## Memorandum

To: JECA Central Files

From: Andy Armstrong, Cave Management Technician

Subject: Jewel Cave Winter Bat Survey

On January 7, 2008, the annual hibernating bat count was conducted at Jewel Cave. Mike Wiles, Rene Ohms, Andy Armstrong, Eric Dodd, Brad Phillips, and Joel Tigner participated in the count.

We conducted the survey following a protocol that has been used at Jewel Cave since 1992. Two search routes were surveyed: one extending from the Milk River gate to the cave entrance (Heavenly Route); the second extending from the Dungeon Room to Surveyor's Hall (Dungeon Route). Attached are copies of the maps used, with the specific search areas indicated.

We began the count at 9:10 a.m. and split into two groups. Each search group proceeded to the end of their assigned route, then counted back toward the entrance. The Dungeon Route group (Joel, Rene, and Andy) finished at 10:00 a.m., and the Heavenly Route group (Brad, Eric, and Mike) finished at 10:40 a.m.

Both *Corynorhinus* (877) and *Myotis* (442) were found. When possible, the *Myotis* were identified to species. One *Myotis thysanodes* was spotted in the Trap-Door Room section. Each bat was counted, although numbers roosting in large clusters were estimated. Many bats may have been overlooked, particularly those that roost in small cracks, such as *M. ciliolabrum*. Temperature and relative humidity readings were taken in each numbered search area.

A total of 1,319 bats were counted. There were 669 bats along the Dungeon Route (COTO=424; MYOT=245) and 650 bats along the Heavenly Route (COTO=453; MYOT=207). Overall, 32 fewer bats were counted this year than last year. The greatest number of bats in a search area was 240 *Myotis* in the Dungeon Room. The largest cluster (55 *Corynorhinus*) was in the Catacombs.

The temperature recorded just outside the cave entrance was 24.6°F, and the cave was inhaling.

## SUMMARY OF BAT COUNT RECORDS FOR JEWEL CAVE, 1950s TO PRESENT

<u>Year</u>	<u><i>C. townsendii</i></u>	<u><i>Myotis sp.</i></u>	<u><i>E. fuscus</i></u>	<u><i>P. subflavus</i></u>	<u>Total</u>
pre-1959					3500-4000 - reference in letter (anecdotal)
12/29/59-3/18/60	1137	unknown			1137 1137 COTO banded*
12/22-12/30/60	544	unknown			544 544 COTO banded*
12/28-12/29/61	291				291 291 COTO banded*
					(Total of 1,972 banded, 1959-61)
1967/68	600	unknown			604 (including at least 4 <i>M. ciliolabrum</i> and an unknown # of <i>M. volans</i> )
1969/70	1000	280			1280
1986/87	728	545			1273
1988/89	614	492			1106
1989/90	831	445			1276

New methodology established in 1992:

1992/93	1187	181			1368
1993/94	791	389			1180
1994/95	895	356			1251
1995/96	721	432			1153
1996/97	730	398**			1128
1997/98	593	479			1072
1998/99	901	454			1355
1999/00	853	466	2?		1321
2000/01	708	435			1143
2001/02	721	445	2		1168
2002/03	1135	470			1605
2003/04	886	457	2		1345
2004/05	1060	493	1?	1?	1555
2005/06	928	443	11		1382
2006/07	750	595	6		1351
2007/08	877	442			1319

\* Banding records are held by National Biological Service, Patuxent Wildlife Research Center at the National Museum of Natural History in Washington DC. (They have the original banding cards).

\*\* Deep Canyon was not counted in 1996/97.

## DUNGEON ROUTE COUNT, 2007

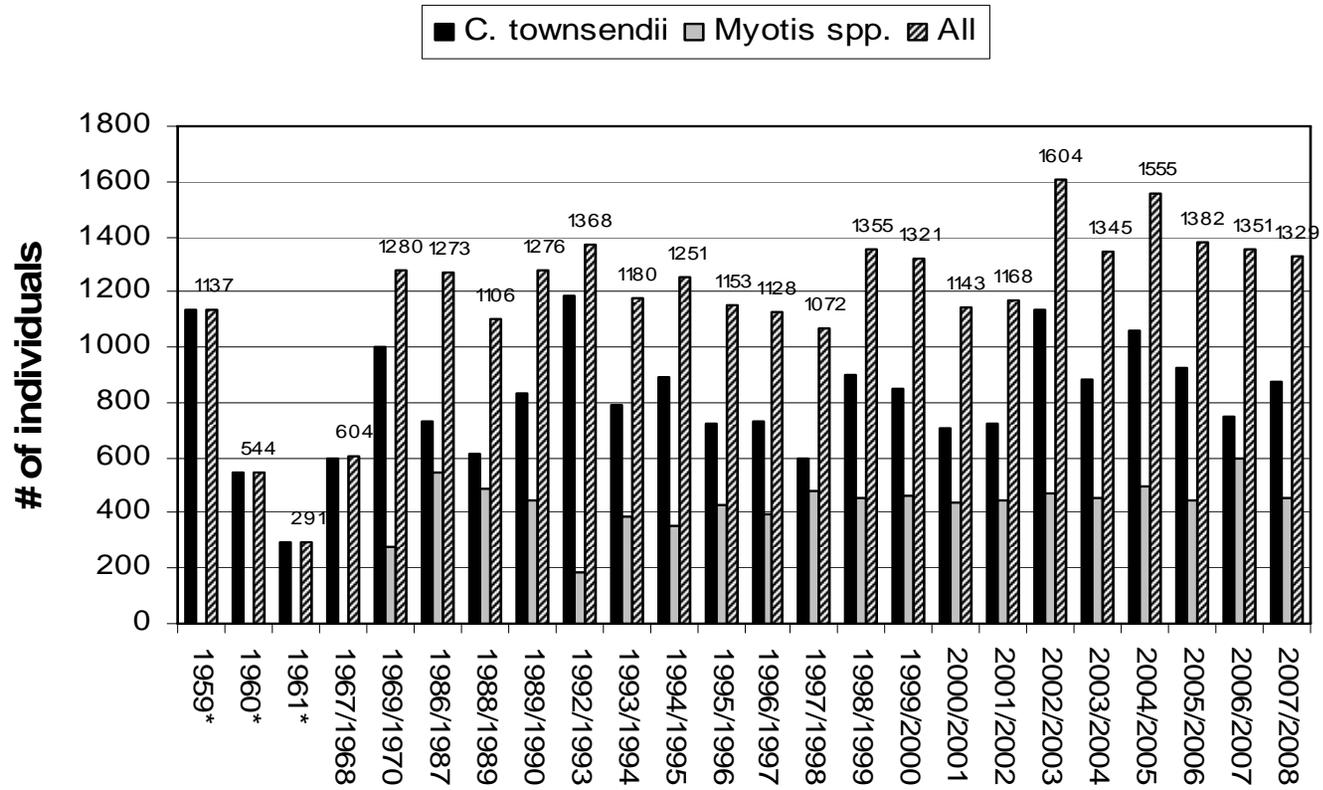

Survey Area	Temp	RH-%	Genus/Count	# in clusters	bats/cluster	avg/cluster	singles
<b>Area #1:</b>	33	85%	COTO = 229 MYOT = 0				
<b>Area #2:</b>	39	84%	COTO = 71 MYOT = 2	1	M. Thysanodes
