hawaii, Miss Clemens was royally received by the prominent people, mingled with the natives, and traveled, not only over the "beaten paths," but also visited the out-of-the-way places of the entire Island group—the veritable show-places of the mid-Pacific.

In the lecture the story of the races who have assembled at this "Crossroads of the Pacific," decline of the natives, the transition from the era of royalty to the Government of a Territory under the American flag, are told in brilliant portraiture, as upon the screen are thrown the myriad views. Of these pictures one critic has written: "No 'movie' film ever produced could equal the consumate artistic skill that has gone to the making of these pictures which perpetuate the haunting loveliness of tropical sunrises and sunsets, at sea or in settings of rocky, palm-fringed islands, or the pale, delicate colorings of the short-lived exquisite floral inhabitants, while apart from its fascinating and almost terrifying beauty, the moving picture taken of the great Hawaiian volcano—Kilauea—in action must surely be unique even in these days of sensational photography."

"Miss Clemens' pictures are regarded as the most beautiful and at the same time the most representative Hawaiian pictures ever shown, and her lecture, in which she sums up her observation of the people, their customs, the industrial and economic conditions, and scenic attractions in this "Paradise of the Pacific," one of the most interesting travel lectures ever presented."

The Volcano House. Kilauea, Hawaii, May 4, 1920.

My return to the Volcano region of Kilauea and sojourn at the Volcano House has been like a real home-coming. The Volcano House still lures and ~~fascinates~~ captivates with its never-failing atmosphere of home, its roaring fires, and true hospitality; though no one who visited this famous hotel in years gone by can do so now without remembering its former genial host, who like many of the travelers he greeted will never return.

The impressions I carried with me of the Volcano Kilauea and the active fire-pit of Halemaumau, after my former visits in October and November 1916, were so vivid that together with pictures, both "still" and moving, have never failed in placing before my audiences throughout Australia, New Zealand, Canada and on the mainland, something of the wonders of this Dynamic Earth Wonder.

But like water to the thirsty traveler, has been the renewal of former impressions during this visit, when for the first time I have come close enough to the moving lava to lift it red-hot (perhaps hotter) on sticks, made even too intimate an acquaintance with a tiresome fire-spatter, intense on displaying its activity, to say nothing of sitting, last evening, with friends, on the rim of the fire-pit, while day merged into the shadows of night and found us still immovable as before us was ever enacted a theatrical spectacle that cannot fail to make one draw a little closer to their God.

I vowed that I could linger longer, but I leave with all my former impressions renewed, intensified, multiplied and with the desire to return again and again.

Mildred Lee Clemens
(Mrs. Robert Evans Schenck).

Press Reviews

Republican, Phoenix, Arizona:—Miss Clemens is a talker of rare charm. Her interesting personality was revealed as she related her own experiences in the valley which added to the interest in the lecture which not in any way corresponded to the stereotyped lecture.

* * * *

The New Zealand Times, Wellington, New Zealand:—Miss Mildred Leo Clemens' lecture, "Trailing Mark Twain," spiced as it was with many amusing anecdotes about the great philosopher-humorist, was punctuated by applause and laughter. Miss Clemens speaks well, and her discourse is enlivened with telling stories and bright flashes of humor.

* * * *

Star Bulletin, Honolulu, Hawaii:—The gifted authoress-traveler has a fresh and original style and a breadth of information on the islands which make her talks very interesting indeed.

* * * *

Evening News, Roseburg, Oregon:—As a fitting finale to a most enjoyable week, Miss Mildred Leo Clemens, a cousin of Mark Twain, presented her charming lecture, "Rambling Through Paradise," which was illustrated with magnificent picture slides and moving picture scenes. Miss Clemens has a wonderful speaking voice, full and clear, a perfect command of the English language, and gave a lecture that was not only very instructive but delightfully entertaining. She went with her audience all through the beautiful Hawaiian Islands and the gorgeousness of many of the scenes presented are beyond description. The moving picture scenes were very entertaining, and especially were those of Mt. Kilauea in action, which were awe-inspiring. These scenes, together with the minute description of the wonderful mountain, given by the speaker, brought the famous volcano before the audience. Miss Clemens and her beautiful story will not be forgotten by those who spent the evening with her.

* * * *

Herald, Dalby, Queensland, Australia:—Much interest had been centered round the visit of Miss Mildred Leo Clemens, a cousin of Mark Twain, the great American humorist, and there was no disappointment. Miss Clemens describes her travelogues in a manner that visualizes the many scenes of interest and her pictures are an artistic mastery of photography. The beautiful views of the tropics, Hawaiian Islands, the Yosemite Valley, and the trip across the Rockies, kept the audience enthralled and the lecture was one that will be remembered for many days to come.

