A SELECTED INVENTORY

HISTORIC RAILROAD STATIONS
HISTORIC RAILROAD STATIONS

A Selected Inventory Prepared by the National Register of Historic Places Office of Archeology and Historic Preservation National Park Service U.S. Department of the Interior July, 1974
ACKNOWLEDGEMENTS

This inventory was organized and compiled by H. Ward Jandl, Jan Thorman and Katherine H. Cole, Architectural Historians with the National Register of Historic Places in the Office of Archaeology and Historic Preservation. We appreciate the assistance of the following people who assisted in the preparation of this catalog: Susan Dynes of HABS and James Armstrong of HAER who compiled lists of stations inventoried by their respective programs and who also helped with the introduction; Carole Huberman in the office of State Plans who provided assistance in going through the various state plans and extracting railroad stations; Elizabeth Jones who helped with the selection of photographs; Wil Cole, Pat Callis and Linda Lee who were responsible for the index; Ron Greenberg in Publications; Jim True who assisted in the layout and design of this catalog. Special thanks should also be given to those people in the State Historic Preservation offices who provided valuable information on stations within their states.

INTRODUCTION

The development of the railroad and its monuments, the railroad stations, coincided with the growth of the United States and was, in large part, responsible for the economic expansion that began shortly before the Civil War and continued well into the twentieth century. The completion of the great transcontinental lines in the decade following the Civil War, the invention of the Pullman sleeping car, the Westinghouse air brake, the safety coupler, and the refrigerator car helped to insure the supremacy and prosperity of the railroad for decades. The network of railroad lines crossing the continent not only provided an efficient means to market grain and livestock, but more importantly brought settlers into the newly opened territories. The termini and junction points of the great transcontinental lines—Union Pacific, Southern Pacific, Northern Pacific, and the Santa Fe—which were either small villages or nonexistent before the Civil War, became cities within thirty years after rail link-up. Cities like Omaha, Kansas City, Duluth, Oakland, Portland, Seattle and Tacoma owe their initial growth and ensuing prosperity to the railroad.

As Carroll Meeks has pointed out in his pioneering study, The Railroad Station (New Haven: Yale Univer-
sity Press, 1956), there was no functional precedent for the station—it was a new type of building, representative of the new problems of design posed by the Industrial Revolution and reflective of the mobility and technology of the masses. Perhaps more than any other type of building, the railroad station and the train shed typified the inventive spirit of the nineteenth and early twentieth century: engineers audaciously seized upon the potentialities of iron and glass, dramatically vaulting increasingly wider spaces with single spans. Architects, too, were quick to adapt the latest revival styles to the train station, achieving a monumentality of scale perhaps unmatched by any other building type of this period.

The most common transportation buildings of the seventeenth and eighteenth centuries were the tollhouses, and it may have been from these way-stations that the vast train shed developed. If the early train terminals were modeled upon cathedrals, Roman baths, Greek temples or propylea, it was in part because architects, in trying to solve the particular problems posed by the railroad, delved into history to see how earlier architects had coped with large enclosed spaces able to accommodate many people.

No expense was spared in the construction of larger terminals. Built in a "golden age," they were symbols of the railroads' prosperity and power; often extravagant and monumental structures, they were designed by some of America's best known architects and built to last with the finest available materials: marble, limestone, granite. In the smaller towns, the depots were no less important; built of wood or brick, many times they were fancifully decorated with "gingerbread" trim or distinguished with an imposing clock tower. More often than not these stations were located in the center of town facing a park or open space. The waiting rooms were the most important interior spaces of stations, both large and small. Spacious and high-ceilinged, often vaulted and coffered, these rooms were decorated with fine woods and stones, stained glass or murals. The architectural magazine, Building News, accurately wrote in 1875: "Railway termini and hotels are to the nineteenth century what monasteries and cathedrals were to the thirteenth century. They are truly the only real representative building we possess... Our metropolitan termini have been leaders of the art spirit of our time."

