which is about 15 m west of the third concrete power pole. The oven is about 20 m south of the track and 10-15 m west of the excavation for the now abandoned fish pond.

The oven was built about 1947 for Jaime Paulino's mother and grandmother by Jesus Meno Crisostomo of Inarajan (the same man, now deceased, who built the *Gef Pago* Park oven in 1992). At the time, the Paulino family lived in Inarajan but they had a *lancho* (small ranch) at this location where they had a covered outdoor cooking area. Now the oven stands in the open in a stand of *tangan-tangan* brush.

The Paulino *hotno* is a modern interpretation of an oven form that was introduced to Guam by the Spanish during the Spanish Colonial Period (A.D. 1668-1898). Although the construction materials used to build the ovens changed over time, the oven style retained the same basic shape.

The oven has an east/west orientation with the opening facing to the west. The base is 1.85 m long, 1.68 m wide, and about .80 m tall. The base is made of coral rocks and mortar. It was built in a corrugated tin frame that left horizontal impressions on the exterior surfaces. There is a .60 m long, .45 m wide, .80 m tall extension of the base on the left side of the opening. The portion of the extension that formerly continued across the front of the oven has collapsed leaving a remnant that is about .27 m wide and .57 m tall. The floor of the vault and its lower walls are built of heat resistant bricks. Five courses of bricks are visible on the vault interior, and they form vertical walls that are about .40 m tall and .24 m thick. Above this point the walls begin to taper toward the rounded roof. The upper walls and roof are built of alternating layers of red clay tiles and mortar. The vault exterior has a smooth finish. The top of the oven is 2.15 m above ground surface. The main opening is .35 m wide by .40 m tall, and it is braced across the top by a metal strip. The vent in the back wall is .80 m above ground surface, and it has a diameter of .06 m.

**7. Narrative description (Continued)**

grandmother baked *pan tosta*, *pan mami*s (dinner rolls), and wedding cakes in the oven. They sold some of their baked goods in their Inarajan store. They also baked slices of breadfruit (*essok*) and roasted pigs.

The oven is in relatively good condition although the trunks of several trees now threaten it. They should be removed.

**8. Statement of Significance**

The Paulino hotno is significant under National Register Criteria C and D. Criterion C states that properties may be eligible for the National Register if they embody the distinctive characteristics of a type, period, or method of construction. This oven exhibits traits of design and methods of construction that are similar to other ovens of this type.

Criterion D states that a property must have yielded or most have the potential to yield important information about some aspect of history. It is likely that if the oven were studied in more detail, additional information would be gained about specific techniques employed in its construction. Archaeological excavation in the ground near the oven would likely provide additional information about the oven's construction and its use over time.
