

## Results of 2020 Saguaro Census on Plot 31, Tucson Mountains

Tucson Mountain Hiking Group, February 7<sup>th</sup>, 2020

We worked with our enthusiastic hiking club from the Tucson Mountains to complete this plot, which was started in January with the Sky Island alliance. Everyone had a great time on this beautiful day, navigating through an area with lots of spine, some nice large saguaros, and many smaller ones.

This plot has had a huge increase in saguaros since it was first surveyed in 1990 – it has gone from less than 100 to about 500 saguaros! This is really an incredible gain in saguaro numbers. There are lots of small saguaros on the plot that are under 1 meter tall, which is great to see.

### Saguaro Plot #31