This selective inventory of historic railroad stations was prepared by the staff of the National Register of Historic Places, National Park Service, for the workshop on reusing railroad stations to be held on July 22 and 23, 1974 in Indianapolis, Indiana. Sponsored by the National Endowment for the Arts in conjunction with Educational Facilities Laboratories, the workshop is co-sponsored by the Advisory Council on Historic Preservation, National Park Service, National Trust for Historic Preservation, and the U.S. Department of Transportation. The workshop was organized in response to a frequent urban crisis—the unnecessary demolition of architecturally significant structures. Within the last ten years numerous railroad terminals have been threatened or demolished both in large cities like New York and Chicago and in smaller towns like Parkersburg, West Virginia and Kent, Ohio. While there are an estimated 20,000 stations still standing in the United States, this is less than half the number that were standing only twenty years ago.

Because of their size and the precarious financial situation in which many railroads have found themselves, railroad stations are particularly vulnerable to destruction or abandonment by companies unable or unwilling to maintain them. It is as if functionality and efficiency in a building cannot coexist with domed spaces, Corinthian columns, and other such "unnecessary" extravagances. Thus, the monumental railroad terminals of yesterday are doomed on today's principle that it is economically prohibitive to build or continue to use overly generous spaces. This workshop will explore methods for preserving these stations, not only for

468 SOUTHERN RAILWAY PASSENGER DEPOT, Branchville, South Carolina (William F. Christensen)
aesthetic reasons, but more importantly so that with reuse stations can remain an essential part of America's architectural heritage.

Ironically, the need for an efficient rail system is felt more keenly now than it was a decade ago. With the increasing shortage and cost of fuel, more people are beginning to realize that automobiles and superhighways are not final answers to the transportation problems facing America. At the same time, many of those supporting the railroads feel that the age of the large railroad terminal has passed, leaving cities and towns with a centrally located, well built, in many cases architecturally significant—but unused—building.

The purpose of this inventory is to bring to the attention of the participants of this workshop—planners, mayors, bankers, developers—the names and locations of as many railroad stations as possible, which are recognized by preservation programs of the Federal government as having architectural, engineering or historical significance.

Five sources were consulted in compiling the inventory: the National Register of Historic Places (including National Historic Landmarks); the Historic American Buildings Survey; the Historic American Engineering Record; the individual State Historic Preservation Plans which inventory architectural resources in detail; and additional stations not mentioned by the other four sources suggested by staff members of the State Historic Preservation Offices.

The Federal programs listed above are all within the Office of Archeology and Historic Preservation of the National Park Service. A brief description of each of the programs will help explain the government's role in encouraging and guiding preservation of this country's cultural resources.
The National Register of Historic Places. The National Register is the official schedule of the nation's cultural property that is worthy of preservation. Established by the National Historic Preservation Act of 1966, the National Register is a protective inventory of irreplaceable resources across the country. The National Register is expanded through four means: 1) acts of Congress and Executive Orders which create areas of historic significance administered by the National Park Service; 2) properties declared by the Secretary of the Interior as eligible for designation as National Historic Landmarks; 3) nominations prepared by the states and approved by the National Park Service; and, 4) nominations of Federal properties prepared by Federal agencies as directed by Executive Order 11593 and approved by the National Park Service.

Most nominations to the National Register are made by a State Historic Preservation Officer appointed by the Governor to supervise the program within each state. A professional staff conducts a statewide historic survey and reports its findings to a professional review committee. If the property meets National Register criteria, the committee recommends it for nomination.

The purposes of the National Register program are: 1) to assess and record the history and achievements of the American people in the areas of American history, architecture, archeology and culture; 2) to aid the states in the preparation of comprehensive statewide preservation plans; 3) to assist in the preservation of the tangible reminders of these achievements and this history through the granting of Federal money to the states on a dollar-for-dollar matching basis; and, 4) to extend to all such properties a degree of protection by insuring compliance with procedures for review of Federal undertakings.

At present there are over 8,500 historic buildings, structures, sites, objects and districts listed on the National Register, including well over 100 railroad stations, listed individually and within historic districts.

One of the purposes of the National Register program is to aid the states in the preparation of comprehensive statewide preservation plans. The National Register oversees and approves the preparation of these plans which are presented in three volumes.

