Module 2 Study Guide: Knowledge of the Resource Issue

In this module, you will learn/think about the importance of science, history and culture to understanding climate change at your site, in your region, and around the globe. You will begin to identify your site’s climate change stories and take the first steps in planning an interpretive product on climate change. Estimated time to complete the basic components for this module is 5-6 hours.

How to Use this Study Guide

This study guide is designed for self-directed, self-paced learning and interaction. You can engage as much or as little as you prefer. The study guide is designed to help you work through a progression of learning in which you 1) investigate—study the recommended content, 2) contemplate—create your own relevance through intentional reflection, 3) actuate—apply the concepts to a personal work strategy and then, importantly, 4) collaborate—contribute to a conversation in a community of practice to broaden your understanding and encourage your colleagues. So the more you put into it, the more you will get out of it!

For non-NPS participants — we believe that the concepts and best practices described in this curriculum are useful to all interpreters and you are invited to fully participate. In this module, some of the content may be NPS-specific, but you are encouraged to seek out or investigate the applicability of this information to your own work.

Note: links may open slowly from within this document – alternatively, you can right-click copy and then paste the URLs in your browser.
**Module Objectives**

After completing the activities in the Module 2 Study Guide, you will:

- Identify at least two collaborators who can enrich your understanding of climate change impacts or stories at your site.
- Identify three current and reliable references to help you understand local or regional climate change impacts or stories.
- Identify at least one climate change misconception that visitors might bring up at your site, and research what the science actually tells us.
- Develop a starter list of possible ways in which the resources at your site can be linked to climate change (current and future impacts, historical context, management practices, visitor experience, etc.).
- Express increased confidence in your ability to articulate the basics of climate science.

**Investigate**

Apply a spirit of inquiry and learning to the following assignments:

- Read the *Module 2 Learning Companion Interpreting Climate Change—Knowledge of the Resource Issue* (14 pages)
- Take the tutorial *Climate Change: Fitting the Pieces Together* — (give this link a few seconds to open) — the University Corporation for Atmospheric Research’s (UCAR) MetEd self-study tutorial provides a quick, helpful and foundational overview of climate science. Note that you can work through this tutorial as you have time — you don’t have to do it all in one sitting.
- Watch at least two of the videos in the series *The Science of Climate Change in National Parks* — choose one that seems most related to your park and another that is completely different (or watch them all!):
  - Phenology and Citizen Science in Great Smoky Mountains National Park
  - Sea Level Rise in Everglades National Park
  - Species Loss, Precipitation and Fire in Sequoia National Park
  - Glacial Change at Kenai Fjords National Park
  - Ocean Acidification at Point Reyes National Seashore
  - Species Range Shifts at Sequoia-Kings Canyon National Parks
  - Climate Change and Cherry Blossoms in Washington DC
  - Cultural impacts from climate change at Historic Jamestowne
• The Cultural Resource Case Studies by bioregion is a working draft. This document gives a complete picture for how climate change may impact the cultural resources of the Atlantic Coast and gives shorter case study examples for the other bioregions. Review the Atlantic Coast section and one additional bioregion.

Contemplate

Ponder the personal relevance of what you have learned by considering the following questions... journal your thoughts in the space below (use as much space as you need).

1. How would you respond to a visitor who says climate change “is just a theory”?

2. “When we try to pick out anything by itself, we find it hitched to everything else in the Universe.” How does this John Muir quote apply to the climate change stories at your site?

3. The video series above identifies several effects of climate change that are already occurring in these national parks. What is at risk at your site — now or potentially in the future? In addition to resource threats, what else might change at your site? Will the visitor experience change? Will facilities need to change? What management practices may need to change?
Actuate

Put learning and thinking into action with the following assignments:

Activity 1: Interview Assignment
Use these interview questions as a basis to start a conversation with others at your site or in your community, in order to broaden your understanding of climate change. Other interpreters have found this interview activity to be very helpful in establishing avenues for communication and collaboration with resource managers, scientists, historians, park managers and others.

Activity 2: Project Planning Worksheet (Steps 1-3)
As you study and collaborate with others to gather knowledge of climate change at your site, you can start to identify possibilities for climate change stories. Use this worksheet as a guide to develop an interpretive product – adding to and adjusting your ideas as you progress through this curriculum. For this Module, complete Steps 1-3 (Step 1—Tangible Resources and Stories, Step 2 — Collaborators and References, and Step 3 — Site Significance).

Activity 3: In Your Own Words
Based on what you learned in the climate science tutorial, Putting the Pieces Together (see above), write a short definition of climate change, in your own words.

Collaborate

Share one of the following items with your colleagues by creating a post on our “Climate Coffeehouse” Facebook page (see the Collaborate tab on the IDP website for additional instructions)

- A useful insight from your interview activity (Activity 1) OR
- Your story ideas from Step 3 of the Project Planning Worksheet (Activity 2) OR
- Your “In Your Own Words” definition of climate change (Activity 3)

Read what your colleagues are saying.
Respond to one other post.
