## ***COPYRIGHT AND RESTRICTIONS***

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted materials. The various state privacy acts govern the use of materials that document private individuals, groups, and corporations.

Under certain conditions specified in the law, libraries and archives are authorized to furnish a reproduction if the document does not infringe the privacy rights of an individual, group, or corporation. These specified conditions of authorized use include:

- non-commercial and non-profit study, scholarship, or research, or teaching
- criticism, commentary, or news reporting
- as a NPS preservation or security copy
- as a research copy for deposit in another institution

If a user later uses a copy or reproduction for purposes in excess of "fair use," the user may be personally liable for copyright, privacy, or publicity infringement. This institution's permission to obtain a photographic, xerographic, digital, or other copy of a document doesn't indicate permission to publish, exhibit, perform, reproduce, sell, distribute, or prepare derivative works from this document without first obtaining permission from the copyright holder and from any private individual, group, or corporation shown or otherwise recorded.

Permission to publish, exhibit, perform, reproduce, prepare derivative works from, sell, or otherwise distribute the item must be obtained by the user separately in writing from the holder of the original copyright (or if the creator is dead from his/her heirs) as well as from any individual(s), groups, or corporations whose name, image, recorded words, or private information (e.g., employment information) may be reproduced in the source material. The holder of the original copyright isn't necessarily the National Park Service. The National Park Service is not legally liable for copyright, privacy, or publicity infringement when materials are wrongfully used after being provided to researchers for "fair use."

This institution reserves the right to refuse to accept a copying order if fulfillment of the order is judged in violation of copyright or federal or state privacy or publicity law.

## ***HISTORY***

The first formal fisheries activities in Yellowstone National Park began in 1889, when Captain F.A. Boutelle asked the U. S. Fish Commission (USFC) to initiate a fish planting program with the objective, "to see that all waters are stocked so that the pleasure seeker can enjoy fine fishing within a few rods of any hotel or camp." In 1903, the USFC was reorganized as the Bureau of Fisheries. In the 1930s, the fish planting or stocking program was expanded to include hatchery facilities at locations throughout the park. In 1936, the stocking program was revised to restrict exotic fish stocking while maintaining native fish stocking. Fisheries activities in Yellowstone remained largely under the management of USFWS until 1996, when the National Park Service took responsibility. Today, the Fisheries and Aquatic Sciences program is a branch of the Yellowstone Center for Resources. In 1940, the Bureau of Fisheries became the United States Fish and Wildlife Service (USFWS).

1871 – The United States Fish Commission (USFC) is founded, tasked with investigating, preserving, and promoting the fisheries of the United States. For many years, Yellowstone National Park was the only wildland managed by the USFC.

1889 – A fish planting program is established in Yellowstone. The first fish from outside the park are planted, including brook trout (*Salvelinus fontinalis*), rainbow trout (*Oncorhynchus mykiss*), brown trout (*Salmo trutta*), and lake trout (*Salvelinus namaycush*) in the upper Firehole River, upper Gibbon River, and Lewis and Shoshone Lakes respectively.

1903 – The USFC is integrated into the newly created United States Department of Commerce and Labor and becomes the Bureau of Fisheries.

1913 – After the Department of Commerce and Labor is split, the Bureau of Fisheries becomes a part of the Department of Commerce.

1916 – National Park Service is established. The Bureau of Fisheries retains responsibility for most fisheries management as a cooperating agency with dedicated personnel and facilities located within Yellowstone National Park.

1932 – The Grebe Lake Hatchery is constructed to collect and hatch grayling eggs. Other hatcheries were also built at Lake, Mammoth, and Trout Lake.

1936 – Fish stocking policy is revised, limiting exotic fish stocking but maintaining native fish stocking.

1939 – The Bureau of Fisheries is transferred into the Department of the Interior.

1940 – The Bureau of Fisheries is reorganized as the United States Fish and Wildlife Service (USFWS) under the Department of the Interior's Division of Biological Survey.