Volume I of this document provides a summary of the State's history and background of its preservation activities, a statement of its long range goals, and its methods of operation. Volume II, the State's inventory of historic resources, constitutes an inventory of the historic sites, buildings, structures, districts and objects which reflect the various themes and aspects of the State's development throughout history. As an ever-growing list of historical resources of varying significance within the State, it provides an excellent planning tool and working base for future historical research. Volume III is the annual work program, which must be submitted annually with an apportionment warrant stating and explaining the State's request for historic preservation grants-in-aid. This volume includes a review of the past year's work, updates of Volumes I and II, and plans for the next fiscal year. It is from Volume II that the names and locations of many railroad stations were taken for this inventory.

The Historic American Buildings Survey. Established in 1933, the Historic American Buildings Survey (HABS) is a Federal program administered by the National Park Service authorized to assemble an archives of the building arts in the United States. Conducted in cooperation with the American Institute of Architects and the Library of Congress, the Survey is the government's oldest operative historic preservation program.

Today, HABS conducts a broad national program of intensive architectural surveys on a shared-fund basis, in cooperation with State and local governments, preservation groups, and historical societies.
INTRODUCTION
Survey works closely with groups and institutions which have an active interest in recording historic structures and gives priority to projects in areas where there is active concern for historic landmarks. Historic buildings are recorded by detailed studies which include measured drawings, photographs, and architectural and historical data.

Before 1959, the Survey had recorded only two railroad stations. Responding to the crisis of the railroads and the impending demolition of many historically significant structures, the Survey has recorded an additional 51 stations since 1959. At least a dozen of these have been demolished, almost all of them in large urban centers: Pennsylvania Station in New York, Chicago's Grand Central, and Broad St. Station in Philadelphia. Although documentary records can never be a substitute for viable structures that contribute to the life of a community, they are an important resource which will be of use to historians and will serve as crucial links connecting past and future generations.

The Historic American Engineering Record. Established in 1969 under a cooperative agreement between the National Park Service, the American Society of Civil Engineers, and the Library of Congress, the Historic American Engineering Record (HAER) conducts a variety of programs that document America's industrial and engineering heritage. Projects include the compiling of inventories of sites and structures and the detailed recording of notable works within a designated geographic area or of a specific genre or industry. Like HABS, such recording includes measured drawings, written historical accounts and technical analyses, professional photographs and, in some cases, photogrammetry and motion picture documentation.

Railroads have necessarily played a major role in the history of American engineering and technology, and shortly after its inception, the Historic American Engineering Record conducted a survey of various nineteenth century structures between Baltimore and Cumberland, Maryland along the main line of the Baltimore and Ohio Railroad, which was completed between the two cities in 1842. Among the notable structures recorded were the Queen City Station-Hotel in Cumberland, the Mount Clare Shops in Baltimore, and the station in Point of Rocks. During the summer of 1971, the Historic American Engineering Record conducted a similar survey along the main line of the Erie Railway, which was begun in 1835 and completed between the metropolitan New York area and Dunkirk, New York in 1851. In addition to the distinguished bridges, tunnels, and viaducts along this route, there are a large number of nineteenth century stations, among them the Starrucca House in Susquehanna, Pennsylvania, at one time a station-hotel noted for its ample dining facilities. Statewide surveys and regional inventories have added other railroad structures, particularly Baltimore and Ohio Railroad works in West Virginia, to the HAER files.

The 562 stations inventoried here represent a small fraction of the stations still extant in the United States. At the same time, the inventory provides a good representative sampling of the depots still to be found in America and indicates that a surprising number have already been adapted as restaurants, residences, and offices.

The stations are listed alphabetically by state and are assigned catalog numbers. Wherever possible, the following information on each station has been gathered: the town or city in which it is located, the station's common name, its street address or general location, the date of construction, the architect, the railroad lines served, the present or adaptive use
Because of the large number of stations involved, it has been impossible to accumulate as much information on each station as desired. Although an attempt was made to check information with State Historic Preservation Offices across the country, inaccuracies and omissions are bound to occur—although, it is hoped, not too frequently.

According to the most recent railroad atlas published by Rand McNally, over 250 railroad lines still operate in the United States. In many entries names of railroad lines no longer in existence, or lines that have been consolidated, will appear along with lines still in operation. An attempt has been made to track down the current name of the railroad line using a particular station, but in many cases this has been impossible, and the historic line name is given. In the cases where the exact name of a station is unknown, it is simply listed "RR Station." For the purposes of this inventory, no effort was made to distinguish between the words "railroad" and "railway."

