~	EV
n	- T

Bar graphs indicate relative abundance of a species in suitable habitat at a given time of year:

Common or Abundant, present in large numbers.

Fairly Common, present in moderate numbers.

Uncommon, present in small numbers.

Rare, present in very small numbers; often highly localized.

 Very rare, three or fewer occurrences per season; may not be present every year.

• Casual, record outside of usual season of occurence.

IIII or ••• Variable, may be present in a given area one year, rare or absent the next.

Winter January through March
Spring April through June
Summer July through September
Fall October through December

Letter symbols denote the habitat(s) in which the species is most likely to occur:

A Aerial

C Cliffs, rocks, and talus slopes

L Lakes, reservoirs, and marshes

M Meadows, clearings, and other open terrain

O Oaks, maples, and other hardwoods

P Pines, firs, and other conifers

R Rivers and streams
S Shrubs

W Willows, alders, cottonwoods, and other riparian hardwoods

d (down) Winters primarily below heavy snow level (4,000' - 5,000') or wintering and migrant

(nonbreeding) birds occur below elevation range indicated.

u (up) Up-mountain drift or southward migration carries some individuals to treeline

during summer.

? Available data are inconclusive.

* Breeds or has bred in park.

Yosemite Bird Checklist

This checklist includes the 265 species of birds presently known to have occurred within the boundaries of Yosemite National Park and in El Portal. The bar graphs indicate seasonal occurrence and abundance of birds. For more detailed information, consult *Birds of Yosemite and the East Slope* (Gaines 1992). Help improve this checklist by reporting all unusual observations. Happy Birdwatching!