1955 – Fish stocking programs of native and non-native species are discontinued.

1960 – Under pressure from People for the Ethical Treatment of Animals (PETA) and other wildlife conservation groups, the Fish and Wildlife Service institutes the "Fishing for Fun and Not For Meat" program in the park.

1962 – USFWS technical assistance in Yellowstone National Park includes a creel census for Yellowstone Lake.

1967 – The Montana chapter of the American Fisheries Society is founded. The chapter became heavily involved in research projects related to fisheries in and around Yellowstone.

1973 – The Volunteer Angler Report and Volunteer Fisherman Report programs begin.

Circa 1979 – The Ad Hoc Fisheries Task Force is formed.

1985 – A revised system for numbering streams and lakes in Yellowstone National Park is developed and implemented. The brook trout restoration project for Arnica Creek begins.

1994 - First verified lake trout caught in Yellowstone Lake by an angler.

1994 – Angling fees of \$10 for a seven-day permit are instituted.

1995 - Lake trout suppression efforts, primarily by gillnetting, in Yellowstone Lake are begun.

1996 – Fisheries management transitioned to the responsibility of the National Park Service. USFWS restoration projects are expanded to include Westslope cutthroat trout and Arctic grayling.

1998 – A coalition of conservation groups petition the USFWS to list Yellowstone cutthroat trout as an endangered species. The petition is rejected.

1998 – Whirling disease is first detected in Yellowstone.

2001 – New regulations require all caught native fish to be released.

2003 – The conservation coalition files a lawsuit against the USFWS.

2006 – The USFWS, under court order, reviews the status of Yellowstone cutthroat trout and again determines that a threatened listing is unwarranted.

2008, 2011 - New scientific panels convened to consider the problem of invasive lake trout. Gillnetting is determined to be the most viable option for suppression.

2009 - Commercial fishing crews contracted to increase the take on lake trout.

2010 - Native Fish Conservation Plan developed.

2013 – The National Park Service begins allowing unlimited taking of non-native species in some waters and mandates killing of any rainbow and brook trout caught in the Lamar River drainage to protect native cutthroat trout.

2016 - Since 1994, more than 2.4 million lake trout have been removed from Yellowstone Lake.

## ***SCOPE AND CONTENT***

### FISHERIES AND AQUATIC SCIENCES PROGRAM RECORDS 1878-2014 (bulk dates: 1964-1998)

*COLLECTION NUMBER*    RG01-FISH (YELL 185562)

*VOLUME*                    115 LF

*DESCRIPTION*            This record group consists of the records of the Fisheries and Aquatic Sciences program of Yellowstone National Park and its predecessors, including records from the United States Bureau of Fisheries. Records prior to 1996 largely consist of those reports, correspondence, and other documents submitted to the National Park Service by the United States Fish and Wildlife Service (USFWS) and its predecessors the Bureau of Fisheries and the United States Fish Commission since these agencies held primary responsibility for fisheries management in Yellowstone National Park at that time. Records after 1996 were directly created by the National Park Service, although a great deal of interagency cooperation at both the national and state levels continues. Additional records related to Yellowstone fisheries are likely to be found in the records of the USFWS (record group 22) in the National Archives.

The records document the management over time of fish and other aquatic species as well as the bodies of water that support fish populations. Records document the eleven native fish species: Yellowstone and Westslope cutthroat trout; Arctic grayling; mountain whitefish; longnose and speckled dace; redbside shiner; Utah chub; longnose, mountain, and Utah suckers; and the mottled sculpin as well as the five non-native fish: lake chub and lake, rainbow, brown, and brook trout. Records pertaining to human activities such as angling, boating, and other activities are also included. The records include scientific research, environmental assessments, management decisions and regulations, reports and censuses, and supporting documentation and administrative activities. While the records focus on the eras following the creation of the National Park Service in 1916 and are especially voluminous after the 1960s, historical records and compilations of information from as early as 1878 are included. Types of records include data sheets, chemical analysis, statistics, counts, and logistics data pertaining to specific projects or studies. There are also regulations, policies, procedures, and financial records as well as annual, quarterly, and project reports. Also included is correspondence with other fisheries agencies and related organizations including U. S. Bureau of Fisheries and U. S. Fish and Wildlife Service; Montana Fish, Wildlife and Parks; Wyoming Game and Fish Department; American Fisheries Society; and the Alliance for the Wild Rockies.

