Prescribed Burning Operation near Yellow John Mountain

Grand Canyon-Parashant National Monument fire managers are planning to conduct prescribed burning if weather and fuel conditions allow. The 140 acre treatment is located just west of Yellow John Mountain at N 36 08' 52" W 113 27' 11". Preparation, ignition, and monitoring of the burn is expected to begin on October 4th and run through October 7th, 2016. Dates are subject to minor changes given the variables and the dynamic nature of prescribed fires.

The prescribed fire will take place away from area roads. Visitors may see firefighters camping near Pleasant Valley. The treatment is intended to restore fire to fire adapted ecosystems, thwart the encroachment of juniper and pinyon pine, encourage the recruitment of native grass and forb species, and increase native plant diversity.

Prescribed fires must meet certain weather-related and environmental factors prior to ignition. National Park Service and Bureau of Land Management fire staff will manage and monitor the prescribed fire activity. Smoke may be present for several days in this remote area. Smoke emissions will be managed in accordance with the Arizona Department of Environmental Quality regulations.

No road closures are anticipated, but public access may be restricted during ignition and periods of active fire spread to ensure safety. Signs will be posted to notify the public. Please use caution when traveling in the area of the fire.

Contact Jeff Axel at 435-688-3377 for more information.

-NPS & BLM-

Grand Canyon-Parashant National Monument contains over a million acres of vast, remote and sparsely developed lands. It is co-managed under Service First Authority by the Bureau of Land Management and the National Park Service to conserve in perpetuity the values of its cultural and natural features.
