FOREWORD

This report has been prepared in accordance with Paragraph 3A, Memorandum FO-11-56 dated February 16, 1956. It does not purport to state in detail at this time what the original conditions of the Dogan House were during the Civil War years, the period to which it is proposed to restore the building. Rather, the intent of this report is to secure approval to permit an architectural investigation of the fabric. Part II, Architectural Survey Report, will propose the details of the restoration.

A restoration such as the Dogan House, involving in part, the restoration of a log cabin becomes exceedingly difficult because of the lack of specific information explaining the construction of log structures. Very few authors have ventured into the field of the log cabin. To further complicate the situation, the building underwent one major change in 1881 and two recent stabilizations in 1948-1950. The chances of finding evidence with historical importance has become more remote with each subsequent stabilization.

Funds to restore the Dogan House were programmed in Fiscal Year 1960, PCP B-59-1. Work had to wait until a resident architect became available on April 4, 1960. The project was reviewed by the Supervising Architect, Historic Structures, BODC, Charles E. Peterson, the Park Superintendent, Francis F. Wilshin, Henry A. Judd, Architect BODC, and Orville W. Carroll, Resident Architect.
A summer team consisting of Thomas Russell Jones, HABS Architect as Supervisor, J. D. Miller, J. S. Kahler, D. G. Malthrop and J. T. Wollon Jr., completed two sheets of measured drawings of the Dogan House for HABS during 1959. At this time, photographs for the HABS files were taken by Architect Jones.

The sources of historical information used in this report rely on the written narrative found in the Historic Structures Report for the William Henry Dogan House, prepared by Historian Elmer T. Crowson, August 26, 1958. Additional information was gathered by the author in private interviews with elderly residents of this area. This information has been included here when it is thought to be of any value. Information from the Manassas National Battlefield Park files was made accessible by the Superintendent, Francis F. Wilson.

It is the intention of the First Manassas Corporation, the Virginia Civil War Commission, the National Civil War Centennial Commission, the Department of Defense and the National Park Service to stage a reenactment of the First Battle of Manassas July 22, 23, 1961. This re-enactment represents the anniversary of the opening drama in the conflict of the War Between the States, and is of particular importance since the setting will be furnished by the National Park Service. In this setting, both the Dogan House and the Stone House will furnish valuable "stage props" - the Dogan House as a small rural home caught up in the crossfire of small arms and artillery pieces and the Stone House representing a building forced into use as
a field hospital. Every effort should be made to facilitate these
restorations before July 21, 1961, to present these buildings properly
in the re-enactment scene.

Orville W. Carroll
PART I

PHYSICAL HISTORY

A. GENERAL DESCRIPTION

The William Henry Dogan House is the last remaining building that comprised the small settlement of Groveton, Virginia, located in Prince William County at the junction of the Warrenton Turnpike (now U.S. Highway 29 and 211) and the Groveton-Sudley Road (now Virginia Road No. 622). It and the Stone House, located approximately one mile east, are the last two buildings remaining of the Manassas National Battlefield Park that witnessed both the First and Second Battles of Manassas (also called Bull Run) fought in the early years of the Civil War, 1861 and 1862.

The house stands approximately 35 feet north of the Warrenton Turnpike and 30 feet west of the Groveton-Sudley Road. Its longitudinal axis is oriented north and south. The house is still composed of two separate buildings, a story-and-a-half log structure 13'-7" x 19'-3", joined on the north to a one story with attic frame structure, 16'-1" x 18'-2". A centrally located stone chimney, 5'-0" in depth, with a fireplace in both north and south rooms on the first floor, was built at the juncture of the two buildings. The interior space between the two buildings on each side of the chimney was utilized as a pantry to the east and as an entrance hall to the west.

1. Information secured in interview with Mrs. R. B. Roland, Haymarket, Virginia, sister of W. H. Dogan (IV) deceased, 1960.
The building contains two rooms on the first floor and two rooms on the second floor, each identical in size to the rooms below. Access to the second floor was by a stairs located in the south-east corner of the log addition and by an additional stairs with three risers located between the two second floor rooms, west of the chimney. The interior walls of the log building were filled with chinking between logs whereas the frame addition was covered with lath and plaster. All interior surfaces were whitewashed.

