

Volcanologists want to educate the people living near Mt. Rainier about some of the hazards that they could face living close to the mountain.

Having heard that you have learned about volcanic processes, they think the best way to educate people is for you to make brochure. A brochure is something that is handed out. It should be printed on both sides. The purpose of the brochure is to teach area residents what hazards they face and what they can do to limit their risk.

Your group needs to *create a brochure*. The brochure should answer three questions:

Why - Why are people at risk?

What - What are the hazards?

How - How can people limit their risk?

Mt. Rainier Hazards Brochure

Student Names _____

CATEGORY	4	3	2	1	0
Description of Hazards	Clear explanations of hazards.	Explanations of hazards are not exactly clear.	A confusing explanation of hazards.	Explanations of hazards are incorrect.	No explanation of hazards.
