CONSULTANTS IN ARCHITECTURAL ACOUSTICS

**CRITERIA B – COMPREHENSIVE PLAN**

The firms of Edward Dugger + Associates, PA (ED+A) and Pro Sound and Video (PS&V) will combine their talents in the design, construction, and maintenance of audio video systems for the National Parks Service.

Edward Dugger + Associates, PA

ED+A is a multi-discipline acoustical consulting firm that works primarily on architectural acoustics projects throughout the United States. The firm is also registered as an architectural firm in Florida and has the capability of obtaining other state architectural licenses through the National Council of Architectural Registration Board (NCARB) system. We have been in business for five years and have completed over two hundred projects to date. Our project experience runs from small Audio/Video systems designs, to large performing arts centers. Our client list includes private owners, not-for-profit groups, Colleges/Universities, and local/county/state/national governmental organizations.

ED+A will serve as the principal design consultants for the project and will be the point contact for the National Parks Service projects. We feel our firm would be an ideal fit for the National Parks Service work since we are a specialized design firm that works in all the areas necessary to accomplish the projects, including architectural design, acoustical design, AV system design and documentation, as well as final commissioning. We have selected Pro Sound and Video from Miami as a strategic partner in this effort since we have had a sixteen year relationship with this firm. This firm will serve as the AV installer who will also act as the maintenance contractor per your RFP requirements. Additionally, Pro Sound and Video has offices throughout the United States which is why we would like to be considered for several, if not all of the geographic areas listed in your RFP.

Both firms are accustomed to working on small as well as very large projects. We commonly organize our design and construction efforts by use of web-based project management systems as well as constant email, phone, and internet communication systems. We commonly exchange AutoCAD, Excel, and MS Projects software files via emails to document each firm's role and how we are to proceed. If necessary, we can call project design meetings and bring in any specialty design consultant and product supplier to discuss the project in detail. We will keep detailed records of our emails, meeting notes, field notes, and any other correspondence associated with each project. Additionally, since our firms have worked well together over the years we easily recognize who should be performing specific roles and how those roles integrate with others. If a problem is recognized then either firm can step in and help resolve the issue, while communicating the solution later to the other firm.

On large projects, ED+A and Pro Sound and Video commonly organize over +20 sub-consultants and contractors, while serving as an effective point of contact from beginning to end.