There are two existing exterior doors. One located midway in the east wall of the frame addition and the second which serves as a common entrance into both 1st floor rooms, located on the west side at the juncture of the two buildings. At one time the exterior walls of both buildings were covered with a beaded weatherboarding. Much of the original weatherboarding has been replaced, although the south wall of the frame addition still retains many of the original boards. Enough whitewash still remains on the exterior surfaces of original members to suggest that this was the only finish of the building.

B. OWNERSHIP AND DATE OF CONSTRUCTION

There is, architecturally, comparatively little known about the present Dogan House at Groveton, since events of any consequence occurring before 1860 centered about the main estate house at "Peach Grove," some 400 yards to the northwest. Upon the destruction of the main house by fire in 1860 the family established
residence in the present house. Since the original log cabin on
the site (which had served as quarters for the overseer) was
inadequate for a large family, expanded accommodations were
provided by moving in a frame outbuilding and joining it to the
log section. This same small unpretentious building was, one
year later, to participate in the opening drama of the Civil War.

The immediate property surrounding the W. H. Dogan House
at Groveton, remained in the hands of the Dogan family from the
time of the American Revolution until its recent acquisition in
1947, from W. H. Dogan (IV) by the Prince William County Chamber
of Commerce. The original estate, called "Peach Grove" consisted
of over 700 acres at the time of the Civil War and was held jointly
by Mrs. Lucinda Dogan and seven children. The small plot of 4,914
square feet remaining at the Dogan House represents the last of the
estate sold off in succeeding years by the Dogan heirs.

We have no actual contracts, vouchers or other documentation
concerning the actual construction of the two buildings now
comprising the Dogan House at Groveton. There are property records,
however, that record certain periods of building activity on the
W. H. Dogan "estate" and one of these periods could, very well,
include the construction of the building in question. One phase of
building activity spans the years 1817-1819, another 1840-1845, a
third 1856-1860 and a fourth 1881-1882. Since it is known that

2. For further study or documentation and records see E. T. Crowson's
Report, Historical Data, Historic Structure Report, August 1958,
on file at Manassas National Battlefield Park Office.
W. H. Dogan (II) owned a set of carpenter tools he could, perhaps, have built both buildings. This would date the time of erection either 1817-1819 or 1840-1845. Further study of the present fabric may reveal the date of construction more accurately.

C. EARLY ALTERATIONS

The original building stood in its present location as a single room, gabled-roof structure with a fireplace located mid-way in the north wall. In its original condition it had one window located mid-way in the west wall and a door located in the center of the east wall. The log structure probably retained this general appearance until 1860, when it is known that a frame outbuilding from the "Peach Grove" estate was moved to the Groveton cross-roads and attached to the log cabin. During this period of building activity, numerous changes were made to the log structure. Namely, changes to the chimney and location of doors and windows, rebuilding of stairways; the application of new weatherboarding and trim and the finish of the interior rooms. The house was never quite successful as a residence, for Mrs. Lucinda Dogan left after the Civil War to live at Paradise Farm, south of Groveton.

In 1881-1882 W. H. Dogan (III) son of Mrs. Lucinda Dogan occupied the house at Groveton. Dogan constructed a two room,

3. Ibid. page 39

4. During the 1817-1819 Dogan (II) would have been 22-24 years of age and 45-50 years of age during 1840-45. Dogan (II) died in 1854.
shed-roof addition across the rear of the house to the west with provisions for an inside kitchen and an additional bedroom. In this alteration he may well have removed some structural feature such as a porch. Since only a portion of the original beaded weatherboarding remains it would appear that he either at this time or some later period, re-weatherboarded the entire structure. According to Mrs. G. E. Roland, daughter of W. H. Dogan (III) a small porch once existed on the east side of the frame addition. A small uncovered platform seems to be visible in the east view of a 1907 photograph. See illustration No. 2. The exact date of construction for the porch is unknown at present.