* * * *

Webster City Tribune, Webster City, Iowa:—It is a fine sight to see the Chautauqua from the platform, a sea of eager, waiting faces, and such a pleasure fell to Miss Mildred Leo Clemens as she stepped to the platform to give the final address. Her subject was "Rambling Through Paradise-Hawaii." Miss Clemens proved to be an interesting and instructive guide. The pictures were beautiful, the "movie" part of them very graphic and in parts dramatic and awe-inspiring and the result of the combination of human voice, still picture and movie was that the great audience seemed to be actually transported through paradise of southern seas. Miss Clemens was a fitting accompaniment to pictures that were unusually fine, both as works of art and as expositions of a worthwhile tale. The audience was specially interested in the very vivid pictures of Hawaii's best known active volcano—Kilauea. This scene was the most dramatically interesting thing the Freeman-Tribune has seen connected with moving pictures taken on the brink of active volcanoes.

* * * *

Everett-Tribune, Everett, Washington: — Miss Clemens' lecture, "Rambling Through Paradise," Paradise, in this instance, being the Hawaiian Islands, proved an exceptionally fine treat.

* * * *

Townsend Leader, Port Townsend, Washington:— Miss Clemens, with her illustrated talk, "Rambling Through Paradise," made one of the big hits of the entire week. She pictured the beauties of the enchanted islands in a manner which carried the audience along with her and almost made them believe they were right in the midst of the wonderful scenes. The films showing the crater of Mount Kilauea, with the molten rock seething and bubbling, were wonderfully realistic, giving those who have not been so fortunate as to have made a trip to the spot a vivid idea of the great forces of nature there demonstrated.

* * * *

Courier, Oregon City, Oregon:—Feature Artists Appear on Last Day at Gladstone Park.—Closing the season was the descriptive lecture by Mildred Leo Clemens, on "Rambling Through Paradise." Miss Clemens has spent considerable time in Hawaii, and brought back with her a wonderful story and a wonderful collection of pictures. Miss Clemens dealt with the history, traditions and customs of island folks in a manner which showed deep study. Many views were shown of the lake of lava, and especially beautiful were the night photographs. With only the light of the fiery cauldron to illuminate the scene, the photography in the pictures was nothing short of marvelous. The talker's description of the great crater was intensely interesting, and proved her to be a keen student of geographical problems.

* * * *

Taree, N. S. W., Australia:—The best thing yet given by Chautauqua was Miss Clemens' illustrated lecture, "Rambling Through Paradise." The photographs were magnificent—landscape and seascape, gorgeous flowers, and the eruption of the great volcano in the Hawaiian Islands. The pictures were photography's highest effort, and the graceful and picturesque language of the lecturer was in keeping with the splendor of the subject.

* * * *

Mail, Vandalia, Missouri:—The climatic close of the Chautauqua came Friday evening in a picturesque "Ramble Through Paradise-Hawaii," led by our faithful guide, Miss Mildred Leo Clemens. Miss Clemens was a guide of the highest type; characterized by a fluency of beautiful descriptives, and a perseverance in taking the by-paths to get into the heart of her subject. She not only displays a love of physical beauty, but an abiding love has developed for the simple, honest and kind-hearted natives. Miss Clemens first showed the commercial and industrial value of the sugar, rice, and pineapple plantations. We reveled in the beauty of the flowers, trees, mountains, sunsets and oceans. When we were led up to view the volcano Kilauea, world-famed for the grandeur of its seething lake of molten lava, we were awed to silence and felt the omnipresence of the God of the universe. With Miss Clemens we drew a little closer to our God.

The Poet

A tourist is only a tourist,
Till his feet touch this Tropical land;
Then words, like the ink in this bottle,
Begin to flow from the pen in his hand.

He "poems" of the tropical grandeur,
Of these isles, their beauties and charm;
Of the mountains, the valleys, the flowers,
Waikiki Beach and the raving palm.

But – when he sees the Volcano –
Its lava, its fountains and lakes,
He gives it a silent Once Over,
Then firm "resolutions" he makes –

And "prays"

Dear LORD on High I supplicate!
Here on my bended Knee,
That in the days that are to come,
A better man you'll help me be.

Then "says"

I have gazed into your furnace,
PELE, I am ~~bound~~ – within your spell,
Show me how to go to Heaven
For I cannot go to HELL.

