

There is still time...

to protect your national parks.

Silver carp leap out of the water when disturbed.

Young bighead carp look like other bait fish.

A group of non-native fish known as Asian carp are moving up the Mississippi River and causing problems for boaters and river ecology. Help control the invasion:

- Drain your boat
- Don't move bait or fish
- Avoid using live minnows above the St. Croix Falls dam
- Minimize lock use
- Report sightings