D. RECENT ALTERATIONS AND STABILIZATIONS

The Dogan House remained unchanged until 1948 when the 1881-1882 addition was removed. After its last occupants left in 1904, the house was left unattended. It stood in a semi-ruinous state without maintenance until 1947 when the Prince William County Chamber of Commerce acquired the house and made an effort toward the preservation of the existing framework. The extent and progress of this effort is shown in a series of Illustrations No. 6 through 10. On August 27, 1949, the Prince William County Chamber of Commerce presented the deed of the Dogan House to the National Park Service.

5. The old log kitchen stood about 15 paces north of the frame addition and may be the same building seen in Photo Illustration No. 2.
Further "stabilization work" was accomplished by the National Park Service in July 1950. At this time, perfunctory service was performed by the Washington Home Improvement Company on a contract basis. A considerable amount of valuable woodwork was removed from the building at this time including, floors, chairrails, trim, mantels, etc. The house stands today (1960) much like it was left ten years ago. See Appendices for specifications and one sheet of working drawings covering scope of work accomplished in 1950.
PART II

EXISTING CONDITIONS

A. PRESENT CONDITIONS

When this building was taken over by the National Park Service, it had already undergone one "stabilization" by the Prince William County Chamber of Commerce. This and a subsequent stabilization by the National Park Service in 1950 resulted in the removal of the 1881-1882 addition and what evidence there might have been left on the surface of the weatherboarding that related to the 1860 appearance.

Masonry:

All masonry work is in poor condition. The present stone foundation was repaired and repointed in 1948 to prevent further damage to the structure. Repointing of the masonry was done with gray Portland Cement mortar, in contrast to the original. The masonry work in the chimney above the roof line was rebuilt and treated in the same manner and remains the same today. In general, the foundation will require rebuilding. The stone chimney stack seems to be structurally sound and probably can be saved with additional repairs.

Surface rain water drains through the area now creating serious problems relating to the stability of the foundation and preservation of the wooden structural members.

Roof:

The rafters, sheathing and shingles over the log structure,
comprising the members of the original structure were removed
(apparently disposed of) in 1950 and replaced with 2" X 6"
rafters placed 16" on center and 1" X 4" roof boards. The roof boards
over the frame addition were re-laid and the entire roof over the
frame addition was then covered with wooden shingles. The same roof
exists today although the shingles are in poor physical condition.
The shingles have square butts and are laid approximately 5" to the
weather.

**Exterior:**

The log structure seems to have suffered more abuse than
its frame counterpart. Due to the deterioration of the lower logs
in the south wall, the log building has settled approximately two
feet, and as a result, this section of the house has separated
from the frame addition. Photo Illustration No. 15 shows the
physical break in the roof at the juncture of the two buildings.

About five percent of the original beaded weatherboards
remain on the exterior walls. A considerable amount of 1861 weather-
boarding remains but it is not the beaded type. It is assumed that
the original log cabin was also weatherboarded in 1860 when the
frame addition was attached; to enable it (the log structure) to
conform visually on the exterior to the more refined appearance of
the frame addition. Two original beaded cornerboards are still
in place on the east wall of the frame addition. At each corner,
only one cornerboard was used. The cornice on the frame addition
east side, appears to have its original beaded fascia board, soffit board and bed molding. (the crown molding is now missing) It still retains visible signs of an early application of whitewash for the exterior finish. The cornice of the log addition was removed during stabilization, but the 1860 cornice probably followed the design found on the frame addition.

The verge boards in both gable ends appear to be from a later period, possibly 1881-1882. They are simple rectangular boards rather than a beaded board that one might expect.

Doors and Windows:

All existing interior doors are board and batten and represent an early type of door construction. The two exterior doors are identical. Each door has four recessed panels and were made with mortice and tenon - joints and wooden pegs and represents a type of construction that was used before the twentieth century. The hinges used on the exterior doors are Victorian and may date them to 1881-1882.