W.S.Jr.
HONOLULU.

NORTON EXPLAINS ADVANTAGES TO HILO OF TICKET TRANSFER

Beginning today, the interchangeable ticket between the Matson and Inter-Island lines is an accomplished fact. If by a chance any Matsonia passengers have stayed over, they may return by the Mauna Kea today. This is the information received here in a letter from L. W. de Vis Norton, agent of the Hawaii Publicity Commission. Mr. Norton makes the statement upon the assurance of Messrs. Percy Morse of the Inter-Island, and John Drew of Castle and Cooke.

Mr. Norton says he took the question up with W. H. Sellander, general passenger agent of the Matson line, when the latter was in Honolulu. Mr. Sellander thought there were many difficulties in the way but finally agreed to take the matter up with Mr. Morse of the Inter-Island. In the end Mr. Sellander was unable to do so, but left the matter entirely in the hands of Mr. John Drew.

Thereupon ensued a series of conferences between Mr. Norton, Mr. Drew and Mr. Morse, as a result of which the agreement has been reached whereby the Inter-Island will accept return halves of Matson tickets, refunding to the holder the difference in cost between the two rates. Although nothing is said to this effect by Mr. Norton, it is supposed here that the Matson line will similiarly accept Inter-Island tickets, payment of the difference in the rate of fare.

How It Will Work

Setting forth the manner in which the agreement will work, Mr. Norton says the Matson Company fare from Hilo to Honolulu, inclusive of War tax is $21.60, while the Inter-Island fare is $16.20. All passengers holding Matson return tickets between Honolulu and Hilo, who desire to remain longer on the Big Island are now given the right to stay over for an indefinite period and, upon their return to Honolulu on an Inter-Island boat from Hilo, may present their Matson return half to the Inter-Island purser, who will hand them the sum of $5.40, this being the difference in the two fares inclusive of War Tax.

"This is the first point gained in what I hope will prove to be a completely satisfactory and workable arrangement between the two companies, and I cannot refrain from expressing my warm appreciation of the attitude of Mr. Morse for the Inter-Island Company and Mr. Sellander and Mr. John Drew for the Matson Company," Norton writes. Continuing he says:

"The second point to be gained appears to me to secure an understanding with the Matson Company in San Francisco that through tickets to Hilo will be sold in all cases with an explanation the purchaser can understand, so that he will be advised beforehand that he is not limited to a 48 hour stay on the Big Island.

"I am taking this up with Mr. Sellander direct, as it will be quite in line with his expressed publicity policy for the islands, and will also enable the Big Island to back him up with more enthusiasm.

"It appears to me to open the way to a large increase of passenger business by both lines, and to be a great inducement to the tourist to stay over and really see something of Hawaii.

Big Island Must Help

"But a very great deal can be done on the Big Island itself, especially by the drivers of rent cars and the proprietors of automobile garages. They

(Continued on page 8)

NORTON EXPLAINS TICKET TRANSFERS

(Continued from page 1)

will see at once that it is to their direct and personal benefit to use every endeavor to persuade tourists to remain longer upon the island, and they will now no longer have to fight the plea that passengers are bound to abide by their tickets which call for return within 48 hours.

"Their ticket now entitles them to remain as long as ever they like, and in addition to that they will receive a cash refund upon its return half.

"This new arrangement will also make it more easy to institute the inclusive ticket system proposed by Mr. Halton and is the forerunner to the next move which will be to secure a similar arrangement operative by Kailua. That this last can be be arranged I have no doubt whatever, but am content to let the first arrangement develop. We have got a concession that has taken five years of work to put through. Now we have got to show that it was worth while and make good on it to such an extent that, presently, we can go ahead on the next step. If the chauffeurs are awake to their own interests, they will do much toward bringing this about."

