

Plovers at a Glance 2009

NPS Photo

Snowy plover nest and eggs - July 19

Current Stats

Nest Success

- 21 nests
 - 9 nests hatched (with at least 1 egg)
 - 6 nests lost (1 to wind, 2 to tides, 3 to predation)
 - 6 nests currently being incubated

Egg Hatch Success

- 60 eggs laid
 - 24 eggs hatched
 - 3 eggs failed to hatch
 - 17 eggs currently being incubated
 - 16 eggs lost

Chick Success

- 24 chicks hatched
 - 3 chicks have fledged
 - 6 chicks currently on the beach (in 3 broods)
 - 15 chicks lost (due to predation or unknown)

August Update

The snowy plover breeding season has now entered the home stretch. The last recorded nest was found on July 19 bringing the total count up to 21 this year. With a number of chicks on the beach and eggs being incubated, the success of the plover season has yet to be determined. We hope to add many more chicks to our count of three fledglings so far this year. Check back again next month for another update.

NPS Photo

On weekends and holidays throughout the summer, **snowy plover docents** give their time by informing park visitors about the status of the "snowies".