Materials related to bodies of water throughout Yellowstone National Park include water use records, water chemistry data, length-weight data, trap records, electrofishing records, and raw and computed data. The records are organized by and document the significant river drainages within Yellowstone: Yellowstone River and Yellowstone Lake, Madison River, Snake River, Falls River, and Gallatin River.

Scientific research and special projects are well represented. Among the studies is an assessment of the impacts of the 1988 fires on the park's bodies of water and associated wildlife. Of particular importance are the investigations regarding the non-native lake trout, which began in 1994, and subsequent efforts to preserve native Yellowstone cutthroat trout and other species endangered by the invasive species. Other threats under study include whirling disease and invasive New Zealand mud snails. Records of individual researchers include those of park staff such as Dan Mahoney and Jeff Arnold as well as researchers from the USFWS, including Oliver B. Cope.

Administrative records include annual and quarterly reports for the program as a whole as well as for specific bodies of water. There are also records of regulations, policies, work plans, and environmental assessments pertaining to fisheries and bodies of water throughout Yellowstone. Fish planting or stocking and distribution records document early 20th century fisheries management practices. More recent activities include records of gillnetting operations and programs which include the participation of visitors and the angling community such as surveys, censuses, statistics and reports.

Researchers may find this collection useful for studying changes in fisheries management and philosophy over time, including the effects of fish stocking, fishing or angling, and native fish recovery efforts. Significant environmental impacts such climate change and invasive species are also well represented. The role of keystone species such as the Yellowstone cutthroat trout and the effort to maintain environmental integrity of a unique ecosystem such the greater Yellowstone area may also be of interest.

#### *ORGANIZATION*

The Fisheries and Aquatics Record Group is organized into five series:

- I. Waterways Records
- II. Volunteer Angler Reports
- III. Project Records
- IV. Administrative Records
- V. Gillnetting Records.

<i>PROVENANCE</i>	Records transferred from various offices and staff, primarily the Fisheries and Aquatic Programs, Yellowstone Center for Resources and its predecessors.
<i>RESTRICTIONS</i>	No
<i>ASSOCIATED MATERIALS</i>	<ul style="list-style-type: none"><li>• 11 boxes of fish scales, Yellowstone National Park Museum Collections</li><li>• Grebe Lake Grayling Fish Culture Logs, 1938-1956, DC Booth Historic National Fish Hatchery and Archives, US Fish &amp; Wildlife Service</li><li>• Administrative records, United States Fish and Wildlife Service (RG 22), National Archives Records Administration</li></ul>

## ***SERIES DESCRIPTIONS***

### *I. Waterways Records, 1966-2009 (bulk dates: 1979-1998)*

The records are organized by the drainage of the primary bodies of water in Yellowstone: Yellowstone River and Yellowstone Lake, Madison River, Snake River, Falls River, and Gallatin River. Further arranged by date.

The Waterways Series contains materials related to the study and management of the bodies of water throughout Yellowstone National Park. These studies primarily pertain to recording and analyzing the quality of Yellowstone's bodies of water for the purpose of maintaining the health of Yellowstone's ecosystem. Information regarding the physiological and behavioral data of the fish residing within these bodies of water are also within these records. The types of records within this series include water use records, water chemistry data, length-weight data, trap records, electrofishing records, and raw and computed data regarding water analysis and fish populations. The dates within these records span much of the history of Yellowstone National Park, though most of it covers the 1960s into the early 2000s.

### *II. Volunteer Angler Reports, 1968 - 2012*

The series is arranged by function and date.