HONOLULU STAR-BULLETIN, WEDNESDAY, JULY 21,

A Second Visit to Kilauea

Once more I'm here to feast my wondering eyes
On sights not elsewhere seen by mortal eyes;
To see the seething lava, smell the s..ulphur smell
And wonder can it really be that this is hell.
When our souls leave their tenements of clay
Will those who have been good fly straight away
To some celestial sphere, while the wicked here remain
To perish with this earth, in endless pain?
I've thought: Since God is Love, He will not thus efface
Those guilty souls of every clime and race
Who failed to do their best to make all burdens light.
But was I right? Let's think this o'er by lava light.
As mortal man, made in the image of Immortal God,
Destroys obnoxious weeds that sap the fertile sod,
Why should not God, Himself, God of service and of love,
Destroy the selfish, thoughtless souls who placed themselves above
His law of service and of love for fellow men
And lived for self alone? Why should they live again?
The greatest happiness earth has for mortal men
Comes through deeds of kindness for their fellow men.
While all religions teach that men should honest be;
Should aid the weak; assist the poor; and upright be,
Because God-given conscience teaches that is right,
Tho Christian's God demands that these be done through love:
Substituting for a cold morality just love.
A smile, a pat upon the back, a helping hand
For the unfortunates we meet on every hand,
A kindly act or gift, however small, brings joy
To all concerned and happiness without alloy.
And this is all that God demands that we should do:
To love our neighbors as ourselves and unto others do
As we would have them do to us. Who fails in this
Ignores his conscience and the divine command
And lives for self. And now I think I understand
How such a soul can be obnoxious to a God of Love
And left to perish with this earth by Him above.
And what's the verdict? I'm blest if I can tell.
I think I'd best reform my ways, lest it be hell.

F. W. V.

Honolulu, July 18, 1920.

(Verses on the occasion of my first visit to Kilauea were printed in The Star-Bulletin of December 9, 1916.)

National Park Service
Hawai'i Volcanoes National Park

August 7, 1920

> Standing at the brink of Halemaumau one looks down hundreds of feet, although this distance varies, into the immense cauldron, covering 15 or 20 acres and near the center observes the greatest activity—observes the roaring, seething, turbulent, sputtering mass of boiling lava, splashing forth at intervals in bursting bubbles and mighty fountains, among them "old faithful" the largest; observes fiery cracks, creeping like lightning, from the center through the surrounding cooler lava mass, some of them to the very sides of the crater; observes the entire floor suddenly collapse and an ocean of billowy, foamy, fiery lava cover it, or sees a detached lava island, kept afloat oftentimes for months, by the imprisoned air contained within it, hover too near the fountains' play and become quickly overwhelmed; observes these and other processes,—cascades, whirlpools and rapids,—repeated again and again. The spectacle when the volcano is at the state of its greatest activity is tremendous, awe-compelling, and even at its ebb cannot fail to inspire one with the magnitude of nature's forces, yet here, as elsewhere, preconceptions of visitors may sometimes foredoom one to disappointment. The

From the "Aloha guide"—the standard Handbook of Honolulu & the Hawaiian Islands.

The above is no longer descriptive of the volcano, altho I felt it was at the time of my previous visit on November 18, 1912. Descriptive did I write? No, I am even more strongly convinced than I was then that it is impossible to describe Halemaumau's activity, and this for the reason that it is ever changing and is never the same. At any particular moment or minute of time it, or portions of it, might appropriately be likened unto the ocean waves and breakers beating, and splashing against a rugged shore, swishing, roaring, foaming, heaving, falling wildly and restlessly the while, but the next moment or minute the activity may have changed and been transferred to a entirely different locality and have changed in its very nature. There is a regularity about the ocean which eventually becomes monotonous and lulling in its effect upon one's senses, but no such regularity marks the volcano's activity, and one is constantly kept on the alert for the next movement and if there be any tiring effect it is because of one's being so constantly kept on the qui-vive and it is then the weariness of constant concentration and not of monotony. No, Halemaumau's activity is impossible of description. The best that can be done is to give another person one's impressions — to put that other in a mental attitude corresponding to one's own — hence to deal in generalities and not endeavor really to describe what one sees.

As compared with 1912 the volcano is at a higher level but not so wildly active. "Old faithful" is gone and the many smaller "geysers" or bubbles, of which I counted thirty or so, are not so large and impressive. The rapidly creeping lighting-like cracks are not so conspicuous, and the impression left is one of comparatively greater quiescence.

Finally, is the volcano worth travelling far to see? Decidedly yes.

1920
Aug 19th

This is my second visit. The appearances and features about the pit Halemaumau are so completely changed as to bear no similar resemblance. The molten mass was then (May 26th 1916) about 300 feet below the then rim. It seems less than that depth now. The present rim seems to be 20 ft higher and good objective point fewer.

Kilauea answers the fullest definition of the word "awe." - in its true sense. When I first approached the banks of that awful cauldron, tear drops of tremendous astonishment stood on my eye lids. I was as a child. Results of a mighty force could be seen. The effect was visible but its source remains a problem probably never to be solved. There may be many beliefs. Beliefs are interesting from the standpoint of investigation but belief is not knowledge.

