

**Take a sneak peek at our COMMUNITIES presentation!**

# Communities and Habitats

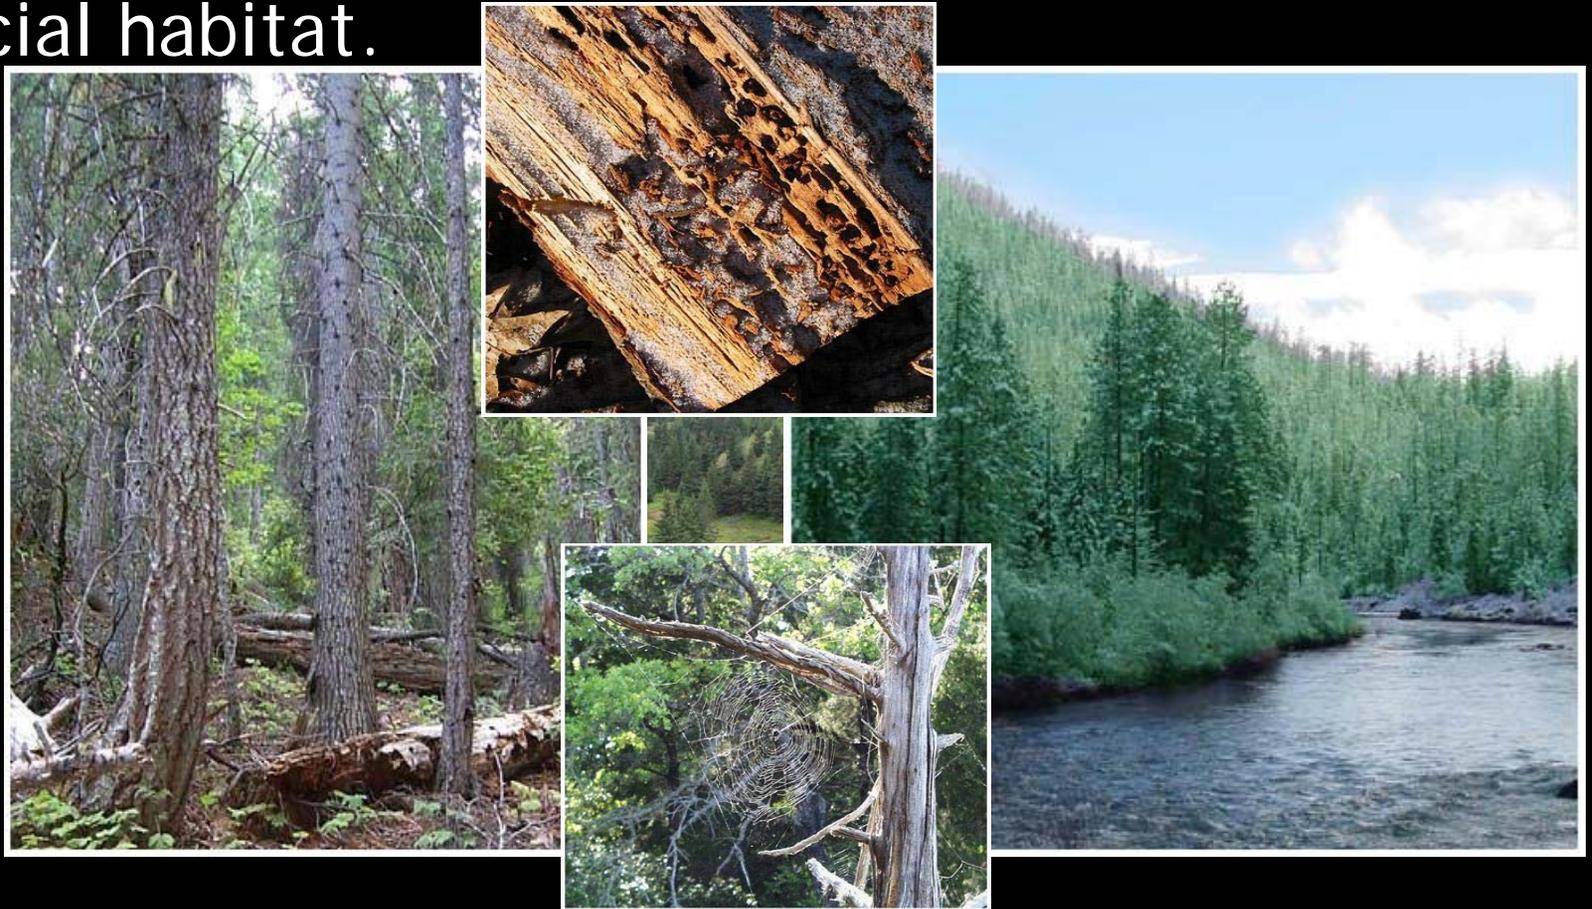

**This program :**

- **Defines communities and habitats of cave and forest wildlife**
- **Uses clues to have students identify an animal and place it in the correct habitat**

# Habitats

Habitats are the homes of plants, animals, insects and people. Every creature in a community has its own special habitat.

Creatures in a community will often share a habitat.

# Communities

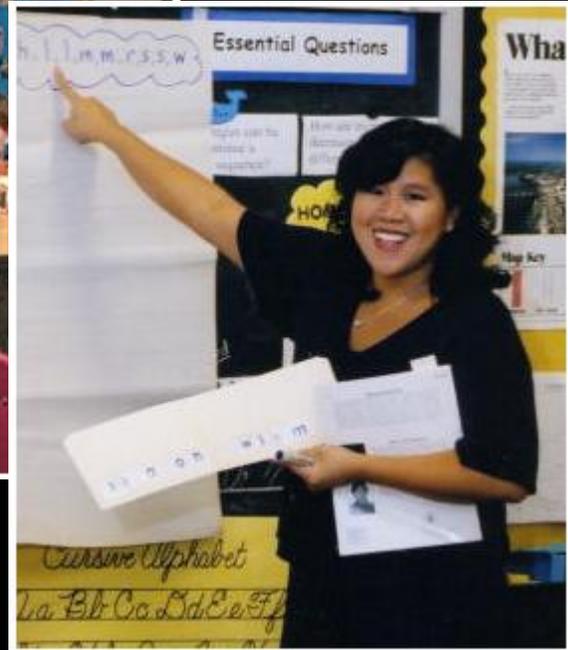

When plants, animals, and insects live together in the same place, we call it a community.

Every living thing is part of a community!

And your school building is a habitat; the people in the school make up the community!

everyone is  
...and even lunch ladies!  
important!

All of these plants and animals make up the community in the forest and cave habitats.

# Habitat Challenge

Color your animal, then see if you can figure out where it lives!