The Volunteer Angler Reports series contains all collected records, reports, and associated documents relating to visitor use and volunteer programs. The bulk of these materials are tied to the Volunteer Angler Report program that began in 1973. As official statistics and logistics records in this collection account for all of the VAR cards that were submitted to the program, only VAR cards that included comments were retained individually. The series also includes surveys, censuses, statistics and reports tied to similar volunteer programs that were conducted by the fisheries program, such as the exit gate surveys from 1976 to 2007. This series' records begin in 1973 with the first VAR cards collected through the program, and ends in 2014 with cards from the same program. However, the series is missing VAR cards from the years 1984 and 2000.

### *III. Project Records, 1910s - 1998*

Arranged by function and volume of record.

The Project Records series contains materials related to investigations and projects performed by and / or under the supervision of fisheries management within Yellowstone National Park. These investigations and projects were primarily conducted by Yellowstone Park staff and research personnel. There are also records of outside researchers. Chief among these was Robert E. Greswell, who focused on lake trout invasion. This series includes the following programs: Fishing for Fun and Not for Meat initiative, the whirling disease awareness and prevention initiative, the lake trout invasion and native cutthroat trout restoration projects, the 1988 fire study, creel censuses, water quality research and analysis records, fisheries observation video tapes, and climate change.

The Fishing for Fun program in particular was a joint effort with the People for the Ethical

Treatment of Animals organization, and includes correspondence and press materials featuring this collaboration. The whirling disease records primarily consist of press materials and correspondence promoting awareness of whirling disease in Yellowstone fish and steps that park staff and visitors can take to help prevent it. The lake trout materials include preservation efforts and status reports on Northern Range and Westslope cutthroat trout, in addition to the primary native cutthroat trout relative to the invasive lake trout. Also included are numerous lake trout workshops conducted by fisheries management to draft plans to combat the lake trout, including plans to purge Yellowstone Lake entirely to prevent ecological collapse. Prominent figures within fisheries management that were involved in these programs include Dan Mahony, Jeff Arnold, Dan Reinhart, Robert E. Greswell, park superintendents Lemuel A. Garrison and Mike V. Finley, Stuart Coleman, John D. Varley, Robert N. McIntyre, Bob Howe, Oliver A. Cope (Bureau of Sport Fisheries), Norman G. Benson, and Ross V. Buckley.

The project records are organized as follows: investigations, restoration projects, surveys and censuses, research projects, photo slides, Jeff Arnold's materials, and water quality records.

#### *IV. Administrative Records, 1889-2011*

Materials are organized by function of record.

This series contains administrative records created by the fisheries management of Yellowstone National Park and its predecessors. The types of administrative records include annual and quarterly reports, regulations and policies, fish planting distribution records, work plans, environmental assessments, and catalog records. Many of the annual reports are bound, the bound volumes spanning from 1952 to 1994. The years 1953-1963 are missing. Drafts of the regulations and policies, including the final versions, as well as correspondence regarding these regulations, are also included. Most of Yellowstone's fish planting programs were terminated by the 1950s, though the series contains some records from planting and spawning programs in subsequent years. The series includes transcripts of electronic records and programs that are no longer available or in use by fisheries management. Also included is a list of aquatic vegetation species native to Yellowstone National Park, including samples.

The administrative records of fisheries management are arranged by the function of the record: annual reports and figures, regulations and policies, fish planting records, work plans, and environmental assessments. The collected records begin in 1908, when fisheries management was then organized as the Bureau of Fisheries, and stop in 2012.

#### *V. Gillnetting Records, 1994-2012*

This series is arranged by year.

The Gillnetting series includes records, reports, statistics, and similar documents regarding gillnetting conducted by the fisheries management program and groups acting under fisheries via research projects or other contracts. The information includes control and spawner groups, sample data, and yearly catches. The records begin in 1994, and stop in late 2012. There are no gillnetting records in this series for the year of 2004.