The index appearing at the end of the inventory lists stations, architects, railroad lines and adaptive uses alphabetically. At a glance the index will provide the reader with such diverse information as the names of stations reused as theatres, the number of depots designed by Shepley, Rutan and Coolidge, or the stations listed on the Baltimore and Ohio Railroad.

The last line of each entry indicates the source of information, and the following codes were used:

- NHL National Historic Landmark
- NR National Register of Historic Places
- NRP Pending nomination to the National Register
- HABS Historic American Buildings Survey
- HAER Historic American Engineering Record
- SI State inventory, State Historic Preservation Plan

Entries with none of these codes were supplied by State Historic Preservation Offices.
1 Albertville
   RR STATION
   Proposed civic center

2 Athens
   RR STATION
   Clothing store

3 Auburn
   RR STATION

Southern RR System
Proposed transportation museum
NR

*9 ALABAMA GREAT SOUTHERN RAILROAD PASSENGER DEPOT, Fort Payne, Alabama (Bill Jocoway)

Completed in 1891, the Fort Payne Depot was designed in a Richardsonian Romanesque style by the Ohio architect, Charles C. Taylor. The one-story building, with its hipped roof, turret and gray sandstone walls, is the sister building of the Fort Payne Opera Building and is a fine example of boom town architecture. The station is one of the few remaining 19th century railroad terminals in Alabama.

*10 SOUTHERN RAILWAY SYSTEM DEPOT, Huntsville, Alabama (John A. Martz)

This two story red brick depot is the oldest extant railway station in Alabama. Constructed in 1860 as part of the important Memphis & Charleston Railroad Company, the depot was purchased in 1898 by the Southern Railway System. Plans are underway to restore the depot as a museum.
11 Linden

*53 SANTA FE DEPOT (UNION STATION), San Diego,
California (Robert Mosher)

The Santa Fe Depot was built in the Spanish Colonial Revival style in conjunction with the 1915 Panama-Pacific International Exposition in Balboa Park.
The great entrance arch is flanked by towers with tiled domes capped by tiled lanterns; the blue and yellow tiles laid in zigzag patterns are especially noteworthy. Plans are underway to turn the station into a transportation complex, including trains, buses, airport ticketing facilities, shops, and a restaurant.

*80 NEW LONDON RAILROAD STATION
New London, Conn. (HABS)

The design of this large, 2 1/2 story red brick building with its hipped roof and projecting gabled center section has been attributed to the noted American architect, Henry Hobson Richardson. Architectural historians have described the Romanesque Revival station as being one of the architect's best works, although the building has been under the threat of demolition for the past decade. Present plans call for the station to be converted into commercial office space and a restaurant, with Amtrak continuing to use some space for its operations.

*81 UNION DEPOT, North Canaan, Conn. (Susan
Babbitt)

This elegant Victorian station was situated at the
junction of the Connecticut Western and Housatonic
railroads, and each wing of the building served a
different line. At the southwestern corner of the
2-story board and batten structure is a large octagonal
tower with rooms for the accommodation of the
telegraph operators. No longer used as a passenger
depot, the station is presently owned by Penn
Central.

UNION STATION
Massachusetts & Delaware Aves. NE
1903-08; Daniel Burnham
Amtrak; Baltimore & Ohio RR;
Penn Central RR; Southern
RR Station; visitors center
NR/HABS
Designed in 1903 by Daniel H. Burnham, Union Station was patterned externally after the Arch of Constantine and internally after the Baths of Diocletian. The richly decorated station, with exterior sculpture executed by Louis Saint-Gaudens, was designed to accommodate inaugural crowds of 100,000, but the number of daily passengers has dwindled to a fraction of that number in recent years. Union Station is now being renovated under the direction of the National Park Service and will become a National Visitors Center as part of the country's Bicentennial program.