I must record a funny incident. Four years ago as I [illegible] away from the enchantment that seven hours before this mighty spectacle had brought upon me, it was dark and some one hundred persons sat about the rim looking into its fiery depths. I heard one gentleman(?) remark to another, "say Sam, would this be a hell of a good place for Billy Sunday to preach a sermon". Needless to say the humor of the thing broke for the moment, the spell.

Peter had a little pit.
In which he built a fire.
He fanned & fanned the little flame
To make it burn the higher.

And when he got it burning
He said "now this will stay ya"
Then he put in all the sulphur
And called it Kilauea

He advertised it far & wide
And people came to see
He got Prof. Jaggar to come & stay
– And work for you & me.

Now Jaggar keeps it burning
He blows it with hot air
The Volcano House is thriving
And we're all glad we're here.

(Apologies to Mary Pauls.)

Peter Peter Volcano House Keeper
Had a hoard of guests to entertain
Then one Madame Pele went to meet her
And now they rave of Kilauea's flame.

ARMY AIRCRAFT ALIGHTS BECAUSE OF GAS SHORTAGE

One Flying Machine Arrives Here From Honolulu After Having Strenuous Time Battling High Winds on Ocean

CREW CLIMB ALONG WINGS TO REACH ROCKS

Trip Takes Four Hours and Thirty Minutes As Result of Bad Weather Conditions; 120 Gallons Gas Consumed

Battling high in the air against a strong wind that retarded the machines to a tremendous extent, two army seaplanes yesterday morning had a strenuous time endeavoring to reach Hilo from Honolulu.

In fact, only one of the planes did manage to alight on the surface of Hilo bay; the other was forced down in the water off the coast of this island at Honohina. However, it was not through any injury caused by the gale that the seaplane was forced down. It was on account of a shortage of gasoline, as the supply taken on board at Pearl Harbor was used during the long battle against the elements.

Alights on Ocean

The plane was brought to rest near Honohina and hit the ocean about 500 yards from land. The swell soon moved the airship toward the rocks and within two hours or so the crew of three officers, Lieutenant Duke, Lieutenant Gale and Captain L. S. Johnson, were able to climb along one of the wings and reach a rocky ledge. The plane was fended off the rocks as much as possible in an effort to save it from destruction.

Plane Total Loss

The effort to save the plane proved futile and a few hours afterward all that remained of the airboat was a mass of debris lying in the rough water. The breakers prevented any salvage work and the crew could only stand on the narrow ledge of rock and watch their craft smashing to pieces.

The three officers had been observed by residents of Honohina and long ropes had been collected so that the airmen could be pulled up to the top of the cliff at the base of which they were stranded. This task was accomplished late in the afternoon and the party then made its way in an automobile to Hilo.

As soon as word of the trouble was telephoned into Hilo from Honohina, the news was given to the three officers who had arrived safely, but they already knew of the forced drop of the second seaplane. In fact, they found themselves very short of gasoline on the final few miles of the air voyage and just managed to reach Hilo. There was not enough gasoline left over to run the seaplane along the surface of the water to the landing stage.

In the first plane were three officers, Lieutenant R. H. Wooten, Lieutenant C. Duncan and Lieutenant J. C. Moorman. They were met by the launch Waiukea as their plane came to a halt in the bay. Instant arrangements were made to have a supply of gasoline sent out in the launch to the second plane. The launch left for the scene of the affair shortly before 1 o'clock.

Details of Flight

Dec 2, 1920
From Hilo Tribune -

After seeing Haleman man all officers in this plane are very thankful it was water they dropped into instead of the molten lava - the entrance to Hades.

A river of liquid fire, roaring and roaring. Mother Earth, which makes one think that only one who has suffered the tortures of the damned could begin to understand it. Yet so marvelous, and so beautiful in its brilliant waters. ity that we feel unable to describe it.

Wenonah E. Rees Omaha Nebraska

I have been in Public School work
for sixteen years and have no words
at my command to describe this
wonderful volcano. Mrs. Russell Leeds, Seattle, Wn.

Feb. 28"
1921

It is one of Gods wonders, one can only
look and speculate as to what might
happen at any time. It is beyond
discription.
Mr and Mrs. M. L. Stickel. Santa Paula, Calif.

Hawaii Volcanoes National Park Service

Feb. 28. Early in the morning
We came; we saw; we ~~conquered~~ to wonder
Spent the night with Madame Pele, who entertained
us well with falling ledges and boiling seas of fire.
Elizabeth Freeman Portland Oregon.