One door and window frame was found intact in the west wall of the frame addition covered over with lath and plaster. These locations are identical to those in the opposite wall and probably were in use before the 1881-1882 alterations. With the exception of an early door frame and trim found in place in the east wall of the log structure, all exterior trim appears 1881-1882.
The covered door frame in the log structure probably dates prior to 1860. One window frame complete with interior and exterior trim exists in the east wall of the frame addition. The remaining window frames and trim appear later than 1860. The interior trim was probably two pieces, casing and backband, with window stool and apron. The apron appears to level with the chairrail. None of the window sash is original but one lower sash in the north window may be satisfactory for use as a pattern.

Shutters were found used on two windows. One pair of venetian type shutters is still in place on the north wall window and hinges for the second pair still remain on the frame of the east window in the log building. They are made with the typical mortise and tenon joints held together with wooden pegs. Both the hinges and the window frames where the shutters were used appear to date from the 1861-1862 period and a more accurate study of the hinges may date the age when the shutters were installed.

Interior:

Very little of the interior trim that remains can be reused. Some baseboards exists in place on both floors of the log structure that might be used again. On the first floor, all the original floors, floor joist, baseboards, chairrails, mantels and window sash are missing. Portion of the 2nd floor have been replaced in the log section but by and large, the floor boards are un-useable. Floor joists on the 2nd floor appear to be in poor condition in both rooms. Only the three top risers remain on the stairway and the
board and batten door at the foot of the stairs. All board and batten doors are in good condition and can be used again.

Although much of the original split lath and plaster remains on the 1st floor, frame addition, it cannot be saved. The same condition exists for the mortar "chinking" in the log structure. Under any movement of the building the "Chinking" will fall out. Consequently it has been anticipated that all new work will be required.

B. COMPARABLE STRUCTURES

The use of log structures covered with weatherboarding seems to have been a common type of building practice in this area of Virginia. This type of construction continued in local use even after the Civil War ended as evidenced by a few standing buildings in this area with this feature. The purpose of covering the log structure with weatherboarding was to protect the logs from the weather (as well as visual aesthetics) since it was easier to replace an occasional weatherboard rather than a log in case of deterioration. Generally, the logs were of uniform size laid one upon another with a saddle-notch joint at the corners. The ends and sides of the logs were cut square with vertical nailing strips about 1" X 4", attached to the logs at two to three foot intervals over which the weatherboarding was nailed. Whatever space was left between the logs was chinked with a mixture of lime mortar and hog hair or in some instances, with pieces of wood.
If a log building was intended to stand without weatherboarding the exposed cut ends of the logs at each corner were shaped in a diamond pattern to shed the rainwater. See Illustration No.21. The lower logs of the first floor in the Dogan House have this diamond-shaped end suggesting that at one time the log structure may have stood without weatherboarding. Above the second floor, the logs have vertical cut with a saddle-notch joint which requires less craftsmanship to execute. This seems to suggest the upper portion of the log structure was built at a later time and may possibly date back to 1860, when the log roof was raised to match the ridge height of the frame addition.

Another building in the Manassas National Battlefield Park area with comparable features to the Dogan House was the Jim Robinson House. Although the original structure is no longer standing, enough early photographs and information exist to give an excellent idea of its construction and exterior appearance. From information furnished to the present Park Superintendent in 1948, by the great-grandson of Robinson, both the first and floor plans as well as the type of construction were recorded on two sheets of drawings with a fair degree of accuracy. The floor plan is very similar to that of the original log structure of the present Dogan House.

A log constructed-weatherboarded kitchen built about 1800, still stands on the Charles Lewis farm south of the Battlefield Park.
It is a square building, one room with attic having an enclosed stairway located in one corner. It has one door facing south and a window located in the opposite wall very similar to the present floor plan of the log portion of the Dogan House. A local red sandstone chimney stands midway in the east wall with a fireplace on the first floor. The first floor ceiling beams are exposed and the entire ceiling and walls areas have been whitewashed.