*103 SEABOARD COAST LINE RAILROAD PASSENGER STATION, West Palm Beach, Florida (Jack E. Boucher for HABS)

This 2-story building, with a distinctive tower on the north side, was designed in a Spanish Baroque style of terra cotta tile with painted stucco and cast stone or plaster detailing. A handsome loggia on the north continues around part of the east side to the asymmetrical main entrance. The Seaboard Coast Line still operates the building as a passenger station.

*130 UNION PACIFIC MAINLINE DEPOT, Boise, Idaho
(Duane Garrett)

This handsomely decorated Spanish colonial building was designed by the prestigious New York architectural firm of Carrere, Hastings, Shreve and Lamb. The three principal elements—the large waiting room block, the lower office wing and the campanile—are set in an asymmetrical pattern, with the tower dramatically dominating the structure. The station, now used as a Union Pacific company office, can be seen both day and night from much of the city, making it a familiar landmark in Boise.

*205 CRESTON RAILROAD DEPOT, Creston, Iowa

One of the largest depots on the Chicago, Burlington and Quincy Railroad and the largest building in Creston, this landmark was built in 1899 at a cost of $75,000. Although a moderate amount of deterioration has occurred through several years of neglect, the brick station with its red glazed tile roof is structurally sound and needs no major repairs. Of special interest is the large waiting room with its red marble floor and oak beamed ceiling.

*229 SOLOMON DEPOT, Solomon, Kansas. (Kansas State Historical Society Staff)

Solomon City was an important railroad center at the time the Union Pacific Railroad Depot was built in 1885. Constructed of cut white Manhattan limestone ornately trimmed in wood, the depot is a 1-story rectangular structure with a distinctive gabled section running at right angles to the main section. The station is in regular use as a freight depot, although there are plans to move the building away from the tracks. Solomon Depot is considered to be one of the best remaining examples of railroad Victorian architecture executed in stone.

*254 MOUNT CLARE STATION, Baltimore Md. (HABS)

In continuous use since its completion in 1830, the Mount Clare Station inaugurated regular passenger service in the United States on May 22, 1830. The roundhouse, with its many unusual architectural features, now houses the bulk of the historical collection of the B & O Transportation Museum, including locomotives and railroad cars. The annex contains some of the smaller exhibits.

*255 MOUNT ROYAL STATION, Baltimore, Md.
(Detroit Photographic Co. copyright 1902)

This elegant Italian Renaissance style station, completed in 1896, is reminiscent of the Venetian Palace in Venice. Built of granite trimmed with limestone, it is 3 stories with a 150-foot tower rising out of the center. In 1961 the Baltimore & Ohio Railroad ceased passenger operations from the terminal, and in 1965 the building was remodelled to become part of the Maryland Institute of Art.

*258 WESTERN MARYLAND RAILWAY STATION, Cumberland, Md. (William Morgan)

During the first half of the 20th century, Cumberland was the most important stop on the Western Maryland Railway system between Chicago and Baltimore. The demolition of the Baltimore and Ohio's Queen City Hotel left this 2-story brick station the sole survivor of the city's transportation past. The station is a large, well-constructed building, an expression of the architectural functionalism of the turn of the century. It is presently used for office space.

*276 NORTH EASTON RAILROAD STATION, North Easton,
Mass. (Bradford Paul)

The North Easton Railroad Station is one of the best
remaining examples of the small railroad stations
designed by the noted American architect, Henry Hob-son Richardson. Commissioned in 1881, it was the
fourth in a series of five buildings in North Easton
which the architect designed for his friend and
patron, F.L. Ames. The 1-story granite structure
has a gable hipped roof with a deep overhang
supported by large paired brackets. The distinc-
tive wide arches placed symmetrically on the west
and east facades and the decorative carved animal
figures carved in the supporting beams are char-
acteristic of Richardson's work.

*279 STOUGHTON RAILROAD STATION, Stoughton, Mass.
(HABS)

The most significant public building in Stoughton, the station is situated one block from the town's main street and is presently operated by the MBTA. The station, designed by Charles Brigham in 1888, is constructed of random ashlar, roofed in slate, with an attached clock tower and carriage porch. Each of the two waiting rooms has its own fireplace and chimney and remains in excellent condition.