Feb 28 Mere words are so weak when one tries to
tell of one's feelings when gazing on the
wonderful work of our Creator
(Mrs H. A.) Carrie M. Webber
Great Falls Montana

Feb 28/21 After twelve years I stand again on the brink
of this marvelous exhibition of Earth's hid-
den forces and find the volcano even
more fascinating than on the occasion
of my former visit. To those who recog-
nize the Divine in Nature's handi-
work Halemaumau is a living sermon
which constantly challenges wrong and
unworthy motives and ever inspires true
and noble aspirations. It is truly a
"Sermon in Stones".
Frances King Headley
Los Angeles, Calif.

On our never to be forgotten trip to the Islands.

Feb. 28. 1921 I have seen the Sphinx and the Pyramids, the wonders of
the Grand Canyon and Yosemite, but nothing, anywhere, to
equal or compare with this greatest Marvel of the World! This
boiling, seething cauldron (or cauldrons) of liquid fire, unceasing
and resistless as fate. Terrible as the Inferno, but still with an
ever changing and awful beauty that fascinates and draws
you with irresistable force to its side, and you carry away
a picture, and a memory that a lifetime will not efface.
Evelyn E. Underwood.
Berkeley. Calif.

Hawaii Volcanoes National Park Service

Feb. 28 1921

My first approach to the wonder of this world was with great anticipation as to what I should see. I certainly reluctantly left it with the most profound impression that anything has ever made upon me. Its awful grandeur and ever changing effects are simply beyond description and make one feel that a most powerful hand is ruling.

Ellen W. Truesdell.
Berkeley. Calif.

Mrs. R. E. Dowdell - Mitchell So. Dak.

Farewell Halemaumau I bid you good-bye
For coming again I never shall try
For parting with friends, as well as my food
Is not very pleasant, but positively rude.

Tourists are we, numbering seven
Like children good, we feel close to heaven
But even the Molers, Twist and Dowdell
On reaching the crater, felt closer to hell.

Mr. & Mrs. A. B. Moler - Chicago - Ill.
Mr. & Mrs. R. E. Dowdell - Mitchell - So. Dak.
Miss Ethel Dowdell - Mitchell - So. Dak.
Miss LaVilla Dowdell - Mitchell - So. Dak.
Mrs Isabel M. Twist - Kalamazoo - Mich.

Hawai'i Volcanoes National Park Service
National Park

Apr. 3/21 When visiting Kilauea for the first time on Sept. 9 1905, it was to peer into a hole almost a thousand feet in depth, and to be rewarded by seeing a thin column of sulphur smoke — nothing more. Today, I found the pit three times its former size, and beheld a lake of molten lava, with wonderful fountains playing in all directions. Maelstroms in three places seemed to be draining the lake dry, but without avail. The level of the lava appeared to be about seventy five feet from the rim. Several large islands in the lake of fire, were smoking with pent up heat. The scene at night, from the Volcano House, is wonderful beyond words. A high fog gives splendid reflection to the fires in the pit.

Whilst Madam Pele has grown stouter and more cantankerous, Mine Host George Lycurgus is still the same courteous gentleman as of old, though he realizes as I do, that the good old days, when a person would spend a week here, and go back and forth to the pit on horseback, have passed on, and now the gas buggy whisks you from Hilo, here and back in a few hours.

Thinks me sentiments on my third visit, May 15 1921 / Chas. J. Cooper / Wm Henry Cooper (nephew)

April 3-4 1921 — Chas. J. Cooper, San Francisco, Calif.

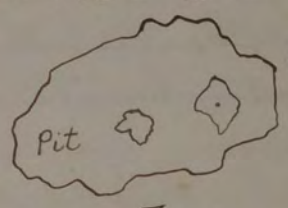
Mt. Clair, Missouri.
R.M.A.

A sight never to be forgotten ——

I visited the crater on a Tuesday December 20th It was a fine sight. It seemed to form maps every once in a while. In different spots it seemed to be quite active and all at once it grew very large. I hope to visit it once again so I can tell more about it.

Mary Butchart



Crater of Kilauea.

Friday the 23rd of Dec. 1921. I went on a ~~hike~~ hike to the tree fern forest and got lost and saw a big hog ~~with~~ with seven little ones it was pouring rain and it was a miserable time.

Miss Edwina Embree.

I visited the Wonderful Crater of Kilauea.

January 1, 1922 -
Happy New Year, everyone !!.