The majority of comparable log structures and frame structures dating back to the Civil War in the Manassas area have been destroyed by fire. Many have been torn down and the timbers either destroyed or re-used in other buildings.
PART III
PROPOSED WORK

A. USE OF BUILDING

It is proposed to restore the exterior of the Dogan House back to its war-time appearance of 1861-1862, thus providing part of the historical background for the battlefield scene as found during the First and Second Battles of Manassas. Since the Dogan House was presented to the National Park Service as a gift from the Prince William County Chamber of Commerce, there is the urgency of saving the building from the standpoint of local interest.

It is also proposed to restore the interior finish of the two rooms on the first floor since it is possible for the public to view these rooms simply by looking through the windows. Repairs to these rooms will also reduce many maintenance problems in the future upkeep of the building.

It is intended to keep the building closed to the public except when accompanied by Park personnel. It is hoped that the Dogan House will eventually be furnished as it originally was during the Civil War. Two pieces of the original furniture have already been located and the owners have offered them as donations to the Dogan House upon its completion. This consists of a drop leaf table and a chest of drawers.

B. ARCHITECTURAL WORK

1. Exterior: The following work on the Dogan House is proposed.

   Foundation: Remove the existing foundation, pour concrete
footings and rebuild stone foundations. Install tile drain around footing.

Frame: Straighten and level existing building; replace all rotted members in log structure and frame addition.

Weatherboarding: Install new beaded cornerboards and replace all weatherboarding that is not the original beaded type.

Cornice: Replace crown moulding, fascia and soffit boards and bed molding. Replace verge boards and trim.

Doors: Rebuild door frames and replace present exterior doors to conform to the size of the original openings. Repair and reuse interior board and batten doors.

Windows: Rebuild all window frames according to original found in east wall of frame addition. All windows require new sash with "old" glass.

Roof: Replace present roof with wooden shingles.

Chimney: Rebuild portion above roof line; repair chimney where required.

Other Features: Replace all additional features that might be found during the subsequent architectural investigation such as porches and steps.

Painting: The exterior wall surfaces and trim will be painted and treated to resemble the original whitewash used.

2. Interior:

Floors: Replace floor joists and floor boards on the first floor. Repair or replace floor joists and floor boards on
second floor where required.

Walls: Remove and replace existing lath and plaster on the first floor. Replace chairrail, baseboard and mantel(s).

Chink log walls with mortar where required.

Stairway(s): Rebuild stairway(s)

Hardware: Secure appropriate hardware.

Painting: Whitewash plaster and log wall surfaces. Paint woodwork with original paint colors.

C. PROVISIONS FOR UTILITIES

Because no permanent heating system is contemplated for the Dogan House, it is strongly recommended that provisions be made for electric heaters for use during the winter months to keep the interior free of excessive moisture that causes mildew and other damage to the structure. It is recommended that both 220 and 110 volt conveniences outlets be placed in each room for operating electric heaters, lights and audio installations. These outlets including the electric panel should be placed in an inconspicuous location. The power supply should be brought into the house through underground service. It is also recommended that the present power pole with transformer, located approximately 12 feet away from the south-east corner of the house, be eliminated and the electric services be placed underground in the immediate area.

D. OTHER RECOMMENDATIONS

Land Acquisition: It is recommended that additional land be
acquired to the west and north to provide for parking facilities and to present a more ideal setting for the Dogan House.

Outbuildings: It is recommended that the outside log kitchen, log meat house and fences be reconstructed to further enhance the setting of the Dogan House. There is need for a topographic site map of the immediate area to provide for fences, outbuildings, roads and walks.

(More land will be needed for these improvements - Ed.)
ILLUSTRATION NO. 1  VIEW FROM SOUTH EAST

Earliest known view of the Dogan House in the Park files. This photograph was taken in August 1907 and shows the house after its last occupants had left in 1904. This view shows the house completely weatherboarded on the south and east sides with the exception of the door and window openings.

Photo Source: Story of the Dedication of the Monument, by Peter W. Ostrander, 1907, page 15.

charge at Gettysburgh, then made an address of welcome, capturing his hearers by his rough and ready eloquence.