*285 PENN CENTRAL RAILWAY STATION, Battle Creek, Mich. (Allen Stross for HABS)

Designed in 1887 by the firm of Roger & McFarland, the Penn Central Station is a 1 1/2-story brick building distinguished by a massive hipped roof, wide bracketed overhangs, and a tall clock tower. Windows are arced and grouped, and the porte-cochere is supported by a huge arch with radiating brick voussoirs.

This unusual and striking building, designed by Peabody and Stearns, is modeled after a French chateau, with a symmetrical facade dominated by steeply-pitched roofs. There are projecting circular towers topped by flared, conical roofs at either side of the entrance. A cast iron portico was added over the entrance early in the 20th century. Planned as the focal point of a new city cultural complex, the Duluth Union Depot will soon house the A.M. Chisholm Museum, the St. Louis County Historical Society and the Duluth Art Institute.

*315 UNION STATION, Kansas City, Mo. (Ca. 1925)

Kansas City's Union Station is a monumentally proportioned Beaux Arts building which has served the transportations needs of a growing metropolis for 30 to 40 years. Designed in 1914 by Jarvis Hunt, the station is noted for its huge interior spaces. The facade is broken by three major arches, nearly 90 feet high, which create a vast openness on both long sides. Marble in varying rosy-brown shades is the predominant interior finish for walls and floors. Original light fixtures are in place, and all rooms have flat ceilings coffered in ornamental plaster.

*320 ST. LOUIS UNION STATION
St. Louis, Mo. (M. Patricia Holmes)

At the time of its construction the St. Louis Union Station was considered to be the largest in the world to have tracks and passenger service area all on one level. The building, designed by the firm of Link and Cameron in 1891, shows the influence of H.H. Richardson and the then-popular French Norman Revival style and is still used as a railroad terminal. The station's Grand Hall is its best feature; an enlarged version of the dining room in Adler and Sullivan's Auditorium Hotel in Chicago, it is roofed by a cavelike semicircular barrel vault. Decorations include ornamental plasterwork, frescoes, ornate light fixtures, and art glass windows.

*341 UNION PASSENGER TERMINAL, Omaha, Nebraska
(Nebraska State Historical Society)

This art moderne terminal was designed by Gilbert S.
Underwood, consulting architect to the Union Pacific
Railroad, and completed in 1931. The building is
steel frame reinforced concrete piling, finished on
the exterior with cream-colored glazed terra cotta.
Particularly noteworthy is the main waiting room,
with its colored glass windows, columnettes of
blue Belgian marble, and crystal and bronze chand-
deliers. Although vacated by Union Pacific, the
station is in excellent condition and is one of
Omaha's finest landmarks.

*346 CALIENTE RAILROAD DEPOT, Caliente, Nev.
(Custom Photo)

Designed by the Los Angeles firm of John and
Donald Parkinson, the Caliente Depot is the only
Mission style station of its type left in Nevada.
The two story white stucco building, with its
red tile roof, is distinguished by a graceful
arched loggia which continues across the north
facade. The second floor was originally used
as a hotel and Division offices for the Union
Pacific Railroad. The station now houses the
Caliente City Hall and civic center.

Built over the Hudson River, the Erie-Lackawanna Railroad Terminal is a massive concrete, steel, wrought-iron and stone copper-clad structure. The main building originally served three branches of ferries to New York from its two-deck concourse. The interior, with its large waiting room and elegant restaurant, has marble terrazzo floors and is finished in oak and cherry. The terminal is still used by the Erie-Lackawanna Railroad.

*368 ALBANY UNION STATION, Albany, N.Y. (Chester Liebs)

Designed by the firm of Shepley, Rutan and Coolidge, Albany's Union Station was constructed as part of a general rail transportation improvement program taking place in the east. The Beaux-Arts classical station is composed of two three-story sections which flank a large, one-story waiting room. The interior of the waiting room has a polished granite wainscot, an ornate plaster ceiling, and a mosaic floor. Exterior walls are granite. Owned by the State of New York, Albany Union Station is presently unoccupied.

*359 DELAWARE & HUDSON RAILROAD PASSENGER STATION
Altamont, N.Y. (Wayne Lennesbaker)

Completed in 1881, this station and the rail line it served was the principal reason for Altamont's growth. The 1 1/2 story station has masonry and frame walls and a hipped roof containing four eyebrow dormers. A decorative cupola covered by a pyramidal roof with flared eaves crowns the roof. After service was discontinued in 1964, the building was converted into a town hall for the village.