Of all the sights that we have seen in all our travels round
We're sure that none can equal Pele's hole here in the grounds.
Altho' the Mauna Kea brought our party to this shore
The ladies say it's worth the trip, and what could they say more?
The English language, we have found, can't possibly convey
Our thoughts, so we are silent. There is nothing left to say.
But, while we are standing breathless, groping for new flowers
of speech,
Mr. King would like to give you a few words about
Long Beach!

Sue Haworth Keller - Omaha, Nebraska -

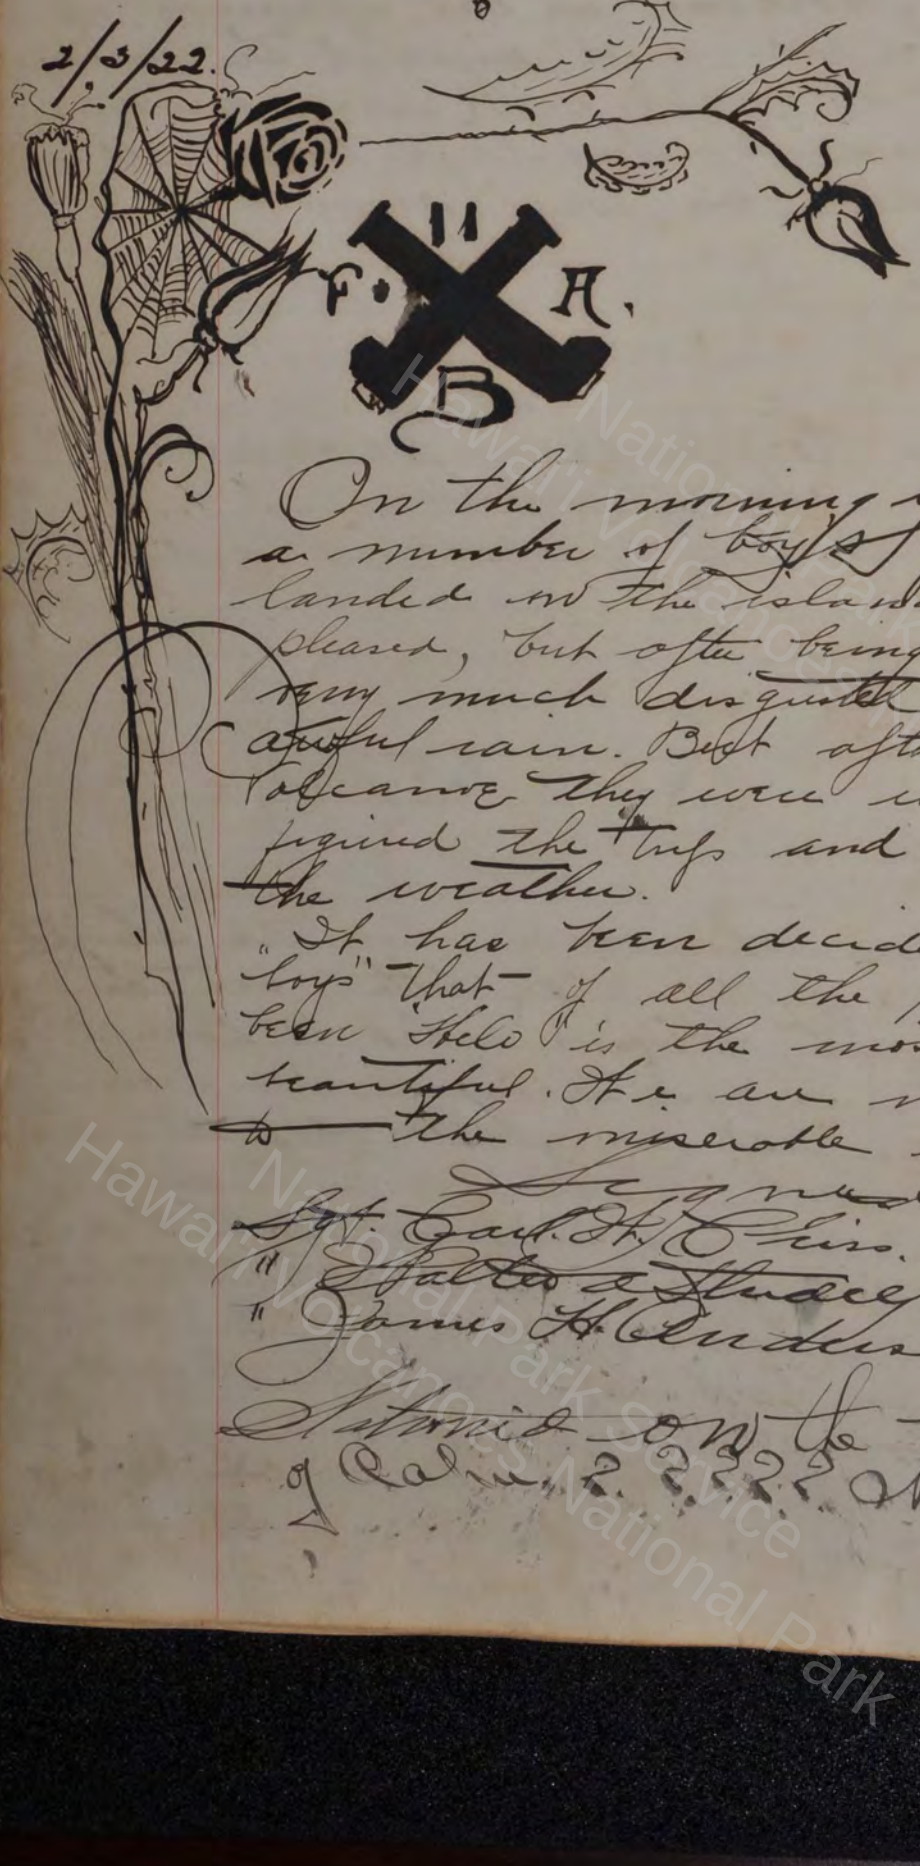
Sgt Walter Studell

Sending love Xmas 1922
for a 15 day stop
Thanks to Uncle Sam



April 1-192

On the morning of Feb. 29th 1922
a number of boys from the 11th F. A.
landed on the island of Hilo, much
pleased, but after being there two days were
very much disgusted because of the
awful rain. But after viewing the
volcano they were well pleased and
agreed the trip and sights well worth
the wealth.

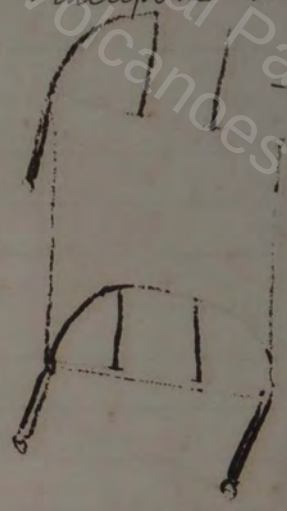
It has been decided upon by the
"boys" that of all the place they have
been Hilo is the most interesting and
beautiful. We are now going to Parker
to the miserable ils of Oahu,

Signed
~~Sgt~~ Capt. H. L. Ellis. Btry "E" 11th F.A.
" Walter A. Lucas " "B" " " "
" James H. Anderson " "E" " " "

Entered on the Beautiful Island
of Hawaii. 2-29-22. A.M.

La visite au Volcan vaut la peine. Le fait intéressant pour celui qui a séjourné à l'Ile de la Réunion, est de trouver ici un volcan similaire à celui du Piton de la Fournaise. La Réunion est à peu près l'antipode d'Hawaii.