After these exercises were concluded all went to the famous "Old Dogan House" which, it will be remembered, stands just above the Warrenton turnpike on a slight hill, near where the extreme right of Hunter's Division first became engaged and exactly where Rickett's battery first

unlimbered at the First Bull-run battle. Up to the time of the retreat of our army on that occasion, this house was used as a field hospital and here the brave Captain Tillinghast, mortally wounded, was helped from his horse by Engineer Lawrence Hanley and the writer of this article.
ILLUSTRATION NO. 2    VIEW FROM EAST

This photograph shows the last remnants of buildings at Groveton in 1907. The W. H. Dogan House is shown in the center of the picture and possibly the old log kitchen to the right. A small stoop is barely visible in front of the door facing the road.

This view shows the juncture of the early log structure, left, with frame addition. The frame addition is known to have been attached to the log building in 1860 by Lucinda Degan, and the house used as a residence. The space seen between the two buildings is said to have been used as an enclosed pantry. The door seen is 2'-5½" X 4'-10". The plaster stone chimney can be seen in the rear.

Neg No. HABS Va. 531
ILLUSTRATION NO. 16 WEST ELEVATION OF THE LOG STRUCTURE

This view shows the gradual settling of the log structure on the right due to deterioration of the logs next to the ground. The spliced log at the lower part of this photograph was replaced in 1950. Notice mortar chinking in lower part of building and wooden chinking above 2nd floor joists. Logs above 2nd floor appear to have been added at a different period. Notice difference in end notchings of logs from upper to lower part.

Re: Contemplated Restoration of Dogan House

The undersigned contractor agrees to furnish all labor and material necessary to complete the following job at the above residence, under the following specifications.

**Structural Work**

Remove entire roof, sheathing and rafters. Remove flooring and joists on first floor. Replace or repair legs at rear of this building to eliminate building in this area. Furnish and install new rafters. Rafters to be 2" x 6" set 16" on center. Sheath entire roofed area with 1" x 6" box sheathing.

**Roofing**

Roof entire building using red cedar shingles, 16" random width, 1/4 grade. All nails to be 3 penny galvanized. Shingles to be applied with double course at eaves using starter shingle, regular courses from eave to ridge, 5" to weather, 1/4" between shingles, joints broken not less than 1½; ridge, and comb type. All shingles to be cut accurately at ridge.

**Flashing**

Do all necessary flashing. Flashing to be 16 ounce copper. Nails, screws, and fasteners to be copper or copper alloy. Chimney to be flashed vertically to within 1" of counter flashing joint. Cut reglet and chimney for flashing.

**Finished Lumber**

Furnish and install cornice, facer and rake mouldings.

**Shoring**

After floors and woodwork have been removed from first floor, second floor shall be braced with wood shoring from the ground in the two first floor rooms. All windows and doors shall be securely barricaded.

We agree to complete this amount of work in a neat and workmanlike manner for the sum of:

Nine hundred fifty nine ($959.00) -- Dollar

Terms: Cash upon completion.

All insurance, including public liability, to be furnished by Contractor.
All debris to be hauled from premises upon completion.

LOCATION MAP

SCALE: 1" = 2000'

HISTORIC NOTE

At the intersection of the General Lee Highway (US 29) and Lee Highway (US 27), the Dogan House was located.

The Dogan House was a part of the Stone Bridge Farm. It was burned by Union forces during the Second Battle of Manassas.

The small one-story house, originally built as the servant's quarters of the Dogan Farm, was later occupied by the Dogan family. After their main house was burned, they moved into the Dogan House, which is now the stone house. It is one of the two remaining original structures on the farm.

SURVEY NO. VA-SBI

HISTORIC AMERICAN BUILDINGS SURVEY SHEET 1 OF 3 SHEETS
First and second floor plans of W. H. Dpgan

House showing existing conditions as found in 1959 by summer measuring team for HABS.
Sheet three shows the four exterior elevations of the Bogun House containing certain conjectural attempts at restoration where evidence suggested such changes.

See notes on Sheet 3.
This sheet shows work of stabilization of the Degel House proposed by the Office of the Regional Architect in 1950. Much of the proposed work was never completed and much of it seems to have been done with little or no supervision.