*419 CINCINNATI UNION TERMINAL, Cincinnati, Ohio
(Gale Brooks)

This terminal is a unique manifestation of Art Deco architecture and interior decoration and as such is one of the best remaining examples of the modern style prevalent in the U.S. in the 1930's. Designed by Fellheimer and Wagner, the distinguishing element of this monumental concrete and steel structure is a round arch semi-spherical dome flanked by low stepped wings which are curved to accommodate the street vehicle system. The interior is richly decorated with murals by Winold Reiss and linoleum panels by Pierre Boudell. The station's future is in question.

*420 UNION STATION ENTRANCE, Columbus, Ohio
(Larry Alan Beers)

Built in 1897, the Union Station Entrance was
designed in a Beaux-Arts style by the well-known
architect Daniel H. Burnham and as completed
served as the entrance to the largest train depot
in Columbus. Instead of the one remaining grand
arch, there were originally two, each flanked by
Corinthian columns and capped with an elaborate
cornice. While the building is structurally
sound, an immediate restoration program is neces-
sary to save one of Burnham's important works.

*425 SANTA FE DEPOT, Shawnee, Okla. (Pottawatomie County Historical Society)

Built of cut red sandstone, this unusual station with its crenelated watch tower was built in 1902-03. Although the architect of the station is unknown, the rusticated arched loggia and steep pitched conical roof are Richardsonian in style and give the building its distinctive appearance. An adaptive use is being sought for the Santa Fe Depot, which is in need of repair.

*449 READING TERMINAL, Philadelphia, Pa. (George Thomas)

The Reading Terminal is typical of the "stub end" type of terminal and consists of a head house and a train shed. At the time of its completion it was the widest single-span train shed in the world, an actively-used terminal handling in excess of 375 trains each day. As a monument to the history of transportation architecture, the terminal is equally significant. The structure also houses the original Philadelphia farmer's market, in existence and continuous use for over 279 years.

*451 PITTSBURGH & LAKE ERIE RAILROAD STATION, Pittsburgh, Pa. (Pittsburgh History and Landmark Foundation)

Designed in 1898 by William George Burns, this classically-detailed station was completed in 1901. The seven story steel frame building is clad in stone, brick and terra cotta and is highly ornamented. Of particular architectural interest is the great waiting room which features an elaborate staircase, barrel-vaulted ceiling, and is adorned with fine woodwork and gilded or painted plaster. In the center of the ornamental roof balustrade there is a square pediment which contains a large relief of a moving locomotive. The building is still owned by the Pittsburgh & Lake Erie Railroad and houses company offices.

*450 ROTUNDA OF THE PENNSYLVANIA RAILROAD STATION, Pittsburgh, Pa. (Early view)

The Rotunda, designed by Daniel H. Burnham, is a large neo-Baroque pavilion covering the entranceway to the railroad station. It is constructed primarily of light, ornamental brown terra cotta over a steel truss framework. The interior is decorated in late-18th century French detail with cartouches and guilloches. The Rotunda is still owned and operated by the Penn-Central Company.

*455 ERIE RAILROAD STATION (STARRUCCA HOUSE),
Susquehanna, Pa. (Jack E. Boucher for HAER)

Only a relatively few railroads built station-hotels between 1865 and 1875. Although quickly made obsolete by the Pullman sleeper, the station-hotel nevertheless played an historic part in American railroad development. The Erie Railroad Station is the sole survivor of that style. The 2 1/2 story brick building has a wide ornamental cornice and an immense hipped roof with a number of dormers. Two Lombard roof towers which were presumed to hold cisterns have since been removed.

