Subject: [EXTERNAL] Complaint About Information Quality  
To: doris\_lowery@nps.gov

The National Park Service is required to make sure all currently disseminated information meets the Information Quality Standards. I wish to complain about the webpage on NPS website:  
<https://www.nps.gov/articles/climatequestion05.htm>

Specifically statement “Scientists predict that the glaciers will be completely gone by 2020.”

There are 35 current, active, named glaciers in Glacier National Park. And no one in their right minds believe they will all melt in the next three to four months.

Here are all the currently active glaciers: Agassiz Glacier, Ahern Glacier, Baby Glacier, Blackfoot Glacier, Boulder Glacier, Carter Glaciers, Chaney Glacier, Dixon Glacier, Gem Glacier, Grinnell Glacier, Harris Glacier, Harrison Glacier, Herbst Glacier, Hudson Glacier, Ipasha Glacier, Jackson Glacier, Kintla Glacier, Logan Glacier, Lupfer Glacier, Miche Wabun Glacier, North Swiftcurrent Glacier, Old Sun Glacier, Piegan Glacier, Pumpelly Glacier, Pumpkin Glacier, Rainbow Glacier, Red Eagle Glacier, The Salamander Glacier, Sexton Glacier, Shepard Glacier, Siyeh Glacier, Sperry Glacier, Swiftcurrent Glacier, Thunderbird Glacier, Two Ocean Glacier, Vulture Glacier, Weasel Collar Glacier, Whitecrow Glacier.

Sincerely,

Devin Watkins
