Mojave National Preserve

Bird Checklist

Mojave National Preserve encompasses 1.6 million acres of the Mojave Desert. Elevations range from below 500 feet near the Devil's Playground to nearly 8000 feet on Clark Mountain. While birds can be found year-round, spring and fall offer the greatest opportunity for bird observation. Riparian areas such as Zzyzx and Piute Spring provide a vital stopover for waterfowl and shorebirds during seasonal migrations.

This checklist was compiled from lists specific to several habitats within the Preserve and is in accordance with the seventh edition (1998) of the American Ornithologist's Union Checklist of North American Birds. Please report any unusual and/or interesting sightings to park personnel.

Seasons of Occurrence:

Sp Spring (March–May)
 Su Summer (June–August)
 F Fall (September–November)
 W Winter (December–February)

Abundance Codes:

A Abundant
 C Common
 U Uncommon
 O Occasional
 R Rare

Habitats:

Pinyon/Juniper Woodland
 Found at 4000 to 8000 feet of elevation in isolated desert mountain ranges such as Clark Mountain, Granite Mountains, Providence Mountains, and New York Mountains. Vegetation includes pinyon pine, juniper, and sagebrush.

Joshua Tree Woodland

Generally grows between 2000 and 6000 feet in elevation. Vegetation includes Joshua tree, yucca, cacti, and blackbrush. The Cima Dome area is an excellent example of this habitat.

Desert Scrub

At 500 to 4000 feet in elevation, desert scrub covers the majority of the Preserve and includes the most variations of habitat. Vegetation includes creosote bush, bursage, blackbrush, cholla, and Mojave yucca.

Riparian

Found around springs and seeps at 500 to 1,500 feet of elevation. Vegetation includes: mesquite, willows, cottonwood, and tamarisk. Zzyzx and Piute Spring are examples of this habitat.