Dominating this red brick structure is the massive arch which frames the main entrance. The interior of this section contains the main waiting room with a domed skylighted roof. Decorative elements reflect the influence of the Beaux Arts. Constructed at a cost of $1.5 million between 1906 and 1908, this was the grandest station built in the city. The station has recently been restored as the "Chattanooga Choo-Choo," and is enjoying renewed popularity. Another terminal in Chattanooga, Union Station, was demolished several years ago after being listed on the National Register. At the time it was the oldest extant structure in the city.
Nashville's Union Station, designed by Richard Montfort, is a notable example of a public building in the Romanesque Revival style. Constructed of Bowling Green gray stone and Tennessee marble, the square 4 story structure features rounded arches above all openings, a roughed stone exterior, and two distinctive towers. This station is one of the best examples of the Richardsonian Romanesque style remaining in Nashville.

*495 GULF, COLORADO & SANTA FE RAILROAD PASSENGER STATION, Fort Worth, Tex. (Texas State Historical Survey Committee)

The Santa Fe Depot was built at the turn of the century and symbolized the prosperity which both Fort Worth and the Santa Fe Railroad hoped they could foster in the Southwest. The station is a distinctive two-story rectangular structure of red brick with white limestone trim. The first story has limestone inserted between the brick, producing an unusual banding effect, and the lines radiate into the window voussoirs.

Ogden was one of four cities vying for the honor of being the intermountain rail junction when the transcontinental railroad was completed in 1869. As a result of expansion of the Utah Northern Railroad in 1869, Ogden acquired the coveted position. The first depot was completed in 1869, but following a fire in 1923, it was replaced with the present structure. Adding to the station’s Spanish motif are the inlaid designs of colored brick in diamond shapes, a red tile ceiling, and bright blue decorative mosaic tiles beneath the arches of the two front entrances.

*521 NORTH BENNINGTON DEPOT, North Bennington, Vt.
(Chester Liebs)

Located at the junction of two major lines to Massachusetts and New York, the North Bennington Depot is a 2-story brick structure resting on a foundation of cut marble blocks. The first story windows and doorways are capped by ornate stone hood moldings and the roofline is embellished with a wooden cornice with scrolled brackets. The roof is a mansard sheathed with alternating bands of light and dark slates and pierced by pedimented dormers.

*534 MAIN STREET STATION, Richmond, Va. (Virginia Historic Landmarks Commission)

Designed by the architectural firm of Wilson, Harris, and Richards, this elegant station demonstrates the strong influence of the French Ecole des Beaux Arts on American architecture during the late 19th and early 20th centuries. The main facade is seven bays wide at ground level, and a five-bay rough hewn stone loggia with segmental arches frames the entrances. The steep hip roof has decorative bronze finials at either end, and there is an impressive six-story clock tower at the southwest corner.

*542 UNION PASSENGER STATION, Tacoma, Washington
(City of Tacoma)

This imposing station, designed by Charles Reed and Allen Stern, was built in 1910 and, while still used as a terminal, is in need of some restoration. Like the Broad St. Station in Richmond, Virginia, this station is dominated by a vast domed central waiting room, flanked by lower two-story wings. The brick and stone station is entered through a massive arch, which also lights the classically decorated waiting room.
Richmond's Broad Street Station was among the last of the great rail terminals to be built in the "Golden Age of Railroads." Designed by John Russell Pope in 1919, the neo-classical station is dominated by a vast domed central waiting room, flanked by 3-story wings on either side and a long concourse at the rear. The interior is functional and elegant with arches and semicircular niches lined with rosetted coffers.

*549 UNION PACIFIC DEPOT, Cheyenne, Wy. (Mark Junge)

The Union Pacific Depot stands as a symbol of the growth of Cheyenne, as well as a fine example of Richardsonian architecture. The 2 1/2 story depot, designed by Van Brunt and Howe, is constructed of red and gray sandstone blocks laid on a frame of wood and iron. In 1890, a clock tower 118 feet high, capped by a foursided pyramid, was built onto the north end. Other additions include an extension on the east and train sheds on the south.

As the Nation's principal conservation agency, the Department of the Interior has responsibility for most of our nationally owned public lands and natural resources. This includes fostering the wisest use of our land and water resources, protecting our fish and wildlife, preserving the environmental and cultural values of our national parks and historical places, and providing for the enjoyment of life through outdoor recreation. The Department assesses our energy and mineral resources and works to assure that their development is in the best interests of all our people. The Department also has a major responsibility for American Indian reservation communities and for people who live in island territories under U.S. administration.