22 Fév. 1922. Louis Raissac.



April 1-1922

This is "April fools day" but we did not get fooled when we visited the Volcano. We had the best nights rest here since leaving Los Angeles

April 7th. 1922

Matthew Arnold made the Greek philosopher, Empedocles, say before he threw himself into the crater of Aetna:

"The gods laugh in their sleeves
To see man doubt and fear,
Who knows not what to believe
Where he sees nothing clear!"

While I – a minor Scotch philosopher – resisted "that impulse" to make a blazing finish, the lines kept recurring as I watched the sparks fly upward from the anvil of the gods — Titan's Forge — Kilauea!

Stephen Chalmers

April 7-1922

Dear M. Knitger-

My second visit to "Madame Pele" – left lacking words to express my impressions of her many glorious activities – still am I glad that I came & hope it will not be my last.

April 7-22 Mrs. Laura M. Knitger Los Angeles Calif.
Magnificent Kilauea! as the centuries come & go
Mankind shall gaze in wonder at
thy source of power we cannot know.

April 26, 1922. Mildred Leo Clemens Schenck, Berkeley, California -
Two years have passed since I last visited
Kilauea, and as I have so often told
from the Platforms of six countries, I
have "lived to come back." Again I leave,
and always with regret that when I will
it, I cannot visit Pele in her ever
fascinating, changing moods, but I am
happy that in "Happy Hawaii" I have
the opportunity of telling thousands of
this magnificent spectacle and bring
them.

" " Robert E. Schenck - - Berkeley - California.
