

Annual percentage of rainfall compared to the 45-year running average from 1987–2016

Annual percentage of rainfall compared to the 45-year running average from 1987–2016. The annual rainfall data is a sum of daily rainfall for each water year October 1–September 30. The data comes primarily from OVCY1 (located in Olema Valley), but two additional stations, BBEC1 (located on Mt. Barnabe), and onerain (located in Point Reyes Station) were used to fill in data gaps at OVYC1. BBEC1 was used as the secondary source to fill data gaps. If there were corresponding gaps in the data at both OVYC1 and BBEC1, gaps were filled with data from the onerain station.
